The kind of "free market" censorship that [Twain](#) and [Orwell](#) were subjected to demonstrated new dynamics in the arena of power, control and wealth accumulation. If two of the West's most famous authors could have their critical political observations about the West censored so completely, most people would not even know about them, much less read them, keeping the [negative cognitions](#) at bay once again. It happened even more completely with [lesser-known authors](#). With the revolutions in Europe, probably beginning with England's civil wars, the Western states had limited ability to use violence on dissenting citizens, and so the cultural managers had to control what people *thought*. Therefore, British and American cultural managers have long been the world's most sophisticated practitioners of mind control, its effects easily seen in [American flag worship](#), British royalty worship and other cultural phenomena. Such behaviors are religious acts, but the participants seem to pretend that they are not.

The European colonial experience was different for each imperial player. The [Portuguese](#) experience was more purely mercantile than the [Spanish](#) one. Spain's imperial exploitation of Mesoamerica was relatively primitive. Raw materials were exported to Spain, but it was mainly gold and silver, which had no productive uses, but allowed Spain's elites to enjoy European manufactures while the mines lasted, while initiating a vast inflationary spiral. Spain's primitive imperial dynamic [largely destroyed it as an imperial power by 1600](#). Spain's early imperial projects were little more than rich Spaniards financing rape-and-plunder operations, with the Crown getting its cut. The [Netherlands](#), which was Europe's first republic, had a more refined strategy, and its East India Company was a combination of corporation and state, and was a direct forerunner to modern corporations. The [English](#) had a similar strategy, and its East India Company became the official ruler of [India](#). [France](#) played the game also, but never quite attained the Dutch and English levels of capitalistic/mercantilist thrust.

The United States came to the empire game much later, and by the time it took the global stage, the corporate order was firmly entrenched. Robber barons virtually ran the nation, with many politicians and government officials in their hip pockets. The European powers had national and colonial subjects. The American Empire had employees, customers and voters. Employees were supposed to follow orders, living as subjects in economic dictatorships. In the American system, freedom was reserved for the owners, customers and voters. At least, that was the carefully crafted fiction of how the American system functions. Customers supposedly had freedom of choice, but American capitalism was notable for how monopolies dominated the scene. When there is only one brand of product, there is little choice, especially regarding life's necessities. In America, all industries and professions [quickly became rackets](#), its owners and members attending to their mutual self-interest.

Wiping out competitors was how the monopolies were largely established and maintained, something that even [Adam Smith](#) remarked upon.

[John Taylor Gatto](#), one of America's finest schoolteachers, openly admits that today's American school system was designed by robber barons a century ago, and that "[dumbing us down](#)" has been the goal of the American school system ever since. The corporate goal is creating docile, childish customers who are easily manipulated. That is no "conspiracy theory," but simply social engineering, consciously designed by people working for the [Rockefellers](#) and others. After Rockefeller [strikebreakers turned machine guns on striking coal miners](#), Rockefeller hired J.P. Morgan's publicist, and the rise of [public relations](#) began, which was all about "image management." Rockefeller created institutions such as the [University of Chicago](#), which dominates mainstream economic theory today, framing the issues in capitalistic terms. Today's system is history's most sophisticated and subtle. Average Americans think they are getting the [news](#), [education](#) and entertainment, not brainwashing. The most effective propaganda systems are *supposed* to appear as something different than what they are. If cultural managers can get the masses to worship flags, movie stars, sports heroes and other largely meaningless symbols, they can be easily manipulated. America's imperial system is merely tactically different and more sophisticated than the European one; the goals of power, control and wealth accumulation at the expense of others remain the same. Regarding how it has deluded the masses, the American system was a triumph of form over substance.

Hawaii, Cuba, Guam, the Philippines and Puerto Rico became outright American colonies, no different than how the European powers operated. In 1900, American troops participated in putting down the Boxer "Rebellion," helping keep China under the white man's boot. The United States also began playing a slightly different version of the imperial game, and the earliest and perhaps greatest instance of its novel colonialism was how it invented Panama. There is a recent book on the subject, which clearly demonstrates how the early days of neocolonialism operated.[\[240\]](#) Neocolonialism is colonialism in everything but the name, and accordingly, the American Empire is an empire in everything but the name. The main difference is that the subject peoples get to fly their own flag as a symbol of their illusionary independence. The oppression and exploitation is simply carried out by [different institutions](#) than the traditional colonial ones.

Europeans used the Isthmus of Panama since the 1500s in crossing between the Atlantic and Pacific oceans. Spain had plans to build a canal across the Isthmus in the 1500s. Panama was independent [for a moment in 1821](#), before Colombia annexed it. Americans began using the Isthmus in earnest during the 1840s, with an [American railroad completed during the 1850s](#). The Isthmus was an important and strategic transportation lane.

The Frenchman who initiated the Suez Canal's construction formed a company to build a Panamanian canal. The Panama Canal was the largest human construction ever attempted, and the French seriously underestimated the issues that plagued the canal effort. The excavation was abandoned only one-fifth complete in 1889, after hundreds of millions of dollars had been spent, and twenty thousand workers had died. It was a financial and prestige disaster for France. Gustave Eiffel, designer of his famous tower and the Statue of Liberty, went to prison for fraud for

misappropriating the project's funds, which ruined his career, although he was later cleared of wrongdoing.

Panama had an uneasy relationship with Colombia for generations, with a number of revolts, but was relatively independent in 1900. Throughout the 1800s, the United States never supported Panamanian notions of independence from Colombia. The U.S. had a treaty with Colombia that it would put down any Panamanian revolts, keeping the region around its rail line stable. Because of the Isthmus traffic, the Panamanian region was relatively prosperous and something of a Colombian cash cow. When Grant was president, he had Central America surveyed several times, to scout out canal possibilities. With the collapse of the French effort, American interest began anew. It quickly came down to two possible routes: through Panama and Nicaragua. Lake Nicaragua was planned for part of the Nicaraguan route.

The milieu surrounding the building of the Panama Canal was complex, with several competing factions, but it could be seen as similar to the Spanish conquest of the Aztecs: it was a grand tale with everything in it but a hero. The Columbian authorities were willing to part with land to build the canal, for the right price. American railroad interests saw the canal as a potential threat, and tried opposing it. The French were willing to sign over the canal rights, for the right price. Similar to Cortés' rise from obscurity as he stumbled into opportunity in Mesoamerica, Philippe Bunau-Varilla was an obscure, puffed-up Frenchman who launched a personal campaign to have the canal built through Panama.

The corruption of Washington D.C. in those days was fairly open. Mark "Dollar" Hanna was Washington's most powerful man before Teddy Roosevelt took the throne. Hanna was deeply in the robber barons' hip pockets. While Teddy Roosevelt said that acquiring the Canal Zone and building the canal was his greatest achievement, and that he "took" it, [\[241\]](#) the dirty reality was that the effort of acquiring the Canal Zone was largely led by Wall Street lawyer William Nelson Cromwell, acting as front man for a syndicate which was mainly bankrolled by J.P. Morgan. Colombia, facing the inevitable, was trying to get the best price it could for Panama, but its representatives were naïve to the real game being played. The Panamanian "revolutionaries" were largely following the orders of their American backers. Panama's first president was an employee of the American rail line in Panama, and his "leading" the 1903 revolution was mostly confined to doing as he was told. Cromwell and his pals bankrolled and orchestrated the Panamanian "revolution," bribing the Colombian general in Panama, Manuel Amador Guerrero, to do America's bidding, not Colombia's. It is a contender for the most fake "revolution" in world history. After bribing and manipulating the Panamanian revolution into being, Bunau-Varilla quickly bilked Panama out of its sovereignty by pulling off a diplomatic swindle, ceding Panama's lands, much as [American "treaties" defrauded the Native Americans.](#)[\[242\]](#)

Not long after Panama achieved its "independence," Joseph Pulitzer's media empire began publishing allegations that Roosevelt worked with the Cromwell-Morgan syndicate to perform a huge stock swindle regarding the U.S.' \$40 million payment to France for the canal rights. Although Roosevelt sued Pulitzer for libel, Pulitzer was apparently right. The Cromwell-Morgan syndicate had surreptitiously bought up the worthless French canal company stock and received about \$24 million on an "investment" of about ten percent as much. The Cromwell-Morgan syndicate's maneuvers

were brilliant and secretive, with the full story unknown to this day, with offshore shenanigans, complete record destruction and other machinations.[\[243\]](#) J.P Morgan became the first treasurer of the Panamanian “republic.”

The cover-up was so good that Roosevelt’s relationship to the Cromwell-Morgan syndicate is still obscure. However, it was discovered that Roosevelt’s Secretary of War and future U.S. president and Supreme Court Chief Justice, William H. Taft, had an interest in the Cromwell-Morgan syndicate, using his wife to front for him. It is doubtful that Roosevelt had “clean” hands. What has been established, however, was that the Cromwell-Morgan syndicate got the lion’s share of the money paid for Panama, with healthy bribes also passing to the Panamanian “revolutionaries.” It was neocolonialism at its starkest. Those were the days of Teddy Roosevelt’s Big Stick Diplomacy. The [Monroe Doctrine](#) became appended in American politics with the Roosevelt Corollary, which stated that the U.S. was appointing itself the selfless task of sometimes exercising “international police power” on its Latin American neighbors, for their own good, of course. The crude neocolonialism of how Panama gained its “independence” eventually gave way to more refined methods.

The United States immediately sent its military to the Canal Zone and occupied it from 1903 to 1914, largely to put down those pesky Panamanians, who harbored childish notions of independence. The Panamanians, as with the Cubans, Filipinos and other neocolonial vassals, discovered that they merely had new overlords, but Panama got to fly its own flag. The robber barons made out like bandits in their Panama Canal swindle, with the American taxpayer left holding the bag. Cromwell initiated an era of U.S. manipulation of Central America, where Wall Street called the shots. Cromwell masterminded America’s Panamanian adventure, although he preferred staying in the background. Cromwell eventually handed over his empire to his handpicked successor, [John Foster Dulles](#), who capably continued in his footsteps. Dulles became Dwight Eisenhower’s Secretary of State while his brother Allen ran the CIA, and they jointly engineered the overthrow of the [democratic Guatemalan government in 1954](#) on behalf of United Fruit, which the Dulles brothers had a financial stake in. To put it mildly, the Dulles brothers had a conflict of interest, and the corruption coming into the open over the years has been breathtaking, and the public certainly has only seen the tip of the iceberg. John Foster’s private records during some of his most active years of running Cromwell’s empire have been destroyed or remain confidential.[\[244\]](#)

While America was securing its increasingly far-flung empire, Europe was reaching a crisis stage. It is probably wishful thinking to see either of the 20th century’s World Wars as little other than imperial conflicts, with latecomers to the game wanting their share of the global spoils, but the more established players kept the goodies for themselves. Instead of merely plundering the world’s non-industrialized peoples, it was white armies and navies fighting each other, while the colonial lands were milked for soldiers and supplies. The Germans trounced the French armies in the Franco-Prussian war of 1870-1871, which saw France humiliated with the capture of Napoleon III, the siege of Paris, an occupying German army, and a heavy war indemnity levied on France, which France paid. From then until 1914, there was peace in Europe. It was not a restful peace. During the 1880s and 1890s, the French, English and Russians formed the Triple Entente, and Germany, Austria and Italy formed the Triple Alliance. Those would be the major players of World War I, which began with conflict in the Balkans. World War I would be the bloodiest war the world had ever seen, at least until the next one. Far more than 20 million people died in World War I, about half of them civilians.

The Triple Alliance was composed of powers that did not have vast colonial lands to exploit, and the Germans, British and French clashed frequently over the African looting grounds. Germany supported Moroccan independence from France in 1911, which was part of the milieu that led to World War I. None of the imperial powers believed in imperialism...for their rivals. World War I saw the spectacle of each imperial power trying to incite uprisings amongst their rivals' subjects. Lawrence of Arabia tried doing just that during World War I. He was a British agent who tried getting the Arabs to rise up against the Ottoman Empire. Russia wanted to carve the Ottoman Empire into nation-states, for self-serving reasons, while Britain and Austria wanted to keep it a weak empire, easily controlled. With the rise of industrialization during the late 19th century, oil suddenly became the great new energy source, and the Ottoman Empire was sitting on most of it, and it leaned toward Germany. Accordingly, the Triple Entente made secret agreements to carve up the Ottoman Empire for themselves.

World War I had unintended consequences, one of which was the Bolshevik Revolution in Russia. As with all revolutions, early idealism soon gave way to "realism" and bloody power grabs. Initially however, Russia pulled out of World War I and the imperial game, which is about the only reason that Turkey exists today. Lenin advocated the opposite of the Empire Game, and a Marxist government ended up inspiring many colonial peoples to try the same thing, which made the imperial powers uneasy. The United States sent troops to try putting down the Russian Revolution, landing troops at Vladivostok and Archangel in 1918, with 500 casualties at Archangel. Astute observers call that the real beginning of the Cold War. Capitalism, [born of colonialism](#), waged war against communism for the next seventy years.

Warring empires have shaped the fortunes of the Middle East's people [for the past five thousand years](#). There were centuries of relative peace, punctuated by violent upheavals and invasions abroad, or being invaded at home.[\[245\]](#) The Ottoman Empire, which began its rise in the fourteenth century, by the sixteenth century ruled over most of the Arab peoples, then began its long decline. The heart of the Ottoman Empire was the Anatolian Peninsula, which composes most of today's Turkey. It was devastated far worse than any of the European belligerents during the World War I era, losing about 20% of its population.[\[246\]](#) The Great Powers, mainly Britain and France, carved the Ottoman Empire into easily controlled nation-states, in their first major experiments with neocolonialism. Imposing national identities onto lands of tribes has proven a disastrous strategy. The Great Powers carved Africa it into colonial holdings in the late 19th century, and those arbitrarily drawn borders are national borders today. Those machinations greatly contributed to the strife that Africa and the Middle East have endured ever since.

Britain preferred the constitutional monarchy model, and imposed it on what became Iraq. Iraq's first post-colonial ruler, King Feisal, was widely regarded as a British puppet. He was originally the "king" of Syria, before the French kicked him out. The British then used him to be Iraq's first "king." Kuwait was a puppet nation, almost invented out of whole cloth by the British, as a way to further their regional aims, particularly as related to Iraq. Carving Kuwait from Iraq nearly completely landlocked Iraq. Iraq has only 36 miles of coastline, and its main port is upstream on the Shatt al Arab (the waterway formed by the joining of the Tigris and Euphrates rivers) at Al Basrah, known as Basra to westerners. The oil-rich Mosul region in northern Iraq was forcefully separated from Turkey by

Britain in 1918. Winston Churchill was instrumental in leading the region's exploitation before and after World War I. Churchill has the distinction of being the first to wage chemical warfare in that part of the world, using it on Iraqis and proudly justifying it.[\[247\]](#) In addition, Britain wanted the Iraq region as a safe plunder route from its vast colonial holdings in India, and planned on building a railroad through there.[\[248\]](#)

In a moment of candor, Churchill let slip what the British game was all about, in a 1914 letter to his colleagues in the Cabinet,

“we are not a young people with *an innocent record and* a scanty inheritance. We have engrossed to ourselves...an *altogether disproportionate* share of the wealth and traffic of the world. We have got all we want in territory, and our claim to be left in the unmolested enjoyment of vast and splendid possessions, *mainly acquired by violence, largely maintained by force*, often seems less reasonable to others than to us.”[\[249\]](#)

During the 1920s, Churchill had his letter published in *The World Crisis*, but with the italicized words deleted, so the masses would not be burdened with digesting too much undiluted truth.

John D. Rockefeller was legendary for his use of front men and the surreptitious purchase of companies and people, to hide his hand. Accordingly, it is difficult to know exactly when the Rockefeller Empire began wrapping its tentacles around the Middle East, but scholars who have investigated those matters say that the world's first global oil cartel was formed in 1920, between Standard Oil, Royal Dutch Shell (today Shell Oil) and Anglo-Iranian (today British Petroleum).[\[250\]](#) Whatever the case may be, oil politics guided the dismemberment of the Ottoman Empire, and Britain largely took over Iran, with its Anglo-Iranian oil company having an eventual monopoly.

France got its revenge on Germany for the humiliation of the Franco-Prussian War, and heavy reparations were laid on Germany, a forced admission of guilt, as well as disarmament. Those dynamics led directly to World War II. With World War I, the United States took center stage. Woodrow Wilson ran for re-election in 1916 on the platform of not getting the United States involved in World War I. He quickly reneged on the deal, and the U.S. government's first big [PR](#) campaign in American history was manipulating Americans to support involvement in Europe's war.[\[251\]](#) The Espionage Act was passed, along with a related sedition amendment, making a crime to speak out against the war. Hundreds of Americans were imprisoned under those laws, including presidential candidate Eugene Debs, a socialist and noted pacifist. He even ran from prison in 1920 and received nearly a million votes. Silencing internal dissent was an imperial necessity. Wilson was a noted racist, and he segregated the federal government, bringing back Jim Crow.[\[252\]](#) The economic progress that blacks had made since the Civil War was curtailed and even reversed under Wilson's openly racist administration. In 1940, black families had a proportionally *lower* income compared to white families than they had in 1900, at about 30%.[\[253\]](#)

Under Wilson, the United States invaded Latin American nations nearly at will. Franklin Roosevelt worked in the Department of the Navy under Wilson, and after the United States invaded Haiti in 1915, Roosevelt was the author of Haiti's new constitution, and Roosevelt bragged that he worked in a major change in the Haitian constitution. [Ever since they freed themselves](#), the Haitian constitution forbid foreign land ownership, not wanting the white-owned plantation culture to reappear there. Roosevelt did away with it, paving the way for Haiti to become a neocolonial asset of the United States. Thousands of Haitians died resisting the American invasion. Wilson's racism and imperialism are minimized in the standard American histories, while American are told about Wilson the great diplomat who founded the League of Nations.

The American people were brainwashed into supporting the global ambitions of America's ruling class, and [my grandfather was crippled in World War I](#). The 1920s were notable for Prohibition, the rise of traditional organized crime and unbridled capitalism. Instead of monopoly trusts dominating, a speculative frenzy seized the stock market, with companies being formed and selling stock, with virtually nothing underlying it at all (known as "Blue Sky" companies, because that was about what they sold). The market frenzy was guided by the "greater fool theory," which was the notion that the stock I buy might not really be worth anything, but somebody might buy it from me for more, them being an even bigger fool than me. The 1929 stock market collapse led to the Great Depression, and laws were passed to supposedly prevent that from ever happening again, although [the laws were largely unenforceable](#), which was by conscious design by the corporate order, and the dot.com collapse and [Enron-initiated accounting scandals of 2002](#) seem like 1929 all over again.

[Smedley Butler](#) figured out the game after he retired from the military. Butler helped run the U.S. Marines for a generation. In 1935, in *Common Sense* magazine, he assessed his career:

"There isn't a trick in the racketeering bag that the military gang is blind to. It has its 'finger men' to point out enemies, its 'muscle men' to destroy enemies, its 'brain guys' to plan war preparations, and a 'Big Boss,' Supra-nationalistic Capitalism.

"It may seem odd for me a military man, to adopt such a comparison. Truthfulness compels me to do so. I spent thirty-five years and four months in active service as a member of our country's most agile military force, the Marine Corps. I served in all commissioned ranks, from second lieutenant to Major General. During that period I spent most of my life being a high class muscle man for big business, for Wall Street, and for the bankers. In short I was a racketeer - a gangster for Capitalism.

"I suspected I was just part of the racket at the time. Now I am sure of it. Like all members of the military profession I never had an original thought until I left the Service. My mental faculties remained in suspended animation, while I obeyed the orders of the higher-ups. This is typical with everyone in the military.

"Thus I helped to make Mexico, especially Tampico, safe for American oil interests in 1914. I helped to make Haiti and Cuba a decent place for the National City Bank boys to collect revenue. I helped

in the raping of half a dozen Central American republics for the benefit of Wall Street. The record of racketeering is long. I helped purify Nicaragua for the International Banking House of Brown Brothers in 1909 to 1912. I brought light to the Dominican Republic for American sugar interests in 1916. In China in 1927 I helped Standard Oil.

"During those years I had, as the boys in the back room would say, a swell racket. I was rewarded with honors, medals, and promotion. Looking back on it, I feel that I might have given Al Capone a few hints. The best he could do was operate in three city districts. I operated on three continents."

In 1935, Butler also wrote [War is a Racket](#), and campaigned on that theme for the rest of his life. The Great Depression of the 1930s was a global phenomenon, and it brought Hitler and others to power.

Life for the remnants of Native American tribes [did not improve much](#) after their conquest, dispossession and genocide was completed during the late 19th century. During the 20th century, the United States continued genocidal policies against Native Americans, including forced sterilization, forcible removal of children from their parents, to be raised in the white culture, more active undermining of tribal governance and still more theft of their lands. Canada also did the same things. It was not until America's Civil Rights era that Native Americans began making a comeback.[\[254\]](#)

Sitting on Top of the World

It is doubtful that any power in world history ever militarily "helped" others primarily from benevolent intent. Violence is not a humanitarian undertaking, as it always violates somebody. Regarding "benevolent" wars, history has shown that it was always a ruling class machination that the common people were blind to, as they cheered the warfare, to "help" other people. Those common people also served as cannon fodder for the ruling class' ambition. Much later, after it did not matter anymore, the truth came out. Covering up ulterior motivation is why "national security" secrecy exists, mainly used to cover-up crimes in high places, and foster and maintain deceptions, not to attend to "[national security](#)."

World War II was humanity's most devastating war...so far, with up to 100 million dead.[\[255\]](#) In the United States, it is known as America's greatest war, often called the "[good war](#)." World War II was obviously born of imperialism and the fact that the imperialist latecomers, Germany and Japan in particular, needed easy access to cheap foreign resources and labor in order to become imperial powers, but the other Great Powers already owned the world. [Hitler took a page](#) from America's handbook, seeing Eastern Europe in the same way that America's [Founding Fathers](#) saw the American continent: possessed by inferior races whose dispossession and extermination (if necessary) would clear the way for "living space" for the chosen race's settlement. Hitler's "crime" was targeting white people as inferior races (although far from unprecedented in Europe). [Japan](#)

developed a similar [Manifest Destiny](#) ideology toward China. While Germany and Japan were making imperial moves, the United States government and industrial leaders [held Germany in warm regard](#), and even when [Japan intentionally sank an American ship](#) as it [attacked China](#), Franklin Roosevelt actively covered for them, minimizing the incident in the American media.

When Germany and Japan began stepping on imperial toes, the situation became strained, although the United States declared war on Germany *after* Germany declared war on them, after the [Pearl Harbor attack, which was no surprise to the American military](#). When it came time to put down the imperial upstarts, the communists received a quick makeover, and one of history's bloodiest tyrants, Joseph Stalin, became [Uncle Joe](#) in the United States, at least while there were Nazis to defeat. The Pacific Theater was [largely an American race war against Japan](#), to [wipe out their burgeoning empire](#). As World War II ended, America quickly hired all the useful Nazis, even ones who performed human experiments in the death camps. The [CIA](#) epitomized [American foreign policy](#), being [headed by Wall Street lawyers and executives](#), while [hiring the Nazi intelligence network virtually intact](#), to wage covert war against Uncle Joe. There were even plans to [nuke the Soviet Union out of existence](#), with Nazi help. The reign of Joe McCarthy in those post-war years was no anomaly, but neatly aligned with U.S. [neocolonialism](#), fabricating the communist threat, which was really the threat that the [colonized world](#) might free itself from the West's shackles.

Few will baldly state what their true ambition is, especially when it is driven by [greed](#) and a lust for power. However, declassified documents from the war and early post-war years clearly spelled out U. S. government intentions. U.S. planners saw the colonized world in virtually the same way that Europe had, but their internal documents phrased things more clinically. Before World War II had even ended, U.S. planners saw nearly the entire globe as its "Grand Area," and the U.S.' destroyed imperial rivals were going to follow the "great workshops" example of Japan and Germany during the war, becoming producers of goods that the U.S. would find useful. The traditional colonial lands were to be a source of cheap labor, food and natural resources, and a captive market for manufactures, in mercantile fashion. The colonial domains were to be exploited to help rebuild Europe and Japan, Africa in particular.[\[256\]](#) U.S. plans were a blueprint for a truly global empire. Only the Soviet Union stood in its way (and later, China), and that was what the Cold War was all about, which the U.S. instigated and escalated at every opportunity.

One of America's leading diplomats, George Kennan, who was a Soviet Union expert and was considered the leading dove on the issue of foreign policy, authored Policy Planning Study 23 for the U.S. State Department in 1948. In it, Kennan wrote things that are now infamous in foreign-relations circles. It was a top-secret document long ago, and Kennan was writing to his own people. He stated that in the wake of World War II, America had only 6% of the world's population, but half of its wealth, and such a situation would invite "envy and resentment" from the rest of the world. Kennan advised that the U.S. foreign policy goal should be to "maintain this position of disparity." In order to keep that "disparity," Kennan recommended that we "dispense with all sentimentality and daydreaming; and our attention will have to be concentrated on our immediate national objectives." Kennan recommended that talk about "unreal objectives such as human rights, the raising of living standards, and democratization" stop, because the "day is not far off when we are going to have to deal with straight power concepts. The less we are then hampered by idealistic slogans, the better."

In other words, Kennan expected the “envy” of the world’s citizens, and thought that America should deal in “straight power concepts” to maintain the “disparity” that might cause the envy. Kennan was a *dove*. Paul Nitze, a hawk of the day, authored the 1950 National Security Council Memorandum 68 for the then Secretary of State, Paul Acheson. Whereas Kennan “gently” called for the use of “straight power concepts,” Nitze called for a subtle assault on the Soviet Union, to sow the “seeds of destruction,” and a militarization of the U.S. economy, where social services would be slashed in order to build the military machine that would be needed to maintain America’s position of “disparity.” In order to do that, the United States needed to silence opposition to the plan and stop its “excess of tolerance” toward dissent in the United States.[\[257\]](#) Joe McCarthy appears to have taken a page straight from Nitze’s work (or vice versa). Kennan and Nitze urged the United States to meet “envy” with violence. Nitze was still around, influencing American policy, during the Reagan administration. Lyndon Johnson once mouthed some of Kennan’s wealth-hoarding rhetoric, nearly verbatim, during the Vietnam era, talking about how America controlled the lion’s share of the world’s wealth, other nations wanted some, and they were not going to get any. When the *Pentagon Papers* were leaked, the government’s internal documents revealed that the main theme of the war planners was not freedom, democratic rule or any of those lofty ideas, but tin, rubber and oil. As with all those slave-owning [Founding Fathers](#), when the political rhetoric is stripped away, the [economic motivation](#) behind the institutions and actions is clear.

The U.S. has *never* exported democracy and freedom to the world’s people, and neither has anybody else. The [White Man’s Burden](#) is a racist canard. With [hiring Nazis](#) and other foreign policy machinations, the U.S. simply refined the methods of oppression, with rigged elections, coups that America armed and financed, and other tactics to have it appear (at least to the American people, who ultimately authorize and finance such activities) that the U.S. was not behind setting up draconian “governments” whose sole purpose was serving U.S. business interests, as in the rise and reign of Indonesia’s [Suharto](#). He was the world’s greatest butcher during the last half of the 20th century, performing most of his evil not only with U.S. approval, but also with U.S. weapons and subsidy. When all else failed, the U.S. would invade, as the wars along Eastern Asia during the 1950s and 1960s demonstrated.[\[258\]](#)

The wars in Southeast Asia during the 1960s and 1970s were obviously American attempts to recolonize that part of the world. The United States pledged to France that it would help them recover their colonial lands after World War II was finished. Regarding Britain and France, the “help” the United States gave them was more on the order of elbowing them out of the way, to grab the plunder for themselves, as Britain experienced when the United States helped them keep [Iran in their fold](#), but took over Iran’s oil industry in the process. Ho Chi Minh was an American ally during World War II, helping battle the Japanese. As the colonial era witnessed numerous times, the new whites on the scene spouted impressive rhetoric about helping the local people become or stay free; in reality, they came to be the new overlords, and it was no different with Vietnam. When World War II was finished, Vietnam declared itself independent, free from two millennia of foreign domination. It did not last long, however, with the Allies even using Japanese troops immediately after the war ended to try recolonizing Vietnam. By 1954, the Vietnamese defeated a weak French recolonizing effort (even with U.S. help), and were on the brink of independence, but the United States then manipulated the situation, putting a puppet, Ngo Dinh Diem, in charge in Vietnam and cutting it in

half, sabotaging efforts for Vietnamese independence and unification. The CIA assassinated Diem in late 1963, to John Kennedy's surprise, and he followed Diem to the grave a few weeks later (they were quite possibly [related assassinations](#)), and Lyndon Johnson's administration immediately began manipulating the Vietnam War into existence. Even Dwight Eisenhower admitted that there would have been only one Vietnam during the 1950s, if the United States had not actively scuttled the Vietnamese election called for by the United Nations.[\[259\]](#)

I know somebody from the U.S. military whose technical innovations were used in fabricating the Gulf of Tonkin Incident, which was the U.S. rationale to begin the wars of Southeast Asia. In intent and effect, the Gulf of Tonkin Incident was no different than what [Zachary Taylor](#) did to instigate the Mexican American War, or the border incident that the Nazis concocted in order to invade Poland, which set off World War II. The sinking of the *Maine* (by a boiler accident onboard) in Havana's harbor was a convenient excuse to wage the [Spanish-American War](#), for another huge land grab. To the credit of millions of Americans, they were not fooled for long by the obvious fraud used to instigate the Vietnam War, and displayed a collective conscience that is rarely found in imperial societies (it was also part of a general cultural awakening – thank you, [John Lennon](#)). American protests were related to the U.S. eventually withdrawing, although the U.S. government took vengeance on Vietnam in any way it could for the next generation. The CIA's Ralph McGehee finally [figured out the American game in Saigon in 1968](#). The greatest violent destruction of human life during the last half of the 20th century is what the United States did to Southeast Asia. There are no close contenders, except what America did up the coast in Korea. The "goo-goos" of the [Philippines](#) became the "gooks" of Southeast Asia, in another intensely racist and genocidal war that America waged against Asia's people, with atom bombs dropping on the "Japs" between the goo-goo and gook wars, as well as [millions of Korean and Chinese dead](#) during the 1950s.

I know Americans who were soldiers in Vietnam and other places, and although they usually are prevented from publicly talking about their experiences because of national security secrecy laws, I have heard many first and second hand accounts. [Dannion Brinkley](#), in his *Saved by the Light*, recounts his experiences of being killed by lightning and the awesome experiences that he had while dead and dying, frankly tells of his days as an assassin in Southeast Asia. It appears as if most of Brinkley's work was done in the "secret wars" in Laos and Cambodia. He was the triggerman on an assassination team. He described murdering people in those nations, blowing their heads off, sniping from the jungle. In one instance, Brinkley was part of a team that was assigned to assassinate an official, outside of Vietnam. The official was staying at a hotel. His security was good enough that Brinkley could never get a clear shot at him, after four days of staking out the hotel. Brinkley and his team then did the logical thing: they blew up the entire hotel, killing about fifty people while taking out their target. Brinkley said that he "laughed about it and told my control officer that all the people deserved to die because they were guilty by association."[\[260\]](#) Brinkley named no names, but that was a famous assassination.

A friend of mine was involved in Special Forces activities as Brinkley was, and told me how he was trained to sneak up on people at night and break their necks with his bare hands. He estimated that he killed about seventy people during one Special Forces mission, in a nation the U.S. was "secretly" at war with. I have also heard of [far worse](#) acts performed by our boys in Vietnam.

The so-called international “aid” agencies such as the [World Bank, International Monetary Fund](#), World Trade Organization and so forth are purely neocolonial institutions, either owned outright or dominated by Western interests, usually American. The Third World gets little say about the kind of “help” those organizations provide. Even supposedly idealistic organizations such as the [Peace Corps are largely neocolonial tools](#), often causing more harm than good to the foreign peoples they “help.” Although the names, faces and techniques may change, the dynamic is still that the world’s poorest nations, with large portions of their populations hungry or starving, export food to the United States instead of growing food to feed that nation’s hungry. The last time I looked several years ago, of the world’s poorest forty nations, thirty-six exported food to the United States.

Those dynamics are part of what astute commentators from both the political right and left call the [Third World War](#), or the War Against the Poor.[\[261\]](#) The United States has been dominating the neocolonial war against the world’s poor ever since World War II, keeping the boot on their neck, supplanting its European rivals as the global slave master.[\[262\]](#)

When the unsavory neocolonial activities become so obvious they can be denied no longer, American cultural managers and spin doctors labor to frame the exercise as attempts to do good that went bad, not what they really were: exploitation and violence designed to serve the dominant class’ interests, not the people who were “helped” and slaughtered.[\[263\]](#) Edward Herman and Noam Chomsky summarized the [American media](#)’s retrospective treatment of the Vietnam War:

"The war was a 'tragic error,' but not 'fundamentally wrong or immoral' (as the overwhelming majority of the American people continue to believe), and surely not criminal aggression - the judgment that would be reached at once on similar evidence if the responsible agent were not the United States, or an ally or client.

"Our point is not that the retrospectives fail to draw what seem to us, as to much of the population, the obvious conclusions; the more significant and instructive point is that principled objection to the war as 'fundamentally wrong and immoral,' or as an outright criminal aggression - a war crime - is *inexpressible*. It is not part of the spectrum of discussion. The background for such a principled critique cannot be developed in the media, and the conclusions cannot be drawn. It is not present even to be refuted. Rather, the idea is unthinkable.

"All of this reveals with great clarity how foreign to the mobilized media is a conception of the media as a free system of information and discussion, independent of state authority and elite interests."[\[264\]](#)

Since the Vietnam War ended, American cultural managers worked diligently to retroactively demonize American war protestors, the victims of U.S. aggression and anybody else who resisted

America's greatest and most disastrous neocolonial venture. It was a largely successful attempt to reconstruct imperial ideology. The Vietnam War protests were virtually unique in their scale, as far as appearing in imperial societies, meaning that the imperial ideology failed to mobilize *all* the masses to unthinkingly support the war; therefore, it needed to be reinvigorated.[\[265\]](#) Opposing the Vietnam War probably cost Martin Luther King, Jr. his life, and perhaps Bobby Kennedy. The FBI helped murder Malcolm X *after* he became *less* militant in pursuing social change.[\[266\]](#)

The toll from the Third World War has been immense, in human death and suffering, not to mention the environmental devastation that keeps escalating. Eight million dead and hundred of millions of people made miserable are well within the range of estimates for the Third World War, and the footnote at the end of this sentence shows one way those numbers are developed.[\[267\]](#)

The strategy that [Nitze](#) outlined in 1950 worked. While the West plundered its colonial and neocolonial domains, the Soviet Union actively *subsidized* its realm, the money and resources *flowing outward* from the homeland (such as the big subsidies for Cuba). That, combined with the arms race the United States instigated, along with the relatively primitive level of industrialization that the Soviet Union had, the Chernobyl disaster and being led into [Brzezinski](#)'s "Afghan trap," all contributed to its collapse. It was about the only peaceful collapse of an empire that humanity has seen, where the people of the Eastern Bloc took Gandhi and Martin Luther King Jr.'s lessons to heart. With the peaceful end of the Soviet Union, the United States was then left alone on the world stage as 1989 drew to a close, with unchallenged global hegemony. America's first act after the Berlin Wall fell demonstrated just how hollow its Cold War rhetoric was.

The New Era Looked a Lot Like the Old Era

When the Berlin Wall was falling and the world was cheering, I wondered what George Bush would have to say about it. Instead of an impassioned speech about freedom and the historic nature of the peaceful collapse of an empire, Bush seemed shocked and afraid by what happened, mumbling about needing to keep things under control. Two weeks later, the United States invaded Panama.

Anybody who thinks that America's 1989 Panamanian invasion had anything to do with "restoring democracy" or stopping the drug traffic is invited to watch *The Panama Deception*, which won the 1993 Academy Award for best documentary. Any war's first casualty is the truth, and the Pentagon got practice in manipulating/muzzling the Western press in Panama that came in handy the next year in Iraq. Not until *The Panama Deception* came out did many Americans find out what was hidden about America's blatant, illegal and murderous invasion of Panama. Napoleon once said that if the truth can be kept quiet long enough so the masses do the elite's bidding, the truth coming out later does not really matter.

The intent and effect of America's invasion of Panama was the opposite of restoring democracy, and the drug trade probably doubled through Panama after America invaded and installed a puppet government.[\[268\]](#) As with Saddam Hussein, Manuel Noriega is no saint. He came up through the

military's ranks, as most Latin American dictators did. Noriega's services were valuable to the United States, and he was well paid by the U.S., apparently more than \$100,000 a year by the CIA. Surely, Noriega had his hand in drug running, but almost as certainly did George Bush, Dan Quayle, Bill Clinton and many others of high stature.[\[269\]](#) Noriega succeeded Omar Torrijos as Panama's leader. Torrijos was not a typical banana-republic dictator. He was the closest thing to a democratic leader that Panama ever had, and was beloved by the Panamanian masses because he enacted many policies that benefited the average person, and he was decidedly wary of the United States' imperial influence. Torrijos died in a plane crash in 1981, an accident that many think was not accidental, but sabotage and murder by Noriega, with CIA help. If that is true, it was merely a day at the office for the CIA.[\[270\]](#) Economic Hit Man [John Perkins](#) was friends with Torrijos, and *knows* his death was a CIA assassination.

Lending more credence to the assassination angle on Torrijos' death, during Panama's invasion the Torrijos Museum was specifically targeted and bombed by America, and four months after the invasion, Torrijos' tomb was attacked, opened, and his remains stolen by white men. Torrijos was a thorn in America's side, negotiating the return of the Panama Canal, which was why [Wall Street invented Panama in the first place](#). The speculation is that the Skull and Bones Society, Yale's eastern establishment secret society that robs graves to steal the remains of those who were obstacles to the American Empire, performed the theft. George Bush the First belongs to the club, as did his father [Preston](#), whose contribution to the club was apparently robbing Geronimo's grave.[\[271\]](#) George Bush the Second also belongs to the club.

The CIA is about the world's premier drug runner, and George Bush once ran it. With the Soviet Empire collapsing, the United States could put aside pretenses it adopted with the 1980s wars [it mounted against Central America](#), where it used proxies. It was still having problems stuffing Nicaragua back into the neocolonial corral, and elections were coming up in February of 1990. The U.S. invasion of Panama may have been an instructive lesson to Nicaragua of what happened to nations that displeased the United States, especially now that the U.S.' main political-economic rival, however weak it was, had collapsed.[\[272\]](#) The Sandinistas lost that 1990 election, as the Nicaraguan people surrendered to the U.S. war against them, as Ronald Reagan openly wished for.

The American invasion of Panama was a classroom for honing methods of overthrowing a government, installing a dictatorship, wiping out the political opposition and keeping the American people in the dark. From the moment the United States invaded Panama, they engaged in extraordinary measures to keep the news from Americans about what was happening. The United States military's cover-up effort during the invasion's first three days was so successful that there exists virtually no independent video footage. The American media was tightly controlled, their correspondents not being allowed to independently witness or record anything. They sat under the military's watchful eye for the entire invasion, not allowed to go anywhere important. Media personnel from other countries were detained, jailed, and in the case of Spanish news photographer Juantxu Rodriguez, summarily executed by United States soldiers for the crime of taking pictures.

During the early stage of the American invasion of Panama, Juantxu Rodriguez recorded the below photograph of Panamanians lined up in a makeshift morgue.

[Click on image to enlarge](#)

American soldiers actively detained journalists and confiscating video cameras and film, and an American soldier summarily executed Rodriguez for the crime of taking pictures.

[Click on image to enlarge](#)

The camera is still wrapped around Rodriguez's neck, as he lay where he was shot. Those kinds of activities kept the American people ignorant of what kind of invasion really happened in Panama. Those images are from *The Panama Deception*.

U.S. soldiers raided, ransacked, shut down and arrested the personnel of every organization in Panama critical of the United States' invasion. The U.S. military immediately took over the television stations in Panama, and began broadcasting their own programming. The puppet government leaders that the United States installed upon invading drew up lists of people and groups who truly advocated democracy in Panama, and who might be politically opposed to the puppet regime. The United States military rounded up thousands of people on those lists and threw them into prison, sometimes for years, with no charges ever filed. The people who received that treatment were college professors, newspaper editors, union leaders, human rights activists, etc. In essence, all the truly democratic leaders in Panama were imprisoned. George Bush had audacity to say his invasion "restored democracy" in Panama. As Bush uttered those words, our politicians in Washington gave him a standing ovation.

A major reason the United States muzzled the media was so the invasion's true devastation of Panama would go unreported. The Pentagon said that only 250 Panamanian civilians died in the invasion. The reality was that thousands died, as many as 4000 people, perhaps more, and 15,000 were left homeless in the El Chorrillo district alone. The United States military invaded and burned the El Chorrillo district of Panama City, in a display of callous disregard for civilian casualties. By detaining or executing journalists, the military kept that news quiet. They wanted other things kept quiet. For instance, it appears that they tried out new weapons systems during the invasion. There were reports of people literally melting, and vehicles cut in two by what appeared to be a laser-type weapon. The Panama invasion would have been the ideal opportunity to try out such experimental weaponry, as acknowledged by [Ramsey Clark](#) and others.

The United States military tried covering up their mass murders as best it could. In echoes of the crematoria at Auschwitz, the military apparently bulldozed bodies into piles on the beaches and had bonfires, trying to destroy the bodies, then dumping the remnants into the ocean. They took over the

hospitals and morgues, seizing their records and detaining doctors and the hospital staff. There were ten doctors on duty at Santo Tomás Hospital on December 20, 1989. Nine of them were fired, arrested or driven into hiding. The Red Cross was denied access to El Chorrillo for several days. America's military heroes were not able to destroy all evidence of their mass murders. Months after the invasion, while the Pentagon was still saying with a straight face that only 250 civilians had died, mass graves were unearthed in Panama. Fifteen mass graves were discovered, and one more Big Lie of the U.S. government was exposed. As the mass graves were exhumed, the victims in them gave mute testimony to what kind of invasion really happened in Panama. There were victims with bullet holes in the backs of their skulls, victims with their wrists tied together, victims in their 70s, teenagers, victims wearing casts on their arms and legs, etc.[\[273\]](#)

The American people cheered the invasion, Manuel Noriega was transformed into public enemy number one, and America wanted him brought to "justice." Invading a nation to apprehend their head of state, for crimes he supposedly committed, is an act nearly without precedence in world history. It was a flagrant violation of all international law, condemned by the United Nations and throughout the world. The American people easily swallowed the rationale of invading Panama to apprehend Noriega. In exasperation, the scholar José de Jesús Martínez said that it was hard to believe "how Americans can be so stupid" as to believe the rationale they were fed regarding Panama's invasion. The U.S. had ample opportunities to apprehend its employee before the invasion.

Why did the United States invade Panama? The primary reason appears to be the same one why America attacked Iraq. The dictator became a little too independent. Jimmy Carter considered himself the "human rights" president. Compared to other presidents of his generation, he was. That is relative, however. The people of [East Timor](#), [El Salvador](#), South Korea and elsewhere may have a different opinion of Carter, but his administration was gentle compared to the Reagan-Bush or Johnson-Nixon-Ford years. Carter signed an agreement in 1977 with Torrijos to give the Canal Zone's control back to Panama in 1999. My militaristic father bewailed in sorrow when Carter signed the agreement, as did many right wingers around America. [Ronald Reagan](#) campaigned for president on the issue that we paid for the Panama Canal, and it is ours.

It appears that the Reagan-Bush gang felt they would live with Carter's agreement if they could control Panama. They almost certainly had a hand in [Torrijos' 1981 death](#), and Noriega was their kind of thug. They thought he would be obedient as long as he got his cut. Noriega began acting increasingly like a disobedient dictator (such as failing to enthusiastically support America's Contra proxy-war against Nicaragua), and the U.S. did not want him in power when the Canal went back to Panama. So America invaded Panama, installed its puppets, had them abolish Panama's army, and the U.S. turned Panama into an obedient client state again.[\[274\]](#) Apparently, a primary reason the United States acted so quickly in sending its troops to the Persian Gulf after Iraq's invasion of Kuwait was that Bush feared Hussein would duplicate his Panamanian success by invading and quickly withdrawing, leaving behind a puppet government.[\[275\]](#)

The exercise of controlling the press during the Panamanian invasion was a mere warm up for the Gulf War. The United States controlled the information regarding the invasion so well that it brings to mind Stalinist Russia or Nazi Germany.

Attacking Iraq

During 1990, I moved to Ohio and experienced the first war our nation waged since I became an adult. Bombing Libya and invading Grenada and Panama were unpleasant for me, but what happened in Iraq was on a vastly larger scale. In 1990, I was also recovering from my experiences with [Dennis Lee](#). I went from having idealistic [free-energy dreams](#) to the harsh realization that the energy industry was essentially run by criminals. The energy industry probably [does not deserve to exist](#), but by suppressing all viable alternatives, it keeps raking in the money. It also is a valuable lever for manipulating the world economy, as the "[oil crises](#)" during the 1970s demonstrated. The United States probably "needs" Middle East oil only because the energy industry has [ruthlessly eliminated alternatives to oil](#).[\[276\]](#)

I eventually realized that my indoctrination by [school](#), the [media](#) and other authority sources presented a worldview starkly different than what I saw with Dennis. I was beginning to read alternative media publications such as [Lies of Our Times](#), [Covert Action Information Bulletin](#), and joining the [Christic Institute](#).

At that time, I knew a little about the region's history, how Europe had been exploiting the region for many years, and when Britain officially pulled out in the 1920s, their actions nearly guaranteed the strife we see there today. Iraq was a nation created by the British drawing lines on a map.[\[277\]](#) When the British carved up the Middle East into nations, obviously the interests being served were not those of the Middle East's inhabitants, but Britain's. Kuwait was a district of Iraq and Kuwait during the Ottoman Empire days, until the British moved in. An oil rich region was landlocked by Britain's power politics.

I also knew that Iraq had legitimate grievances with Kuwait. Britain drew up their national borders, and Iraq had always maintained that Kuwait was part of Iraq, and was held back by Britain from simply invading and annexing Kuwait. The British High Commissioner in Baghdad in 1930 even "suggested to the government of the day that Britain should encourage the gradual absorption of Kuwait into Iraq," and that, "Kuwait was a small and expendable state which could be sacrificed without too much concern if the power struggles of the period demanded it."[\[278\]](#) The Kuwait/Iraq border was long disputed, particularly around the rich Rumaila oilfield. Kuwait may have drilled into Iraqi oil fields while Iraq was fighting Iran. A factor that led to Iraq's invasion of Kuwait was Kuwait's refusal to lease two uninhabited islands to Iraq, so Iraq could have a Persian Gulf port.[\[279\]](#)

I also caught the whiff of possible propaganda being purveyed to justify the subsequent devastation of Iraq. For instance, a friend angrily called me up one day in October of 1990, telling me the story of Iraqi soldiers taking babies out of incubators in Kuwait and letting them die so Iraqi babies could have the incubators. I also heard George Bush telling the world about Iraq's imminent threat to Saudi Arabia, and the American media swallowed it whole.

The incubator story sounded exactly like the wartime propaganda that nations have always used to dehumanize the enemy. The incubator story was eerily similar to [English tales during World War I that told of German soldiers killing babies](#), or [Christian stories of Jews killing babies](#), or [Roman/pagan stories of Christians killing babies](#). Baby killing/eating is a classic wartime propaganda ploy, but the American media repeated the story endlessly. I remember the bomb-disguised-as-a-toy story concocted about the Soviet Union during the 1980s, where they supposedly used them in Afghanistan. Such stories are always suspicious, particularly when a nation beats the war drums as hard as the U.S. was.

Seven U.S. Senators cited that incubator "incident" as part of their justification for voting for war. The incubator story was a prominent media story for months, as the Bush administration garnered support for the military action against Iraq. I had been exposed to enough wartime propaganda to doubt what I was hearing, and it later turned out that the incubator story, the Iraqi threat to Saudi Arabia and other influential stories (such as how the Iraqi army had the U.S. forces in a risky position) were fabrications. While the incubator story received widespread and repeated airing, the American media barely reported Iraq's willingness to negotiate a withdrawal. Several withdrawal proposals were tendered, and the Bush administration immediately rejected all of them.[\[280\]](#) Bush proudly said that he did not negotiate with people such as Hussein, whom he compared to Hitler. Bush even had the gall to call Hussein's invasion of Kuwait a "naked aggression." That came from a man who ordered the [invasion of Panama](#), which was a far more unjustified, murderous and "naked" aggression than the invasion of Kuwait was. Instead of laughing at Bush's hypocrisy, the media applauded his high principles.[\[281\]](#)

The tale of Iraqi soldiers taking babies out of incubators and leaving them to die was given in heart-wrenching testimony at the Congressional Human Rights Caucus by a young woman named Nayirah, who said she witnessed it. That "atrocities" was later exposed as a fabrication. It was discovered that Nayirah was the Kuwait ambassador's daughter, and an American [public relations firm](#), Hill and Knowlton, coached her performance. Nayirah's performance was a recitation of a script that Hill and Knowlton wrote for her. Kuwait hired Hill and Knowlton to "manage" the perception of Kuwait's situation.[\[282\]](#) She was *not even in Kuwait* when the fabricated atrocities supposedly happened, and the Kuwaiti hospital personnel on duty when it supposedly happened later denied that it happened. The incubator story may have been the deciding factor for the Senate's narrow approval for Bush's declaration of war on Iraq. George Bush's speech about the Iraq army massing in Kuwait in preparation for an [invasion of Saudi Arabia](#) also turned out to be a lie.

I lived in Dayton, and worked at a bank's headquarters in a small town named Wilmington. Nearly one hundred people worked at the headquarters. When the bombs finally started dropping in January of 1991, the office virtually erupted in cheering. The United States had fabricated its "coalition" by bribing and threatening nearly all the nations involved; forgiving billions of dollars of debt for nations that joined the coalition (for instance, Egypt, \$7 billion, the former Soviet Union, \$4 billion), and threatening aid cutoff and vengeance to those who did not.[\[283\]](#)

The region where Iraq resides has one of the world's richest histories. Iraq is in the region known as the [Fertile Crescent](#), where a series of events led to what is called civilization. [Sumeria](#) is the earliest

known civilization, existing about six thousand years ago, sitting largely between the Tigris and Euphrates rivers. Succeeding the Sumerian civilization was the Babylonian civilization, which in its turn rose and fell. The region has seen civilizations and empires rise and fall for the past six thousand years, the lands and people passing from empire to empire, with names such as Assyria and Mesopotamia describing the region at times. The rise of Islam during the seventh century AD eventually brought the region under theocratic control, with the mixed blessings that theocracies have always conferred.

The United States (with little buddy Britain helping) has essentially carved the Mosul region from Iraq with its unilaterally imposed and illegal “no-fly zones.” The Mosul region is the same one the Britain [carved from Turkey after World War I](#). America also coveted the Middle East's oil wealth, and eventually wrested control of Middle Eastern oil from its European rivals. When the United States overthrew Iran's government in 1953, installing one of the twentieth century's bloodier regimes, it also dominated the British monopoly that controlled Iran's oil production (Anglo-Iranian Oil Company). The event that sparked the American-led coup was Iranian politicians nationalizing the Anglo-Iranian Oil Company. War-crippled Britain asked the U.S. to help keep its grip on Iranian oil, and the U.S. obliged, but there was a price: the British went from 100% control to 40%, and the United States took over, with American oil companies controlling 40%.[\[284\]](#)

Iran's neighbor Iraq, however, successfully nationalized its oil industry between 1972 and 1975. Iraq, partly due to the artificiality that created it, has been a fractious nation, with numerous coups and political crises. It became fervently nationalistic however, and remained largely non-aligned in the global power game. Saddam Hussein began making his rise to power during the 1960s, helping to wipe out Iraq's left-leaning parties.[\[285\]](#) America has never minded anybody who wiped out leftists, especially during its war on communism. During the 1970s, America manipulated Iraq's Kurdish minority as cynically as Machiavelli might have recommended. After the Kurdish leadership was fed to the wolves, Henry Kissinger remarked on the betrayal, “Covert action should not be confused with missionary work.”[\[286\]](#)

Iraq was prominent in the Arab effort against Israel, eagerly fielding troops and aiding the Palestinian victims of Jewish nationalism. Iraq was the radical Arab nation, with strong secular roots, and partly because of that radicalism had the Middle East's highest standard of living. For all of Saddam Hussein's crimes and failures, Iraq was an anomaly in the Middle East, as a substantial share of Iraq's oil revenues were devoted to improving the standard of living of Iraq's citizenry. That attitude of benefiting the domestic population was the direct opposite of how U.S. puppet states have always operated. Iraq was the most socially advanced Arab nation in 1990. Iraq has one of the world's largest oil deposits, attracting the interest of the world's powers.

Saddam Hussein is no hero. He is a despot who used chemical weapons on Iraq's Kurdish population (with U.S. help and approval[\[287\]](#)), initiated a bloody war against Iran (with U.S. support), and invaded Kuwait (with tacit U.S. approval). Hussein is in good company regarding using chemical weapons on Iraqis, with [Churchill preceding him](#). The United States' ally Turkey has been comparably vicious on the Kurdish population within its borders, but those atrocities go largely unreported in the U.S. media to this day, and Saddam's atrocities were minimized...until he became an official enemy on August 2, 1990. The atrocities themselves have never been the issue in

America's media. The standard procedure is [exaggerating/fabricating the crimes of our enemies while ignoring our own or those of our friends](#), just as Jesus observed two thousand years ago, when he spoke of looking for the splinters in a neighbor's eye while ignoring the logs in one's own.[\[288\]](#)

My office in Wilmington had a sound system that played mellow music at low volume during the day. It was a pleasant background to work to. The men who ran the bank were fervent military boosters, their office walls adorned with photos of friends and relatives in uniform. The day after the bombs began dropping, the music was replaced with a news/talk show, played at high volume. The night before, as we began bombing them, ex-generals and other hawks dominated the U.S. media as they rhapsodized over the bombing. I heard one ex-general on the radio exulting over the air show over Iraq, calling it "a great day to be a soldier." The next day at the office I was treated to the loud blast of war coverage. During that day, the radio announced that America had destroyed Iraq's air force, so there was no air resistance from Iraq, and one of the bank's owners came running out of his office, listening raptly to the announcement, nearly thrusting his fist into the air. It was a struggle to maintain my composure, and difficult to get any work done.

