What You'll Find Here

This book reveals the little-known sources where you can purchase foods, food ingredients and herbal products that very few people know about and yet are critical for overcoming chronic diseases like diabetes, cancer, heart disease and clinical depression. For example, in this book you're going to learn about where to buy freeze-dried berries that work as powerful whole food vitamins that will lower cholesterol, fight cancer, enhance immune system function, prevent cardiovascular disease, and provide a long list of other healthful benefits.

But that's only the beginning. You'll also learn about a little-known source for rainforest herbs that holds the key to reversing cancer, fighting off infectious disease and even surviving a flu epidemic.

Beyond that, I'll also tell you where you can get freeze-dried vegetables that you can eat like snacks as a replacement for potato chips or fried foods. These freeze-dried vegetables give you the crunchy texture you crave when you're wanting comfort foods, but without all the trans fats and calories found in fried foods. They serve as a fantastic replacement for eating fried snack foods.

I'll also tell you where you can get the best superfoods mixes on the internet. These mixes are powders that contain a variety of superfoods with the ability to prevent and even treat chronic diseases like cancer, diabetes, heart disease, osteoporosis, clinical depression, and many more. I'll also share the best sources for getting chlorella and spirulina.

You'll even learn where to buy quinoa and other ancient grains for just pennies on the dollar. Normally if you go into a health food store and want to buy quinoa, you're going to pay as much as \$10 / pound for it. I'll show you where to get it for a little over \$2 / pound! I'll also show you where to get flax seeds for about a \$1 / pound, or where to buy oat bran for a little over \$2 / pound.

I'll show you where to get real salt that's been harvested from the ocean rather than concocted in a synthetic chemical factory (as is common table salt). I'll reveal where to purchase stevia extract powder (a natural herbal sweetener that replaces sugar) at the very best price you'll find anywhere.

I'll show you how to buy sea vegetable powders for pennies on the dollar, I'll reveal sources for getting healthy oils like avocado oil and cancer-fighting apricot kernel oil (which some people claim is an outright cure for many forms of cancer). You'll learn where to get disease-preventing powders like broccoli powder and beet root powder that you can mix into drinks as part of your daily nutrition.

I'll show you how to get coral calcium at a fraction of the price you've been paying in the health food stores. I'll also explain where to get a powerful mushroom blend that works to boost immune system function and even helps fight cancer.

Unlike the manufacturer of all these products, I am not bound by unfair FDA restrictions that prohibit free speech. *I can tell you the truth* about these products and that is exactly what I am going to do in this book. You're going to learn exactly how to prevent and even treat chronic disease with the most powerful healing foods and natural medicines on the planet.

Priceless Health Know-How

Essentially, I am going to give you information that will not only save you a considerable amount of money over purchasing these food items at the grocery store or at health food stores, I'm also going to give you dozens of strategies for replacing unhealthy comfort foods and snack foods with healthier choices that enhance your health instead of compromising it.

I'm going to give you ways to use foods to fight cancer, reverse diabetes, treat heart disease and cardiovascular disorders. I'm going to show you how to get your nutrition from whole foods in a convenient way that anyone can follow, even if you don't like to cook. I'm also going to reveal a powerful, little-known vitamin that I call "vitamin X" that is just now emerging on the market, and that has been shown to be 500 times more powerful than vitamin E as an antioxidant. I'll tell you where you can get vitamin X and I've even managed to convince two manufacturers to offer exclusive coupons that give you a discount on vitamin X just by reading this report.

This is the kind of information you're going to get in this book. This is the kind of information that it has taken me years to gather and learn from experience. I use this information myself every single day. This is exactly where I purchase my own foods, herbs, freeze-dried berries and other supplements that I use as the main ingredients in my own diet.

Essentially, I am giving you the blueprint to my own healthy diet and revealing the exact sources where I acquire the products that make this possible.

Why I'm Giving This Away

You might be wondering, "If this information is so valuable, why is Mike crazy enough to give it away?" The short answer is that not everybody in the world is a greedy, money-grubbing corporate CEO that has to make a buck off every single thing. But the more accurate answer is that I hope to accomplish three important things with this:

First, I am deeply dedicated to the mission of helping people transform their health. I truly want to live in a world where people are healthier, and giving away this information is just one small way in which I can help make that happen.

Second, I hope to support the companies offering health-related products. The best way to keep these companies in business is to make sure they have lots of customers. So even though I don't earn a dime from your purchases of the products mentioned here, you're still doing the world a favor by supporting the financial well being of these companies. And they deserve your business!

Third, I hope that you will give this report to a hundred friends and that they, in turn, will find out about NewsTarget.com, TruthPublishing.com and all the health-related information available through those online resources. The more people I reach with a message of disease prevention and health transformation, the better I feel about being alive. No kidding. So by stealing this report and giving it away to people you know, you'll also be helping me out. And that's how you can return the favor, frankly. (If you want to send me Christmas cards as a thank you, that's okay too.)

Most People Don't Have a Clue Where to Get These Items

What's really interesting about all this is that most consumers around the world have no idea how to really eat healthy. They don't really know where to get the food sources they need to support health. And they also tend to spend a fortune on foods at the grocery store. People always say to me, "Hey Mike! I can't eat in the healthy way that you describe because that would cost me a fortune!" Then they go to the grocery store and buy foods like macaroni and cheese or dinner mixes that are actually ten times more expensive than the foods I am going to reveal to you in this report.

The truth is, *it isn't expensive to eat healthy if you know the secret sources that I am going to reveal in this book.* You're going to save a small fortune on feeding yourself and your family just by following this information. Let me give you a concrete example of what I'm talking about here.

If you want to have a healthy meal, one of the best grains to use is quinoa. And quinoa is very expensive if you go into the health food store. But once again, I'm going to reveal a source where you can buy organic quinoa at \$15 for 7 pounds! That's a large #10 can -- and it comes out to a little over \$2 / pound! You'd normally pay quadruple that price at a local retailer.

By the way, one pound of dry quinoa is enough to make a meal for a large family, especially if you throw in some other ingredients like organic chicken, onions, garlic, broccoli and make a quinoa soup out of it. You can also make quinoa chili or use it as flour and make quinoa pancakes or pastas. The point is, for \$2 worth of quinoa, you can feed yourself or an entire family a whole lot of food. It's not expensive. And as you'll find here, it will save you a small fortune over purchasing more popular foods at the grocery store. It's also incredibly easy to prepare as a food. No baking required.

Ugly Packaging, Beautiful Nutrition

The other thing you'll notice in this report is that I'm talking about the purchase of foods, products, and food ingredients that are shipped to you in ugly packaging. None of these are beautifully-packaged products, but the foods inside are outstanding. You see, when you buy foods at the grocery store, they come in pretty color printed packaging. When you buy brand-name food products, you're paying a lot more for the packaging than you are for the ingredients inside!

Your average box of cereal, for example, contains ingredients that cost only a fraction of what it costs to produce the box itself. So for most people who go shopping for food at the grocery store, they are actually paying for all of the hype and packaging. They're paying for the color printing, the plastic packaging, the food containers. And the stuff inside the box? It's mere pennies. Nutritionally speaking, most of the stuff inside is worthless.

Health illiteracy is widespread: neither patients nor doctors grasp the fundamentals of nutrition

I've found health literacy to be astonishingly low among the general population -- even among people who can read just fine! A fundamental grasp of nutrition, for example, is almost completely lacking in our population. I've listened to people tell me that they think eating white rice at a Chinese restaurant is good for them "because it contains so much fiber." That's quite a surprise to hear, since white rice has virtually no fiber whatsoever and isn't healthy at all: it's more like a dietary sugar than a health food.

<http://www.newstarget.com/001117.html>

But you, using the information in this book, are going to be spending your money on wholesome food and food ingredients rather than pretty packaging. Because if you want to go out and buy pretty cardboard, you can do that on your own. But don't confuse that with shopping for food.

No Financial Relationship with Suppliers

One final point on all this is that I make absolutely no money from the sales of the products I mention here. None of the companies paid to be listed here. This is not a giant advertisement. Many of the companies here are not even aware they are being listed. By the time you read this, they will probably be well aware. But when I wrote it most weren't aware that they were going to be listed.

I chose these companies because they are the ones that I use personally. And once again, I make absolutely no money whatsoever from the purchase of products mentioned here. This ain't no payola factory!

Secret Source #1: Emergency Essentials

The first secret source I'm revealing here is a company called "Emergency Essentials" The URL for this is <http://www.BePrepared.com>. Emergency Essentials is actually a company that caters to people purchasing food for long-term storage -- people who want extra food for emergency use. That's not a bad idea because given all the hurricanes, power outages, terrorist attacks and everything else going on in this world, being prepared is certainly a smart strategy.

But that's not the purpose for mentioning them here. Instead I'm going to tell you how to use these preparedness foods as a source of outstanding nutrition. And to do that, you're going to want to look at a line of products sold by Emergency Essentials known as "freeze-dried products." What I'm specifically talking about here are freeze-dried vegetables, meats and fruits. I will list specific items here and describe what they're good for.

The Advantages of Freeze-Dried Foods

What's so interesting about freeze-dried foods? First of all, they have an incredibly long shelf life. Freeze-dried foods can stay stored in the cans in which they are shipped for ten years or more. So you don't need to worry about them going bad on your shelf. Secondly, the freeze drying process conserves much of the nutrition of these foods. In fact it conserves far more nutrition than just drying the foods... and certainly far more than canning them. That's because freeze-drying doesn't subject these foods to extremely high temperatures for a long period of time.

It's more like "flash freezing." And what really happens during the freeze-drying process is that the water in these foods is very rapidly forced out of the food through a phase transformation process called "sublimation," leaving just the crunchy, dry fruits or vegetables without any of the water. As a result, they are less expensive to ship as well because you're not shipping the water weight.

Freeze-Dried Berries: Disease-Fighting Gifts From Nature

Freeze-dried berries are my favorite products from Emergency Essentials. You can easily add them to a wide variety of foods and drinks and, in doing so, transform them into healing meals that prevent and even help reverse chronic disease.

Do you remember the breakfast cereal called Lucky Charms and how much fun it was to eat Lucky Charms as a kid? Lucky Charms had these little wheat bits surrounded by tiny crunchy marshmallows, which were basically pure sugar with artificial coloring. Those were delicious, right?

You can get close to that experience today by using this freeze-dried berry blend product from Emergency Essentials. For \$26 you get a #10 can full of a blend of freeze-dried berries that are absolutely loaded with antioxidants and health-enhancing phytonutrients. If you make a bowl of cereal using some healthy low-sugar cereal (such as Hi-Lo cereal or some other high fiber cereal), you can toss in a couple of spoonfuls of freeze-dried berries, and it instantly transforms that boring bowl of cereal into something that looks and tastes a whole lot like Lucky Charms... *but without the sugar!*

With this magic combination, you have crunchy, sweet, nutritious berry clusters floating around in your bowl of cereal. It's a true delight. Better yet, you're not eating any refined sugars: all the sweetness comes straight from the berries, the way nature intended. At the same time, you're getting a vast array of beautiful, natural colors: the blue from the blueberries, red from the raspberries, and so on. It is precisely these pigments that exhibit powerful disease-fighting characteristics.

Tremendous Health Benefits from Eating Berries

Blueberries have been clinically proven to lower cholesterol even better than statin drugs. They also improve vision health and protect against oxidative damage to the eyes. Raspberries enhance the health of your kidneys and cardiovascular system. All of these berries contain antioxidants and a wide spectrum of phytonutrients that conventional medicine doesn't even know about yet. They all enhance your health in profound ways that have yet to be understood (or even described) by modern medical science.

When you eat this freeze-dried berry blend product you're getting all the benefits of these berries in their natural form without the inconvenience of buying berries at the grocery store and having them go moldy on you in a day or two. That's the problem with buying berries, isn't it? I often try to buy blackberries or raspberries from the store and after you get them home, if you don't eat them within a matter of hours, it seems like they start molding.

When you buy freeze-dried berries, you don't have this problem. The berries are available to you anytime you want them. You just add a couple of spoonfuls of this berry blend into any food or drink you want. If you're making a healthy breakfast drink, for example, put in a couple of spoonfuls of the berry blend, and it will greatly enhance the health of the breakfast shake while also turning it a wonderful dark berry color.

Blueberries, cranberries, strawberries all contain powerful phytochemicals that fight cancer, heart disease, high cholesterol and more

Here's more good news on how nature can help you prevent and reverse chronic disease. Berries such as blueberries, cranberries, strawberries and raspberries are rich in disease-fighting phytochemicals that prevent and even reverse serious diseases like cancer, diabetes, heart disease, stomach ulcers and even help lower cholesterol levels.

<http://www.newstarget.com/001505.html>

Real Blueberry Pancakes for a Change

Another great idea is to use these berries in baking mixes. If you're making some pancakes for breakfast (hopefully you're using a healthy whole grain pancake mix like something made by Bob's Red Mill or another trusted manufacturer), you can toss in some of these berry mix powders. You'll get some blueberries, some raspberries, some strawberries, and it will make a delicious pancake recipe that's far superior to anything you could buy at the store (both in terms of taste and health impact).

Remember that when you buy mixes at the store that are labeled as "blueberry mixes," such as a blueberry muffin mix or blueberry pancake mix, they almost never contain actual blueberries. They contain little chunks of fructose colored with artificial colors to make them appear purple. All that does is promote disease and neurological disorders thanks to the toxic side effects of artificial colors. *If you want the real colors, get the real berries.* And the way to do that is to buy these freeze-dried berry blend products from Emergency Essentials.

Mass media hypes up statins, calling them wonder drugs while ignoring their dangerous side effects

Statins are extremely potent prescription drugs with dangerous side effects that include sudden death from heart failure, a sharp drop in sex hormones, disruption of normal liver function, and complex hormonal imbalances that are only beginning to be identified.

<http://www.newstarget.com/001254.html>

You can also buy freeze-dried blueberries all by themselves for \$25 for a #10 can. This is a product I especially recommend for anyone with heart disease or high cholesterol. If you're taking statin drugs or even considering taking statin drugs, try these blueberries instead. For just \$25 you can have an entire #10 can of blueberries, and you can mix them in with your breakfast cereals, blended drinks or other foods and consume them in large quantities on a daily basis. Your cholesterol numbers will vastly improve in a matter of a few weeks. With the right dietary changes, your doctor will probably tell you that you don't need to take statin drugs after all. And remember, these blueberries won't go bad on you either. So you can keep them around and use them any time of the year, any time you wish.

Freeze-Dried Strawberries

The next berry product I recommend is freeze-dried sliced strawberries at \$22 for a #10 can. Why do I like this product so much? Because if you go out and buy a typical breakfast cereal claiming to contain actual strawberries, you'll find that there are maybe two or three strawberries in that entire box. And they've chopped that strawberry up into tiny little pieces to try to make it look like there's a lot more in there. There's really not much fruit in the cereal box at all.

Using this can of freeze-dried strawberries, however, you can transform any boring cereal into a delicious strawberry cereal by just putting in a cup or so of freeze-dried strawberry slices. And it's absolutely delicious. It makes any cereal far more interesting (and sweeter) without adding refined sugars of any kind.

Freeze-Dried Garden Pole Beans

Let's move on to the vegetables here. One of my favorite freeze-dried vegetables is the green garden pole beans, which is \$16 for a #10 can. That kind of price may seem a bit expensive, and it's true -- these are some of the more expensive food items in this book. It's not cheap to produce freeze dried fruits and vegetables. That's because the freeze-drying process reduces the weight of the fruits and vegetables so much that you're actually getting a lot more food than you think. If you were to add water and rehydrate the foods, you'd get a much better idea of how much food is actually in there. But without that perspective, when you open up a can of freeze-dried garden pole beans, you think, "Geel! I spent \$16 for this? It looks like a large bag of snack chips!"

So let me explain what's good about this. First of all, you can eat these freeze-dried garden pole beans as if they were snack chips. They are crunchy. You can pop them in your mouth and chew on them... and you think you're eating something like green Fritos or some kind of odd-shaped potato chip. It's a handy snack food, but without the negative health effects.

Whenever you're in the mood for something crunchy, and you don't want to be eating fried snacks that promote heart disease and have trans fatty acids (and other dangerous chemical compounds like acrylamides), you can reach for the can of green garden pole beans and start munching on those. That's what I do. And you'll find that even though the can costs \$16, it lasts a long time. That's partly because when you eat these as snack foods, you must drink a lot of water at the same time, and the water reconstitutes the foods, making them take up more space in your stomach (which makes you feel full).

Safety Note: Always Drink Lots of Water

From a safety perspective, drinking lots of water is critically important because if you don't drink extra water while consuming freeze-dried foods, you could end up with serious gastrointestinal problems. That's because all freeze-dried foods will soak up water once you swallow them. And if you're eating them in their dry form, your body is going to start pulling water out of your stomach and out of your digestive tract in order to rehydrate these foods. So it's important to consume a large amount of water at the same time you're eating these foods: a good guideline is to drink 8 oz. of water for every one cup of freeze-dried fruits or vegetables you consume. Of course, drinking water is good for you anyway, but it is especially important when you're eating freeze-dried vegetables.

The strategy of eating freeze-dried vegetables is a great hunger buster. I can't tell you how many times this has gotten me through a tough evening when I felt really hungry and wanted to eat some kind of crunchy snack food. But of course, I don't touch fried foods, nacho chips, or other popular snack foods. Instead, I just reach for the freeze-dried garden pole beans and start munching until I'm full.

Freeze-Dried Broccoli: Much Better Than You'd Suspect

Next on the list of vegetables is freeze-dried broccoli florets. What's so good about broccoli florets? A couple of things. First, you can eat these as a replacement for crunchy snacks like potato chips or cheese puffs. They're quite delicious, and if you want to add some spices, you can throw in some salt or taco spices to alter the flavor.

The great thing about these broccoli florets is that when you eat them in the freeze-dried state, they don't taste bitter at all (like fresh broccoli sometimes does). They are genuinely good. And because they are broccoli, they are powerful anti-cancer foods. In fact, I recommend this as a snack for anyone who has a history of cancer in their family or who has been diagnosed with cancer or pre-cancerous conditions. I've often stated that broccoli is such a powerful anti-cancer food that if the pharmaceutical companies could patent it and sell it to consumers, they would charge \$100 for a plateful of broccoli.

In contrast, for just \$12, you can get an entire can of freeze-dried broccoli florets that are powerful immune boosters and cancer fighters. And you can eat these like the garden beans: they are crunchy, they make an excellent snack food, and they're extremely nutritious at the same time. As always, be sure to drink lots of water when you eat freeze-dried broccoli florets. One more thing, you can also toss these into soups or even into the blender when you're blending up some healthy drinks. They'll turn any drink or meal into a cancer-busting meal.

Heal your own cancer with broccoli

You don't have to know how it works to gain the benefit: just eat broccoli. It's one of the most powerful anti-cancer foods you can find at any grocery store. In fact, broccoli contains such powerful anti-cancer compounds that if drug companies could put the benefits of broccoli in a pill, that pill would be front page news and cost a hundred dollars a week. Broccoli works against prostate cancer, breast cancer, multiple myeloma, lung cancer, colon cancer, and even cancers of the organs like liver cancer.

