

Scientific Data Supports Theory That Mutilated Montana Cow Dropped from Sky and Bounced

© 2006 by Linda Moulton Howe

Yellow marks indicate areas of past animal mutilations between Great Falls and Pondera Counties. Conrad is the county seat of Pondera. The most recent cow mutilation occurred in Valier, 25 miles northwest of Conrad. From the early 1970s to 2006, rashes of mutilations have repeated every few years. In 2001, the Pondera County Sheriff's Office investigated fourteen cases officially reported and knew about another half dozen cases not officially reported.

November 24, 2006 Valier, Pondera County, Montana - This week I visited Montana Pondera County Sheriff Tom Kuka and his Chief Deputy Dick Dailey and Deputy Ed Erickson in their Conrad Court House offices. I was there to work with a Toronto, Canada, company producing a series entitled *Best Evidence* to air on The Discovery Channel in 2007. I traveled with field segment producer, Michael Sheehan, and his freelance cameraman Douglas Monroe from Pleasant View, Utah, and audioman Mike Kasic from Montana, to join Sheriff Kuka and his deputies at the John and Patricia Peterson ranch in Valier northwest of Conrad. Conrad has a population of 3,000 and Valier about 500.

On October 8, the Petersons had moved part of their cattle herd into one of their Valier fields after barley was harvested. The ranchers knew that everything was fine at 5 p.m. that afternoon before they locked the gate and went home. Early the next morning on October 9, a neighbor saw the cow laying about fifty feet behind the Peterson's barbed wire fence along the county road, but did not report the downed cow. Later, by October 11, 2006, the Petersons discovered the dead and mutilated cow and called Sheriff Kuka. See: **101706 Earthfiles**. Several ranch families within a mile of the cow's mutilated body on the west and north never saw or heard anything unusual. About a mile to the east is a U.S. Air Force missile launch control station.

Looking south on gravel county road in Valier, Montana, 25 miles northwest of Conrad. Pink arrow points to cow's dead and mutilated body as a deputy approached.
Image by Pondera County Chief Deputy, Dick Dailey.

On November 21, as our vans rolled down the gravel county road, the large, black cow stood out on the beige stubble field in the afternoon sun. By then, it had been about six weeks since her death, but no coyote or other predator had taken any bites from her body. However, there had been a human intruder. A local resident said that a Montana NBC affiliate reporter had cut off the cow's head on Saturday, November 18, before we arrived. One of the Peterson's neighbors said the reason for the head removal was to have a Montana college lab examine it. But the Petersons told me no one had asked them for permission to remove the head.

The rest of the visible body showed the udder had been removed in a somewhat circular cut like the rectal/vaginal region. In addition to the excised udder and rectal/vaginal hole, back on October 11-12, 2006, Sheriff Kuka and deputies found the cow's left ear, eyeball, circle of tissue around the eye, tongue, and jaw flesh had also been removed. Altogether, that list of removed tissues is typical of worldwide animal mutilations since at least the 1960s.

Sheriff Tom Kuka and Pondera County Sheriff Deputies examined head of mutilated cow on October 12, 2006. Left ear, left eye and circle of flesh around eye, left jaw flesh, tongue, udder and rectal/vaginal tissue had been excised.
Image by Pondera County Chief Deputy, Dick Dailey.

Left jaw bloodlessly stripped of flesh, as in the majority of animal mutilation cases since at least the 1960s. Image © 2006 by Pondera County Sheriff's Office.

Cow Bounced On Ground

The Sheriff had called me after his first October visits to the Peterson ranch to tell me there appeared to be a bounce mark some four to five feet southeast of the dead cow's body. The soil was shoved up against the north side of the mark, suggesting that the 1300-pound cow had dropped from high enough above to hit the ground with considerable force and bounced to its final resting place with its legs and head pointed north.