Then a talk show interrupted the war coverage. The host sounded like Rush Limbaugh's protégé. There was *one* war protest in our corner of Ohio, at least that our media presented. About twenty students protested at the University of Cincinnati. Ohio has more than ten million people, and twenty people amounted to less than .001% of the region's population around Cincinnati. The talk-show host made those few protesting students the subject of his show. He asked his listening audience if those students were "stupid or evil." His callers were unanimous in condemning anybody who dared to protest our bombing of Iraq. One caller cleverly said that the students were "steveil."

A week later, the first letter to the editor I ever wrote was on its way to the *Dayton Daily News*. They published it on February 5, 1991. Here it is.

As the United States subdues another enemy in freedom's name, or so it is said, the blood of our children will again be spilled for the noble cause. It could be very profitable at this time to consider an ancient strategy. Many years ago, a radical genius offered a means to absolutely destroy one's enemies. The succeeding years have proven the tactic too outrageous and incomprehensible to even attempt. History tells us that practically nobody has ever gathered the courage to see the strategy through.

The ancient extremist theorized that his maneuver would not only win the day, but could be used over and over to annihilate any and all enemies. The bizarre theory involved the obscure and very, very rarely used strategy of loving the enemy.

This country was not officially founded in that radical's name, nor are his theories officially recognized here, but the person's work and life supposedly has many adherents in this country. You could fool me.

His ideas were far ahead of his time back then, and they seem equally far ahead of the present time.

When ever will the example of the life of Jesus actually be taken seriously? I hope soon, for the sake of us all, including those awful Iraqis.

It was my first experience in writing to a newspaper, it was the first thing I had published, and it was my first experience with editing. The newspaper edited out "or so it is said" from that first sentence. That changed the letter's tenor a little, particularly my intended irony in using the word "awful" to describe the Iraqis. I was glad that they published what they did, and maybe it caused a few people to reconsider their lusty cheers. Next to my letter was printed the wit and wisdom of Hughie Sprinkle, whose sentiments better reflected the public attitude. Hughie wrote, "The only sensible way to win the war and save American lives is to nuke (Iraq), using neutron bombs. Kill them all - man, woman and child. Kill 'em quick and kill 'em good. Then bulldoze the area over, and begin again."

Mr. Sprinkle's opinion might seem from the lunatic fringe, but it was not. At about the same time as my letter and Mr. Sprinkle's were published, the *Dayton Daily News* ran its weekly Cal Thomas column. Thomas is a nationally syndicated columnist, a man who calls himself a Christian from the conservative tradition. In Thomas' column, he also called for dropping nuclear weapons on Iraq, and he was not alone on the national stage with his opinion. Thomas wrote that nuking Iraq would "save lives." He obviously did not mean the lives of Iraqi citizens.

What made the sentiments of Thomas and Sprinkle surreal was that the events in Iraq and Kuwait were obviously not a "war" in any meaningful sense. In the words of American soldiers, what happened in Iraq was a "turkey shoot." Iraq was virtually defenseless to America's record bombing campaign. It was history's most intense bombing campaign. Nobody will ever know exactly how many Iraqi soldiers died in that "war." Credible estimates range from 100,000 to 200,000 soldiers dying, and even higher. Iraq's elite Republican Guard was not decimated. The dead were mainly Iraqi conscripts. The vast majority never even saw an American soldier before they died. They usually died in their shelters and trenches, huddling from the awesome devastation raining from the air.

The United States tried out many new weapons in Iraq. Americans generally only heard about the Patriot Missile system that was used to shoot at Iraqi Scuds. Barely reported was the Iraqi population's suffering, or the neat weapons used on Iraq. Those realities were hidden from the American people. Pentagon censors screened virtually every American news report that came from Iraq. The American people were treated to daily propaganda exercises led by Norman Schwarzkopf, now in America's pantheon of heroes. Once in a great while, some truth made it to the public, and it was usually by the *Los Angeles Times* and CNN, two non-members of the eastern oligarchy.

In the *Los Angeles Times* on February 24, 1991 John Balzar brought a little reality to his readers with his front page article titled "Apache Copters: Deadly Havoc in the Dark of Night." Balzar was able to watch night vision gunsight footage from the briefing room. He reported what he saw.

"They looked like ghostly sheep flushed from a pen - Iraqi infantrymen bewildered and terrified, jarred from sleep and fleeing their bunkers under a hellish fire. One by one, they were cut down by attackers they could not see or understand. Some were blown to bits by bursts of 30-millimeter exploding cannon shells. One man dropped, writhed on the ground, then struggled to his feet; another burst of fire tore him apart...Even hardened soldiers hold their breath as the Iraqi soldiers, as big as football players on the television screen, run with nowhere to hide. These are not bridges exploding or airplane hangers. These are men."[\[289\]](#)

The weapons used in the Gulf War were nightmarish. Bombs that explode at waist level were not the kinds of smart bombs that our newscasters oohed and aahed over. By the Pentagon's own numbers, ninety-three percent of the bomb tonnage used by America in the Gulf War was not "smart." Missiles that turned around buildings in pursuit of their targets were evening news fare, but the vast majority of what America dropped onto Iraq was the dumb kind, about 70% of it missing its target. If Americans had seen what was really happening in Iraq, they may not have cheered so loudly.

During the Gulf War, some of the weapons systems deployed are the most powerful weapons short of a nuclear bomb. One is a fuel-air bomb. The bomb works thus: there are two detonations; the first spreads a fine mist of fuel into the air, turning the area into an explosive mix of vast proportion; then a second detonation ignites the mixture, causing an awesome explosion. The explosion is about the most powerful "conventional" explosion we know of. At a pressure shock of up to 200 pounds per square inch (PSI), people in its detonation zone are often killed by the sheer compression of the air around them. Human beings can typically withstand up to about a 40-PSI shock. The bomb sucks oxygen out of the air, and can apparently even suck the lungs out through the mouths of people unfortunate enough to be in the detonation zone. Our military used it on helpless people. The U.S. also dropped a bomb called "Big Blue," with a specialized high-tech explosive mixture that can produce up to a 1000-PSI shock wave, a magnitude only exceeded by nuclear weapons.[\[290\]](#) That kind of shock wave turns a body into hamburger, even if no shrapnel hits it.

Some of the other weapons systems deployed are called "bouncing" bombs. "Adam" was one of those bombs used in the Gulf War. It is euphemistically called an "antipersonnel" bomb. What the bomb does is bounce up to about waist high after it hits the ground, so when it explodes it has a better chance of eviscerating the "personnel" unfortunate enough to be near it. Another novel weapon deployed in the Gulf War was "The Beehive." The Beehive is a bomb that spins at high velocity, spitting out 8,800 pieces of razor-edged shrapnel in all directions, producing a "Swiss-cheese" effect on anybody near it. In concept, those weapons were not exactly new, but are high-tech, refined versions of earlier ideas and weapons, nearly making death dealing into a macabre art form. As the *Los Angeles Times* reporter who wrote about those weapons in 1991 observed,

"The mechanics of death and destruction are a grim affair. The military's scientific approach and its philosophies - for example, its preference for wounding vital organs over blowing off limbs - can be deeply disquieting to anybody who imagines such matters are left to chance. Many people would

rather not know about the gruesome details."[\[291\]](#)

Norman Schwarzkopf never regaled the press with footage showing the results of those weapons.

While the bombing was happening, America leapt into a frenzy of jingoistic support. Yellow Ribbon campaigns blanketed the nation. The bank where I worked had a Red, White and Blue Day at the office, where everybody was supposed to wear those colors and pose for a company group picture. I was working as a temporary employee at the time, and decided to not toe the line, perhaps risking my job. I wore black and green that day, and found a way to disappear when the group photo was taken, amidst the chest-beating cheers. Concurrently, there was an office campaign to send valentines to American Persian Gulf soldiers. It was not an optional program. Over the sound system, each department was summoned to a room to sign those valentines. There was an irony: sending valentines to soldiers annihilating a helpless enemy, an enemy that was their ally a few months earlier. I also left the building when my department signed the valentines.

On Valentine's Day, the "news" blaring from the office speakers was the U.S. media spinning an event from February 13th, when the United States military bombed one of Baghdad's bomb shelters. The U.S. said their intelligence told them the bomb shelter housed military headquarters, and they sent a sophisticated bomb that penetrated the shelter, incinerating its interior. As had been happening throughout the bombing of Baghdad, and was well known by American surveillance, on that night the shelter was filled with women and children huddling from the nightly bombings. Several hundred women and children died. On Valentine's Day, "expert" opinions filled America's airwaves, trying to spin that disaster into a propaganda ploy by Saddam Hussein. One rationale was that since Baghdad had few bomb shelters, only a small percent of the population could hide there. Therefore, the women and children were not really hiding from the bombs, but were part of some strange propaganda maneuver by Hussein. According to such logic, their deaths were the responsibility of Iraq, not America.

CNN's Peter Arnett in Baghdad did things that made him [hated by the U.S. government](#): he made reports that the Pentagon could not censor. He visited the bomb shelter and witnessed the fact that there was no evidence of a military installation. Arnett did a similar thing when he witnessed a milk factory we bombed, while claiming that it was a chemical-weapon facility. Arnett toured the bombed ruins and found that it was indeed a milk factory. He toured the factory the summer before, as it was producing milk.[\[292\]](#)

Those incidents were similar to America's 1986 bombing of Libya, with Ronald Reagan telling the world that he had "irrefutable" proof that Libya was behind the bombing of a nightclub in Germany that killed some U.S. soldiers. That nightclub bombing was Reagan's rationale for bombing Libya, which killed up to 100 people, including children. It turned out that Reagan was lying when he said that, for he had no "irrefutable" proof. The "proof" was allegedly NSA-intercepted communications between Libya and its embassy in East Berlin. Not even the Germans, who helped decode the messages, believed the "proof."[\[293\]](#) The complete "intercepted" communications have never been made public, and the U.S. promised the "irrefutable" proof to Britain and France because we wanted

them to assist the bombing raid (it was launched from Britain, but France refused to let us use their air space, and we “accidentally” bombed their embassy during the raid on Libya). Our allies let us bomb first and provide proof later. When it came time to provide the proof, the U.S. admitted that it did not have any, a betrayal reported throughout the world...except in the U.S. mainstream media.

The same situation happened when America bombed a Sudanese pharmaceutical lab in the summer of 1998, in retaliation for "terrorist" bombings in Africa. Our government said there was incontrovertible evidence that the lab was being used for producing substances that could be used in chemical weapons. Again, America lied to the world, and that ironclad evidence has simply vanished when subjected to scrutiny. Sudan has been the stage for famine and other health disasters in recent years. That pharmaceutical lab produced half of Sudan's pharmaceuticals. How many children died because of that action? The American media never speculated about it. It went straight into the Memory Hole, so Americans could cheer the next time we bomb somebody on a whim.

Those days in 1991 were among my life's most alienating. I was never more ashamed of being an American. While the bombing continued, I was writing a letter that became a book. Writing it was a form of therapy, trying to make sense of and recover from my [experiences with Dennis Lee](#). I was putting my wife through graduate school for her doctorate in psychology. Consequently, she believed in the process and began insisting that I see a psychologist. She found one who specialized in treating post-traumatic stress disorder (PTSD). His office was down the road from Wright Patterson Air Force Base, the world's premier Air Force base. He specialized in treating soldiers with PTSD. I was definitely a candidate for his therapy. I had a few months of it, and it helped. I finished my letter/book as part of my therapy. He assured me that I was quite sane, but living in an insane world.

As I talked about my traumas in that spring of 1991, outside my therapist's window I could see American flags flying from every light pole and sign. The flags fluttered, the yellow ribbons abounded, and the parades marched through American cities. George Bush rocketed to a public-approval rating of 82% as our "turkey shoot" in Iraq progressed. It had fallen to 56% the previous autumn, from its high of 80%, after U.S. troops invaded Panama to arrest Bush's former employee Noriega (they tried murdering him, but Noriega outwitted them by strolling into the Vatican embassy). The public was nearly delirious in its approval of our performance in Iraq, with about 90% of Americans thinking that we had performed a righteous and noble deed.

My therapist abandoned his professional role with me at times, and confided that the events sickened him. He told me that one of his clients was a young Navy SEAL, and one of the first Americans into Iraq for the short-lived "ground war." The SEAL saw America's handiwork up close. He saw many bodies of women and children, euphemistically termed "collateral damage" by the Pentagon and our national press. The young man was having difficulty dealing with his experiences, and found nothing honorable about what we did there. People like that never appear on [Nightline](#), describing their experiences. "National security" makes sure that cannot happen. Instead, Henry Kissinger lies to the public in his tuxedo.

Many of America's Gulf War actions qualified as war crimes. One was the infamous bombing of the

retreating Iraq army, on the highway leading from Mutlaa, Kuwait to Basra. It was a mass exodus from the city, including the Iraq military that was withdrawing to Iraq on Hussein's orders, and also civilians and prisoners. What the United States military did on that highway stands as one of the greatest and most defenseless mass murders of the modern era. What the U.S. did was disable the front and rear vehicles on that highway, trapping the two thousand vehicles and their occupants into a seven-mile-long parking lot. Then the planes flew mission after mission on the helpless vehicles and their occupants, annihilating and incinerating many thousands of people, perhaps tens of thousands. That highway became known as the "Highway of Death."

One pilot who flew the "Highway of Death" mission was quoted as describing it as "shooting fish in a barrel," and the pilots rushed back and forth from the aircraft carriers supplying them with bombs. According to the *Washington Post*, "Their preferred weapon, the Rockeye cluster bomb, was passed over for others because elevators were too slow getting them up to the flight deck in time for the next launch."[\[294\]](#) It was a quick trip to the parking lot to drop their payloads, then back to the aircraft carrier to get more bombs. Those activities were in direct violation of the Geneva Convention of 1949's common article 3, which outlaws killing soldiers who are "out of combat." In addition, cluster bombs are only effective at killing people, not destroying military targets. That was not the only highway treated that way. A sixty-mile stretch of highway further east was treated similarly. The general in charge of one of the mass slaughters during those days, Barry McCaffrey, headed Bill Clinton's "War on Drugs" and headed the effort to ["fight drugs"](#) in [Colombia](#).

In May 2000, an article by Seymour Hersh in the *New Yorker* stirred a small tempest regarding McCaffrey's bombing of the retreating Iraqi army. Predictably, the U.S. government moved to discredit Hersh's story. Those actions were part of the 19 war crimes that ex-Attorney General Ramsey Clark got George Bush and friends (Dan Quayle, Colin Powell, Norman Schwarzkopf, James Baker, Richard Cheney, etc.) prosecuted for. The International War Crimes Tribunal found them guilty, not that the U.S. citizens heard much about it over the cheers.[\[295\]](#) Winners never worry about minor things such as war crimes trials; only losers do.

Another innovative act by our armed forces was a new version of trench warfare. During the ground war, the United States deployed vehicles that were essentially tanks with bulldozer blades. The ground war, as with the air war, was not a war in any meaningful sense. It was another "turkey shoot," with entire armored divisions of Iraq's army decimated without returning even one effective shot. The surviving Iraqi soldiers were generally fleeing, hiding in their bunkers or rushing to surrender. Many thousands of Iraqi soldiers were huddled in trenches and bunkers, and some were attempting to mount a pitiful defense to the juggernaut bearing down on them. The tank-bulldozers performed an unprecedented act: they approached the trenches and bunkers, and filled them with earth, burying thousands of Iraqi soldiers alive. It qualified as another war crime. Not one American was killed in the live entombment of thousands of Iraqi soldiers.[\[296\]](#)

Again, what happened in the Gulf War was not "war." It was slaughter. War is what World War II was like, where both sides were fairly evenly matched, and [both sides endured similar levels of casualties](#). What the [Nazis did to the Jews](#) was not "war." In the "Gulf War," the casualty ratio was about 1000-to-1. America likely killed more than 100,000 Iraqi soldiers (other reasonable estimates go as high as 200,000 and higher), while fewer than 200 Americans died, and about half of those by

"friendly fire" by our own troops. As with Panama, the U.S. government had great motivation to keep the facts from the public that cheers and finances the bloodshed. America's armed forces actively prevented any accurate "enemy" body count in [Panama](#) or Iraq.

It would be a mistake to think that those American soldiers were all innocent lambs, having no idea what was going on, just following orders. To a degree that is true, as nations always send out [young men with no idea of their mortality or why they are fighting](#), but make able killers (one of my friends punned in 1991, "Support our dupes"). For a peek into our boys' mentality during the Gulf War, the U. S. Air Force's 77th Tactical Fighter Squadron published a songbook before the bombing began, describing their plans for Iraq. The only part that can be reproduced in polite company was this little ditty:

Phantom fliers in the sky,

Persian-pukes prepare to die,

Rolling in with snake and nape,

Allah creates but we cremate.

The rest of the songbook is, in the words of David Stannard, a "melange of sadism and obscenity, most of them employing personifications of entire Arabic and Islamic peoples as racially inferior, maggot-infested women whose mass destruction by the Americans is equated with brutal, violent sex." One honor America's soldiers got, which is a time-honored ritual, was writing messages on the bombs. The bombs had messages such as "Mrs. Saddam's sex toy" and a "suppository for Saddam" on them as they dropped, and again, those are the messages I can print in public.[\[297\]](#) One post-war study found that more than half of the American women in the Gulf War felt they were sexually harassed verbally by their fellow male soldiers, and eight percent reported attempted or completed sexual assaults by American soldiers (about 3000 instances).[\[298\]](#)

Stormin' Norman Schwarzkopf publicly admitted his disappointment with being unable to finish his job in Iraq. Schwarzkopf said, "We could have completely closed the door and made it a battle of annihilation...(it was) literally about to become the battle of Cannae, a battle of annihilation." To his disappointment, Schwarzkopf was prevented from exterminating the Iraqi army.[\[299\]](#)

The American media was [extremely complicit](#) with the warmongering. [Project Censored](#) has been tracking the censorship in America's "free press" for more than twenty years. For 1991, their top censored story was CBS and NBC refusing to air footage from Iraq that was initially commissioned by NBC and shot by Emmy-award-winning producers. The footage showed civilian devastation of Iraq that contradicted the propaganda being purveyed by the government and media, which gave the

impression of the Gulf War being a "clean" one, with minimal "collateral damage." *NBC Nightly News* Executive Producer Steven Friedman and anchor Tom Brokaw were enthusiastic about the film and wanted it aired. NBC President Michael Gartner killed the story. The producers then took the video to CBS. *CBS Evening News* Executive Director Tom Bettag told one of the producers that he would appear with Dan Rather the next evening. That same evening, Bettag was fired, the story was killed, and the cheering continued.

Project Censored's number-two story for 1991 was the heavy censorship that attended Gulf War reporting, where stories about Iraqi civilian casualties, fuel-air bombs, Highway of Death footage and the like were all suppressed, and U.S. battlefield casualties were disguised as training accidents. The media served as the government's propaganda organ, contradicting any notion of a "free press" in the United States.

Project Censored's number-six story for 1991 exposed one of the many lies and inventions George Bush told as he prepared the public for war. On September 11, 1990, Bush surprisingly announced that the main reason America had troops in the Gulf was because Iraq threatened to invade Saudi Arabia, and the Pentagon said Iraq had 250,000 troops and 1500 tanks in Kuwait, based on satellite images. The public never saw those images, but Russian satellite images showed that no such military buildup existed.[\[300\]](#)

Project Censored's number-one story of 1990 was how the U.S. press eagerly believed the government's propaganda regarding Iraq while it was whipping up support for the Gulf War, when hindsight regarding Vietnam, Panama and Grenada revealed how shamelessly the government lied to the press and public. It was as if the press would be lied to 99 times in a row, and eventually realize they were being lied to, but would fervently believe the 100th lie they were told. How "knowing" was that kind of stupidity?

The purpose of our bombing campaign was officially stated as driving Iraq from Kuwait. America was "liberating" Kuwait. When the imperial powers pulled out of the Middle East in the 1920s, the governments left behind were dictatorships that could be controlled, and would control the public in those nations. Kuwait was and is a bloody and brutal dictatorship, although relatively "free" as far as the Middle East goes. Saudi Arabia, the other nation America was theoretically defending, has one of earth's most brutal and oppressive regimes. The Saudis are notorious for executing political prisoners, keeping their women in virtual slavery, flogging children, kangaroo courts, etc. Saudi Arabia's method of public execution is using a sword to decapitate their prisoners, sometimes taking a few whacks to get the job done.

America immediately reinstalled a dictatorship in Kuwait. In Kuwait and Iraq were many activists for democratic reform, representing various oppressed groups. The United States never considered giving them any voice or influence. The dictatorship reinstalled in Kuwait immediately began throwing people into prison, torturing prisoners to death and ruthlessly stomping out any notion the populace might have harbored regarding freedom.[\[301\]](#)

The American government said it was driving Iraq from Kuwait. In a logical war, that would mean doing just that: invading Kuwait to beat the Iraqi army back into Iraq. That did not happen. Instead,

America unleashed the most intense bombing campaign in history onto Iraq. America specifically targeted the infrastructure of Iraq, including their transportation, electric, sewer and water-supply systems, and have since blocked attempts to rebuild them. It was a form of biological warfare, akin to starving out the enemy. Among other issues, targeting the civilian infrastructure is by definition a war crime.

Going back to the end of World War II (when America dropped nuclear weapons on Japan, in a move that respected historians now conclude had little to do with [saving American lives](#), and everything to do with a demonstration of power to the world, and to [impress the Soviet Union](#) in particular), the United States has excelled at fighting the coward's war. America's high-tech wars, where devastating weaponry is dropped on helpless populations, with the attacking soldiers never seeing the "enemy" face-to-face, and using the powers of state to ensure that the cheering people at home never know the truth, guarantees that such disasters continue.

Something happened after [Vietnam](#). The war planners realized that the American people would no longer stand to have their young men killed in foreign wars of dubious benefit. A new strategy was crafted, which events of the past generation have made obvious. The new strategy is this: we will only wage war against weak enemies. The strategy is to pick on enemies that cannot fight back, have our propaganda machine (the "free press" and government, working hand-in-hand) turn them into malevolent demons of tremendous stature, and then we resoundingly defeat them in mere weeks, enduring few or no casualties amongst our armed forces. The public will then be delighted that we overcame such an invincible adversary so easily, at little cost to ourselves.

The Gulf War was a textbook example of that strategy. The rhetoric of Norman Schwarzkopf, George Bush and the American media during the buildup to the Gulf War, with Saddam Hussein being compared to Hitler, and Schwarzkopf talking about how outnumbered America's forces were by Iraq, made the strategy clear. The new "Hitler" was America's ally until the day he invaded Kuwait, and he even told American ambassador April Glaspie that he was planning on invading Kuwait a week before his troops did, and she said the United States had "no position" on Arab border disputes.[\[302\]](#) Two days before Iraq's invasion of Kuwait, assistant Defense Secretary John Kelly said in the House Middle East subcommittee hearings, in direct response to the voiced possibility that Iraq might invade Kuwait, that the U.S. had no treaty obligations to defend any nations in the Middle East, a reply that was globally broadcast.[\[303\]](#) At best, Iraq was given mixed signals; at worst, America may have lured Iraq into invading Kuwait. Even the King of Saudi Arabia, King Fahd, apparently felt that the Iraqi invasion of Kuwait was largely because of Kuwait's intransigence in negotiations, and Fahd was initially quite reluctant to allow the United States to "come to the rescue" of Kuwait, or even "defend" Arabia, which had no quarrel with Iraq. George Bush and company eventually wore him down.[\[304\]](#)

Below are some samples of images that the average American never saw during those glory days in early 1991.

Click on image to enlarge.

The Iraq and Panama devastations may both be instances where George Bush the Fist Bush was double-crossing his business partners. Noriega was a drug runner and overall thug, but Bush ran the CIA, which specialized in drug running as a way to fund covert operations. That is well known. More explosive than the betrayal of his ex-employee was Bush's alleged relationship with Hussein. In *The Immaculate Deception*, by Russell Bowen, a retired brigadier general who did some of Bush's covert-action dirty work, the author relates documents that surfaced in a lawsuit in Illinois against the Federal Reserve System that documented a kickback system where Hussein and Bush jointly laundered \$250 *billion* in oil revenues.[\[305\]](#) It was related to the BCCI scandal. People who investigate the BCCI and related scandals often end up dead, as [Danny Casolaro](#) and [Paul Wilcher](#) did.[\[306\]](#) While the story sits there in black and white, the American media will not touch it. It may be that bludgeoning Iraq was a lot more than just killing more than a million of people, but Bush cutting out his partner in crime in history's biggest money-laundering operation.

The Continuing War and the Body Count

As the dust and shrapnel was settling in Iraq, the major suffering was just beginning. A public-health team from Harvard went into Iraq soon after the bombs stopped dropping. They issued a report based on their findings. They estimated that more than 46,000 children under the age of five had already died by August 1991 due to the destruction of Iraq's infrastructure by the U.S. bombing, and the holocaust was only beginning.[\[307\]](#) That news was barely reported in the U.S. mainstream media in 1991. About the only national mainstream American journalist who mentioned the tremendous death toll that the Iraqi children were about to endure was Mike Royko. Other than his voice in the mainstream American media wilderness, the American people were blissfully insulated from the looming children's holocaust that they were largely responsible for, while they congratulated themselves and had parades for returning soldiers. To add murderous insult to injury, America led an economic embargo of Iraq, a nation that bought 70% of its food from abroad. That embargo is standard American foreign policy, something we did to Vietnam, Cuba and Nicaragua - what we do to any militarily weak nation that stands up to us. The difference is that the Iraq embargo is unprecedented in its severity and scale.

The Iraqi children's death toll has mounted through the years. In 1995, the United Nations Food and Agriculture Organization (UNFAO) issued a report on the Iraqi food supply and health. The Iraq health minister stated that more than 500,000 children had died (in excess of normal rates before the Gulf War) in the previous four years due to starvation and disease. The report said they could not confirm that number, but it also did not seem unreasonable. The report discussed the current children's death rate in Iraq (several thousand a month), and their observation of starvation conditions among the children, such as marasmus and kwashiorkor, which was previously rare in Iraq.

Several thousand children and elderly die each month needlessly. In March 2000, seventy members of U.S. Congress moved to end the genocidal aspects of the sanctions. The coordinator of the so-called "oil-for-food" program, the Irishman Denis Halliday, resigned in September 1998, and was highly vocal about the genocidal aspect of the economic sanctions. The man who filled his position, Hans von Sponeck, similarly resigned his position in February 2000, saying the same things Halliday did. The U.S. government tried discrediting those men who failed to act as obedient bureaucrats, while many thousands of children and others died.

The issue of the magnitude of the American-led sanctions' impact on Iraq is not too controversial. Madeleine Albright was interviewed on *60 Minutes* in 1996, and was asked if the sanctions were justified in light of the half million estimated deaths of Iraqi children. Albright replied, "We think the price is worth it." Worth it for who? The death toll is not even denied, and it is "worth it." Ever since the U.S. government has acknowledged the gruesome death toll among the children of Iraq, our government has gone out of its way to blame Saddam Hussein for it. Bill Clinton was interviewed by [Amy Goodman](#) on *Democracy Now!* on Election Day 2000, the day Jeb Bush and [friends helped steal the American presidency for his brother](#). Clinton called the radio station to help get out the vote for Al Gore, to target the crowd who might be leaning for Ralph Nader. Clinton was asked about the death toll of the Iraqi children, and he presented some astounding misrepresentations regarding the Iraq situation. According to Clinton, Iraq had more money in the bank than ever, and that the starving Iraqi children were all Hussein's fault.

While nobody connected with the Iraq situation disputes that a vast human tragedy has happening there, the numbers themselves are subject to a wide range of interpretation. Putting numbers on the dead is a macabre task, but it needs to be done, especially deaths that we are primarily responsible for. In early 2000, the Iraq Health Department released a report that stated that since 1990 about 1.3 million children and elderly had died because of the U.S.-led actions against Iraq. In 1998, UNICEF estimated 1.5 million deaths. Add about two hundred thousand soldier and civilian war deaths to that total, and the tally is between 1.5 and 1.7 million deaths, courtesy of the United States. The Iraqi Minister of Health announced in January of 1999 that the Gulf War and the sanctions caused nearly 1.9 million Iraqi deaths. Regarding the Iraqi children, in 1999, Richard Garfield of Columbia University conservatively estimated more than 100,000 excess children's deaths, with a more likely estimate of about 227,000, and that is even highly conservative.[\[308\]](#) Partly because the United States has a vested interest in not obtaining an accurate body count, as it did regarding our [invasion of Panama](#), and partly because nations at war have reasons to overstate or understate the body count (for instance, the U.S. recently admitted that it had greatly inflated the American body count regarding the Korean War of the 1950s), neither the Iraqi nor the American governments can be wholly trusted on this matter.

There is a wide range of estimates on the body count of soldiers and civilians during the Gulf War, on the children's body count since the war was over, and the body count of other Iraqi citizens, such as the elderly and the ill. There is an easy analysis to perform to gain an idea of this tragedy's magnitude. In the *1990 World Almanac and Book of Facts*, the 1989 estimate of Iraq's population was 17.6 million people, with an annual growth rate of 3.6%, which was one of the world's largest.[\[309\]](#) The nearly twenty years since the oil price increases of 1973 saw a great increase in Iraq's

standard of living, with infant mortality plummeting, literacy rising, and with Iraq attaining the Middle East's highest standard of living. The CIA estimated a 1989 Iraq population of 18.1 million. The CIA estimated a 2000 Iraq population of 22.7 million. The Population Reference Bureau estimated a 2000 Iraq population of 23.1 million. Those estimates are close to those given by UNICEF and *Middle East Review*. Using the more conservative 17.6 million 1989 population and the 3.6% growth rate, an estimated 2000 Iraq population of about 26.0 million is derived, for three million missing Iraqis.

Using 2002 estimates of 24 million and a more conservative 2.8% growth rate, and assuming that growth rate since 1994, a projected 2002 population of 26 million is calculated. Using conservative numbers, two million Iraqi citizens are missing. In number, that qualifies as a genocide, and also in American intent.[\[310\]](#) How many lost lives were due to premature death, how many were due to children not being born because of the hardships the potential parents suffered, and how many were due to dead soldiers who could have fathered children, is a matter of conjecture. If the missing people were Iraqi children who were never born, instead of children, ill and elderly who died before their time, it is obviously not a population control program that the Iraqi people freely chose.

To analyze the numbers a little differently, in neighboring Iran, which had recently concluded a bloody war with Iraq, the 1989 population was estimated at 51.0 million, with a 3.1% growth rate. Iran's Islamic leadership then engaged in an active program of reducing Iran's population growth, as they saw where unchecked growth was headed. Ayatollah Sayyed Ali Khamenei issued edicts that allowed contraception and sterilization for both men and women, which reduced the population growth of Iran to around 1.0 % by 2000, with a birth rate about half of Iraq's, in one of history's most successful voluntary programs to reduce population growth.[\[311\]](#) Even with their aggressive program to reduce population growth, Iran's population grew from 51.0 million in 1989 to an estimated 67.4 million in 2000, for an increase of 32%.[\[312\]](#) Iran's 2000 population is about four million less than its 1989 growth rate projected to. Iraq, on the other hand, had no program for reducing the population growth, its citizens have been merely trying to survive, and its estimated growth rate in 2000 was 2.9%. Iraq's population grew from 17.6 to 23.0 million, for an increase of 31%. Indeed, millions of otherwise alive Iraqi citizens appear to be missing.

The economic sanctions that the United States is inflicting on Iraq comprise the most effective weapon of mass destruction on earth today. Ironically, America has continued to kill Iraqi children because there is a faint possibility that Iraq could rebuild its non-conventional weapons arsenal, even though America helped them build their first one, we have the world's largest, we are the world's only nation to [drop nuclear weapons on another](#), and we turn a blind eye to Israel's nuclear arsenal. Situations like that sparked [Edward Herman](#) to write *Beyond Hypocrisy*. It is genocidal hypocrisy. Even the people carrying out these murderous policies will sometimes admit it. British Prime Minister Tony Blair has a Personal Assistant for Foreign Affairs named Robert Cooper, who is an ex-diplomat himself. Cooper wrote in his *The Post-Modern State and the World Order*, "We need to get used to the idea of double standards," which is another way of saying, "Get over it, we are hypocrites (but powerful ones)." Cooper openly admitted the roots of America's Iraq policy: "the reasons for fighting the Gulf War were not that Iraq had violated the norms of international behaviour..." Cooper wrote that it was all about keeping control over "vital oil supplies," which is obvious to everybody on earth, except those who believe American propaganda.

The death rate of Iraqi children has more than doubled since 1991, and even Richard Garfield's conservative study concluded that the great increase in childhood mortality in Iraq was nearly unique in modern health literature.

The United States has been doing something novel to Iraq. A nation and its people are being systematically destroyed. Those dead children might be the lucky ones. Children in Iraq today are generally hungry, underweight, and have developmental deficiencies. They suffer from all manner of deprivation and psychic distress. Most Iraqi women (70%) are anemic. Iraq's economy had an 80% collapse after the Gulf War, easily the world's worst. Not even the disaster of Russia in the 1990s comes close. Iraqi adult literacy has been collapsing, as has life expectancy. Iraqi lives are becoming nasty, brutish and short. Previously rare social dysfunctions such as openly displayed greed have become increasingly common. Even under history's most brutal economic sanctions, the Iraqi people have been clawing back from the abyss' edge.

Nations had been defying the U.S.-imposed sanctions, as has increasingly happening regarding Cuba. In 2000, for the first time since the Gulf War, commercial airlines flew to Iraq. [Michael Parenti](#) was part of an international delegation that flew to Iraq in November 2000 on Olympic Airways, a Greek airline. Others on the flight were former Greek first lady Margarita Papandreou and members of Greek's parliament. Parenti observed that starving children were no longer as prevalent in Iraq hospitals as in earlier years. Unfortunately, the hospital occupants are increasingly Iraqi children who suffer from diseases such as leukemia.[\[313\]](#) The radioactive weapons that the United States used on Iraq in 1991 are likely the major contributor to Iraq now having the world's highest rate of childhood leukemia. Because of the embargo of medicines and other supplies to Iraq, no Iraqi children survive childhood leukemia today, whereas in the United States the survival rate is about 70%. Also being born in Iraq today are severely deformed children, obviously deformed by the radioactive debris and other poisons introduced by the United States.

Because of Parenti and others, there has been a growing awareness in the United States of the horrendous toll that America's actions have taken. Even the *New York Times* suggested that the United States might consider easing the sanctions a little. George Bush the Second, upon attaining office, acted as the Reagan administration did upon seizing the White House (both administrations came to power due to well-known fraud, the [October Surprise](#) operation for Reagan, and the [widespread vote fraud](#) in Florida for Bush Jr., although the official investigations, as usual, can never seem to find any foul play). Bush began nominating the most socially regressive cabinet members in recent history, such as John Ashcroft for Attorney General. His first day in office was marked with an attack on abortion options regarding American foreign aid. Before his first month in office was finished, America bombed Iraq again, with Bush Jr. saying that the bombing was "routine." Unfortunately, he was right. Even U.S. pawn Turkey expressed its dismay at the American bombings of February 2001. Obviously, the United States is going to play hardball with Iraq again, trying to goad the world back into line with our program of punishing Iraq, especially its children. It is a routine feature of American foreign policy. If there was ever a U.S. president safely in the oil companies' back pocket, it is [George the Second](#).

There are some dire footnotes to Iraq's situation. The "oil-for-food" program has largely swindled

Iraq. The U.S. manipulated the program so baldly that it would be hilarious if it were not costing so many lives. Iraq is forced to sell its oil for food and other life-saving supplies, and tries its best to not sell any of it to the hated United States. All the same, nearly 40% of Iraq's oil exports (sold at cut-rate prices) make it into the United States via middlemen, and the United States as of April 2000 was blocking more than a billion dollars of relief from getting to Iraq. The oil companies raked it in through cut-rate prices paid for Iraqi oil, Iraq became one of the U.S.' biggest oil suppliers (from zero imports in 1996 to the U.S.' fifth biggest supplier in 2000), the U.S. blocked dearly bought food and supplies from getting to Iraq, and the deaths continued to mount.[\[314\]](#) It has been among the world's deadliest rackets.

Back in late 1997, the United States began beating the war drums again over the "weapons of mass destruction" that Saddam Hussein supposedly still harbored. The U.S. government clearly mobilized the American masses again to cheer another bombing of Iraq. In November of 1997, I was moved for a second time to write a letter to the editor, that time to *The Seattle Times*, as I was back home in Washington. They ran my letter on November 30th, 1997. Here it is.

I have been watching Seattle's mainstream media while all the saber rattling has been going on over Iraq lately. *The Seattle Times* article of November 14 is the first time I have seen a substantive reference to the harm United States has inflicted on the Iraqi people over the past seven years ("Iraqi Sanctions Split U.S.-Arab Coalition").

It is not surprising that the first reference I have seen is not due to some "bleeding heart" American mainstream journalist digging up the facts, but was in response to our "Arab allies" refusing to fall into line and get behind a U.S. military action against Iraq.

The article, authored by Barbara Demick of Knight Ridder Newspapers, at least said that there is apparently a lot of suffering going on in Iraq. But her characterization of those "more virulent commentators" and the comparison to the atomic bomb attacks on Japan was highly misleading. So far, the United States' economic attack on Iraq has killed far more people than our atomic attacks on Japan. Two of the most prominent commentators have been former U.S. Attorney General Ramsey Clark and United Nations Food and Agriculture Organization investigators.

Two years ago, it was estimated that the death toll in Iraq, because of the UN embargo, was approaching one million people, including over a half-million children. Today the death toll is more than one million people, five percent of their population.

The children's death toll because of the embargo is about 700,000 as of today, and starvation conditions like kwashiorkor and marasmus are now common. That the American mainstream media fail to mention the horrendous human toll our economic attack has extracted from Iraq is a crime.

Oh yes, we can say the United Nations is doing this, but we are the ones making the sanctions happen, just like we fabricated the "coalition" in 1990. The mainstream media in America are accomplices in this great crime against humanity, and there is a lot of blood on their hands. Making

letters like mine public would help turn things around. The choice is yours.

A few months later, the war drums and propaganda were again reaching a fevered pitch. America was on the brink of bombing Iraq, and I was again compelled to write a letter to *The Seattle Times*. That one was a little more forceful. For that letter, *The Seattle Times* called me at home before running it. It was written on February 2, 1998 and run in the February 8th edition of *The Seattle Times*. Here it is.

Once again in America the drum beat has begun. It looks like we are going to unleash more death and destruction onto the people of Iraq. Once again, the pertinent questions are not being asked. One pertinent question would be, "What has Iraq ever done to us?" The answer is, "Nothing, except resist our attacks."

It is indeed ironic that the only nation to ever unleash weapons of mass destruction on another is the United States. It is also very illuminating to see that there are but two nations getting ready to bomb Iraq: the former and current masters of the world.

In another irony, during the seven-year saga between the United States and Iraq (allies until the day Iraq invaded Kuwait), the only mass destruction that has taken place has been to the nation and people of Iraq. The United States, through economic warfare following on the heels of an unprecedented bombardment, has killed over one million Iraqi citizens, most of them children under the age of five (800,000 and counting). That situation, which should assail the conscience of every American, still is barely being mentioned in the nation's media, amidst all the saber-rattling.

One of the greatest ironies of all is that back in April of 1990, when Saddam Hussein was still our ally, he made an offer to the United States that he would destroy his chemical and non-conventional weapons if Israel would also destroy theirs. And in another surreal twist, much if not most of the material that Iraq has for making "weapons of mass destruction" were purchased from the United States and Europe. Hussein's offer and the United States' response was reported in the *Boston Globe* on April 14, 1990 and by other publications around the world.[\[315\]](#) The reaction of United States government was interesting. We said that we would not be willing to enter into negotiations on that issue. Our politicians cleverly avoided mentioning Israel's nuclear arsenal as they rejected Hussein's offer. The Israeli arsenal (hundreds of nuclear bombs) is not that controversial an issue, as far as its existence goes, as Israel kidnapped and imprisoned one of their citizens for divulging its existence (the celebrated Vanunu case, and he is still in prison after a decade). But the United States cannot officially acknowledge Israel's nuclear arsenal, because to acknowledge that Israel has secretly built a nuclear arsenal would make all of our aid to Israel (billions of dollars a year) illegal, according to our own Foreign Aid Act.

The hypocrisy of the situation is evident to anybody who knows what is going on. The United States will go to the lengths of killing millions of people to prevent an ex-ally from being able to use what we

sold him. But, if a nation finds itself in the fortunate position of being one of our allies, we will go out of our way to ignore their weapons of mass destruction.

Amazingly, the American people are generally ignorant of the points I have made in this letter. People who live outside of this country are not so disinformed. What this country has done to the children of Iraq over the past seven years is terrifying and hard to forgive. The current global Imperial menace is engendering a lot of fear and hatred, particularly in the Arab countries. The ex-Soviet Union apparently cannot account for about 100 suitcase nuclear bombs. If one of those goes off one sunny day in Washington D.C., for instance, it will be no great surprise.

What Bill Clinton may have done with a woman who worked in the White House is an incredibly minor situation. But, unfortunately, the American media and people find what Bill Clinton may have done in a closet far more fascinating than the blood which is on the hands of all Americans today, the blood of children whose crime it was to be born in Iraq.

I was three-for-three in having my letters published. I was shocked that they ran that one, if for no other reason than at more than 600 words, it was more than twice as long as their recommended 300-word limit. The paper called me the day after they ran it, giving me the phone number of a man who wanted to talk to me. I called him. He was nearly 80 years old, and called to say he was "flabbergasted" that the paper would run a letter like mine, and that he had written letters for many years to the paper, and never had one published. During the 1980s, I doubt that any mainstream American paper would have published that letter. I sent that letter to ex-CIA operative [Ralph McGehee](#). Ralph said that he was "amazed" that any American mainstream newspaper would run a letter like that. He said that letter would never see print in the *New York Times* or *Washington Post*.

In February 1998, the federal government staged a "town meeting" at Ohio State University to air their rationale for their proposed bombing of Iraq. The public was invited, although the meeting was more for show, to fabricate a fig leaf of public consent for the bombing. Our government reckoned incorrectly. Students protested noisily, and even the "mature and responsible" citizens who were allowed to approach the microphone were anything but enthusiastic about bombing Iraq again. Their questions, even more than the rabble-rousers' protests, took the politicians by surprise. Secretary of State Madeleine Albright was practically stuttering in the face of the tough questions her team was being asked. The staged meeting became a public relations disaster for the United States government. At the 11th hour, America backed down from bombing Iraq.

I was cautiously optimistic, but doubted that our government officials would immediately begin behaving themselves. Iraqi children were still dying by the thousands, our government would look for another opportunity to bomb Iraq, and they had learned their lesson. The next time they moved to bomb Iraq, even the appearance of a democratic consensus being achieved with the public would not be risked. Our government will likely stage no more "town meetings" before they bomb somebody. The December 1998 bombing of Iraq validated my suspicion. That one had no warning or propaganda buildup. It happened the day Clinton was impeached. Similarly, the summer before, America bombed Sudan and Afghanistan when the Lewinsky scandal was headline news. With

China Syndrome and *Grand Canyon* timing, the movie *Wag the Dog* came out soon before we bombed Sudan and Afghanistan.[\[316\]](#) Did life imitate art again? In the autumn of 1998, the propaganda machine revved up again. The subsequent bombing of Yugoslavia was the same, with no selling of the war to the American people before it began.

My motivation for writing letters to the editor was not necessarily being published, but helping to let the newspaper know how many people out there felt like me, and perhaps they might run one letter like mine. If the people truly stand up, they will be counted, but the system is increasingly rigged against people participating in it. Noam Chomsky has written about how the system works for many years in many books. In nearly every society there are an elite few at the hierarchy's top, and they often view those below them as beings to be used for their own selfish ends. The West immediately attacks any nation that attempts to form an egalitarian society, as we think we own the world, and have for five hundred years. Ralph McGehee stated it clearly [while concluding *Deadly Deceits*](#). Egalitarianism is incompatible with elitism, and United States has long led the field in destroying egalitarian movements worldwide.

The coverage of the latest bombing attacks of 1998 was a much different affair than it was in 1991, or the saber rattling during the winter of 1997-1998. What happened in December 1998 literally made me sick. They impeached Clinton for the wrong crime. That time nearly the entire world was against America. Clinton, with a straight face, told America that the bombs we were dropping in Iraq as he spoke were dropped to protect Iraq's neighbors. Not one of Iraq's "threatened" neighbors voiced approval of the bombing. They all said to stop bombing Iraq. Even nations that supposedly hated Saddam Hussein, such as Syria and Iran, protested what the United States and Great Britain were doing. They knew that a devastated nation of starving people posed little threat to them, and the writing on the wall is obvious: if they displeased the United States, they could end up just like Iraq. *America could not even get Israel to support our December 1998 bombing of Iraq.*

The U.S.' hypocrisy regarding the United Nations was laid bare. If America could manipulate the United Nations into voting our way, we present their vote as authorizing our actions, speaking fair words about the need to obey international law and the United Nations' voice. When the UN does not vote the way we like, we give them the finger, doing as we please. The fact that we outraged two of the five permanent members of the UN Security Council, China and Russia, while France looked for a place to hide, spoke volumes about the United States' actions. The entire world saw that our actions in Iraq benefited nobody but us. Peace activists began saying that dropping a nuclear bomb once a year on Iraq would be more humane than the slow starvation and strangulation of its population.

The night of America's surprise bombing of Iraq on December 16th was not a happy one for me. I decided against writing another letter to the editor, and wrote a several page essay. I was up until about 3:00 AM writing it. I titled it "In the Service of Empire."[\[317\]](#) I had not had a web page up for a couple of years, and had not planned to go public until a book was published. My writings were being published around the Internet in various places, and I was getting more requests for my work. I decided to start another web page, putting my latest writings under one roof, which led to this web site. The Iraq portion of this essay was the first part of that project.

Subsequent Events

Since our attack on Iraq in December of 1998, there has been a continuous series of air battles and skirmishes between the United States and Iraq. The best analysis of events takes into consideration the United States' global political-economic aims and those of its junior partner, Great Britain. The reason the Bush administration did not [negotiate a withdrawal from Kuwait](#) with Iraq is that *bullies never negotiate*. George Bush said about the Persian Gulf War, it demonstrated that "What we say, goes." If one possesses the superior means of violence, there is no need to negotiate. Negotiation is even avoided, because the very nature of negotiation means giving up something. If one has the monopoly on violent means, the ultimatum is delivered: do it our way, or we destroy you.

"It would be some time before I fully realised that the United States sees little need for diplomacy. Power is enough. Only the weak rely on diplomacy... The Roman Empire had no need for diplomacy. Nor does the United States." - **United Nations Secretary-General Boutros Boutros-Ghali**

In January 1999, United States officials admitted what really happened during those so-called UN (UNSCOM) weapons inspections. United States officials admitted that spying on Iraq was an important part of the weapons inspection program. America had "inspectors" install spying devices while they performed their inspections in Iraq for "weapons of mass destruction," partly to gather information to locate and assassinate Saddam Hussein and key Iraqi government officials in America's 1998 bombing campaign. It was admitted that the bombing campaign did just that, killing important people in Hussein's administration, although failing to get Hussein himself.

In the March 2, 1999 *Washington Post*, U.S. officials, understandably speaking on condition of anonymity, confirmed what Iraq had been saying for years: the United States was using UNSCOM for spying operations. U.S. agents infiltrated the inspectors, installing spying devices unrelated to the supposed disarmament mission of UNSCOM.[\[318\]](#) United States officials tried spinning the revelations as minor, and that the world should have expected it. The next "Hitler" accused the U.S. of murderous dishonesty for years, and our own officials confirmed that he is right.

Brian Becker of the [International Action Center](#) (AIC) visited Iraq a week before the December 1998 bombing, along with the AIC team. Saleh Al-Mukhtar, the chairman of the Iraqi Solidarity and Friendship Organization, told the AIC that the United States would bomb Iraq "within a week." He made that prediction a week before America bombed them. Mukhtar predicted that Bill Clinton's visit to Israel immediately before the bombing was calculated to appear to offer concessions to the Arab people, so when the bombs dropped, the Arabs could be bribed into standing by and watching Iraq getting bombed once more.[\[319\]](#)

In an interview published in the *New York Times* on January 22nd, 1999, Bill Clinton spoke of the likelihood of a biological attack on America by "rogue states" and "terrorist groups." Clinton's "Fortress America" idea had a deceptive feeling to it. The United States has the power to label its enemies. Calling a nation we have bludgeoned a "rogue state" has a nice defensive sound to it, but there is another way of looking at it.

A bully makes sure his victims cannot fight back. Bullies never seek a fair fight, but pick on those smaller than themselves. The hatred America has engendered throughout the world as it has bludgeoned nation after nation will haunt us. Until the World Trade Center attacks of 2001, the United States never had its national boundaries threatened, except when Russian nuclear missiles were aimed at it; and that was never the active threat and real suffering that the Iraqi people endure today, or Nicaraguans or Cubans, etc. When the United States sends the world's biggest killing machine to Iraq and Panama, those nations cannot strike back at us, not by challenging our military aggression directly.

Sneaking a biological, chemical or nuclear weapon into Washington D.C. would be a form of retaliation they could do. We see the "terror," they see it as the only way they can fight back. The Gulf War and the aftermath the United States is responsible for has killed more than a million Iraqi people, nearly half of them children. Iraq only has about 24 million people in it, for a death toll approaching ten percent of the population. If a series of non-conventional weapon sneak attacks wiped out New York City, Washington D.C. and Los Angeles, it would kill somewhere around 30 million people, or about ten percent of our population. See what happened when the World Trade Center attacks killed a ten-thousandth that many. To an Iraqi, that might be considered "getting even." Imagine if somebody attacked America and killed 30 million people, and ten million of them were children. In relative terms, that is America has done to Iraq over the past eight years. *Killing Hope* clearly shows why many nations have good reason to hate America.

Instead of admitting the truth and working to lessen the hatred toward us, Clinton talked about "rogue states" and "terrorist groups." The "terrorist" legislation Clinton tried to push through for years would have given a fairly free hand in defining what a "terrorist" is. Many Americans were afraid that such legislation would make a "terrorist" of anybody who dared criticize our government. If one followed the asset seizure laws enacted by the Reagan administration, for things such as suspected "drug dealing," where 85% of those whose assets were seized were not even charged with anything, but had their assets seized because "they were there," the fears were not outlandish. If Clinton got his Fortress America wish (something George Bush the Second pushed for early on, with his outrageous Star Wars missile system, announced before he even took office), America moved one step closer to a police state and a future I would rather not ponder. As of September 11, 2001, those nightmares began coming to pass.

The Seattle Times on February 1, 1999 had a front-page story about how the CIA believed that Iraq used humans to test its weapons. Does Iraq have chemical and biological weapons salted away? Possibly. Did they use human beings for some of their testing? That would not be surprising, but if one compares the human experiments allegedly done by Iraq to the human experiments done by the United States, the Iraqis are obviously amateurs. There are so many instances of the United States government's callous disregard for human life that it can become numbing. For every instance of

human experiments that were undeniable (fallout tests on South Pacific natives, planned nuclear releases in America on unwitting populations, [Nagasaki](#), the Tuskegee syphilis experiments on black men, the CIA LSD experiments on unwitting people, the University of Rochester plutonium experiments, the entire [artificial fluoridation issue](#)), there is rumor of human experimentation that makes my skin crawl, such the Montauk Project and the Montauk Boys, the Philadelphia Experiment, the CIA's [MK-ULTRA program](#), [Jonestown](#), various military tests on soldiers, some told to me by the soldiers themselves, things done to involuntary prisoners, etc.

Involuntary human experimentation (and even "voluntary," as on prisoners) is evil, and Iraq has probably done it. Yet, the article was intended to portray Iraq as monsters, setting the stage to further justify America's attacks. America is one of the last nations that can point the human-experiment finger at Iraq, but it is in keeping with U.S. hypocrisy throughout the entire Iraq affair. The article admitted that it was a string of wild rumors and wishful thinking. They presented as much evidence for human experiments as existed for the [Iraqi incubator story](#), or that [Iraq planned to invade Saudi Arabia](#), which is none. It had little relationship to actual news reporting, but looked more like wartime propaganda.

A great irony of that human experiment speculation was a contemporaneous story that was a far more responsible speculation. A February 2, 1999 e-mail from the International Action Center stated that hoof and mouth disease broke out in Iraq when the December bombing happened. The disease threatened the nation's entire livestock population. It crippled over a million animals by that time. For a nation already starving, it was a terrible blow. The International Action Center openly wondered if the CIA intentionally introduced it into Iraq. If so, it would be no surprise. The CIA probably performed acts of biological warfare against Cuba, including introducing Newcastle disease to Cuba's turkey population, swine fever to its pigs, Dengue Fever to human Cubans, and even inducing killer storms through weather control.[\[320\]](#)

In Africa, there is compelling evidence that when Zimbabwe was vying for independence, when it was still called Rhodesia, the white minority engaged in biological warfare by giving the "rebel" regions anthrax, which not only killed people but decimated their livestock populations.[\[321\]](#) Biological warfare by white people against non-whites is [far from unknown](#).