<http://www.newstarget.com/000750.html>

Freeze-Dried Peas

Next on the list are freeze-dried fresh peas. You may be familiar with a snack product called 'Wasabi' (Wasabi peas). Those are peas that have been rolled in rice flour and Wasabi spices such as horseradish. And they're quite delicious. But if you don't want the sugar and the rice flour, you can just buy these freeze-dried fresh peas and eat them right out of the can. It's \$17 for a #10 can, and just like the other freeze-dried vegetables, you can eat these as snacks or add your own spices. They are absolutely delicious! In fact, these fresh peas are fairly sweet, making them another of my favorite vegetables for munching on when I want some snack food.

Popcorn Cauliflower

Next on the list is freeze-dried cauliflower, or what I call “vegetable popcorn.” That’s because it looks a lot like popcorn. In fact, if you take a bowl of this freeze-dried cauliflower, put some butter flavor on it and add a bit of salt, you can crunch on it like popcorn and probably fool yourself into thinking it might be popcorn (that is, if you have a good imagination). And yet, it’s far healthier for you than popcorn. For one thing, it doesn’t have the high glycemic index of popcorn. Nor does it have the unhealthy fats or added sugars typically found in popcorn snacks.

It’s also loaded with immune boosting, cancer fighting phytonutrients similar to the way broccoli is. In fact, cauliflower is in the same group as broccoli: cruciferous vegetables. It is well known to contain potent cancer-fighting phytochemicals. The freeze-dried cauliflower costs \$16 for a #10 can. It’s one of the vegetables I purchase and consume on a regular basis. It makes a great snack that won’t murder your heart and pack on the pounds.

Quality Meats: Freeze-Dried Chicken

Next, let’s move to the meats. The only meat I recommend is freeze-dried chicken, which is \$40 for a #10 can. That’s pricey, but there’s a lot of chicken in there, and it’s pure chicken meat with no flavors, additives or preservatives. The format is diced chicken chunks, and by the time you receive the shipment through UPS, some of it will probably have turned to chicken dust at the bottom of the can. But the point is, if you ever want quality animal protein in your diet, this is a good way to do it (especially if you’re traveling). It’s very hard to get good quality protein when you’re eating at a restaurant, on an airplane, or at work.

With this freeze-dried chicken, there are no preservatives, no flavors, no salts, no MSG and none of that other garbage that you normally find in other meat products. And don’t forget about sodium nitrite, because sodium nitrite is a dangerous chemical preservative found in virtually all packaged meats in the grocery store. It’s well known to cause cancer in the human body due to the formation of nitrosamines during digestion. Freeze-dried chicken from Emergency Essentials has no sodium nitrite whatsoever. So without the preservatives, you’re just getting good quality proteins without any associated health risks.

On the down side, freeze-dried chicken is rather tasteless. Don’t expect to fall in love with the taste of this food. It’s not just bland, it’s almost offensive. This is hard-core food for people who are very disciplined about what they eat. Don’t dive in with this product if you’re expecting something that tastes like Chicken McNuggets. The other downside is that this chicken meat is not free-range or organic chicken meat. Unfortunately, organic freeze-dried chicken meat doesn’t exist as far as I know, so you’re stuck with conventional chicken meat if you want it freeze-dried.

Phytochemicals in broccoli and cauliflower fight cancer, says new research

Broccoli is one of the most powerful anti-cancer foods in the world: it contains phytochemicals so effective that if drug companies could patent them, they’d charge consumers a hundred dollars a pill for the same thing you get from a serving of broccoli. Cauliflower, too, is a powerful cancer fighter. The truth is, cancer is almost entirely preventable through food choice and physical exercise alone. Nature has provided an abundance of healing foods that can prevent and reverse chronic disease, including cancer, diabetes, heart disease and more.

<http://www.newstarget.com/000084.html>

Avoid Manufactured Food Products

By the way, there are many other products available from Emergency Essentials, but I don't recommend them. There are plenty of products you want to avoid from Emergency Essentials. And that includes most of the mixes or meals the company offers. Anything that is a prepared product such as an MRE or a prepared meal is likely to contain harmful ingredients that I certainly do not recommend for your health. Remember, manufactured foods almost always contain additives. In contrast, freeze-dried berries, vegetables or meats have no additives whatsoever.

The only products I recommend are the ones I've mentioned here: the freeze-dried fruits, vegetables and meat products. And by the way, I don't recommend the freeze-dried turkey product because the quality of that meat wasn't nearly as high as the quality of the chicken product (at least not when I ordered it).

So that's the scoop on Secret Source #1 – Emergency Essentials. They're at <http://www.BePrepared.com>. It's a great place to get food products that can enhance your health, that can help prevent chronic disease and that can serve as healthy snack foods so that you can avoid consuming unhealthy fried foods when you get that craving for a comfort snack.

How to save money with Emergency Essentials

As a service to [NewsTarget.com](http://www.NewsTarget.com) readers, I've negotiated an exclusive discount with Emergency Essentials. Type "newstarget" in the promo code box of the shopping cart at [BePrepared.com](http://www.BePrepared.com), and you'll get free shipping on any order over \$20. I'm not certain if this applies outside the USA, however.

Summary of Recommendations

Price	Item	Nutritional Benefits
\$26	Freeze-Dried Berry Blend	Excellent source of antioxidants, protects against heart disease, lowers LDL cholesterol, helps prevent cancer, protects against nervous system disorders, adds sweetness to foods or drinks without using refined sugars
\$25	Freeze-Dried Blueberries	Proven to lower LDL cholesterol better than statin drugs, without any negative side effects. Outstanding source of antioxidants.
\$22	Freeze-Dried Strawberries	Excellent antioxidant source, high in vitamin C. Great for using on cereals.
\$25	Freeze-Dried Raspberries	Another great source of natural antioxidants.
\$29	Freeze-Dried Blackberries	Yet another great source of natural antioxidants.
\$16	Freeze-Dried Garden Pole Beans	Excellent replacement for fried, crunchy snack foods. (But a bit pricey.)
\$12	Freeze-Dried Broccoli	Anti-cancer food: contains an assortment of phytochemicals clinically shown to prevent the growth of cancer tumors. Also boosts immune system function. Can be eaten as a snack.
\$17	Freeze-Dried Peas	Good choice for late night snack food for when you have “the munchies.” No fats, no unhealthy additives like MSG.
\$16	Freeze-Dried Cauliflower	Natural “popcorn” alternative. Add butter flavor and natural salt to make a veggie popcorn snack. Also offers an assortment of anti-cancer phytochemicals, similar to broccoli.
\$40	Freeze-Dried Chicken Meat	Pure chicken meat product with no additives or flavors. Great for traveling, since quality protein is difficult to find in airports, restaurants, etc.

Secret Source #2: Jenny Lee Naturals

Secret Source #2 is a company called “Jenny Lee Naturals” that can be found at <http://www.JennyLeeNaturals.com>. This is a small company that sells superfoods like chlorella, spirulina and supergreens mixes that I consider to be the very best on the internet. This is partly because I know their ingredients are well sourced: all spirulina used at Jenny Lee Naturals is Hawaiian spirulina made by Cyanotech in Kona, Hawaii (a company I toured and interviewed for a series of feature articles).

This company has earned my five-star rating for providing quality products at a reasonable price. The thing to realize here though is that you’re not going to get fancy packaging from Jenny Lee Naturals. This is true with many of the companies I recommend here. What you are going to get are the highest quality ingredients with no fillers.

Jenny Lee Naturals offers four key products worth mentioning:

- **Chlorella:** offered in capsule form (free-form chlorella), this is a potent disease-fighting superfood covered in depth at <http://www.ChlorellaFactor.com>. Jenny Lee Naturals offers very competitive pricing on their chlorella, which is sourced from Japan.
- **Spirulina:** also offered in capsule form, this is Spirulina Pacifica, a unique strain of spirulina grown only in Kona, Hawaii, in pristine waters pumped from deep in the Pacific ocean.
- **Supergreens:** this is Jenny Lee’s feature product, and it’s one I use every day. It’s a blend of superfoods like chlorella, spirulina, quinoa, flax meal and various cereal grasses. It’s a food supplement powder that compares to The Ultimate Meal, a product found in most health food stores.
- **Jenny Lee A-V tincture:** a super-powerful tincture made of the most potent anti-viral herbs found on the planet, including shiitake mushrooms, echinacea, astragalus, licorice, olive leaf extract, cat’s claw (Una de Gato), lemon balm and many other herbs. This product greatly boosts your flu immunity, helping you resist flu infection while also giving you natural medicines to more quickly overcome a flu. This product was actually modeled after my “top medicinal herbs for resisting the flu” list which appears in The Flu Solution, an ebook on beating the flu (or even the influenza pandemic), found at <http://www.TruthPublishing.com>. See the next chapter of this book for more details on the influenza pandemic.

What’s so secret about Jenny Lee Naturals? The company is fairly well known for their chlorella and spirulina products, but as of this writing, **no one knows about the A-V tincture product**. And this is the product that will be in very high demand as the influenza epidemic grabs more headlines. In fact, it won’t be long before Jenny Lee Naturals won’t be able to keep up with orders for their A-V product, especially if we start to see more headlines about the spread of influenza or a difficult flu season.

Spirulina research shows treatment of breast cancer, tumors, HIV virus, and other viruses

The other interesting compound in spirulina that really isn’t found anywhere else in the plant kingdom or animal foods is something called phycocyanin. This is a blue pigment. That’s why spirulina is actually called blue-green algae, because of the phycocyanin blue pigment. And it’s a phycobiliprotein and research has shown that it really provides a great deal of protection to both the liver and the kidneys. It’s actually an antioxidant pigment or protein pigment.

<http://www.newstarget.com/002034.html>

Chlorella and Spirulina With No Binders

If you order spirulina or chlorella, you're going to get a product with no binders. And that's important. Jenny Lee Naturals is the only company I know of that packages their chlorella and spirulina products with capsules rather than using binders to create small tablets. By the way, capsules are expensive. So the fact that Jenny Lee Naturals continues to provide a competitive price is downright amazing. I imagine their profit margin is quite slim on these products.

In producing these capsules, Jenny Lee Naturals simply takes the raw spirulina or chlorella ingredients and encapsulates them using a high-end encapsulation machine. This way, when the capsule dissolves you're getting what I call free-form powdered chlorella or spirulina that makes it fast-acting and easy to digest. With other companies, you're getting tablets that have to be broken down through the process of digestion. And worse yet, you're getting binders, because tablets have to have binders in them in order to get the chlorella or spirulina material to stick together.

In other words, the binders are a type of glue that makes the ingredients stick together into the shape of a tablet. And some of the binders used out there at competing companies are chemicals that I wouldn't want to be putting in my own body. So if you want free-form chlorella and spirulina without questionable binders and in an easy-to-digest format, get it from Jenny Lee Naturals. Just get their encapsulated spirulina, which is four bottles for \$1116 or their encapsulated chlorella which is four bottles for \$1116 also.

Spirulina from Hawaii

I should also tell you that the spirulina is *spirulina pacifica*, which means that it comes from the company called Cyanotech located in Kona, Hawaii. This is not spirulina sourced from cheaper sources such as Southeast Asia. It's spirulina from Hawaii. It is organically produced. It is grown in pristine waters. And I've actually toured the facilities that manufacture this spirulina, so I have seen the level of professionalism and dedication that the people there at Cyanotech give their product. There is quite simply no better spirulina product in the world than what you're going to find in the Jenny Lee Naturals spirulina capsules.

Supergreens for Health and Disease Prevention

I also strongly recommend the Jenny Lee Naturals Supergreens product. It's just called "Jenny Lee Supergreens," and it's 4 bottles for \$100. This is a product that was formulated to compete with *The Ultimate Meal*, which is a product that I had been recommending for several years, and in fact still recommend as a superfoods whole meal powder. This Jenny Lee Supergreens powder contains all the superfoods that you need to achieve a high state of health, and it's something I eat myself on a daily basis and even feed to my dog, too.

An inside look at spirulina production: an exclusive interview with Dr. Gerry Cysewski, CEO of Cyanotech Corporation

I'd like to point out that Cyanotech, the name comes from cyanobacteria or blue-green algae, and Cyanotech is a microalgae company -- all of our technology and products are based on microalgae. We think microalgae holds tremendous potential for human health and nutrition. There are over 30,000 different species of microalgae, and they produce everything from fuels to very nutritious foods, sometimes even pharmaceuticals. And that's why we're in this area -- we think that microalgae is really an unexploited, vast potential natural resource.

<http://www.newstarget.com/002031.html>

What's interesting about the Jenny Lee Supergreens formula is that if you look up the documented health enhancement effects of the ingredients it contains, you'll find that the superfood supplement is a powerful disease fighter. It is:

- Anti-cancer (due to powerful anti-cancer phytochemicals and detox effect)
- Anti-diabetes (due to blood sugar regulating effects, quality protein, GLA, etc.)
- Anti-osteoporosis (due to its alkaline nature and bone-building mineral content)
- Anti-heart disease (omega-3 containing flax meal)
- Anti-obesity (complex carbs like quinoa, quality proteins)
- Immune boosting (due to wide-ranging phytonutrients)
- Liver boosting (due to cleaning effects of green ingredients, plus the lecithin)
- Brain boosting (GLA, acetylcholine, etc.)
- Mood boosting (regulates blood sugar, which steadies moods)
- Digestive health boosting (quality fibers, plus cleansing chlorophyll)

... and a whole host of other benefits. The ingredients are: organic quinoa, organic Hawaiian spirulina, open-cell wall chlorella from Japan, flax seed meal, lecithin, soy protein, alfalfa sprouts, barley grass, wheat grass, coral calcium, stevia

The organic quinoa flour provides a complete protein and offers outstanding fiber and complex carbohydrates. When considering the Hawaiian spirulina, open cell wall chlorella and flax seed meal, these are some of the superfoods I recommend the most. The flax seed meal also promotes cardiovascular health and it has lignans that are powerful antioxidants and anti-cancer nutrients.

The spirulina and chlorella offer phytonutrients including chlorophyll that cleanse the blood, cleanse the organs and prevent chronic diseases like cancer and diabetes. In fact there are so many benefits to these two products that I encourage you to go read the book I've written on it called, 'Superfoods For Optimum Health: Chlorella and Spirulina.' You can find that at <http://www.chlorellafactor.com>.

Also found in the Jenny Lee Supergreens product is lecithin, which is an important source of acetylcholine, which is very important for both liver function and healthy brain function. I realize that a lot of products use lecithin as a filler, meaning they use it as the primary ingredient. But in Jenny Lee Supergreens, it's actually the fifth ingredient. So it's put in as a nutritional ingredient and not as a primary filler.

The top four superfood products for optimum health and disease prevention/reversal; recommended by Mike Adams

They can absolutely help reverse chronic disease. Here's the truth about this: the FDA has outlawed nutritional supplement companies from telling the truth about their own products. If The Ultimate Life company, for example, stated on the label, "this product prevents chronic disease," the FDA would consider that to be an unsubstantiated health claim (even though it's true!) and would ruthlessly attack the manufacturer, eventually putting them out of business.

<http://www.newstarget.com/001539.html>

Also in this product, you get soy protein, alfalfa sprouts, barley sprouts, wheat grass, coral calcium and a little bit of stevia to sweeten it up (although it still remains quite bitter thanks to all the greens). This is the product that I use on a daily basis. It is, in my opinion, the very best Supergreens product out there and the price just can't be beat. You can find cheaper products with a lot more filler, or you can find similar quality products at as much as twice the price at local retail stores, but I don't think you can find a better value with the wholesome ingredients that you can get from Jenny Lee Supergreens.

But once again, keep in mind, Jenny Lee Naturals is a fairly small company. So don't be surprised, if after this report gets out they're having some difficulty filling the orders on time. You might have to wait one to two weeks to actually get your order filled. In fact, that can be true for a lot of the companies I mention here in this report.

Summary of Recommendations:

Price	Item	Nutritional Benefits
\$29.95 16oz.	Jenny Lee Supergreens powder	Powerful prevention of chronic disease, including cancer, diabetes, mental disorders, osteoporosis, heart disease, arthritis and many more.
\$116 for 4 bottles	Chlorella Capsules	Outstanding superfood for preventing or treating cancer, diabetes, liver disorders, nervous system disorders and many other chronic diseases.
\$116 for 4 bottles	Spirulina Capsules	Also an outstanding superfoods for beating cancer, diabetes, nervous system disorders, obesity, and even heart disease. Contains trace minerals, phycocyanins that destroy breast cancer tumors, high-quality proteins / amino acids, and an impressive array of phytonutrients.
\$19.95	Jenny Lee A-V Tincture (2 oz.)	Contains powerful combination of anti-viral herbs for beating the flu or surviving the coming influenza pandemic. Significantly boosts immune system defenses, combines the most well-researched anti-viral herbs on the planet: shiitake mushrooms, echinacea, astragalus, garlic, cat's claw, olive leaf, and many more.

The True Story of the Coming Influenza Pandemic

How it may infect 30% of the world's population, and what you can do to survive the outbreak even if there's no vaccine

This section reprints the entire report, "Surviving the Coming Influenza Pandemic," which is available as a separate downloadable ebook at www.TruthPublishing.com.

In the fall of 2004, the World Health Organization (WHO) held a meeting of scientists, researchers, and vaccine manufacturing company representatives. In that meeting, the World Health Organization reached some startling conclusions that many people still have not fully grasped. The organization stated that the next global flu pandemic is fast approaching. There is a strong chance it may become an epidemic as soon as next year, and if that happens, literally 30% of the world's population will become infected with influenza.

The particular influenza strain being watched is the H5N1 bird flu virus. Should an outbreak occur, the total deaths expected around the world, according to the WHO, numbers in the tens of millions of people. Furthermore, the WHO says that **the United States currently has no vaccine to distribute to the population** that might offer protection from this flu epidemic. In their own words, "... the H5N1 strain has demonstrated its capacity to infect humans and cause severe disease, with high fatality, on three separate occasions beginning in 1997. The disease in humans has no vaccine to confer protection and no specific treatment once illness becomes severe."

Source: http://www.who.int/csr/disease/avian_influenza/assessment2004_05_14/en

Even with this clear threat to public safety, the United States currently has no plans to manufacture any vaccine whatsoever. Even if a vaccine theoretically existed, the U.S. doesn't have a system in place to distribute it to citizens. And waiting for the flu pandemic to appear will undoubtedly be too late. "Vaccines and antiviral agents are unlikely to meet demand, even for industrialized countries able to purchase them," explains an investigative medical article entitled, *The Next Influenza Pandemic: Lessons from Hong Kong, 1997* by René Snacken, Alan P. Kendal, Lars R. Haaheim, and John M. Wood, published by the Centers for Disease Control, <http://www.cdc.gov/ncidod/eid/vol5no2/snacken.htm>

It goes on to explain, "Waiting until a pandemic strikes to determine access to [vaccines and medicines] inevitably contributes to inequities in supply for countries lacking facilities to produce antiviral agents or vaccines or lacking resources to competitively purchase supplies at a time of scarcity. The issue of equity cannot be resolved by individual governments or manufacturers."

We should have learned that lesson many times over, but still the vaccine problems persist. The winter of 2004 saw a complete breakdown in the U.S. vaccine infrastructure when the winter flu vaccine experienced a severe shortage because the vaccine manufacturer Chiron was found to be producing contaminated product.

