1. (U) COUNTRY: NEW ZEALAND (NZ)
2. (U) REPORT NUMBER: 6 869 8186 78
3. (U) TITLE: (U) PROJECT MOON DUST

U. S. Department of Defense, Joint Chiefs of Staff Message Center,
from Defense Intelligence Agency (DIA) concerning Project Moon Dust information
from New Zealand location received on November 13, 1978.

Timeline of Metal Spheres Discovered South of Ashburton, New Zealand:

- 1) 4 similar-sized titanium alloy balls 15 inches in diameter landed on John Lindores farm about 10 miles south of Ashburton on April 3, 1972. Soviets denied metal balls were remnants of Venus-bound spacecraft later renamed Cosmos 482. But New Zealand authorities said Cyrillic Russian writing was found, even though never photographed.
- 2) 2 other smaller titanium alloy balls, a larger piece of spacecraft and a cylindrical structure were also found by other residents April 3, 1972, a little further south of Ashburton.

Back row: Group of four similar-sized titanium alloy spheres found on April 3, 1972, by farmer John Lindores about 10 miles south of Ashburton. **Front row:** Two smaller spheres, larger spacecraft piece and cylindrical structure found further south of John Lindores farm. Photograph © Ashburton Aviation Museum.

Russian Space Web.com illustration of "the Venera-D spacecraft approaching clouds-veiled Venus. Shown configuration was only one of several designs envisioned at the conclusion of the project's definition phase in September 2009. A ball-shaped capsule containing the main lander can be seen at the top, with four mini-capsules carrying atmospheric balloons attached just below it. Individual entry capsules for each balloon would allow to deploy scientific sensors over much wider regions of the planet than it would be possible if they were all released from a single descent vehicle."

3) Silicon-aluminum alloy sphere found October 24, 1978, by farmer John Lovett also south of Ashburton.

4) Silicon-aluminum alloy sphere found November 5, 1978, by New Zealand DSIE (Defense Security Information Exchange) also south of Ashburton.

The triangle pattern of metallic spheres discovered between April 3, 1972, and October 24 and November 5, 1978, were in a region about ten miles south of Ashburton, South Island, New Zealand.

November 18, 2009 Albuquerque, New Mexico - On March 31, 1972, the Soviet Union launched a Venus 9 spacecraft later renamed Cosmos 482 with the goal of making a Venus trajectory for exploration. But four days later on April 3, 1972, the Venus 9 failed as it tried to move into the planned Venus trajectory. At 1 AM on April 3, 1972, a farmer named John Lindores of Ashburton, New Zealand, reported that four red-hot, metallic balls about 38 centimeters in diameter (15 inches) landed on his farm near Ashburton. Two smaller spheres, a larger spacecraft piece and cylindrical structure were found further south of John Lindores farm by other residents.

In 2002, declassified New Zealand government files contained correspondence from Sir Keith Holyoake, New Zealand's Foreign Affairs Minister in 1972, who wrote that the spheres were "probably gas pressure vessels of a kind used in the launching rocket." But the Soviets denied the New Zealand space debris was theirs and the Americans did not have any craft with a re-entry path that would have gone over New Zealand.

Two More Metallic Spheres South of Ashburton, New Zealand, in 1978

A Defense Intelligence Agency (DIA) transmittal of a New Zealand message concerning Project Moon Dust has been given to me by retired Navy Chief Yeoman (Ret.) Thomas Colman Sheppard, who I

interviewed in November 2006, about his 1976 experiences at White Beach, Okinawa, with highly classified MJ-12-stamped photographs and documents concerning the crash of non-human vehicles in Roswell, New Mexico, and the retrieval of non-human bodies.