Scott Ritter was the leading U.S. weapons inspector in Iraq, and he has gone public with information that the U.S. government would have rather kept quiet. In the June 2000 issue of *Arms Control Today*, Ritter wrote:

"...from 1994 to 1998 Iraq was subjected to a strenuous program of ongoing monitoring of industrial and research facilities that could be used to reconstitute proscribed activities. This monitoring provided weapons inspectors with detailed insight into the capabilities, both present and future, of Iraq's industrial infrastructure. It allowed UNSCOM to ascertain, with a high level of confidence, that Iraq was not rebuilding its prohibited weapons programs and that it lacked the means to do so without an infusion of advanced technology and a significant investment of time and money.

"Given the comprehensive nature of the monitoring regime put in place by UNSCOM, which included a strict export-import control regime, it was possible as early as 1997 to determine that, from a qualitative standpoint, Iraq had been disarmed. Iraq no longer possessed any meaningful quantities of chemical or biological agent, if it possessed any at all, and the industrial means to produce these agents had either been eliminated or were subject to stringent monitoring. The same was true of Iraq's nuclear and ballistic missile capabilities.

"...By the end of 1998, Iraq had, in fact, been disarmed to a level unprecedented in modern history, but UNSCOM and the Security Council were unable - and in some instances unwilling - to acknowledge this accomplishment."

During the summer of 2000, the U.S. government stepped up propaganda efforts against Iraq, and used mouthpieces such as the [New York Times](#) as its platform. In light of Ritter's revelations, the U. S. engaged in naked genocide in Iraq, its stated rationale in tatters.

There were been other media items worthy of comment. On February 18th, 1999 I passed by a *USA Today* street dispenser that looks like a television (not by accident). The front-page headline said "Price of cheap gas: Laid off oil workers." That is the price of cheap gas, according to the mainstream media. The price was not dead Iraqi children, not a devastated environment, genocide in [East Timor](#), the ruination of [Nigeria](#), etc. The price was workers losing their jobs. As usual, they did not mention the "p" word, and talk about the impact on oil company profits. Layoffs raise profits, and the dead are invisible.

There is a much broader framework to view these events from, a viewpoint voiced by Noam Chomsky and many others. With the Soviet Empire's collapse, there has been little obstacle to the United States establishing a de facto Global Empire, with China being only serious obstruction to that goal. William Blum ended *Killing Hope* with "Noam Chomsky has noted that the end of the Cold War has enabled the U.S. government to achieve its ultimate goal - 'to set the terms of discussion' for virtually any international issue, and thus become the ultimate empire."[\[322\]](#) When viewed through that lens, so much becomes clear that our propaganda systems obscure. The ethnic strife we see in Yugoslavia and the Indian subcontinent were partly due to conscious strategies implemented by the colonial powers to divide and conquer the people, in an ancient strategy.

Events in Iraq are more of the same. In the opinion of Chomsky, Becker, Mukhtar and others, America's strangulation of Iraq is destroying a regional power so that no Middle East nation dares oppose America's hegemony. What America [did to Southeast Asia](#) was similar. The goal is eliminating regional power structures across the globe, recolonizing the planet, turning it into our *Global Plantation*. As America eliminates regional powers such as Yugoslavia and Iraq, we eliminate any chance that those regions can resist our domination. Our genocidal policies towards Iraq are part of a long-term strategy by the United States and Britain to dismember Iraq, [Yugoslavia](#) and any other nation posing an obstacle to our global empire. The "dissident" analyses of Chomsky and others are not easily dismissed, but that kind of discussion [is never in our American mainstream](#)

[media](#). Cold War propaganda constantly focused on the evil "communist conspiracy" that would take over the world. Insert "capitalist" for "communist," and it describes the real situation more accurately.

America's Global Empire efforts are unlikely to succeed. One need not study biblical prophecy to see where events are probably headed, particularly in light of the World Trade Center attacks. No tyranny lasts forever, and as the United States has led the global proliferation of weaponry, it is becoming harder to monopolize the means of violence. The people that run the United States acted as if nobody could fight back against our murderous bullying. Long before the World Trade Center attacks, Whitley Strieber had visions of Washington D.C. being destroyed one day by a "terrorist" bomb.[\[323\]](#) When a bully backs somebody into a corner and keeps on beating, what recourse does the victim have? In order to survive, they may run home and get a gun, changing the terms of engagement. Lieutenant Colonel [Tom Bearden](#) publicly stated several years ago that people with the means and motive to crop-dust Washington D.C. with anthrax are already here, and the question is not if it will happen, but when.[\[324\]](#) William Blum downplayed the notion of such a "terrorist" attack, but the notion is not farfetched, particularly now.

The scenario could unfold in other ways. Living at the empire's heart makes for comfortable lives. Hundreds of thousands of citizens in ancient Rome received free food as it flowed from the imperial hinterlands. Today, [bananas](#) that should be feeding Central American children instead are sold in United States supermarkets. Land that should be growing food for African people instead grows food and other products for export to the industrialized world, in order to service African debt to western banks (at an unfair exchange rate), for money that went into a dictator's Swiss bank account. Those living in the imperial center (the United States) are generally oblivious to those situations. Similar to the slaughterhouse kept at a respectful distance from town, or the forest clear cuts that are hidden by a strip of trees left standing, the suffering of those [unwillingly supporting the empire](#) are carefully hidden from view, and the imperial class prefers it that way. It makes it easier to live with a "clean" conscience.

As Adam Smith made clear in his *Wealth of Nations*, nationalism is a handy tool to manipulate populations into marching off to war and other exploitations of average people, benefiting the elite at the top.[\[325\]](#) The people running the American Empire have no particular allegiance to the American people. [American stupidity has been cynically cultivated](#) and used to get Americans to cheer bombings, [wave flags](#), march off to war and other acts of nationalistic fervor. Every militaristic nation tells itself that it is the force of light of virtue, even when it kills off children.

The people heading America's food chain rake it in from the carnage. That is not to say that Americans do not enjoy cheap gasoline and bananas (that is part of the bribe), but [capitalists](#) have no particular allegiance to America. They will go wherever the profits are. Those cheap commodities come with being at the empire's heart. We are seeing the long-term effects of global profit-seeking, with American jobs being shipped off to places such as Indonesia, Mexico, the Caribbean, and Asia, where \$20-per-hour American jobs became \$2.00-per-hour Mexican jobs and \$2.00-per-day Indonesian jobs, while executive compensation (almost exclusively white men) skyrocketed. White, educated, American men are the most privileged demographic group in world history and will probably be so for some time. Women, the uneducated and people of color do not cheer too loudly

for America's state of affairs, with a large and growing homeless population, the [world's largest prison population](#), and many other social indicators that nobody can cheer about.[\[326\]](#)

The capitalists know what they are doing. The international treaties they rammed through, such as GATT and NAFTA, are designed to make the world safe for profits, having the owners' interests "peculiarly attended to." Real wages in America significantly declined since 1973, with a slight increase in the 1990s "boom times," but the 1929-like Wall Street Scandals, which began with the 2000 dot.com collapse and reached new heights in 2002 with [Enron](#) and many other accounting scandals, may usher in a new economic collapse. Average Americans are slowly joining the global oppressed class. The goal of global capitalism is turning the entire planet into the *Global Plantation*, where plutocratic pockets of cognac-sippers exist throughout the world, and the slave-driver class (corporate managers, academics, professionals, the military and CIA, etc., which are about 20% of the U.S. population) keeps the vast majority of humanity in the yoke. Under that scenario, which has been unfolding for many years, it will always be preferable to be Joe Six-Pack in America than toiling on a Guatemalan banana plantation, but the differences are slowly disappearing.

Yugoslavia and East Timor

In the spring of 1999, the United States was destroying two nations at once: Iraq and Yugoslavia. I had strange conversations with people who thought those situations were unrelated, who thought that in the midst of the genocide of Iraqi children over controlling Middle East oil, the very same politicians and diplomats had suddenly grown big hearts as they bombed Serbia to "free" Kosovo.

As with Iraq and most nations, Yugoslavia was an artificial entity created by drawing lines on a map. In Yugoslavia's situation, however, the nation's creation had more to do with the local population banding together to prevent further imperial intervention than it did the imperial powers drawing those map lines.

The Balkan region has one of the most culturally and historically diverse populations on earth. It is where the Western Roman Empire met the Eastern Roman Empire, where the Ottoman Empire met the Austro-Hungarian Empire, where Eastern Orthodox Christianity met Roman Catholicism, and where both met Islam. More than a dozen distinct ethnic groups inhabit what was recently known as Yugoslavia, with the Serbs, Croats and Muslims being the most populous, but also with significant populations of Slovenes, Albanians, Macedonians and others.[\[327\]](#) The region has seen numerous marauding armies, including Christian Crusaders, Islamic armies and Nazi Germany and its minions.

During the two World Wars of the 20th century, the region's people suffered greatly, especially the Serbs, who lost perhaps one million people in those wars, with hundreds of thousands of those deaths occurring in concentration camps. Post-war Yugoslavia feared attack from the Soviet Union for a long time, it being a disobedient communist nation, but ended up being invaded by the United States and its Western European underlings.

Scholars who study the Balkan region are wont to say, in jest, that it has "too much history."[\[328\]](#)

With such a long and tumultuous history of bloodshed and invading armies, mass migrations, population displacement, religious and ethnic friction and the like, it is guaranteed that very few Americans have even a passing understanding of what the issues, tensions and conflicts are there, yet we allowed our government to mount an immensely destructive invasion. To repair the war damage and recreate the Balkan stability that existed twenty years earlier will likely cost about \$100 billion[329], an amount greater than the annual Gross Domestic Product of the former Yugoslavia. [330] Immediately after the bombing stopped, Clinton informed the world that the United States' role in the region was bombing it to smithereens, not helping to rebuild it. In short, the nation was destroyed environmentally and economically, as well as politically.[331] Even if left alone, it would take the region generations to recover from the U.S.-led destruction, and it is guaranteed that it will not be left alone. Scholars have argued at length regarding the "real" reasons behind Yugoslavia's disintegration, and they can have sharply divergent theses, but this essay focuses on what my nation did to abet the situation. The United States was possibly the largest influence, and virtually none of the mainstream scholarship that I read even *addressed* the United States' role, even though *its* bombs devastated the region. I could not even find a *discussion* of the U.S. role at my local library, and again had to resort to reading "radical" U.S. scholarship, the kind that the mainstream media immediately dismisses, if it is even aware of it. Michael Parenti and Noam Chomsky, two of America's leading dissident scholars, authored the only books I saw that analyzed the U.S. role at length.[332] As usual, they have been subjected to a [hail of criticism](#) and vilification in America because of their work.

Yugoslavia was an anomaly in post-war Europe. It was a communist nation not under Soviet domination. I spent a week there in 1974, traveling its length by bus, from Greece to Austria. It was the only communist nation over there that welcomed people from the "free world." In many ways it was a hauntingly beautiful nation, and in others it was not. I was in Dubrovnik when Nixon resigned, and the hotel manager gave his condolences to our tour group. He was genuinely sympathetic, and told us that he had once visited the United States, and liked it. Dubrovnik was heavily shelled in the 1990s wars, killing many people. As in many regions, there was ethnic and cultural diversity and friction in Yugoslavia, but it stayed a relatively neutral nation in a difficult region, wedged between the great powers.

The U.S. government and mainstream media endlessly justified the bombing of Yugoslavia as a "humanitarian intervention." Even so-called "left" media sources stated the same thing.[333] America's bombs somehow saved the Albanians, even as they killed Albanians. The NATO bombs directly killed about 300 Albanians, the people they were supposedly saving. In only three previous instances in the twentieth century had a large power invaded another nation for "humanitarian" reasons, and America and Bill Clinton made the fourth. The other three were Hitler's invasion of Czechoslovakia, Mussolini's invasion of Ethiopia, and Japan's invasion of Manchuria.[334] In those three earlier instances, the invading imperial powers invoked lofty rationales for their invasions, their rhetoric accurately citing problems and abuses in the regions they invaded. Such rationales could be concocted for any place on earth. The Big Lie regarding each rationale was that their motivation was helping the nations they invaded. In each case, they invaded for murderously self-serving reasons.

One thing is certain: the application of violence, if justified (which I have not found a clear instance of yet, and doubt I ever will), should be the result of lengthy deliberations by those who authorize such

actions. As with all of our violent interventions, the American public (who ultimately authorized the violence) knew virtually nothing about what was happening as they cheered the violence. Not one in ten Americans could pick out Yugoslavia on a geophysical map (one with no national boundaries or names) of the world. In a 2002 global geographic literacy survey by *National Geographic*, more than ten percent of American adults between the ages of 18 and 24 could not even pick out the United States, and 87% could not pick out Iraq. Thirty percent could not even identify the Pacific Ocean. Americans cheer the bombs without really knowing where they fall.

America's Humanitarian Record

With all the self-congratulation about what a humanitarian nation America is, and how we saved the Albanians, a little investigation into our humanitarian record is warranted.

The genocide in Iraq, ongoing and concurrent with the bombing of Yugoslavia, should have made any thinking person at least question our motives regarding Yugoslavia. William Blum, in his recent *Rogue State*, sampled the UN voting record of the United States on various humanitarian issues. He selected votes from the Reagan years, but notes, as we will see, that the voting trend during the Reagan years is nearly the same today.

Our justification for the Iraqi genocide (harboring chemical/biological weapons, whose ingredients were largely purchased from the United States and its allies) looks a little odd compared to our voting record on chemical and biological weapon proliferation, and other weapons of mass destruction.

Here are UN resolutions to ban testing and development of chemical and biological weapons.

Resolution #	Date	Nation Vote
36/96B	December 9, 1981	109-1
37/98A	December 13, 1982	95-1
38/187A	December 20, 1983	98-1
39/65B	December 12, 1984	84-1

Here are resolutions on prohibiting the testing and development of nuclear weapons.

Resolution #	Date	Nation Vote

37/73	December 9, 1982	111-1
37/78A	December 9, 1982	95-1
38/183M	December 20, 1983	133-1
39/148N	December 17, 1984	123-1

To demonstrate that those votes are not from a distant, errant past, recently the U.S. Senate stood on the world stage and refused to ratify a nuclear-test-ban treaty.[\[335\]](#) The U.S. has been alone on the world stage numerous times, either refusing to limit nuclear weapons, or asserting its right to use them "preemptively," which means to [use them for offensive purposes](#).

Here are resolutions on prohibiting the testing and development of new systems of "weapons of mass destruction."

Resolution #	Date	Nation Vote
38/182	December 20, 1983	116-1
38/70	December 12, 1984	125-1

Here are resolutions calling for education, health care, nourishment and national development to be considered standard human rights.

Resolution #	Date	Nation Vote
36/133	December 14, 1981	135-1
37/199	December 18, 1982	131-1
38/124	December 16, 1983	132-1

Here are resolutions to affirm the right of every nation to control its own economic and social destiny, free of outside intervention.

Resolution #	Date	Nation Vote

36/19	November 9, 1981	126-1
38/25	November 22, 1983 [336]	131-1

Here is the resolution calling for a convention on the rights of children.

Resolution #	Date	Nation Vote
42/101	December 7, 1987	150-0-1

The United States abstained voting on the resolution regarding the rights of children, the world's only nation to do so. In all of the above UN vote tallies, the United States was the lone "no" vote.[\[337\]](#) The American media rarely informs the American public of those votes.

The Convention on the Rights of the Child was held, and one of its resolutions was banning the death penalty for people who commit crimes as children, and banning child soldiers. Only two nations have not ratified the treaty. Somalia did not, because it does not have a functioning government. The other was the United States, the only nation on earth that still executes children. How could Bill Clinton keep a straight face while talking about "rogue states"?

That litany of lone "no" votes can keep going, such as regarding resolutions condemning Israel's horrendous human-rights violations of the Palestinians, or the apartheid government of South Africa's treatment of the blacks there. The United States has a lengthy record of installing and/or propping up some of the most brutal regimes on earth, such [Suharto's Indonesia](#), Pinochet's [Chile](#), the [Shah's Iran](#), the death-squad regimes of [El Salvador and Guatemala](#), its support for [Pol Pot's Cambodia](#) and so on. The United States regularly stands alone on the world stage, rejecting principles of decency and humanity that the rest of the world has embraced. In that light, the sudden professed humanitarian concern for the Albanians should be viewed with a skeptical eye.

Indeed, try as one might, there is probably not one "humanitarian" military intervention to be found in world history.[\[338\]](#) Violence is not, has never been, and never will be, a humanitarian undertaking. Somebody is always violated, and invading armies have *never* inflicted violence out of humanitarian intent. It has always been self-serving on the part of those who created the armies and the situations they are used in, and they will *always* concoct a reasonable and seemingly noble rationale for their violence, and it is *never* the real reason. If America's activities happen to benefit Albanians or Kuwaitis or Iraqi Kurds, it is incidental, and our leaders will always look for a good cover story to sell to the masses, so minor population elements benefiting from America's interventions become the story of the day, not the majority's suffering. If the Albanians or Kuwaitis get in the way or become expendable, they will share the same fate as the Iraqi children.

Whenever people begin analyzing whether the Serbs are worse than the Croatians, or if the

Albanians deserve to be “free” in Kosovo, or how murderously the Muslims were treated, they usually have already made assumptions that I reject, which is that the United States government really cares about *any* of those people, and that we have a God-given right to intervene. The only right being exercised is the right of might, which America exercises regularly, accompanied each time with lies to justify it, just as Hitler and Mussolini did when they invaded Czechoslovakia and Ethiopia.

The Kurdish Plight

The Kurdish people compose the world's largest ethnic group without a home state. There are more than 16 million Kurds alive today, and about half of them live in Turkey. Turkey is another artificial entity that imposed a national identity on a land of tribes, being the remnant that the Great Powers could not carve into [controllable chunks after World War I](#).^[339] At World War I's conclusion, the Kurdish people were vying to establish a nation for themselves as the Ottoman Empire ended. [Woodrow Wilson](#) even remarked that the three ethnic groups that should have their own nation as the Ottoman Empire was carved up were Armenians, Kurds and Arabs. Unfortunately for the Kurds, Kurdistan was sitting on large oil deposits, and Britain's power politics (other colonial powers were also involved, including France and America) divided Kurdistan between the new artificial nations Turkey and Iraq (Kurdistan also was carved up into portions of Iran, Syria and the Soviet Union). The Kurds were neither Turks nor Arabs, having their own distinct identity, linguistically and culturally. ^[340]

The plight of the Kurdish people over the past century has been a grim one, with periodic revolt and repression throughout Kurdistan. The 1980s were a particularly difficult time for the Kurds. Although the Kurds were instrumental in deposing Iran's Shah, the Khomeini regime denied them autonomy, and the Kurds were partly used as pawns by Iran during the Iraq-Iran war in the 1980s, the Iraqi Kurds being armed and encouraged to fight against Iraq. In light of how [America sold them out earlier](#), the Kurds must have been desperate indeed to rise up again, with U.S. encouragement. As Iraq gained the upper hand militarily (enthusiastically armed by the West, America in particular^[341], and the U.S. also helped arm Iran, as the Iran/Contra scandal made clear), in 1987 it began a military campaign against the Kurdish rebels, and that is when Saddam Hussein's troops used chemical weapons on the Kurds. In 1987 and 1988, when Hussein was using chemical weapons on the Kurds, he was the U.S.' ally against Iran, so those atrocities went largely unreported in the mainstream American press. While chemical weapons were being used on Iraq's Kurds, Turkey was engaging in its own bloody repression of its Kurds. Beginning in 1984, the military effort of Turkey killed about 40,000 Kurds and made refugees of two million others. In *Censored 2000*, the number-five story of the year was the fact that Turkey had destroyed thousands of Kurdish villages with American weapons.

To this day, the Turkish government's atrocities against its Kurdish population go largely unmentioned in the U.S. media. The U.S. instigated another Kurdish rebellion that happened in Iraq as the Gulf War ended, then literally flew air cover for Iraq's Republican Guard, even denying the Kurds captured Iraqi weapons to fight back with.^[342] America did it in the name of "stability." The

hypocrisy was surreal, and awe-inspiring to witness.

The Kurds were unfortunate pawns again. As they fled Iraq for Turkey and Iran, the U.S. engaged in operation Provide Comfort, which was supposed to succor the Kurds who fled. More than seven times as much aid was spent on a Kurdish refugee in Turkey as one in Iran. The Kurds essentially were put into concentration camps along the Iraq-Turkey border, and then the Western press decided their plight was newsworthy (as it was partly caused by our new official enemy, Iraq) for a few moments. A notable aspect of those events was that Turkey was repressing the Kurds arguably worse, but the media made that relationship largely invisible to the American public. The U.S. unilaterally created a "no-fly zone" in northern Iraq, so Iraq could not exert much military influence in the Kurdish region. The "no fly zone" applied to Iraqi planes, but not Turkish ones, as the Turkish military, using American equipment, flew into Iraq to bomb the Kurds there; acts that our media has generally not reported.[\[343\]](#)

About 75% of Turkey's arms are of U.S. manufacture. Analyzing the U.S. media's performance regarding Turkey, Iraq, Iran and the Kurds is a good lesson in the "[good victim/bad victim](#)" paradigm that the U.S. press has adopted. Kurds being killed by Iraq, while Iraq was a U.S. ally (largely because they were at war with Iran) was largely unreported by the U.S. press...until Hussein became an official enemy on August 2, 1990.

Amnesty International stated,

"One of the clearest examples of the USA's changing attitude to human rights violations in different circumstances is that of Iraq. During the 1980s Iraqi forces committed gross and widespread abuses...Amnesty International repeatedly appealed for action, yet neither the US authorities nor the UN responded...after Iraq invaded Kuwait in August 1990...The USA repeatedly cited the Iraqi government's appalling human rights record to gather support for UN military intervention in the Gulf."[\[344\]](#)

Talk of Kurdish independence is rare in the U.S. mainstream press. The Turkish government has treated those Kurdish refugees as stateless persons with no rights. The American people have been treated to a mind-boggling inversion of reality regarding the Kurdish plight.[\[345\]](#) To be fair, the Kurds in Turkey have likely not aided their plight by massacring Turks, led by the Marxist guerilla group known as the Kurdistan Workers Party (PKK), and succumbing to Turkey's divide-and-conquer tactics that have fragmented their efforts. When thinking about those Albanians (who have a home state) that America so nobly helped, pondering the Kurdish situation might be fruitful.

Helping Kosovo

To find out what the American people were not told about the events in Yugoslavia and the region, [Project Censored](#) provided more rich reading. The number-six story in *Censored 2000* was one that the alternative media reported widely on: the attack on Yugoslavia "coincidentally" served numerous private interests.[\[346\]](#)

That issue became one of contention in leftist circles. Kosovo has large deposits of lead, zinc, silver, gold and other lucrative ores. The Yugoslavian government's mining company owned the mines. The capitalists did not have their hands on it yet. Ripping Kosovo from Serbia nearly guaranteed that the capitalists will own it. That part of the "freedom" deal the Kosovo Albanians are getting has received little notice in the American press. Those mines, however, are tiny compared to another goal of the capitalists. There is about five *trillion* dollars of oil sitting underneath the Caspian Sea region, and the United States has been busy negotiating rights to that oil, while cutting out local powers such as Russia and Iran. Yugoslavia sits on a favored route for the projected pipeline from the region, and is one more reason the capitalists want to control the Balkans. Breaking Yugoslavia into pieces is a good way to do it. It is another divide-and-conquer tactic. Noam Chomsky downplayed the strictly economic aspect of the Kosovo intervention,[\[347\]](#) likening our intervention to that of a Mafia Don: he may terrorize the shopkeeper for protection money, but the terror is more important than the money, as it helps keep all shopkeepers in line with the program. What did Al Capone want more of, money or power? To those he abused, it did not really matter.

The number-ten Project Censored story of 1999 was that the entire Kosovo intervention was a set up from the beginning. The negotiations with Milosevic's Serbia were a sham. The U.S.-produced Rambouillet "agreement" and Milosevic's refusal to sign it was the official reason that NATO bombed Yugoslavia. The U.S. did not negotiate in good faith. The Rambouillet proposal was one that no sovereign nation would agree to. The agreement gave NATO personnel unlimited power in the region and complete immunity from any crimes they might commit. Appendix B of the proposal gave NATO personnel "free and unrestricted passage and unimpeded access throughout the FRY (Federal Republic of Yugoslavia), including associated airspace and territorial waters." Clauses 11 and 15 granted NATO "the use of airports, roads, rails and ports without payment (and) the right to use all the electromagnetic spectrum." The proposal granted NATO arbitrary arrest and detention powers. In short, the Rambouillet proposal turned all of Yugoslavia (not just Kosovo) into occupied territory, a new colonial holding of the U.S. and friends. That "fine print" was not reported in the U.S. media, as Milosevic and the Serbs were vilified. As Yugoslavia rejected the Rambouillet proposal, it stated that it would work toward Kosovo self-management. That also went unreported in the mainstream media, and the day after Yugoslavia refused to ratify the Rambouillet proposal, while proposing its own counteroffer (Yugoslavia had already made their own proposals, some quite generous, which were immediately dismissed by the U.S. and not reported by our media, [just like we treated Iraq](#)), NATO began bombing them.

Dan Goure, of the Center of Strategic and International studies stated,

"The administration went to Rambouillet basically to arrange a trap for Milosevic. It was a no-win

situation for him and frankly, Albright was trying to find a pretext for bombing. They told the Kosovar Albanians that if they signed and Milosevic didn't, they'd bomb Serbia. Rambouillet was not a negotiation, it was a setup, a lynch party."[\[348\]](#)

A U.S. diplomat frankly admitted after the bombs began dropping that NATO deliberately "raised the bar" high enough at Rambouillet so Milosevic would not sign, because Serbia "needed to be bombed."[\[349\]](#) Those with the best weapons need not truly negotiate: simply deliver your ultimatum, then attack.

A senior official of the French foreign ministry told Eric Rouleau, the former French ambassador to Turkey, that the Rambouillet document was unacceptable. Even Henry Kissinger stated that "Rambouillet...was...an excuse to start bombing."[\[350\]](#)

Although the U.S. media endlessly played up the "genocide" that precipitated the bombing of Yugoslavia, there is no credible evidence of such a "genocide." Project Censored's number-twelve story of 1999 was the lack of credible evidence of genocide before, during or after the bombing. While U.S. officials and press were throwing around numbers such as 100,000 (U.S. Secretary of Defense William Cohen) and 500,000 (U.S. State Department) dead or missing, in the aftermath of the U.S. bombing, with forensic teams (such as an eager FBI team, among others) looking for all those mass graves, the final tally was about two thousand people killed, with most being buried individually.[\[351\]](#) The NATO bombing killed about two thousand civilians. Ironically, the U.S.-led bombing may have killed more people than the "genocidal" Serbs did. Just who was being "saved?"

In 1984, Ronald Reagan authored [U.S. National Security Decision Directive 133](#), which was eventually declassified and released. It stated, among other sobering revelations, that the United States would strive to "promote a trend toward an effective, market-oriented Yugoslav economic structure." That may sound innocent enough, but coupled with the now admitted (even bragged about by Reagan and others) secret plan to destabilize and overthrow the Soviet Empire with a "quiet revolution," bringing Eastern Europe back to the "world market," it boded ill for Yugoslavia's future. The U.S. had targeted the Yugoslavian economic system for destruction, to replace it with capitalism.[\[352\]](#)

The 1970s and 1980s saw a series of economic events that caught many nations in its maw. In the late 1960s, communist nations began borrowing from Western banks to finance their industrial expansion. By itself, it was no great error, but then came the oil price shocks of the 1970s, where oil prices were raised by OPEC in 1973, and escalated again in 1979, which set off a huge spiral of inflation, which, among other economic disasters, [led to the U.S. Savings and Loan Scandal](#). The West went into a recession, imports from the communist and developing nations were squeezed off with protectionism, oil prices kept skyrocketing and nations such as Yugoslavia found themselves deeper in debt all the time. Ironically, the new "petrodollar" deposits of the OPEC nations largely funded the bank loans. Many conspiracy theories surround that situation, and more than a few of them might be true.

The debt burden became crushing for many nations. Then the [International Monetary Fund](#) (IMF) rode to the “rescue.” The IMF is infamous for imposing “Structural Adjustment Programs” (SAPs). The IMF has imposed SAPs on dozens of nations, so they can repay their loans.

In the Third World nations, the deal was much worse than the communist nations received. In communist nations, the loans generally went to productive activity that benefited the domestic population. In the Third World nations, the loans all too often went to luxury items for the elite, public works projects that did not benefit the average citizen (but benefited Western capitalists), or the money went straight into the dictator’s Swiss bank account. When it came time to repay the loans, the dictators did not empty their Swiss bank accounts, and the elite did not sell their Mercedes luxury sedans bought with the loans.

The SAPs are notorious for how they restructured the national economies of the subject nations. Instead of growing food for domestic consumption, they had to grow food for export to the United States, to earn “foreign exchange.” SAPs played a major role in that situation. Under the SAPs, social spending is slashed for education, medical care, housing, affordable food, and so on. For instance, the African nations of Burkina Faso, Mozambique, Niger and Tanzania spend more than twice as much money servicing their foreign debt as they spend for primary medical care, nations where children are starving, illiterate, etc. To the people in those devastated nations, what is happening is merely [colonialism with new rhetoric](#). They still do not eat the food they grow. Their nation’s resources, whether they are crops, mining products, timber or their labor, still end up going to the imperial powers, while the common people starve and live in destitution. About the only difference is that they get to fly their own flag. Flags are not edible, unfortunately.

The [IMF and World Bank](#) are officially United Nations institutions, but as with the United Nations itself, the rich and powerful dominate them. Western banks, particularly American, control the IMF and World Bank. One can find many people in the IMF, World Bank and other neocolonial institutions such as the CIA, [Peace Corps](#), USAID, etc., who think they are truly helping those who are subject to their policies. A [Ralph McGehee](#) waking up to what really happens is rare in such institutions, and of course, there are those [who know exactly what their institutions really do](#), but it is unacceptable to publicly admit the real game, but [John Perkins broke ranks and did in 2004](#).

Pre-breakup Yugoslavia surely had plenty of ethnic tension, but if people are not on the brink of survival, different ethnic, religious, racial and cultural groups can generally live together in peace and even harmony. It is when they are pitted against one another, each trying to survive, that it gets ugly. World War II was born of the Great Depression, where anti-Semitism not only reached genocidal proportions in Germany, but also reached its [all-time high in the rest of Europe and America](#), to even *increase* in America during the Jewish Holocaust. When times are difficult in America, we hear strident anti-immigration rhetoric. Economic strain is a common factor in American divorce. The [Berga concentration camp](#) showed how quickly American soldiers could come to look and act like concentration camp inmates.

In much milder circumstances, [during my days with Dennis](#) I saw more than my fair share of people acting dishonorably and criminally when they felt their jobs were in jeopardy. With the pressure on,

otherwise valuable employees stole anything that was not nailed down, broke into our facilities to steal, and even held items for ransom. Losing a job one had held for a few months was tame compared to what the Yugoslavian people endured under the IMF's ministrations, as the United States covertly attempted to bring Yugoslavia into the "world market." For a further illustration of converting the communists to capitalism, see the "success" story of the Western capitalists and Russia since 1990, where the life expectancy of a Russian man declined by ten years, an awesome statistic only seen before during war, plague or famine.

[World Bank and International Monetary Fund](#) (IMF) activities devastated Yugoslavia's economy, which helped lead to its breakup. Inflation skyrocketed, industrial production declined, unemployment climbed and many companies went bankrupt. Project Censored's number-twenty story for 1999 was how the media covered up that situation. That kind of U.S.-imposed economic stress is a standard neocolonial tale. What America did to [Chile](#), with Nixon ordering his henchmen to make the Chilean economy "scream," as a prelude to overthrowing their government, is another example. The most knowledgeable observers in Yugoslavia all admitted that economics was the biggest problem that Yugoslavia faced before it disintegrated.[\[353\]](#)

Rounding out Project Censored's Balkan-related stories for 1999, story twenty-two was about how the U.S. and Germany armed and trained the Kosovo Liberation Army (KLA), who were portrayed as the freedom fighters of Kosovo. Very interestingly, in 1998 U.S. Special Envoy to Yugoslavia Robert Gelbard said that without a doubt the KLA was a "terrorist group."[\[354\]](#) He was not the only American official to state that opinion. When the KLA became useful for U.S. interests, they received a quick image change and became "freedom fighters." Very ironically, the very "terrorists" in Afghanistan that we bombed in 1998 and 2001 were the "freedom fighters" that we armed and incited to take on the Soviet military. Jimmy Carter's national security adviser [Zbigniew Brzezinski](#) admitted in a 1998 interview with a French magazine that the Afghanistan "freedom fighters" were actually armed and incited by the U.S. *before* the Soviet Union intervened in Afghanistan. Brzezinski called it the Soviet Union's "Vietnam," and gleefully said that it led to the Soviet Union's breakup.[\[355\]](#) Freedom fighters one day, terrorists the next, or vice versa; it can be confusing to be a U.S. propagandist.

As with mercenary groups everywhere, the worst enemies the KLA had were often its own members. In May 2000, more than twenty KLA leaders were assassinated by other KLA members, with most murders probably being initiated by KLA chief Hashim Thaci, buddy of NATO general Wesley Clark.[\[356\]](#) It was like an internecine Mafia gang war. The KLA is partly composed of a highly unsavory mix of soldiers of fortune and other criminals; some prominent members were not even Albanian. Some of the KLA's favorite murder targets were Kosovar Albanians who were trying to peacefully negotiate with Serbia.[\[357\]](#) Those "freedom fighters" in Kosovo appear to be more like mercenaries that the U.S. and its allies trained and armed. As with the Contras, the mountain fighters of Cambodia and others, the KLA appears to be another pawn of U.S. ambition. It is another standard CIA ploy. The American public was not treated to that possibility by the mainstream media.

The evidence is overwhelming that the U.S. media misrepresented and demonized Milosevic and the Serbs before and during the NATO bombing, which is a typical U.S. propaganda tactic.[\[358\]](#) During

the 1999 bombing, I was buying groceries one day, and there was *Newsweek* magazine at the checkout stand. On its cover was a picture of Milosevic, with the headline announcing, "The Face of Evil." That was a headline worthy of the tabloids.

The disintegration of Yugoslavia was a bloody affair, with all sides (Serbs, Croats, Muslims, Albanians, etc.) committing heinous atrocities. To single out the Serbs as the bad guys was a convenience for U.S. propagandists. While Milosevic was no angel, the Croatian president, Franjo Tudjman, was openly fascist. He wrote a 1989 book that justified Hitler's Holocaust of the Jews (in his words, Europe needed to be "rid of the Jews"), and he was friendly with some of the worst Nazi-aligned Croatian war criminals of World War II. He once told a crowd that he thanked god that his wife was not a Serb or a Jew. He originally was a seemingly responsible historical revisionist regarding how many people died at the hands of the Nazi-aligned Croatian government during World War II, but his scholarship eventually degenerated into outright [Holocaust denial](#) and Holocaust apologetics. He eventually took the position that less than a million Jews died during the Final Solution. The Muslims suffered greatly during Yugoslavia's breakup, perhaps more than any other single group, but they were also no angels, apparently bombing their own people and trying to blame it on the Serbs, as even admitted by UN investigators.[\[359\]](#) When Serbs overran Muslim positions during fighting, they found that Muslim soldiers were collecting the heads of fallen Serbian soldiers.[\[360\]](#) Those headhunting soldiers were often the same ones that the [U.S. trained in Afghanistan](#) to create the ["trap" for the Soviet Union](#).

The murderous hypocrisy of the United States regarding Yugoslavia was breathtaking. Not only was everything about the NATO intervention illegal (NATO was the fig leaf the U.S. used when it was obvious that the UN would never approve of the U.S. bombing Yugoslavia), the rationale fed the American people does not survive the barest scrutiny. The issue was supposedly Kosovo gaining its freedom. The bloodiest war in U.S. history was fought over the [right of states to secede from the Union](#). The U.S. recently supported the extremely bloody Russian campaign to keep Chechnya from seceding. Puerto Rico has a much more legitimate reason to secede from the U.S. than Kosovo had for seceding from Serbia, yet the CIA and other organizations devoted a great deal of effort toward derailing Puerto Rican movements for freedom from the United States, and remember the [Turkish Kurds](#).

In the final analysis, the conclusion is clear: the United States systematically destroyed Yugoslavia, although America does not deserve all the credit. Germany and Great Britain were also instrumental. Undoubtedly, the people of Yugoslavia all played their part, being divided and conquered. I respect the perspective of American "radicals" more than any other commentators I have read. Few other commentators even *discuss* the U.S. motivation. Michael Parenti's *To Kill a Nation* is the best work I have seen regarding the U.S. role in the breakup of Yugoslavia. Brief, tightly argued, impeccably documented, Parenti's book is devastating.

In reviewing the serious scholarship regarding Yugoslavia, I either found them agreeing with Parenti's thesis (but not devoting much detail to the issue), or ignoring the issue altogether, as Allcock did in his *Explaining Yugoslavia*. Christopher Bennett's *Yugoslavia's Bloody Collapse* laid a great deal of Yugoslavia's woes at Milosevic's feet, yet admitted that the Western policy toward Yugoslavia "has been determined in advance, and is based on the domestic political considerations

of the great powers, not an analysis of Yugoslav affairs.”[\[361\]](#) Misha Glenny, who does not see things the way Parenti does, and operates from various Western establishment assumptions (which nearly all mainstream journalists do), and whose work is light on dealing with the economic aspects of what has happened to Yugoslavia, fully admitted that the region’s economic problems are directly related to the Great Powers’ past militarily interventions. Glenny wrote that the military interventions led to the ethnic conflicts, and that NATO’s military adventure will probably be no different in effect, if not intent, than other Great Power interventions.[\[362\]](#) Parenti’s focus is not on who are the bad guys in the Balkans, but what the United States’ role was, and its motivation for intervening. Every attack I have seen on [Parenti’s work](#), most notably from the right wing, fails to comprehend that distinction. That same “misunderstanding” has been [directed toward Noam Chomsky’s work countless times](#). How much do they truly misunderstand that distinction, and how much of their criticism is a knowing misrepresentation of Parenti’s work, which is also the [straw man](#) logical fallacy? History is on Parenti’s side.

Studying the history of the Catholic Church, [European colonialism](#) for the past several centuries, the American medical establishment, the [energy industry](#), and so on, self-interest is *always* the primary motivation, and the means used are remarkably similar. Whether it is the Catholic Church and its Inquisitions, the Albigensian Crusade and other Holy Wars, or the [American medical inquisitions](#), imprisonments and outright murders of doctors who present alternatives to the cut/burn/poison cancer treatment paradigm, or the energy industry [wiping out all the alternative energy sources](#) that they cannot monopolize, the pattern is quite clear. It is all about wealth and power, and the powerful always conjure noble-sounding rhetoric about how selfless their oppressive actions are. People who believe the rhetoric are either ignorant, deeply deluded, or they get something out of the deal, usually economically, which often abets their ignorance and delusions.

The Catholic Church was the self-proclaimed custodian of Jesus’ message, which was obviously all about love. As it sought wealth and power, the Catholic Church [became the antithesis of Jesus’ message](#). The American [medical establishment](#) is the self-proclaimed custodian of America’s health. As it has sought wealth and power, it now delivers the exact opposite of health, its treatments harming and killing its patients instead of healing them. The United States is the world’s self-proclaimed leader, with its rhetoric stating that it exports freedom and democracy to the world. As it has sought wealth and power, it has come to export the exact opposite. Oppression and poverty are its two principal exports.

Authors who write about how “confused” American foreign policy can be have usually fallen for the false assumption that America’s leaders are trying to help the people beyond its shores (the self-serving myth of our “blundering efforts at doing good”), or those writers may be propagandists themselves. If one understands the true goals of American foreign policy, the picture no longer appears confusing. In brief, the goals are:

- Dominating the entire world political-economic system with what is variously called global capitalism, corporate capitalism, etc., which is largely dominated by American-based

transnational corporations;

- Preventing any alternatives to that system to exist or flourish, and destroying any that exist;
- Preventing the appearance of any regional powers or nations that can threaten the supremacy of capitalism or the United States, and destroying any that exist;
- Lining the pockets of the [defense contractors](#) and others who essentially own America's politicians.[\[363\]](#)

Our politicians even tacitly admit such goals. In their second presidential debate, George Bush the Second and Al Gore fielded the question of American foreign policy. They laid out their mentality clearly, and I never heard a word of dissent in the media toward their stance. Both made it clear that in American foreign policy, the most important question is always, "What is in the best interests of America?" That is always the salient question. The interests of those who America "intervenes with" or bombs are not in the equation; the clearly stated attitude is "What's in it for us?" It is the epitome of the [self-serving mentality](#), and America apparently agreed with them, as I did not hear a word of dissent. What Gore and Bush did not say is that "America" really means their constituency, and it is not the American people, but those they are beholden to, such as all those corporations that bankrolled their campaigns. What a breath of fresh air it would have been for one of them to say, "Justice for us and those we deal with is my goal." [Ralph Nader](#), the Green Party candidate for president, would have talked about justice, but he was forcibly removed from even being on the premises for the debates, even as a spectator, although he was invited by the media to attend.

With the true goals being completely self-serving, the "underdeveloped" nations and those nations that escaped capitalism's clutches during the Cold War have received a predictable and systematic treatment by the IMF, World Bank, CIA, U.S. Marines and so forth. For the [Third World](#) nations, keeping them where they are, enslaved to the industrialized nations, is the program. For those nations that strayed from the fold during the Cold War, they are being turned into exploitable domains, a process that Michael Parenti calls "Third Worldization."[\[364\]](#)

The contours of Third Worldization are:

- Preventing any nation from charting an independent course of self-development;
- Making their natural resources open for capitalistic exploitation;
- In the case of Eastern Europe, the goal is to also have a pool of literate and skilled workers (who also happen to be white) who will toil for minimal wages for Western corporations, in what has been called "the race for the bottom," which is a global phenomenon;
- Wipe out any independent industries that can compete with the West's, which is a standard colonial strategy, such as the [British in India](#) or the [Spanish in Mexico](#).

Third Worldization is a process of turning the entire planet into a readily exploitable pool of cheap labor, cheap resources, cheap imports and obscene profits for the capital class. If somebody is one of that system's few winners, life is relatively good. So far, the winners in this system comprise less than 10 percent of the industrialized world's population (a few percent of the world population, at best), with the biggest winners literally being less than one thousand human beings, who possess more wealth than the poorest half of humanity, for a wealth ratio of millions-to-one. People who live in the imperial heartland, in a situation similar to what ancient Rome's citizens enjoyed, also derive benefits in the form of cheap commodities, brought in from the imperial hinterlands. That bribe keeps them from challenging the system too strongly. Therefore, [Americans enjoy](#) cheap oil, bananas, coffee, tin, shoes, clothes, toys, wood, food and the like. This dynamic is quickly leading to the uninhabitability of planet earth, as such rapacity devastates the environment as well as human beings. Naturally, the reaction of the capitalist class (and its servile academics) is to lie about the devastation or cover it up, push it onto the subject peoples and lands as much as possible, and maintain a "strong" military to keep the subject peoples in submission, and call it "defense," in the best tradition of Orwell.

For instance, in the United States the environmental movement slowed down the chain saws and oil drilling. The reaction by U.S. industry has been to import more oil and chop down the forests in [Chile](#) and New Zealand, as they literally ship their logs to mills in Oregon for processing, and oil imports doubled since 1973, to reach more than half of American consumption.

In 1991, chief economist for the World Bank, Lawrence Summers, wrote an internal memo that encouraged the bank to promote the migration of the "dirty industries" to the less developed nations. Summers' rationale was that since the workers in those nations earn far less than workers in the developed nations, the health problems and deaths they would endure from those "dirty industries" would be less costly than the misery and death that would be inflicted on the industrialized world's workers. Summers wrote, "the economic logic behind dumping a load of toxic waste in the lowest-wage country is impeccable and we should face up to that."[\[365\]](#) The memo was eventually leaked, to widespread public condemnation. What kind of public disgrace and career scuttling did Summers endure? In 1999, Bill Clinton promoted him to be the U.S. Secretary of the Treasury.

[Edward Herman](#), whose work stacks up against anyone's regarding U.S. foreign policy and its context in world events, deeply studied the breakup of Yugoslavia, the [kangaroo court that Milosevic found himself in](#) during the summer of 2001 (he and Noriega are the only two heads of state behind bars), and other aspects of recent U.S. interventions. Herman noted that the serious scholarship regarding Yugoslavia's breakup also weighs important factors that the American propaganda machine has not touched, namely:

1. A strong central government was needed to hold the nation together in the face of

Yugoslavia's deep regional and ethnic fragmentation.

2. The roots of Yugoslavia's economic crisis of the 1990s were easily traceable the 1982 deflationary economic policies that the World Bank and [International Monetary Fund](#) imposed.
3. The collapse of the Soviet Union removed the motivation of the West to keep supporting the central Yugoslavian state.
4. Germany and Austria encouraged Slovenia to secede from Yugoslavia, without any democratic vote or provision for the welfare of Slovenia's large Serbian minority.
5. The West and Western Badinter Commission would not allow threatened ethnic minorities to withdraw from the new secession states.
6. The U.S. and the West encouraged Bosnia-Herzegovina's Muslim population to try establishing a state under its control, while the local Serbian and Croatian residents were opposed to it and fearful.
7. The U.S. and NATO supported Croatia and its massive ethnic cleansing of Serbs in Krajina.
8. Milosevic supported many diplomatic initiatives that were foiled, largely because of U.S. meddling (such as encouraging Muslim inflexibility), such as the Owen-Vance and Owen-Stoltenberg plans.[\[366\]](#)

I recently read that the term most applicable to the United States' campaign of murder and terror waged across the planet for the past fifty years is "politicide," which means killing people because they have a different political persuasion. It richly applies to the Korean and Vietnam wars, America's devastation of [Central America](#), America's support for [Suharto](#) and other butchers, and so on. I would like to introduce a new term. What the United States has done to Yugoslavia (and also the Cold War efforts against many nations) can be called "econocide," which means destroying any economic system that is not global, corporate capitalism. We are even doing it to our own economy, with the drive to privatize everything from prisons to Social Security. The evidence for econocide regarding Yugoslavia is impressive. The Confederation of Trade Unions of Serbia published a list of 164 factories destroyed by the NATO bombings. Every single one was state-owned.[\[367\]](#) *Not one* foreign-owned facility was targeted for bombing. Buildings that displayed such corporate logos as [McDonald's](#) and Coca-Cola received zero damage. When Michael Parenti visited Yugoslavia after the bombings, he was truly impressed when he saw that the NATO bombings badly damaged the state-run Hotel Yugoslavia, making it uninhabitable, while the Hyatt Hotel, with a bomb-inviting all-glass facade, did not receive a scratch. It does not get much clearer than that, regarding what the real goals of the NATO bombing were. Destroy all the state-owned institutions, and leave the corporate-owned ones alone. Then the neoliberals can crow about how socialism "does not work."

Montenegro is notable for being the only region that really tried holding Yugoslavia together with Serbia. Already, the capitalists are digesting Montenegro, with institutions such as USAID at the effort's forefront. Montenegro is undergoing intensive [Third Worldization](#) as I write this, virtually handing over its sovereignty to American-based transnational corporations.[\[368\]](#) Montenegro is

currently about the poorest place in Europe, and is about to get poorer, except, of course, for the plutocratic elite.

Panamanian scholar [José de Jesús Martínez](#) expressed his amazement that Americans could be so "stupid" as to believe the media propaganda about why America invaded Panama. I was rendered nearly speechless by the mindlessness of some I knew regarding events in Yugoslavia. A twenty-five year friendship ended when my patience ran out with a friend who called me one morning to cheer the violence, thinking that the United States was "saving" Kosovo with its bombs. When he called me, he voiced the rationale made by butchers throughout history: those people they are about to bludgeon "only understand violence."[\[369\]](#) He was the same person who called me in a rage about the [Iraqi incubator story](#). His life has been a continual quest to find examples of justified violence. He thought he finally found it in our bombing of Yugoslavia. Although he realized that the media lied to him many times in the past on matters of war, he thought that Yugoslavia was an exception. He ended the friendship, stating that I did not respect his opinion on the "helpful" violence that we were inflicting on Yugoslavia.

World opinion was united that the U.S. was committing a great crime against the people of Yugoslavia with its attack. It violated Yugoslavia's sovereignty as well as international law. That globally held understanding was not to be found in America's mainstream media.

Nearly every day during the Yugoslavian bombings, NATO admitted that it bombed refugees fleeing the area, towns of the civilians they were "saving," or other innocents. In a powerfully reported story on October 17, 1999, the *London Observer*, in conjunction with the Danish *Politiken*, cited several highly placed NATO sources who stated that the "accidental" American bombing of the Chinese embassy during the Yugoslavia bombing was intentional. The Chinese apparently used their embassy as a radio relay station for the Serbs, after America had destroyed the Serbian communication system. The bomb the U.S. used on the embassy was satellite-guided and could hit you in the chair you are sitting in as you read this. It apparently was not a case of mistaken identity. [Fairness and Accuracy in Reporting](#) took the U.S. media to task for not reporting that story to the American people, and the *New York Times* and *USA Today* have given the media's standard lame and hypocritical responses. When the story covers U.S. malfeasance, the U.S. newspapers will not give the story one line of ink if they cannot prove it in a court of law, beyond any shred of doubt (and even then, they often will not). If the story is about the crimes of Saddam Hussein or Milosevic, however, [any rumor will do](#), or even fabricated "news."

As in Iraq, the United States used radioactive weapons on Yugoslavia. Depleted Uranium (DU) is nuclear waste. When U-235 is refined from uranium[\[370\]](#), [U-238 is left over](#). It is not radioactive enough to make good reactor fuel or nuclear explosives, but works great as a penetrating missile, as DU is 1.6 times as dense as lead. DU is effective at penetrating tanks and other targets, but it is also radioactive for billions of years. DU is one suspected culprit in the Gulf War Syndrome and escalating Iraqi birth defects, as many thousands of people have been exposed to the radioactive debris of those weapons. In one sense, they get creativity points. Why spend billions on [burying nuclear waste](#) when America can make bombs from it and drop it on nations it destroys? Recently, America's European allies expressed surprise and alarm that their soldiers who participated in the

NATO bombings were exposed to DU debris. Why were they surprised?

With acts such as bombing Libya and Sudan, invading Grenada and Panama, and especially what America has recently done to Iraq and Yugoslavia, a significant question has been raised. By the definition of the word, what America has done to those nations amounts to torture. To inflict violence on those nations, while giving them no recourse except to do as they are told, amounts to what torturers do.

Particularly disturbing has been watching the world's most prominent human rights organizations sell themselves out to money and power. Human Rights Watch long ago largely adopted the U.S. interventionist paradigm (i.e., if the U.S. intervenes internationally, it must be for a good cause). That left Amnesty International as the premier mainstream human rights organization. I contributed to them for years. The tribunal at The Hague was set up for prosecuting war crimes. The United States funds it and nearly controls it completely. It is a kangaroo court, particularly used for political ends as the U.S. attacked Yugoslavia. Most aspects of impartial courts have been dispensed with at that tribunal, [with breathtaking hypocrisy.\[371\]](#) When the tribunal indicted Milosevic when the U.S. began bombing Yugoslavia (a nearly unprecedented judicial outrage), it was evident how the court would operate, and the succeeding years confirmed my suspicions. It was with a heavy heart that I began reading Amnesty International's mailings to me, which campaigned to have Milosevic arrested and tried at that tribunal. Even today, as the kangaroo court aspect of the court is clear to all impartial observers, Amnesty International keeps sending me funds pleas that make clear its unwavering support for that court. Violating Milosevic's human rights, to pursue human rights, is something right out of Machiavelli, and is always doomed to failure, if justice is its goal. With what has happened at that tribunal, virtually *anybody* could be tried for "war crimes." If Milosevic is actually guilty of war crimes, and I would not be surprised, then Clinton and Blair deserve to be sitting alongside Milosevic behind bars, a hundred times over. The tribunal is a winners' court, however, and winners never face war crimes trials. Amnesty International's stance was so shocking that I snooped around in the human rights community, asking those whose opinion I respected, and my sentiments were confirmed. I was told that Amnesty International began adopting the U.S. interventionist paradigm during the Gulf War. While they still do some good work, I did not renew my membership.

America's "humanitarian intervention" probably ended any chance that the Balkans will be at peace during my lifetime. Economically, they have been set back generations, with damage to their infrastructure estimated at many billions of dollars, with Bill Clinton telling the world that the United States would assume little part in rebuilding the nation that it destroyed. With unexploded cluster bombs everywhere, with DU dust everywhere, with toxic spills due to factories being bombed, the bombing of Yugoslavia was a great environmental disaster. The psychological devastation of being bombed and becoming refugees is something that no economist can put a price tag on. [John Pilger](#) wrote regarding the Yugoslavian situation, the actions of our leaders and how the media presented it, "George Orwell could not better it."[\[372\]](#)

Helping East Timor

The 1999 events in East Timor put America's "humanitarian" intervention in Yugoslavia in an even clearer light. The United States decisively supported the [Indonesian invasion of East Timor](#) and resultant genocide in the 1970s, while most Americans had never heard of the place. During 1999, Indonesia and East Timor were in tumult. First, the looting of Indonesia by Suharto and his cronies, with the virtual enslavement of Indonesia by Western corporations such as oil companies, shoe manufacturers and the like, led to a "debt crisis" whereby the IMF and the United States had to "ride to the rescue," something that hurt the Indonesian people even worse. The austerity programs imposed by the IMF led to the revolt of the Indonesian people, which toppled the world's greatest butcher of the late twentieth century.

Reading and watching the American media's accounts of Suharto's fall was illuminating. The media virtually never mentioned [Suharto's bloody record](#), a record built with U.S. assistance in money, arms, and CIA help. Suharto was continually called the "president" in media accounts. America's media handled him gently. It was like covering Hitler's fall, calling him "Chancellor Hitler," and not mentioning [what he did to the Jews](#) or how he came to power.