H5N1 avian strain expected to become next viral pandemic

The World Health Organization is to be applauded for its efforts to try to ramp up production of vaccines to protect people from the coming flu pandemic. Despite their best intentions, however, the world isn't ready for such a viral outbreak. Should such an epidemic actually occur soon, millions of people will likely be killed while waiting for vaccines. There simply isn't enough flu vaccine production to go around.

<http://www.newstarget.com/002316.html>

That left the entire country without adequate flu vaccine, creating an instant shortage. Now imagine what would happen if there were truly a global killer flu, an influenza virus that mutated and made the cross-species leap from birds to humans. Imagine that this virus is spreading around the world from city to city, being carried by travelers in airplanes, and then being spread from person to person in those cities through coughing, shaking hands, touching doorknobs or just from being in the same elevator with another person.

Now imagine 30% of the United States population getting infected with this flu. The result would be nothing short of a national crisis. As the World Health Organization explains, "Vaccines, antiviral agents and antibiotics to treat secondary infections will be in short supply and will be unequally distributed. It will take several months before any vaccine becomes available." They also explain, in their own words, that:

- Medical facilities will be overwhelmed.
- Widespread illness may result in sudden and potentially significant shortages of personnel to provide essential community services.
- The effect of influenza on individual communities will be relatively prolonged when compared to other natural disasters, as it is expected that outbreaks will reoccur.

Source: <http://www.who.int/csr/disease/influenza/pandemic/en>

Incredibly, the above description may actually be the good news. A Russian scientist, Dr. Dmitry Lvov, head of the Ivanovsky Virology Institute, estimates that this particular strain of the flu is so aggressive and deadly that as many as **one billion people around the world could die from it**. He estimates that in the United States alone, we could be looking at 700,000 dead. Granted, his estimates may be high, but this man is no stranger to infectious disease. In any case, it does give you an indication of the seriousness of this next global outbreak.

Conventional Medicine Offers No Real Defense

As I have been discussing these points with a few people, I've been met with looks of utter confusion. People tell me things like, "I thought we overcame infectious disease, I thought these flu epidemics were things that just happened in history, they shouldn't happen today, we have modern medicine..." Unfortunately, they are dead wrong about conventional medicine.

Flu pandemic could kill one billion people around the world, say experts

They may be on the high side, but even the World Health Organization now says the next global pandemic is overdue. Furthermore (and perhaps even more importantly), the world is not at all prepared to manufacture and distribute enough vaccines to protect the global population from the coming pandemic. Health officials can't even get flu shots distributed without creating a near-panic in the population. Imagine the fear and confusion that would be created by a killer virus: a flu pandemic.

<http://www.newstarget.com/002331.html>

The world is on the brink of a major flu epidemic — one that could claim more than a billion lives, the head of the Russian Virology Institute, Academician Dmitry Lvov said at a press conference organized by the RIA-Novosti news agency on Thursday.

"Up to one billion people could die around the whole world in six months," Lvov said. The expert did not give a timeframe for the epidemic, but said that it is highly probable that it will start this year. "We are half a step away from a worldwide pandemic catastrophe," the academic said.

The Russian expert said that U.S. researchers possessed data suggesting that if a pandemic hits, up to 700,000 people will fall ill in the United States. He said that the population of the United States can be roughly compared to that of Russia and thus the number of cases will be approximately the same.

The academician said the pandemic was most likely to be caused by the so-called bird flu stem. "The death rate among those who contract this type of flu reaches 70 percent," Lvov said.

The expert called for the Russian authorities to prepare for the epidemic. The country will need a reserve of at least 300,000 hospital beds if an epidemic breaks out, he said.

<http://www.mosnews.com/news/2004/10/28/pandemic.shtml>

As the World Health Organization explains on their site, *“Although health care has improved in the last decades, epidemiological models from the Centers for Disease Control and Prevention, Atlanta, USA project that today a pandemic is likely to result in 2 to 7.4 million deaths globally. In high income countries alone, accounting for 15% of the worlds population, models project a demand for 134 – 233 million outpatient visits and 1.5 – 5.2 million hospital admissions.”* Source: <http://www.who.int/csr/disease/influenza/pandemic/en>

In fact, modern medicine is largely helpless against such outbreaks. Even in recent times, outbreaks have been frequent. And throughout history, they have devastated populations. The 1918 - 1919 Spanish Flu pandemic killed 20,000,000 people around the world. The 1956 Asian Flu pandemic killed hundreds of thousands. In 2002 - 2003, SARS very nearly became a global pandemic, and it killed an astounding 10% of those infected. Today, all eyes are on the avian flu virus H5N1, which was first detected in pigs in Vietnam in February, 2004. And the people who study infectious disease know the next pandemic is right around the corner. “During the last few years, the world has faced several threats with pandemic potential, making the occurrence of the next pandemic just a matter of time.” - the World Health Organization (<http://www.who.int/csr/disease/influenza/pandemic/en>)

For a fascinating look at the full chronology of the H5N1 avian influenza, as published by the World Health Organization, visit http://www.who.int/csr/disease/avian_influenza/chronology/en

Primed for Infectious Disease

Historically speaking, we're overdue for the next outbreak. In many ways, the world today is even more conducive to the spread of these dangerous viruses than in times past. Today we have higher population density than ever before, which means the virus can spread more easily from one person to the next. Today, we have faster global travel than ever before, meaning the virus can jump from city to city in a matter of hours.

“Given the high level of global traffic, the pandemic virus may spread rapidly, leaving little or no time to prepare.” - the World Health Organization, <http://www.who.int/csr/disease/influenza/pandemic/en>

On top of that, we have a medical system that is actually breeding superbugs in hospitals where antibiotics abuse encourages the mutation of extremely aggressive infectious strains with innate immunity to every known antibiotic.

Simultaneously, we have bizarre animal feeding habits where cows are being fed chicken litter (containing chicken dung and feathers). We have cows being fed the ground up remains of other cows and animals, including spinal cord tissue and brain tissue, and thus we're creating an environment for the rapid mutation and distribution of aggressive viral strains. This is partly what's causing mad cow disease to be such a concern, and it could play a hand in the next global pandemic.

Northeastern University professor lays out the truth about mad cow disease: it may be in your freezer

Here's a must read article on mad cow disease. It focuses on the comments from a professor at Northeastern University who says that contaminated beef is right now sitting in grocery stores and personal freezers all across the country. He goes on to state that the reason the beef and cattle industries are fighting so hard against mad cow testing other animals is because they know that many more animals are affected, and is simply don't want to be faced with the reality of finding that out!

<http://www.newstarget.com/000733.html>

Today we have all the conditions to foster a global outbreak. And yet we have virtually no defense against it: no vaccines, no vaccine distribution system, and no policies to decide who gets vaccines and who doesn't. The only thing that's missing is the virus itself; and in fact, it already exists as well. It's the influenza A (H5N1) strain right now living in pigs and birds in Southeast Asia. Should it make the jump to humans, it may very well become the next global pandemic. It is not an exaggeration to say that millions would die from it. The Centers for Disease Control and the World Health Organization are saying exactly the same thing. Check the headlines yourself at <http://www.newstarget.com/pandemic.html>.

Much the same is also being stated by one of the world's leading experts on influenza: Dr. Robert G. Webster, a member of the Infectious Diseases department of St. Jude and co-author of the Nov. 28, 2003 article about influenza published in the journal Science. You can see some of Dr. Webster's credentials at http://www.stjude.org/faculty/0,2512,407_2030_3957,00.html.

As Dr. Webster explains, "If an influenza pandemic started tomorrow, we would not be able to head it off with vaccines because the production facilities available to produce them are grossly inadequate." He also mirrors the preparedness assessment offered by the World Health Organization. Namely, that neither the United States nor the world is prepared for a flu pandemic. "In the face of a pandemic, the available supplies of antiviral drugs would be used up in days," he says. "It would take up to 18 months to make more drugs from scratch. Stockpiling is the only answer."

Take Charge of Your Own Defense

All this leads to the humbling realization that anyone who wishes to prepare for the coming flu pandemic is going to have to take charge and stop relying on their governments to save them. So what's a person to do?

I asked myself the very same question. To find the answers, I searched through over 400 books written by some of the most respected doctors, physicians, naturopaths and authors in the natural health community. And in each book, I pulled out passages relating to antiviral herbs, vitamins, minerals and other nutrients. This resulted in 500 pages of citations from these 400 books, or a little over one page from each book, on average. What I ended up with was an authoritative list of the most powerful nutrients for fighting viral infections. (The full list, with detailed explanations, is included in the book "The Flu Solution" available at www.TruthPublishing.com.)

Through this research, I was able to document the astounding antiviral capabilities of all varieties of medicinal herbs, including rainforest herbs, Chinese medicine herbs and Western herbs. These herbs have such strong antiviral effects that they have even been described as stronger than antiviral prescription drugs. When used synergistically, they provide a full-spectrum antiviral defense for the human body, meaning they help you overcome all varieties of viral infections, including influenza H5N1.

The Top Twelve Herbs

From this research, I narrowed the list down to twelve of the most powerful antiviral herbs I could find. These are the “Big Twelve” as I call them. They’re the most well-documented, the most clinically proven, the most aggressive antiviral herbs known to the natural health community. Then I said to myself, “People need a tincture made with these twelve herbs.” So I searched the internet trying to find if there was such a product, thinking I’d be recommending it to people. I couldn’t find one. Nothing like this existed. There was no product that combined the top twelve herbs in a powerful antiviral tincture that could help people not only avoid the flu, but even survive the coming flu pandemic.

One Source Agrees to Manufacture It

So I put the word out to a few of my contacts -- people I know in the industry from doing what I do -- and I asked, “Who wants to manufacture this? Because if you are willing to manufacture this herbal tincture, I would love to mention it to people and help get this into peoples’ hands.” The answer came back from a company I’ve been recommending for quite some time, and that’s Jenny Lee Naturals (www.JennyLeeNaturals.com). They said, yes, they’d be willing to manufacture this product and attempt to meet whatever demand exists for it, and they decided to call it Jenny Lee A-V tincture, which stands for ‘Anti-Viral.’

As a result, this product is now available. It’s in a 2-oz. tincture. It is a very potent tincture (taste it yourself to see what I mean) that uses a tremendous quantity of these herbs to make what I consider to be the single most powerful antiviral natural medicine available anywhere in the world. I don’t think there’s any herbal combination that comes close to the ability of this product to protect you against viral infections. And by the way, as it turns out, most of the ingredients in this tincture also have very strong, well documented anti-cancer properties, so this exact same tincture could even be sold as an anti-cancer or cancer prevention tincture. I’ll describe the exact ingredients below. (Remember, too, that you can buy the bulk herbs yourself and make this tincture on your own. The recipe is no secret, I list the ingredients right here.)

(By the way, as always, I must remind you that I have no financial involvement with Jenny Lee Naturals or the sale of this product. I don’t earn a dime. Whether you purchase this product or not is entirely up to you. It won’t impact my bottom line either way.)

What This Product Can Do

Now remember, the company making the product, Jenny Lee, can’t really tell you anything about it. This is true for all nutritional supplement manufacturers, thanks to the suppression of accurate product descriptions by the FDA (which doesn’t want you to know how to treat disease with herbs, for one thing). So don’t expect Jenny Lee to tell you what this product does. But I’ll do it instead.

This product will greatly boost your immune system function. It will offer you the strongest protection that I know of against viral infections. It can be used to treat existing viral infections that you may have, including HIV, cold sores, influenza or other viral diseases. But most importantly, this is a product that can literally save your life if we see this global pandemic become a reality. It doesn’t mean this product is a magic bullet that’s absolutely going to save your life. Because if you don’t support your immune system by changing your lifestyle to get healthier, then you’re going to have

reduced odds of success. In other words, if you continue to smoke cigarettes, eat fried foods, avoid physical exercise, avoiding taking vitamin D supplements, avoid getting natural sunlight on your skin, if you spend most of your time under fluorescent lights or breathing toxic fumes during a long commute, or you have a high stress environment, then all of those things are going to suppress your immune system and there's no medicine in the world that can cure you of influenza. To beat the flu pandemic, you have to get plenty of water, you must get adequate levels of sleep, you need to radically alter your diet, shift to healthier foods, give up unhealthy habits like drinking coffee, smoking cigarettes, drinking large amounts of alcohol, breathing secondhand smoke and so on. All these things affect your outcome.

But even if you have a poor lifestyle, a product like this Jenny Lee A-V tincture will still enhance your odds of resisting the flu and surviving it. So even if you are smoking cigarettes, eating pizza and chowing down on fried foods all the time, at least a product like this can increase your odds, but it's not a replacement for being a wise consumer. So I hope I'm making myself clear on this: don't look at this product or any product out there as a miracle cure, especially if you continue to pursue unhealthy lifestyle habits. But if you want an ally in the battle to resist the flu and survive the flu pandemic, this is an excellent choice. If you don't buy it from Jenny Lee Naturals, then at least, for your own sake, buy some of the bulk herbs and make your own tincture. (Recipe below.)

You Can Taste the Potency

Let me warn you up front, this is not a delicious tincture. This is not some candy being disguised as medicine. This stuff tastes pretty awful and if you think about what's in it, you'll understand why. There are some rather bitter-tasting herbs in there. But it is in fact the taste that lets you know this is the real thing. Because if you buy some herbal tincture that tastes sweet, or it just doesn't taste very strong, then chances are you've purchased a product that's highly diluted (a lot of cheap herbal tincture products are like that). Real herbal tinctures with medicinal value have a strong taste. They are usually extremely bitter. They should make your face go into all sorts of bizarre contortions. That's how you know you're getting a potent herbal tincture, and that is definitely the case with this Jenny Lee A-V product.

I've tasted it myself and at that moment I made myself a promise that I would never use it again unless I was around people who were infected with the flu, or if there were a global flu pandemic and I wanted to have the best possible defense against that pandemic. This is definitely not a product you want to be using on a daily basis. This is not some vitamin supplement. You don't need these herbs every single day unless you're fighting the flu or battling cancer.

The other thing to know about this product is that you shouldn't take it if you're pregnant or if you are expecting to become pregnant. Some of these herbs are contraindicated with pregnancy. One of the ingredients, St. John's Wort, is also known to interact with various prescription drugs, so if you plan to take this product, this is something you should definitely discuss with your doctor to make sure it is aligned with whatever health strategy you are currently pursuing. In particular, St. John's Wort can interfere with various heart drugs and reduce their effectiveness. So prescription drug dosages may need to be modified when taking this product.

Don't Wait Until the Pandemic Strikes to Prepare

By the way, if you're reading this and the global flu pandemic has not yet become a genuine outbreak, then you still have a chance to get these products. They have an extended shelf-life -- several years if you refrigerate them -- meaning that you can buy them now, put them in your fridge and use them years later with the same medicinal effect. And why should you buy them now? Because this report is being shared freely with readers around the world, and experience tells me that when people get their hands on this information, they're going to forward it to their family and friends and coworkers, and this is going to wind up being downloaded and read by a very large number of people, probably a few hundred thousand (and that's BEFORE there's a flu pandemic).

"In the face of a pandemic, the available supplies of antiviral drugs would be used up in days. It would take up to 18 months to make more drugs from scratch. Stockpiling is the only answer."

- Dr. Robert G. Webster, member, the Infectious Diseases department of St. Jude

Most of those people are going to wait around and do nothing about the flu pandemic until it hits. They won't modify their lifestyle, they won't boost their own immune system function, and they won't order products that can defend against the flu until the day this epidemic really hits. One of these days there will be a news headline in USA Today or some other national newspaper that says "Global flu epidemic strikes USA!" -- and it will be talked about on the news, in all the newspapers, and all over the internet. You'll hear that people are getting sick and dying from this flu pandemic and, oh, the U.S. government didn't do anything to prepare for it, and gee, there's not enough vaccine to go around. I can hear the useless chatter already.

Most People Will Wait Until It's Too Late

That's the day when it's too late to order this product, because I can absolutely guarantee that, given human nature and the way people think, 99% of the population will wait until that day to do something about it. On that day people are going to call up Jenny Lee Naturals and they're going to start ordering 20 or 30 bottles at a time, and Jenny Lee Naturals is going to run out of product in a matter of hours. Even with their best efforts, they won't be able to manufacture enough product to meet the skyrocketing demand as people suddenly become aware that this pandemic is real, and they suddenly want to be saved from it, because none of them actually did anything to enhance their immune system function. They kept on suppressing their body's defenses by eating unhealthy foods and following unhealthy habits. Now all of a sudden the pandemic has hit and they are scared... they want something to protect them and they're going to buy it in large quantities, foolishly thinking they can buy their way out of a personal health crisis.

That's human nature, that's the way people think. And if you wait until that day, you're probably going to find yourself at the end of a long waiting list. So then what will you do? You'll go out to the health food store thinking, well, I'm going to buy up all these ingredients myself, and you'll find that, strangely enough, all of these key antiviral ingredients are already wiped out of stock at the local health food store. So you'll say, well, gee, I'll go online and I'll find an herbal store or some kind of vitamin store and I'll order these products there. So you do that, and sure enough they take your order and charge your credit card. You think you're all set until, a few hours later, you get an email that says "All the items you ordered are out of stock, please wait 4 to 6 weeks for delivery." You're thinking, "I need this stuff TODAY, not in four to six weeks!"

It's at that point that you're going to realize you're too late, and you're going to get desperate. What I'm saying here is don't get caught with your pants down in this situation. Don't be the last person to realize that something needs to be done. Don't join the masses who are ignoring this problem and then, all of a sudden one day, getting panicked because it's showed up on the evening news and now they realize they really, truly might be killed by this virus if they don't get some protection.

The Government Won't Save You

And for goodness sake, don't trust the U.S. government to do anything about this. As usual, the bureaucrats are bumbling around doing absolutely nothing useful for the public. There will be no vaccine distribution system in place that's sufficient to reach the entire population. Some people are going to have no vaccine whatsoever, no question about it. The vaccine, if it even exists at all, will be rationed. There will be extremely limited supplies. The elderly will probably get it first, followed by young children. Most adults are unlikely to get any vaccine whatsoever. And all the while the government is going to be making public statements saying that it is doing everything in its power to protect the public from the flu pandemic. Of course, it will all be hogwash, because if they were doing everything in their power, they'd be doing something today to put such a system in place and there wouldn't be a vaccine crisis in the first place. But just like the population, the government doesn't like to plan ahead.

"Vaccines and antiviral agents are unlikely to meet demand, even for industrialized countries able to purchase them."

The Next Influenza Pandemic: Lessons from Hong Kong, 1997, published by the Centers for Disease Control, <http://www.cdc.gov/ncidod/eid/vol5no2/snacken.htm>

The bottom line to all this is that I recommend you get this product right now. Get a couple of bottles for yourself, and if you have family members, you might want a few extra for them, too. Make sure you have enough of this in your house so that if this global flu pandemic strikes, you are well protected. At the same time, if you do manage to catch a cold at any time of the year, you can use this product to help get over that cold far more quickly. And it's important to take immediately when you start to feel symptoms. If you get a sore throat, start to get a stuffy nose, or aches and pains in your muscles and joints, then start taking this product. It will help you overcome that cold or flu far more quickly. Of course, I recommend you also take lots of zinc and vitamin C at the same time because those are the top two vitamins and minerals for overcoming viral infections. If you combine vitamin C and zinc with this tincture you're going to get the most powerful viral protection available anywhere in the world. Of course, always visit a qualified medical professional (preferably a naturopath) who can help you overcome the infection without turning to dangerous drugs or toxic procedures.