Near center of photograph is the bounce mark amid barley stubble where Sheriff Tom Kuka and his deputies found the barley broken off and the soil piled up to the north only a few feet from where the cow bounced down a second time, dead and mutilated. The cow's head in upper left corner shows the sky-facing jaw stripped of flesh.

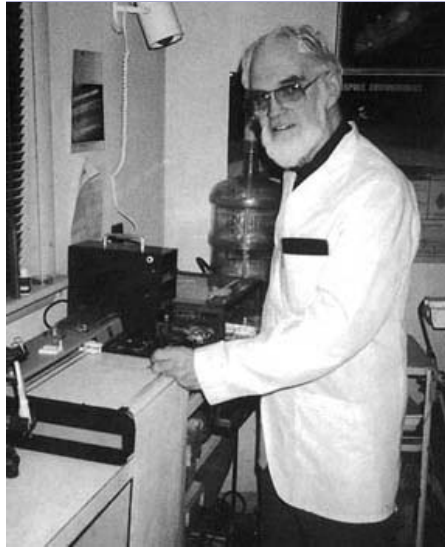

Image by Pondera County Chief Deputy, Dick Dailey.

One of the mysteries, Sheriff Kuka told me, was that even though the physical ground evidence indicated the cow had bounced south to north, all the 6-inch-high barley stubble underneath her body was neatly lined up and flattened to the ground north to south in the opposite direction.

Deputies lifted mutilated cow up and found barley stubble underneath was all neatly laid down north to south, the opposite direction of the soil piled up in bounce mark. Image by Pondera County Chief Deputy, Dick Dailey.

I had arranged back in early October for Sheriff Kuka to talk with biophysicist W. C. Levengood in Michigan about how to sample the soil and young volunteer barley plants coming up amid the stubble. Today I interviewed W. C. Levengood in his lab about his analyses so far, which support Sheriff Kuka's theory that the Peterson cow was dropped from above, already dead and mutilated.

W. C. Levengood, Biophysicist, Ph.D.-eq, Pinelandia Biophysical Laboratory, Grass Lake, Michigan. Photograph © by Linda Moulton Howe.

Interview:

W. C. Levengood, Biophysicist and Ph.D.-Eq, Pinelandia Biophysical Laboratory, Grass Lake, Michigan: "I call these bovine excisions because the alterations in the tissue on the cow are not only very consistent, but they are very precise.

What I had here in the Pondera County cow - thanks to Sheriff Tom Kuka's good work - I had excellent soil and barley samples to investigate. The samples were taken at various distances from the cow. In the north and west directions, I found pretty much the same thing I've found in most of the mutilation sites. As you proceed from the animal, the energy in the plants and soil that I'm able to measure increases to about 20 feet from the cow (20-foot-diameter circle around mutilated animals where measured energies are higher). Then energies typically and consistently drop off by distance from the dead animals. That's what I found in the Pondera County cow. But there were also surprising anomalies.

I'm measuring the CDP pulses, which are charge density plasmas. When I refer to charge density pulses, I am referring to ten years of data that I have studied since the mid-1990s. Dr. John Gedye and I published about these pulses of charges, which can be produced by a number of things, including stress or impact pulses. These pulses are due to very specific clustering and organization of specific molecular isomers (different molecular configurations) in the matrix of the water molecules in what you are studying. In this case, I'm studying soil.

[Editor's Note: Biophysicist Levengood has been studying negatively and positively charged ion energies in water, soils and plants since the mid-1990s. His work has been published in the respected botany journal, *Physiologia Plantarum*, the *Journal for Scientific Exploration*, and *Subtle Energies and Energy Medicine* shown below. The reference to measured energies in this Pondera County mutilated cow research is a reference to "charge density plasmas."

Experimental

MECHANISMS RELATED TO CHARGE DENSITY PULSE FORMATION IN LIVING SYSTEMS

W. C. Levensgood, Ph.D. & John L. Gedye, M.B., B.Chir.

Levensgood and Gedye publication © 2003 in *Subtle Energies & Energy Medicine*,
Vol. 13, Number 2, Pages 131-153. Later, biophysicist Levensgood changed
the name of the measured energy to "charge density plasmas."]