In 1999, East Timor held an election regarding its independence from Indonesia. The citizens overwhelmingly voted for independence, which led to an immediate escalation of military violence in East Timor, often engaged under the facade of vigilantes. It was little different than the paramilitary [El Salvadoran](#) death squads that the United States turned a blind eye to during the 1980s. This time, because of the tireless activism of Noam Chomsky and other during the previous twenty years, the slaughter in East Timor did not pass in silence as it did before. The "vigilantes" killed about ten thousand East Timorese people. They terrorized and slaughtered them for several months, while the U.S. quietly stood by and watched. Those events in East Timor made what Milosevic did to the Albanians in Kosovo before the U.S.-led bombings look like a picnic.

While the U.S. government could hardly wait to bomb Yugoslavia, they stood by as East Timor was bludgeoned once more, publicly wringing their hands, but privately supporting it.[\[373\]](#) The surreal aspect of the East Timor situation was that all the British needed to do was stop selling arms to the Indonesian military, or even threaten to stop selling them arms, and they would likely have backed down. At the time, the United States had more than twenty billion dollars in undelivered aid that they promised to Indonesia. Bill Clinton needed only to whisper that what Indonesia was doing to East Timor might jeopardize those U.S. funds, and they would have quickly stopped the slaughter. The analyses of [Chomsky](#), [Herman](#) and other radicals were vindicated, and I have never seen an honest and competent attempt to refute their work.[\[374\]](#)

In watching the American media's treatment of the East Timor situation, I did not see one news account disclose to the public the U.S.'s emphatic support of the East Timorese genocide during the 1970s. That history was invisible in the media accounts. In the Seattle media, for the first time I saw a hint about the conflict in America over U.S. ties to the Indonesian military.[\[375\]](#) The article was a whitewash of U.S. involvement. The article quoted one Senate dissident, Senator Tom Harkin of Iowa. Regarding U.S. support for the Indonesian special forces, who were training and arming those "vigilantes," Harkin was quoted as saying, "I can't see any benefit to it...what good did it do us?" As with nearly every foreign policy decision the United States has ever made, the question is framed as, "What's in it for us?" Harkin, one of the few American politicians with some backbone, was candid

enough to admit it. The question is never really framed as to how it is helping the people in those nations that we "helped," not behind closed doors. That is not the game and never has been. When the U.S. reinstalled Aristide in Haiti, they gutted his initial reforms, keeping the Haitian people in the yoke.[\[376\]](#)

With Suharto out of power, Bill Clinton became the world's leading war criminal. More blood was on his hands than anyone else's, at least for those who were still adding to their tally, and he was racking up the deaths at a much faster rate than Suharto did.[\[377\]](#) Clinton bombed Baghdad in 1993 as bizarre retribution for an alleged plot to kill George Bush when he was president. With that debut in international violence, Clinton was an able successor to George Bush the First's criminal ways.

America bombs other nations at will because it is the world's most powerful nation, and anybody who thinks there is another reason will have to make some compelling and well-founded arguments. The embargo of Cuba (forty years old), the continuing genocidal sanctions against Iraq, the recent bludgeoning of Yugoslavia, Clinton's complacent acquiescence to mass killing in East Timor and Rwanda, and so on, makes him the bloodiest tyrant since Stalin, Hitler and the Chinese purges.[\[378\]](#) Clinton did it because it is his job. Bush and Reagan would probably have been worse. Killing millions of innocent people comes with the job of being the American president.

Helping Colombia

As the title of William Blum's latest book evinces[\[379\]](#), the U.S. has been playing the Godzilla of global politics ever since the Soviet Union collapsed. Former CIA agent [Ralph McGehee](#) was busy during the spring of 2000, posting several articles about events in Colombia on his CIABASE web site, and disseminating them over the Internet. He has been called the CIA's number one critic by an intelligence publication. Soon after his Colombia warnings, the CIA and friends stepped up their harassment of him, leading to bodily injury (by spiking his food) and his CIABASE went off-line, and will never go back into business.

What Ralph saw in Colombia was eerily similar to the series of events that led to the Vietnam experience. Ralph was far from alone.[\[380\]](#) It was the most excited that I had seen Ralph write. The CIA simply makes up their intelligence estimates as they go, such as regarding the acreage under coca cultivation in Colombia, or how much of America's illegal drugs begin their journey in Colombia. Few CIA intelligence estimates can be trusted, as they are often fabricated to conform to policy already decided upon. The CIA acts as a propaganda organ, and lying to the American public is one of its chief functions, as Ralph has made clear in his work. The American media, however, has been using the CIA as a prime source of information regarding the situation in Colombia, the *Washington Post* particularly.

Political Killings: A Regional Perspective

Nation	Years under military dictatorship	Political Killings
Uruguay	16	220
Argentina	8	9,000
Brazil	15	125
Bolivia	17	243
Chile	17	2,666
	Years under Colombian "Democracy"	
President Barco (1986-1990)	5	13,635
President Gaviria (1990-1994)	4	14,856
Total		28,332
Source: Data Bank in the Comision Inter-Congregacional de Justicia y Paz [381]		

The above table compares well with other sources of information, and most notably, Amnesty International's tally.[\[382\]](#) For instance, while Amnesty International's Colombian political murder tally is close to the above table's,[\[383\]](#) the Comision Inter-Congregacional de Justicia y Paz documents more than 67,000 violent politically related deaths from 1988 to 1995. Of that count, "only" 6177 were explicitly political, another 10,566 were presumed to be political, with other "disappearances," "social cleansing" and "obscure assassinations" that likely had a political motive, but cannot be proven.[\[384\]](#) What such a tally cannot put a number to are the millions affected by such a reign of terror, and what it does to a society's fabric. Colombia is by far South America's most violent nation, and has been the world's most violent nation in recent years.

The political killings in Colombia today roll along at about the same clip as in those years documented in the table above, with about 3000 people a year dying at the hand of the government-sponsored death squads. Most Americans associate Colombia with [drugs](#) today, and the lawless drug cartels and the coca production in Colombia is the rationale for the U.S.' proposed 1.6 billion dollar military aid package to the Colombian government. During 1989 and 1990, when the most spectacular drug-related violence was taking place, murders that were widely covered in the American media, a careful count of the violent deaths in Colombia yielded the fact that drug-related

murder accounted for 0.18% of the violent deaths, and less than 10% of the level of violence committed by the state against its citizens.[\[385\]](#)

The conflict and unrest in Colombia has been a constant feature of that nation for the past two centuries, and has been particularly bad recently. When the Soviet Union was still around, the attacks on the peasant "guerillas" were characterized as killing the pawns of international communism. After the Soviet menace faded away, the same groups of people were being killed to allegedly stem the drug trade. Now, they [are being called terrorists](#). It is impolite to discuss that the "guerillas" are fighting in order to end their exploitation at the hands of the plutocratic elite, which is the standard situation throughout Latin America. Standard also has been America's response: heavily arm and train the governments that keep those peasants oppressed. In Colombia, the practice initiated with the [Spanish conquest of the New World](#) is still in place, where 3% of the Colombian population owns 70% of the arable land, and 57% of the poorest farmers try subsisting on 3% of the arable land.

From 1984 to 1992, more than six thousand Colombian soldiers were trained in the United States, the School of the Americas being the chief place where they honed their "counterinsurgency" skills. As is typical with that kind of U.S. "training," the soldiers return to their home nations to begin torturing their victims with chainsaws and other techniques that make the death camp Nazis appear as amateurs.[\[386\]](#) Javier Geraldo, one of the many courageous priests in Latin America who have risked ([and often lost](#)) their lives in their efforts for justice, wrote a booklet that became *Colombia, The Genocidal Democracy*. It makes for harrowing reading as Geraldo describes the unspeakable acts of the military and paramilitary soldiers of Colombia's government. Hacking "rebels" into little pieces, one piece at a time, until they finally died, was one sport of the psychopaths that populate the Colombian military. Often the "rebels" are women, or children not yet old enough to walk. Geraldo takes it easy on his readers, refusing to describe the events engaged in by the chain saw torturers, witnessed by the man who carried off the decapitated fruits of their labors and dumped them into a nearby river.[\[387\]](#) After years of Geraldo's courageous documenting of the human rights situation in Colombia, the government-sponsored death squads drove him into exile with death threats.

Today's Colombian government resembles a democracy about as much as Hitler's Germany did. The government may gird itself with the trappings of democracy, but the trappings are about all it can lay claim to. The official political landscape of Colombia is divided into two spheres. The first is a state bureaucracy that is as corrupt as they come. The other is the military that keeps the populace in line. Kangaroo Court is a salient feature of state justice against its opponents, with secret judges, secret witnesses and secret evidence, paid witnesses and arbitrary arrest and imprisonment, among other practices that make the notion of "democracy" ludicrous on its face. The loser in such a system is the vast majority of the populace. In the standard Latin American model, there is a plutocratic elite at the top, largely doing the bidding of the United States. A vanishingly small middle class largely performs a service function to the elite, and the other eighty or ninety percent of the population does all the work and suffers greatly, although American consumers receive cheap coffee, bananas, cocaine, etc., and the elite, both American and Latin American, rake it in.

The Colombian body count presented above probably severely underestimates the carnage. The atmosphere of state-sponsored violence is so pervasive in Colombia that in some areas eighty to

ninety percent of the killings go unreported for fear of retribution by the state-employed killers.

One thing is certain: funding the Colombian government to fight drug trafficking is like asking the wolf to take good care of the sheep. The paramilitary death squads of Colombia have openly declared that their funding often comes from the drug trade.[\[388\]](#) The [drug war](#), like so many other "wars" declared by America, is a fraud. Just as Ronald Reagan called the death squad regime of El Salvador a "[fledgling democracy](#)" a generation ago, as billions of dollars in U.S. military aid flooded into that nation, the Clinton administration described the Colombian president Gaviria as "...forward looking in building democratic institutions..."[\[389\]](#)

Violence *always* begets more violence. The only path to a non-violent world is non-violence, and there will never be a war to end all wars. The [means become the ends](#), something that the vast majority of humanity has yet to realize. The gentle *will* inherit the earth. That realization is beyond intellectual, materialistic understanding, and incomprehensible to the victim mentality. Jesus knew what he was talking about, but "love the enemy" is as incomprehensible today as it was in his time.

As my fellow American unendingly cheer our violence, I have been beset by a painful question: do Americans have a collective conscience? Our collective conscience is directly related to our consciences as individuals. It is up to each of us how we will fare as a species.

During the past fifty years, no nation has inflicted more death, destruction and exploitation onto the peoples beyond its borders than United States has. Indeed, no other nation comes close. Contrary to [Ronald Reagan](#)'s cue-card rhetoric, if there was an evil empire during the last half of the twentieth century, it was the United States. Our fate rests in our hands. If we keep cheering each time our military bombs a defenseless nation, readily believing the lies told to rationalize it, our day of reckoning will be much darker than the World Trade Center attacks.

The Pied Pipers of today's march to doom are accomplished students of the [dark spiritual path](#), and have found that a humanity seeking comfort above all else is easy to manipulate, and the American citizenry is putty in their hands. We need to develop a collective conscience.

A World Trade Center Postscript

"What we say, goes." - **George Bush the First**, speaking of the [lesson that Iraq and the world should have learned from the Gulf War](#).

"We think the price is worth it." **Madeleine Albright**, [on 60 Minutes in 1996](#), when asked if killing a half million Iraqi children, as a consequence of America's economic war against Iraq, was a justifiable side effect.

"The only way to make sense of why this happened is that we are a country that stands up for

freedom, democracy and human rights." - **Madeleine Albright**, when asked to make sense of the World Trade Center attacks, *Oprah Magazine*, December 2001.

"Americans are asking, 'Why do they hate us?' They hate what they see right here in this chamber: a democratically elected government. Their leaders are self-appointed. They hate our freedoms: our freedom of religion, our freedom of speech, our freedom to vote and assemble and disagree with each other." – the [unelected](#), court appointed **George Bush the Second**, September 20, 2001, in a national address at a joint session of Congress.

"...the essential act of the Party is to use conscious deception while retaining firmness of purpose that goes with complete honesty. To tell deliberate lies while genuinely believing in them, to forget any fact which becomes inconvenient, and then, when it becomes necessary again, to draw it back from oblivion for just so long as it is needed, to deny the existence of objective reality all the while to take into account the reality which one denies – all this is indispensably necessary. Even in using the word *doublethink* it is necessary to exercise *doublethink*. – **George Orwell**, 1984.[\[390\]](#)

"Why of course the people don't want war. Why should some poor slob on a farm want to risk his life in a war when the best he can get out of it is to come back to his farm in one piece? Naturally the common people don't want war neither in Russia, nor in England, nor for that matter in Germany. That is understood. But, after all, it is the leaders of the country who determine the policy and it is always a simple matter to drag the people along, whether it is a democracy, or a fascist dictatorship, or a parliament, or a communist dictatorship...Voice or no voice, the people can always be brought to the bidding of the leaders. That is easy. All you have to do is tell them they are being attacked, and denounce the pacifists for lack of patriotism and exposing the country to danger. It works the same in any country." - **Hermann Goering**, at the Nuremberg Trials, as told to Gustave Gilbert, in his *Nuremberg Diary*.

"The flag is a symbol of the fact that man is still a herd animal." - **Albert Einstein**, in Fred Jerome's *The Einstein File: J. Edgar Hoover's Secret War*

The United States of America is a democratic republic in name only, where form prevails over substance, with the [U.S. Constitution](#) rendered little more than a faded relic, where elections have largely become meaningless rituals, with most Americans no longer even going through the motions. America has the lowest voter turnout in the "free" world. America's government is more properly called a plutocracy. Simply observing how [Ralph Nader was treated at the year 2000 presidential debates](#), as two scions of political dynasties squared off in their stage-managed "debates," is sufficient to remove any doubts.

America has *always* been a plutocracy, ever since the new [nation's richest man became president](#), followed by a [string of slave-owning, land-grabbing aristocrats](#) parading through the White House. The first Chief Justice of the U.S. Supreme Court (John Jay) baldly stated that those who own the country should run it. More importantly, America is an empire. Rome was also a republic originally,

at least officially. Rome degenerated into becoming an empire, in its quest for wealth and power. It is impolite to declare that America is an empire, because the favored fantasy is that America is different from other nations, possessed of unique virtue. Also, it is impolite to call American colonialism what it is; so it is [colonialism in everything but the name](#), with subject peoples [getting to fly meaningless flags](#), providing the illusion of independence. If the pattern of other empires holds, American global hegemony is probably nearing its end.

American election campaigns are nearly indistinguishable from marketing campaigns, complete with the equivalent of taste testing. Political ads appropriately appear alongside ads for hamburgers and automobiles, with hamburger ads being more appealing and informative. Ballots look like menus, and politicians nearly come shrink-wrapped anymore. The power sold to Americans is the power to *consume*, and consequently Americans are [history's fattest people](#), and are threatening to [consume the entire planet](#).

With the [assassination of JFK](#), who obviously was not killed by “lone nut” Lee Harvey Oswald, the American government has been on a steep slide into corruption that has gradually disillusioned most Americans, although the national security state keeps the worst corruption out of the public eye. The corruption was even more open during the 19th century, with Enlightenment ideals fading quickly as the American Empire began its ascent with its [huge land grabs](#). Just as the American government began sliding headlong into open corruption, as epitomized by [Andrew Jackson](#)’s “spoils system,” Americans began focusing on the [nation’s trappings](#), adopting a national anthem, beginning to revere the flag and other acts of nationalistic fervor. It was a textbook case of [cognitive dissonance](#).

Power corrupts, and as the United States became the world’s most powerful nation during the 20th century, with [World War II](#) being an unprecedented watershed event, its corruption grew along with its wealth and power. The interests who had JFK murdered are probably the same ones that have been covertly manipulating the United States government ever since, and [murder seemed to have been a standard political tactic](#) for a generation.

America’s dirtiest political family of the late 20th century, at least for those in national office, may be the Bush family. From their early days of [carrying the Eastern Oligarchy’s bags, through their ardent support for Nazi Germany](#), through their [Skull and Bones](#) affiliations, through their [CIA and spook ties](#), to the [coup d’état “election”](#) to vault the semi-literate George Bush the Second into the presidency, the record is long and sordid. The “covert action” suspicions are not easily dismissed regarding the Florida election, as the CIA is full of election-rigging specialists, something they have done around the world for fifty years. George Bush the First was heavily involved in the [Savings and Loan Scandal](#), which bilked the American taxpayer out of hundreds of billions of dollars. The [Enron scandal](#) is simply more of the same, with the [Bush family](#) being the common denominator. With George Bush the Second in the White House, the [Constitution is being torn into confetti](#) on several fronts, not the least of which are the antics of the neo-McCarthy-ish Attorney General, John Ashcroft. The new TIPS (Terrorism Information and Prevention System) program would have been right at home in Nazi Germany, and is even beginning to alarm America’s white middle class.[\[391\]](#)

Jefferson was America's first [grave-robbing president](#), but not its last. George Bush the First quite possibly [had his Skull and Bones boys acquire Torrijos' skull](#), and the onus may now be on George Bush the Second to collect some bones. The theft of [Noriega](#)'s remains would not take much daring, as he already sits in a U.S. prison. Obtaining Osama bin Laden's skull might be George Bush the Second's mission, or perhaps collecting Saddam Hussein's. As with [Noriega](#) and [Hussein](#), Osama bin Laden is largely a creation of United States foreign policy.

During the 1970s and 1980s, the United States poured several billion dollars worth of weapons, training and supplies, in the CIA's largest covert action so far, into Afghanistan, largely through Pakistan.[\[392\]](#) Wherever the CIA has focused its effort, whether it has been Southeast Asia, Central America or Afghanistan, the [drug trade](#) increased geometrically, as it is a financing mechanism for American covert action. The [CIA has always been run by corporate America](#), and it helped build an Islamic fundamentalist *jihad* against the "evil" communists. Arab rich boy Osama bin Laden was just the thing the U.S. was looking for: a ruling class Arab to become the *jihad*'s figurehead. As with nearly every other CIA covert action, the principle result was wrecking the nation it intervened in. Afghanistan, due to its geographic location, the Khyber Pass long being a gateway from Central Asia into the Indian subcontinent, has seen marauding armies pass through, and battles waged there, for millennia. Afghanistan became a European battleground during the [Great Game](#) days of the 19th century.

[Zbigniew Brzezinski](#) was the Henry Kissinger of Jimmy Carter's administration, engineering U.S. foreign policy during the late 1970s. According to Brzezinski, in an interview he had with a French magazine in 1998, he helped create the Soviet Union's invasion of Afghanistan. According to the official story until Brzezinski's interview, the United States pumped billions of dollars in arms and training into the Afghanistan rebels as a reaction to the Soviet Union's invasion. Brzezinski set the record straight. He was behind arming and inciting the Afghanistan rebels six months *before* the Soviet Union invaded. In light of the devastation of Afghanistan (half its population either dead, disabled or refugees) and Islamic fundamentalist Taliban in charge, Brzezinski was asked if he regretted his decision to bait the Soviet Union into invading Afghanistan. Brzezinski replied:

"Regret what? That secret operation was an excellent idea. It had the effect of drawing the Russians into the Afghan trap and you want me to regret it? The day the Soviets officially crossed the border, I wrote to President Carter: 'We now have the opportunity of giving to the USSR its Vietnam War.' Indeed, for almost 10 years, Moscow had to carry on a war unsupportable by the government, a conflict that brought about the demoralization and finally the breakup of the Soviet empire."[\[393\]](#)

As Brzezinski saw things, sacrificing Afghanistan in the U.S.'s global chess game with communism was an acceptable price to pay. Brzezinski asked what was worse, the menace of the Soviet Union or the Taliban being in charge of Afghanistan.

In interviews over the years, particularly those with [Robert Fisk](#), Osama bin Laden made clear the source of his ire toward the United States:

1. The U.S. establishing a military presence in Saudi Arabia during the [Gulf War](#), as Arabia contains Islam's holiest sites;
2. The U.S.-inflicted [genocide of the Iraqi people](#) since the Gulf War;
3. The U.S.' unfailing support for [Israel](#), as it has brutally dispossessed the Palestinian people.

Using Osama bin Laden and friends as Cold War pawns has come back to haunt the United States. The World Trade Center and Pentagon attacks of September 11, 2001 are seen around the world as the [global Godzilla](#) finally getting a bloody nose. I was [far from alone](#) in publicly [predicting something like it](#). The shock and horror of the attacks were only a few hours old when talk of revenge began appearing. Osama bin Laden and friends were named almost immediately, and George Bush the Second's finger pointed straight at Afghanistan. The day after the 9/11 attacks, Bush said,

"We will make no distinction between the terrorists who committed these acts and those who harbor them."

Bush called for Afghanistan to hand over Osama bin Laden. Early on, Bush's rhetoric and actions failed to mesh. The Taliban offered to serve up bin Laden to a neutral nation for trial, but [just as his father did](#), George Bush refused to engage in any negotiations, as the war drums pounded once again. If justice was Bush's goal, he picked a strange way to show it, pointedly ignoring any attempts the Taliban made to respond to his demands, or even try to use international justice systems (which the U.S. has consistently undermined) to respond to the immense crimes of September 11, 2001. [\[394\]](#) Bush took the [bully's route](#), as nearly all American presidents have done.

America's economic inducements to attack Afghanistan were underplayed to the point of being nearly invisible in America's media. The world's last great region of unexploited oil and gas reserves is [Central Asia](#). Trillions of dollars of oil and gas sit beneath that region, and American oil companies had been trying for years to exploit it, something it could not do while the Soviet Union still survived. As with the [Gulf War](#), the World Trade Center attacks made for a convenient excuse to move in a military presence, in [neocolonial](#) fashion.

The [swirl of conspiracy theories](#) that quickly grew up around the World Trade Center attacks has been understandable. I am skeptical of the several of the conspiracy theories.[\[395\]](#) However, as [Michael Ruppert](#) and others have compellingly documented, there was ample foreknowledge of the World Trade Center attacks, and a great deal of short-selling (betting the stock price will decline) of the stock of American Airlines and United Airlines immediately before the attacks. I do not trust the U. S. government to perform credible investigations of those allegations.

The connections of the Bush family and friends to the WTC attacks are unsettling. The [flurry of short-selling activity was traced to Deutschebank/Alex Brown](#), which has deep CIA connections. Just as [Noriega](#) was George Bush the First's employee, and the [invasion of Panama](#) may have been at least partly a double-cross of a fellow [drug dealer](#) and [money launderer](#), and Saddam Hussein may have been another business partner that [George Bush the First double-crossed](#), the connections between bin Laden's family and Bush's are twenty years old, publicly known through the relationship between bin Laden's family and the Carlyle Group, one of America's biggest defense contractors, of which George Bush the First is an important member. The Carlyle Group has had a long-standing relationship with bin Laden's oil-rich family. Not surprisingly, neither the mainstream media, nor anybody on Capitol Hill, is bringing up that startling issue, which at least points to a conflict of interest with George Bush the Second. It is as if Roosevelt and Hitler owned stock in armaments companies in 1939 (and even the *same ones*), and nobody cared to examine their potential conflict of interest. As I write this in mid-August 2002, there have still been no indictments of any [Enron](#) personnel, while their auditor, Arthur Andersen, is out of the auditing business. It is a case where the cop has been *executed*, while the crooks he failed to catch still run around free. Will the Enron Scandal be partially swept under the carpet, somehow minimized? As long as George Bush is president, Americans can probably count on it.

Just as plenty was covered up about the U.S. government's mass murder at [Waco](#), and the [Oklahoma City](#) bombing, to even casual observers a lot is not adding up about the WTC attacks and the subsequent "War on Terror." The [American childishness](#) that the corporate order has been carefully cultivating for more than a century came into full view. [Flags were draped everywhere](#) (and still are, a year later), while vengeance was on everybody's lips. Any attempts to try *understanding* the motivation behind those who attacked the WTC and Pentagon were equated with trying to *justify* them, in another vivid instance of the [false dichotomy logical fallacy](#). Anybody who attempted to comprehend why it happened (so such events could be prevented in the future) was called a traitor, largely because attempts to understand it would bring to light very good reasons why America is hated in the Islamic world, instead of Bush's "[they hate our goodness](#)" explanation.

In the days immediately after the WTC attacks, I received an avalanche of emails from friends, family and cyberpals that reproduced a fatuous speech that a Canadian politician gave a generation ago about what a great nation and friendly neighbor America is. No [Latin American](#) politician would have given such a speech, unless he was a U.S. puppet. The Americans [waving flags](#) often wore a [dazed](#) expression. The post WTC orgy of "patriotism" made the [jingoism of 1991](#) pale by comparison. Those activities were a painful display of people trying to overwhelm the [negative cognitions](#) associated with the WTC attacks with bogus positive ones. I was not untouched by the sickness, as

Americans began [attacking me through vicious emails and threats](#).

Responses by American media pundits were breathtaking in their bloodthirstiness. Ann Coulter wrote:

"The nation has been invaded by a fanatical, murderous cult. And we welcome them. We are so good and so pure we would never engage in discriminatory racial or "religious" profiling..."We should invade their countries, kill their leaders and convert them to Christianity. We weren't punctilious about locating and punishing only Hitler and his top officers. We carpet-bombed German cities; we killed civilians. That's war. And this is war."

That was a typical American media response. In less strident days, Thomas Friedman candidly admitted, while writing about the wonders of global capitalism:

"The hidden hand of the market will never work without a hidden fist. McDonald's cannot flourish without McDonnell Douglas, the designer of the F-15. And the hidden fist that keeps the world safe for Silicon Valley's technologies is called the US Army, Air Force, Navy and Marine Corps."[\[396\]](#)

Friedman is one of the *New York Times*' leading columnists, holding forth with great confidence about events in Israel and elsewhere, and has been a leading pundit on the "War on Terror."

Bill O'Reilly, a right wing commentator on the *Fox* TV station, stated:

"The US should bomb the Afghan infrastructure to rubble - the airport, the power plants, their water facilities, the roads. The Afghans are responsible for the Taliban. We should not target civilians, but if they don't rise up against this criminal government, they starve, period."

Michael Kelly of the *Washington Post*, echoing [Hermann Goering](#), wrote:

"American pacifists are on the side of future mass murders of Americans,"

Kelly called pacifists "objectively pro-terrorist," "evil" and "liars."[\[397\]](#) The pacifism = terrorism equation played loud and long in America immediately after the WTC attacks. It was becoming [like World War I all over again](#).

George Bush the Second led America's descent into mental illness. He parlayed his own [false dichotomy](#), calling the vengeance that America was about to wreak on whoever was behind the WTC attacks a case of "good against evil," saying that the attacks were because those crazed Arabs hated American *goodness*. Bush stood on the global stage and told the world that either they were "with us, or against us," while his Secretary of Defense Donald Rumsfeld stated that the United States would eliminate the nationhood of countries that got in the way, and his hit list was a few dozen nations long.

Bush then cooked up some comic-book rhetoric, calling Iran, Iraq and North Korea the "axis of evil" not long after the United States was unable to find and kill bin Laden and friends. Those nations had nothing to do with the WTC attacks, and have no relationship with each other (except for Iran and Iraq hating each other...strange "axis"...their main commonality is having oil deposits that the U.S. does not control today). My friends and associates in Europe and elsewhere could scarcely believe that Bush was alone on the world stage, mouthing such rhetoric. Some called it the most embarrassing imperial spectacle since Caligula's horse.

For all the hypocrisy and corruption in America's [Founding Fathers](#), at least they could be literate and thoughtful. [Ronald Reagan](#) ably read his cue cards during his presidency, even though he was [nearly a vegetable](#). Bush can barely string a sentence together. He is probably the least intelligent president America has had, and him [not even being elected](#) adds insult to injury. Bush tries taking the high moral ground, yet has been convicted of drunk driving, sort of takes the fifth amendment on whether he used cocaine, and he belongs to a [secret society that robs graves](#). He rather gleefully presided over more executions than any other modern governor, and a fair number were probably innocent. When one death row convict's court-appointed lawyer fell asleep in court, the higher courts ruled it to be a "fair trial," noting that there was nothing in the Constitution that said the defendant's lawyer had to be "conscious."

The dictionary definition of "terrorism" is "*a mode of governing*, or of opposing government, by intimidation."[\[398\]](#) As Edward Herman clearly demonstrates in his *The Real Terror Network*, the American propaganda system chopped off that italicized first part of the above definition, thereby defining out of existence the terrorism waged by governments. In the best tradition of Orwell, the powerful defined terrorism to only mean terrorism by the powerless. *Governing* by intimidation is by far the greatest instance of terrorism, and always has been. Terrorism as state policy was refined by the United States a generation ago, particularly by what it did to [Southeast Asia](#) during the 1960s and 1970s, and what it did to Latin America, its [terror wars peaking during the 1980s](#). Torture was a historical relic until the United States began training the security forces of its Latin American puppets,

especially at its School of the Americas at Fort Benning in Georgia. Latin America security forces were trained in torture and other “counterinsurgency” methods. American torturers also [went abroad to teach their craft](#). When returning to their Latin American home nations, the traditional homecoming was to use their new skills to perform [heinous atrocities on the local citizenry](#).

Those activities even came into general American awareness with the Iran-Contra Scandal. Elliott Abrams was a Reagan administration front man, lying to Congress and anybody else who would listen about what happened in Central America during the 1980s. According to Abrams, the El Salvadoran death squads were free-lance terrorists, not connected to anybody. All knowledgeable observers knew those death squad members were El Salvadoran soldiers who simply took off their uniforms when performing death squad duties. Abrams called America’s El Salvadoran policy a “fabulous achievement.” Abrams’ record of lying and obfuscation was long and ugly, and it finally caught up with him during the Iran Contra scandal. As a front man for genocidists, Abrams would have swung from a Nuremberg noose if his services had been rendered for Nazi Germany, but he instead swung a plea bargain, admitting to only some of his less onerous behaviors, gaining a lesser sentence, and even then, George Bush the First pardoned him soon before leaving office. The moral fiber of George Bush the Second’s administration quickly became evident when it placed Abrams on its National Security Council, as a *human rights* advisor. The School of the Americas is still in business, and is known throughout the world as terror central. Not only that, America has long harbored the world’s deadliest terrorists, such as Cuban exile terrorists, Orlando Bosch most notoriously.[399] Not only were such terrorists living in America, the U.S. government funded them and even actively protected them from international prosecution, similar to how it [protected death camp Nazis after World War II](#). If [Bush is taken at his word on September 12, 2001](#), the American military should have been launching missiles at Miami and the White House.

American propagandists have had a challenging job naming terrorists, with the same people called [terrorists one day and freedom fighters the next](#), depending on which way the political wind blew.

By the dictionary definition, the WTC and Pentagon attacks were terrorism, no doubt about it. They were heinous atrocities. However, America’s response to the attacks was also terrorism, and on a much vaster scale.

After Afghanistan [served its usefulness](#) as the “trap” for the Soviet Union, America left it to “rot.”[400] Afghanistan was littered with about ten million land mines. During the 1990s, thousands of Afghani people died each year from stepping on mines. The United States did not provide any effort to help rebuild its discarded pawn, so the sudden professed [humanitarian concern](#) for the Afghani people after the WTC attacks was ludicrous on its face. During the years before the WTC attacks, Afghanistan suffered through a horrendous drought, and was the world’s most devastated nation. Even calling it a nation is a misnomer. Afghanistan was more a collection of villages, warlords and fundamentalist preachers, with a civil war raging.

George Bush’s threats immediately after the WTC attacks amounted to terrorism. Winter was coming and the world knew what America was about to do to Afghanistan: the same thing it did to [Iraq](#) and [Yugoslavia](#), except probably worse. Afghani people began fleeing into the mountains,

where many thousands of people starved and froze to death last winter. The world's independent aid agencies begged the U.S. government and world community to forestall an American attack on Afghanistan, as a war that lasted into the winter would put about seven million people in danger of not surviving until spring.

When America was good and ready, the bombs began dropping onto Afghanistan. It was a terrorist bombing that far exceeded the WTC attacks. Few knowledgeable observers thought the Taliban and friends would successfully fight off the U.S., as the world's biggest killing machine was aimed at the world's most devastated people. The goal for a long time has been risking as few American troops as possible, and the terror bombing of Afghanistan was a keyboard war, with missiles being launched from vast distances. As the American military safely sat behind their keyboards, launching missiles at Afghanistan, the Afghani people were subject to unending aerial bombardment. As with bombing the [Chinese embassy](#) in Yugoslavia and the [French embassy in Libya](#), it appears that the two bombings of the Red Cross warehouses in Kabul were intentional.

About three thousand people were killed in the WTC and Pentagon attacks. In December 2001, professor Marc Herold of the University of New Hampshire released a summary of reporting on the U. S. bombing of Afghanistan.[401] Using only stories that made the media, Herold tallied 3767 civilian deaths directly attributable to American bombardment. It was the most conservative number attainable, and exceeded the toll of the WTC and Pentagon attacks. Afghani civilians, who were as innocent as those who died in the WTC attacks, died at the U.S.' hands. Similar to how Iraq's civilian casualties [were a non-story in America](#), there was virtually no American media coverage of Herold's tally, in another proof of the [worthy/unworthy victim thesis](#) of Herman and Chomsky. Many thousands of Afghanis also did not survive the winter, and today's Afghanistan is in ways a worse disaster than a year ago.

In the wake of the aid agencies' pleas, the United States engaged in one of history's most grotesque public relations stunts: dropping food-bombs onto Afghanistan. It dropped food rations with the cluster bombs, and *they looked alike* (they were both in yellow plastic packaging, and about the same size). All knowledgeable observers admitted that the food-bombs were useless in bringing aid to Afghanistan, and people were even blown up as they walked across minefields to recover those food-bombs, generally to sell them on the black market. For all the ["toy-bomb"](#) propaganda the U.S. spun about the Soviet Union, the U.S. exceeded its own propaganda and dropped food-bombs on the same people. [Robert Fisk](#) visited Afghanistan and wrote in August 2002 that many children had been killed by previously unexploded cluster bombs during the past year.[402] Children have been mistaking them for both food packages *and* toys. In addition, American troops have been marauding through Afghanistan during 2002, performing death squad activities, with summary executions and disappearances attending their surprise attacks on villages. As with [Panama](#), [Iraq](#) and so forth, the American people are hearing nothing about it through the mainstream media.

After the first draft of this essay was written, in what will surely be only one of numerous incidents of war crimes in Afghanistan, *Newsweek* reported that a U.N. investigation unearthed evidence that the U.S. ally warlord Abdul Rashid's troops Dostum murdered hundreds, if not thousands, of Taliban POWs, and the U.S. stonewalled an investigation ever since it happened several months earlier.

[403] If even *Newsweek* is reporting it, enough evidence may be rescued from oblivion to give Americans some pause about its War on Terror. There are about 5000 missing Taliban prisoners of war, and mass graves have been located. Edward Herman has also written about the [mass graves being investigated](#), and the U.S. media not touching it.[404] Time will tell, regarding how much the American people hear about it through the media.

What the United States inflicted on Afghanistan far exceeded the terror of 9/11, and would have been immensely worse if the bombing effort had not surprisingly routed the Taliban before winter set in. The U.S. effort destabilized the region, with two nuclear powers, Pakistan and India, rattling sabers during 2002. The “War on Terror” will not turn out well for the region’s people, and the U.S. has moved quickly to establish a military presence among those nations north of Afghanistan that were part of the Soviet Union. It appears that establishing military control over the world’s most lucrative oil and gas reserves is coming along nicely under the rubric of the “War on Terror.”

A useful book to understand today events is an old one. [George Orwell](#)’s *1984* makes for eerie reading. Published in 1949, Orwell wrote about a future that was far from utopian. Orwell partly got it wrong about how Big Brother kept control over information. The reality turned out more like Huxley’s *Brave New World* on that score, where people simply did not care to read anymore, or [even think much](#); the information was there, but nobody bothered to read it.[405] As with America’s Founding Fathers, Orwell did not envision that a power greater than the state would take over everything: the corporate state. With that misprediction acknowledged, Orwell foretold other dynamics with startling accuracy.

In *1984*, the masses had zero sense of history, information quickly going down the “memory hole,” to be retrieved if needed for [doublethink](#). The ruling party manipulated the masses to cheer *any* war. Allies one day, enemies the next, it did not matter. There was always a war to cheer on, accompanied by spectacular displays of [flag-waving patriotism](#). The world’s three power blocks were Oceania, Eurasia and Eastasia. Oceania, where Winston Smith, *1984*’s protagonist, lived, changed from being at war with Eastasia to being at war with Eurasia without missing a beat, and the public never caught on that enemies and allies had simply changed places (nearly exactly how the Soviet Union transformed overnight from ally to enemy, which happened by the time *1984* was published). There was one man who inspired terror in the citizenry’s minds and hearts. In *1984* he was a Jew, Emmanuel Goldstein. His face appeared on TV regularly, and the masses reacted with fear and hatred, especially during their “Two Minutes Hate” (about the length of today’s average nightly news story). Goldstein, like bin Laden, was the state’s greatest enemy, although they could never seem to find him.

There was also “Hate Week.” Winston saw through the game being played, but could not afford to appear a disobedient member of the herd, so Winston “voluntarily” contributed to the Hate Week fund. The planner of Hate Week in Winston’s neighborhood was going to drape the local “Victory Mansion” in huge flags for Hate Week.[406] “Terrorist” bombs went off regularly, killing many, but the mess would be cleaned up and spark further flag-waving furor, with Goldstein being burned in effigy. [407] Anybody who did not wave their flag as fervently as possible became suspected of being a subversive, and could be treated with the utmost harshness. Just as Secretary of Defense Rumsfeld

announced that the War on Terror could take generations, the strategy of Oceania's ruling party was having a continual, never-ending war. One closet "skeptic" of the ruling party propaganda thought the terrorist bombs were really launched by the ruling party, "just to keep people frightened."[\[408\]](#) Inflicting the most heinous atrocities onto the enemy was heroic, but evil when done by the enemy to "our side."[\[409\]](#) Orwell called orthodox "thinking" a form of unconsciousness.

Oceania's big, exciting cultural event was the lottery, which was the only time the masses demonstrated much intelligence, as they prayed for their numbers to come up, and performed amazing feats of memory and mental skill. For the working class, they were so dumbed down that sophisticated mind control techniques were not needed for them. They just shuffled along and did their jobs, while pumping out babies. The story always told was that everything was better than ever, and nearly everybody accepted it as fact. Sophisticated mind control was used to control the minds of the educated class.

Just as [Ronald Reagan](#) called a nuclear missile the "Peacekeeper," a slogan of Oceania's ruling party was: "War is peace." The mental state the people were to be kept in was "controlled insanity," where most words were completely inverted in meaning, where the Ministry of Truth disseminated lies, the Ministry of Peace was really the war department (just as the U.S. War Department was renamed the Defense Department), and so on.[\[410\]](#) In the United States, it was a little different, with the Pentagon announcing the creation of a new disinformation department after the WTC attacks. That was a little too blatant, so the department was scrapped, with George Bush the Second promising the people that the American government does not condone lying.[\[411\]](#)

When the year 1984 rolled around, there was wide discussion of why Orwell's' dark prophecy did not come true. Americans largely live in Orwell's' world, while boasting that they do not, as their society is "free."

[Fascists run America](#); fascists [also run Israel](#). Jewish ideology has been racist for millennia, which was partly how they kept their blood as "pure" as they have [during their long journeys](#). Bona fide terrorists were among Israel's Founding Fathers, and the leader of a terrorist group that openly supported Hitler became the [Israeli prime minister](#) (Yitzhak Shamir; and another terrorist and future prime minister, Menachem Begin of Irgun, had a hotel blown up, killing nearly 100 people). [Manifest Destiny](#) was a modern version of the Jews' Promised Land concept, and those lands [were secured by similar means](#). Israel was established largely because European hatred of Jews [did not even abate after the Jewish Holocaust was over](#). The early years of Israel were rocky ones, and using gangsters such as [Mick Cohen](#) to provide weaponry was part of the era's [very dirty realpolitik](#).

It was not until Israel proved itself a murderously capable land grabber in 1967 that the era of massive and virtually unconditional support for Israel came from the United States. Until that time, few Americans cared much about the [Jewish Holocaust](#) or Israel. When they became America's kind of fascists, and a useful imperial outpost in the oil-rich Middle East, then came the close relationship, with the U.S. turning a blind eye to [Israel building its own nuclear arsenal](#). Since then, [an industry](#) has grown around the Jewish Holocaust. The so-called Occupied Territories in Palestine were

secured by Israel similarly to how George Washington [proposed stealing Native American land](#): send the military and armed “settlers” into the native lands, and if the armed “settlers” can keep it from the natives, it is theirs.

In the United States, arguably the *least* reliable mainstream source of information on Israel and the Arab world is the [New York Times](#), which regarding Israel leans probably further to the right than the John Birch Society and the militias do in matters involving America. Yet, reporting on Israel in the West Coast’s mainstream media is often written by NYT staffers, such as [Thomas Friedman](#), William Safire and others like them.

There are no people on earth more misinformed about Israel’s situation than Americans, with media lies and obfuscations about Israel and Palestinians reaching unprecedented levels. The radical left, including [Z Magazine](#), [FAIR](#) and [Counterpunch](#), with many Jews in their ranks, including [Noam Chomsky](#) (who was about the first American intellectual to publicly support Israel, long before it became fashionable.^[412]), has taken on that highly distorted treatment of Israel in America’s media for many years.

One myth long promoted by Israel is portraying Palestinians as terrorists. The Israeli state used terror as a method of dispossessing and oppressing the Palestinian people from the very beginning. Another Israeli prime minister, Moshe Sharett, even admitted in his diary that Israel fabricated a “long chain of fake incidents and hostilities” to harm neighboring Arab states and create an atmosphere of fear and violence. Sharett even called it “Israel’s sacred terrorism.” From Israel’s 1948 inception to 1990, the Israeli state’s terrorist acts took more than twenty times as many lives as Palestinian acts of terrorism, but Israeli terrorism was never called that (called “retaliation” and other misleading terms), while Palestinian terrorism was played up endlessly in the American media.^[413] The Israeli state engaged in acts of large-scale terrorism that make the blood curdle, but with the American media’s double standard, Israel’s terrorism has never been called terrorism, while America’s image of a terrorist is a bearded Arab wearing an Islamic headdress. In mind-boggling irony, the very term “terrorism” was originally coined by the British when describing the violent acts of [Stern Gang](#) and Irgun.

A year before the WTC attacks, another fascist Israeli leader, Ariel Sharon, instigated a new era of brutal Israeli oppression against the Palestinian people. It became so bad that Palestinians became even more desperate, and suicide bombings became common, with even women suicide bombers making their appearance. Immediately after the WTC attacks, Benyamin Netanyahu, another fascist Israeli prime minister, was asked what the WTC attacks meant for U.S.-Israeli relations. Netanyahu responded with an ominous, “It’s very good.” In the wake of the WTC attacks, Israel took the gloves off, feeling that they now had carte blanche to inflict violence with impunity onto the Palestinian people as part of the War on Terror. Israel’s motto is to fight terrorism with terrorism on a far greater scale. Israeli tanks rolled into Palestinian towns and rolled through Palestinian living rooms.

America’s War on Terror has been a windfall for fascists across the globe, as they have been killing dissidents and others with gusto, calling it the War on Terror. In the United States, Attorney General Ashcroft (who calls himself simply “General” at the Justice Department) and friends have waged an

assault on civil rights that is America's most ominous since the McCarthy era, with sweeping police powers being granted, military courts, arbitrary detentions, the White House announcing that people need to watch what they say, and so on.

During the bloody campaign that Israel has waged against Palestinians during 2002, George Bush the Second took the stage and proposed a step toward a solution: demanding that Yasser Arafat step down from his position as the leader of the Palestinian people. Arafat is not a Vichy Palestinian, although as with all national leaders, he may be in it more for himself than the people he represents, but at least Arafat is an *elected* leader, [unlike Bush](#). Although the U.S. media did not report much about it, that "diplomatic" attempt by Bush was met throughout the world with shock. Even Tony Blair was forced into backing away, leaving Bush alone on the world stage, demonstrating that his grasp of political reality was as deep and thorough as a child's.

One nation that everybody agrees had no relationship to the WTC attacks was Iraq. Osama bin Laden and Saddam Hussein hate each other. There were some clumsy attempts by American propagandists to fabricate the link early on, but it was quickly abandoned. Even so, as soon as the Taliban fell and Osama bin Laden escaped, a new demon had to be brought onto center stage, and Saddam Hussein was quickly dusted off and presented as the next bad guy who had to go.^[414] Nobody outside the United States believes that America's current beating of the war drums against Iraq has anything to do with caring about the Iraqi people or any other Arabs.^[415]

As always in that part of the world, it is all about oil, with the current Bush administration dominated by oil interests, from Bush and Cheney on downward. Knowledgeable observers all know that however "evil" Saddam Hussein may be, he is not stupid, and the last thing he would do is provoke the United States into invading Iraq. If he has any "weapons of mass destruction," they will only be used if America attacks Iraq again. If that happens, Bush and his pals will almost certainly use the American people as cannon fodder, facing terror attacks while Bush and friends sit in their safe bunkers far below the earth, like the one Bush was ushered into immediately after the WTC attacks. His wife had to coax him out of his hiding place and "lead" the American people in its time of crisis, with the White House even concocting a tale that the terrorists were trying to shoot down Air Force One (that was later exposed as a fabrication, apparently created to try justifying Bush's disappearing act). Bill Clinton was out of the country, and he made it to Washington D.C. *before* Bush did.

Scarcely a hint of irony can be seen or heard as American officials and the media consider it America's God-given right to do whatever it can get away with regarding Iraq. Such arrogance on the world stage may be unprecedented. There has been some dissent in Washington DC, but with a few notable exceptions, it has largely been the hawk-versus-hawk style of debating, where toppling Saddam Hussein is a foregone conclusion, but the debate is mostly over how to do it.

America *is* the new Roman Empire, with an empire that spans the globe. Is Armageddon just around the corner? Will humanity survive America's reign? It [does not have to be this way](#), and we can change it.

Invading and Occupying Iraq – A Postscript

December 2005

I originally finished my site in September 2002. For somebody who has been writing about Iraq since 1991, the drumbeating for the invasion of Iraq was a nightmare in itself. I wrote a letter to a friend in November 2002, which has been [posted to the Internet](#). All of my public pre-invasion concerns were validated by post-invasion reality. That the Bush administration invaded Iraq while serving up a string of [continually-shifting rationales](#), that have *all* [proven to be lies](#), while never admitting that it was all about oil and empire, was no surprise to informed observers. The Iraqi oilfields comprise the world's biggest treasure chest, and the U.S. today sits on it, but is having a difficult time lifting the lid and making off with the plunder. There are no plans to leave Iraq anytime soon, no matter how much blood is spilled. The charade of giving Iraq “democracy” is an obscene joke. Economic Hit Man [John Perkins](#) knew well what the invasion of Iraq was about. In the nearly three years since the U.S. invaded, perhaps a quarter million Iraqis have died prematurely, mostly violently.^[416] The below photo collage sums up the noble nature of our Iraq adventure.

Click on image to enlarge

The invasion/occupation of Iraq section of this essay could easily be one hundred pages long, but I do not have the time or stomach for it these days. While the invasion/occupation has been one of history's great, evil deeds, the invasion has perhaps done some good. For one thing, the Empire is being derailed, in a classic instance of “imperial overreach,” and is having difficulty digesting what it seized. In America, it used to be relatively easy to shuffle along with the masses and not stand out too much. Not anymore. Those emblazoning their car bumpers with jingoistic slogans such as “The [Power of Pride](#)” have openly cast their lot with the imperialists, and staying silent in the face of recent events is like being a “Good German” in the 1930s and 1940s. In general, informed Americans did not support the invasion or Bush's policies, but if people were poorly informed or misinformed (as in those who get their “news” from *Fox News*), they supported Bush policies.^[417] The decline and fall of the American Empire will likely take some time, but its fall will bless the world.

Peace.

Footnotes

[2] The early 21st century anthropologists' view of the pre-Columbian New World is presented in Charles C. Mann's *1491*, published in 2005; on the battles over the early inhabitation date, see *1491*, pp. 137-173.

[3] See, for instance, Michael Moseley's *The Incas and their Ancestors; The Archeology of Peru*.

[4] See, for instance, Michael Berliner of the Ayn Rand Institute defending the European invasion. His essay is easily found the Internet today. He did not have an elementary grasp of the facts, or seem to have much familiarity with the current state of scholarship on the issue. Another scholar, Dinesh D' Souza, from the right wing think tank Hoover Institution, also defends Columbus' efforts in the New World and all that came behind it, with a command of the facts and interpretation similar to Berliner's. His work is also easily found on the Internet.

[5] See Jack Weatherford's *Indian Givers*, pp. 59-115. See also the diffusion the other way in Alfred Crosby's *The Columbian Exchange*, pp. 64-121.

[6] On the Anasazi collapse, see Jared Diamond's *Collapse*, 136-156. On the Mayan collapse, see Diamond's *Collapse*, pp. 157-177, and Mann's *1491*, pp. 243-279. On the Cahokian collapse, see Mann's *1491*, pp. 259-267.

[7] See Mann's *1491*, pp. 196-201 on milpa agriculture, and pp. 299-300 on the adoption of swidden agriculture only after European contact.

[8] Jared Diamond's *Guns, Germs and Steel* is an example of a materialistic approach to reconstructing the human past. See a creditable critique of his work in J.M. Blaut's *Eight Eurocentric Historians*, pp. 149-172. While Blaut does not take on his materialism, a [spiritual perspective](#) is probably essential to try understanding those extinct cultures, and Diamond's effort suffers for its materialism, and even its admitted lack of cultural consideration. For instance, the [Michael material](#) has stated that the [Iroquois Confederation](#) was formed by an [Old Soul](#) culture (it also corresponds to Maslow's Hierarchy of Needs, for those who prefer a different model to the soul age idea), and the U.S. Founding Fathers comprehended its merits, using it as a model for the U.S. Constitution. Whereas the Old World was dominated with Baby and Young Soul ideas of controlling and conquering nature, the New World's peoples often had a different outlook, which anthropologists have often minimized or ignored. While hunter-gatherers often are Infant Souls, much of the New World's populations evidenced Mature and Old Soul awareness, as can be readily seen by their "religions" that revered nature.

[9] See Mann's *1491*, pp. 251-252.

[10] See Mann's *1491*, pp. 6-15, 280-311.

[11] See Sauer's, *Sixteenth Century North America*, pp. 302-304.

[13] See Thomas' *Conquest*, pp. 227-250.

[14] See Antonio Pigafetta's diary of the voyage. See Bitterli's *Cultures in Conflict*, pp.22-23. That offensive bloodshed inflicted on peaceful natives was not an unusual "exploration" style in those days. "First contacts" where the native reception was hostile is evidence that previous "explorers" had probably already preyed upon the natives. See Laurence Bergreen's *Over the Edge of the World* for a recent account of Magellan's feat. That voyage of discovery was an exceedingly violent affair, with the first violence inflicted on each other, with a mutiny when they were in South America, with murders, executions, torture and maroonings among the events. Magellan did not inform his crew where they were going, as they would have certainly mutinied if they knew what Magellan was attempting. Events went downhill from the first mutiny (another occurred not long afterward), with bloodshed, kidnapping and other horrors accompanying most of the voyage's encounters with natives. Magellan practiced coerced conversion to Christianity and came to an ignominious end when he attacked an island where he had previously burned down a village after its chief refused to convert. The natives fought back that time and killed him while his men largely looked on, most either happy that the megalomaniac was being killed, or stupefied at the senselessness of Magellan's attack on natives who refused to convert (see pp. 284-285). Later in the voyage, slaughtering several natives whose boat just happened to be sailing by when the crew wanted to ask directions barely merited mention, the crew was so inured to the violence they inflicted (see p. 337). Spain quickly launched other expeditions to try wresting the spice trade from Portugal, but they were unmitigated disasters (see pp. 410-412). In 1498, Arab traders cured [Vasco de Gama's](#) crew of scurvy and by feeding them oranges, because the Arabs were more experienced with long voyages (see pp. 215-216). It was first of many encounters with natives who cured the Europeans of scurvy, but over the next three centuries more than a million Europeans died of scurvy on the high seas, [as Europeans ignored or derided the obvious cures](#).

[15] See Bitterli's *Cultures in Conflict*, pp. 155-156. After the invasion by the "explorer" Alvaro de Mandaña in 1568, the natives of the Solomon Islands were spared for two more centuries, until they were "rediscovered."

Clive Ponting's *A Green History of the World*, esp. pp. 102-110, Stannard's *American Holocaust*, pp. 57-62.

[28] See Bitterli, *Cultures in Conflict*, p. 64.

[29] See Sale, *The Conquest of Paradise*, p. 165.

[30] See Sauer, *The Early Spanish Main*, p. 155.

[31] One might notice that Las Casas did not *free* his slaves, but gave them to somebody else. The humanitarian impulse of Las Casas, which was possibly the most pronounced one in Spain, still had its limits. Las Casas admired Columbus, and probably could not conceive of freeing his slaves, and it probably was not practical anyway, since there were no "free Indians" living near the white man in those days.

[32] Formal proclamations of taking land in the name of kings and empires was a Spanish tradition, and after 1513, at every new beach and every village or town the Spaniards encountered, the welcoming natives were treated to a reading of the Requirement, or *Requerimiento*. An example is when Pizarro made his first excursion to the Incan Empire in 1527. The first Incan noble he met was told the following:

"I, Francisco Pizarro, servant of the high and mighty kings of Castile and León, conquerors of barbarian peoples, and being their messenger and Captain, hereby notify and inform you...that God Our Lord, One and Eternal, created Heaven and Earth and a man and a woman from whom you and I and all the people of the world are descended...Because of the great multitude begotten from these over the past 5000 and some years since the world was made...God placed one called Saint Peter in charge over all these peoples...

"And so I request and require you... to recognize the Church as your mistress and as Governess of the World and Universe, and the High Priest, called the Pope, in Her name, and his Majesty (king of Spain) in Her place, as Ruler and Lord King...