Ingredients of Jenny Lee Naturals A-V Tincture

Here's the recipe of the "Big Twelve" antiviral herbs identified through the research:

- Echinacea
- Astragalus
- Cat's Claw
- St. John's Wort
- Olive Leaves
- Licorice
- Ginger
- Lemon Balm
- Garlic
- Shiitake Mushrooms
- Onion
- Green Tea

<http://www.JennyLeeNaturals.com>

As you can see, this list is a combination of Amazon herbs, Chinese herbs, Japanese mushrooms and Western herbs.

If you don't want to buy the tincture, you can make it yourself by buying the bulk herbs and soaking them in strong vodka for several weeks (the longer, the better), then straining out the liquid. If you can't get all twelve herbs, get what you can and make the tincture from that. Even if you only have 2-3 herbs, it's still better than nothing. You can get bulk herbs at Herbal Advantage (www.HerbalAdvantage.com), local health food stores, or by visiting a local herbalist (either Chinese or Western). They may even have their own additions to the formula, based on their own experience.

Another great source for antiviral herbs and tinctures is Michael Tierra's "Planetary Formulas," found at <http://www.planetherbs.com>.

Once you have a tincture, store it in a dark place to avoid light damage. Inside your refrigerator is a great place to store them.

To learn more about how to beat the flu and survive the coming flu pandemic, check out "*The Flu Solution*" at www.TruthPublishing.com. The Flu Solution lists the top herbs, vitamins, minerals, foods and antiviral products that can literally help save your life. Plus, the book offers straightforward advice on boosting your immune system function so that you never get flu symptoms in the first place. It also provides a three-stage strategy for defending against the flu or conquering it once symptoms appear. The book is available as an instant download (PDF file, which you can read with Adobe Acrobat reader).

Secret Source #3: Walton Feed

Secret source #3 is a company called Walton Feed. Visit their web site at <http://www.waltonfeed.com>. I have been using Walton Feed for many years. I learned about this company years ago when I was helping people with preparedness and nutrition. Walton Feed is absolutely the best source for affordable “healing foods” such as whole grains and quinoa. At Walton Feed, you can feed yourself and your family at a fraction of the price you’ve been spending at the grocery store. Let me give you several examples:

Flax

You can get 7 lbs of quinoa for \$15 at Walton Feed. Likewise, you can get flax seeds for less than \$1 per pound. Stop for a minute and think about how amazing that price is. When you go to the grocery store, you probably spend \$5 per pound for flax seeds. I have seen stores that charge \$8-\$10 per pound. The fair market price on flax seeds is really only about \$1 per pound, and that’s what you pay at Walton Feed. So stop spending your money like water on healthy products from places that are charging an arm and a leg. Buy healthy products in bulk (and in plain packaging) from places like Walton Feed. You’ll have all the flax seeds you need to keep you fit and promote cardiovascular health.

Oats

You can also buy oat groats from Walton Feed. For those of you who don’t know what they are, oat groats are what oatmeal was before it got rolled into a flat shape. Oat groats are the way oats should be eaten -- as whole grain oats. If you boil oat groats as a cereal, you’ll find out what oatmeal is really supposed to be. Common instant oatmeal that you find in grocery stores isn’t really true oatmeal. It’s a processed form of oatmeal with lower nutritional value. Eat oat groats if you want the real thing and buy them from Walton Feed.

If you want to make healthy oatmeal, take some oat groats, boil them and add a couple of spoonfuls of oat bran. You’ll get a high fiber, high bran, oatmeal-like cereal, but with a lower glycemic index than typical oatmeal, which is important for stabilizing blood sugar levels.

Oat bran is an excellent source of fiber. Some qualified health claims now say that oat bran reduces the risk of cardiovascular disease. But the real claim should be that oat bran provides the insoluble fiber most people are missing in their diets. At Walton Feed you can get oat bran for just over \$2 per pound, and that’s for *organic* oat bran. If you go to grocery stores or health food stores, oat bran can cost you four or five times that much. Get oat bran from Walton Feed for just a couple of dollars a pound and save yourself a fortune.

(Wheat bran is another product you can get from Walton Feed. It has the same function as oat bran, but as you guessed, it’s derived from wheat.)

Wholesome Grains

How about some ancient grains, also known as healthy grains? Buckwheat, available in bulk at Walton Feed, is the number one grain for people who are diabetic because it has a very low glycemic index. You can also buy kamut, millet, spelt and barley at a fraction of the price you'd pay in any local retail store. Walton Feed prices simply can't be beat.

Are you looking for some healthy organic brown rice? If you like to eat rice, brown rice is the only type you should be eating. Walton Feed sells a six-pound bag of brown rice for \$11 -- an incredible deal. Check the price of brown rice at your grocery store. You will find that prices are three or four times that much for brown rice. Only fools buy whole grains and rice products at grocery stores. Smart consumers who want to be healthy and save money buy grains in bulk, in plain packaging, from places like Walton Feed. Again, you can't beat \$11 for 6 pounds of brown rice.

As an added benefit, Walton Feed offers grains and seeds in #10 cans. Insects and mice can't get into these grains because they aren't held in wimpy plastic bags. The grains and seeds that are shipped in #10 cans are sealed for long-term storage. That's right; your grains won't go bad! You can store the cans for five or even ten years, pull them off the shelf and eat the food stored inside. Not only is buying canned grains and seeds good for saving money, it's also a great idea to have some healthy organic foods standing by for preparedness purposes. When there's a rainy day, an ice storm or a power outage, you'll need some backup food. The world is full of unexpected events.

Eating buckwheat lowers blood glucose in diabetics

Diabetes is primarily a disease induced by food choice. Consuming soft drinks, refined white sugar, white flour, cookies, cakes and other products causes diabetes. Now it turns out you can eat something to help control it. Buckwheat, researchers have found, controls blood sugar. This isn't new -- holistic nutritionists have known this for a long time -- but it's new to see it in the mainstream news.

<http://www.newstarget.com/000134.html>

Real Salt

Another item you can get from Walton Feed is *real salt*. "Real salt" implies an opposition to fake salt -- and that's true. The salt you buy at the grocery store is synthetic salt. Sodium chloride is not salt, folks! Real salt comes from the ocean. It has dozens of minerals and trace minerals in it. If you're salting your food with salt from the grocery store, you're giving yourself hypertension and heart disease. You should be using real salt instead. You can purchase 9 pounds of real salt from Walton Feed for \$30. That's enough salt to last a very long time. Even if you eat a lot of salt, 9 pounds goes a long way! You'll find that \$30 is the best price you can find on the internet.

Caution

Just as I mentioned previously with *Emergency Essentials*, there are many products you should avoid from this secret source, Walton Feed. Please avoid all meal ready-to-eat (MRE) products and food mixes like powdered fruit drinks and boxed dinners. You should also avoid all milk, butter, margarine, shortening and sugar products. Products such as their pancake mixes are loaded with sugars and white flour, and you certainly don't want those in your diet. Don't buy products just because they are from Walton Feed. Do order quinoa, flax seeds, whole grains, ancient grains, pearled barley, brown rice and so on. These are the products that should be part of your health-enhancing diet and can help you save a fortune on groceries.

Summary of Recommendations:

Price	Item	Nutritional Benefits
\$15.10	Quinoa (organic) 88 oz. #10 can	A near-perfect grain: high in protein and fiber, easy to cook. Used by the Incas for centuries.
\$5.95	Flax 76 oz. in #10 can	Flax seeds contain heart-healthy omega-3 fatty acids shown to prevent cardiovascular disease. You can grind flax seeds in a regular coffee grinder just before sprinkling them on cereals or other foods.
\$6.15	Oat groats 85 oz. in #10 can	Excellent source of complex carbohydrates and fiber. Boil oat groats to make a real oat meal (they're not easy to chew, however, so be warned).
\$8.25	Oat bran fine (organic) 57 oz. in #10 can	Excellent source of fiber, helps prevent cardiovascular disease, reduces effective glycemic index of foods eaten, helps prevent colon cancer. Can use together with oat groats to make a high-fiber oatmeal.
\$10.50	Buckwheat hulled (organic) 85 oz. in #10 can	An excellent, high-fiber grain with a remarkably low glycemic index, making it ideal for diabetics.
\$7.95	Kamut (organic) 85 oz. #10 can	An ancient grain, one of the ingredients in the popular "Kashi" whole grain product.
\$6.65	Millet hulled (organic) 84 oz. #10 can	Another ancient grain with a small grain size. Like the other grains here, it can be ground up and used as flour, or boiled whole.
\$8.65	Spelt (organic) 85 oz. in #10 can	An ancient grain and excellent replacement for wheat. Spelt has (slightly) more protein than most varieties of wheat. Can be boiled and eaten in its whole grain form.
\$10.50	Brown rice (organic) 84 oz. in #10 can	A healthy, high-fiber rice that serves as a replacement for disease-promoting "instant rice" or "white rice."
\$4.55	Pearled barley 92 oz. #10 can	Great for diabetics: a complex carbohydrate and good source of fiber. Barley also helps cleanse the kidneys and stabilize blood sugar.
\$30.45	Real Salt 128 oz. #10 can	Real salt from the ocean, with complex minerals and trace minerals.

Tips for dealing with Walton Feed

The company doesn't necessarily like to be widely known. They even seem to go to great lengths to hide their shopping cart on their website, making it difficult for people to find. While the company has always been 100% fair and honest in dealing with me, don't be in a huge hurry or get pushy with this company. Because their product pricing is so good, they have the luxury of choosing who they want to deal with, and if you give them a difficult time, they'll just tell you to go somewhere else.

As this report gets more widely distributed, you can expect order fulfillment times at Walton Feed to exceed two weeks. This is to be expected. *Be nice to these folks*. They're performing a wonderful public service in making healthy foods so affordable (and in helping people prepare with long-term storable foods, too).

Where to Order: <http://waltonfeed.com/cart/all.html>

Secret Source #4: Amazon Herb Co.

Secret Source #4 is a wonderful company called the Amazon Herb Co. It sells what may very well be some of the most medicinally useful herbs in the world: rainforest herbs. These include herbs like Cat's Claw, Chanca Piedra, Sangre de Drago, and many others.

But these aren't just "standard" rainforest herbs, either. These are the most medicinally powerful herbs I've ever tasted. When I first learned about Amazon Herb products, I ordered a few for myself, including an 8 oz. bottle of Recovazon, a product that helps speed recovery from heavy physical exertion. It claimed to be a liquid extract of a variety of rainforest herbs. Before I tasted the product, I said to myself, "Yeah, sure, this is going to taste like water because it's probably 99% water." Boy was I wrong! One sip told me the truth: **these liquids are as concentrated as most "tinctures" you buy at the health food store for \$20 / oz.** In other words, this 8 oz. liquid contained the same concentration of herbs that could have easily cost \$160 if I had purchased them as tinctures from another company. And yet the Amazon Herb prices were quite reasonable -- just a fraction of that \$160.

Amazon Herb products are based on truly miraculous medicinal herbs. It's no exaggeration to say that these herbs can prevent and even reverse chronic diseases like cancer, heart disease and diabetes. The anti-cancer ability of these herbs is far superior to chemotherapy, yet without the negative side effects of chemo. The ability of these herbs to prevent heart disease and other cardiovascular disorders is truly stunning. And their use as detoxifying agents that cleanse the human body of dietary and environmental pollutants is quite simply unmatched.

Uniquely Prepared for Maximum Potency

Another thing I really like about the Amazon Herb products is that they are harvested and prepared in a traditional, sacred manner that honors these herbs as gifts from nature. This is important, because the energy and attitude that goes into harvesting herbs is transmitted to you when you consume them. Call it a homeopathic influence, if you want, but the truth is that the emotions and intentions of the people producing these products really do have an impact on your health. For example, if you buy herbs and vitamins from companies that are primarily interested in greed and profit, you won't get near the health benefit from the same ingredients provided by a company that

hires passionate, loving wildcrafters who honor the plants for their gifts. It may sound a bit “out there,” but it’s absolutely true: energy and intention really matters.

The Amazon Herb Co. goes even further and uses what they call a spagyric process for transferring the healing power of the harvested herbs into a consumable product. First, the plants are soaked in natural solvents (water and grain alcohol) to extract their medicinal compounds. Next, the herbs are composted to form an alkaline ash, which is recombined back into the product solution. So nothing gets thrown away, and the full energy of the original plant is reconstituted back into the liquid or capsules that customers purchase. This spagyric process, which is only practiced by a few companies around the world, may help explain why I have personally found these Amazon Herb products to be so potent and medicinally valuable.

These herbs are so powerful that if I had a family member who was diagnosed with cancer, for example, I would immediately send them a combination of products from Amazon Herb Co., including Cat’s Claw (Una de Gato) and Gravizon. I would explain that chemotherapy is extremely toxic, that cancer surgery is all but useless, and that the only way to survive cancer in the long term is to support their body’s innate ability to heal itself. I’d beg them to start taking these herbs, and if they did, they would stand a much greater chance of surviving their cancer and going on to live a healthy life. Of course, they’d have to make radical lifestyle changes, too, so they didn’t continue giving themselves cancer, but that’s another book.

The Right Ethics from an Herbal Product Company

It’s hard to find a company with stronger creative intention than the Amazon Herb Co. This company has the right ethics: instead of going into a rainforest area and clear-cutting it to make room for cattle ranching (like some greedy corporate CEOs would try to do), this company, headed by “Amazon” John Easterling, shows indigenous populations how to profit from the gifts provided by the rainforest itself. Essentially, Amazon John believes that the rainforest is “more valuable alive than dead,” and I agree with him. You can support his philosophy and the economic sustainability of the rainforest by becoming a regular customer of the Amazon Herb Company. I’ve been one for months, and I love this company!

Frankly, if I wasn’t writing about this company, I’d get involved myself and promote their products as a distributor. But I can’t, since part of my job is to remain 100% neutral and to receive absolutely no financial benefit from the companies and products I recommend. So I can reveal right here that I am not a distributor for the Amazon Herb Co., and I receive no financial benefit from any products you purchase from them. I recommend this company because I know the products can help people overcome chronic disease, and because I applaud this company’s approach to honoring the herbal gifts provided by nature.

Official nutritional information for cancer patients offers wimpy advice; here’s how to really prevent and even reverse cancer

It’s laudable when people with cancer decide to get serious about nutrition and avoid cancer-causing foods. When people avoid red meat, stop eating all hydrogenated oils, and give up soft drinks for life, they’re obviously going to have a lower risk of cancer. But the “official” advice on how to avoid cancer is purposely wimpy: it’s just enough advice to keep people in limbo so that they stand a good chance of getting cancer again down the road.

<http://www.chemotherapynews.com/001483.html>

The Secret Truth That the Amazon Herb Co. Can't Tell You About its Own Products

As usual, the company can't tell the truth about its own herbal products due to the campaign of suppression by the highly corrupt FDA, which now seeks to outlaw all nutritional supplements and even criminalize senior citizens who buy drugs from Canada. (Read my articles about the FDA at: http://www.newstarget.com/the_fda.html)

Thankfully, Free Speech remains intact in this country, and that allows me -- as an independent researcher and author -- to tell you the truth about Amazon Herbs and what they can do for you.

So here's the straight truth about a few of the best products at the Amazon Herb company:

Product	The Truth About What It Does, According to the Informed Opinions of Mike Adams
Una de Gato (Cat's Claw) <i>Anti-cancer</i>	The most powerful anti-cancer, immune-boosting, and digestive cleansing herb from the rainforest. This herb is a true miracle. I'll bet the drug companies wish they could patent the chemicals in this herb, because the benefits would be front page news all around the world. If you have cancer, or you're trying not to get cancer, buy this product from Amazon Herb Co. and take it regularly. It also alleviates high blood pressure and protects against colds.
Arcozon <i>Immune boost, especially good for those fighting cancer, viral infections or other immune system challenges</i>	Boosts your immune system, defends against cancer, enhances adaptogenic response, accelerates skin healing, and even contains Pau D'Arco, a powerful cancer fighter.
Calmazon <i>Calms the body and mind</i>	Relaxes your system, helps you get to sleep more quickly, calms your mind, suppresses the production of stress hormones like cortisol.
Envirozon <i>Detoxifies your body, boosts liver function, recommended for anyone who eats the Standard American Diet (fried foods, hydrogenated oils, etc.)</i>	Detoxifies your system, removes heavy metals, cleanses liver and kidneys, and even helps you recover from serious illnesses. Contains Boldo, a powerful liver cleanser. Also contains Jurubeba, which stimulates healthy liver function.
Gravizon <i>Powerful cancer fighter, much stronger than chemotherapy, with zero negative side effects</i>	Powerful anti-cancer product. The phytochemicals in graviola target and destroy cancer cells much better than chemotherapy, without the negative side effects or the sky-high cost. Drug companies actually tried to steal the phytochemicals from graviola and patent their own anti-cancer medicines from it.
Metabazon <i>Strongly recommended for type-II diabetics and hypoglycemics</i>	Excellent for diabetics, this product stabilizes blood sugar levels and supports healthy pancreas and liver function. One of its key ingredients, Pedra Hume Caa, is known as "vegetable insulin" for its ability to lower blood sugar levels.
Lunazon <i>Women's health, hormone balance</i>	Balances monthly hormone levels for women. Can really work miracles in eliminating cramps, mood swings, etc.
Recovazon <i>Accelerates healing and recovery from physical stresses, great for people who exercise or strength train</i>	One of my personal favorites (because I train so hard), this product reduces joint pain and muscle soreness, aids in recovery from strenuous activities, and even helps sprains and other minor injuries heal more quickly. It also contains several blood purifying herbs such as Sarsaparilla and Manaca. I recommend this product strongly for strength trainers.
Sangre de Drago <i>Antioxidant + wound healing, excellent first aid product</i>	Powerful antioxidant and anti-parasitic product. Enhances skin health and the healing of minor skin wounds. Also shows benefits for cardiovascular health due to antioxidant content.