Energy Impact 200 Feet South of Cow

But south of the cow, the energies were extremely high.

YOU FOUND THE GREATEST ENERGY CHANGE WAS 200 FEET SOUTH OF THE
MUTILATED COW?

Yes. That was a great anomaly to me. And I'll explain more about that in a moment. But
there are a couple of glaring exceptions.

Sheriff Kuka thought there was a case here for the animal being dropped from above onto
the ground and then bounced, ending up a few feet away from a depression in the soil. In
this depression, the barley plants had been knocked over and everything was pretty well
crushed. So, I asked Sheriff Kuka to get soil in that depression and also roll the cow over
and get soil under the cow.

I ran the samples and was totally baffled that the soil in the depression (bounce mark) had
the lowest energy of anything I've ever seen in my investigations of crop formations and
bovine excision sites. The energy was almost zero. So far, I have never seen anything like
that and I've been looking at soil now for three years from crop formations and bovine
excisions.

The soil underneath the cow was a little higher, but still extremely low, compared to the
normal control soil samples. That puzzled me and I kept measuring and looking at the data
and found another anomaly about 200 feet south of the cow. The energy there was
extremely high. That didn't make a lot of sense because that far away is where we expect
to have our baseline control samples. Well, this was no control!

In the west and north samples, the energy was much lower and in the normal range I would
expect. So, I decided I had to concentrate how to solve the anomaly of the soil beneath the
cow being such a low energy.

In the past decade, I have tested soils to see what the energy in it looks like.
Experimentally, when I tapped the sides of containers filled with soil, the energy went way
up. In other words, it indicated that the soil can contain energy. But in the Pondera County
case, we find it was *ultra low* near the cow and bounce mark.

Impact of Cow's Body On Soil

Pink arrow points at dirt piled up along mutilated cow's back right leg. Green arrow points to bounce mark. Perhaps from force of impact, the intestines are protruding from rectal hole, which in most animal mutilations is a dry, empty hole penetrating into the body. Image by Pondera County Chief Deputy, Dick Dailey.

My hypothesis is that when the Pondera County cow was dropped, it reduced the natural energy in the water molecules of the soil. Normal silicate-type soils have a negative charge on the little sand grains and crystals. That's why - when a thunder cloud comes over with positive charge on the bottom - it discharges itself to the Earth because the Earth is negatively charged.

So, I think the Montana cow of significant weight (1300 pounds) produced a wave or pulse of positive energy that neutralized the negative energy in the soil. So, at least temporarily, the soil near and under the cow had energy that was nearly zero.

Right at the cow, the energy in the plants were also anomalously low. That would fit in because when the cow hit, the initial impact and second landing, the plant energies were neutralized.

AT THE BOUNCE MARK WHERE THE SOIL PILED UP AND WHERE THE COW LANDED.

Right. I don't recall ever having this tremendous degree of directionality (from south to north) in both the soil and plants that I saw here. Usually it's in rings around the animals, not a specific direction.

Pondera County Deputy Sheriff standing directly south of mutilated cow on Peterson Ranch in Valier, Montana. Plants and soil 200 feet south were most intensely affected by energy changes, indicating a south to north direction up to the cow's dropped body. Image by Pondera County Chief Deputy, Dick Dailey.

Soil Impact Tests

To test my hypothesis, I devised a system of pendulums in the lab. I attached a weight to the pendulum and got a container with flexible sides and filled it with soil and put my charge collector plates down on the sides of the soil. From previous work the past three years, I put the charge collector plates on all four sides of the tank: north, east, south and

west.

Then I did controlled impacts laterally, which would be parallel to the surface of the ground. But it hit below the surface of my tank about half way down. Then I would get an energy pulse in all four directions.