"And if you do not do this...with the help of God I shall come mightily against you, and I shall make a war on you everywhere and in every way that I can, and I shall subject you to the yoke and obedience of the Church and His Majesty, and I shall seize your women and children, and I shall make them slaves, to sell and dispose of as his Majesty commands, and I shall do all the evil and damage to you that I am able. And I insist that the deaths and destruction that result from this will be your fault." See Wright's *Stolen Continents*, pp. 65-66. Also see discussion of the development and use of the document in McAlister's *Spain & Portugal in the New World, 1492-1700*, p. 90. See Todorov's, *The Conquest of America*, pp. 146-149.

[33] See Las Casas, *A Short Account of the Destruction of the Indies*. p. 33.

[34] See Thomas, *Conquest*, p. 103.

[35] By 1557, the flow of New World wealth into the Spanish court's coffers amounted to 11% of crown revenues. See Lyle McAlister's, *Spain & Portugal in the New World, 1492-1700*, p.186-187.

[36] See Thomas' *Conquest*, pp. 358-382.

[37] See Alvar Núñez Cabeza de Vaca's *Castaways*, translated by Frances M. López-Morillas. Abbreviated accounts can be seen in Duncan's *Hernando de Soto* and Steele's *Warpaths*.

[38] The death rates of the native slaves at the gold mines on Española were about 50% per year, per Las Casas. See Sauer's *The Early Spanish Main*, p. 148. Stated another way, the life expectancy of a native in an Españolan gold mine was about a year, maybe less. After the conquest of the Incas, the life expectancy of a native in the South American silver mines was about four months. The life expectancy of a Jew in the Auschwitz rubber factory during World War II was about four months. See Stannard, *American Holocaust*, p. 89. There was a difference in attitude, however. The Spanish genocide of the New World natives had greed as virtually its sole motivation. As Carl Sauer stated, the Spanish "operation was maintained by treating the natives as expendable." (*The Early Spanish Main*, p. 155) The Nazis' primary motivation was racism, with greed less obvious. On one hand, German corporations clamored for the cheap (nearly free, the modest fees went to the Nazis) Jewish labor for its factories. On the other, the Nazis were only too willing to provide them cheap labor, and the fewer workers who returned to the concentration camp at the end of the day, the better. There were always more subhumans (Untermenschen) being rounded up to fill the camps. Christopher Simpson deeply probed the relationship between the Nazis and the German corporations in *The Splendid Blond Beast*.

[39] See Alonso de Zorita's *The Brief and Summary Relation of the Lords of New Spain*, translated by Benjamin Keen, p. 210.

[40] See Alonso de Zorita's *The Brief and Summary Relation of the Lords of New Spain*, translated by Benjamin Keen, 1994 edition, pp. 206-218, and 6-10. On p. 66, Keen notes that although epidemics have generally received most of the credit for the collapsing native population over the recent decades, recent scholarship is showing that the labor policies might have been the greatest contributing factor in the native genocide. It paralleled what the Spanish did to the Taino in the Caribbean.

[41] See Pedro de Cieza de León's *The Incas*, translated by Harriet de Onis, p. 163.

[42] See Pedro de Cieza de León's *The Incas*, p.62.

[43] See Hemming, *The Conquest of the Incas*, pp. 368-373. See also Weatherford, *Indian Givers*, pp. 1-20.

[44] See Hemming, *The Conquest of the Incas*, pp. 367-369. See also Stannard, *American Holocaust*, pp. 90-92.

[45] See Denevan, *The Native Population of the Americas in 1492*, xxiv - xxv, 151-180, and Stannard, *American Holocaust*, p. 91.

[46] Those epidemics are summarized in Gibson, *The Aztecs under Spanish Rule*, pp. 448-451.

[47] Las Casas, *A Short Account of the Destruction of the Indies*, p 38, 99, 103. See Alonso de Zorita's *The Brief and Summary Relation of the Lords of New Spain*, translated by Benjamin Keen, 1994 edition, p. 210. See also David Radell's account of the depopulation of Nicaragua by the slave trade after the Mexican conquest in Denevan's *The Native Population of the Americas in 1492*, pp. 67-76. Decapitating collapsed porters became a standard practice by the Spanish in the New World. In Venezuela, the load of the decapitated porter was distributed to the other natives in the chain.

[48] According to Friar Juan Fernández de Ángulo. Cited in Las Casas, *A Short Account of the Destruction of the Indies*, p 82.

[49] See Lyle McAlister, *Spain & Portugal in the New World, 1492-1700*. pp. 126-127.

[52] See Sauer's *Sixteenth Century North America*, pp. 69-76, and see also pp.299-300.

[53] See Sauer's *The Early Spanish Main*, pp. 218-277. See Stannard's *American Holocaust*, p. 83, 218.

[54] Pizarro arrested [Balboa](#), and Pizarro was murdered by his own men.

[55] See David Duncan's *Hernando de Soto, A Savage Quest in the Americas*, pp. xxix-xxx. Soto's haul from the Incan plunder could have purchased more than 100 caravels of the day, which were Spain's best sailing vessels. In today's value put on gold and silver, his haul would have been worth about ten million dollars, but in purchasing strength, it would have been far greater. Building the equivalent of 100 caravels today would be immensely costly, far more than \$10 million.

[56] See Sauer's *Sixteenth Century North America*, p. 167, 302. The best account of Soto's adventures is generally considered to be David Ewing Duncan's *Hernando de Soto, A Savage Quest in the Americas*. See his account of the Soto expedition and those depopulated lands on pp. 327-351.

[57] See Herbert Priestley's *Tristán de Luna*. See p. 112, for instance, and pp. 117-159. See Charles Mann's *1491*, p. 98.

[58] See Stannard's *American Holocaust*, p. 129.

[59] As McAlister makes the point in his *Spain and Portugal in the New World, 1492-1700*, pp. 163-165, *encomienda* was a type of *repartimiento*. There were various shades of the institutions, but more benign *repartimientos* succeeded the *encomienda*. See Gibson, *The Aztecs Under Spanish Rule*, chapter 9.

- [60] See Gibson, *The Aztecs Under Spanish Rule*, p. 274 and chapter 10 in particular for what happened to the native lands in the Valley of Mexico.
- [61] See Gibson, *The Aztecs Under Spanish Rule*, p. 277.

- [81] See a brief discussion of some of mass grazing's impact in Goudie's *The Human Impact*, pp. 49-52, and see Crosby's *The Columbian Exchange*, pp. 111-113.
- [82] See Gibson's *The Aztecs Under Spanish Rule*, p. 303.
- [83] See, for instance, Elinor G. K. Melville's *A Plague of Sheep*, which was the result of meticulous research into the Spanish impact in early New Spain, particularly the valley north of the Valley of Mexico known today as the Valle del Mesquital, which is a semi-arid valley that today benefits from the sewage runoff from Mexico City. The Valle de Mesquital was fertile farmland interspersed with large forested tracts when the Spaniards came conquering, and the steep decline in the native population combined with deforestation and the introduction of sheep on that farmland turned the Valle into semi-desert in less than a century. That phenomenon occurred throughout New Spain during the first century of conquest. Melville demonstrated that the same general trend accompanied the white invaders of Australia during the 19th century, as they introduced sheep and deforested the land.
- [84] See Clive Ponting's *A Green History of the World*, pp. 161-193.
- [85] See discussion in Jack Weatherford's *Indian Givers*, pp. 1-20. See McAlister's *Spain & Portugal in the New World, 1492-1700*, p.462-468 for a discussion. The inflation and money issue is contentious in ways, as far as what caused what (population pressures may have contributed the most), but the flooding of Europe with New World silver and gold had a major impact.
- [86] Todorov, *The Conquest of America*, pp. 142-143. Todorov showed, however, that greed did not explain all of the Spanish motivation. In the next paragraph, he showed that a lust for power, of life and death over the conquered natives, also fueled the Spanish drive.

- [88] Sauer, "Destructive exploitation in modern colonial expansion." *International Geographical Congress*, Amsterdam, 1938, volume 3, section IIIC, 494-9, quoted in Goudie, *The Human Impact*, pp. 7-8.
- [89] See Stannard's *American Holocaust* and Ward Churchill's *A Little Matter of Genocide*.

[90] Among the sources for this narrative regarding the Spanish gold rush of the 1500s are: Carl Sauer's *The Early Spanish Main and Sixteenth Century North America*; Hernan Cortés' *Letters from Mexico*, translated by Anthony Pagden; Bernal Díaz del Castillo's *The Discovery and Conquest of Mexico*, translated by A.P. Maudslay; Hugh Thomas' *Conquest: Montezuma, Cortés, and the Fall of Old Mexico*; David Ewing Duncan's *Hernando De Soto: A Savage Quest in the Americas*; John Hemming's *The Conquest of the Incas*; Pedro de Cieza de León's *The Incas*, translated by Harriet de Onis; *Life and Labor in Ancient Mexico: The Brief and Summary Relation of the Lords of New Spain*, by Alonzo de Zorita, translated by Benjamin Keen; David Stannard's *American Holocaust*; Lyle McAlister's *Spain & Portugal in the New World, 1492-1700*. See also the [sources](#) for this site's Columbus essay.

[91] See Sauer's *Northern Mists*, pp. 46-53.

[92] See Denevan's *The Native Population of the Americas in 1492, Second Edition*, p. xxviii.

[93] See Robin Blackburn's *The Making of New World Slavery*, p. 135.

[94] The other bankruptcies happened in 1575, 1596, 1607, 1627, 1647 and 1653. See Lyle McAlister's *Spain & Portugal in the New World, 1492-1700*. p. 298.

[95] See, for instance, Edward Peters' *Inquisition*. The book's biases are made evident in its first sentence, as it characterizes one of the most brutal chapters in the history of religion as the Catholic Church's defense from the "attacks of heretics." Try Edward Burman's *The Inquisition* for a concise account of the evolution of the phenomenon. Burman finishes his book with a poignant question: "was Christianity worth preserving?" Henry Charles Lea's three-volume history of the Inquisition is the classic in its field, although it is a bit dated, being written in the 19th century.

[96] Among the sources used for the Portuguese and Dutch imperial efforts are: Boris Fausto's *A Concise History of Brazil*; James Anderson's *The History of Portugal*; Lyle McAlister's *Spain & Portugal in the New World, 1492-1700*; Robin Blackburn's *The Making of New World Slavery*; Bitterli's *Cultures in Conflict*; Meltzer's *Slavery, A World History*; Stannard's *American Holocaust*; *Encarta Encyclopedia*.

[122] See Steele's *Warpaths*, p. 61.

[123] See Sauer's *Sixteenth Century North America*, p. 302. See Steele's *Warpaths*, p. 63. There is also speculation that the valley became a no man's land due to battling tribes.

[124] See Steele's *Warpaths*, p. 63-65.

[125] An early instance of Spanish cultural justification for bloodshed was Balboa's quest for the Pacific Ocean. Balboa was about the most capable and virtuous conquistador. On his 1513 Pacific Ocean expedition, which was designed to claim it (history's largest claiming), he also sought gold constantly. Torturing chiefs to death to reveal where their (non-existent) mines were and feeding them to his dogs were among Balboa's activities (and then taking the surviving women as concubines). During one famous night, Balboa attacked a sleeping village and put several hundred people to death, and his favorite dog tore the chief's head off (a difficult feat), much to the delight of Balboa's entourage. About forty native men were dressed in what seemed feminine garb, and Balboa gave them special treatment: killing them and feeding them to his dogs. Balboa's justification was their "nefarious" practice of "sodomy." Balboa knew nearly nothing about what the feminine garb may have signified. I nearly attended [Balboa Junior High School](#). See Varner and Varner, *Dogs of Conquest*, pp. 36-39. See Sauer, *The Early Spanish Main*, pp. 231-237. See Duncan, *Hernando de Soto*, pp. 31-32.

[126] See Ward Churchill's *A Little Matter of Genocide*, pp. 190-196. See Bitterli's *Cultures in Conflict*, pp. 87-108. See Steele's *Warpaths*, pp. 59-79. See Sauer's *Seventeenth Century North America*, pp. 77-125

[128] See Stannard's *American Holocaust*, p. 241.

[129] See Bitterli's *Cultures in Conflict*, pp. 155-177.

[130] That speculation is seen in Bruce Johansen's *Forgotten Founders*, p.120. While researching his book, Johansen encountered significant evidence that the Enlightenment was indeed influenced, perhaps even initiated, by Europe's encounters with Native American cultures. It was out of his book's scope, but he suggested that somebody could delve further into that issue. To my knowledge, that issue has not been explored in a scholarly manner.

[131] As an example, see R. David Edmunds and Joseph L. Peyser's *The Fox Wars*, esp. pp. 157.

[132] See R. David Edmunds and Joseph L. Peyser's *The Fox Wars*, esp. pp. 119-201, 219-220..

[133] See Ward Churchill's *A Little Matter of Genocide*, pp. 151-157.

[134] See Sauer's *Sixteenth Century North America*, pp. 52-61.

[135] Amherst's letters were between him and Colonel Henry Bouquet and Captain Simeon Ecuyer. William Trent, who worked for Ecuyer at Fort Pitt, wrote of his successful efforts, "Out of our regard to them we gave

them two Blankets and an Handkerchief out of the Small Pox Hospital. I hope it will have the desired effect.” It did. See also Ward Churchill’s *A Little Matter of Genocide*, p. 154. Some of these letters have been [reproduced on the Internet](#), where the originals can be viewed.

[136] See Richard Shenkman’s *Legends, Lies and Cherished Myths of American History*, p. 113.

[137] See Richard Drinnon’s *Facing West*, esp. pp. 119-164.

[138] See, for instance, Churchill’s *Indians Are Us?*

[139] Estimates of Washington’s fortune, nearly all in land holdings, range up to \$500 million in 2005 dollars.

[140] See Reginald Horsman’s *Expansion and American Indian Policy*, 1783-1812, pp. 3-15.

[141] See Reginald Horsman’s *Expansion and American Indian Policy*, 1783-1812, p. 9.

[142] See Allan Eckert’s *That Dark and Bloody River*, pp. 439-442. See also the discussion of Washington’s plan in Sword’s *President Washington’s Indian War*, p. 27. See also Ward Churchill’s *A Little Matter of Genocide*, pp. 209-211.

[143] See Reginald Horsman’s *Expansion and American Indian Policy*, 1783-1812, pp. 131, 150-153. For some particularly large, early sales, such as land in the acquired-by-conquest Ohio River Valley, the land companies sometimes paid only eight cents per acre for recently “ceded” Indian lands, as the U.S. government began using the land sales as a major source of federal revenue (see p. 42).

[144] See Christopher Simpson’s *The Splendid Blond Beast*, pp. 59-74.

[145] My father’s side of my family has a genealogy that traces the family name to Scotland, when my direct ancestor migrated to Pennsylvania in the 1730s. My father’s ancestors then migrated to North Carolina, and although Quakers, they moved to Ohio in 1811, Indiana in 1816 and Kansas in 1879. My ancestors essentially followed in the wake of fraudulent treaties and the U.S. Army as the Native Americans were dispossessed.

[146] See John Shy’s *A People Numerous and Armed*, pp. 177-178.

[147] According to the only detailed study done of a community during the Revolutionary War, the Hackensack Valley, a great deal of rebel and Loyalist militia fighting was of the “score settling” variety, where the rubric of revolution was used to attack rival ethnic groups, churches and neighbors. See John Shy’s *A People Numerous and Armed*, p. 206. See a discussion of the fractious nature of the evolution in Chomsky and Herman’s *After the Cataclysm*, pp. 40-46. In Alfred Young, Terry Fife’s and Mary Janzen’s *We the People*, the authors begin the book by noting that John Adams was writing as early as 1809 that American history was already “getting full of Falsehoods.” The authors noted that “The history of this period [the American Revolution – Ed.] is obscured by hero worship and sacred symbols” and it was difficult to “separate myth from reality, or to challenge the sacred.” (see p. viii).

[192] See Richard Drinnon's *Facing West*, p. 90-92.

[193] See Ward Churchill's *A Little Matter of Genocide*, pp. 185-186.

[194] The labels and names that Europeans have bestowed upon the Native Americans were rarely terms of appreciation. There is debate over whether Native American polities should be called tribes, nations, bands, etc. Peoples who are commonly called by names such as the "Creek," often do not appreciate the appellations. There were about 100 tribes known by the name "Creek." Although I have "Creek" blood myself, I can appreciate that writing as a white man, not all Native Americans will agree with my terminology, nor all of the ideas I am using here. For whatever inaccuracies I may be promulgating in my work about Native Americans, they have my apologies. I am trying to write about "my people," which are white Americans, and that is the main focus of my work, always, although I believe that all humanity is one.

[195] See Alan Galway's *The Indian Slave Trade* for a history of early colonial South Carolina and the English slave trade in the region.

[196] See Alan Galway's *The Indian Slave Trade*, pp. 40-69. See Ward Churchill's *A Little Matter of Genocide*, p. 200. See Steele's *Warpaths*, pp. 51-52.

[222] See Grant's letter to President Andrew Johnson of December 18, 1865.

[223] My father's father was born in Plainville Kansas in 1907. His early years were spent living in a sod hut. He largely grew up in Wallace, in western Kansas. The Great Depression and Dust Bowl drove him, his young wife and their oldest daughter out of Kansas, along with numerous other family members. They moved around the nation, *Grapes of Wrath*-style, until coming to Washington State in 1935, with my grandmother starving and pregnant with my father, who was born with rickets and nearly died. I lived with my grandparents in Seattle for several months in the 1980s and became close to my grandfather. In early 1994 my grandmother died, and in May I flew from Ohio and met my grandfather and aunt in Denver, and we drove to Plainville, which was his last trip to Kansas. Kansas is surely its most beautiful in May, and the rolling plains in springtime were dazzling. The old homestead and sod hut was gone, becoming part of somebody's farm, although we visited the homestead of my grandfather's uncle, where he played as a child. It was still there, occupied by what are politely called uneducated rural whites. They lived in a dilapidated trailer home, with rusting cars, chickens and dogs running around, on a dirt road a long way from civilization. We also visited the cemeteries of my ancestors, some who were among the region's first homesteaders, dying in the late 1800s.

The Great Plains farms have undergone drastic changes during the era of corporatized, mechanized agriculture. Family farms are nearly gone, with most farmers living in town, and even the towns are drying up and blowing away, with children moving away to the big cities. I visited communities that were already nearly ghost towns. In one country cemetery, several of my ancestors were buried, including my great, great grandfather, whose life came to a miserable end in 1939, as the Great Depression and Dust Bowl tarnished his last years. My grandfather was sick on that trip and died a couple of years later, but one day I took the rental car and went back to that cemetery in the middle of nowhere. Much of the vicinity's land was not even farmed anymore. I sat on my great, great grandfather's gravestone, looking out across the green plains, then closed my eyes and meditated, trying to imagine what his life had been like. I also tried imagining what the land was like before the white man showed up. It must have been glorious. I was both joyful and saddened to think about those days of long ago, about what was and what had been lost.

On the way to Kansas, my grandfather had us turn off the highway, and I drove down dirt roads for many miles. There were no signs and the land was sparsely populated, with a farmhouse appearing now and then. We made turns here and there, with my grandfather probing his memory, not quite sure if he was remembering the way accurately. I had no idea where we were going, other than someplace he once knew. He found what he was looking for, and we got out of the car at the Arickaree battleground. In 1868, a few months before [Custer's triumph at the Washita](#), Civil War hero General Sherman was occupied with dispossessing the Plains Indians and moving them onto reservations. Short of troops, he had General Sheridan recruit "frontiersmen" to hunt Indians. Sheridan articulated the American mentality when he said the only good Indians he ever saw were dead. Fifty men went hunting Indians that summer, and like Custer did in 1876, they found more than they bargained for. They came upon a party of several hundred traveling Indians. The Indians then attacked their pursuers and the "battle" was on. Surprisingly, I had already read about that battle during my research, in Ralph Andrist's *The Long Death*, which is still considered one of the best histories of the genocide of the Plains Indians, although it was written in the early 1960s, before

America's cultural awakening.

My grandfather obviously regarded that battleground with reverence, and he talked animatedly about how the “battle” happened. It was only about sixty miles from Wallace, and it must have been a hallowed spot when he was growing up. Andrist's book was pretty iconoclastic when it came out in 1964, being one of the first works to see the events more from the Indians' perspective, not the Hollywood cowboy perspective. The “frontiersmen” quickly formed a defensive perimeter when the Indians attacked, and a few whites were killed. It then became a siege, with some men running back to Fort Wallace to get reinforcements. Andrist's account describes the battle, with the Indians soon leaving the scene, leaving the whites in their hasty fortifications, where they used dead horses as breastworks. There was no Indian honor in starving out an enemy. At the battleground are monuments for the five whites that died there. Andrist barely mentioned Indian casualties in his book, but the narrative at the battleground told a different story. As many as eighty Indians died in that battle, and on the hill above the battleground came the mournful cries of the native women, as their husbands, fathers and sons died fighting the white men. Other scholars have estimated the Indian dead at “only” thirty, but the iconoclastic work by Andrist did not even mention the Indian body count. White men get monuments, and the Indian dead are barely mentioned, even in the iconoclastic works.

My grandfather evidently relived childhood memories at that battlefield, and I could see his excitement, but he also gradually discarded his homesteader perspective as he aged, admitting in his later years the horrible crime that white America committed against the Indians, particularly that last group to be subdued, the Plains Indians. My grandfather served in World War II in the South Pacific, in the Solomon Islands and elsewhere. He rarely talked about those days, although he stayed in contact with his war buddies the rest of his life, and I visited some of them when I lived in Texas. My grandfather exemplified something I have now seen many times. Men who survive warfare seldom talk about their experiences. Men who really did not see much “action” are usually the ones telling war stories. My grandfather was “only” a Seabee, but for a time he was bombed by the Japanese every night, and was lucky to be alive. One morning he awoke to find a bomb that buried itself in a log next to him. It was a dud that miraculously did not explode. One time a bomb landed in the opening of his foxhole, but was another dud (those were the smaller, “anti-personnel” bombs.)

When my grandfather talked to me about his wartime experiences, it was briefly, and obviously something that he did not like dwelling on. He said that comrades adorned their quarters with Japanese skulls, and black American soldiers were treated like the lowest caste, something that he was pained to see even then. My grandfather was a poet of international reputation, but he did not have much nice to say about his World War II experiences, and it left deep scars on his psyche. I am the first man in my family, going up my family tree a hundred years, who did not serve in the American military, and my relatives' military experiences damaged them all, to one degree or another. My other grandfather [was crippled in World War I](#), and my father was in the Korean War, and they received deep emotional wounds.

Sometimes my grandfather would talk to me about his days growing up. Similar to [Terrell's observation about those “noble” pioneers](#), my grandfather said that he grew up in ignorant and unenlightened times. He grew up with a rifle in his hand, and he and his friends “shot at anything that moved.” That was a couple generations *after* the local natives had been exterminated, so imagine how trigger-happy they were in 1860 versus 1915. If somebody was mentally retarded or a little on the unintelligent side, the entire community would mercilessly make that person the butt of all jokes and pranks, everybody laughing mean-spiritedly at their affliction. My grandfather also enjoyed telling stories about funny or heartwarming events from those days, but he did not have a very large repertoire of such tales, with me hearing the same stories repeatedly over the years. When my grandfather would talk about those days, concluding with one of his more trenchant observations, I would say, “Ah, Grandpa, those good old days!” and he would respond with, “I don't know what was good about them.” I was saddened with his passing in 1996. He was my last living grandparent,

and I was blessed to have known him.

[224] See Andrist's *The Long Death*, pp. 167-169. The corruption and fraud in the BIA is not controversial. One cannot read about the dispossession of Native Americans during the 19th century without encountering numerous accounts of BIA malfeasance. See Dee Brown's *Bury My Heart at Wounded Knee* and Angie Debo's *And Still the Waters Run*.

[225] See Angie Debo's *And Still the Waters Run*, pp. 21-22.

[226] See Ward Churchill's *Since Predator Came*, p. 34.

[227] See Wright's *Stolen Continents*, pp. 153-154.

[228] See Stannard's *American Holocaust*, p. 146. See also his narrative of the *Wounded Knee Massacre* on pp., 126-127, and the book's photo section. See Dee Brown's *Bury My Heart at Wounded Knee*.

[229] There were some notable exceptions to the "exterminate the dancers" attitudes of whites. George Catlin was a prototype of the character that Kevin Costner played in *Dances with Wolves*, studying and painting the Plains Indians during the 1830s. Catlin appreciated the natives he saw, and understood some of the mystical significance of their dancing. See Drinnon's *Facing West*. Although there were some whites of the times that demonstrated respect and even some enlightenment in their dealings with the natives, there were very few of them.

[230] See Dinnerstein's *Anti-Semitism in America*. American anti-Semitism never quite reached Europe's genocidal levels, however.

[231] Most of those were in my vocabulary while growing up, and were rather casually applied to those groups. They were also on the lips of all my friends, and often their parents, also including beaner, coon, gook, Jap, Nip, wop, slant, slope, Polack and Kraut. And also, the epithets were not simply restricted to the color of somebody's skin or the ethnic group they came from. There are other terms worth mentioning: queer, faggot, dyke, and other terms to describe people who are not heterosexuals, including colorful language to describe all aspects of the sexual experience, anatomy and body functions. Those terms were also a standard part of conversation, and can be found today in certain circles, but there is a "counter PC" offensive taking place, seemingly trying to rehabilitate the attitudes, if not quite the terms, of the good old days.

[232] See, for instance, Ellen Meiskins Wood's *The Pristine Culture of Capitalism*, pp. 31-34.

[233] See Richard Shenkman's *"I Love Paul Revere, Whether He Rode or Not,"* p. 2.

[245] For a brief summary of Iraq's rich history, see Simons' *Iraq: From Sumer to Saddam*, pp. 79-146. Among other sources I used to gain a glimpse of the region's deep history are Hourani, *A History of the Arab Peoples*; Payne, *The History of Islam*; and Roebuck, *The World of Ancient Times*.

[246] See a brief summary in Erik Zürcher's *Turkey: A Modern History*, pp. 170-172. The devastation of the Anatolian peninsula was due to ten years of fighting, forced migrations, genocide, famine, disease and the like. World War I was the centerpiece of the suffering, but not the only component. For instance, the Turks "won" at Gallipoli, even though they suffered greater casualties than the French and British invaders did.

[247] Churchill wrote, "I do not understand this squeamishness about the use of gas...I am strongly in favour of using poisoned gas against uncivilised tribes...(Chemical weapons are only) the application of Western science to modern warfare." See Geoff Simons' *Iraq: From Sumer to Saddam*, pp. 179-183. See also Chomsky, *Deterring Democracy*, p. 182.

[248] See for instance, Simons' *Iraq: From Sumer to Saddam*, pp. 148-150.

[249] See Chomsky, *Powers and Prospects*, p. 83.

[255] See James Dunnigan and Albert Nofi's *Dirty Little Secrets of World War II*, pp. 48-50.

[256] See a discussion of those plans in Chomsky's *Deterring Democracy*, esp. pp. 45-64. An easily readable summary of it is in Chomsky's *What Uncle Sam Really Wants*.

[257] See a discussion of those documents in Noam Chomsky's *What Uncle Sam Really Wants*, and a broader discussion in Chomsky's *Deterring Democracy*.

[258] The best single-volume lesson on those post-war U.S. neocolonial efforts is William Blum's *Killing Hope*.

[259] In his *Mandate for Change: The White House Years, 1953-1956*, p. 372, Eisenhower wrote, "I have never talked or corresponded with a person knowledgeable in Indochinese affairs who did not agree that had elections been held at the time of the fighting, possibly 80% of the population would have voted for the Communist Ho Chi Minh." An *elected* communist leader was unacceptable, just as an elected communist was unacceptable in Chile, so the United States overthrew and murdered Chile's president in 1973, setting the stage for the bloody Pinochet rule. See also Drinnon's *Facing West*, esp. pp. 402-442.

[260] Brinkley, *Saved by the Light*, pp. 21-22.

[261] Bo Gritz from the far right (see his *Called to Serve*), and John Stockwell from the left (Ex-CIA) use the term "Third World War" term in their work, and mean the same thing, the neocolonial bludgeoning of the Third World. See Jack Neslon-Pallmeyer's *War Against the Poor*.

[262] For instance, see *Views from the South*, edited by Sarah Anderson. See also *The Struggle for Accountability*, edited by Jonathan Fox and David Brown.

[263] That phenomenon is well known and remarked on often. See, for instance, Bruce Franklin's *Vietnam and Other Fantasies*, pp. 1-4, although Franklin allows that the "bungling do-gooders" may even believe their rhetoric.

[264] See Herman and Chomsky, *Manufacturing Consent*, p. 252.

[265] See Bruce Franklin's *Vietnam and Other Fantasies*, Howard Zinn's *A People's History of the United States*, and Chomsky and Herman's *After the Cataclysm*.

[266] The FBI took credit for Malcolm X's murder in an internal document dated in 1969. See Churchill and Vander Wall's *The COINTELPRO Papers*, p. 102.

[267] The United States largely initiated both the Korean and Vietnam conflicts. Even during the post-Cold-War 1990s, South Korean schoolchildren were six times as fearful of the United States as they were of North Korea (see Blum's *Rogue State*, p. 17). Arguably, nearly all the Korean War and Vietnam War deaths were mainly the United States' responsibility, although this estimate will not put *all* those deaths on the United

States' scorecard. In all wars, accurate body counts are impossible. For example, the United States recently admitted that it inflated the Korean War American body count by about 50%, calling training accidents and deaths of American forces around the world all due to the Korean War.

There is a wide range of estimates of war deaths and who is responsible for them. Between a half million and a million South Koreans died in the Korean War. The Chinese and North Korean dead were more than a million. Numerous estimates of the Korean War dead reach three million. In Vietnam, most of the U.S.' firepower was directed at the people of South Vietnam, the people who were supposedly being saved. Assassination programs such as the Phoenix program were enacted by the United States during those years (see, for instance, Ralph McGehee's *Deadly Deceits*, pp. 125-159). The death toll in Southeast Asia from the U.S. attacks make up the greater part of this eight million estimate. The estimates are: about 250,000 (to 500,000) for the South Vietnamese military, 500,000 to 1,000,000 for the North Vietnamese military, 300,000 to 2,000,000 for South Vietnamese civilians (the higher end is more likely). About 65,000 North Vietnamese civilians also died. The estimates for Vietnam are often about 3 million people altogether, all unnecessary if the United States would have [allowed a free vote in Vietnam](#). While the United States was destroying Vietnam, it also "secretly" carpet-bombed Laos and Cambodia. The death toll from those bombings was about 500,000 Cambodians (the CIA estimated 600,000) and about 250,000 to 350,000 Laotians.

The United States also bears a huge burden of responsibility for the aftermath in Cambodia. The U.S. bombing is what largely brought Pol Pot to power, just as the U.S. proxy-war in Afghanistan largely brought the Taliban to power. Those are easily foreseeable consequences of waging war. Incredibly, the United States supported Pol Pot during his reign of terror, because he was an enemy of Vietnam (see Blum's *Rogue State*, pp. 86-90). The aftermath of America's "secret" bombing of Cambodia resulted in hundreds of thousands of deaths from disease and starvation, but the American propaganda machine spun it into the responsibility of Pol Pot, even while the United States was supporting him. Pol Pot's reign presided over the deaths of probably more than a million Cambodians.

Regarding Iraq, I write at length about the [body count](#) there. Between one and two million Iraqi citizens have died as a direct result of U.S. involvement there. From those grim events, I put numbers of 2 million Koreans and Chinese, 2 million Vietnamese, 1 million Cambodians and Laotians and more than 1 million Iraqis. Those numbers are obviously debatable. It is arguable that all those war deaths can be put on the United States' tally sheet, because none of those wars would have likely happened without the United States' involvement, as it pursued its agenda. If that is the case, and the high-end estimates are used, it totals 3 million for Korea, 3 million for Vietnam, 2 million (some will argue for 3 million) for Cambodia and Laos, and 2 million for Iraq, for 10 million.

Other military actions by our proxies should also be put on that list. The United States helped bring Suharto to power in Indonesia in 1965, then helped him slaughter the political opposition. Between 500,000 and 1,000,000 Indonesians (perhaps more), largely ethnic Chinese who made up the communist movement there, [were slaughtered outright by Suharto's boys](#). The CIA even drew up kill lists for Suharto. Then the Indonesian military rounded up all the political activists on the CIA's list and killed them. Indonesia then became a major recipient of U.S. military aid, as U.S. corporations flocked to invest in Indonesia, such as oil companies, and today shoe companies and other American-based firms have moved their factories there, where the Indonesians make pennies an hour while making American shoes and clothing in slave-like conditions. Nike called in the Indonesian military to put down a strike by workers there not long ago, as they protested their horrific working conditions. In the 1970s, Indonesia invaded [East Timor](#), using American weapons, and it enjoyed major diplomatic assistance from the United States. About 200,000 East Timorese (perhaps more) died in one of the 20th century's greatest proportional genocides. Suharto also mounted

another genocidal effort in West Papua, New Guinea, wiping out the indigenous people in favor of Indonesian "settlers." Add in the U.S.-backed slaughters in [Guatemala and El Salvador](#) for 300,000 more, and there is another 1.5 million deaths that the U.S. was directly responsible for.

Arguably far more than ten million, largely violent, deaths have happened since World War II, where the blood is mainly on the U.S.' hands. Others can argue for smaller numbers ([John Stockwell](#) estimates about six million, while acknowledging how uncertain the numbers are), and America establishment defenders can be counted on to spin the Korean, Vietnam and Iraq conflicts into tales where the United States was trying to protect the freedom of the world's people. The facts offer little support for such spin, but it is nevertheless done. During the 1960s and 1970s, the United States overthrew about ten *elected* Latin American governments, installing death squad regimes in places such as Chile (see Blum's *Killing Hope*). With its neocolonial empire, the United States has kept hundreds of millions of people in bondage. Most Latin Americans live miserable lives as a direct result of U.S. interventions. The same can be said for Indonesia, the Philippines, Southeast Asia, and parts of Africa (such as Angola). In some cases, the United States bears almost sole responsibility, such as in Southeast Asia, where in others, such as Angola, it was just one of the imperial players, although arguably the most meddlesome. Hundreds of millions of people live under the boot of the United States today, or are still trying to recover from being violated, as they are in Southeast Asia. The 1980s conflict in Afghanistan, as Zbigniew [Brzezinski bragged about](#), killed more than one million Afghans, and directly led to the dire situation there today, and the World Trade Center attacks are a classic instance of "blowback," where our foreign policy shenanigans came back to haunt us. This eight million estimate is debatable, but not outlandish. "Hundreds of millions" may even understate the number that live in misery as a direct result of the United States' actions during the past fifty years.

[\[268\]](#) The United States General Accounting Office issued a report titled "The War on Drugs: Narcotics Control Efforts in Panama" which estimated drug traffic through Panama may have doubled during the two years following the United States' invasion of Panama. The puppet government the United States installed in Panama is undoubtedly heavily involved in that drug trade, as do key elements in every government that has illegal drugs flowing through its nation.

[\[269\]](#) Studying the dark netherworld of United States covert operations quickly brings the realization that the CIA has long been involved in drug running. They did it in Southeast Asia during the Vietnam War era. They did it during the U.S.-sponsored wars in Central America in the 1980s, and are undoubtedly doing it today. [George Bush the First](#) has been involved in covert operations probably since he was a child. To get an idea of George Bush's pedigree, read the *Immaculate Deception: The Bush Crime Family Exposed*, by Russell Bowen. Bush ran the CIA in the 1970s, and Noriega was on his payroll at that time. The Carter administration kicked Noriega off its payroll, but the Reagan-Bush administration not only put him back on the payroll, but gave him a raise. Drug running is an effective way to raise money for covert operations and not have the funding subject to public scrutiny. Back when George Bush was running for president in 1988, Brett Kimberlin, a federal prison inmate in Oklahoma, claimed that Dan Quayle was a regular marijuana customer of his in the early 1970s. As Kimberlin was preparing for a press conference a few days before the election, prison officials suddenly canceled the press conference and threw Kimberlin into solitary confinement, in an obvious and illegal move to kill the story (see Lee and Solomon's *Unreliable Sources*, pp. 162-167). The Iran-Contra scandal brought to light many dark acts. One revelation that came out, which the U.S. government tried stifling, was that while America was running arms to our mercenary Contras in Central America, the pilots were flying drugs back to the United States. An important airstrip those planes came back to was in Mena Arkansas, in the backyard of then governor Bill Clinton, who was possibly taking a cut of the dough somehow, which is standard practice throughout America. CIA contract agent John Hull had a ranch in Costa Rica where many of those shipments came through, going both ways. Hull was deeply involved in the events

that produced the Iran-Contra scandal, and he eventually made Interpol's most wanted list due to the criminal activity he engaged in on behalf of the United States (the U.S. refused to honor attempts to extradite him to face trial in Costa Rica). CIA deep cover agent Gunther Russbacher said Quayle was a regular visitor to Hull's ranch while the arms/drug transshipments took place, and was deeply involved in the operation. Russbacher said, "Quayle was one of our bag boys." (see Rodney Stich's *Defrauding America*, p. 307) George Bush had the gall to say he was "out of the loop." The war on drugs has always been a fraud, and the biggest players are the CIA, law enforcement, politicians, etc. The British Opium Wars with China is a classic case of opening a new drug market by waging war against the nation trying to stop the drug from coming in. Today the world's largest official drug pusher is the United States. During the Reagan-Bush years the U.S. government used the threat of trade sanctions and other vengeance to the Asian nations of Japan, Thailand, Taiwan and South Korea to get them to open their nations to U.S. tobacco companies. Since U.S. muscle forced open those markets to [U.S. tobacco companies](#), the smoking rates in those countries, especially among teenagers, have skyrocketed (see INFAC, *Global Aggression*, pp. 24-25).

[270] The CIA has been involved in dozens of foreign assassination plots (see Blum, *Killing Hope*, p. 453). There were United States plans to assassinate Torrijos in the 1970s.

[271] See Mark Fried, "The Preppy Pirate", *Lies of Our Times*, December 1990, p. 10.

[272] See Blum's *Killing Hope*, p. 304.

[273] You can see the graves being exhumed in *The Panama Deception*. For an analysis of the disgraceful way the *New York Times* handled the issue of civilian Panamanian casualties, see Gary Grass, "Panama: Laundering Casualty Figures," *Lies of Our Times*, December 1990, pp. 9-11.

[274] See John Perkins' *Confessions of an Economic Hit Man*, pp. 173-181.

[275] Colin Powell even openly admitted it, saying Hussein would put "his puppet in [and] everyone in the Arab world will be happy." See also Chomsky, *World Orders Old and New*, pp. 13-14.

[276] If one seeks support for *that* bold claim, reading my [web site](#) might be in order.

[277] See David Fromkin's *A Peace to End All Peace*, particularly pp. 449-454. On pp. 450-451, an American missionary cautioned Gertrude Bell, assistant to the commissioner of British India, "You are flying in the face of four millenniums of history if you try to draw a line around Iraq and call it a political entity!" See also Geoff Simons' *Iraq: From Sumer to Saddam*, especially pp. 148-189. British High Commissioner Percy Cox drew the borders of Iraq and Kuwait in 1922, and he did so rather capriciously. See also William Blum's *Killing Hope*, p. 321.

[278] See Simons' *Iraq: From Sumer to Saddam*, pp. 176-177.

[279] See Chomsky, *World Orders Old and New*, pp. 13-14. See also William Blum's *Killing Hope*, p. 321.

[280] See, for instance, the chronology in Simons' *Iraq: From Sumer to Saddam*, pp. 328-330, regarding the escalation of the crisis and the many peace overtures and withdrawal offers that George Bush rejected. The day after the Kuwait invasion, on August 3, 1990, Iraq declared that it would withdraw from Kuwait if nobody

threatened them militarily. On August 6, Saddam met with Joseph Wilson, an American diplomat, giving him his assurances regarding Kuwait; Wilson then praised Iraq's "professional standards." Saddam offered his first peace plan on August 12, which was immediately rejected by Bush. On August 15, Iraq foreign minister Tariq Aziz offered to begin talks, and Bush again rejected the offer. On August 28, King Hussein of Jordan proposed a peace plan. Iraq accepted it; Bush rejected it. On September 1, Libya proposed a peace plan, including the Iraqi withdrawal from Kuwait; Bush rejected it. September 19, King Hassan of Morocco proposed a peace plan; Bush rejected it. On September 24, France proposed a peace plan. Iraq responded positively; Bush rejected it. On October 1, Bush said the U.S. wanted "a peaceful outcome." : -) On October 28, a Soviet envoy visited Saddam, and Gorbachev reported that Saddam was willing to negotiate. On November 13, King Hassan's peace initiative failed. On November 30, Bush proposed talks with Iraq, Iraq accepted the next day, and Saddam released all remaining "hostages" (called "human shields" by Iraq), and on December 9, the U.S. rejected Iraq's proposed date for talks, then on December 15 the U.S. canceled the talks. On December 30, the Yugoslavian foreign minister took an Iraqi proposal to Washington, and a State Department spokesman called it a "serious pre-negotiating position." Bush rejected it. On January 3, 1991, Bush agreed to Aziz-Baker (U.S. Secretary of State) talks in Geneva; Iraq agreed the next day, and the talks on January 9th failed. The bombs began falling on January 16. On February 7, Iraq proposed a peace plan; there was no response from West. On February 15th, Iraq said it was willing to withdraw from Kuwait, the Soviet foreign minister welcomed the offer; Bush called it a "cruel hoax." On February 18, Gorbachev proposed a peace plan; Bush rejected it on February 22. On February 25, the Soviet Union proposed a peace plan, and Saddam ordered the withdrawal from Kuwait; Bush rejected the Soviet peace plan. On February 28, Bush ordered a cease-fire, whose terms Iraq immediately accepted. President Bush was an impressive negotiator.

[281] See *Seeing Through the Media: Persian Gulf War*, Jeffords and Rabinovitz, eds. It dissects the media's performance during the Gulf War quite well. See also Chomsky, Noam. *Deterring Democracy*. pp. 179-214.

[282] See Stauber and Rampton, *Toxic Sludge is Good for You!*, pp. 172-174. See also Jeffords and Rabinovitz, *Seeing Through the Media*, pp. 12-13. See also *The National Insecurity Council, It's a Conspiracy!*, pp. 115-116.

[283] For a good summary of how the U.S. bribed and blackmailed its way to forming the coalition, see Phyllis Bennis' "Bush's Tool and Victim", *Covert Information Bulletin*, Summer 1991, pp. 26-30. Bennis aptly described what America fabricated as the "Cash Register Coalition." See Simons' *Iraq: From Sumer to Saddam*, pp. 319-325. Yemen and Cuba were the only two nations that could not be bribed or blackmailed into supporting (or abstaining from voting against) the U.N. Resolution 678, which supposedly authorized the U.S. to use force. After Yemen voted against the resolution, an American diplomat told the Yemen ambassador, "That was the most expensive 'no' vote you ever cast." The subsequent American vengeance on Yemen, one of the world's poorest nations, cost Yemen about \$1 billion. When an American warship was bombed off the Yemen coast in late 2000, I never saw one American media account that even suggested a connection between the American vengeance on Yemen and the "terrorist" attack on an American warship off Yemen's coast. Osama bin Laden is Yemeni.

[284] Unfortunately, the standard (American and British) histories of those events are covered less than adequately. Read *Encyclopedia Britannica's* version of that history. Nowhere is mentioned the cloak and dagger skullduggery by the CIA and British Intelligence that boosted the Shah into his position. Without their assistance, the Shah's coup probably would not have happened. *Microsoft Encarta* (1996 edition) does not mention that connection either. The accounts mention the anti-American fervor that led to the 1979 "hostage crisis," but were largely silent on why they might have felt that way. Even a thoroughly establishment account

of those events such as Daniel Yergin's *The Prize* (see pages 450-478) mentions the CIA and British Intelligence involvement, but downplays their importance. Yergin gave the "Soviet menace" fable plenty of ink as a rationale for what the U.S. did to Iran. For an antidote to those histories, try William Blum's *Killing Hope*, pp. 64-72, or try *Wall Street Journal* reporter Jonathan Kwitny's *Endless Enemies*, pp. 152-178. See also Phil Agee's *On the Run*, pp. 313-318. The recent *All the Shah's Men* by Stephen Kinzer, who also co-authored *Bitter Fruit*, about the 1954 overthrow of Guatemala's government, is the final word for now on what the U.S. did to Iran. Economic Hit Man [John Perkins](#) was taught that the overthrow of Iran, led by Kermit Roosevelt Jr., Teddy's grandson was the beginning of privatizing covert action, to make it less accountable to the public.

[285] See Blum's *Killing Hope*, pp. 242-244.

[286] See Blum's *Killing Hope*, p. 244.

[287] On August 17, 2002, just after the first the first draft of this essay was complete, an article appeared in America's media that proved what Chomsky and others have been saying for fifteen years: as Saddam Hussein's forces warred against Iraq's Kurds and used chemical weapons on them, the United States supported Iraq with intelligence to fight Iran, and Iraq's use of chemical weapons was no big deal to the Reagan administration; ironically, George Bush the First was heavily involved in that operation, being the ex-CIA director that he was. As long as they were fighting the hated Iran, there was nothing Iraq could do to raise the U.S.' eyebrows too much. It makes the "chemical weapons" rhetoric of the Clinton and Bush the Second administrations, as they have justified the economic war against Iraq, ring rather hollow. See the *Seattle Times*, August 18, 2002, "Officers say U.S. ignored Iraq's use of gas against Iran," by Patrick Tyler of the *New York Times*. That is a welcome admission by members of the U.S. government, but fifteen years too late.

[288] A great deal of scholarly attention is given to that notion in Herman and Chomsky's *Manufacturing Consent*, pp. 37-86.

[289] Quoted in Ray, Ellen. "The Killing Deserts", *Lies of Our Times*, April 1991, p. 3. See also Paul Rogers, "The Myth of the Clean War", *Covert Action Information Bulletin*, Summer 1991, pp. 26-30.

[299] See Stannard, *American Holocaust*, pp. 253-254.

[300] Those Project Censored stories can be obtained today in *20 Years of Project Censored News*, by Carl Jensen and Project Censored. For a summary of Bush's constantly changing rationale for the Gulf War that he was about to wage and the Gulf War in general, see William Blum's *Killing Hope*, pp. 320-338.

[301] Those situations are amply documented by Amnesty International reports, readily available on the Internet. Their main report regarding Kuwait after "liberation" is titled "Five Years of Impunity: Human Rights Concerns Since the Withdrawal of Iraqi Forces." See also Simons' *Iraq: From Sumer to Saddam*, pp. 19-24. In Arabia, the women are *only* executed with the firing squad, being spared decapitation.

[302] That meeting with Glaspie is well known. Iraq produced the transcript of that meeting. It is arguable that the United States knowingly lured Iraq into invading Kuwait. The text of that meeting, whose authenticity has never been effectively disputed by the U.S. government, can be found in *The Gulf War Reader* (Sifry and Cerf, eds.), pp. 122-133. See discussion of the possible conspiracy by America in Blum, *Killing Hope*, pp. 322-325. See also Simons' *Iraq: From Sumer to Saddam*, pp. 305-317.

[303] See Simons' *Iraq: From Sumer to Saddam*, pp. 316-317.

[304] See Simons' *Iraq: From Sumer to Saddam*, p 320.

[305] See Bowen, *The Immaculate Deception*, pp. 157-168.

[306] On Casolaro and Wilcher, there are many sources. For instance, see Rodney Stich's *Defrauding America* and Vankin and Whelan's *50 Greatest Conspiracies of all Time*. I have a copy of the 101-page letter that Wilcher wrote to Attorney General Janet Reno a month before he died. According to the official investigations, both he and Casolaro "committed suicide." That conclusion is far less convincing than the Warren Commission's "[lone nut](#)" conclusion about Oswald and JFK. The deaths of Wilcher and Casolaro begin ranging into very dark conspiracy theories that are beyond the scope of this essay. Those two books are a good introduction.

[307] See Ascherio, A., R. Chase, et al. "Effect of the Gulf War on Infant and Child Mortality in Iraq." *New England Journal of Medicine* 327, no. 13 (1992): 931-36. Whatever the real numbers were, they were virtually unreported in America, with the emphasis on the parades for returning U.S. soldiers. Some critics might take my terminology to task and say it was an "allied" bombing. Great Britain, whose neocolonial interests were well served by the Gulf War, was the other "big" bomber with the U.S. By one count, the British dropped about 3,000 tons of bombs in the Gulf War, the United States dropped 88,500 tons. See Paul Rogers, "The Myth of the Clean War", *Covert Action Information Bulletin*, Summer 1991, p. 28. By any tally, the U.S. was responsible for the vast majority of the bombing. Calling it the "US bombing" is not misstating the facts by much, and in spirit is correct. It was not much of a coalition. It was led by the current and former masters of the world (as it was in our 1998 bombing of Iraq again, when we acted alone against world opinion), with various bribed and blackmailed parties giving token support to the effort, like mercenaries.

[308] See Garfield, *Morbidity and Mortality Among Iraqi Children from 1990 Through 1998: Assessing the Impact of the Gulf War and Economic Sanctions*, Internet version dated July 1999.

[309] See the *1990 World Almanac and Book of Facts*, p. 721.

[310] According to the United Nations Convention on the Prevention and Punishment of the Crime of Genocide, Article II, genocide means, among other things, deliberately inflicting on a national, ethnic, racial or religious group, "serious bodily or mental harm...(and) inflicting...conditions of life calculated to bring about its physical destruction in whole or in part." The United States is notable in being the world's only "civilized" nation to not ratify the Genocide resolution when the others did, and to this day, the United States has not properly ratified the resolution. See Churchill, *A Little Matter of Genocide*, pp. 363-398.

[311] See *Seattle Post-Intelligencer* editorial, October 20, 1999.

[312] Population Reference Bureau estimate for mid-2000.

[313] See Parenti, "Defying the Sanctions," *Z Magazine*, February 2001, pp. 31-34.

[314] See Lee Siu Hin's "US Using U.N. Program to Steal Iraq's Oil," *Covert Action Quarterly*, Spring/Summer 2000, pp. 32-33.

[315] The offer was concurrent with a visit by five U.S. senators with Hussein in Iraq. See the friendly chat that people like Senator Bob Dole had with Hussein on April 12, 1990 in Sifry and Cerf, eds., *The Gulf War Reader*, pp. 119-121.

[316] For those too young or who missed those movies, during the 1970s the movie *China Syndrome* was released, which depicted an American nuclear accident at a power plant, partly caused by corporate corruption. When the movie came out, establishment critics said things like "nice movie, but that can't happen in America." While the movie was still in the theaters, America had the Three Mile Island accident, which has had plenty of covering-up of its effects, as usual. During the early '90s, the movie *Grand Canyon* was released. It depicted life in Los Angeles, and in one scene in particular, a driver took a wrong turn after attending a Lakers game at the Inglewood Forum, and ended up in a neighborhood where he was nearly preyed upon by criminals. Critics said, "Nice movie, but it misrepresented the streets of Los Angeles." When I lived in Los Angeles, I had a similar experience to that scene in *Grand Canyon*, so I knew it was not far-fetched. Soon after *Grand Canyon* was released, the outrageous Rodney King beating verdict was handed

down and we had the LA Riots, where martial law eventually prevailed. The movie *Wag the Dog* was about manufacturing media events to distract the public from what was really happening. Although Noam Chomsky downplayed the notion, it seemed as if Bill Clinton was reading the script of *Wag the Dog* when he bombed Sudan and Afghanistan.

[317] That essay is too long to reproduce here, and is simply a condensed version of what became this American Empire essay. It was reproduced in a few places on the Internet.

[318] Numerous articles appeared in the U.S. media in January 1999 regarding the spying of the "weapons inspectors" (Washington Post, January 6th, 8th and 9th; New York Times, January 8th; Reuters, January 8th; *The Washington Post* January 6th article by Barton Gellman is the most informative and shocking of them all.).

[319] That analysis is published on the International Action Center web site, titled "After the Bombing, What is Next."

[320] See Blum, *Killing Hope*, pp. 188-189. Jonathan Kwitny discounts the notion that the Cuban outbreak of dengue fever was the work of the United States (*Endless Enemies*, pp. 266-267), but summarizes many other dirty tricks the U.S. played against Cuba (*Endless Enemies*, pp. 238-269.) In Blum's recent *Rogue State*, pp. 108-111, in a chapter where he described numerous instances of U.S. biological warfare and other "unconventional" activity, lent more evidence that the Dengue Fever outbreak in Cuba was due to U.S. biological warfare. The strain that hit Cuba was from Southeast Asia, and it was the first major Dengue Fever epidemic ever experienced in the Americas, effecting more than 300,000 Cubans and killing 158, mostly children. Long before the Dengue Fever outbreak, the U.S. had experimented with breeding the mosquitoes that carried that strain of Dengue Fever. It is quite possible that the U.S. indeed spread Dengue Fever in Cuba.

[321] Meryl Nass, "Zimbabwe's Anthrax Epizootic," *Covert Action Quarterly*, Winter 1992-1993, pp. 12-18.

[322] Blum, *Killing Hope*, p. 383.

[323] Strieber relates a number of stark future visions in his "Communion" books, the destruction of Washington D.C. only one of them. See Strieber, *The Secret School*, pp. 235-240. Ultimately however, Strieber's work is optimistic and hopeful, with more positive visions than negative ones.

[324] I heard Bearden make that statement at a conference hosted by Richard Hoagland in Seattle in September 1998.

[325] Smith wrote regarding imperial powers willingly giving up any part of their domains,

"No nation ever voluntarily gave up the dominion of any province, how troublesome soever it might be to govern it, and how small soever the revenue which it afforded might be in proportion to the expence which it occasioned. Such sacrifices, though they might frequently be agreeable to the interest, are always mortifying to the pride of every nation, and what is perhaps of still greater consequence, they are always contrary to the private interest of the governing part of it, who would thereby be deprived of the disposal of many places of trust and profit, of many opportunities of acquiring wealth and distinction, which the possession of the most turbulent, and, to the great body of the people, the most unprofitable province seldom fails to afford." See

Smith, *The Wealth of Nations*, Book IV, Ch. VII, Pt. III, p. 131-133.