Shipibo Matte Tea <i>Weight loss</i>	I drink this stuff all the time. It's a great aid to weight control or weight loss if you're overweight. The Mate is a metabolic booster without the caffeine jitters of green tea or other stimulants. It also has antioxidant properties that help boost immune system function.
Warrior <i>Sexual energy & vitality, mental energy</i>	It's sort of like rainforest Viagra, but far better for you. It boosts vitality, energy, sexual performance, mental focus, and even helps with emotional stability.
Illumination <i>All in one formula (anti-viral, anti-cancer, accelerated wound healing, blood sugar regulating, detoxifying, immune boosting, joint health, etc.)</i>	If you're looking for just one Amazon Herb product that offers the most medicinal plants in one formula, this is it. Illumination has ingredients that fight cancer, dissolve kidney stones, regulate blood sugar, enhance joint health, boost immune system function, defend against infections, boost cardiovascular health, improve mental function, improve physical endurance and much more.
Shipibo Treasure Tea <i>Kidney stones, stamina, anti-cancer, pain relief</i>	If I had kidney stones, I'd be drinking this tea twice a day. In addition to Chanca Piedra, this formula also contains medicinal herbs that boost cardiovascular stamina and immune system function, thereby allowing your body to more easily overcome cancer and other immune-related disorders. It also contains Chuchuhuasi, which is known for alleviating back pain and joint pain.
Sumacazon <i>Rejuvenation, energy, stamina, endurance</i>	This formula is based on the Suma plant which is an adaptogen as well as a nerve tension reliever.
Fiberzon <i>Healthy digestion and elimination</i>	This is a fantastic fiber supplement that contains the most powerful digestive-boosting herbs I've ever seen in a single formula. If you're suffering from constipation or gastrointestinal disorders, you owe it to yourself to investigate Fiberzon. It contains Una de Gato, Sangre de Drago, Boldo, Jatoba and a dozen other helpful ingredients, including psyllium husk, fenugreek seed (anti-parasite), oat bran and flax seed. High recommended as a fiber supplement.
Kavazon <i>Calming</i>	Based on kava, a medicinal herb that has been traditionally used for its calming effects, Kavazon alleviates anxiety, soothes the nervous system and calms the body and mind. The FDA can't wait to outlaw kava, though, so if you want some Kavazon, better order it quick. (The FDA attempts to discredit all herbs because they compete with profitable prescription drugs.)

(You can order these products at <http://www.amazondreams.amazonherb.net>)

The only product I don't recommend from the Amazon Herb Co. is called "ChocaMaca" because it contains sugar (dehydrated cane juice). Otherwise, it's an excellent product offering real rainforest chocolate (theobromine cacao) as well as maca, an herb often used in weight loss formulas.

So Which Amazon Herb Products Should I Get?

Here's a simplified list of the products I recommend based on your current health challenges. (These recommendations are based on researching the health effects of key ingredients in each of these herbal formulas. Once again, don't self-diagnose. Work with a naturopathic physician when attempting to treat diseases. Nothing in this book should be taken as medical advice of any kind.)

Cancer:

- Gravizon
- Una de Gato
- Illumination

Diabetes:

- Metabazon

Heart disease:

- Illumination

Infections, colds, the flu, or a global viral outbreak

- Illumination
- Arcozon
- Una de Gato

Injuries, muscle aches, soreness, etc.

- Recovazon
- Sumacazon

Sluggish liver, kidneys, pancreas, or for people who eat fried foods, processed foods, junk food, etc.

- Envirozon

Digestive disorders (constipation, IBS, Chron's disease, etc.)

- Fiberzon

Chronic stress

- Kavazon
- Calmazon

Weight loss

- Shipibo Matte Tea

Kidney stones

- Illumination
- Shipibo Treasure Tea

I firmly believe that if the entire population would use these products, even in low doses, we'd see cancer, heart disease and other chronic diseases virtually eliminated. These products are, indeed, that powerful. We could save literally *hundreds of billions of dollars* on medical costs and lost productivity in this nation if people would avail themselves of these healing rainforest herbs. And yet these herbs largely remain a secret, thanks to the suppression of the FDA and conventional medicine's ongoing effort to discredit all herbs and nutritional supplements.

Even Simpler

If the above list is too complicated, there's one product from Amazon Herb Co. that does it all: **Illumination**. It combines the best ingredients from several different recipes to create an herbal powerhouse for healing. It's excellent for cancer, diabetes, heart disease, nervous system disorders, digestive disorders, kidney stones, detoxification and much more. In fact, this is the product I recommend the most because the other products are often too complicated for people. They just want one single product that does it all. Illumination is exactly what they've been looking for.

Ordering Amazon Herbs

I have no involvement whatsoever with the Amazon Herb company, and I earn no money from your purchase of these products. As with all products I recommend, I do not financially benefit from my own recommendations.

But I do have a contact I recommend. She's not only a warm, well-informed and passionate believer in rainforest herbs, she's also contractually agreed to donate 50% of her revenues from these orders to international charities that help children and suppressed populations around the world. Her name is Terry Pezzi, and by ordering Amazon Herb products through Terry, you'll pay the exact same price you'd be paying everywhere else, yet at the same time, you'll be helping support much-needed international charities that are doing good work. Here's how to reach Terry:

Phone: (520) 247-1700

Toll-free USA: 1-866-693-8622

Email: amazondreams@amazonherb.net

Website: <http://www.amazondreams.amazonherb.net>

Amazon Herb ID# 95284

Feel free to contact Terry with any product questions you might have, but remember that she cannot provide medical advice, and since she's financially involved with the products mentioned here, she can't even tell you the statements I've printed here. Remember: I have absolutely no financial involvement with Terry or the Amazon Herb Co., so I can tell you the truth about these products without interference from the highly corrupt FDA.

Getting involved with Amazon Herbs

Here's how rainforest herbs can help you achieve not only health, but also wealth: if you're looking for an ethical, health-related business opportunity, I strongly recommend getting involved with the Amazon Herb Company enough. I'll even help you be successful with it. How? Like this:

As a reader of NewsTarget articles, you have the full permission to take any articles, reports or ebooks I publish (including this book) about the Amazon Herb Company and freely distribute them to others as part of your marketing and educational efforts. You don't have to pay me a dime, but I do ask for credit (include my name, Mike Adams, and a link back to NewsTarget.com, please).

In addition, I'm hosting a page that will list all the NewsTarget readers who join with Terry Pezzi as Amazon Herb distributors. I'll post your name, short bio and contact information so that other readers can reach you. In this way, you'll benefit from the publicity of the NewsTarget network to help you achieve your Amazon Herb business goals. You'll even get a link back to your own website, and you may even be able to hook up with people in your local area. All of this is offered free of charge, and I don't ask for anything in return.

That's how serious I am about supporting this company and its products. If you get involved, I'll do my part to help you succeed. And I hope you spread the word about these products and make yourself wealthy at the same time, because these are the kind of products the world needs to know about. These products can literally save lives, and the success of this company can transform the economics of the rainforest, preserving a national treasure of medicinal herbs that, astoundingly, remains largely unexplored (only 1% of the rainforest herbs have been tested for medicinal compounds).

How do you get involved? Just contact Terry Pezzi and sign up! She'll hook you up with literature and other materials you need to share the news about these products with the people you know. And remember, you can freely use anything you find on NewsTarget.com to help you be more successful. I'm even going to make downloadable PDF files available for all the articles about Amazon Herb products. **These articles tell the truth about what these products can do for people!**

All I ask is that you don't contact me with questions about the product or the business. I simply don't have time to provide this level of support, since I'm spending so many hours a day writing new material to help educate people about how these products can literally save their life. That's my mission: to share real health solutions with the people who need this information the most!

The bottom line? If you're looking to get involved with an honest company with a solid product line that's doing tremendous good in the world, this is an unsurpassed opportunity. And you'll be receiving tremendous assistance from myself and the NewsTarget Network in terms of materials you can freely give out to other people. Making this work is as simple as it gets.

Amazon Herb ID# 95284

Or, if you're already involved, good for you! Feel free to use all the articles and materials I publish about Amazon Herb products to help promote your business and spread the word about these products. You're part of a unique group of people who are truly making a difference in the world!

Secret Source #5: Herbal Advantage

Secret Source #5 is a company located in Southern Missouri called Herbal Advantage (www.herbaladvantage.com). I've been dealing with this company for many years, and they do sell you what they promise and get it to you in a timely manner. The owner, Steve Marsden, will give you an honest deal on every order.

So what can you find at Herbal Advantage that's interesting in terms of enhancing your health and saving money? Herbal Advantage is the best source for Stevia extract powder, an herbal sweetener that I've been using for at least the last eight years. Stevia is the only sweetener you should be using: it has virtually no calories, no carbohydrates and won't spike blood sugar levels. Plus, it's much safer than aspartame or Sucralose.

To read more about aspartame:

<http://www.newstarget.com/aspartame.html>

To read more about Sucralose:

<http://www.newstarget.com/sucralose.html>

After you're convinced that Stevia is the sweetener for you, you'll get it at a great price from Herbal Advantage. You pay about \$25 for ¼ lb of Stevia, or around \$75 for a full pound. I bought a pound of Stevia several years ago, and I have not run out of it yet! Stevia does seem to last forever, because it is 300 *times sweeter* than regular sugar -- you need very little to sweeten up your drinks, breakfast cereals, pancake batters, or whatever recipe you are cooking. Stevia is the way to go, and Herbal Advantage has it for a great price!

Sea Vegetable Powders

There's something else I want to tell you about at Herbal Advantage: sea vegetable powders. Sea vegetables are one of the recommended superfoods that I encourage people to put into their diets on a regular basis. Herbal Advantage carries several powdered sea vegetables like dulse, bladderwrack, and kelp. The prices range from \$6 to \$17 / pound depending on which vegetable you need. There are many ways to add sea vegetable powders to your diet: add the powder to your blended drinks, to flavor soups, or in your main course recipes. Be aware, sea powders can alter the taste of a food adding a salty, seawater flavor. In Asian cooking, chefs use the taste of sea powder to their advantage to add a salty flavor to soup or perk up the taste of a main course.

A High-Carbohydrate Diet With Added Sugars Doubles Your Risk of Breast Cancer, Says New Research

A new study carried out by researchers at the Harvard School of Public Health reveals a strong correlation between the consumption of refined carbohydrates -- especially refined white sugar -- and increased risk of breast cancer. This is apparently a major "eureka" for these scientists, who are just now beginning to suspect that there are in fact links between diet and cancer.

<http://www.newstarget.com/001673.html>

Healing Foods Powders

One of the products that I really like from Herbal Advantage is dehydrated minced garlic. Garlic is a powerful anti-cancer herb, boosts your immune system, and is very healthy for your digestive tract. If you're interested in being healthy, you need to find a way to make garlic a part of your diet on a regular basis. Herbal Advantage offers dehydrated minced garlic at \$5.30/lb. If you buy garlic at your local grocery store, you could be paying almost \$30/lb for garlic -- that's ridiculous! You will save a lot of money and get a high quality garlic product by ordering it from Herbal Advantage.

Another great buy is beetroot powder. Beetroot powder is an excellent liver cleanser and can be made part of almost any diet. You can use it as a food coloring by adding a little bit to your blended drinks (health shakes) or bowl of breakfast cereal. If you add freeze dried strawberries to your breakfast cereals, beetroot powder adds a beautiful bright red color that turns milk into strawberry milk. Herbal Advantage sells beetroot powder for \$8.80 / pound.

Everyday herbs prove to be convenient healers; garlic proves itself against cancer and cholesterol

Garlic and ginger are named two of the most potent anti-cancer foods in the book *Eat To Beat Cancer*, a highly recommended read for those who want to prevent or reverse cancer. In fact, they are far more effective and safe than any prescription drug.

<http://www.newstarget.com/001092.html>

Anti-cancer Apricot Kernel Oil

Let's take a look at apricot kernel oil. Herbal Advantage can't tell you the true purpose for this product, but I will. If you are battling cancer, and you want to fight the disease using natural methods, one of the best ways to do that is to take apricot kernel oil two or three times a day. Apricot kernels contain a phytochemical that functions as powerful chemotherapy at the cellular level, meaning that it targets and destroys cancer cells and tumors. The active chemical is Laetrile, also known as Vitamin B-17, which is found in abundance in apricot kernels. Herbal Advantage sells apricot kernel oil in 16 oz. bottles for \$11.

Many people who are battling cancer take apricot kernel oil to fight their cancer and supplement their immune system function. If you've ever tasted apricot kernel oil, you may already know that taking it three times a day is difficult. The taste is *extremely* bitter due to the medicinal properties of the phytochemicals found in the oil, and I don't take apricot kernel oil on a regular basis. However, if you are facing a desperate fight with cancer, apricot kernel oil could be a huge positive factor in your treatment regime.

New science proves that cancer is reversible, but organized medicine insists that cancer cannot be cured

Fascinating new research is showing that cancer is reversible. A cloning experiment conducted on cancer cells showed that those very same cells can revert to healthy cells and result in the creation of a healthy organism, free of cancer. This is ground-breaking new research on cancer because it shows that malignancy is not the inevitable fate of cancer cells.

<http://www.newstarget.com/001582.html>

Avocado Oil

Another oil with a notable health benefit is avocado oil. There are many health benefits to avocado oil; your heart, nervous system, and brain function all benefit from adding this oil to your diet. Of course, I recommend eating avocados in their whole food form, but if you want to use the oil because it's more convenient to put into foods or drinks, you can get a 16 oz. bottle for \$22 from Herbal Advantage.

Bulk Medicinal Herbs

A large variety of medicinal herbs, from A to Z, is available from Herbal Advantage. In fact, their catalog is listed in alphabetical order to make it easier for you to find your favorite herb. Most of the herbs are available as powders or bulk ingredients like bark, sticks, or leaves.

To effectively use these herbs, you'll have to make your own tinctures or use a small capsule machine to stuff the powders into gelatin capsules (which isn't fun). It's generally much easier to make a tincture by soaking the herbs in high-proof alcohol or vodka, then filtering out the herbs with a cheesecloth or strainer, leaving only the tincture liquid.

One of the herbal blends that I highly recommend is the Seven Mushroom Blend. This is a potentially lifesaving product if you're battling cancer or you have other immune system challenges. Seven Mushroom Blend is \$48 / pound. These mushrooms have been used in Japan for centuries. They contain powerful, well-documented, scientifically proven anti-cancer phytonutrients. The combination blend offers you a powerful anti-cancer strategy, whether you are trying to overcome an existing case of cancer, or just working to prevent cancer. At \$48 / pound, you don't need to buy an entire pound (you can get smaller quantities from Herbal Advantage). Seven Mushroom Blend is an immune system booster that everyone can benefit from by adding just a little bit to their diet from time to time.

Coral Calcium at a Reasonable Price

Another item that is very popular right now is coral calcium. People seem to be buying it in large quantities these days, but they are also going to health food stores and paying over \$200 / pound for coral calcium capsules! At Herbal Advantage, you can get coral calcium for \$37 / pound as a bulk powder -- a fraction of the retail price.

Are coral calcium capsules a good way to get calcium and other minerals into your diet? Sure, but there are better ways; like eating lots of whole foods and adding organic spirulina to your diet. However, there is nothing wrong with coral calcium and I do take it on a regular basis myself.

Beating Kidney Stones With Cornsilk

Another item that's worth mentioning is cornsilk. What is cornsilk? The next time you're husking a piece of corn, pay attention to the fine, string-like fibers that envelope the corn: that's cornsilk. What you might not know is that cornsilk is a powerful medicinal herb that can help dissolve kidney stones and support urinary tract health.

At Herbal Advantage, cornsilk is \$9 / pound. To get the powerful medicinal benefits of cornsilk, you need to make cornsilk tea, preparing it as you would any fresh herbal tea: boil the cornsilk in a pot of water, strain it, and you've just made cornsilk tea. I recommend adding a sweetener like stevia, or adding some delicious herbs like peppermint or ginger to make a great tasting cornsilk tea. You can get high quality cornsilk from Herbal Advantage, or you can also go to the produce section of your grocery store and get it yourself!

Bulk Fibers: Psyllium Husk Powder

One last item I want to mention is bulk fibers. Everyone is familiar with Metamucil, but you can buy Psyllium Husk powders for a fraction of the price. If you buy Psyllium Husk powder from Herbal Advantage, you'll pay \$6 / pound. Buy Metamucil at your local store, and you're paying a 300 to 400 percent markup for practically the same product. If you want to add fiber to your diet, get it from Herbal Advantage and you'll save yourself a considerable sum.

Almost every item you find at Herbal Advantage is cheaper than what you would pay in a grocery or health food store. It's a great place to buy stevia sweetener, medicinal herbs, healthy oils, and food additives like minced garlic and broccoli powder. I have only skimmed the surface of all the products available at Herbal Advantage (www.herbaladvantage.com). Go to their website and see for yourself what products can improve your health. If you take the time to educate yourself, you will not only get the health products that will benefit you, but get them at a great low price.

As with most of the suppliers mentioned here, however, there are some products I don't recommend buying from Herbal Advantage. Particularly, I don't think their spirulina product is Hawaiian Spirulina, so it's not the type of spirulina I recommend. With all the research I've done on the subject of spirulina, I can only recommend spirulina grown in Kona, Hawaii, from a company called Cyanotech. Their product is called "Hawaiian Spirulina," and it has much higher levels of antioxidants and phytonutrients than any other spirulina, mostly due to the unique drying process that avoids long exposure to high temperatures. Plus -- and this is the most important point of all -- it's grown in the pristine Pacific ocean waters pumped from deep ocean surrounding the Hawaiian islands. I emailed Steve Marsden to verify the source of their spirulina, but at the time of this writing, I haven't heard back.

Summary of Recommendations:

Price	Item	Nutritional Benefits
\$6 - \$17 per lb.	Sea vegetable powders	Excellent source of trace minerals, anti-cancer phytochemicals, anti-viral compounds and a variety of health-enhancing nutrients. Can be easily used in soups, health shakes and a variety of recipes.
\$5.30 / lb.	Minced garlic	An unbeatable price on a culinary herb with outstanding medicinal value. Garlic helps prevent cancer, fights infection, boosts immune system function and much more.
\$8.80 / lb.	Beetroot powder	Use for adding color to drinks and foods (looks like a strawberry color). Beetroot powder is an excellent cleanser. It supports liver function, helps cleanse the blood, and helps remove some toxins from the body.
\$11 / 16 oz.	Apricot kernel oil	Powerful anti-cancer phytochemicals. Works like nature's own chemotherapy, but without the toxic side effects. Has been shown to shrink cancer tumors.
\$22 / 16 oz.	Avocado oil	A heart-healthy oil that can be easily added to health shakes, soups, salads or other recipes.
\$varies	Bulk herbs A - Z	Herbal Advantage sells bulk herbs from A - Z. Every "common" herb -- and lots of uncommon herbs -- are available at Herbal Advantage.
\$48 / lb. (powder)	Seven Mushroom Blend	A blend of seven of the most medicinally potent mushrooms. Provides powerful anti-cancer benefits, anti-viral effects, and immune system support. If drug companies had developed this, they'd call it a miracle cure for cancer. Similar mixtures have been used to treat cancer in Japan and throughout Asia for hundreds (if not thousands) of years.
\$37 / lb.	Coral Calcium (powder)	Straight coral calcium powder. This is essentially ground-up coral at perhaps the best price you've seen yet. Can be spooned into health shakes, a glass of milk or soy milk, and various recipes. As most people are chronically deficient in calcium, this supplement can have seemingly miraculous health effects (especially with cardiovascular health and neurodegenerative disorders), but there's nothing magical about it. It's just calcium from the ocean.
\$9 / lb.	Cornsilk	This herb helps dissolve kidney stones and supports urinary tract health. Boil it to make a tea (together with some stevia, ginger and peppermint, for example) or pack it into capsules and take it as a supplement.
\$6 / lb.	Psyllium husk fiber	Practically the same as Metamucil, but without the sky-high price. Psyllium husk fiber can be blended with water (use LOTS of water!) and consumed quickly to add fiber to your diet. Helps lower cholesterol, prevents the absorption of heart-damaging fats, and encourages more frequent bowel movements (so it's good for colon health).
\$75 / lb.	Stevia extract powder	The #1 recommended herbal sweetener. I've been using it for years, and it allows you to make all sorts of foods and recipes with no sugar, almost no carbs, and definitely no big blood sugar spike. You probably won't need a full pound, however: 1/4 pound is just \$25.