See:

• 03/17/2006 — Part 1: U.S. Navy Chief Yeoman Describes "Extraterrestrial Biological Entities" in TOP SECRET/MAJIC Photographs

• 03/23/2006 — Part 2: U.S. Navy Chief Yeoman Describes "Extraterrestrial Biological Entities" in TOP SECRET/MAJIC Photographs

After our interview about the MJ-12 classified photographs and documents that were vaulted on Thanksgiving night of 1976 in a U. S. Navy White Beach safe, Tom Sheppard has continued to search for reasons why such a sensitive TOP SECRET file would be stored at an American Navy base in Japan.

This year of 2009 while searching the **Defense Intelligence Agency website**, Tom Sheppard came across the following 4-page message dated "Received 13 NOV '78" from (U.S. Defense Attaché Office) USDAO/Wellington, New Zealand to RUEKJCS/DIA, Washington, D. C., PRIORITY information for Air Intelligence Group, Ft. Belvoir, Virginia; Foreign Technology Division (FTD) Wright-Patterson AFB, Ohio; Headquarters ADCOM (Administrative Command) Peterson AFB, Colorado Springs, Colorado; and Secretary of State, Washington, D. C. Source: Pages 78 on, <http://www.dia.mil/publicaffairs/Foia/uf02.pdf>

The context is Project Moon Dust (retrieval of foreign/E. T. technologies) and two different discoveries are described: one on October 24, 1978, and November 5, 1978. The two 1972 impact areas were approximately 10.5 miles apart. The apparent 1978 impact area is about 5 miles south of both the previous 1972 impact areas, forming a triangular pattern.

The message is about an incident in Ashburton, New Zealand, on October 24, 1978, in which “a space fragment, known locally as a ‘space ball,’ was picked up by farmer John Lovett in his paddock about 20 kilometers south of Ashburton on New Zealand’s South Island. It was turned over to the New Zealand police who in turn delivered it to the National Radiation Laboratory in Christchurch for a radioactive check (negative finding). The object has now been delivered to the DSIR (New Zealand Department of Scientific and Industrial Research) for detailed examination and analysis.

“On November 5, 1978, a second ‘space ball’ was found by DSIE (Defense Security Information Exchange). R. O. believes that a U. S. technical team would be welcome to examine the objects, although their R. O. has not discussed that possibility with any New Zealand authorities.”

Included in the Defense Intelligence Agency's Moon Dust message was the following comment from the Embassy Scientific attache:

“The two spherical space objects and other apparent space debris, which were found in April 1972, were located in virtually the same area south of Ashburton. (The two 1972 impact areas were approximately 10.5 miles apart. The apparent 1978 impact area is about 5 miles south of both the previous 1972 impact areas, forming a triangular pattern.)

“The statistical likelihood of two separate spacecraft decaying in a way, which caused them to impact in virtually the same spot on the globe was considered to be so small as to make the 1978 objects suspect. The suspicion was reinforced by advice from Lt. John Baker-Nunn Tracking Station that they had not been alerted to space craft decay during the October 23 to 24 period.

“The Department of Scientific and Industrial Research (DSIR)'s advice to the science officer November 3, 1978, that the sphere was a silicon-aluminum alloy with a melting point of less than ??? degrees caused doubt that a space object with such a low melting point could survive re-entry in such a surprisingly complete condition, even if shielded (There are no evidences of shielding other than the magnetic spattering.)

“The discovery of the second sphere on November 5, 1978, however, seems to increase the likelihood that the objects are indeed space fragments and, because the alfalfa field had been worked earlier this year, it would seem to eliminate the possibility that the spheres were connected with the 1972 findings.

“Also, from the observation of the first ball, it was too clean inside and out to have been laying about since 1972, or even for several months. (The New Zealand police say they did not clean the ball.) The interior of the ball is covered in a fine, light brown dust, which has not yet been analyzed. Through the holes in the sphere, the equatorial weld can be observed, and it is apparent the weld was external only. The weld bead did not penetrate the joint, and a fairly wide reach between the two hemispheres is observable. DSIR will continue to cooperate with full analysis information. End of scientific attache's comment.”