About the mercantile system that existed in Smith's day, he wrote,

"It cannot be very difficult to determine who have been the contrivers of this whole mercantile system; not the consumers, we may believe, whose interest has been entirely neglected; but the producers, whose interest has been so carefully attended to; among this latter class our merchants and manufacturers have been by far the principal architects...In the mercantile regulations...the interest of our manufacturers has been most peculiarly attended to; and the interest, not so much of the consumers, as that of some other sets of producers, has been sacrificed to it." See Smith, *The Wealth of Nations*, Book IV, Ch. VIII, pp. 180-181, University of Chicago Press edition, 1976.

That pretty much sums up the [bizarre journey of Dennis Lee](#), where he was "some other set of producer" who was sacrificed to the powerful producers. In the end, however, the consumers have suffered greatly, although somewhat unknowingly, and such a sacrifice of better ways to the interest of power and [profit](#) may doom the human race.

[326] For harrowing reviews of that state of affairs, see David McGowan's *Derailing Democracy* or William Blum's *Rogue State*.

[327] See the census results in the 20th century for Yugoslavia in Tim Judah's *Serbs, History, Myth and the Destruction of Yugoslavia*, pp. 311-317.

[328] See, for instance, John Allcock's *Explaining Yugoslavia*, p. 19.

[329] As estimated by the Vienna Institute for Economics, which is an admittedly early estimate.

[330] In 1990, the Gross Domestic Product of Yugoslavia was about \$73 billion, according to *The World Bank Atlas 1991*.

[331] Among the works I have used to familiarize myself with the situation regarding what was known as Yugoslavia were: John Allcock, *Explaining Yugoslavia*; Tim Judah, *Serbs, History, Myth and the Destruction of Yugoslavia*, Christopher Bennett, *Yugoslavia's Bloody Collapse*, Misha Glenny, *The Balkans*, Julie Mertus, *Kosovo, How Myths and Truths Started a War*. Marcus Tanner, *Croatia: A Nation Forged in War*. Those are all fairly mainstream texts.

[332] See Michael Parenti's *To Kill a Nation* and Noam Chomsky's *The New Military Humanism*.

[333] For instance, *The Washington Spectator* stated in its May 15, 1999 issue that the NATO bombing was the "Just War." *The Washington Spectator* is a "liberal" publication, but its enthusiasm for the Kosovo bombing caused many of its readers to cancel their subscriptions, including me.

[334] See Sean Murphy's *Humanitarian Intervention*, pp. 33-64.

[335] On October 13, 1999, the U.S. Senate voted 51-48 to not ratify the Comprehensive Nuclear Test Ban

Treaty. Although the United States is not alone on the world stage regarding the non-ratification of the treaty, it is by far the most notable, undermining the notion of other nations ratifying it. As of April 2000, 55 nations had ratified the treaty, and Russia ratified it in May 2000.

[336] On the 20th anniversary of the [assassination of JFK](#), ironically.

[337] The UN vote tallies are taken from William Blum's *Killing Hope*, pp. 184-199. Also see McGowan, *Derailing Democracy*, pp. 22-24.

[338] See Sean Murphy's *Humanitarian Intervention*. See Chomsky, *The New Military Humanism*, pp. 38-80.

[339] For a brief history of Turkey in the recent centuries, try reading Erik Zürcher's *Turkey, A Modern History*.

[340] See *A People Without a Country, The Kurds and Kurdistan*, Gerard Chaliand, Ed., pp. 144-149 and 49-51.

[341] See Alan Friedman's *Spider's Web, The Secret History of How the White House Illegally Armed Iraq*.

[342] Hunter, Jane. "Sowing Disorder, Reaping Disaster", *Covert Action Information Bulletin*, Summer 1991, p. 25

[343] See Voices in the Wilderness, "Myths and Realities Regarding Sanctions," in *Iraq Under Siege*, Anthony Arnove, ed., p. 73. See also pp. 43-44.

[344] Amnesty International "United States of America - Rights for All," October 1998, cited in David McGowan's *Derailing Democracy, The America the Media Don't Want You to See*, p. 19.

[345] See, for instance Kamran Karadaghi, "The Two Gulf Wars, The Kurds on the World Stage, 1979-1992" in *A People Without a Country, The Kurds and Kurdistan*, Gerard Chaliand, Ed., pp. 214-230 and Bill Frelick's "Operation Provide Comfort: False Promises to the Kurds," pp. 231-237, and Aliza Marcus, "Turkey's Kurds after the Gulf War, A Report from the Southeast," pp. 238-247. See also Kevin McKiernan, "Turkey's War on the Kurds" in the *Bulletin of Atomic Scientists*, March/April 1999.

[346] See *Censored 2000*, pp. 40-44.

[347] See Chomsky, *The New Military Humanism*, pp. 135-137.

[348] See *Censored 2000*, p. 53.

[349] See Black and Herman, "The Unindicted War Criminal," *Z Magazine*, February 2000, p. 28. See George Kenney's account in *The Nation*, June 14, 1999. Kenney was a Yugoslavian desk officer for the U.S. State department, who heard from an "unimpeachable press source" of a State Department official bragging that the U.S. "deliberately set the bar higher than the Serbs could accept." The official stated that the Serbs needed "a little bombing to see reason." James Petras, a foreign policy aid to Senate Republicans, told essentially the same story. See Parenti, *To Kill a Nation*, p. 113.

[350] See *Censored 2000*, p. 56.

[351] See Michael Parenti, "Where Are All the Bodies Buried?" *Z Magazine*, June 2000, pp. 35-37.

[352] See Parenti, *To Kill a Nation*, pp. 25-26.

[353] See, for instance, Allcock, *Explaining Yugoslavia*, pp. 89-99. Allcock makes an impressive case that no theory regarding the breakup of Yugoslavia that does not have economics at its heart, "deserves to be taken seriously." Yet, like all the other mainstream scholars I read, he did not mention the destabilizing activities of the IMF or World Bank, or how the United States supported such activities, just as it has throughout the Third World. It is a typical blind spot in Western mainstream scholarship.

[354] See Parenti, *To Kill a Nation*, p. 99.

[355] See Blum's *Killing Hope*, pp. 338-352 and *Rogue State*, pp. 4-5, 33-37, 155. When Ralph McGehee was still publicly visible, he wrote about the Afghanistan "terrorists" and the classic "blowback" that our activities there created. The devastation of Afghanistan and the repressive Taliban being in power there is a direct result of U.S. intervention. In the final result, it is almost a West Asian version of what America did to Cambodia. The Soviet Union's Afghanistan intervention was not all that responsible for bringing down the Soviet Empire, but it surely contributed.

[356] See Parenti, *To Kill a Nation*, p. 100.

[357] See Parenti, *To Kill a Nation*, pp. 98-107.

[358] See some of those disinformation campaigns in Parenti's *To Kill a Nation*, pp. 81-94; see Allcock's *Explaining Yugoslavia*, pp. 429-430, see Chomsky's *The New Military Humanism*, pp. 93-95.

[359] See Parenti, *To Kill a Nation*, pp. 75-76.

[360] For instance, see one of those photographs in Judah's *Serbs*, photo 44.

[361] See Christopher Bennett's *Yugoslavia's Bloody Collapse*, p. ix.

[362] See Misha Glenny's *The Balkans*, pp., 659-662.

[363] William Blum's *Rogue State*, pp. 13-14 states nearly the identical points.

[364] See Parenti, *To Kill a Nation*, pp. 17-22.

[365] See Blum, *Rogue State*, p. 6.

[366] See Herman, "Propaganda System Number One," *Z Magazine*, September 2001, pp. 42-50.

[367] See Parenti, *To Kill a Nation*, p. 166.

[368] See Alex Dajkovic, "A 'Model' for the Balkans," *Z Magazine*, January 2001, pp. 25-29.

[369] See Schmidt, *Maverick Marine*, p. 63 for an American diplomat making the statement that "Mexicans respect power and nothing else" as he called for military intervention when his other manipulations failed.

[370] Uranium-235 is much more radioactive than U-238. U-234 is also present in naturally occurring uranium, but at far smaller concentrations, and U-235 is less than one percent of naturally occurring uranium. U-235 is largely what made the nuclear age possible. See my fluoridation essay for some more information on that situation.

[371] The best summary I have yet seen on the matter is Edward Herman's two-part article in *Z Magazine*, in its [April 2002 edition](#), pp. 50-55 and May 2002, pp. 49-55.

[372] See *The New Statesman*, June 28, 1999.

[373] For instance, the work of [Allan Nairn](#) and Amy Goodman, the American journalists who really broke the East Timor story to the American public in the early 1990s, clearly demonstrates the real dynamics. Nairn and Goodman covered East Timor, and Nairn had his skull broken by an Indonesian soldier (by the butt of a U.S.-made rifle) while they massacred an East Timorese funeral procession, which was for people murdered by the Indonesian military. Nairn is one of America's most courageous journalists. In 1999, he snuck into East Timor (the Indonesian military strove mightily to keep him out) and kept reporting from there when no other journalist dared stay there. He kept reporting on the U.S. support for the violence in East Timor, when even our government was making public noises that Indonesia had gone too far there.

[374] See, for instance, Chomsky and Herman, *The Washington Connection and Third World Fascism*, or Chomsky, *Powers and Prospects*, or Herman and Chomsky, *Manufacturing Consent*, for examples of their scholarship regarding events such as the East Timorese genocide.

[375] See "Crisis Stirs Debate over US Aid to Indonesian Army," *The Seattle Times*, September 14, 1999. I may have missed other articles, but they are oddities. The main coverage did not mention the historic U.S. involvement at all. In September of 2000, one article on East Timor inspired me to do something I had not done for a year - write a letter to the editor. The paper called me to confirm that I wrote it, a standard prelude to printing it, but I was out of town, so they did not publish it. Here it is:

August 29, 2000

Dear *Seattle Post-Intelligencer*:

On your front page today was the most prominent article about East Timor that I have yet seen in a mainstream American newspaper ("Hope, fear in year after independence vote," by Daniel Cooney), with a full color photo dominating the page. I hoped the article would begin telling Americans what has happened in East Timor, and how it relates to the United States.

While the article mentioned the genocide in the 1970s, what went unmentioned was that the arms used in that massacre were of U.S. manufacture. Not only that, the U.S. emphatically supported the invasion of East Timor by Indonesia in 1975, with then President Gerald Ford and Secretary of State Henry Kissinger dining with Suharto a few hours before the invasion. The then U.S. ambassador to the United Nations, Daniel Moynihan, sabotaged UN attempts to react to the invasion, and bragged about it in his memoirs. After a couple of genocidal years, the Indonesian army was literally running out of bullets, and that human rights saint President Jimmy Carter hastily signed a deal giving the Indonesian army more arms.

During that slaughter, which was the greatest proportional genocide since the Jewish Holocaust, the U.S. press observed almost complete silence about the situation in East Timor, with virtually no American having ever heard of the place, as our tax dollars killed off the natives. In the East Timorese genocide, the U.S. press was actively complicit, the blood dripping from its hands. The U.S. public did not know in the 1970s that they financed the East Timorese genocide, and with articles like the one you ran today, it looks like they never will.

As I finished the article and found no mention of U.S. involvement in the tragedy of East Timor, an involvement that continues even today, I looked at the photo's caption. It did not depict an East Timorese trying to rebuild his life, but an Indonesian government-sponsored vigilante trying to find a livelihood after murdering East Timorese people for a living. I was stunned. That would be like reporting on the Jewish Holocaust for the first time, and alongside the story was a photo of an ex-gas chamber operator, trying to make a new life for himself in the post-war economy. Orwell was so right.

[376] See Chomsky, *World Orders Old and New*, pp. 62-67. See Farmer, *The Uses of Haiti*. See Blum, *Killing Hope*, pp. 370-383. See Blum's *Rogue State*.

[377] Edward Herman wrote an article whose title summed it up: "Clinton is the World's Leading Active War Criminal. See *Z Magazine*, December 1999, pp. 36-41.

[378] As Herman stated, Suharto had a slight lead over Clinton, but Clinton was gaining fast and took much less time to rack up his tally.

[379] Blum's latest is *Rogue State: A Guide to the World's Only Superpower*.

[380] See Mark Cook, "US Intervention in Colombia and Ecuador" *Covert Action Quarterly*, Spring-Summer 2000, pp. 28-31.

[381] See Giraldo, *Colombia, The Genocidal Democracy*, p. 18.

[382] In Amnesty International's November 1996 *Crime Without Punishment: Impunity in Latin America*, they reported that the new civilian government of Argentina recorded 8960 cases of disappearances during the military dictatorship's reign in Argentina from 1976 to 1983. Regarding Bolivia, Amnesty International has noted the jailing and torture of political prisoners, but the political deaths in Bolivia measured in the *dozens* in the reports I saw, and although more than 2000 political prisoners were arrested after the U.S.-assisted coup in 1973 (see Blum, *Killing Hope*, pp. 221-229), the 243 death count appears within the range of the observer counts. In their October 29, 1998 news release, Amnesty International stated that the post-Pinochet Chilean state recognized 3197 "disappearances," death by torture and extra-judicial executions during the Pinochet years. Regarding Uruguay and Brazil, the relatively low number of "political killings" is also verified. Amnesty

International's May 20, 1996 report (*Uruguay: To Find the Truth is to Overcome the Past*) cited 32 "disappearances" of Uruguayan citizens, and another 100 or more who "disappeared" in Argentina in collaboration with the Uruguayan government. The U.S. overthrew the Brazilian government in 1964 (see Blum, *Killing Hope*, pp. 163-172), instituting fifteen years of military dictatorship, and the political killing tally of "only" 125 is also within the observed range. Those numbers do not take into account all violent deaths in those nations, but those of a political nature. For instance, the Brazilian police killed 111 prisoners in a São Paulo prison incident in 1992, but that was after the "military dictatorship" had ended, and calling it political murder is questionable. There have been numerous massacres and killings of peasants by the Brazilian police in recent years as the Amazon is being "developed." The Brazilian police engage in off-duty death-squad activity, and many people die in their custody (similar to the New York and Los Angeles police forces, but on a greater scale), but few of those deaths can be accorded a strictly political nature. That is similar to the notion of New York police killing a drug-addicted black teenager in their custody. That would not be generally considered a political killing, although it does get Amnesty International's attention.

[383] See Blum's *Rogue State*, p. 166, which cited a 1994 Amnesty International report that noted over 20,000 politically related murders from 1986 to 1994.

[384] See Giraldo, *Colombia, The Genocidal Democracy*, p. 17.

[385] See Giraldo, *Colombia, The Genocidal Democracy*, p. 20.

[386] See Noam Chomsky in Giraldo, *Colombia, The Genocidal Democracy*, p. 12. See also Chomsky, *Deterring Democracy*.

[387] See Giraldo, *Colombia, The Genocidal Democracy*, p. 50.

[388] See Chomsky, "The Colombia Plan, April 2000" *Z Magazine*, June 2000, pp. 26-34.

[389] See Chomsky, "The Colombia Plan, April 2000" *Z Magazine*, June 2000, p.28.

[390] See George Orwell, *1984*, pp. 176-177, Signet Classic edition.

[391] See Frances M. Beal's "TIPS Domestic Spy Network May Go Too Far for White America," August 27, 2002, on [ZNet](#).

[392] See Blum's *Killing Hope*, pp. 338-352.

[393] Brzezinski gave his interview to *Le Nouvel Observateur* in their January 15-21, 1998 edition, p. 76. The American edition of that issue leaves out the Brzezinski interview. See Blum, *Rogue State*, pp. 4-5. People can also find the French original on the site of that French magazine, run it through a translator program (they are available on the Internet), and it comes out close to the text reproduced here.

[394] The U.S. proxy war against Nicaragua was a terror war, as were all its [proxy wars in Central America](#), with the Contras openly targeting civilians. When the World Court convicted the U.S. of crimes, particularly its mining of Nicaraguan harbors, and ordered them to stop and provide restitution, the U.S. ignored the ruling.

[Noam Chomsky's](#) work deals with that issue extensively.

[395] The word “skeptical” means I have doubt about it, but am willing to consider the evidence, not the Orwellian use of the tem that the “[skeptical](#)” community has arrogated.

[396] Friedman, *New York Times Magazine*, March 28, 1999.

[397] Russell Mokhiber and Robert Weissman had an article published on the [Counterpunch](#) site on November 15, 2001, which summarized the American media's more egregious editorial comments, including those above. The article was titled “Kill, Kill, Kill.”

[398] See Edward Herman's *The Real Terror Network*, p. 21.

[399] See Edward Herman's *The Real Terror Network*, pp. 65-69.

[400] The word [Robert Fisk](#) used to describe America and the West's treatment of Afghanistan during the 1990s.

[401] See Herold, "A Dossier on Civilian Victims of United States' Aerial Bombing of Afghanistan: A Comprehensive Accounting," December 2001. it was published in the Guardian in Britain and is also on the [ZNet site](#).

[402] See, for instance, Robert Fisk's “Return to Afghanistan: Explosives that US knew would kill innocents continue to take their toll” in [The Independent](#), 10 August 2002

[403] The story appeared in the media on August 19, 2002. The group Physicians for Human Rights has been pursuing the issue, trying to get the mass graved opened and analyzed.

[404] [Edward Herman](#), “News Not Fit to Print,” [ZNet](#) article, August 21, 2002.

[405] Neil Postman discusses Orwell and Huxley's “competing” visions in *Amusing Ourselves to Death*.

[406] I am using the Signet Classic edition of 1984. See pp. 13-15, 49-50.

[407] See Orwell, 1984, p. 124.

[408] See Orwell, 1984, p. 127.

[409] See Orwell, 1984, p. 153.

[410] See Orwell, 1984, p. 178.

[411] : -)

[412] See Finkelstein, *The Holocaust Industry*, p. 19.

[413] See Edward Herman and Gerry O'Sullivan's *The Terrorism Industry*, pp. 29-36.

[414] The American media has been putting Saddam Hussein onto magazine covers for several months now, with headlines such as "Tales of the Tyrant" (*Atlantic Magazine*, May 2002), "The Sinister World of Saddam" (*Time*, May 13, 2002) and so on. Indonesia's [Suharto](#) made Hussein look like a choirboy, but there has never been that kind of coverage of Suharto in America's media, as he was an American "ally," and there was never such coverage of Hussein while America found him useful, especially as he waged war against Iran.

[415] Just today (August 15, 2002), as I was finishing this essay, White House national security advisor Condoleezza Rice said about Hussein in a press conference, "This is an evil man who, left to his own devices, will wreak havoc again on his own population, his neighbors and, if he gets weapons of mass destruction and the means to deliver them, on all of us."

[416] In October of 2004, *Lancet* published the only scientific study to date of the Iraqi casualties, and estimated about a hundred thousand post-invasion civilian deaths, mainly from U.S. violence. That does not include the deaths of Iraqi soldiers trying to repel the U.S. invasion. There have been no credible critiques of the study's methodology by science professionals. In fact, the study's authors have produced widely cited work on demographic catastrophes in Africa, for instance. The only critiques leveled at their Iraq work have come from the imperial class in the U.S. and British media, and none have withstood scrutiny. By December of 2005, an Iraqi civilian death toll of 150,000 is well within the range of credible estimates, even on the low end, and between 50,000 and 100,000 Iraqi soldier deaths is a credible estimate. An Iraqi death toll of quarter million due to the invasion/occupation is well within the range of credible estimates. An Iraqi death toll of two million premature/violent deaths since 1991, courtesy of the United States, is well within the range of credible estimates. Contrary to the rhetoric of George Bush, they do not "hate us" because of our freedom or prosperity, but because of the devastation we have visited onto Iraq and elsewhere in that part of the world.

[417] See, for instance, [Mickey Huff's Dazed and Confused](#), published on AlterNet, May 2, 2003. For Americans who correctly knew that there was no credible link between Saddam Hussein and Al Qaeda, they were four-to-one *against* the invasion of Iraq. For those who incorrectly believed there was a connection, they were two-to-one *for* the invasion. In summary, those who believed the transparent lies of the Bush administration were for the war, while those who knew the truth were against it. As the perceptive 2003 article by [Gaius Publius](#) noted, such seeming stupidity on the part of the war-cheering Americans is largely intentional.

Ralph McGehee, the CIA and *Deadly Deceits*

By Wade Frazier

Introduction

Statement for Ralph's Protection

My 1999 Synopsis of *Deadly Deceits*

Introduction

In 1990, when I was getting educated in the alternative media and other areas, I obtained *Deadly Deceits*, the memoirs of an ex-CIA operative, Ralph McGehee. When I was writing my original web site in 1996, I wrote a brief synopsis of *Deadly Deceits*, in a section where I outlined the sources that influenced my worldview. I contacted Ralph before I published the pages, asking him if I could publish the *Deadly Deceits* excerpts that I quoted on my web pages. He replied that it was OK by him, so I did.

Ralph is an ex-CIA employee who publicly criticized the CIA, and only a handful ever have. McGehee is interviewed on Bill Moyers' *Secret Government* video. Ralph maintained his CIABASE archives on the Internet for years, exposing the CIA's activities using public domain sources. In running his CIABASE, Ralph was doing something that anyone could do. Still, he endured endless harassment from the CIA as they have tried silencing him. Ralph had more than my respect; he had my awe. After riding in the saddle with [Dennis Lee](#) for years, I discovered how rare a Dennis or a Ralph McGehee was. People of conscience, living it at those levels, are one in many thousands.

My web pages came down in early 1997 with no warning, something not entirely in my control. In early 1998, I discovered that some of my work survived and was being reproduced on the Internet. Not only had one person reproduced my entire 600-page web site, I also found that my synopsis of *Deadly Deceits* was reproduced in several places. I contacted Hank Roth's The Golem web site, one place my synopsis appeared, asking him where he got it. The surprising response from Hank was that he thought Ralph McGehee gave it to him. It turned out that Ralph had published my synopsis of his book across the Internet as the defining synopsis of *Deadly Deceits*, which is the summary of his career. I was deeply honored.

When I discovered that my hurriedly written synopsis still dominated Ralph's presentation of his work on his new web site, I wrote a version of it using more care. It is below. After escalating harassment by the CIA and friends, leading to bodily injury to Ralph, his CIABASE web site went down in the spring of 2000, and will probably never reappear.

Statement for Ralph's Protection

In August 2001, I received the below statement from Ralph. He wanted to have me post it on my site, and wherever else it can be posted, for his protection.

“I moved to Florida in July 2000. Immediately the harassment I experienced in Herndon transferred here. A major difference is that the FBI here openly advises I am a threat to National Security -- because, I assume, I tell unclassified truths to the American people.

“In 1990 the CIA officially advised me in writing that I may use any information in the public domain -- making the FBI's actions against me false if not illegal as I have never and will never expose secret persons or information.

“Harassment here has grown to such a degree that I fear staged incidents to arrest me for something -- anything.

“I base my actions on what is in the best interests of the United States. This may be difficult to believe given my negative commentary, but I participated in and watched CIA operations in Vietnam and other countries nearly destroy the US/us.

“The CIA said I was an analyst with few peers and awarded me its Career Intelligence Medal. I use this ability and those experiences to inform about the CIA's many opportunities and deficiencies.

“Anyone wishing to know more may find details via a Google search under my name.”

-- Ralph McGehee

Ralph has also asked me to post his letter from the CIA that informed him that his CIABASE activities were perfectly legal, and were no threat to “national security.” Here it is.

My 1999 Synopsis of *Deadly Deceits*

Deadly Deceits became a college textbook. After a moving introduction it starts slowly, climaxing with a series of haunting revelations. During McGehee's twenty-five year CIA career, he heartily believed in its stated mission of "fighting communism." McGehee wrote that CIA fieldworker candidates are psychologically screened before being hired, and their most treasured quality is the willingness to blindly follow orders.

Ralph W. McGehee joined the CIA in 1952, after an All-American football career at Notre Dame (where Phil Agee also studied) during their national championship years. He was raised on and believed in the American dream - "the Protestant work ethic, truth, justice, freedom." He signed on as a dedicated cold warrior and spent the next ten years stationed at home and abroad: at Langley (the CIA headquarters in Washington), Taiwan, Japan, the Philippines, and then Thailand. McGehee was dedicated to stopping the scourge of communism, and enthusiastically helped keep the world free of its taint.

During the mid-1960s, communism was sweeping Southeast Asia. McGehee's job was saving Thai villages from communist insurgency. He viewed his career as a cross between "Peace Corps and missionary work." Building upon a British method used earlier in Thailand, McGehee developed an inexpensive method of intelligence gathering that identified communists and exposed their network. The strategy was partly intimidating the villagers through terror, such as holding a gun to a baby's head to get the mother to talk, yet was benign when compared to other "counterintelligence" methods of the time, among them torture and boiling suspected communists in oil.

The operation's goal was to make communists confess their "crimes," name their cohorts, return to the Thai government's fold and become "good peasants" again. Forgiveness was offered and given to those who talked, with escalating intimidation for those harder to crack. The Catholic Church successfully used a similar carrot-and-stick strategy during its [Inquisition days](#). The Thailand strategy was effective and Machiavellian, something that McGehee crafted and believed in. It obtained a quality of intelligence the region had never seen before. It also reversed communist inroads. The Thai government's brute force response to "communist insurgency," backed by its U.S. sponsors, alienated the villagers, driving them into the communists' arms. McGehee's method was far more subtle and effective.

The operation's results were awarded universal praise in intelligence circles in 1967. McGehee had his career's greatest success and was euphoric. He discovered a way of exposing and defeating the communists, and his future looked bright. He was at the top of his game. In the wake of the accolades, William Colby (future [CIA director](#), and then the Far East division chief) visited, and McGehee briefed him:

"I explained the procedures of the survey and then outlined my general conclusions, including my doubts about previous Agency reporting which said that the communists did not have the support of the local people and that they forced people to support them with threats and terrorism.

"Such a picture is inaccurate,' I told Colby...'We have found that the Communists concentrate the majority, almost the entirety, of their time winning the cooperation of the peasants.'"

McGehee exposed the communist movement as a grass roots movement with peasant support, mainly because their goal was freeing themselves from colonial and [neocolonial](#) oppression, enforced by the Thai ruling class

and their industrialized-nation sponsors. The Communist Revolution in Southeast Asia was an exercise in freedom, although McGehee would not attain that realization for years. In 1967, McGehee was ecstatic that his method reversed communist infiltration.

Colby silently received McGehee's presentation, finally muttering, "We always seem to be losing." McGehee was astonished by Colby's response.

Soon after Colby's visit, McGehee was removed from the field, his successful program was canceled, and he found himself behind a meaningless desk at Langley. He was shocked and confused for years. He eventually realized that his intelligence work, although arguably the most effective the West had ever seen in Southeast Asia, produced an undesirable answer. Communism could not be damned as an evil if the people wanted it. If that fact became widely known, our Vietnam adventure could be seen in an unsavory light: killing millions to prevent them from choosing a government we disapproved of. The American experience in Vietnam was an attempt at [reconquering the region](#), keeping it in the [capitalistic fold](#) and keeping those people enslaved.

McGehee still believed his indoctrination and volunteered for Saigon, something that no sane CIA employee did in 1968. McGehee was a true believer in America's good intentions, even if their tactics sometimes seemed regrettable. Defeating the communists was his great desire.

One pivotal evening in his quarters near Saigon in December of 1968, McGehee finally figured it out.

"I sat there in agony thinking about all that had led me to this private hell. My idealism, my patriotism, my ambition, my plans to be a good intelligence officer to help my country fight the communist scourge - what in the hell had happened? Why did we have to bomb the people we were trying to save? Why were we napalming young children? Why did the CIA, my employer for 16 years, report lies instead of the truth?

"I hated my part in the charade of murder and horror. My efforts were contributing to the deaths, to the burning alive of children - especially the children. The photographs of young Vietnamese children burned by napalm destroyed me."

McGehee will never lose the memory of the smell of burning Vietnamese flesh. McGehee thought of killing himself that night in Vietnam. He thought of various ways to kill himself to protest what was happening. In the end, however, he committed his life to telling the world what really happened in Vietnam and the true nature of America's fight against communism. McGehee embarked on the hard, lonely road of exposing what his nation was really up to.

When his devastating tour of duty in Vietnam was finished, McGehee left:

"I was glad to be going home. But I knew I would never be the same person again. All of my ideals of helping people, all my convictions about the processes of intelligence, all my respect for my work, all the feelings of joy in my life, all my concepts of honor, integrity, trust and love, all in fact that made me what I was, had died in Vietnam. Through its blindness and its murders, the Agency had stolen my life and my soul. Full of anger, hatred, and fear, I bitterly contemplated a dismal future."

The year was 1970, and McGehee had nearly twenty years of CIA service. He spent mere weeks in the United States before returning to Thailand. He sought somewhere to serve out his career's remaining years; somewhere he could stand living. Ironically, he saw the fruit of his anti-communist efforts in Thailand. The peaceful culture of Southeast Asia was destroyed by American involvement. Where McGehee had earlier witnessed pastoral scenes of Thai and Vietnamese people quietly living their lives, Southeast Asia had been turned into an armed camp, with violence, drug use and prostitution commonplace. A barbed-wire fence surrounded the Thai school that his children happily attended on an earlier tour of duty. The students were bodily searched as they entered the school's grounds. The Thai government destroyed the villages that McGehee had "helped" on his earlier tours. He helped establish the framework that destroyed those that he "helped." He became a squeaky cog in the machine and was put on probation.

McGehee soon returned to Langley, spending several years getting educated in the CIA's archives. He finally understood what communism meant to the communists, and realized that the Western view of communism was a fantasy to justify our violence against them. They were not trying to conquer the world. They sought freedom. For that crime, America [murdered millions of them](#). McGehee retired after spending 25 years with the agency, accepting a career achievement medal so his future work could not be called that of a CIA employee with a failed career. He began his book's conclusion with:

"The CIA is not now nor has it ever been a central intelligence agency. It is the covert action arm of the President's foreign policy advisers. In that capacity it overthrows or supports foreign governments while reporting "intelligence" justifying those activities. [McGehee says he has never once seen a CIA official tell the truth to Congress. Instead comes a steady stream of lies. - Ed.] It shapes its intelligence, even in such critical areas as Soviet nuclear weapon capability, to support presidential policy. Disinformation is a large part of its covert action responsibility, and the American people are the primary target of its lies.

"As noted in the Church Committee's final report, the Agency's task is to develop an international anti-communist ideology. The CIA then links every egalitarian [which means "all men are created equal" - Ed.] political movement to the scourge of international communism. This then prepares the American people and many in the world community for the second stage, the destruction of those movements. For egalitarianism is the enemy and it must not be allowed to exist."

McGehee called for the CIA's abolition in *Deadly Deceits*, describing it as an unsalvageable organization. In *Deadly Deceits'* appendix, McGehee reported on the gauntlet that he ran to publish the book. He did not want to lose his pension, go to jail or leave the country, so he abided by the secrecy agreement he signed when joining the CIA. The appendix begins:

"The secrecy agreement that I signed when I joined the CIA allows the Agency to review prior to publication all writings of present and former employees to ensure that classified information relating to national security is not revealed. This provision seems logical and necessary to protect legitimate interests. However, my experiences in getting this book approved show that the CIA uses the agreement not so much to protect national security as to prevent revelations and criticisms of its immoral, illegal, and ineffective operations. To that end it uses all

possible maneuvers, legal and illegal. Had I not been represented by my attorney, Mark Lynch of the American Civil Liberties Union, and had I not developed a massive catalog of information already cleared by the Agency's publication review board, this book could not have been published."

McGehee's dark journey in publishing *Deadly Deceits* is a damning indictment of U.S. secrecy laws and their enforcement. The CIA tried ambushing McGehee with a room full of lawyers, before they knew he hired a lawyer with the necessary security clearance to represent him. The CIA man assigned to work with McGehee made his feelings plain, telling him, "It's too bad you didn't work for the Israeli intelligence service. They know how to deal with people like you. They'd take you out and shoot you."

McGehee's original manuscript contained nothing that he felt was classified information, and he was careful. The CIA made 397 deletions from his original draft, after retracting hundreds of their more whimsical deletions, made before discovering that he had obtained competent counsel. The legal battle took more than two years, and the CIA went around in circles. They would permit certain passages after battling with McGehee, then they would retract that permission, then grant it again, then take it away once more, and on different grounds each time. The CIA's effort was an incredible feat of double-talk and duplicity. At one point, Ralph was threatened with prosecution for stealing state secrets if he could not prove that every fact in his book was obtained in the public domain. The published book is riddled with censorship deletions, with text such as "[19 words deleted]" in the middle of a sentence. McGehee states:

"John Marks and Victor Marchetti's book *The CIA and the Cult of Intelligence*, published in 1974 (9 years before McGehee's book), was the last approved critical book written about the Agency by an ex-employee. In light of my own experiences the reason is obvious: the secrecy agreement and the way it is abused by the Agency. It is virtually impossible to write in an atmosphere where everything is secret until it is deemed otherwise....It is clear that the secrecy agreement does not halt the flow of information to our enemies, for it does not affect the CIA employee who sells information...What the CIA's secrecy agreement does quite effectively, however, is to stop critics of the Agency from explaining to the American public what the CIA is and does. It is sad to say, but the truth is that the primary purpose of the secrecy agreement is to suppress information that the American people are legitimately entitled to."

For all the mainstream media's rhetoric regarding the First Amendment, freedom of speech in America has had a rough ride. From the [Sedition Act of 1798](#), making it a crime to criticize high-ranking American officials (not dealt with by the [U.S. Supreme Court](#) until 1964, in the *New York Times* versus Sullivan decision), to pre-Civil War Southern laws making it a crime to speak or write about abolition, to the [Espionage Act](#) that made it a crime to criticize World War I, freedom of speech has often been more imagined than real in America. During my lifetime, freedom of speech has waxed and waned.

The Freedom of Information Act (FOIA) would be unnecessary if the principle of freedom truly guided the American legal system. The FOIA was originally passed during the Civil Rights days of the 1960s. The Nixon years saw the FOIA erode. The aftermath of the Watergate scandal tipped the scales back toward freedom. The Carter years saw a new openness in government and a focus on human rights, but that is relative. Under no U.S. president have we truly had freedom of information, nor have [human rights concerns](#) ever prominently guided America's foreign policy. Knowledge is power, and keeping information secret is a time-honored method

of amassing and maintaining power. The United States is no exception, and there is no reason why it should be. People can wave around the [Constitution](#), but America's freedom of information is scant for a nation that calls itself democratic, and has gotten worse since the [World Trade Center](#) attacks. America's military and spy establishment has the largest secrecy apparatus of any nation, by far.

The rich and powerful run the Democratic Party, the same as in the Republican Party, but the Democratic Party sometimes has at least an *appearance* of allegiance to average Americans. The FOIA has endured many vicissitudes in my lifetime, with the [Reagan-Bush](#) years witnessing the greatest assaults on the FOIA. The Reagan administration even tried *reclassifying* previously declassified information used in McGehee's book, to enter bizarre, Orwellian realms. [Bludgeoning Central America](#) was one of many dark acts committed during the Reagan-Bush years, and secrecy was its handmaiden, evident in the Iran-Contra scandal, among others. Although the pendulum swung marginally back to freedom's side during Bill Clinton's reign, freedom of speech in America is a farce if one offends or exposes the powerful. Today, the "anti-terrorist" legislation Clinton has championed, and his recent "Fortress America" ideas of protecting America from "terrorists," can easily be used to silence American critics of our government, by calling them "terrorists." Those fears, voiced continually in right wing circles, are not so farfetched (events since the [World Trade Center attacks](#) make the above writing quite dated, as [Bush](#), Ashcroft and friends seem to be trying to raise McCarthy from the grave).

To date, Ralph is one of a handful of ex-CIA employees to publicly criticize the CIA. Ralph does not agree with me, but I believe he did not attain his realizations due to his intelligence, which is considerable. He figured it out because he fervently digested his indoctrination and believed that his efforts made the world better. Because he was such a true believer he chased experiences (such as volunteering for Saigon in 1968) that eventually provided him with his devastating revelations. When he realized that his efforts helped murder millions of people in Southeast Asia, his conscience assailed him. His pure heart enabled him to figure it out, not his intelligence.

I can only wonder how often Ralph thinks back to those Southeast Asians that he "helped," abetting their horrific experiences at the United States' bloody hands. He probably thinks about it every day. His CIABASE and other efforts have been attempts to help balance *his* scales, while helping us awaken, to help prevent further murders in greed's name. Unfortunately, it is happening in [Iraq](#) today, and Armageddon might be just around the corner. Ralph's weathering of the CIA's continuing harassment has been inspiring. [John Stockwell](#) (another rare ex-CIA employee who spoke out, and has paid dearly for his efforts) has written, "More effectively than any other ex-CIA author, Ralph McGehee deals with the anguish of a principled man seeking a career in the CIA."

Ralph is the rare individual possessing the integrity to walk his arduous and heartbreaking path. Of the many thousands who have filed through the CIA's ranks during the past fifty years, Ralph is in an elite company of less than ten people who woke up and took a public stance. That list includes Philip Agee, John Stockwell, Victor Marchetti and David McMichael. There are not many more, and probably no others of their stature. They have my admiration, and even my awe. None of them think of themselves as heroes. As [Noam Chomsky](#) says, their motivation is partly being able to look themselves squarely in the eye while shaving. They are responding to the insistent call of their consciences, and feel compelled to act. Ralph McGehee and those few others like him rarely see themselves as heroes, but are doing what any decent person would do. The problem is, few will do the decent thing if it might really cost them. I will always be grateful for the "heroic" efforts of McGehee, Chomsky, Agee, Stockwell, McMichael, Marchetti, [Dennis Lee](#) and others. They helped me figure out how our system works.

Wade Frazier, Seattle, March 1999 (slightly revised since original publication)

P.S. in 2004, [John Perkins](#) spoke out like Ralph did, but from the privatized “middle management.”

The Big Cover-up

Introduction

I was born in 1958, and had a fairly typical middle class suburban American childhood (fan of *Gilligan's Island* and *Star Trek*). I was largely raised in Ventura, California; my mother ran the household while my father worked to support the family. His entire career was spent working for the federal government, and all but one year was spent working for the Department of Defense. The nearby military bases employed most of the area's professionals, so some of my friends' fathers (as well as several of my father's friends) also worked for the military. If anything, the political outlook I was raised with was fairly Cold War, but not too pronounced. I was taught that the Soviets were the bad guys, and my family generally supported politicians

from the Democratic Party. My father was rather outraged when Nixon won the presidency in 1968, and I was saddened when Reagan beat Carter in 1980. My political outlook was a fairly mainstream one, which means that I was ignorant. I read the newspaper virtually everyday, from age 10 to 27, thinking that I was getting the “[news](#).” I had some [spiritual training that came in handy later on](#), but I was like most people of my age, assimilating my indoctrination. I kept my eyes open to see how closely reality matched my ideals, because I *needed* to honestly believe in my ideals.

Upon graduating from college, I had a rather rude awakening, and [indoctrination and ideals brutally collided with reality](#). I eventually realized that my profession was [virtually worthless](#), although that full realization was not clear for several years. Then I met [Dennis Lee](#), and was able to live my dreams of trying to bring alternative energy to the world. After meeting Dennis, I had a very rude awakening. That was when my political education began in earnest. Our efforts at developing alternative energy were definitely the targets of conspiracies. Policemen and others committed felonies while pursuing us, [leading to the death of one woman](#). We received offers to buy us out, which culminated in an offer probably in excess of \$1 billion, to bribe us to stop pursuing alternative energy. When [Dennis rejected the offer](#) made by “European interests,” given through a [CIA man](#), a month later Dennis was [thrown into jail](#) with a million dollar bail, on fabricated charges.^[1]

As Dennis attained national visibility with his free energy promotion, numerous people approached us who had tried similar ventures, and we were told nightmarish stories of being [wiped out by conspiratorial activities](#). Kangaroo courts, prison and murder; threatening phone calls in the night and hiding from the murderers were common tales, the kind that few Americans hear first-hand. It became obvious that the [energy industry](#) has maintained its technological monopoly by using extremely dirty tactics. It is one thing to hear the tales; it is quite another to live through them.

The first alternative political literature I read, other than the [Christian Science Monitor](#) (which is only *slightly* alternative), was conspiratorial literature, from conspiracies regarding instigating our wars, to [controlling the banking system](#), to eliminating the United States’ sovereignty. While Dennis was still in jail, I was introduced to [Noam Chomsky](#) and the political left. Ever since, I have studied scholarship such as Chomsky's far more than right-wing scholarship. I consider left wing scholarship superior. They both explain how the world works. Their perspectives can be divergent, but sometimes are nearly identical. It can be hazardous to over-generalize, but right-wing scholarship is often centered on conspiracies, while left-wing scholarship is more interested in the “structural” aspects of our system’s workings. The right sees the activities as more conscious (conspiratorial), while the left sees it as more unconscious (structural, institutional behavior). It probably has something to do with their spiritual outlook, with fundamentalist Christians populating the right, and scientists and rationalists populating the left. Both have their creation myths. The Christian right has the book of Genesis, while the left has the Big Bang and evolution. One was conscious, while the other was a big and unfathomable accident.

[Each perspective](#) has its strengths and weaknesses. The right can veer into outright paranoia, seeing a conspiracy behind every bush, ignoring or underplaying the structural aspects of what is happening. The police may throw people in jail for [curing cancer](#), but may not know the real reason they threw them in jail (or [even care](#)). They were just following orders.

The left often suffers from what Michael Parenti terms a “[conspiracy phobia](#).”^[2] It has a tendency to see everything as a big accident, with institutional forces at play and few, if any, individuals really controlling a

situation's outcome. It seems afflicted by too-often rejecting the notion that people can be consciously malicious and act in concert. Only a small proportion of our populace is devoted to "evil." In the minds of those devoted to "evil," they are simply devoted to themselves. They see themselves as good guys, too. The dark path is simply being devoted to one's self at the extreme, and they have made [self-service a science](#). All the same, conscious evil is a small fraction of how the world works, which [even Hitler admitted](#). The rest is due to people's actions when they feel threatened with loss, enticed by gain, and so forth. Those on the dark path easily manipulate the herd of average people, who are preoccupied with comfort and survival.

Gary Wean and the JFK Assassination

[In early 1989](#), it appeared as if Dennis had no chance of living to see this side of the bars again. There were a handful of people trying to save him from life in prison, and probably being murdered while he was in there. Although our effort was the target of a wide-ranging international conspiracy, Ventura County was also one of the United States' most corrupt counties, regularly ranking in the top ten most corrupt law enforcement jurisdictions (it has even been ranked number one). Dennis was far from alone in being raped by Ventura County's legal system.

In Ventura County, one person in particular was standing up to the corruption. Gary Wean was a sailor in World War II and became an LAPD policeman in 1946. Gary had the kind of career that they make movies about. He moved back and forth between Ventura County and Los Angeles a couple of times in the 1950s and 1960s. While in Los Angeles, Gary was at times a motorcycle cop directing traffic, while at others he was a detective. He worked out of the downtown and Hollywood precincts. Dealing with the escapades of politicians, celebrities and gangsters was simply part of his job.

In 1947, he was pursuing an armed robber through the streets of Los Angeles on a high-speed chase. The suspect crashed his car as it barreled along at ninety miles an hour through LA's streets. He tried escaping on foot, and Gary cornered him in the dark. The suspect begged for his life. As Gary approached, the man stuck his pistol (which had already killed somebody during the robbery) into Gary's abdomen and fired. He fired a second shot that hit Gary in his hand. Gary then emptied his pistol into the man, while his partner also fired, killing the robber instantly. Gary's partner rushed him to the hospital. Although Gary's abdomen was in great pain, he did not want to unbuckle his Sam Brown belt (a wide leather belt which held his firearm and other police equipment) as they rushed to the hospital, because he thought it might be all that was holding him together. When Gary finally took off his belt, his partner saw that the bullet hit the belt and did not penetrate Gary's skin.[\[3\]](#) That was a day in the life of an LAPD cop. Below are images from that day.

Click on image to enlarge.

Gary relates many amazing incidents in his book *There's a Fish in the Courthouse*. Gary was from the old school: he believed in the ideal of law enforcement, and that through a properly functioning legal system there could be a more just society.

When I met Gary in early 1989, he gave me the best advice I could get: no organization in America would help Dennis, either governmental or private. Dennis' experience was not that unusual. U.S. judicial gangsterism was normal, but nearly always [covered up or misrepresented by the media](#), as they are an integral part of the system. Gary's advice kept me from wasting my time seeking somebody in the United States government to help. Gary's insight helped lead to Dennis' miraculous release from jail. In my hour of need, Gary was generous with his time, sincere, and helpful.

The first edition of *There's a Fish in the Courthouse* was published in 1987, and tells of an incredible meeting that Gary attended in late 1963. One of Gary's friends was [Audie Murphy](#), America's most decorated war hero who became a Hollywood movie star. During World War II, Murphy took on hundreds of German soldiers and six tanks single-handedly near Holtzwihr France, while he was firing a machine gun from atop a burning vehicle filled with explosives. It stands as one of the most heroic feats from any war. Murphy suffered from "shell shock" (now called Post Traumatic Stress Syndrome) for the rest of his life.

One of Murphy's friends was Bill Decker, the sheriff of Dallas County. Decker came to California regularly on business, and when he came to town, Gary would arrange for Murphy, Decker, himself and his partner to dine at the Police Academy. About two weeks after the JFK assassination, in early December 1963, Decker was in town and they all had lunch together. The topic of conversation quickly turned to what arms experts across the nation were discussing: how could Oswald have made those shots with that poor shooting position and mediocre rifle to kill John Kennedy? Nobody at that table thought it was possible for Oswald to have made those shots. After they arrived at their conclusion, Decker told them that he *knew* Oswald had not fired the shots, and that a man in Dallas wanted to talk to somebody about it. Oswald died while being transferred to Decker's custody. Decker knew somebody who could set the record straight, and wanted to talk to somebody not connected to Dallas or Washington. Murphy was interested, and the next week, Murphy, Gary and his partner were flying to Ruidoso, New Mexico to meet Decker and his friend.

They met at the airport and went to a diner to talk. The man who came with Decker was named John. According to John, Oswald was anything but a "lone nut." He was a U.S. intelligence agent acting under the direction of E. Howard Hunt. Oswald had been recruited into military intelligence when he joined the Marines. His hanging out in an expensive Tokyo nightclub as a private, his learning Russian at the highly sensitive U-2 base in Japan, his defection to the Soviet Union and other oddities were all part of his intelligence career (which probably began even before his Marine days, when he was a cadet in 1955 in David Ferrie's Civil Air Patrol unit. "Coincidentally," Oswald began his "fascination" with communism at the same time). Oswald was developing "communist" credentials for his future activities in infiltrating communist organizations. It was a fairly normal American intelligence path.[\[4\]](#)

Oswald was inducted into CIA covert activities and came under Hunt's direction. Hunt was a major player in mounting the failed Bay of Pigs invasion, and he, as with many others in the military and CIA, blamed Kennedy for the failure (Kennedy refused to call in openly American air support). Hunt dreamed up the crazy assassination attempts on Castro that the United States tried. His mission in life was eliminating Castro. Oswald came into his control, and was thrown into the cauldron of the Cuban exile communities in Miami and New Orleans. Oswald did not initially know what his mission would be.

Hunt was paranoid about Oswald's Russian wife, thinking that she might be a Russian spy, so Oswald could tell her nothing about his activities. Oswald's joining Fair Play for Cuba and his staged "murder attempt" on General Walker were all part of giving Oswald "credentials" that would make his upcoming performance more believable. Hunt had concocted the most bizarre assassination intrigue of all time. Oswald was going to participate in a fake assassination attempt on John Kennedy, and frame Castro for it. Oswald's apparent visit to the Cuban Embassy in Mexico City was part of laying an elaborate trail to Cuba. Hunt believed that if Castro could be implicated in an assassination attempt on JFK, the American people could be riled up into supporting an outright invasion of Cuba.

JFK was not aware of the fake assassination plan, but high-ranking officials in the government and his administration were. Military intelligence, the FBI and the CIA were all involved. Oswald was initially leery of Hunt's plan, but with assurances and after seeing the high-level people involved, he went along with it. Oswald was to fire his rifle into the air, then go into hiding, and the false trail to Cuba was laid. He could come home to a hero's welcome and live a normal life after America had finished mopping up Cuba.

But something went horribly wrong. The fake assassination turned into a real one. Somebody had infiltrated the operation, interposed the mission and killed JFK. The real assassins tried killing Oswald after JFK was killed, but policeman Tippit was in the wrong place at the wrong time and was killed. Oswald escaped, to be captured alive. John said that he knew that Oswald would not have shot a policeman under any circumstances.

At the end of his mind-blowing tale, John handed over a thick manila envelope, sealed with wax with a thumbprint on it, that contained the documents John said would prove his story.

Murphy, Gary and his partner went back to California. They knew that the situation was too big and dangerous for them to pursue. John said that if he went public with his story, he would quickly disappear, never to be heard from again. A few days after that meeting, Decker called Murphy. As John was telling his story, the CIA and intelligence community was in shock. They did not know what to do, paralyzed with fear. As they recovered from their shock, they saw themselves facing the firing squad if their involvement in the assassination intrigue became known. The intelligence community decided they would do everything they could to cover their tracks, invoking "national security." Decker told Murphy that John had given him the envelope of documents in a moment of panic, and that if Murphy did not give the envelope back, he would be "destroyed." Murphy did some fast thinking and told Decker that they had torn the envelope into pieces and threw them out of the airplane as they were flying back to California.

That is what Gary says he witnessed, and I believe him. In the first edition of his book, Gary hid John's identity. Because John was dead when Gary published the second edition of his book in 1996, Gary revealed that "John" was John Tower, the Senator from Texas and George Bush's little buddy who he nominated to be the Secretary of Defense.

Gary wrote his book in the early 1970s. New evidence keeps coming to light regarding the JFK assassination. Because of what Gary saw, I knew that Oswald was not a lone nut. The center of gravity of my research into the JFK assassination has been to see how it correlated with Gary's testimony. Every piece of credible evidence I have seen supports Gary's story, and none contradicts it. Particularly impressive has been the recent revelations of [Operation Northwoods](#), where the U.S. government was going to stage terrorist acts in America to manipulate Americans into supporting an invasion of Cuba. Gary's story touches upon many facets of the JFK assassination evidence, including Oswald's military intelligence days, his association with the Cuban exiles, the "Texas Connection," the "Republican

Connection,” the oilman connection, the George Bush connection, the CIA connection, the FBI connection and others. Up until now (2002), Gary's testimony has been ignored by virtually everybody involved in investigating the JFK assassination. Gary is the only surviving member of that meeting with John Tower. Tower and Murphy both died in private plane “accidents” that may not have been accidental.

Gary's career ended in Ventura County when he stumbled into corruption that boggles the mind. Gary names names, and I knew some of the people he named in his book, and knew of many of the events. I independently believed his version of some events before I met him. When he encountered the corruption in Ventura, which ended his career, he fought back and survived a [murder attempt](#) himself. Those who run Ventura County are judges on the Superior Court, real estate developers, politicians and the like. According to Gary, political murder was common in Ventura County, where judges, lawyers and other people who got in the way or were expendable were murdered, sometimes by private plane “accidents,” mysterious drownings, etc.

Hollywood has made many movies and TV shows about the police and crime in Los Angeles, especially during the 1930s, 1940s and '50s, such as *LA Confidential* and *Chinatown*. Gary worked out of the downtown and Hollywood precincts during his days as an LAPD cop. Later in his career, he became an investigator for the LA District Attorney's Office. In the early days of Gary's career, he was assigned to keep watch on Mickey Cohen, who ran LA's organized crime operations. Cohen, Bugsy Siegel and Meyer Lansky were Jewish gangsters. Siegel “built” Las Vegas. Cohen ran the LA crime scene for many years. In typical gangster style, Cohen's hangouts were often boxing arenas, racetracks, restaurants, etc. Gary followed Cohen around as part of his job. One member of Cohen's entourage, who Gary saw regularly, was an aspiring lawyer who sat on the Ninth District Federal Court for many years. I saw his name in the news a few years ago, and he is still a judge, at nearly 80 years of age in 2002. The man is a gangster, and a federal judge, and the media and establishment has been lavishing praise on him lately, with awards and hagiographic articles.

The connection between Frank Sinatra and organized crime is one of many in the entertainment field (or the CIA, or [George Bush](#), or Joe Kennedy, or entertainment and law enforcement, such as Elvis Presley and the FBI, or the FBI and organized crime). Along with good food and pretty women, first-class entertainment is another gangster perk. Gangsters keep entertainers as their “pets” when they can. The Las Vegas connection and entertainment is a case in point. Cohen was deeply involved in the Hollywood scene.

One of Cohen's specialties was blackmailing celebrities, such as obtaining compromising photographs of them to use as leverage. The Mafia had the goods on FBI director J. Edgar Hoover, a transvestite. Because of their blackmail, Hoover publicly denied organized crime's existence, and the FBI rarely tried prosecuting them. When Robert Kennedy prosecuted organized crime when he was Attorney General, he was breaking the unwritten rules.

One of Cohen's successes involved Lana Turner. Johnny Stompanato was a good-looking, aspiring Italian gangster, one of the gangster wannabees that filled Los Angeles in those days. The LA hookers said that the Italian Stallion Stompanato was the best bedroom performer in LA, and Cohen arranged for him to meet Turner. The romance flourished. Cohen paid for a deluxe motel suite for the lovers. The bed was wired for sound. Cohen got a recording of Stompanato and Turner going at it. Cohen had two thousand copies pressed of Turner's squeals of ecstasy. It became a hit at Hollywood parties. Some said that it was one of Turner's finest performances. It made Cohen a lot of money, as he sold the record for fifty dollars a copy. Turner's daughter eventually murdered Stompanato, creating one of Hollywood's bigger scandals. That

recording became the “must have” item after Stompanato’s death, and Cohen pressed thousands more records, making big money.