Secret Source #6: Astaxanthin

This source is actually two companies that provide a little-known antioxidant nutrient called astaxanthin. Astaxanthin is a fat-soluble carotenoid nutrient that has anti-inflammatory and immune-stimulating properties. It has the ability to cross the blood brain barrier, meaning it offers health protective effects for the eyes, the brain, and the entire central nervous system. As an antioxidant, astaxanthin has been shown to be 500 times more powerful than vitamin E, and yet it also multiplies the effects of vitamins E and C to create powerful antioxidant benefits throughout your body.

Most people have never heard of astaxanthin. I call it “Vitamin X,” and it comes from micro algae that turn red when exposed to environmental stresses such as a lack of water. Astaxanthin is responsible for the red coloring in salmon and farmed fish. It also provides the coloring in shellfish like shrimp and lobster. Of course, people don’t normally eat the shells of those shellfish, so they aren’t a convenient source of the nutrient for humans.

Eliminating Joint Pain and Muscle Pain

Astaxanthin is truly a wonderful nutrient for supporting human health. What’s it good for? First off, it eliminates or reduces joint pain, arthritis pain, muscle soreness, back pain and repetitive motion pain. I’ve been using this for quite some time and I’ve noticed a significant reduction in the amount of pain due to soreness when I engage in heavy strength training or gymnastics training. It has truly helped me pursue a higher level of physical activity and it has also helped increase my flexibility.

The nutrient is also highly beneficial for your cardiovascular health. That’s because it’s a powerful antioxidant, and antioxidants are important for preventing free radical damage to your cardiovascular system. In a similar way, astaxanthin is also a powerful immune booster. People are using it right now to prevent and treat cancer, colds, flus and other immune system challenges.

Severe Sinus Infection Cured with Astaxanthin

As one quick example of how well this works for boosting immune system function, I recently adopted a new dog from the humane society. Unfortunately, she had a severe upper respiratory infection.

She was sneezing blood all over my house (not a pretty picture, I assure you, thank goodness for tile floors). Of course, I wanted to treat my dog with natural methods, so I started feeding her astaxanthin supplements right away. The humane society told me it would take several weeks for this respiratory infection to go away, and my holistic vet repeated the same thing, warning me to expect the sneezing blood episodes to last for at least two more weeks.

It turns out that my dog overcame this respiratory infection in just *three days* with the help of astaxanthin. Her energy is much higher and she’s recovering very quickly from the hysterectomy performed on her by the humane society. I suspect, by the way, that astaxanthin also helps wounds heal more quickly because of its powerful anti-inflammatory and antioxidant properties. But that’s not something that is yet supported by the evidence.

Potent antioxidant Astaxanthin shows promise as anti-inflammatory for arthritis, joint pain, back pain, muscle soreness and carpal tunnel syndrome

We became aware of the very potent antioxidant properties of natural astaxanthin, and as we did more research and started looking more at the scientific literature, we found that natural astaxanthin has three very unique properties: first of all, it's an extremely potent antioxidant. Some studies have shown over 500 times stronger than vitamin E. It's also anti-inflammatory, and third it crosses the blood-brain barrier and delivers these health benefits to the central nervous system.

<http://www.newstarget.com/002037.html>

Nutritional Sunscreen

One thing that is supported by anecdotal evidence is astaxanthin's ability to prevent damage associated with overexposure to ultraviolet light. In other words, you can take this supplement and get a lot more sunlight on your skin without suffering sunburn. I think that's an important benefit, especially when you consider the fantastic health benefits of getting more sunlight on your skin. Unfortunately, a lot of people avoid getting sunlight because they are afraid of getting burned. And their past experience has taught them that they burn quickly. But astaxanthin can help them with that by boosting their resistance to sunburn.

I know all about sunburns. I used to burn quickly too, but after changing my diet and eliminating food ingredients like processed sugar and white flour, my resistance to sunburn skyrocketed. And now after taking astaxanthin, I've found my radiation resistance to be even higher. I can spend literally hours under the sun, even the tropical sun of Hawaii, without any sunscreen whatsoever, and not get burned. That's astonishing. (I used to be the kid that would get a sunburn in 30 minutes.)

By the way, astaxanthin is also extremely helpful for protecting your eyes from light-induced damage. So if you want to support your eye health and avoid macular degeneration, this is a supplement that you should definitely consider.

Lowering Cholesterol, Reducing Inflammation and More...

Astaxanthin is also showing benefits in reducing high cholesterol. In one self-reported survey of astaxanthin users, 78% of respondents said their cholesterol condition was improved by taking astaxanthin. In that same study, 73% said their prostate condition was improved. There were also positive results reported in post-surgery inflammation, macular degeneration, rheumatoid arthritis, back pain, sore muscles and joints, osteoarthritis, and even asthma.

Astaxanthin, or Vitamin X as I'm calling it, may some day be widely known as the "super antioxidant." It is clearly far more powerful in terms of brute free radical scavenging power than any other antioxidant I have studied yet.

There are two sources where you can purchase astaxanthin, and because this isn't a well-known nutrient yet in the United States, most health food stores don't carry it. That's going to change in the years ahead, probably due to some of the reports I'll be releasing on the subject, but in the meantime there are two sources where you can get it. You can find them both, along with exclusive discount coupon codes, at: <http://www.newstarget.com/002156.html>.

Astaxanthin sources revealed: super antioxidant eases arthritis pain, joint pain, sore muscle and protects against heart disease

What is astaxanthin? I call it "Vitamin X," and it's a supercharged antioxidant derived from microalgae. It's 500 times stronger than Vitamin E and crosses the blood/brain barrier, meaning it offers powerful oxidative protection for the nervous system (eyes, brain, nerve tissues, etc.) I used astaxanthin as part of my strategy for achieving a whopping 89,000 score on the Pharmanex nutrition scanner!

<http://www.newstarget.com/002156.html>

The two companies that manufacture astaxanthin are both located in Kona, Hawaii. I've toured both. I've visited their facilities and I've talked to the presidents and CEOs of both companies. In fact, they are located right across the street from each other. And some of the employees in one company used to work at the other company. So essentially, you're getting a lot of the same know-how whether you order products from one company or the other. There may be differences in quality between the two products, but I haven't been able to determine them.

Better Than Anti-Inflammatory Prescription Drugs

For all those people who were taking Celebrex or Vioxx and now are hearing that Vioxx has been pulled from the market because it causes sudden death, heart attacks and strokes, there is a much better alternative. And that alternative is astaxanthin. You don't need to be taking toxic, expensive, anti-inflammatory drugs and COX-2 inhibitors like Celebrex or Vioxx. All you need is this powerful anti-inflammatory known as astaxanthin. It's far safer. It doesn't have the gastrointestinal side effects and it won't cause heart attacks or strokes. In fact, it will protect you from heart attacks and strokes.

I can't help but chuckle when I'm reading headlines these days about all the people panicking about Vioxx being pulled from the market. These people are running around so concerned about what's available to take instead of Vioxx. They're basically looking for alternative drugs. But they don't know that astaxanthin exists and that it is a much smarter alternative than any prescription drug. So if you have inflammation, if you're dealing with rheumatoid arthritis or osteoarthritis, or if you have joint pain or back pain, this is a nutrient that you owe it to yourself to try.

And by the way, this nutrient is extracted from micro algae that are grown in ponds similar to those used to grow spirulina. This isn't extracted from shellfish; it's grown in large ponds that are fed deep ocean water off the coast of Hawaii.

Strong User Satisfaction

One of the most fascinating things about this product is that once people start using it, they see such a tremendous positive effect from it that they keep on ordering it. It follows that people are really finding it works for them. And again, if you've been taking Vioxx or Celebrex or some other anti-inflammatory drugs, I urge you to get off of those drugs and get on this natural substance found in micro algae and manufactured right here in the United States in Kona, Hawaii.

By the way, just to reassure you again: even though I'm promoting this product, I do not earn a dime from any of your purchases. There is no affiliate structure, there is no commission structure, I don't get any benefit whatsoever when you purchase this product. I am promoting it because I believe it is a safe alternative to the dangerous prescription drugs that people have been taking. And I'm promoting this as a service to my readers and because this is something I have experienced personally and that I believe is a safe, effective nutrient that can help improve the quality of life for everyone.

Merck caught in scandal to bury Vioxx heart attack risks, intimidate scientists and keep pushing dangerous drugs, Vioxx lawsuits now forming

The truth has finally come out about Vioxx: insider emails published by the Wall Street Journal reveal that Merck, the maker of Vioxx, was fully aware of the health risks of its COX-2 inhibitor anti-inflammatory drug as early as March, 2000. As is apparent from the published emails, there was a concerted effort to bury the negative evidence and even **distort the drug trials** by excluding heart patients from the Vioxx studies so that, "...the rate of cardiovascular problems for Vioxx patients would not be evident."

<http://www.newstarget.com/002155.html>

Secret Source #7: Ancient Harvest

Secret Source #7 is a company called Ancient Harvest (also known as the Quinoa Corporation) www.quinoa.net. I've already talked about quinoa and how you can get it from Walton Feed. But in case you want more than just the quinoa grain, if you want quinoa pasta or quinoa flour, you can get that from the Quinoa Corporation. They sell quinoa flour for about \$3 / pound, which is a great deal. You can use that flour to make your own pancake mixes, cake mixes, breads or an assortment of other pastry items.

I use it to make pancakes every once in a while and of course, I throw in some freeze-dried blueberries that I purchase from Emergency Essentials. Ancient Harvest also sells quinoa flakes, which you can boil like oatmeal to make a delicious high-fiber, high-protein, oatmeal-like breakfast without wasting your money on instant oatmeal (which is actually a refined grain that will cause blood sugar swings).

If you're looking for quinoa flour in large quantities (like a 25-pound bag), you can get it from Ancient Harvest. I keep a 25-pound bag of quinoa flour in my house and use it from time to time when I'm making various recipes.

By the way, if you'd like to learn more about Quinoa and what a fantastic food product this is for your health, I'm working on an ebook about Quinoa that will be released at www.TruthPublishing.com. Here's a few pages from that book:

Quinoa the Supergrain

Quinoa is sometimes called a supergrain, and it deserves that name because it really is an impressive healing food. It's a food source that's high in vitamins, minerals and fiber. Learning a little about the attributes of this impressive grain will give you a sense of just how amazing it is.

First off, quinoa looks a lot like very tiny grains -- almost like amaranth, if you're familiar with that. Or like small little dried beads. Quinoa stores very well for many years. You typically buy it dried. By adding water to the quinoa and boiling it, you'll find that the grain soaks up the water and vastly increases its size -- much more than other grains. This means you don't need a lot of dry quinoa to make a very large quinoa meal.

The unique shape of quinoa is also fascinating. The grain has an outer edge that looks something like a UFO. It's almost like the grain is wearing a hula-hoop. This outer edge can come off when the grain is boiled, or it may stay attached -- looking something like a tiny pigtail (this is actually the germ of the quinoa grain). This structure is unique for a grain: it's not something you see in wheat or rice.

High protein diet good for your health, good for weight loss, says startling new research

The most important consideration in all this, by the way, is: where do you get your protein? If you're getting your protein primarily by eating red meat, you're going to cause all sorts of other health problems (like heart disease) in your body due to the saturated fats found in red meat, the additive ingredients such as sodium nitrite, and the high concentration of pesticides and other potentially harmful contaminants such as mad cow disease. If you want to be healthy on a high protein diet, you must choose healthy sources of protein.

<http://www.newstarget.com/001480.html>

You see, in most grains, the germ is usually a very tiny structure found on the end of the grain. But in the case of Quinoa, the germ circles the entire grain. Remember that in every grain, the germ is very high in protein. With the germ being so large in the quinoa grain, it explains why quinoa as a whole is very high in protein compared to most other grains.

In fact, it has the highest protein content of any grain. It is the protein king of the plant world. There's simply no other grain that has as high a level of protein as Quinoa. In fact, you'd have to get into superfoods like spirulina to even come close.

When you cook it, quinoa has a texture similar to tapioca pudding. Some people might mistake it for rice pilaf or some kind of boiled grain, but I think it most closely resembles tapioca. In fact, pudding is one of the many wonderful things you can make out of quinoa. Later in this report, you'll learn how to use it in some delicious pudding recipes that have no refined sugars and provide outstanding nutrition.

A Complete Protein

Quinoa is not only high in protein in terms of grams per serving, it's also high in the amino acids that create a complete protein. The eight essential amino acids you'll find in quinoa are the ones your body must acquire through foods in order to live. You can't synthesize these amino acids, you have to get them from your diet.

Some would say that you can get these amino acids from eating meat or other plants. The trouble is, many plants don't provide complete proteins, or they're very low in amino acids such as lysine. Quinoa is high in lysine, and it is a complete protein as well. Vegetarians, for example, do very well on quinoa.

A Great Source of Calcium

But that's not the only good news about quinoa. Quinoa is also very high in calcium. This is a rather important mineral that many people don't get enough of, even though the conventional wisdom is that you can get calcium from drinking milk. In fact, **a cup of cooked quinoa has more calcium than a cup of milk**. If you've seen anything written about cow's milk at [NewsTarget.com](http://www.newstarget.com), you already know that cow's milk is not a good source of nutrition. It has all sorts of nutritional problems and imbalances in terms of human need. Cow's milk is perfect for baby cows, just not for humans. Quinoa is a much better source of calcium.

Quinoa also contains other minerals like magnesium (also typically deficient in the western diet), zinc, potassium and iron. Beyond the minerals, it has a fairly high B-vitamin content -- another important nutrient that most western diets are lacking. Quinoa also contains a healthy serving of fiber, found in the germ itself.

Skinny on Dairy: Diet Value Unclear

Aside from the chronic sinus infections, asthma and constipation caused by cow's milk, the beverage also contains homogenized fats which are proven to promote cardiovascular disease. Even beyond that, milk is loaded with pus -- yes, pus -- that nearly always exceeds the pus levels allowed by federal law.

Cow's milk also contains blood, hormones that have been banned in most civilized countries, and potentially pesticides and other toxic chemicals that have been fed to the dairy cows.

<http://www.newstarget.com/001223.html>

Very Low Caloric Density Grain Suppresses Appetite

So that's the nutritional breakdown of quinoa; now let's discuss the "absorption factor." The amount of water quinoa absorbs while cooking is rather remarkable. You can take a cup of quinoa, boil it, and end up with a couple of bowls of boiled quinoa cereal, ready to eat. This may not sound like a big deal, but let me explain why it is in terms of appetite and weight control.

It's no secret that a lot of people overeat, but one reason they do that is because the foods they eat take up very little space in their stomach, but are very high in calories. In other words, they have a high caloric density. Those foods often include cheese, pizza, potato chips, french fries, candy bars, snack crackers -- basically anything that contains a lot of fat or refined sugars. These are all foods that pack a lot of calories into a small space.

We tend to get into trouble as consumers when we eat foods like that, because our hunger signals are not really fine-tuned to what we've eaten. Our hunger is, in part, affected by the physical space foods take up in our stomachs. So we tend to continue eating, regardless of the calories consumed, until we have a physical sensation of fullness. Once this happens, cells in the stomach and small intestine actually broadcast a hormone signal that tells the endocrine system to turn off the hunger signals. It is at this point that we finally stop feeling hungry. Eventually, we might even stop eating.

The important thing to note in all this is that **our feeling of hunger has nothing to do with the number of calories we are eating**. It's largely determined by the amount of **physical space** foods take up in your stomach.

Because of this, quinoa can be very beneficial in suppressing your appetite and, therefore, helping you lose body fat. How? Quinoa takes up a lot of space in your stomach without giving you a lot of calories. In other words, you can eat a very large bowl of quinoa and you can feel like you are completely stuffed. Yet you may have only eaten 300 to 400 calories. That's astounding! To get that same level of fullness from eating pizza, you might consume 1500 or 2000 calories (which would definitely pack on the pounds).

You can see there's a huge difference. For people who are attempting to moderate their intake of calories, who want to lose weight, who are battling diabetes or obesity, quinoa can be a very helpful dietary tool. You get the nutrition you need and yet you don't feel hungry.

Let's face it, most of us like to eat vast quantities of food if we can get away with it. But, it's the **type** of foods we eat in vast quantities that determine whether we are thin or obese. You can eat quinoa in tremendous quantities and you'll probably never gain weight. With quinoa, you will be losing weight even while feeling full.

If you were to make quinoa a part of every meal, you can really moderate your caloric intake. Say you're having dinner: you enjoy a side dish of quinoa pilaf first, before you head over to the steak, or the barbecue, or pizza, or whatever else you're going to have. You'll automatically eat less of that other food because you had the quinoa first, and it's taking up lots of physical space in your stomach.

As your body digests the quinoa, it will eventually figure out that there weren't a lot of calories in the meal. But by that time, you've already won the appetite battle. The meal is over. You've already fooled your stomach into thinking you've had a huge serving. This is a little trick to get around your ancient appetite control system -- the one we're all pre-wired with as human beings.

“Eat” Your Water

Further along during digestion, your body will extract the water out of the quinoa grain, leaving the fiber and nutritional content to be used by the body. Fiber will, of course, help with your digestive tract health. You'll also have more frequent bowel movements, which is another good thing for your health.

In the meantime, your body will extract the water from the grain, and that's good too because a lot of people don't eat enough water. You could say “drink” but I used the word “eat” on purpose because with quinoa, you're actually eating the water. And for a short period of time, that water is locked up in the grain as it sits in your digestive tract. You can think of the quinoa as little water beads.

You see, most people are in a state of chronic dehydration. And that actually causes hypertension, asthma, constipation, immune system suppression, and a long list of other symptoms and diseases. So quinoa can actually be a good water source. After you eat it, your body pulls the water out and puts it to good use.

You can see how quinoa helps you on many fronts. It gives you the fiber that's not found in typical processed grains. It also gives you a high level of calcium, magnesium, phosphorous, zinc and even some iron. You even get a large dose of B-vitamins. You get fiber, protein, all eight essential amino acids including lysine, plus extra water. No wonder they call this a super grain!

Hypertension caused by chronic dehydration, says doctor; but pharmaceutical industry prescribes drugs that cause further water loss

Hypertension is another one of these problems. When there isn't enough water in the body, or the body becomes dehydrated, 66% of the water loss is from the interior of the cells. 26% is from the environment around the cells, and only 8% is lost from the vascular system. If people drank water on a regular basis and took enough salt and minerals to expand the capillary beds, hypertension would disappear completely.

<http://www.newstarget.com/001968.html>

Summary of Recommendations:

Price	Item	Nutritional Benefits
\$2.69 per lb.	Quinoa Flour Also available: quinoa pastas like spaghetti, shells, elbows, linguine, etc.	A versatile “healing food” flour that's can replace flour in most recipes. Quinoa is an ancient grain, used extensively by the Incas. It offers the highest protein of any grain, even boasting a complete protein (all essential amino acids). It's also high in fiber and delivers healthy, complex carbohydrates.

Order site at: <http://www.quinoa.bigstep.com>

Secret Source #8: House of Nutrition

The House of Nutrition (www.houseofnutrition.com/spirutein.html) is the only place I've found where you can reliably purchase the brand of spirutein soy protein powders I recommend: the unsweetened Nature's Plus "Simply Natural" spirutein products.