DSIR

(F) TECHNICAL INVESTIGATION: R.O. BELIEVES THAT A U.S.
TECHNICAL TEAM WOULD BE WELCOME TO EXAMINE THE OBJECTS
ALTHOUGH THE R.O. HAS NOT DISCUSSED THAT POSSIBILITY WITH
ANY NEW ZEALAND AUTHORITIES.

COMMENT: THE FOLLOWING COMMENT FROM THE EMBASSY
SCIENTIFIC ATTACHE IS OFFERED:

QUOTE THE TWO SPHERICAL SPACE OBJECTS AND OTHER APPARENT
SPACE DEBRIS WHICH WERE FOUND IN APRIL 1972 WERE LOCATED
IN VIRTUALLY THE SAME AREA SOUTH OF ASHBURTON. (THE TWO
1972 IMPACT AREAS WERE APPROXIMATELY TEN AND ONE-HALF
MILES APART. THE APPARENT 1978 IMPACT AREA IS ABOUT FIVE
MILES SOUTH OF BOTH, FORMING A TRIANGULAR PATTERN). THE
STATISTICAL LIKELIHOOD OF TWO SEPARATE SPACECRAFT DECAYING
IN A WAY WHICH CAUSED THEM TO IMPACT IN VIRTUALLY THE SAME
SPOT ON THE GLOBE WAS CONSIDERED TO BE SO SMALL AS TO MAKE
THE 1978 OBJECTS SUSPECT. THIS SUSPICION WAS REINFORCED
BY ADVICE FROM MT. JOHN BAKER-NUNN TRACKING STATION THAT
THEY HAD NOT BEEN ALERTED TO SPACE CRAFT DECAY DURING THE
OCTOBER 23-24 PERIOD. DSIR'S ADVICE TO THE SCIENCE OFFICER
NOVEMBER 3 THAT THE SPHERE WAS A SILICON-ALUMINUM ALLOY
WITH A MELTING POINT OF LESS THAN 600 DEGREES CAUSED DOUBT
THAT A SPACE OBJECT WITH SUCH A LOW MELTING POINT COULD
SURVIVE RE-ENTRY IN SUCH A SURPRISINGLY COMPLETE CONDITION,
EVEN IF SHIELDED. (THERE ARE NO EVIDENCES OF SHIELDING
OTHER THAN THE MAGNETIC SPATTERING.) THE DISCOVERY OF THE
SECOND SPHERE ON NOVEMBER 5, HOWEVER, SEEMS TO INCREASE THE
LIKELIHOOD THAT THE OBJECTS ARE INDEED SPACE FRAGMENTS AND,
BECAUSE THE ALFALFA FIELD HAD BEEN WORKED EARLIER THIS
YEAR, IT WOULD SEEM TO ELIMINATE THE POSSIBILITY THAT THE
SPHERES WERE CONNECTED WITH THE 1972 FINDINGS. ALSO, FROM
THE OBSERVATION OF THE FIRST BALL, IT WAS TOO CLEAN INSIDE
AND OUT TO HAVE BEEN LAYING ABOUT SINCE 1972 OR EVEN FOR
SEVERAL MONTHS. (THE NZ POLICE SAY THEY DID NOT CLEAN THE
BALL.) THE INTERIOR OF THE BALL IS COVERED IN A FINE,
LIGHT BROWN DUST WHICH HAS NOT YET BEEN ANALYZED. THROUGH
THE HOLES IN THE SPHERE, THE EQUATORIAL WELD CAN BE
OBSERVED, AND IT IS APPARENT THE WELD WAS EXTERNAL ONLY.
THE WELD BEAD DID NOT PENETRATE THE JOINT, AND A FAIRLY
WIDE REACH BETWEEN THE TWO HEMISPHERES IS OBSERVABLE.
DSIR WILL CONTINUE TO COOPERATE WITH FULL ANALYSIS INFOR-