As Gary followed Cohen, sometimes putting him under sophisticated surveillance, Gary met members of Cohen’s entourage. In 1946, Gary saw somebody new with Cohen at the racetrack. In 1947, he bumped into him at a restaurant he was watching. The man knew Gary was a cop, yet they had an interesting conversation. The man introduced himself as Jack Ruby. His real name was Jacob Rubenstein, and he worked with Mick Cohen. Ruby openly told Gary that the mob was focusing its operations on New Orleans and Havana, where the action was. With World War II over, the West Coast was not really the happening place anymore. Ruby murdered Oswald, and Gary presents intriguing evidence regarding the organized crime connection with the JFK assassination.

In 1948, the state of Israel was established. Menachem Begin eventually became Israel's Prime Minister. Begin was a member of the [Irgun terrorist group](#). He helped blow up a hotel, killing many people. When Begin was the Israeli Prime Minister, he could not visit Britain, because he was wanted for murder there. The people who established Israel were extremely violent. Mick Cohen became involved with Begin, and became an arms dealer for Israel, which is not surprising to anybody who has done any digging into the [CIA's alliances](#). Cohen said that his Jewish blood made him such a fervent supporter of Israel, but he was likely in it for the money, as usual.

In Israel’s early days, their relationship with the United States was not happy, and was particularly troubled during the Eisenhower administration.^[5] It was not until the war of 1967, when [Israel proved itself a murderously aggressive power](#) in the Middle East, grabbing huge chunks of land from its neighbors, that the United States began its massive and unconditional support of Israel, which is the biggest foreign aid project the world has ever seen. In 1960, the U.S. presidential election was between Nixon (Eisenhower’s vice president) and John Kennedy.

Kennedy was a legendary philanderer, and Cohen and friends tried exploiting JFK’s proclivities. According to legend, John Kennedy met Marilyn Monroe through a connection with Frank Sinatra. Right there is a possible organized crime connection, but Gary says that another member of the “rat pack,” Joey Bishop (who knew Cohen well - Gary says that Bishop even *worked* for Cohen), came up with the idea of introducing Monroe to JFK, and Gary looked in on Peter Lawford’s (JFK’s in-law) Malibu party where JFK and Monroe were introduced, in 1960, during the Democratic national convention.

As with Stompanato and Turner, Cohen underling Georgie Piscitelli became Monroe’s lover. Cohen got a tape of them in bed together and played it for Jimmy Hoffa, the Teamster boss who later received cement shoes from the Mafia, and who was then feeling the heat from Attorney General Bobby Kennedy. They promised Hoffa a tape of JFK and Monroe in bed together (so Hoffa could blackmail JFK into calling off Bobby Kennedy’s efforts), but could never deliver. Monroe was being used as the world’s highest-class hooker.^[6] Cohen and friends wanted to know what Kennedy's intentions towards Israel were. Monroe was supposed to elicit it during pillow talk. Monroe was controlled by mobsters and was kept on all manner of narcotic. When she became increasingly uncontrollable and potentially dangerous if she publicly talked about what was happening, she was murdered. Gary had Cohen under surveillance, and caught him and Begin having a conversation in Yiddish in a diner. They were talking about Kennedy, Israel, how much money Kennedy was wasting on the Peace Corps and other programs.

Gary’s testimony regarding JFK, John Tower, Marilyn Monroe, Menachem Begin, Jack Ruby and Mick Cohen is just part of his amazing tale, which he published at great risk. The only JFK assassination book I

am aware of that even mentions Gary is *Final Judgment*, by Michael Collins Piper, who heavily relies on Gary's testimony. Gary thinks that Jewish gangsters were involved in interposing Hunt's grand scheme. That does not mean that [Allen Dulles](#) (the CIA chief whom Kennedy fired over the Bay of Pigs, and who later served on the Warren Commission), J. Edgar Hoover, [George Bush](#) and others were not also involved in interposing Hunt's scheme, playing Hunt for a chump.

Piper is a reporter for *The Spotlight*, which I subscribed to for years. It has understandably been described as a neo-Nazi, anti-Semitic publication. The culmination of Gary's book is uncovering a vast Jewish crime organization. It is different from the Italian Mafia, as its members are judges, politicians and other public figures. It is a highly intelligent crime organization, using the pen more than the gun to achieve its goals. The most powerful criminals do not *break* the laws: they *make* and *enforce* the laws, to serve their own interests, not the public's.

Gary has suffered greatly at the hands of Jewish gangsters. Consequently, I believe he has taken his Jewish theorizing a little too far, but it is understandable. [During my days with Dennis](#) and the horror I lived through, I thought policeman and [lawyers](#) were among the lowest forms of life. I have since revised my views, but I understand how brutal treatment at the hands of Jewish gangsters can lead to overgeneralizations regarding the Jewish people.

[The Jewish people have had a very rough ride](#), especially at Christendom's hands. The flocking of Jews to Southern California was just one more chapter in their long journeys, trying to find a place in the Christian world where they would not be discriminated against, or murdered en masse. Consequently, Jews entered new industries such as the entertainment industry in Hollywood, and some took advantage of Prohibition, just as Italian criminals did. Cohen, Siegel and Lansky were part of a uniquely American phenomenon. What Gary ran into, a Jewish underworld where the criminals were bankers, judges, lawyers, politicians and others, is an understandable Jewish variation of organized crime. The Jewish gangsters also sought "invisibility," which is also common in corporate and other power games.

Even though Gary has taken his theorizing about the Jewish people too far, he is correct when he says that Jewish apologists have been using the cry of "anti-Semitism" as a club to prevent anybody from criticizing Israel (and Gary says the same tactic prevents the exposure of Jewish gangster activities). Noam Chomsky says the same thing about how the cry of anti-Semitism is being used to deflect criticism of the Israeli state.^[7] So does Native American scholar Ward Churchill.^[8] Jewish scholars are definitely guilty of [playing up the Jewish Holocaust](#) and its imagined historical exclusivity, to the point where some have denied the Gypsy Holocaust of World War II. Gypsies were subject to the same extermination policies as the Jews were, dying alongside the Jews in the same death camps. All the same, the far-right scholarship that argues that [the Jewish Holocaust never happened](#), or was never intended by the Nazis, is, in the words of Ward Churchill, "tripe." If one is not familiar with scholarship's "rules," the-Jewish-Holocaust-Never-Happened scholarship can appear reasonable. Far right scholarship on the subject is extremely biased, and is often appallingly bad. Typically, they use a few "facts" to establish their arguments, but then liberally add rumor, supposition and fabrication into the mix to construct their hypothesis.

All disinformation has "truth" and "facts" in it (which is what makes it plausible), and to the uninitiated can unfortunately be convincing. Probably the main reason Gary's testimony is dismissed is because of his fervent writings about Jewish gangsters, and generalizations about the Jewish people that can easily be labeled anti-Semitic. In 1998, I submitted a brief essay about Gary's testimony to a JFK assassination forum, and the only response was to flame me, call my writing a "fairy tale," call Murphy a "coward" and Gary a "Nazi." Yet, Gary's theories have virtually nothing to do with what Gary says he witnessed. I

believe everything that Gary says he saw, including his meeting with John Tower, and Jews do not come up in the John Tower conversation at all.

The surfacing of the [Operation Northwoods](#) documents in 2001, however, may make Gary's testimony vastly more credible, as Tower's tale is very similar to the plans as depicted in the Operations Northwoods documents. I have spent hundreds of hours looking into the JFK assassination evidence since 1989, and I have never seen any piece of credible evidence contradict Gary's testimony, and evidence has kept appearing during the past fourteen years that keeps confirming it. The next section will deal Gary's account of John Tower and JFK, and how it fits today's evidence.

Assessing the Credibility of Gary's Story, and How it Fits the Facts

Up until now, Gary's testimony regarding Tower and JFK has been ignored by, or unknown to, nearly everybody involved in the JFK assassination controversy. This section is written in the hope that the recent [Operation Northwoods](#) revelations will spark more interest in Gary's tale. James Bamford, the author who brought the Northwoods documents to American attention in his *Body of Secrets* (an Australian work, Jon Elliston's 1999 *Psy War on Cuba*, first publicly disclosed the documents, but the book was ignored in the U. S.), wrote that the Northwoods plan "may be the most corrupt plan ever created by the U.S. government."[\[9\]](#) There is plenty of competition for "most corrupt plan" in American history.

George Washington, probably America's richest man when he became president, whose fortune was anything but "clean," designed the blueprint to [steal the North American continent](#) from Native Americans, by forcing them to cede their lands in treaties that the U.S. government would never honor. Washington's plan was quickly adopted by the Continental Congress, and was U.S. official policy until there were virtually no more native lands left to steal. Thomas Jefferson told Big Lies to both the [British](#) and [Spanish](#) ambassadors about U.S. intentions toward North American lands. The U.S. government [during the 19th century](#) was more openly corrupt than in the twentieth century.

The 20th century began with the U.S. consolidating its theft of the last shreds of Spain's colonial lands, which began with robber baron William Randolph Hearst whipping up the American people to invade Cuba, to "free them" from Spain (under the false pretense that Cuba sank an American warship in Havana Harbor). The lie of the U.S.' "noble intentions" was immediately laid bare when it also [seized the Philippines](#), and then engaged in a genocidal attack against the Filipinos when they tried becoming independent of the new imperial overlords. To the Filipinos, it mattered little if the overlords were Spanish, American or Japanese. While the U.S. was still digesting its land grabs from Spain, it engaged in its first experiment in neocolonialism, with the [outright theft and fabrication of Panama, separating it from Colombia](#), and then the U.S. immediately split it with the Panama Canal Zone. The United States [invaded Latin America at will](#) after the creation of Panama.

Panama was a free nation in name only. Wall Street lawyer [William Nelson Cromwell](#) ran the "free Panama" operation. He was a founder of the Sullivan and Cromwell law firm. In the Panama operation, Cromwell ran a syndicate largely bankrolled by J.P. Morgan, and the American taxpayer was ultimately swindled by their subterfuge, in the biggest single payment the American government had ever made, up to that time. John Foster Dulles inherited Cromwell's empire. Dulles became Eisenhower's Secretary of State, and his brother Allen ran the CIA. Both men were partners in Sullivan and Cromwell. Allen and John

Foster were particularly fond of Nazi Germany, heavily investing in it during the 1930s. After World War II ended, Allen quickly “rehabilitated” [Hitler’s biggest cheerleaders in German banking and industry](#), and put them right back into the positions they enjoyed while supporting Hitler’s regime.

John Foster Dulles’ behaviors while serving as Eisenhower’s Secretary of State added a new word to the dictionary: brinksmanship. Dulles’ notion of diplomacy with the Soviet Union was threatening it with nuclear attack. The Cromwell-Dulles empire was quite active in Latin America. One of Sullivan and Cromwell’s clients was the Rockefeller-owned United Fruit, which “owned” Guatemala. In 1951, Jacobo Arbenz became Guatemala’s president, and he nationalized some of United Fruit’s unused land, with a plan to compensate them for it. Arbenz was a fan of Franklin Roosevelt, and tried building a New Deal-style economy in Guatemala. Citing the “international communist conspiracy” fantasy, the Dulles brothers [engineered the overthrow of Arbenz in 1954](#), and the Guatemalan people were treated to a string of brutal U.S.-puppet-dictators for more than the next thirty years, which took hundreds of thousands of lives, while the entire nation (except for the ruling class) lived in misery. The year before overthrowing the Guatemalan government, the Dulles brothers reacted to Iran’s attempt to nationalize Britain’s oil monopoly [by overthrowing the Iranian government](#). The U.S. began taking over Middle East oil on behalf of the American oil companies, which “coincidentally” also served Rockefeller interests. The Shah’s reign was one of the bloodier chapters in modern Middle East history.

The 1950s also saw the U.S. invasion of Korea, and millions were killed. Those were also the years of the McCarthy witch hunts and the [marketing of industrial waste](#) to Americans as “medicine.” So, corruption was far from unknown, especially during that era, and far right, anti-communist hysteria was imbedded in America’s psyche as deeply as any catechism ever was. People such as Ralph McGehee eventually realized [what a Big Lie the anti-communist ideology was](#). It was a smokescreen designed to disguise and protect imperial/corporate prerogatives.

When Castro’s boys finally overthrew a U.S. puppet in Latin America in 1959, the super-hawks in the Eisenhower administration could barely contain themselves. As with most who have been called “communist,” Castro was originally simply an anti-imperialist, and Cuba has long had Latin America’s highest standard of living, ever since the Cuban Revolution (there are no homeless in Cuba, something the U.S. could learn from). The thought that other Latin American nations might follow Cuba’s example and break free of American domination was intolerable, and in the 1960s and 1970s the U.S. overthrew more than a dozen elected Latin American governments and installed U.S.-backed dictatorships, some of which were among the 20th century’s bloodiest regimes.[\[10\]](#) The official reason why America has named Cuba a pariah nation, and led economic warfare against it for more than forty years, is because of its “human rights” violations. The American-puppet governments in [Guatemala and El Salvador](#) during the 1980s make Castro’s Cuba appear saintly on the human rights issue. The same goes for today’s Colombia (earth’s most violent nation), as the [Colombian government](#) receives vast sums of arms from the U.S., to “fight terror.” The rationale used to be to fight “communists,” and then “drug dealers” after the Soviet Union collapsed, and now we are fighting “terror” in Colombia. What will the next rationale be? The same peasants are being killed, and the same oil companies are rubbing their hands at the prospects of exploiting the region.

Eisenhower was rather incensed that the Cuban Revolution came during his watch, and asked his military leaders to “think of manufacturing something that would be generally acceptable” to justify invading Cuba. Eisenhower even harbored those ideas as a lame duck president, soon before JFK’s inauguration.[\[11\]](#) Shortly before Eisenhower left office, he appointed a hawk among hawks, General Lyman Lemnitzer, to be

the chairman of the Joint Chiefs of Staff (JCS). Lemnitzer thoroughly distrusted civilian politicians, and felt that the military should run the American government. Ironically, Lemnitzer's kind may be just what Eisenhower was warning against when he ominously spoke of the growing power of the "military-industrial complex," three days before he left office.

The antagonism between the military and CIA goes back to World War II, when Wild Bill Donovan and other Wall Street lawyers and executives founded and ran the Office of Strategic Services (OSS - the [direct forerunner of the CIA](#)), and they prevailed in the battle over who ran the U.S. intelligence scene, and quickly [hired Nazis to staff the CIA](#) after World War II was over.

JFK came to office as the CIA was about to mount an invasion of Cuba. Lemnitzer knew it would be a disaster, but remained silent. The Bay of Pigs debacle cost Allen Dulles his job, but did nothing to cool the hawks' ardor. While E. Howard Hunt, who planned the Bay of Pigs operation (and would later plan the Watergate break-in), was devising plans to assassinate Castro, with plans seemingly out of Maxwell Smart's spy manual, General Lemnitzer and friends devised plans to justify invading Cuba, and Operation Northwoods was conceived. Although some caution is warranted regarding the authenticity of the [Northwoods](#) documents, they are in step with the times, and what the Joint Chiefs of Staff were thinking in those days. Not even the establishment-defending mainstream media is disputing the documents' authenticity. Only some of the far right fringe is disputing them, to my knowledge, and they have yet to make a persuasive case. The documents appear genuine, and only came to light when Oliver Stone's film *JFK* inspired the creation of the Assassination Records Review Board (ARRB), which was formed in 1994.

An ARRB member allegedly tipped off Bamford as to the documents' existence, and they might be the only documents like them to survive Lemnitzer's document-destroying fervor. What kinds of plans are in the Northwoods documents? An early idea was to stage a fake attack on the Guantanamo Bay naval base in Cuba. The Northwoods ideas became increasingly extreme, and one plan was blowing up the rocket that John Glenn was about to fly in, and pin it on Cuba somehow. They planned plane hijackings and bombings of American cities. One plan that has received attention from the 9/11 conspiracy theorists was to stage an incident over Cuba with a drone plane made to look like an airliner. The plane would self-destruct over Cuba, to make it appear as if the Cubans shot it down. Lemnitzer reported to John McNamara, JFK's Secretary of Defense. Lemnitzer increasingly fell from grace in the JFK administration, and a few days after Lemnitzer tried broaching his grand plan to McNamara, JFK told Lemnitzer that there was no chance of the U.S. ever using direct military force against Cuba. That was in 1962, and Lemnitzer soon lost his job as the JCS chairman, but Bamford wrote, "Even after Lemnitzer lost his job, the Joint Chiefs kept planning 'pretext' operations at least into 1963."[\[12\]](#)

Having the military and government cooking up plans, no matter how insane, bloody or evil they might seem, does not mean they were ever approved or implemented. When McNamara was confronted with the Northwoods revelations, he denied that Lemnitzer ever showed him the plan, which may have been true. JFK's speechwriter Theodore Sorensen also denied such a plan, saying that it would have been "illegal" and "unwise." Being illegal and unwise has rarely stopped the U.S. government from doing anything, particularly during the current "[War on Terror](#)" and impending invasion of Iraq. Before the Soviet Union set off its first nuclear bomb, the U.S. military had a plan for dropping [dozens of atomic bombs on the Soviet Union](#), and then using the U.S.' Nazi-allies to finish the job. Cooler heads prevailed, thankfully. Similarly, after the U.S. dropped atom bombs on Japan, there were still die-hard Japanese generals who did not want to surrender. The man who designed the kamikaze attack strategy proposed a post-Hiroshima plan to sacrifice about twenty million Japanese citizens [in a special kamikaze attack](#). Once again, sanity prevailed. It is not imprudent to believe that the Northwoods documents are genuine, and that Lemnitzer

and friends seriously pondered them.

Whether the Northwoods plan was ever implemented, or capable of implementation, is not the point of this essay. The point is that the Northwoods plan was *eerily* similar to the tale that [Gary Wean reported](#). The plan that John Tower spoke of seems to have been a CIA parallel to the JCS plan, or perhaps its offspring. The plans are so similar in aims and means, that to not take Gary's testimony seriously is to ignore the evidence. Not only are the plans remarkably similar, with one targeting the America public for "terror," and the other targeting the head of state, but it is widely recognized that the Gulf of Tonkin incident of 1964 was either exaggerated or fabricated by the U.S. government, in the spirit of the Northwoods plan, something that was not lost on Bamford in his latest book. I know somebody who worked for the U.S. Navy in 1964, and he told me that some of his work was used by the Navy to fabricate the Gulf of Tonkin incident. The Gulf of Tonkin incident initiated the devastation of Southeast Asia, which [killed several million people](#), and the U.S. government's motives were [obviously fraudulent](#).

Fabricating incidents to justify invasion is a very old game. The United States initiated/fabricated a border incident to justify the huge land grab known as the [Mexican-American War](#). Hitler probably had his boys burn the Reichstag to "justify" his police state, and Hitler's lads dressed up concentration camp inmates in Polish uniforms to fabricate a border incident to justify invading Poland, which began World War II. The [Japanese attack on Pearl Harbor](#) was certainly no "surprise" to the American military brass, and there is substantial evidence that the American men in Pearl Harbor were sacrificed to lure the isolationist American people into World War II. [Michael Ruppert](#) and others have presented compelling evidence that the [World Trade Center](#) attacks had prior knowledge by many people, and may have been "allowed to happen," with foreknowledge perhaps extending to the White House. In 1998, [Zbigniew Brzezinski](#) openly bragged about the U.S. arming and inciting the Afghani "rebels" as a way to lure the Soviet Union into Afghanistan and its "Vietnam." Brzezinski's little plan killed and/or devastated many millions of people, as he played his global chess game. Thinking that Hunt's alleged plan is "too far out" is to be ignorant of history, and/or falling prey to the myth of American exceptionalism, as every nationalist ideology encourages.[\[13\]](#)

Gary wrote most of his book during the early 1970s, as he was trying to survive what the gangsters who ran Ventura County were dishing out, and his wife typed it up. He first published his book in 1987. Gary's book is more like a diary than anything else, and is certainly not a work of scholarship. Because I know Gary a little, and he and I [lived in the same milieu for awhile](#) (bearing the brunt of evil dished out by the same people), and I got to see his integrity and helpfulness in action, I have always believed what he reports as his *experiences*. Not only did I have experiences like his, I have since come into contact with a man who was a policeman in Ventura when Gary was working there, and he has vouched for some events that Gary described, as he saw them too. Gary's *theories*, particularly about the Jewish mob and Jewish people, I have considerable skepticism about. True *skepticism*, however, means pursuing the truth, not dismissing something out of hand, with *a priori* reasoning, as the "[skeptical crowd](#)" has a penchant for. People who survive Gary's kind of experiences are not going to publish a book like his in the hopes that it makes a lot of money, or deceives the public, but to tell a story that needs to be told. In that regard, Gary is like [Ralph McGehee](#), [Rodney Stich](#) and [Dennis Lee](#), and he will always have my greatest respect for his courage and willingness to face the dark underbelly of our vaunted system, and try to do something about it. There are not many like Gary, whatever extremes of theorizing his arduous journey may have led him to engage in.

Even if Gary's timing of the Tower conversation is discounted (three weeks after the assassination), or when Gary wrote about it (about ten years later), many details of the Tower conversation did not come into public awareness until after Gary first published his book in 1987. The Northwoods documents and the

plans for framing Cuba have not come into public awareness until relatively recently. The revelations of what really happened between the U.S. and Cuba during the 1960s did not start becoming public knowledge until the 1990s, after the Soviet Union collapsed and documents began coming forward from the former Soviet Union. Ironically, researchers have often encountered more document availability in the former Soviet Union than they have in the United States. Some revelations have been chilling, such as the fact that during the 1962 Cuban Missile Crisis, when JFK administration hawks wanted to invade Cuba, there were already numerous nuclear-armed missiles in Cuba, aimed at the U.S. and ready to go. The Soviet commander in charge of the Cuban nukes admitted that if the United States had invaded Cuba, he would have fired the nukes. It is the closest the world has ever come to a nuclear holocaust, and it was only JFK's overriding his hawks that kept (a very short lived) World War III from happening. In light of those revelations, a plan to frame Castro to justify invading Cuba is right out of *Dr. Strangelove*.

A significant possible connection between Lemnitzer's plan and Tower's tale is General Edwin Walker. Walker was Lemnitzer's soul brother, Walker being a John Birch Society member, as well as a KKK member. Walker helped initiate a "race riot" in Little Rock in 1961, and handed out John Birch material to his troops. Walker's antics cost him his career, and a pre-JFK-assassination Senate investigation into Walker suspected that Lemnitzer was connected to Walker's efforts. Oswald's "assassination attempt" on Walker sure raises more suspicion than it did before the Northwoods documents surfaced, particularly in light of Gary's tale. To top it off, they supposedly let Oswald keep the rifle he "shot at" Walker with, so he could "kill" JFK with it. That is one of many astounding irregularities in Oswald's tale, vis-à-vis law enforcement.

The framing Cuba angle was certainly not in public awareness in 1963 or 1987, and I believe that only with the Northwoods documents, which did not come to American public awareness until 2001, that the framing Cuba angle has become publicly known as government policy. For cautious researchers, it would be most prudent to compare Gary's book versus what was publicly known in 1987. There is plenty of JFK-associated evidence that has come to light since 1987, which further confirms Gary's tale, but it will be up to other researchers, not me, to nail down what *all* those pieces might be. I want to paint a possible picture that accounts for Gary's reporting, and I have little doubt that the bulk of his reporting of the John Tower conversation is straight as Gary can tell it, with perhaps some minor shading of it, unconsciously, by events that happened after the Tower conversation, and before Gary wrote about it.

If Gary's tale is true, many people around the "fake assassination" project were unaware that it would turn into a real assassination, especially Lee Harvey Oswald. Up until 11/22/63, America was in denial about a lot of things, and the naïveté of Americans back then was fairly astonishing, with about 85% of Americans having "great faith" in America's institutions (governments, corporations, churches, etc.), a number that is only about 15% today (or even lower, in these "[War on Terror](#)," priest-pedophilia, [Enron](#) days). However, many lived lives of quiet desperation, with American housewives being the biggest customer class of Valium when it was introduced in the 1950s, to keep them doped up so they could try acting the part of June Cleaver; getting the newspaper, dinner, slippers and pipe ready for her husband, as he returned home from the office or factory.

Until the bullets hit JFK, Oswald, Hunt, Tower and quite a few others were probably being played as chumps by whoever pulled off the JFK hit. The fabrication of Oswald's trail to Cuba, his "commie" credentials and the like were probably not done as carefully as they would be today. That is because the American public was so trusting, they would swallow anything that officialdom told them. Whether that was in fact true, it is reasonable to think that Hunt and friends operated under that assumption. In Hunt's designs, the trail to Cuba would not be subject to much public scrutiny, and would only be needed until the Cuban invasion and Castro overthrow was complete.

Oswald was seen in the book depository lunchroom soon after JFK's shooting, and the Warren Commission had to construct an involved scenario to explain Oswald's alleged movements. The evidence tends to support the idea that Oswald sat in the lunchroom the entire time period surrounding the assassination.[\[14\]](#) If the mission was interposed, Oswald would have certainly not have been in the "sniper's nest" as a real assassination was being carried out. The likeliest series of events was that Oswald was told to go to the lunchroom and await further orders, or perhaps wait for a phone call. It is hard to say when Oswald realized that he had been set up, but it was probably less than a minute after JFK was shot. The "fake" plan would have called for Oswald to leave the building anyway, as even a fake hit would have brought plenty of attention onto the book depository. Because of the Magic Bullet's wildly improbable tale, I think it likely that people on the real assassination team set up the "sniper's nest."[\[15\]](#)

If Hunt's operation was infiltrated, it is hard to know just who was on the "inside" and who was not. Even on Oswald's "team," it is hard to know who was really on the inside in Dallas, and who was among Hunt's chumps. The story generally agreed upon is that Oswald left the book depository before police sealed the building, and walked seven blocks to catch a bus. He soon left the bus and took a cab.[\[16\]](#) Depending on what testimony and evidence is believed, Oswald entered the movie theater *before* policeman J.D. Tippit was murdered, or soon afterward. If Oswald was the intelligence operative Tower said he was, he may have had a "double," and the double may have been in town as part of the real hit team. Whatever the real events were, according to Tower's tale, Oswald realized that he was set up, and was doing his best to stay out of jail, and alive. He always referred to himself as a patsy, which is not the stance one would expect for an assassin.

If Tower's tale is true, Oswald's trail to Cuba may have been fabricated, perhaps including his trip to the Cuban embassy in Mexico City. The photographic record in his military and CIA files may well be fabricated or altered. If Tower's tale is true, there is little information that came from the FBI or CIA that can be relied upon, which includes nearly all the evidence that the Warren Commission considered, because the "investigators" for the Warren Commission were the FBI and CIA. The Warren Commission accepted at face value the CIA and FBI-produced evidence, with [Allen Dulles](#) on the commission (probably a case of the fox watching over the hens).

When Gary said that Tower spoke of Hunt inventing the "exploding cigar" tactic to assassinate Castro, it could have been a slight mis-remembrance by Gary, or Tower had it slightly wrong (those events did not become public until after the Watergate Scandal and the Church Committee began looking into the CIA's adventures, which was after Gary first drafted his book), as Hunt tried *poisoning* Castro's cigar, not make an exploding one.[\[17\]](#) That is a minor quibble with Gary's work. However, the big picture of Gary's story - that Oswald was an intelligence agent working for Hunt, to stage a fake assassination attempt to frame Castro - has a rich correspondence with [several lines of evidence](#). Gary's story fits startlingly with the main lines of evidence and speculation that has cropped up about Oswald, and there is enough uncertainty regarding various details that I have seen no credible avenue of evidence and theory regarding a conspiracy that Gary's testimony may not fit with. With the Northwoods revelations, the JFK assassination community can no longer easily dismiss/ignore Gary's testimony, as it has been doing for the past fifteen years. Joseph Milteer's prediction of the JFK hit has been taken seriously by most JFK researchers, even though he was a right wing, KKK-type of guy. Gary was a policeman and investigator, with a solid career going until he ran afoul of the gangsters that run Ventura County. Does him being Audie Murphy's friend count for anything, as far as his credibility? If nothing else, the Northwoods documents may end up giving Gary's tale due consideration.

Gary's experiences with Jack Ruby, Mick Cohen and the Jewish mob angle also need to be considered, as Ruby assassinated Oswald, and Gary *was there* in that milieu, even [chatting with Ruby in 1947](#) about the mob's plans for New Orleans and Cuba.[\[18\]](#)

In 2006, I encountered two Internet forums that were earnestly discussing Gary's encounter with John Tower and Audie Murphy. They were about the first worthy discussions that I had seen of that issue, and I discovered that Gary passed away in 2004. I had rewarding exchanges with one forum, and had some exchanges with an impressive investigator. The investigator told me that he does not know of any piece of credible evidence that contradicts Gary's story, and knows of no reason why his tale would not be true.

There are numerous lines of JFK evidence to pursue, an undertaking that could take the rest of a person's life. This essay will deal with just one aspect of the JFK assassination evidence in detail, and people can make up their own minds regarding the truth of the issue, and see if it is worth pursuing further.

The Backyard Photos

On the day of JFK's assassination, after Oswald was arrested, the police searched the home where his estranged wife lived. Oswald was accused of murdering the head of state of the world's most powerful nation, and the investigation was underway. It is difficult to imagine a murder investigation that would have been carried out with more zeal and thoroughness than that one. The Dallas police descended on Ruth Paine's house on November 22nd, where Oswald's wife Marina lived, and where Oswald stayed the night before. Ms. Paine let the police come in and search, even though they did not have a search warrant. Oswald's possessions were largely stored in Ms. Paine's garage, which was attached to the house. The police thoroughly searched the premises that day. It is difficult to imagine any significant items of Oswald's left in that house or garage after they searched it. That place should have been stripped to the walls, and indeed the police seized many items that day.

After the Dallas police thoroughly searched the place the day of the assassination, another search "discovered" two photographs the next day. In the photos, Oswald is shown holding the rifle and radical newspapers. In the two inventories the police made of Oswald's possessions, those photos are not mentioned. Also, detective Gus Rose, the man who discovered the photos, testified that he found two negatives. Only one has ever been produced (a vast amount of evidence disappeared during the JFK investigation, the second negative just one piece of many[\[19\]](#)). To add more intrigue to the photos' discovery, assassination researcher Jim Marrs talked with Robert Hester, a photo technician who assisted the FBI and police in the assassination's wake. Hester said he saw the FBI in possession of a *color transparency* of the backyard photo the *day before* the Dallas police "discovered" it. Unfortunately, with Hester since passing on, it is only hearsay by Marrs at this time, and always will be, although Marrs says Hester's wife also confirmed the story.[\[20\]](#)

Oswald was shown those photos the day after the assassination, when they were "discovered." What did Oswald say about the photos? He said they were not photographs of him, but photos of somebody else with his head pasted on, and that he had never seen the photos before. Oswald said that he would be able to prove that those pictures were fakes. All Oswald was able to prove was his mortality, as Jack Ruby gunned him down the next day. With Oswald dead and unable to defend himself, the wheels of the government and media turned, and Oswald was eventually pronounced the lone assassin of JFK.

During the Warren Commission investigation those photographs became known as exhibits 133-A and 133-B.

Warren Exhibit 133-A

Warren Exhibit 133-B

Click on images to enlarge

Life put 133-A on its cover in 1964. The negative to 133-A has never been produced. Only the negative to 133-B has been found. If that ended the tale of "discovering" the photographs, it would be enigmatic enough, but the plot gets thicker.

In 1967, George de Mohrenschildt discovered another version of 133-A in his possessions after he moved back to America from Haiti. De Mohrenschildt did not know where the photograph came from, and suspected it was planted there to further frame Oswald. The strange thing about de Mohrenschildt's photo is that it is a clearer picture than the original 133-A, and views area outside the frame of the original 133-A. There is wide-ranging speculation about that situation. How did de Mohrenschildt come to possess a higher quality photo than the original, and how was it developed? Those questions bring up issues of authenticity not easily answered.

To further add to the controversy, another backyard photograph was discovered in 1976 in the possession of the widow of Dallas policeman Roscoe White. That photograph is now known as 133-C. One speculation is that White pocketed the photograph when the other two were found in Ms. Paine's garage. If that is the case, he did not keep the photograph to himself. The position of Oswald in 133-C is markedly different from 133-A or 133-B. In 133-C, Oswald is holding the newspapers up in the air with his right hand, and the rifle in the air with his left. Neither 133-A nor 133-B depict that posture. In 1964, as police were recreating the backyard photos scenario, photos were taken using the same posture as in 133-C.

Click on image to enlarge

The Dallas police department obviously knew about 133-C in 1964. The very origin of the photos is in question. What about the camera that took them? The camera allegedly used to take the photographs was an Imperial Reflex camera. How was that camera found? On the day of the assassination, when the

photos were not yet “discovered,” the police seized plenty of photographic equipment. The Dallas police discovered a miniature Minox camera, the kind that spies used. It is about the size of a large cigarette lighter. Oswald the starving commie certainly could not afford one of those. Even stranger was the serial number the Dallas police recorded off of that camera: serial # 27,259. Years later, Minox reported that the serial numbers of their cameras sold during 1963 were above 135,000. Oswald apparently had some vintage spy equipment. The FBI tried to get the Dallas police to restate their original report to record seizing a Minox light meter, not a camera. The Dallas police refused to reclassify the camera, and it disappeared during the FBI investigation. The FBI later listed it as a light meter. Gerald Posner claims to have solved that mystery. He says he interviewed Ruth Paine's husband Michael, who said it was his camera, one he had since the 1950's.[\[21\]](#)

That spy camera makes the mystery of the Imperial Reflex camera even more puzzling. Michael Paine did classified work for Bell Helicopter, which might explain his "spy" camera. It might be innocent, but it is one more odd connection with the intelligence community, where a woman married to a man who did classified work for the government took in Marina Oswald. Marina and Ms. Paine met because of Ms. Paine's avid interest in the Russian language, or so it is said. The FBI seized a number of cameras, and the Imperial Reflex camera was not taken in the first search, nor the second, nor even a later one by the FBI, when they came to cart off the rest of Oswald's possessions. The police even seized a camera that supposedly was not Oswald's, but it was up to Oswald's brother Robert to stumble upon that Imperial Reflex camera on December 8th, 1963, in that magical garage that kept spewing out evidence not discovered in earlier searches.

That Imperial Reflex camera officially became the one that took the infamous photographs. When Marina Oswald was first asked about the photographs, she claimed that she had never taken any. Later she would testify that she remembered one photograph being taken. Later her testimony was amended to say she had taken two photographs, in light of the fact that two photographs were introduced into evidence. Today she says she took all three photographs now known to exist. She may eventually remember more, because the original FBI inventory lists four of them. There was supposedly a photo of Oswald holding the rifle over his head, which his mother found and destroyed.

When asked when she took them, Marina originally said it was in the winter of 1963, nearly a year before the assassination. However, the scene depicted in those photographs shows a yard in bloom. Also, the newspapers Oswald held up were not published until the spring. After more prodding of Marina and investigation by the Warren Commission, it has been determined that the likeliest date for the photographs to have been taken was March 31st, 1963. That date corresponds to shortly after Oswald mail-ordered the rifle, pistol and papers he displays in those photos. It also corresponds to the timing of Oswald's “assassination attempt” on General Walker on April 10th. Soon after the Walker incident, de Mohrenschildt met Oswald one last time, and they never met again. There is an inscription on the back of the de Mohrenschildt photo in Russian that says, "Hunter of Fascists, Ha! Ha! Ha!" The handwriting has never been conclusively traced to either the Oswalds or the de Mohrenschildts, especially Oswald, because the date written on the photo, April 5th, 1963, is written in European-style (5/IV/63), which Oswald never did, as far as can be determined.

There are a few problems with the alleged photo date of March 31. March 31 may have been too early in the year for the plants and trees in the photos to be in bloom. That situation might be explained away, although I know of nobody who has. What is more problematic about the March 31 date is that the photographs were taken in bright sunshine, but the weather records for Dallas on that date show that it was cloudy with traces of rain all day. There are a couple more oddities to consider before getting to the actual

photo analysis. One is that when the FBI finally received custody of the Imperial Reflex camera in February of 1964, it did not work, and when it was first shown to Marina, she was unable to identify it as belonging to her husband, even though she supposedly used it. The other is that the Oswald in the photos is wearing a black shirt, black pants, and a distinctive wristwatch. After the assassination, the investigators could not find in Oswald's possessions the black shirt, black pants, or the wristwatch, and nobody ever remembered Oswald wearing that wristwatch. Maybe they should have looked in the garage!

While performing the research for producing this web site, I had to delve into many controversial areas. The only way to resolve the issues to my satisfaction was to try ignoring what all sides had to say, and evaluate the primary evidence for myself, and try to become my own expert. For a “one-man-show,” such a task is nearly impossible, so I have often relied on secondary evidence, but I also looked at the broad spectrum of secondary evidence (while correlating primary to secondary evidence when I could, to get a feeling for how reliable certain secondary evidence might be), and tried digesting all the available evidence into something coherent. The JFK issue was no exception.

Jack White deserves credit for his analysis of the backyard photos. White began his investigation with some expertise in photography, and devoted years to analyzing the backyard photos. The reason he did so was two-fold. The main one was that Oswald himself said the backyard photos were faked, with his head pasted onto somebody else's body. The other was that White asked for and was given advice on how to pursue the JFK evidence, and was told to become expert on just one piece of it, and focus his attention there. White did so, and a fair bit of the evidence produced in this essay relied in some measure on what he discovered. White deserves credit for the work he performed. However, White's analysis of the backyard photographs is not wholly reliable, because of his limitations as a photographic expert. Specifically, he has no training or expertise in the field of photogrammetrics, and all of his photogrammetric analysis is suspect.

For weeks I watched White post his analyses of Apollo lunar photographs to a JFK forum, to make the case that the moon landings were faked. None of his photo analysis stood up to the slightest scrutiny. To be fair, I have never seen *any* photo analysis of [“faked” Apollo footage](#) that has ever stood up to scrutiny, as far as it proving that the moon landings were faked, and White proved himself badly out of his element in analyzing the Apollo images. Recently, White tried proving that the Zapruder film was faked, and one of his central analyses, which David Mantik wrote produced “robust” data, has failed to impress upon scrutiny. [\[22\]](#)

So, White's work has its limitations. Proving his photographic analyses wanting, however, does not prove the case that the backyard photographs are genuine. Albert Einstein said that he had little respect for somebody who looked for the weakest spot of a board, and repeatedly drilled holes through it. White's “photogrammetric” analyses are the weakest parts of his work, and should be taken as such. White's critics have rarely strayed beyond his lack of photogrammetric expertise in critiquing his work. Even amateurs can stumble forward, as I did when [discovering Neil Armstrong's leap](#) back to the Apollo 11 LM. When a musician felt that he found evidence that disproved the acoustic evidence of the House Select Committee on Assassinations (HSCA), which was the linchpin in its “conspiracy” finding, the “lone gunman” theorists fell over themselves congratulating him on his find. Amateurs have made many of [science's breakthroughs](#).

Evidence can theoretically stand on its own, no matter who produces it. That is the ideal of the scientific method. The following analysis will focus on the evidence that most strongly argues for fakery in the backyard photos, and will also demonstrate that whatever White's limitations are, the official investigators

for the U.S. government performed incredibly flawed, if not intentionally flawed, analysis, which brings up the suspicion of conscious fraud.

After looking long and hard at the evidence, I think that the most impressive evidence, as far as photographic fakery in the backyard photos is concerned, exists in four areas:

1. The anomaly of Oswald's chin;
2. The nearly identical position of the camera in the photos;
3. The shadow anomalies;
4. The anomalies relating to Oswald's arms and hands, and the rifle and leftist newspapers he is holding, including some shadow anomalies;

Jack White adduced other evidence, such as Oswald's strange posture in 133-A and evidence of retouching. While the other evidence may provide supporting evidence of fakery, the lines of evidence listed above seem the most impressive, and are also areas where the official explanations sometimes dealt with the evidence in an unsatisfactory manner.

In 1994, Michael T. Griffith, one of the most prominent independent JFK investigators, spent three hours interviewing photographic expert Brian Mee, while examining the evidence. Griffith consulted several other specialists in the field, and their judgments concurred with Mee's and have influenced this essay. Mee had expertise in exactly the areas that concern the evidence discussed below.

Before beginning this analysis, I will present my opinion of how the photos were probably faked, if they *were* faked. They were probably faked just as Oswald said, by pasting his head onto somebody else's body. Also, there are enough strange anomalies with his hands, arms, and the rifle and newspaper he holds, that they may indeed be "special" effects that were also pasted into the picture (or altered), to further incriminate Oswald. The photos in evidence are probably at least one generation removed from the original composite photos, with each succeeding generation having degraded clarity, as with any analog copying process.

A legitimate question, in light of Gary Wean's tale and the notion that they were trying to fabricate Oswald's violent reputation, is this: why would they feel the need to falsify the backyard photographs, especially when Oswald was playing along with the game? I have long pondered that question, and I am not sure what the answer might be. Claiming that the backyard photos are genuine would eliminate that seeming contradiction, but for Oswald to call them fakes, and promise that he would be able to prove that they were, is significant. Also, there are so many inconsistencies in how the photographs made their way into the evidence, and conflicting evidence surrounding the photos themselves (such as 03/31/63 being a cloudy day, or how none of them were "discovered" when they should have been, with the [133-C photo's travels](#) casting grave doubts on the Dallas PD's investigative effort), that their authenticity must be seriously questioned. It is quite possible that the rifle Oswald ordered is not the one found in the book depository, and may not even be the one in the photographs. Perhaps Oswald had seen the forged photographs months earlier, and knew they had been forged for some reason. There are suspicions that there was an Oswald double, and his trail to Mexico City and Cuba may have been forged. The backyard photos may

have been part of an entire body of evidence that was being used to fabricate Oswald's "violent" tendencies and communist sympathies. There are many scenarios that could have played out, when Hunt's little plot and the plot-within-a-plot are considered. I acknowledge that faking the backyard photographs can seem initially inconsistent with fabricating Oswald's violent image, but only those who know the whole story know for sure, if anybody does, and any of them are still alive.

If Oswald's head was pasted on somebody else's body, it is legitimate to search for where that might be, and the area that leaps out to even casual observers is Oswald's chin. There are several pieces of impressive evidence relating to his chin and photographic fakery. The two most impressive pieces of evidence are the shape of his chin and a line that crosses it, from one edge of his neck to the other, looking exactly like a crop line, exactly where one might be expected.

If Gary Wean's tale is in any way true, nothing in the federal government's files about Oswald is above suspicion, and with the "double" speculations about him, the photographic evidence of Oswald's younger days must be viewed with suspicion. In Jack White's second video about the backyard photographs, he presents several photos of Oswald from the government-produced evidence, and made the case that several photos appear to be composites. I have not seen anybody effectively dispute White's analysis in that matter. What I doubt can be effectively disputed, however, are the mug shots of the man who was captured the day of the assassination, and who died in police custody. Below are comparisons of Oswald's chin from his mug shots, compared with backyard photo 133-A, and also a man with a square chin is on the right hand side of the below image.

Click on image to enlarge

Oswald transformed from a square-chinned guy in the backyard photos, to a pointy-chinned guy. How? The man with the square chin on the right is Roscoe White, who supposedly stole the 133-C picture. The square chin was a point of contention in the HSCA hearings, with HSCA expert Calvin McCamy trying to convince the HSCA panel that Oswald's chin was square in earlier photographs. Congressman Fithian was unimpressed with McCamy's attempts to give Oswald a square chin, and said,

"I did not visually at least identify any other chin that was even approximately as square as the one in the backyard photograph, from all of the pictures that you put up."

McCamy told the HSCA panel that Oswald's square chin was an illusion, and that a trick of the light, as it was coming almost directly from above, hid his pointy chin. He was not able to provide *even one photo* of Oswald to persuasively support his point.

McCamy's performance on the square chin issue was dubious. What was convincing, however, was the HSCA experts' "Penrose" study, although it was not convincing in the way it should have been. The Penrose study compared several photos of Oswald to the backyard photographs, to determine if the man in the backyard was indeed Oswald. The Penrose method measured and compared the dimensions of Oswald's face to various alleged photographs of him. The Penrose study concluded that the backyard

photographs were genuine depictions of Oswald. The data presented for the Penrose study tells the full tale. For three critical parts of Oswald's head in the backyard photos, *the committee omitted the data*. Most importantly, *they omitted the data regarding Oswald's chin*. That is *extremely* suspicious, as the chin was the primary area of contention. At best, such "editing" of the data invalidates the Penrose study. At worst, it brings up the suspicion of fraud. I have not seen anybody even provide a lame excuse.

[Lying by omission](#) is by far the most common method of lying. I am a professional in the creation, manipulation and presentation of numerical data. The HSCA experts appeared to have eliminated the data that did not conform to their foregone conclusion. In science, such a method is known as "rigging the data." In the world of accounting, it is known as fraud (as with [Enron](#) and friends). Of all the many criticisms I have seen of Jack White's work over the years, by all manner of conspiracy debunkers, I have never seen one "lone gunman" theorist deal with that issue, where the HSCA did something that seemed fraudulent.

Also in the images above, note the difference between where the neck, head and bottom of the right ear meet. The man in the backyard apparently had a larger neck than the man who died in Dallas PD custody (as did Roscoe White).

In 133-A, a line can be seen *exactly* where a forger might have pasted Oswald's face onto somebody else's body. The below image shows approximately where the line is.

Click on image to enlarge

How did McCamy explain the apparent crop line? He said that it was a water spot. Michael Griffith has yet to meet a photographic expert who has seen a water spot run in a straight line. Spots are just that; spots. They are circular in nature. Mee said during the Griffith interview,

"One thing is the sheer coincidence that this line just happens to fall in the chin area; that this one edge of this one particular water spot is supposed to have left deposits in such a way as to form a line that coincidentally starts at one side of the neck, crosses the chin, and then ends at the other side - right where Oswald's head could have been attached to the body. I mean, this would be a good place to join a head to a body in a composite, in the chin area, and here we have a line in that region, and it's supposed to be a water spot."

What *are* the odds that perhaps the only water spot that ever ran in a straight line happened to occur right where one would expect a crop line that forged a chin (that was obviously not Oswald's) onto his face? How far do we want to stretch coincidence?

The other anomaly that is extremely difficult to explain away, and Jack White is probably on the right track with his work, is that the backyard photos were all taken with the camera in virtually the same position. Marina Oswald was one of history's most fickle witnesses. The way she was repeatedly prodded to give

the Warren Commission testimony about the backyard photos, and had to keep amending it, as more photos cropped up as evidence or other evidence contradicted it, does not inspire much confidence in her rendition of the facts. The Warren Commission and others probably manipulated her. Many years after the assassination, she publicly stated that she believed her husband had been framed. However, Marina had virtually no experience with taking pictures, and when she described how she took the backyard photos, it is reasonable to accept her account. According to Marina, Lee Harvey brought her into their backyard, and had her take the pictures. He advanced the film and had her take a picture. Then he walked over, took the camera from her, advanced the film and handed her the camera back. Then she took another picture, until all four photos had been taken.

The background in the backyard photos is virtually unchanged from image to image. In order for that to be the case, Marina Oswald probably could not have even moved her feet, or changed where she held the camera. It is a highly unlikely scenario, given how Marina said the photo session was performed. The HSCA experts said there were minor differences in the camera's perspective, which could account for the camera moving between pictures. However, the apparent differences in perspective were so small that they may well have been done on a tripod. Jack White performed experiments with "keystoning," where the photo was slightly tilted and then photographed, which appeared to cause the slight variations. White says he was able to exactly align the backgrounds by that technique. I would not accept White's findings until I saw them independently reproduced, but Mee said the concept can easily explain the slight variances, particularly if they are the result of multigenerational copying. In copying 133-A from one generation to another, the slightest change in the planar alignment of the copying camera and photo can produce the differences that can be seen in the backgrounds between 133-A, B and C. I would like to see some quality independent analysis of such a theory before completely endorsing it, but at this time, I have to lean toward the tripod method of taking the images, with slight differences in the backgrounds due to slight planar and lateral differences in making the multigenerational copies.

By examining the 133-A and 133-B photographs above, it is evident that in 133-A Oswald's head is virtually perpendicular to the ground. In 133-B, Oswald's head is significantly tilted to his left. In both images, the shadow below his nose falls almost exactly at the midpoint of his upper lips (see the [chin close-up](#) above to see where that shadow hits his lips). Because of the tilt of his head in 133-B, the nose shadow should not have hit his lip in the same place. McCamy produced photographs of a mannequin at the HSCA hearings to explain this discrepancy. He provided a novel explanation, where the head twisted and tilted, to keep the shadow hitting the same spot on his lip. The HSCA panel was skeptical of McCamy's explanation, and when the mannequin achieved the posture where the shadow hit the same part of the lip, it was no longer looking at the camera. Once again, McCamy invoked a fortuitous set of improbable circumstances to explain away an anomaly that suggested photographic fakery. Because the mannequin no longer looked into the camera when the desired shadow was achieved, such an analysis cannot be accepted as explaining the anomaly. What appears more likely is that the same head was pasted onto the different pictures, but the forgery was not sophisticated enough to account for different head angles.

One area of evidence deals with photogrammetrics, and Jack White made the case that the shadows on his body did not fall in the same line as the shadows on his face, for further evidence of fakery. The HSCA investigators performed a sophisticated analysis where they drew lines from the places on Oswald's body that cast the shadow to where the shadow hit the ground. They performed what they called a "vanishing point" analysis, where the lines all converged on the source of light, the sun. The HSCA panel was also a bit skeptical of the vanishing point analysis, as the lines appeared to converge only slightly past Oswald's head, not at the distant sun. I performed my own crude analysis of the shadows on his face and ground, and from what I could see, the facial and body shadows were not very far from being parallel, not far enough for my crude analysis to catch anything impressive. One area of speculation has been the shadow

cast by Oswald's body in 133-A, versus his nose. In that matter, I have to tentatively conclude that the McCamy and friends may be right, or at least the conspiracy investigators have to do their photogrammetric work better. Contrary to Jack White's analysis, the shadow cast by his nose is not vertical, but slightly tilted to Oswald's left (think of minute hand of a clock pointing to a minute or two after the hour). When I shined a flashlight on my face from approximately the sun angle in the photos, I was able to reproduce the shadow "anomaly," where the left side of Oswald's neck was lit, while the left side of his neck was in shadow. White's analysis is not convincing on that matter. At this time, I have to lean toward the HSCA's analysis regarding the shadows running parallel in their vanishing point analysis, while their explanation with the mannequin is more of their strained logic. The independent investigators will have to do a better job of analyzing those face/body shadow variations if they want to present a convincing case.

The apparent falling off to the right of Oswald's body shadow in 133-A is partly an illusion caused by his bizarre posture. White thinks Oswald is standing to the right of his center of gravity, which should not be possible. However, still photos catch people who are never quite still, and Oswald could have been shifting his weight as the photo was taken, producing the effect. However, his strange stance, where his right leg is strangely bent inward, contributes to the illusion that the shadow cast by his body falls to his right. It *does* fall to his right, but not nearly as far as it appears, because of the strange position of his right leg. If you draw lines from his shadow on the ground to the parts of his body that cast them (in photo 133-A), they are nearly parallel to the shadow cast by his nose. Not quite, but close enough in my crude analysis to convince me that most of discrepancy, if not all of it, is caused by his strange posture.

All of Jack White's attempts to impute measured distances onto parts of the picture were dismissed by the HSCA (and all of Jack's many critics) because of his limitations as a photogrammetric analyst. So, has anybody pursued what Jack attempted, to reproduce the scene and use sophisticated photogrammetric analysis, to determine what the real height of the man in the photos was, or how long his rifle was? If anybody has done it, I have not heard of it.

I think the evidence is persuasive, however, that from the chin up it is Oswald, and from the chin down it is somebody else. Whose chin might that be? Jack White investigated the Roscoe White connection. Roscoe White was on the same ship to Japan as Oswald during their Marine days. They both may have worked for military intelligence. White began at the Dallas Police Department not long before the JFK assassination. A generation after Roscoe White's death, his son claimed to find his father's diary, where Roscoe admitted he was one of the Dealey Plaza shooters. Soon after the son publicly announced the existence of his father's diary, he said his home was burglarized, and the diary taken. The conspiracy debunkers mainly replied with "how convenient," and have largely dismissed the son's testimony. However, the 133-C photo had been taken from White's widow in a robbery (other accounts say that con men obtained them from White's widow), and was seized by the FBI. That was how it made its way into the evidence.[\[23\]](#) White's widow worked for Jack Ruby shortly before the JFK assassination.[\[24\]](#)

There are other correspondences between Roscoe White and the figure in the backyard photos. He had a similar posture to the "Oswald" in the backyard photos.

Click on image to enlarge

The 133-A De Mohrenschildt photo is difficult to account for. It is a clearer image than the “original” 133-A, and views area outside the frame of the original 133-A. Brian Mee thought this suspicious, as do I. If the photos were forged as Mee thinks they were, the De Mohrenschildt photo perfectly fits the evidence. If the backyard photos are fakes, the likeliest way to do it was to take the original photos with the highest resolution cameras possible, and perform the forgery work. Then the forged images would be photographed at least once more, as removing the images from their original generation would hide much of the evidence of forgery. The photographs will also lose their resolution in successive generations, and become grainier. Also, in successive generations, the image will often get slightly cropped along the way. The lower resolution and the graininess of the backyard photos (as Mee observed), as well as the cropping between the De Mohrenschildt photo and the “original” 133-A, gives compelling evidence that the “original” 133-A is a generation or more after the De Mohrenschildt image. That is not something one would expect that Oswald did, but fits impressively with the notion that the forgers made a slight mistake when planting evidence in De Mohrenschildt’s belongings.

In addition, the notion that the “original” 133-A is a later generation of the forged images makes some of the HSCA testing of dubious validity. The HSCA investigators performed tests such as measuring the depth of the negative and grain analysis, which would have been of questionable validity if they were generations removed from the original, altered photos.