I recommend this line of products because it offers delicious flavors such as chocolate, peaches and cream, strawberry, vanilla and so on, and it's offered at a good price, about \$15 per can (.82 lb. / 370g) from The House of Nutrition.

Using these products is a great way to get some soy protein into your diet, and I use these products in my breakfast drinks on a frequent basis. Just keep in mind that there's not a lot of spirulina in these products, because if there were, then the products would be green, and they aren't. That tells me there's hardly any spirulina at all. In fact, I think the product should be called "Simply Natural Soy Protein." I don't think there's enough spirulina in it to even warrant putting it on the label. So don't make the mistake of thinking this is a good source of spirulina. This product isn't a superfood, it's just flavored soy protein.

Delicious pudding with no sugar and almost zero carbs

These products are fantastic for making delicious low-carb, near-zero-sugar puddings! One of my favorite recipes is to take one scoop of the Nature's Plus Simply Natural Spirutein banana soy protein, combine it with 2 cups of soy milk, add a good dose of stevia (as the sweetener), then throw in some thickener like glucomannan powder, xanthan gum powder or guar gum (all will work). Blend it in a powerful blender until it's the thickness of pudding.

There you have it! It's a delicious banana pudding, with NO fats, NO sugar, virtually NO carbohydrates, and it took NO TIME at all. (About 60 seconds, actually.) This is a fantastic recipe for feeling full without actually eating much in the way of calories. And you can make peach pudding, chocolate pudding, strawberry pudding, or a long list of other puddings by using these unsweetened Nature's Plus Spirutein products.

So if you want a great quality soy protein with delicious flavors, this is the way to go. Check out The House of Nutrition and buy their unsweetened Nature's Plus Simply Natural Spirutein products. By the way, the products are not always described on the website as being unsweetened. The only way you know they're unsweetened is if they say "Simply Natural." Any spirutein product that doesn't say "Simply Natural" is going to be sweetened with fructose, which is something I would definitely NOT recommend. Stevia is the only natural sweetener I know of that offers zero carbs, no sugars, and no calories.

How Revolutionary New “Blue Laser” Health Technology Promises to Forever Change the Landscape of Modern Medicine, Nutrition and Disease Prevention

... and how you can personally exploit this proven technology to radically overhaul your own health, prevent every common disease known to modern medicine, and even choose how long you wish to live.

No discussion of nutrition and health would be complete without talking about a brand new technology, just emerging, that allows you to actually measure the level of nutrition in your body without any invasive techniques (like drawing your blood or taking X-rays).

When it comes to nutrition, there's a huge question in everyone's mind. That's, "How do I know whether this is working?" People say, "Gee, I'm taking all these vitamins, I'm taking these nutritional supplements, but I don't really know if they're working!" And how do you know when you're taking enough, anyway?

Other common questions about nutrition include: "What if I'm immuno-suppressed in other ways? Maybe I'm smoking cigarettes, or engaging in heavy physical exercise. Maybe I'm under heavy stress or not getting enough sleep or I'm exposed to environmental toxins through the air, the food or the water. How do I know whether the nutrition I'm taking is enough?" And until now, the answer has been that you don't know! It was very difficult to tell. You had to take a guess at how you felt, and that was a rather subjective way to determine if your nutrition was working.

The Pharmanex® Nutrition Scanner

For More information visit:

<http://www.newstarget.com/pharmanex-contacts.html>

But now, there's a genuine breakthrough that changes all this. I am ecstatic to report about brand new technology that I believe will revolutionize the fields of nutrition and disease prevention. Years from now, this technology will be in every doctor's office, every hospital, every public school and even many homes. What is this technology I'm talking about? It's called the "Nutrition Scanner," and by non-invasively scanning the tissue in the palm of your hand, it can tell you your level of health and disease prevention almost as if by magic. Don't believe me yet, by the way. It sounds like magic, but it's actually good, solid science. Let me explain:

X-Ray Vision Through Advanced Technology

Remember Superman and how he had X-ray vision? He could see through walls and view objects on the other side. What if there were a device that had a type of X-ray vision that could peer into your tissue and actually see the level of antioxidants at the site of action where they battle free radicals? You might think, well, gee, there's already technology like that, it's called an MRI or CT scan, but the answer is no, those don't detect antioxidants at all -- they only show the physical structure of your body. They're designed to show broken bones, cancer tumors or malformed biological structures, but they don't show your tissue saturation. In fact, until the development of this technology, the only way to measure antioxidants was to take some blood out of your body and send it off to a laboratory for chemical analysis. And of course nobody likes to do that; who likes to have their blood taken? It's a painful, invasive procedure. Besides, measurement in the blood is not a true reading of the "bioavailability" of antioxidants to your tissue, a more stable and accurate representation of your antioxidant protection level.

But this nutrition scanner device is something altogether different. It has a sort of X-ray vision, but without using X-rays or any kind of dangerous radiation at all. All it uses, in fact, is a low intensity blue laser. It's similar to the laser light that reads your audio CDs in your CD player. Or if you've ever purchased a small laser pointer that allows you to shine a red dot on the wall, that's about the same intensity of laser light we're talking about here. It's completely safe, and you feel absolutely nothing during the scanning procedure.

Live Tissue Analysis With Coherent Light

Here's how it works: you put your hand over this laser light, which is being produced by a device about the size of a breadbox (it looks like a small desktop computer). Hold your hand in place for approximately three minutes. During that three-minute time, this device scans the tissues of your palm. And because this blue laser light can penetrate your skin, it has the ability to excite the molecular structure of chemical compounds in your tissues.

Laser light is a coherent light, of course, which means that it propagates at a single wavelength. This wavelength has been chosen to resonate with the molecular structure of carotenoid antioxidants in your tissue. Once these antioxidant molecules become excited by the laser, they begin to give off photons. The easiest way to understand this is to think about fluorescent rocks or glow in the dark chalk. If you take fluorescent rocks and you shine a black light on them, they will fluoresce (give off light) on a variety of different wavelengths. They may appear bright yellow, green or red. Or if you've ever had glow in the dark chalk and drawn something interesting and then shone a black light on them, you see that they fluoresce. Much the same thing is happening with this blue light laser; it's causing the chemicals in your tissue to emit photons at a specific wavelength that can be detected.

Here's How it Works:

Hold your hand in place for approximately three minutes. During the scan, the Nutrition Scanner is gathering thousands of bits of information about the level of photons being emitted from the antioxidants in your tissue. It then converts this information into a number. This number is your antioxidant score.

These emitted photons are shifted towards the green. They're not of an intensity that can be detected with the naked eye, but they are able to be detected by this very sensitive, calibrated equipment known as the Nutrition Scanner. During the scan, the Nutrition Scanner is gathering thousands of bits of information about the level of photons being emitted from the antioxidants in your tissue, which of course correlates with your level of antioxidants (the more antioxidants you have in your tissue, the more green light will be detected). It then converts this information into a number. This number is your **antioxidant score**.

Decoding Your Antioxidant Score

This antioxidant score number is fascinating, because it quite literally tells you your health future. It's sort of like having a crystal ball that can peer into your future and tell you how much disease you're going to experience (and how soon). The number typically ranges from 10,000 to 40,000. Let's take a closer look at what these numbers actually mean:

Below 20,000

Many individuals in the United States, who are consuming the standard American diet and being exposed to environmental toxins while avoiding taking nutritional supplements will score in the sub-20,000 range. Your average person off the street might score at around 18,000. At that score, it means they're going to get chronic disease very soon... in fact, they're already well along with the disease process. They don't have enough antioxidants in their body, and they aren't getting the level of nutrition they need to prevent chronic disease. In fact, any score below 20,000 indicates rapid aging and accelerated degeneration of health. A person at the sub-20,000 level is aging at perhaps twice the rate of a healthy person. They can look forward to dealing with chronic diseases like heart disease, cancer or other degenerative diseases in their forties or early fifties. These are diseases that should never appear that early in the human lifespan.

20,000 - 30,000

Someone who takes a few vitamins, or who follows a moderately healthy lifestyle, may score in the 20,000 - 30,000 range. That's a better score, but it certainly doesn't represent optimum health. This might be a person who eats a few servings of fresh fruit and vegetables, but who also goes out and eats pizza, fried foods, fast foods or junk foods. It could also be a person who engages in heavy physical exercise but who doesn't have the wisdom to take nutritional supplements that compensate for the physical stresses being placed on their body through their physical training. It might be a person who's taking supplements, but isn't taking quality supplements, or who is exposed to chronic stress through relationship difficulties, job troubles, or family problems. Perhaps they don't live in a clean city with clean air; maybe they're not drinking clean water, or they're getting a lot of pollutants from the food they eat. Perhaps they're eating a lot of foods made with white flour and other ingredients that actually deplete the body of critical nutrients. Regardless of the reason, a score in the range of 20,000 - 30,000 is still a poor score. It still means that person is going to show symptoms of chronic disease at a relatively young age (typically their 50's).

30,000 - 40,000

Healthier people will score in the 30,000 to 40,000 range. These are people who are actively protecting their health. They are watching what they eat, and they take measures to reduce the level of stress in their lives. They take nutritional supplements, especially whole food supplements and superfood supplements. They tend to avoid prescription drugs and they avoid toxic therapies such as chemotherapy or radiation therapy. They typically avoid conventional doctors, and when they have medical problems, they go see naturopathic doctors, nutritionists or herbalists. These people typically don't smoke cigarettes, they don't drink soft drinks, and they may drink various herbal teas such as green tea or black tea. These are the healthiest people in the population. These are the people you see on the street and you say "Wow! They sure look healthy!" They don't have excess body fat and they're not suffering from chronic diseases like heart disease, diabetes or cancer.

Good Health Takes Planning and Effort

The important thing to note is that people don't get to this level without making an effort. No one just happens to find themselves in this 30,000 - 40,000 range out of pure luck. It's not something that strikes from the sky like a bolt of lightning. It's something you have to work for. And if you do work at it, the Nutrition Scanner is going to tell you your score and provide **objective, scientific proof that what you are doing is working.**

Put it all together, and what we have here is technology that can tell you your level of health right now and can serve as an accurate predictor of what you're going to experience in terms of chronic disease and aging. The correlation between these numbers and your level of health is very strong. I have no doubt that if you were to go out and test people who are suffering from cancer or heart disease right now, you would find that they would almost universally score in the sub-20,000 range. If you were to take these people and get their scores above 30,000 you'd tend to find their diseases regressing. If you got them over 40,000, you'd start to see some of these diseases literally disappear.

Beyond 40,000: The Pathway to Longevity, Health, and Zero Medical Bills

If you choose to follow an exceptionally healthy lifestyle and you take superfoods (like the Jenny Lee superfoods product I've been recommending for quite some time, or the "Berry Green" product you'll find at most health food stores) or nutritional supplements like astaxanthin and organic whole food concentrates, then you can boost your score beyond 40,000. If you avoid chronic stress in your life, don't smoke cigarettes, don't eat fried foods, don't drink soft drinks, don't consume ingredients like hydrogenated vegetable oils, dairy products or white flour, then you can achieve an even higher score. How high? Consider this:

In learning about this machine, I decided to have my own antioxidant level tested, and the results confirmed that the lifestyle I choose to lead is indeed a very healthy one. My score came back as 89,000 - which was the largest score ever recorded on the particular scanner I used.

What does a score of 89,000 mean? In my view, it just confirms everything that my naturopathic physicians have told me and that my blood chemistry lab results indicate (I've posted my blood chemistry results on a public page at <http://www.newstarget.com/adamshealthstats.html>). Ultimately, here's what it all means: with a score of 89,000, it's impossible for me to get heart disease, it's impossible for me to get cancer, and it's impossible for me to suffer from neurodegenerative diseases. It's not just that the risk is reduced, it's that these are IMPOSSIBLE. With this blood chemistry, with this level of antioxidants in my tissue, with these exceptionally good laboratory results, it is literally impossible for these diseases to appear. Why? Because disease is a process of cause and effect, not bad luck.

No Such Thing as Chance When it Comes to Disease

Physicians like to talk about your “risk” of getting disease, but in reality, there really is no “chance” involved here. Chance isn't even an element. It's all cause and effect. If you have heart disease, that disease has a cause. What was the cause? It was probably decades of consuming foods and following a lifestyle that promoted heart disease. Add up five hundred pepperoni pizzas, five thousand soft drinks and fifty thousand french fries over the last few decades, and you start to understand how these habits add up. Fortunately, you can eliminate the cause of disease by making different choices in your life. And as you do that, **this Nutrition Scanner will objectively show you the positive effect of those choices.**

Step One: Determine Where You Stand

The strategy, then, is straightforward: first of all, get yourself scanned right now so you can find out where you stand in terms of your health. Are you in the sub-20,000 level where you are practically guaranteed to have chronic disease in your body right now that just hasn't been diagnosed yet? Are you in the 20,000 - 30,000 range, where you're probably going to get chronic disease in your forties or fifties and end up taking toxic prescription drugs for the rest of your life? Or are you in the 30,000 - 40,000 range, where you're a relatively healthy individual and probably won't get chronic disease until much later in your life?

Perhaps you're even in the above-40,000 level. Maybe you can hit 50,000, or 60,000, or 70,000 or even higher, meaning that you have virtually no chance of ever being diagnosed with these chronic diseases. It's important to know where you stand today. And conventional medicine can't tell you that. Seriously: when was the last time your doctor actually spent ten minutes talking to you about *preventing* chronic disease? If you're fortunate, you have a doctor who does that. But most doctors simply don't have the time. The only way to know where you stand is to get scanned with this Nutrition Scanner and find out what your numbers are.

Next: Boost Your Numbers

From there, the winning strategy is to boost your numbers. How do you do that? One of the first things you can do is follow everything you're reading in my nutrition and health books at www.TruthPublishing.com. I talk about how to get adequate nutrition, how it works in your body, what supplements to take, and so on. So if you do all that, your antioxidant score could be boosted by 50% or more. You can also, of course, avoid the things that promote disease. That means avoiding all the things that suppress your immune system such as chronic stress, metabolic disruptors (dangerous food ingredients), processed foods, fried foods, junk foods, snack foods, restaurant foods, frozen TV dinners, those lunch snack boxes at the grocery store, popular canned soups and everything else I've been talking about in articles on Newstarget.com. When you avoid all those things, even if you don't take nutritional supplements, your Nutrition Scanner score will skyrocket.

Decide How Healthy You Wish To Be

Where do you want to end up in six months? Some people are satisfied to be in the 30,000 range. Personally, I think that everyone should strive to be over 40,000. In fact there are people who are involved with the company that manufactures this product, a company called Pharmanex, that have been able to boost their scores from 20,000 to 60,000 and beyond. And how are they doing that? They're doing it by taking the Pharmanex nutritional supplements.

That's where the scanner comes in quite handy, because it tells the truth about whether your nutritional supplements are actually working. It tells you what's really happening in your tissue from taking those supplements. So if you buy some cheap multivitamin product from the corner discount store, and it's made with a collection of isolated, synthetic chemicals that have names like vitamin E and vitamin C, it's probably not going to help your nutrition score much.

But on the other hand, if you go to a trusted source, like the Pharmanex company, or you're taking superfoods supplements like the Jenny Lee supergreens (www.JennyLeeNaturals.com), or you are eating lots of fresh organic fruits and vegetables, berries, broccoli, onions, cauliflower, ginger, garlic... and if you're taking Chinese herbs, Western herbs, or rainforest herbs from the Amazon, then **you're going to see your numbers skyrocket**. Because the Pharmanex Nutrition Scanner tells the truth. It tells you the effectiveness of what you're doing. It is an unbiased judge of the health impact of the choices you make every day. And that's why I consider this to be revolutionary technology.

World Health Organization adopts global health and diet recommendations: reduce sugars, processed foods, soft drinks and junk food advertising

The World Health Organization has accomplished the nearly impossible and officially adopted a global health strategy that advises the countries of the world to teach their citizens how to modify their diets to avoid chronic disease and experience enhanced health. The primary recommendations by the WHO report? Reduce the consumption of refined sugars (added sugars), processed foods, and salt, restrict the marketing of unhealthy foods to children, and enhance product labeling and health education so that people can make better informed decisions about foods.

<http://www.newstarget.com/001095.html>

The Future of Nutritional Medicine

The conventional medical community hasn't figured all this out yet, by the way. This is such new technology that its implications have yet to be realized by old-school doctors. Even worse, most conventional doctors and physicians are still not being taught nutrition and disease prevention. As a result, they aren't aware of the health value of nutritional supplements. Not surprisingly, many physicians are in very poor health. But if they were to look at their Nutrition Scanner scores, they'd see right away: "Gee, I'm only at 18,000..." If they had that their own antioxidant scores, they could create a workable health strategy by saying, alright, my score's too low, what do I need to do to make it higher? And then they might start asking questions about nutrition, the value of supplements, the importance of avoiding toxic foods, and the wisdom of avoiding pharmaceuticals which no doubt lower your Nutrition Scanner score (most prescription drugs actually suppress the immune system, and many cause nutritional deficiencies).

If they were to start using this technology to scan patients suffering from chronic diseases, they would find an obvious correlation between the numbers and the health of their patients. Before long, they would start to notice, "Hey, it's funny, everybody who comes into this cancer center scores around 15,000 on this Nutrition Scanner. That's interesting! How can it be that everybody scores about the same when they're getting cancer? Maybe cancer has something to do with a suppressed immune system. Maybe if we start to find ways to boost that immune system function, we can actually prevent people from getting cancer in the first place!"

Don't Wait for Conventional Medicine to Come to its Senses

In fact, that's the truth of the situation, but it has yet to be acknowledged by the conventional medical community. But you, as an individual, don't have to wait around for modern medicine to figure this out. You don't have to wait ten years for medical schools to start teaching this. The conventional medical community is very slow to change their minds about anything. Remember, it took the American Heart Association twenty years to even admit that vitamins are good for you! And today, the group continues to deny the health benefits of antioxidants like vitamin E. In fact, I wrote an article about the American Heart Association called: "Follow American Heart Association Advice and Die From Heart Disease." (<http://www.newstarget.com/001625.html>)

The AHA's advice has been so poor for so long that they even put people on strict low-fat diets that avoided the consumption of heart-healthy oils like olive oil, flax oil, salmon oil and other Omega-3 oils that we now know actually prevent cardio-vascular disease. It was the AHA that argued against those heart-health oils for years and years, so don't expect the AHA or the American Cancer Society, or any of these other "disease" associations to recognize the benefits of this high-tech Nutrition Scanner.

If you wait around for them, you might be dead before they finally get the picture. You need to take it upon yourself to take charge of your own health, today, by finding out what level of nutrition you're at right now and then making changes to improve it. And it's surprisingly easy to do so.

Follow American Heart Association Advice and Die From Heart Disease

The first thing you have to do to understand this news is put the AHA in perspective. This is an organization that has for decades discredited and fought against the use of vitamins. The AHA has even strongly recommended for many years that people avoid virtually all dietary fats, including healthy fats that are unquestionably shown to enhance cardiovascular health.

<http://www.newstarget.com/001625.html>

Watch Your Score Improve as Your Health is Transformed

As you start altering your lifestyle, taking the Pharmanex supplements, eating superfoods, and avoiding the foods and beverages that promote chronic disease, your score will begin to rise. And if you get scanned once a month, which is my recommendation, you will know just how well you're doing each and every month.