What I found interesting in the Pondera County cow is that there was a much higher energy going south to north than north to south. The data from my impact studies on soils in my impact tanks agrees with the drop/bounce theory. That's why I saw such a very low energy in the soil near the mutilated cow where we think it first hit when it was dropped from above and bounced to the second position where it came to rest.

YOU ALSO FOUND THAT THE ENERGY WAS LOW IN THE SOIL BENEATH THE BODY OF THE MUTILATED COW?

But not nearly as low as the bounce mark and that fits in, too, because the cow did not fall as hard in the bounce to its final resting place. The bounce would not have been nearly as high as the cow was when she fell with considerable force from above onto the bounce mark.

SO YOUR WORK SUPPORTS SHERIFF KUKA'S HYPOTHESIS THAT THE COW WAS DROPPED FROM ABOVE ONTO THE GROUND. THEN THE IMPACT WITH THE SOIL REDUCED THE CHARGED DENSITY PLASMA ENERGY IN THE SOIL.

Right.

Was Montana Cow Dropped from Advanced Beam Technology?

Greeley Tribune, Greeley, Colorado, Sunday, November 2, 1980.

IF WE ARE DEALING WITH AN ADVANCED BEAM TECHNOLOGY, AS SOME EYEWITNESSES HAVE DESCRIBED, IT IS POSSIBLE THAT THE COW IN PONDERA COUNTY WAS SUSPENDED IN THAT BEAM TECHNOLOGY AND WAS MOVING AT AN ANGLE ON THE GROUND AND INTERACTED WITH THE GROUND PERHAPS AROUND 200 FEET FROM WHERE THE COW WAS EVENTUALLY DROPPED?

It might be. I have no way of saying precisely where the energy is coming from. Or what's causing the energy. But it's a reasonable hypothesis because I have found before at bovine excision sites, where there is no physical evidence of dropping, that there is an indication that there is a peak in energy twenty feet from the animal, all around the animal. It makes a regular circle around the animal of high energy.

THAT ALSO COULD BE EXPLAINED IF THERE WAS A BEAM THAT WAS CASTING A CIRCLE ON THE GROUND AT THAT POINT WHERE THE ANIMAL WAS DROPPED?

That's right, yes. That's a possibility.

SPECULATING FURTHER, IT'S POSSIBLE THAT THE BEAM TECHNOLOGY CAUSED THE BARLEY STUBBLE TO LAY DOWN NORTH TO SOUTH BEFORE THE COW'S BODY HIT THE GROUND BOUNCING SOUTH TO NORTH?

Maybe."

14 Cattle Mutilations Reported to Pondera County Sheriff's Office (6 more unofficially reported) in 2001:

June 12, 2001 - Don Reishus, Depuyer (Pondera County) - Mutilated cow.
June 12, 2001 - Karl Rappold, Depuyer (Pondera County) - Alive bull with severed tail.
June 26, 2001 - Mark Taliaferro, Depuyer (Pondera County) - Mutilated cow with blue-green color on jaw tissue.
August 6, 2001 - Steve Young, Fort Shaw (Cascade County) - Mutilated cow.
August 15, 2001 - Larry Elings, Browning (Glacier County) - Mutilated yearling.
August 15, 2001 - Doug Banka, Belt (Cascade County) - Mutilated cow.
August 31, 2001 - Gerald Miller, Conrad (Pondera County) - Mutilated cow.
September 24, 2001 - Jim Vandenbos, Conrad (Pondera County) - Mutilated cow with "burned off" hair.
October 6, 2001 - Everett King, Valier (Pondera County) - Mutilated Charolais cow in impact crater.
October 21, 2001 - New Miami Hutterite Colony, Dupuyer (Pondera County) - TWO mutilated cows.
October 28, 2001 - Robert Lettenga, Conrad (Pondera County) - Mutilated cow.
November 1, 2001 - Glen Bouma, Conrad (Pondera County) - Mutilated 8-month-old steer calf.
December 8, 2001 - Dan Majerus, Conrad (Pondera County) - Mutilated 13-year-old cow.
