

## Mysteriously Downed Oat Plants in Eagle Grove, Iowa, and Downed Corn in Hillsboro, Ohio

© 2004 by Linda Moulton Howe

### Eagle Grove, Iowa

Eagle Grove is north of Des Moines, Iowa, in Hamilton County.

Earthfiles, news category.

**July 6, 2004 Eagle Grove, Iowa** - KCCI-TV, The Iowa Channel 8 in Des Moines, reported last night that "a dozen spots" (patterns of downed plants) were found Saturday morning by Brenda and Mike Trevis in their oat field near Eagle Grove in north central Iowa. Some of the plants were described as "pushed over and broken at the roots in various shapes and sizes."

The Trevises called the Humboldt County Sheriff's Office and so far investigators report there was "no evidence of a person or animal going in or out of the field." Further, there were no weather events before the weekend that could be linked to a cause of downed crop. Channel 8 provided me four frames from video they broadcast on July 5 .

On Saturday, July 3, 2004, Brenda and Mike Trevis noted "a dozen spots" where plants were down in their oat field. All images © 2004 by KCCI-TV, The Iowa Channel 8, Des Moines, Iowa.

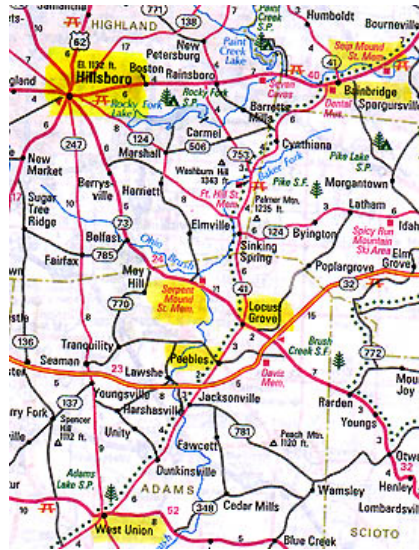

The Humboldt County Sheriff's investigators said there were no visible human or animal tracks around the dozen areas of downed oat plants.

The Trevis family said they are baffled and "kind of scared because we want to know what caused it."

Hillsboro, Ohio

Hillsboro, Ohio is near the Hopewell ancient mound region where in 2003, there were several complex crop formations in soybeans noted by yellow in the above map. See **09-06-03 Earthfiles**.

Unexplained downed corn plants in Hillsboro, Ohio garden, discovered on July 5, 2004. Photograph © 2004 by owners.

Today, Jeffrey Wilson, Director, Independent Crop Circle Researchers Association (ICCRA), forwarded to me an e-mail from Hillsboro, Ohio farmers, along with a photograph they took of mysteriously downed crop in their garden plot of corn. They wrote:

"We have what most would refer to as a 'crop circle' in our garden plot of corn. We noticed it yesterday (July 5, 2004). We have contacted the local sheriff's department and he said it did not look like vandalism to him, but rather some type of natural or unexplained phenomena. No one has stepped into it yet, as I thought it might be of interest to someone."

The unanswered question over the years: Does the same energy that creates the geometric formations cause randomly downed patterns as well in grass and cereal crops? If the same energy is involved, why are some patterns geometric and others not?