You can set a goal for yourself, such as, "I want to be at 40,000 in six months." Then, you can track where you are and measure that against your goals. If you start at 20,000 and you want to get to 40,000 in six months, that means you need to gain an additional 20,000 points in six months, which comes out to around 3500 points each month. So if you start at 20,000, then a month later you want to be at 23,500, and the next month you want to be at 27,000. You can monitor your progress and start taking supplements, altering your lifestyle, and keeping tabs on exactly where you are. Remember, the Nutrition Scanner doesn't lie. The number tells you where you stand (and how far you still have to go).

You Can Create Any Health Outcome You Desire

You might find that you can get to 40,000 and still have some comfort foods in your life. Perhaps you can still drink a few cups of coffee. Maybe you can still eat pizza every once in a while. You will know the effects of what you're doing and you can make a conscious choice about how much chronic disease you really want in your life and how soon you want it to hit you. You can choose to have cancer, heart disease or neurodegenerative diseases like Alzheimer's disease at a young age, or you can make a different choice and live a life free of those diseases. And it's really all up to you. With the Pharmanex Nutrition Scanner, you have the power to do it and to know exactly whether your strategy is working. That's the breakthrough. That's what's going to revolutionize the world of nutrition and disease prevention.

How to Get Started

So how do you get started with getting scanned with this product? Here's the catch: it's such a new technology that there aren't a lot of scanners out there yet. But there are several hundred in the United States and in major world cities right now, so there's probably one near you if you live in a major metropolitan area. The distribution network is growing rapidly, so this situation is improving very quickly. There are scanners throughout Europe, many in Asia, some in South America, lots in Canada, etc. I believe there are even scanners in Australia, New Zealand, China, Taiwan and Japan.

So the first thing you want to do is get hooked up with an associate of this company who can put you in touch with a local scanner in your area. You'll find a list of contacts at <http://www.newstarget.com/pharmanex-contacts.html>.

The next thing to do is improve your score, and you do that by taking the supplements sold by the same company that makes the scanner. This company, Pharmanex, offers a line of potent, high-end nutritional supplements that will unquestionably raise your Nutrition Scanner score. I've reviewed some of these supplements at www.NewsTarget.com, and I have nothing but positive reviews for them: they're outstanding nutritional supplements. They're well-formulated and many of them are, in fact, anti-cancer products (even though Pharmanex can't call them that).

Almost all of the Pharmanex products boost immune system function. There's a whole line of supplements available. If you start taking these supplements, you will boost your Nutrition Scanner score, and in doing so you will be extending your lifespan and preventing the onset of chronic disease. It's simple cause and effect.

Note: I have no financial interest whatsoever in this product line. As with all products I review and recommend, these are unsolicited, unpaid recommendations based on my own personal passion about these products and their ability to transform your health. This article is in no way endorsed by Pharmanex. In fact, they aren't even aware it is being published.

So get in touch with a Pharmanex associate and find out how you can get yourself scanned and start getting some of these supplements to boost your scanner score. Getting scanned costs just \$10. It's very affordable, making it something you can do every month. Buying these nutritional supplements costs more than \$10 depending on what you get, but it's cheap compared with being in the hospital. Think about it: how much does it cost to have cancer? Not in terms of just dollars, but the lost years of your life. What's the cost of having heart disease? How much is 20 years of your life actually worth? What about the quality of your life, what's that worth? By comparison, investing in these nutritional supplements is dirt cheap, it's pennies on the dollar. Prevention is always a bargain.

Healthy, Wealthy and Wise

Lastly, if you are looking to get on board with a truly unique opportunity with this breakthrough technology, the Pharmanex company is signing up distributors who can operate these scanners (and it's easy to operate, it even comes with its own laptop computer) and who can help share the information about this technology and their line of nutritional supplements. If you'd like to get involved with this company, I think it's a great opportunity to do well by doing some good at the same time. Personally, I'm not involved with the company, but that's only because I have to maintain neutrality in covering the technology as an outside observer.

What's so good about getting involved with Pharmanex? I love the idea that there are people out there who are helping spread the word about breakthrough technology that can prevent chronic disease, save people's lives and even help reduce the healthcare costs of populations around the world. We don't need to live in a society where we have skyrocketing rates of cancer, heart disease, diabetes, Alzheimer's disease, bone disorders and all sorts of suffering and death from the onset of these degenerative diseases. We don't need all that. We can live in a society that is primarily disease-free.

Now we have access to technology that can detect when a person is going off track and needs help in preventing chronic disease. There are physicians, chiropractors, and naturopaths all over the world getting involved. Some of the medical doctors and book authors that I have interviewed on Newstarget.com are now using the Pharmanex Nutrition Scanner in their clinical practices. They're scanning patients and helping them boost their numbers. You can get involved in this, even if you don't have a medical degree, and help bring this technology to people in your local community or around the world.

You know, they say "Be healthy, wealthy and wise" and I see this technology as encompassing all three. If you use it and pay attention to the numbers, you'll be healthy. If you get involved with the company and share this good news with the people around you, you could make yourself quite wealthy. And if you listen to the wisdom of your body and the wisdom of nature by relying on quality nutritional supplements and the innate healing ability of your own body to prevent chronic disease, then you'll be wise. It's a win/win/win situation.

I for one am going to get myself scanned on a regular basis. And I'm going to keep doing everything in my power to boost my score. I don't know what the upper limit is to this score, I don't know if the machine blows a fuse if you hit 100,000 or if anyone's ever hit 100,000. Maybe it's not even possible. But I'm going to keep boosting my own score as well as I can to serve as an example for everyone out there who truly wants to prevent chronic disease and take charge of their health.

Because, let's face it, conventional medicine isn't really helping most people prevent chronic disease. If you grab patients as they come out of doctors' offices, and you set them down in front of the Pharmanex Nutrition Scanner, they're mostly going to scan in the sub-30,000 range. That's because their doctors really aren't teaching nutrition. They're not putting people on nutritional supplements, and they're not telling patients what foods and beverages they have to avoid in order to be healthy. Many physicians will even admit that to you -- especially the open-minded ones who are now teaching themselves about the value of nutrition and the true underlying strategies for being a healthy individual and living a long life with clarity of mind, outstanding physical stamina and healthy mental balance. Those are the pioneering doctors, and their numbers are increasing.

Conventional Medicine Isn't Focused on Preventing Disease

Conventional medicine is simply not interested in prevention. To the drug companies, hospitals and medical schools, there is no financial incentive in making people healthy. In fact, if you get healthy, the drug companies lose a customer. If you get your entire family healthy, they lose perhaps four or five customers. You see, they were counting on those revenues from you. They need those revenues for the rest of your life. They'd much rather see you on Alzheimer's drugs for the rest of your life, taking diabetes drugs for decades, or being doped up on antidepressant drugs because, after all, you could be depressed for the rest of your life as well. They're all about building revenue streams, and those revenue streams depend on people being diseased.

In contrast, what I'm describing here is the opportunity to **build a revenue stream by doing something positive**. Why don't we make some money by getting people healthy? There's a fascinating idea. Let's generate income streams by helping people *prevent cancer*; let's have health and wealth synergistically combined in a way where everybody wins. Let's give people back their quality of life! Let's give them back the years they deserve, the years that they should

be experiencing if they weren't killing themselves with foods and pharmaceuticals and environmental toxins. Let's show people how to get off of prescription drugs by restoring their health and vitality. Let's get them out of a system of oppressive medicine, and into a system of disease prevention, nutrition, clarity of mind and youthful energy at any age.

How does that sound? Does that interest you? I think that would interest a whole lot of people these days, because I think the population is, as they say, "sick and tired of being sick and tired." People know the game is up -- they know the pharmaceutical companies are dishonest, that the drugs are over-hyped and that the toxic side effects of pharmaceuticals are minimized (if not outright hidden). They know the FDA is in bed with the drug companies, that it's a highly corrupt agency that does practically nothing to look out for the health of the public. Even the FDA's own top drug safety scientist, Dr. David Graham, recently testified before the U.S. Senate that, "The FDA is incapable of protecting Americans."

Massive medical fraud exposed: pharmaceutical company paid doctors to prescribe drugs and run sham clinical trials

Here's a must-read article for anyone interested in learning how the pharmaceutical industry really operates. It's a case of aggressive marketing gone bad, with a mixture of corrupt physicians, underhanded payola and a near-total disregard for patient health. And yet it's business as usual in the pharmaceutical industry: drug maker Schering-Plough, one of the largest drug companies in the world, has been outright bribing physicians to prescribe drugs and operate sham clinical trials.

Smart People Are Taking Charge

Smart people are starting to realize that if they want to be healthy, they're going to have to take charge of their health, and they're going to have to look beyond conventional medicine. As a result, they're increasingly interested in vitamins, nutrients, healthy oils, health food stores, whole grains, nutritional supplements, physical activity, and now the Pharmanex Nutrition Scanner. Why do you think interest in health foods is exploding all over the country? Why are people taking more salmon oil? Why is the nutritional supplement industry experiencing such high customer demand? Why are herbal medicines finally starting to catch on? It's because people are wising up.

You have a role to play in this. You can limit that role to yourself, by just taking charge of your own health, getting yourself scanned and doing everything in your power to enhance your own Nutrition Scanner score, or you can get involved in a much larger way. You can play a bigger role and positively influence the health of people around you. You can make a difference in your community. You can be helping awaken someone to disease prevention in a way that could literally save their life. You could help communicate the idea that people can take charge of their own health and avoid virtually every chronic disease now responsible for killing people in every developed nation in the world.

Today there's a great sense of helplessness when it comes to health. People have been trained that disease is something that happens to you; it's just bad luck, or it's something that's caused by your genes, or it's your ancestors' fault, because they died from heart disease, or they died from cancer. These are the distorted beliefs taught to us by conventional medicine, and they disempower people. Read my book, it's called "Take Back Your Health Power" -- you'll find it at www.truthpublishing.com. This book tells you how the medical industry has stolen your power and taken away your responsibility. People are tired of that: they want to take their power back. They want to take charge of their own health and choose a better life for themselves. And there is no better technology available for guiding you along this path than the Pharmanex Nutrition Scanner, because for the first time, this is a tool that virtually everyone has access to.

The Pharmanex Nutrition Scanner doesn't require a medical degree to operate, and you don't have to pay health insurance fees or fill out a mountain of paperwork to get it done. It's affordable, it's objective and it tells the truth about your level of health. This allows you to take charge of your health. It puts you in the driver's seat. At the same time, it gives you new responsibilities because now you have the obligation to make the right choices about your own health. For some people, that's a burden because it means they have to take responsibility for eating all those fried foods, smoking cigarettes, not taking nutritional supplements, consuming white bread, soft drinks, candy bars and other products that directly promote disease. Now all of a sudden they have to take responsibility for that, and for some people that's too much. They don't want to be responsible for their own actions -- they'd rather just blame it on their genes!

The Nutrition Scanner Puts You In the Driver's Seat

For others, though, it's a new opportunity. It's empowering. Now, they can see how to make a real difference. They're no longer backseat drivers -- they're in the driver's seat! They're deciding whether to turn left or turn right, or how fast to go down the road. They decide how quickly they want to get to their destination, and they can even name the destination they want. They can say, "I want to be at a destination where I'm in a state of perfect human health." Then they can point themselves in that direction and get there.

They can do that by making a series of choices aided with the objective, scientific measurements provided by the Pharmanex Nutrition Scanner. It's similar to the way in which a pilot flies an airplane from New York to London. He doesn't take off from New York and point the airplane at London and then leave the cockpit. He uses the help of technology, and that technology measures where the airplane is at each second, asking itself the question "Are we still heading towards London?" Because perhaps some wind comes along and pushes the plane off course, or maybe the aerodynamic characteristics of the plane are not symmetrical, and the plane veers slightly to the left or right. Regardless of where the pilot *wants* the plane to go, the onboard computer tells the pilot where it really is. Then the pilot makes corrections.

You get from New York to London by making a thousand corrections along the way. You point yourself in the general direction of where you want to go, and then you find out where you are at every step of the way and correct your heading to match your goal. And when you do that, as a pilot, you can land an airplane to the precision of a few meters on a runway at Heathrow Airport in London.

You can do the same thing with your health. You can go from chronic disease to perfect health. And you get there by pointing yourself in that direction (and that's by educating yourself with material like this, or the articles at NewsTarget.com), then finding out where you are at every step in the journey (by using this Pharmanex Nutrition Scanner). If you're not yet where you want to be, you correct your course by continuing to improve your lifestyle, avoiding the things that cause disease, and supplementing with the things that prevent disease. That's all there is to it. Here it is again:

Step 1: Decide where you want to go. “Do I want to be healthy in my 40’s? My 50’s? My 60’s and beyond?” Decide what Nutrition Scanner score you want, like 60,000.

Step 2: Start moving in that direction: educate yourself and make new choices in foods, nutrition and exercise. Take nutritional supplements that boost your score, and avoid foods and habits that suppress your score.

Step 3: **Find out where you are** every month: get scanned with the Pharmanex Nutrition Scanner and check your score.

Step 4: Adjust your course. If you’re not at 60,000 yet, you have more work to do in terms of nutritional supplements, diet and lifestyle changes.

That’s all there is to it, just four simple steps that can get you from a state of chronic disease to a state of perfect health. And now, with the development of this technology, there’s no excuse for not heading towards that destination. You’re no longer driving in the dark. With the Pharmanex Nutrition Scanner, the numbers are screaming at you, saying “Get healthier! Get healthier! Make some changes in your life!”

Let the Positive Feedback Roll!

The great news is that as you make those changes, your Nutrition Scanner score starts to rise, and you start to receive positive feedback. All of a sudden, you feel great again, you feel like hey, I’m making progress. Have you ever done something really well and been publicly recognized for it? Remember how good you felt? You felt like, wow, I’m really good at this! I can do this! And that’s the way health can be. It doesn’t have to be a huge struggle. Granted, it’s not always easy to avoid the foods you might have loved in the past that made you unhealthy. It’s not easy to give up habits like smoking or drinking coffee or that late-night chocolate fix. It may not be easy to remember to take all the nutritional supplements you need to support a healthy body and mind. None of these are easy, but they’re all within your reach and they will move you one step closer to your destination. Let me make this perfectly clear: today, **you can choose whatever health destination you want.** You are NOT a prisoner of your genes. You are NOT a victim of bad luck. You are NOT powerless to overcome chronic disease, reverse obesity or regain your youthful energy. In fact, you have the power to do all these things.

With this in mind, I urge you to get yourself on this track toward outstanding health. Get scanned to find out your Nutrition Scanner score as soon as possible. Get involved with this company, or at least be involved as a customer and boost your score in every way that you know how. You can transform your health, and you can revolutionize your own personal success by showing others how to transform their health, too.

Join thousands of forward-thinking people who are experiencing true breakthroughs with this technology. Get hooked up with a Pharmanex Nutrition Scanner, start boosting your score, and see if you can get into the 60,000 range in the months ahead. You will prevent chronic disease, enhance your longevity, vastly improve your quality of life, enhance your level of energy, clear away the brain fog, and work your way towards eliminating the possibility of ever being diagnosed with chronic disease. That’s the transformative power available to you right now that was never available to anyone in the history of the world before today. I strongly advise you to exploit this technology to your advantage. Learn more at <http://www.newstarget.com/pharmanex-contacts.html>.

Wrap Up

So there you have it. All the secret sources of where to get the foods, the herbs, the medicinal products, the stevia, the food ingredients, the supergreens, and a multitude of other healing foods and natural medicines.

We've covered how to get freeze-dried berries and use those in cereals and pancake mixes or breakfast drinks in order to give yourself antioxidants and cholesterol-lowering phytochemicals. I've talked about Jenny Lee Naturals and how to get supergreens mixes and A-V (anti-viral) tincture at a great price. I've talked about Walton Feed and how you can get quinoa, whole grains and ancient grains for a fraction of the price you'd be paying in most grocery stores. I've introduced you to the Amazon Herb company and how its products have the capacity to prevent and even treat chronic disease.

I've introduced you to Herbal Advantage, shown you where you can get stevia, sea vegetables, apricot kernel oil, mushroom blends, minced garlic, bulk herbs, coral calcium, bulk fibers and many other products at fantastic prices from honest companies that you can trust. I've also given you a brief introduction to astaxanthin, or what I call "Vitamin X," which I think is destined to be one of the most popular and widely used vitamins and antioxidants in the years ahead.

I've also told you about Ancient Harvest, where you can get quinoa flour, quinoa pasta, and quinoa flakes. And I've told you about The House of Nutrition, where you can get unsweetened soy protein powder mixes from the Nature's Plus "Simply Natural" spirutein product line. Finally, I've introduced you to the breakthrough Pharmanex Nutrition Scanner and explained how it stands to revolutionize modern medicine, consumer health and disease prevention.

I hope you've enjoyed this tour! Please use this information to enhance your own health. It's a complete waste of time if you read this and don't actually do anything with it, so be sure to start making incremental changes in your life right now.

Sources of Life-Saving Information

There's more: Hopefully you already know about the NewsTarget.com website. There, you'll find literally thousands of articles covering a wide variety of health topics. You can get free access to those articles and even sign up free for the NewsTarget Insider email newsletter that brings you new health-enhancing articles each day (and without a bunch of annoying advertising, too).

You can use the search function at the bottom of any article to search for topics that interest you. If you want to find articles on medicinal herbs and diabetes, just search for "diabetes." If you want to find articles on osteoporosis, just search for "osteoporosis" and you will get a whole selection of articles authored by myself or other well-known doctors and authors.

That's the source of information that the Fraud and Drug Administration (FDA) hopes you never find out about. That's what the drug companies don't want you to be reading. Food manufacturers, you can bet, don't want you to see that information as well, because I tell the truth about what's in their food and what you need to be avoiding if you want to be healthy for the rest of your life.

If you want more ebooks on a variety of health topics, go to TruthPublishing.com. That's where you will find books on a variety of topics: health, wellness, disease prevention, losing weight and so on.

Together, NewsTarget.com and TruthPublishing.com are online destinations where you can learn more about the truth of what's going on in the health industry these days -- and how you, as an empowered individual, can take control of your health, save yourself a fortune, and transform your quality of life all at the same time. Because, really, the bottom line is that you don't need to go through life diseased or obese or depressed. There are simple solutions that are cost-effective, if not downright free of charge, that can not only prevent these diseases, but actually reverse them.

If everybody in the world knew about this information, we wouldn't even have an American Cancer Society. We wouldn't have a health care industry that's draining away hundreds of billions of dollars in productivity each year. We wouldn't have sky-high health insurance rates and people falling over dead from the toxic side effects of prescription drugs.

And why wouldn't we have all that? Because people would be healthy. They'd live their lives without chronic disease, and they'd save fortunes by not wasting money on prescription drugs, hospital stays and useless surgical procedures that really do nothing to make them healthier in the long run.

If you truly want to be healthy, you do that by educating yourself with information like this, and then by taking action to integrate it into your own life. So please take steps to do that in your life right now. And if you're not already a subscriber to the Newstarget Insider, then go to Newstarget.com right now and subscribe so that you can start getting free e-mails that can keep you informed on topics like this.

As always, I wish you the best in personal health and happiness.

- Mike Adams