Those are the main lines of evidence I was the most impressed with, as far as giving evidence of forgery, and where I thought the HSCA performed questionable, if not fraudulent, work.

The last area of evidence that I found compelling, but other investigators often have not, is in the area of his hands, arms and the newspapers and rifle he is holding. Those backyard photos about are the only evidence linking Oswald to the murder weapon. A nitrate test on his cheek on the day of the assassination (to determine if he fired the rifle) was negative. There was a belated finding of his palm print on an inside part of the rifle, after it had been dismantled, which has understandably been greeted with skepticism in the JFK “conspiracy” community. There were no fingerprints on either the rifle or the pistol that were identified as Oswald’s murder weapons.

Oswald had to be an idiot if he was the real assassin. Earlier in 1963, he was arrested for the attempted murder of Edwin Walker, and he obviously would have been suspect number one if he really shot JFK, employed in the building where the shots were fired, with a rifle he not only bought months earlier, but used in another assassination attempt. With all those incriminating circumstances, we are supposed to believe that he carefully wiped his fingerprints off the rifle before he snuck out of the depository? But he also was so stupid that he had no plan of escape, taking a bus and cab before lamely trying to hide in a theater? Far more likely is that the “safe house” plan that Hunt devised for Oswald evaporated when JFK was really shot, and Oswald did what he could, on his own, as the world’s most marked man.

The rest of this backyard photo section will deal with the rifle, newspapers and the hands and arms holding them.

Oswald's left arm, which holds the rifle, is peculiar. Below his upper arm, the only thing visible is his hand. His entire forearm and elbow are invisible. Jack White tried reproducing the phenomenon, but was unable to.

Click on image to enlarge

It may be possible that the way Oswald held the rifle hid his entire forearm, but I think that anomaly bears further scrutiny. His right hand that holds the newspapers is anomalous for more than one reason, and one anomaly is impressive indeed. The fingers on his right hand all appear chopped off, as if Oswald had an accident with the meat cleaver.

Click on image to enlarge

The photograph I am using is a pretty good one, from Groden's *The Killing of a President*, p. 112. The chopped off look is evident in the photo above. Whatever disparaging comments the critics may make about Jack White, one thing they cannot dispute is that Jack has about the best quality photographs that exist to work with. On the presentation in his video, the chopped-off look of his fingers is even more pronounced. Mee was skeptical. He thought the reflection of light from the papers could have produced an illusion. White calls the chopped-off fingers evidence of retouching. The other anomaly is even more impressive to me.

The shadow issue is highly contested. Oswald has a shadow below his nose, and his eyes are completely in shadow. It appears as if the sun is at a 45-degree angle to the ground. I arrived at that approximate angle by noting that the shadow's length under his nose is about equal to the distance his nose protrudes from his face. That is only an approximation, and does not need to be more accurate for the point I am about to make.

The HSCA investigation applied plenty of professional aptitude to the backyard photos, and McCamy made the case that the sun was coming in at such a high angle, that the bottom of Oswald's pointy chin was in shadow, creating the illusion that Oswald had a square chin. If one looks at the photo, McCamy's rationale uses strained logic, one the HSCA itself found difficult to swallow, but the point is taken that the sunlight is coming from a steep angle.^[25] Oswald is holding the newspapers against his chest at a nearly perpendicular angle; his right hand with the chopped-off fingers is holding the paper. There is something even stranger than the ends of the fingers missing. The nose's shadow is about the equivalent of how far it protrudes. Using the same logic, his index finger should cast a shadow on the newspaper it is holding, roughly equal to the height of the finger above the paper. Take a good look at the shadow cast by his right index finger.

Click on image to enlarge

There is no shadow. That is compelling evidence that the photo is faked, which would prove the case that Oswald was not a lone nut, if it was true. That logic is admitted to by virtually everybody who has studied the assassination. If those are faked photos, they are sophisticated fakes for 1963. It means that somebody went to a great deal of effort to forge the photos, not something that “Oswald the starving commie” would have had the time, resources or motive to do. There is also a complete lack of shadow under the bottom of Oswald's hand and little finger.

The final issue is the murder weapon itself. The backyard photos were highly damning because they showed Oswald posing with the murder weapon. There is compelling evidence that at least two rifles have been in evidence as the murder weapon, and that the rifle in the backyard photos is probably not the weapon in evidence today.

Jerry McLeer [has presented evidence of two different rifles](#) in evidence, with one cleverly forged to look like the other. The most convincing pieces of evidence are the numerous discrepancies between the rifle examined by the Warren Commission and the weapon that sits in the National Archives (which the Archives will not let anybody examine). *Life Magazine* took photographs of the rifle in 1983, and those images provide much of the evidence. There is also evidence that the “murder weapon” [is a vintage rifle](#), not something that Oswald would have been able to mail order.

Of the many discrepancies between the two rifles, what may be the most impressive for a lay audience are the discrepancies in the serial number, which are depicted in the image below.

Click on image to enlarge

the ad they presented was a duplicate of the ad Oswald used to purchase his rifle. The original ad that Oswald used was readily available, which made independent investigators scratch their heads. The reason for the Warren Commission's use of another, later, ad than the one Oswald used became evident. The rifle in the National Archives is a forty-inch rifle. The rifle in the ad Oswald used to purchase his rifle was a thirty-six-inch rifle. The Commission substituted a later ad that advertised a forty-inch rifle. That switch by the Warren Commission to force the rifle in evidence to correspond to the ad is a strange way to perform an investigation.

Another issue lends evidence to the notion that the rifle in the photos is not the “murder weapon” in the National Archives. [McLeer's analysis](#) provides the evidence, although the images in Groden's *The Killing of a President* are adequate. On the rifle's stock, about a foot from the barrel's end, on its underside, is a circular ring about an inch in diameter. It is used to attach a strap. The ring is quite clear in good reproductions of the photograph. The ring is round, and appears on the underside of the rifle stock. The

Warren Commission rifle had an oblong ring mounted to the side. The author of A Carcano Homepage theorizes that the ring is part of the bush behind Oswald, a contention nearly impossible to take seriously. Another explanation I have seen is that the rifle that Oswald holds is turned enough to where the oblong ring on the far side of the Warren Commission rifle is visible, providing the illusion that it is a circular, bottom-mounted ring strap. I am skeptical of that explanation also. The rifle appears slightly rotated, as can be seen by looking at the riflescope, but it appears far from being rotated onto its side, especially far enough to make the Warren Commission rifle side ring produce the alleged illusion. The only way to know for sure is to get the “murder weapon” and perform the reconstruction (I will not hold my breath waiting for the federal government’s cooperation on that matter). Also, the cheap rifle strap seen in the backyard photos is markedly at variance with the strap found on the murder weapon, a strap that appears dyed black, [as well as the rifle stock itself](#). It is difficult to imagine a starving commie shelling out for a designer strap for his rifle (which appears to be designed for the rifle, dyed that same color as the rifle’s stock), when he already had one. Here are some images of the controversial strap ring.

Click on image to enlarge

One of the difficult-to-explain-away aspects of Oswald’s tale, particularly regarding the rifle, is that Oswald was supposedly a starving commie. In 1962, he come up with enough money to repay several hundred dollars in loans (including a loan from the State Department), while making virtually no money and trying to support a wife and child. The “lone gunman” defenders have never satisfactorily explained Oswald’s finances, particularly during the time leading up to the assassination.^[26] Oswald the starving commie and family man somehow paid off loans and bought a rifle, while scarcely making ends meet. It is similar to the enigma to how Private Oswald could have been a regular customer at a highly expensive Tokyo nightclub, rubbing shoulders with the military brass (something way out of line with America’s military caste system). One night at that club cost as much as he made in a month.

The “murder weapon” was so poorly made that government investigators had to fix the sight’s alignment so it could hit what it shot at, and even then, the government’s best marksmen, after numerous trials, were never able to duplicate Oswald’s alleged feat of putting two bullets into a moving target of JFK’s size and distance, in the time the assassination took.^[27] Oswald was only a mediocre marksman in the Marines, and there is no evidence that he ever used a bolt-action rifle before November 22, 1963.

The evidence argues persuasively in favor of the hypothesis that the photos were forged and planted, and the camera was planted. In kind, it is nearly identical to the [magic bullet’s tale](#). After the bullet’s highly dubious entrance into the evidence ledgers, Arlen Specter and Gerald Ford concocted one of the most implausible tales ever.

JFK’s autopsy photos are probably also forgeries/composites. Nearly all the medical personnel who attended to JFK at the Parkland Hospital, where he was taken after he was shot, testified that the back of his head was blown out. Large blowouts are exit wounds, not entrance wounds. The back of his head being blown out is inconsistent with a bullet coming from Oswald’s rifle. The back of his head being blown out is nearly irrefutable evidence of a shot hitting him from the front, which brings up the legendary grassy knoll gunman.

Click on image to enlarge

In light of the backyard photos, altering or forging the JFK autopsy photos (and X-rays) would be consistent with how the entire affair has been manipulated.

There may have been several shooters in Dealey Plaza that fateful day.

The Nature of the JFK Assassination Affair

I have noticed a pattern in the JFK assassination that reappears in other cover-up attempts.

1. People in power do not want the rest of humanity to obtain information that may disrupt their power base, even if that information could benefit humanity (e.g. [free energy](#), [cancer cures](#), political information) because it would encroach on their power base. Noam Chomsky says that the current institutional ideology ranks hegemony above survival. Another way of stating it is that the elite do not really care if they destroy life on earth, as long as they are in charge (with survival enclaves secured for themselves, however).
2. Derailing access to this information is within the scope, motivation and resources of the power elite (e.g. the energy oligarchy, medical establishment and U.S. government).
3. There are often agent provocateurs involved in those obfuscations – an agent who [develops fake credentials](#) to allow him/her to infiltrate the ranks of researchers who attempt to uncover the truth of any suspected conspiracy, or propose solutions to the big problems.
4. The structural composition of the suppression includes prosecutors whose careers are measured by their “kill ratio.” The actual innocence of guilt of those prosecuted [makes no difference](#) to those people, who also employ others who are just “following orders.” So people who are *just doing their jobs* largely inflict the damage (the same dynamic is seen in the cancer racket, [where approved “treatments” kill off the patients, while the real cures are suppressed](#)).
5. Public apathy and lack of integrity of those trying to uncover the truth is by far the most important aspect of these situations. For example, many people suppose that because we do not have free energy, that it does not exist, thereby ignoring the possibility that these resources have been suppressed. Absence of evidence is not necessarily evidence of absence. Diogenes’ quest for the honest man would be as fruitless today as it was in ancient Greece.

Independent investigators of the JFK assassination often discuss how unhelpful the [CIA](#) and FBI have been. The [CIA](#) essentially [works for the Fortune 500](#), just as the American President does. They call themselves an intelligence agency, but their “intelligence” is usually [disinformation designed to fool the American public](#). Covert action is their main function, and it has contributed to the [death and misery of countless millions of people](#). The FBI has been liberally used to derail social movements in the United States. Outright murder of activists for native rights, black rights and the like has been merely days at the office for the FBI.[\[28\]](#) “Fighting crime” has been one of their minor functions. Those organizations are little

different than the Soviet Union's KGB, except that America's spooks have caused far more death and destruction than the KGB could have ever aspired to. It is well known that many in the American "intelligence community" were very happy when JFK was killed. On that day, in my father's office in the Department of Defense, one man walked down the halls, shouting his approval of Kennedy's murder, saying that JFK got what comes to all "tyrants."

What is obvious when researching the JFK assassination is that at least some theorists and investigators are provocateurs. A classic CIA disinformation ploy is to flood a certain subject with information, some of it true, and some or most of it fabrication. If anybody tries investigating the information, they will find so much false information that it taints whatever might be true. There are an incredible number of JFK assassination theories. One is that Kennedy was hit accidentally by a Secret Service man riding in the car behind him, whose gun accidentally discharged when Kennedy was under fire, giving him his fatal headshot. There is a bizarre theory that there was more than one gunman, but they coincidentally tried to kill Kennedy at the same instant (the *Washington Post* cooked that one up). That one invokes odds of trillions-to-one. There are even stranger theories than those. Prominent people, such as mainstream journalists, have concocted some of them. They were probably creating their surreal theories under the influence of the CIA or other spook organization. The CIA has operatives in virtually every major media organization. The circus atmosphere of strange theories has served to discredit all assassination theories besides the official "lone nut" one, and sincere researchers are nearly defeated before they begin.

Again, most importantly, what has hurt the independent assassination researchers the most has probably been the behavior of the researchers themselves. Those who independently spend years of their lives investigating the assassination have a trust fund or other source of passive income, are doing it in their spare time, or try to sell the results of their labors. Not too many people have the trust fund option. Also, those who are independently wealthy or have inherited wealth almost always obtained it through the workings of the system, and consequently are rarely going to have the inclination to challenge that system. I have never received a dime of compensation for this work, and have given up hundreds of thousands of dollars of lost income to pursue it, and not many people can do that.

If people put their JFK research out there with their name on it, the provocateurs and others generally take the tactic of discrediting them, and they are instead put into the position of defending themselves, and the evidence they have produced is not considered. It is a classic misdirection tactic. That phenomenon is not limited to investigating conspiracies. [My critics](#) do not want to discuss the merits of my propositions, such as whether we are engaging in genocide in Iraq to control Middle East oil, or that we are [putting poison in our water supply](#) and calling it medicine. Instead, they attack me for my style, call me names, and otherwise totally *avoid* the substance of my work.

I have looked into many areas like the JFK assassination, looking at the primary evidence for myself. I also rely on the work of historians and investigators whose work I have come to respect, through long investigation of their work, such as Noam Chomsky, Edward Herman, David Stannard, Carl Sauer and Rodney Stich, to name a few.

The fact that provocateurs have stirred up plenty of trouble, that independent JFK researchers have not always been pillars of virtue, that they often attack each other, that they become too attached to their theories, should not cloud the question of whether JFK was murdered by a conspiracy. Proving a researcher's theory wrong does *not* mean that JFK was *not* murdered by a conspiracy. The evidence can speak for itself, in those backyard photos.

The JFK assassination brings up extremely uncomfortable issues for Americans. If JFK was killed by a backfired covert operation (as [Gary's story](#) says), and the government acted to cover it up, what kind of government does America really have? Would it really be much more legitimate than ancient Rome's? I have found that nearly everybody who defends the lone gunman theory of the JFK assassination is also of a white bread political persuasion, with ideas that rarely stray from what officialdom says is so. Defending the lone gunman theory appears in large measure to be an attempt to defend the legitimacy of the U.S. government. Why? I think the [cognitive dissonance](#) dynamic explains much of it.

If Gary's story is true, a lot more than JFK's death was initiated by that backfired plot to frame Castro. The successful cover-up of JFK's murder appeared to *embolden* the intelligence community. The rash of assassinations and attempts after JFK, leading clear to the attempt on Ronald Reagan, all have [suspicious connections to the U.S. intelligence community](#), with a "lone nut" scapegoat served up each time. Hunt eventually got caught with his hand in the cookie jar with the [Watergate burglary](#), which may have far more sinister connotations than just some bumbling idiots trying to derail the Democratic challengers to Nixon. This essay will further deal with those issues of further assassinations and other dirty tricks.

Why Are There So Many Conspiracy Theories Today?

While investigating conspiracies and cover-ups, I wondered if this "conspiracy mania" was happening in America fifty years ago. The push to [fluoridate our water supplies](#) began more than fifty years ago. Much of it was a "structural" conspiracy. Scientists working for fluoride polluters would naturally, if largely unconsciously, massage the data to minimize the harm that fluoride caused, and amazingly, produced data showing that fluoride was *good* for people. Recently, declassified documents show the U.S. government covering up fluoride poisoning, because fluorine was used in the Manhattan Project extensively, and there were industrial fluoride accidents that harmed many people. Even though it turns out that fluoridation luminary [Harold Hodge](#) was secretly working to cover-up fluoride damage due to industrial accidents, and was doing secret research on the fluoride ion's effect on the human central nervous system, a lot of it was just doing his job and obeying the rules of "national security."

I once had exchanges with a college kid who thought that the political "realists" understood the global situation much better than "radicals" such as Chomsky. After reading some "realist" literature, I doubt it. Scholarship that *assumes away* economic factors is not very realistic.^[29] The kid said that the reason why only a few CIA employees have ever written books critical of the CIA is that almost all CIA employees believe that their careers serve their nation. My response was two-fold. One is that serving their nation obviously did not mean serving the interests of those in the nations the CIA helped rape. The other point is that the vast majority of CIA personnel will believe they are doing "good work" no matter how much their eyes tell them otherwise. People will always see themselves as "good guys," no matter what they are doing. That goes for [death camp Nazis killing Jewish children](#), American "pioneers" [killing Native American children](#), American soldiers [bombing Iraq, Vietnam, Yugoslavia](#), and doctors [whose cancer treatments kill their patients](#).

Today, conspiracy theories abound in the media and public awareness. Why? I think it is mainly because of the many shocks the American psyche has endured during the past forty years.

JFK's assassination marked the beginning of the end of innocence for many Americans. There were

definitely dark activities taking place before that, but the American people were largely in denial about them. After the JFK assassination, America had the Vietnam War, Watergate, the scandals of the Reagan-Bush years (Iran-Contra and [Savings and Loan](#) scandals), and America's confidence in its institutions and leaders [cannot sink much lower](#).

There is a strange dichotomy, however. On one hand, people are slowly realizing that they are continually lied to. Yet, they are selective in the lies they believe or disbelieve. It may be related to the [size of the lies](#). People will believe the lies that serve their interests, while maintaining a general attitude that they are being lied to. They inconsistently assess the dishonesty in their world, and the powerful fully encourage such inconsistency. For instance, the two biggest “scandals” in the media during the 1990s were the O.J. Simpson murder trial and Bill Clinton’s “zippergate” scandal with Monica Lewinsky. The [Savings and Loan scandal](#) will cost American taxpayers hundreds of billions of dollars, and it is already disappearing into the Memory Hole. Whether O.J. Simpson committed murder or Bill Clinton really had sex with Monica Lewinsky had virtually no bearing on the average American’s life. Yet, those were the big media “scandals” of the 1990s. As Chomsky has said, one of the main purposes of the mainstream media is distracting people from what is really happening. Our murderous oil policies can kill off [millions of Iraqi citizens](#), mainly children, and it barely makes the news or lodges in the public awareness, while O.J. and Clinton’s cigar make headline news. It is not entirely [the media’s fault](#). They are tending the herd, but the herd also desires the tending.

In the end, people suspect something is awry, and the great increase in conspiracy theories is evidence of it. Elisabeth Kübler-Ross performed the seminal research on the psychological aspects of death and dying in the West. She named five stages of the process. They are: denial, anger, bargaining, depression and acceptance. This process has been generalized to apply to any grieving process, and can apply to most things people do not want to face. In 1962, about 85% of Americans had “great faith” in society’s institutions, such as the government, corporations, and churches. Today, only about ten percent of Americans have that “great faith” anymore. What has replaced it is anger, the process’ next stage. Acceptance (some may think they are in acceptance, but they instead have apathetic feelings of powerlessness; it is not the same thing), and transcendence appear to be a long way off, but Mother Earth cannot wait that long. Bargaining and depression are stages that humanity has largely not experienced yet. As Americans have been staying in denial, [cognitive dissonance](#) has become more evident, particularly [after the World Trade Center attacks](#) of September 2001.

The long prophesied “[earth changes](#),” which are happening today, as with [global warming](#), is also going to accelerate the process. Will we wake up quickly enough to prevent our demise by our own hand? Conspiracy theories seem to be incomplete attempts to understand what is happening. What such a mentality seeks is to seemingly relieve us of our responsibility for what is happening, making us the victims of powerful forces, but the only “power” those forces have is what we gave them. Until we learn to accept our responsibility, the fascination with conspiracies will be one more way that we avoid taking responsibility for our lives. Investigating conspiracies or cover-ups can be dangerous business, however.

The Dangers of Investigating Conspiracies and Cover-ups

With our steeply hierarchical political, economic and social systems, not too many people at the top have to be “in on it” to make conspiratorial designs a reality. The conspiratorial and structural (or conscious and

unconscious) perspectives of the situations are important in understanding what is happening. Neither one, by itself, can fully explain the phenomenon.

Noam Chomsky and Edward Herman can write at length about the structural aspects of America's system, and how its media, for instance, can serve up an inverted view of reality, and they will suffer no harm. For instance, the documentary on Chomsky's life and career, titled [Manufacturing Consent](#), is the most popular documentary in Canadian history. Chomsky's thesis is virtually proven by the reception that it has received in United States. To my knowledge, no American television station has ever played it, except for [a small alternative station](#).

It is argued, and it is partly true, that Chomsky and Herman have not had their careers ruined, or been thrown in jail, or died mysteriously, because they are prominent academics in their own right, Chomsky arguably being the world's most prominent academic during the past fifty years. However, the most important reason they are still alive is probably because they are not unmasking conspirators. That is when the work can get dangerous.

Structural analysis is generally involved with studying documentation. Conspiracies, by their very nature, do not leave paper trails. Consequently, the "solid" evidence is often patchy, and can lead to various interpretations. Also, because of the spotty nature of the "hard" evidence, people can construct conspiracy theories from rather flimsy evidence, where there may have been no conspiracy. That is the nature of the beast. All too often, people dismiss any and all conspiracy theories because the evidence is not ironclad. Also, "conspiracy" has become a code word for "lunatic fringe." Deductive logic's conclusions are only as valid as its *assumptions*. Inductive logic begins with the factual information available, and is also valid reasoning.

Here are examples of the dangers of investigating conspiracies. When [Gary Wean](#) waged a legal battle against the gangsters who run Ventura County, who are the judges and their cronies, they tried murdering him in his front yard. Gary made a legal motion that obstructed the sale of bonds used to build the County Center ([where Dennis was jailed](#)), swindling the taxpayers out of many millions of dollars. Building the County Center was part of a plan to make a killing in real estate and other raids of the public coffers. The weekend before Gary's lawsuit delayed the issuance of revenue bonds, he came home one Saturday night to see a strange car parked near his house. Gary had been a policeman for many years, and his instincts saved his life. The assassin was sneaking into his yard in the twilight, and Gary grabbed his pistol from his car and hid behind a tree. The assassin fired and blew off a tree limb next to Gary's head. Gary returned fire as their car sped away. If they had killed Gary, his lawsuit would have been dismissed on Monday morning, and the revenue bonds would have sold without a hitch.[\[30\]](#) That is one way to deal with gadflies like Gary.

Chronicling mysterious drownings, mysterious plane crashes, a bloody murder of a lawyer and his wife in their bed a few miles from where I was raised, and other dark events, such as the county judges controlling the local drug trade, Gary's book makes for scary reading; but murders are the extreme acts. Bribes, framing people for crimes and scandals, media smears and Kangaroo Court were the more common *modus operandi* of the conspiracies.

Whereas Gary Wean is speculative in his work at times, [Rodney Stich](#) is a conservative writer. As with Gary, Stich did not become involved because he loved diving into nasty messes, but his job led him to the heart of darkness. Stich was a Federal Aviation Administration (FAA) investigator during the 1960s, and was assigned to investigate several fatal crashes of United Airlines jets. During the course of his

investigation, he stumbled into FAA corruption and complicity with United Airlines in covering up their negligence that led to the disasters. Worse than the negligence he discovered was the corruption that covered it up. He wrote *Unfriendly Skies*, and went on the radio and TV talk show circuit to expose what was happening. It won him few friends in the aviation establishment.

Most people in Stich's shoes keep their head down, stay quiet and keep punching the clock. A case in point is my [Justice Department friend](#) who investigated the death threat made by an automobile company to a man who invented a 100-MPG carburetor. The oil companies paid the quiet money of \$50 million to suppress the invention. My friend was no hero. He saw what happened and realized how the game was played. He kept his head down and later enlightened me with the story. He would not risk his neck by making his discovery public.

Stich's investigations took him deeper and deeper, and his *Defrauding America* shows how far he descended into the darkness. *Defrauding America* is about the most frightening book an American can read. In conservative style with little speculation, Stich chronicles theft after theft of the public's money by a series of related scams by the rich and ruthless. *Defrauding America* even chronicles a huge bribe that one of my relatives took, and from what I know of the person, Stich's revelation does not surprise me.

Stich investigated the black world of [CIA drug running](#), the criminal aspects of the [S&L scandal](#), Iran-Contra, October Surprise, etc., and the hard-to-believe corruption in the federal government, with federal judges part of the program, eagerly taking their cut (they are [lawyers](#)). With a prominent federal court judge in California whom Gary *knows* was a protégé of Mick Cohen, because he regularly saw them together when the judge was a young lawyer, the overlap in Stich's and Gary's stories are many.

Defrauding America's cover says it makes the "Godfather Saga Pale by Comparison." It does. One chapter is titled "Silencing Whistleblowers." In that chapter, Stich chronicles what establishment gangsters do to people who speak up. Murdering them is more common than is comfortable for me, yet more common is an array of kangaroo court tactics and other tricks. Stich notes that the pattern of murder accelerated during the 1990s, as the crimes escalated. No saints [have ever been American presidents](#). The Clinton Body Count, where many close to him have died suddenly and/or mysteriously, is well known. If most of them were liquidated, it is standard American politics. *Defrauding America* was published in 1994, and the worst scandals happened during the Reagan-Bush years. *Defrauding America*, Russell Bowen's *The Immaculate Deception*, Bo Gritz' *Called to Serve* and Pete Brewton's *The Mafia, CIA and George Bush* corroborate that information.

Before reading *Defrauding America*, I was aware of many of those whistleblowers' fates, and Stich's book told me of dozens more. Stich mentions Danny Casolaro, who was an investigative reporter who tried breaking the story on what he called "The Octopus." The Octopus was a pattern of scandals that seemed related, including the October Surprise. For those not familiar with October Surprise, it relates to Ronald Reagan's presidential campaign in 1980. The Iranians released their hostages the day Reagan was inaugurated.

Casolaro's Octopus was an alleged connection between the October Surprise, Iran-Contra, BCCI, Inslaw and other scandals. In early August of 1991, Casolaro felt that he had nearly solved the puzzle, and told his friends and family that he had nearly attained the big payoff to his investigations.

Just as he reached the brink, he began receiving anonymous threats, so ominous that Casolaro told his brother, a physician, "I have been getting some threatening phone calls. If anything happens to me, don't

believe it was accidental." A week later, Casolaro was on his life's most important trip, going to Martinsburg, West Virginia seeking his puzzle's final pieces. On August 10th, while Casolaro was in Martinsburg, a week after he told his brother to not accept "accidental" explanations of anything happening to him, the housekeeper at the Casolaro home picked up the ringing phone to hear, "You're dead, you bastard." The anonymous caller quickly hung up. On that same day, Danny Casolaro lay dying in a bathtub at the Sheraton Hotel in Martinsburg.

In life, Casolaro was squeamish, but the body in the bathtub had apparently hacked its wrists so forcefully that a tendon was severed. There was a suicide note, asking for forgiveness. His friends and family thought him unlikely to kill himself, especially his brother, who received Danny's warning the week before. Casolaro was outgoing and boyishly exuberant about life. The Martinsburg authorities did not contact his family the day Danny died. Instead they quickly and illegally had his body embalmed, something that made a valid autopsy (to answer questions such as, "had he been drugged?") impossible. The next day the *Village Voice* received an anonymous call, telling them that Casolaro had died. Casolaro's family was not notified until the day after the *Village Voice* received the news.

When looking into assassinations, mysterious suicides, etc., the same patterns repeat themselves. Inexplicably, the police abandon the most basic procedures of their profession, and cavalierly destroy or "misplace" evidence. Very strangely, a briefcase full of Casolaro's investigative notes, which he hauled everywhere he went, especially to Martinsburg, vanished without a trace. There was also evidence that somebody besides Casolaro was in the room after he died, because somebody had been trying to mop up the blood with towels, as told by the assistant housekeeper on duty at the hotel, who was on the scene before the authorities arrived. The housekeeper told of blood smeared all over the floor, and a wad of bloody towels lying under the sink. How strange. It was not strange enough for the local police to follow up on, however. It was a suicide, case closed.[\[31\]](#)

After his family raised hell when they discovered what the West Virginia authorities had done, there was an official "investigation," which naturally confirmed that Casolaro killed himself. In U.S. history, very few official investigations have concluded that something might be awry with the system. They are usually cover-ups more than they are investigations.

When the Warren Commission investigated JFK's murder, they could not deny foul play, but decided that a "lone nut" did it. The evidence for a conspiracy surrounding the JFK assassination is simply overwhelming, and studying debunking work such as Gerald Posner's *Case Closed* makes the case for conspiracy even *stronger*, even ignoring what Gary Wean knows. When the House Select Committee on Assassinations investigated the JFK assassination, one piece of evidence caused them to decide that a conspiracy killed JFK. Many other pieces of evidence should have also convinced them, but they settled on one. They backpedaled as well, saying that there was a conspiracy, but they had no idea who did it. Case closed.

Casolaro was probably silenced. He was kind of an amateur, and probably got in over his head. Casolaro ran his ideas by an FBI man. That FBI man told a House investigative committee, "There is cause for suspicions." Three days before Casolaro died, he told an FBI agent that he was warned that his pursuit of the Octopus would kill him.[\[32\]](#)

Another incident during the 1990s can make the pattern clearer. Paul Wilcher was a lawyer who deeply probed the world of CIA covert actions and conspiracies. On May 21st, 1993, Wilcher sent a 101-page document to U.S. Attorney General Janet Reno. His letter had similar allegations to Casolaro's "Octopus" investigation. To average Americans, Wilcher's allegations might seem like the most extreme conspiracy

theories that anybody could imagine.

There is an impressive body of evidence that the Jonestown "mass suicide" in Guyana was anything but mass suicide. Conscientious investigators unearthed that evidence long ago, but I have never seen the American mainstream media question the "mass suicide" Kool Aid story. There is strong evidence that Jonestown was a slave labor camp that Jones was running with CIA help. Jones had significant CIA ties. There were enough psychoactive drugs, such as Thorazine, at Jonestown to have kept a city of 200,000 doped up for a year. The coroner of Guyana, Dr. Mootoo, was on the scene quickly, and testified that almost all the dead had injection marks on their shoulder blades, or were shot or strangled. There was no evidence of mass suicide, but mass murder.

What appears to have happened is something that most Americans would rather not believe *could* happen. Jonestown appears to have been a continuation of the CIA's MK-ULTRA mind control experiments. The CIA told Congress that they stopped MK-ULTRA in the 1970's, but [Ralph McGehee](#) has never once seen the CIA tell the truth to Congress. It is so bad that it is almost guaranteed that the *exact opposite* of what the CIA tells Congress is true. One of the CIA's primary tasks is [lying to the American people](#). It appears that Jones was a CIA asset who ran a mind control experiment at Jonestown. Jones was the boyhood friend of CIA torture specialist [Dan Mitrione](#), who also operated out of South America. Most of Jonestown's "residents" were black. The people running Jonestown were white. The "church" they ran in the San Francisco Bay area did attract disturbed and gullible white people who wanted to join a cult, but many Jonestown "residents" apparently were abducted off the San Francisco's streets, while others were lured there under false pretenses. It appears that Jonestown may have been partially inspired by what the Nazis did in the death camps. Josef Mengele, of Auschwitz fame, may have known Jones. Mengele may have "consulted" at Jonestown.

Whatever they were doing in Jonestown, California Congressman Leo Ryan was getting heat from his constituents regarding their sons and daughters being spirited off to Guyana. Ryan decided to check out Jonestown himself, and flew down there. Ryan's appearance "blew" the operation's cover, and it had to be shut down. Ryan was murdered as he landed at Jonestown, which is the first and only time that a U.S. Congressman has died in the line of duty. Then they liquidated Jonestown's 900 residents. They apparently tried turning the Jonestown inmates into automatons, and they *tried* getting everybody to drink the cyanide-laced Kool Aid, but the people were not that far gone. Nearly everybody fled into the jungle. They were chased down, murdered, and hauled back to Jonestown.

Alleged CIA-agent and embassy official Richard Dwyer was apparently there when the killing began, and Jones himself was captured on audio tape yelling, "Get Dwyer out of here!" British and American Special Forces troops were "conducting operations" in the vicinity, and they rounded up and killed Jonestown's fleeing inmates. Bo Gritz knows a Special Forces operative who was on that operation. The man was so outraged that he wrote a manuscript, titling it with the message they radioed in when the job was done: "All the Niggers are Dead!" U.S. secrecy laws forbade the man from publishing it, but he at least had the satisfaction of writing it.[\[33\]](#)

Jonestown has apparently been repopulated by inmates from Asia, and is merely one of numerous camps like it. There apparently are other Jonestowns dotting the globe, run by the CIA and other spook agencies. America's tax dollars at work.

How many Americans have heard that story? Has Dan Rather talked about that one lately? A House committee "investigated," and concluded that the CIA had nothing to do with Jonestown. Case closed.

Wilcher heard about it, however. Jonestown was mentioned in his letter, along with the JFK, RFK, Martin Luther King, Malcolm X and John Lennon assassinations, as well as the deaths of J. Edgar Hoover, Martha Mitchell, John Tower, Senator John Heinz, Congressman Ted Weiss, as well as the attempts on Ronald Reagan and George Wallace. Wilcher also wrote about October Surprise, the FBI's COINTELPRO program wiping out the Black Panthers, and so on. Wilcher even alleged that the South Korean airliner's downing was not by the Soviet Union, but the CIA. Is there a conspiracy theory that Wilcher left out? The major thrust of Wilcher's letter was what happened at Waco. He also discussed the infamous Clinton Body Count. Wilcher's belief was that unless somebody like Reno found some courage, there would not be an America left before long.

Wilcher was snooping into the bank accounts of ex-presidents at BCCI. Janet Reno was far from alone in hearing from him. Most of Capitol Hill was aware of Wilcher's muckraking.

Wilcher was taping and attending conferences held by famous independent White House correspondent Sarah McClendon. In the meantime, Wilcher was in close contact with CIA agents and his friend [Rodney Stich](#). In early June 1993, a few weeks after he sent his letter to Janet Reno, Wilcher stopped attending McClendon's conferences. McClendon herself became concerned about Wilcher, and asked a woman friend of Wilcher's to ask Stich if he had heard from him. It is known that on June 16, 1993 Wilcher talked to one of his sources, a CIA contract agent in a federal penitentiary, and an informant of Stich's also.

A couple days before the woman called Stich, she went to Wilcher's apartment, looking for him. Not only was Wilcher not home, but the woman also rang the adjacent apartment's doorbell and was greeted with a recording saying that she had reached a disconnected government number.

Wilcher's friend called Stich on June 22, 1993, asking him what to do, and if he thought Wilcher was alive. Stich responded that based on what he knew, it was 75% likely that Wilcher was dead. In the meantime, McClendon, 83 at the time, was badgering the Washington D.C. police to do something about Wilcher's disappearance. On June 23rd, the Washington D.C. police finally broke into Wilcher's apartment to find his decomposing, naked corpse sitting upright on the toilet, as if he had died there.

The apartment was crawling with nearly thirty firemen, policemen and FBI investigators. The FBI seized all the records in Wilcher's apartment, while incredibly telling McClendon (who rushed to the scene) that they had "no interest" in the case. The local authorities inexplicably ruled Wilcher's death a suicide. The coroner's office refused to provide Stich with a copy of their autopsy report. Case closed.

Stich's informants are CIA/FBI/NSA types, and they end up dead from time to time (one was stuffed into a car trunk at an airport). I am surprised that Stich lived long enough to write *Defrauding America*. They got Stich, however, which I will cover soon.

Stich discovered that Wilcher was apparently lured out of his apartment and led to Vienna, Virginia. He was interrogated about what he knew about George Bush's, Jimmy Carter's and former CIA head William Webster's bank accounts at BCCI. BCCI insiders had given Wilcher a great deal of documentation. Wilcher was then fed a pizza and given a can of Pepsi. The Pepsi can was coated with a solution of curare dissolved in DMSO. DMSO is a chemical that carries throughout a person's body in seconds. When I was in collegiate track, I knew people who used it. If you put your finger in a cup of DMSO, you can taste it on your tongue in seconds. Curare is a highly toxic poison that paralyzes the muscles, causing death from asphyxiation. Wilcher was dead within minutes of grabbing that can of Pepsi.

Then his killers (CIA/NSA types) put his corpse into a fetal position, stuck it in a car's trunk and drove back to his apartment. By the time they arrived, rigor mortis had set in and Wilcher looked like a statue of *The Thinker*. They set his corpse on his toilet.[\[34\]](#) That is one way to end an investigation into corruption. The official opinion is that the deaths of Casolaro and Wilcher are unrelated suicides. More people besides Casolaro and Wilcher have died regarding the Octopus-like activities surrounding the BCCI, Inslaw and related scandals.[\[35\]](#)

Stich chronicles the many ways that they silence whistleblowers. Stich tells how they took care of him. The judges in California get creativity points in Stich's case; they used an angle I had never heard of. Stich was a multimillionaire, married many years ago, and in the 1960s he obtained a divorce in Texas. As Tom Bearden said about [game theory](#), they look for chinks in the target's armor and go for the weak spot. Although Stich had been divorced for 26 years, the judges in California said that California did not recognize his Texas divorce, declared him still legally married to his ex-wife, and then used the community property laws to seize his assets.[\[36\]](#) With no money, he was legally defenseless. Kangarooing somebody into prison from that point is often merely a formality.

They made it up as they went along, not bothering to have a shred of legal standing for what they did. The gangster judges handed down ruling after ruling that would make a lawyer's jaw drop. Then they all wolfed down a chunk of Stich's six-million-dollar net worth. Free drinks for everybody!

The Europeans always played off [Native Americans against each other](#), and few natives ever figured it out as they participated in their eventual annihilation. Similarly, with Stich they found a greedy ex-wife who was willing to participate in the legal abomination so she could get at her ex-husband's money. While reading Stich's account of events, I recalled seeing that game played before, many times. His ex-wife's participation in the fraud ruined her daughter's life, drove her daughter's husband to suicide, and shattered several lives.

A critical lesson that humanity has yet to learn is that the ends never justify the means. The [means become the ends](#). One cannot use a means inconsistent with the desired end. Good guys do not kill bad guys. That is a lie that too many believe. The devils in costume keep playing that game, as long as people are stupid enough to fall for it. It is idiocy to think that people can kill all the bad guys, and all that will be left are good guys. Maybe it happens in John Wayne Western movies, but not in real life. It is another case of inverted logic. [Orthodox cancer treatment](#) uses nearly the same premise: killing all the "bad" cells while sparing the good. It does not work.

As Ralph McGehee makes clear in his [Deadly Deceits](#), the CIA actively recruits people who blindly follow orders.[\[37\]](#) The indoctrination and propaganda is intense, but is also merely a continuation of the lies that children are taught in [grade school history classes](#) and [see on TV](#). I have known people who are part of "off-the-shelf" operations, where they do not officially work for the CIA, but try holding down real jobs between stints with the spooks.

They are often recruited with a pitch about how covert action serves their country. The appeal is usually to patriotism and/or the macho mentality. They are told that they are defending freedom. They are trained in the art of murder and other activities. I have friends with a lot of blood on their hands, whom I will not name, because blowing their cover could risk their lives. They were either young or gullible, and seduced into the program. Generally, their covert action jobs ruined them as human beings. Nobody murders somebody, even when told that they are killing "bad guys," with clean hands and consciences, except true

[dark path](#) initiates. The CIA's headquarters are [full of zombies who kind of figured it out](#), but are trapped in their careers and drink themselves silly until retirement.

Once in a great while, a covert action soldier wakes up and his conscience takes over. [Ralph McGehee](#) and Philip Agee are two such men. Ralph published his CIABASE on the Internet. He is more than 70 years old. His CIABASE was composed of public domain information. He used no classified information. Nevertheless, his activities exposed the CIA for what it is. They made [Ralph's life a living hell for daring to speak up](#). They tried to silence him for years, trying to frame him for crimes and other dirty tactics, but since he was doing nothing illegal, and the CIA's harassment of him was illegal, Ralph was hanging in there, though some days were worse than others. In early 2000, as Ralph was writing about how our "aid" to the [Colombian government](#) looked remarkably similar to how the [Vietnam experience](#) began, the CIA stepped up the harassment by spiking his food and causing injury to his mouth. Ralph's CIABASE is now out of business.

The CIA has been partly responsible for the [deaths of millions of people throughout the world](#), as it helps keep the majority of humanity enslaved to the [neocolonial](#) system. If humanity survives the transition we are in the early stages of today, the coming age will not have secret agencies and spies. Secrecy and deception are tools of [dark path initiates](#), not light path beings. When light path beings resort to such tactics to "fight the dark," they have already lost. The CIA, FBI, NSA and related institutions are primarily self-serving, or what most would call "evil." The American people are carefully brainwashed into believing that they need them, to "protect" them.

Phil Agee did not abide by the secrecy agreement as Ralph McGehee did, and he wrote *Inside the Company* abroad and named names. He had a rougher ride than Ralph. *Inside the Company* and *On the Run* documents what the CIA did to Agee. One trick was using a bugged typewriter to find his hiding place in Paris, while he was writing *Inside the Company*. They tried luring him to Spain to "neutralize" him before he finished the book. After he published *Inside the Company*, he was kicked out of several European countries before he gained political asylum in West Germany. He lost his homeland by publishing how the CIA works.

Some results of the CIA's machinations help to bring cheap oil and other commodities to America, and many Americans have consciously prostituted themselves. They realize that the CIA and gang are creating immense death and destruction throughout the world, but as long as they enjoy cheap gasoline, coffee, bananas and tennis shoes, they think it is great. Many in the upper classes think that the CIA, FBI and NSA are great institutions, keeping the chips flowing their way. Those who condone bloodshed and exploitation in the service of their lifestyles, often coming up with highly strained rationales, will create future circumstances where they will find the shoe on the other foot. They will experience what slavery is like, barely surviving while their masters live in opulence.

On the issue of UFOs, there has been credible data and testimony from impeccable sources. [Steven Greer](#), MD, founded and has run the Center for the Study of Extraterrestrial Intelligence (CSETI) since 1991. His strategy during the past several years has been honorable and difficult to defeat. Greer has been rounding up astronauts, politicians, military leaders (generals, and about 400 people in all), and other experts and high-ranking people, persuading them to testify about what they know about UFOs. As Dennis Lee has done, Greer knocked on the front door, walking right up to the White House, the military, Congress, the CIA, the United Nations and presenting his material. Of the 100 witnesses that Greer originally rounded up, more than fifty wanted immunity from the national security laws before they would testify. More than

forty wanted to testify, and as far as they were concerned, the national security laws could be damned. Those numbers were when Greer only had 100 witnesses willing to speak. His total numbers have quadrupled, but most of those 300 additional witnesses also want protection before they will testify.

Greer approached the establishment with their own people, making the impossible-to-fairly-attack case that in humanity's common interest, the national security laws should be waived, so those people can publicly tell what they know without being thrown into prison. If there was nothing to hide about UFOs, the government has no defense. The witnesses Greer assembled are impressive.[\[38\]](#) In April 1997, Greer presented eleven witnesses who testified under oath to the U.S. Congress in secret hearings. The co-host of the presentation was a man who walked on the moon, Apollo 14 astronaut Dr. Edgar Mitchell. The witnesses gave first-hand testimonies, given under oath, of UFO encounters and related events. One person who did not testify was, in words of Greer, an "Intelligence Officer privy to the disinformation plan to stage a mock attack using back-engineered alien reproduction vehicles (ARVs), was picked up and sequestered by Intelligence during the proceedings."

Greer and friends are trying to bring the issue into a public forum, and waiving the national security laws so they can testify without being sent straight to prison. Greer's plan *is* unassailable, yet the merciless attacks on Greer in 1997 were beyond bizarre. Even his supposed allies in the UFO field attacked him, trying to wrap him up in copyright issues and other drivel. People accused Greer of ridiculous things (such as he would make a killing and control the movement). How can he control anything by having public hearings where witnesses can testify without fear of reprisal? The plan *is* unassailable, which is why the attacks on him were so irrational. The glib attacks were largely made by organizations and people that I suspect have intelligence connections, posing publicly as UFO enthusiasts, but in reality working to discredit or otherwise attack the real deal coming forward. It is similar "logic" to prosecuting Dennis' Seattle company for "consumer protection," when the customers [risked none of the their money](#) as they purchased Dennis' heat pump. Logic does not matter if one has the bully pulpit to lie from.

The witnesses are not rabid, wild-eyed conspiracy theorists, but people such as astronauts who want to safely testify in a public forum. Those hearings would probably be one of human history's biggest events, and the man trying to make it happen is attacked from all sides.

A recent example of this nation's response to that secret Congressional testimony, and the threat of public knowledge that we are not alone in the universe, is David Adair. Adair has been on the *Art Bell Show* since he testified, and his story *is* incredible. Adair testified to an experience that he had at Area 51 in 1971. He says that he built a *fusion* rocket as a teenager, with U.S. government sponsorship and theoretical assistance from Stephen Hawking, before he developed Lou Gehrig's Disease. Hawking was involved because a partial black hole was used as the containment field for the fusion reaction. The rocket was launched in New Mexico and landed at Area 51 in Nevada. At Area 51, Arthur Rudolf, one of the [NASA Nazis](#), asked Adair to look at something. Adair was taken underground and shown what he believed to be a star drive from an alien craft. It was like his fusion engine, but a thousand times bigger, and it was alive, an organic fusion engine. Adair determined that it had a containment failure. Adair was only 17 years old, and was going to be locked up when the legendary Curtis LeMay came and rescued Adair from jail, because he was a friend of the family and suspected that Adair was in trouble.

LeMay ran the Strategic Air Command, and was Barry Goldwater's buddy. Goldwater, who lost the presidential election to Lyndon Johnson in 1964, was a brigadier general in the National Guard, one of America's highest-ranking politicians, and a pal of the highest-ranking military officials. One day at Wright-Patterson Air Force Base, Goldwater was shooting the breeze with LeMay and asked if he could see the

legendary Blue Room and Hangar 18, reputed home of captured craft, frozen aliens and other extraterrestrial paraphernalia. According to Goldwater, LeMay became the angriest he had ever seen him. He shouted at Goldwater that he had better never hear him ask that question again. It is the highest official admission of what might be going on behind the national security veil that I know of. Goldwater talked for years about that event, even on *Larry King Live* to a national audience. There are published letters that Goldwater wrote, confirming the story.[\[39\]](#)

Adair says that LeMay rescued him from Area 51, and on the way back home to Mount Vernon, Ohio, LeMay told Adair to stop making rockets, and Adair says that he readily complied, not wanting to risk what nearly happened at Area 51. Adair has been involved in the space program ever since, and is buddies with many astronauts, and his company's equipment goes up in the space shuttles regularly.

Adair testified to Congress, under oath, and told them that their own records can prove his story, as they provided the funding to build his rocket. He talked about it on *Art Bell* to a national audience. Adair said that if he was lying, they could lock him up tomorrow, as he would have perjured himself.[\[40\]](#) His story is unbelievable. It also might be true.

Where were the "skeptics," leaping all over Adair, proving him to be a fraud? There was barely a peep. Look on the Internet for commentary on Adair. His story and credentials cannot be hard to attack if they are bogus. Nobody made a credible effort.

Greer's right hand throughout his UFO activism was Shari Adamiak, who was with him every step of the way. When they held those hearings in April 1997, they were both about forty years old. How they could be stopped legally or ethically was difficult to imagine, walking in the government's front door with their witnesses. Two months after the hearings, Greer and Adamiak both came down with cancer. What are the odds of that "coincidence"? There may be a Curare and Cancer Department in one of America's intelligence agencies. The collective response by the UFO crowd to Greer and Adamiak's illness was a yawn. Adamiak died on January 20, 1998. Greer is still alive.

With America's collective catatonia and the government's stonewalling of Greer's activities, Greer has been forced into doing what he tried avoiding: bypassing the official channels in getting the information out there. Part of his Disclosure Project has been to publish *Extraterrestrial Contact*. His organization has been preparing documentation and video testimony, if nobody will allow it through the official channels. It will not be surprising if more "coincidental" problems befall Greer and his organization.

Those situations should have a certain resonance with right wing Americans. What the government did to the Branch Davidians at Waco, Texas in 1993 was obviously a diabolically planned mass murder. As with [The Panama Deception](#), the documentary *Rules of Engagement* was nominated for an Academy Award. It did not win, but stands as the best audio-visual summary regarding what our government did to those people. Americans should be justly outraged by what happened there. Yet, it is a microcosm of what America has done to Iraq, for instance. The American government murdered more than a dozen children at Waco. It has [murdered hundreds of thousands of Iraqi children](#), with the death toll still climbing. It [murdered millions of Southeast Asian people](#) during the 1960s and 1970s. The Waco Massacre was relatively mild when compared to what happened to [Black Kettle's](#) people, not all that far from Waco.

In a familiar pattern, the Branch Davidian survivors were prosecuted for the deaths of the storm troopers who attacked them (probably killed by their own Bureau of Alcohol, Tobacco and Firearms (BATF) buddies). The men who died in the attack were some of Bill Clinton's bodyguards, on loan from the Secret

Service. They are more people on the Bill Clinton Body Count, and may have known too much. The Branch Davidians fought back and waged their own unlawful death lawsuit against the murdering feds. Several experts were going to testify on the Branch Davidians' behalf regarding the infrared film footage that clearly depicts the government agents firing machine guns into the Davidian compound as they set it on fire. Expert Carlos Ghigliotti was going to testify regarding the footage. He conveniently died of a "heart attack," soon before he could testify. He was only 42. Edward Allard, another expert who was going to testify, had an incapacitating stroke a few weeks before Ghigliotti died. At about the same time Ghigliotti was dying, Fred Zegel, another expert who was going to testify, suddenly came down with blood poisoning and barely survived. Another expert who was going to testify, Maurice Cox, had a sudden worsening of his kidney problems at the same time those others had their "mishaps." Michael McNulty, who produced *Rules of Engagement*, has major doubts that they were coincidental. The sudden incapacitation and/or death of those experts pretty much destroyed the chance those Davidian plaintiffs had in court. Was it another string of fortunate "coincidences" for the American government? They ply their trade with more subtlety than when David Ferrie died of a "drug overdose" just before Jim Garrison's JFK assassination investigation could get to him, or George de Mohrenschildt "committing suicide" the very day that HSCA investigator Gaeton Fonzi contacted him, and many other amazing and unfortunate coincidences.[\[41\]](#)

Similarly, the evidence is strong that Timothy McVeigh's fertilizer bomb could not have done the damage to the Oklahoma City federal building that it did. The Air Force conducted tests at Eglin Air Force Base in Florida after the Oklahoma City bombing, and Brigadier General Benton K. Partin, one of the world's leading experts on explosives and ordnance, led the research. They found that an air bomb, which was what McVeigh set off, could not possibly do the damage to the Oklahoma City federal building that it supposedly did. An air bomb would have blown out the windows of the federal building and not much else. There had to be other bombs inside the building in order to take out those reinforced concrete columns, which meant that a sophisticated bombing took place, far more than McVeigh and his buddy could have done. McVeigh apparently was a fall guy, as were Oswald and Sirhan, but maybe it was not a government/spook action, but perhaps a backfired covert operation, as the JFK assassination was. There is a great deal of evidence of prior knowledge of the bombing. Everybody at the BATF in that building (except for the support staff) stayed home on the day of the bombing. The Oklahoma governor's brother wrote a novel *before* the Oklahoma City bombing, where he described a terrorist bombing of a federal building in Oklahoma City, performed by some nut named *Tom McVey*. How far do we want to stretch coincidence?

What about Those American Hostages in Iran?

Why *did* the Iranians release the hostages the day Reagan was inaugurated? The Iran-Contra scandal gave plenty of evidence why, as the United States was shipping arms to our "enemy," Iran. The Iranian hostage crisis was an albatross around Jimmy Carter's neck that helped derail his reelection bid. There is substantial evidence pointing to a deal being made between Ronald Reagan's election campaign team and the Iranian government, to hold onto the hostages until after the presidential election. It looks as if George Bush may have helped negotiate the deal.[\[42\]](#) The federal government "investigated" and dismissed the October Surprise allegation. They did not really put the allegations to bed, just as the Warren Commission did not regarding JFK's death.

America's political milieu around 1980-1981 is one of American history's scariest periods. Numerous conspiracy theories swirl around Ronald Reagan's choice of George Bush as his running mate. [Bush has a long pedigree](#) in the Eastern Oligarchy and covert activities. Bush ran the CIA and was a member of David

Rockefeller's Trilateral Commission, as were many members of the federal government. Bush has apparently admitted that David Rockefeller was his mentor.[\[43\]](#) Rumors abound that Reagan chose Bush because of Rockefeller's influence.

A little-known member of David Rockefeller's Trilateral Commission also became president, rising from obscurity to win the 1976 presidential election: Jimmy Carter. David's brother Nelson was vice president while two assassination attempts were made on Gerald Ford, bringing Nelson within a bullet of being the second president who was never on a ballot, and Ford was the first.

While Bush was apparently in Paris in October 1980, negotiating the hostage release with Iran, it looks like the wheels were moving to put some bona fide gangsters in charge of the federal government. Immediately after Reagan was elected, one man was coming out of a five-year hibernation, after barely escaping deportation proceedings that were only forestalled because Richard Nixon was run out of office. Ironically, both Nixon and Reagan ran on the law-and-order platform and probably had the two most lawless administrations in American history. John Lennon was coming out of seclusion after five years. Not only was he in the studio making his first album in five years, *Double Fantasy*, he was also coming out of his political hibernation. In light of what happened after Reagan's inauguration, Lennon was on a short list of those who could have mobilized average Americans against what Reagan's boys were about to do to [Central America](#) and other nations. Lennon won Nixon's hatred with his high-profile Vietnam protests, which was why they tried to deport him.

A controversial situation got CIA-man Bush on the ticket, a man who may have helped engineer October Surprise. A few weeks after Reagan was inaugurated, the State Department floated a white paper on February 23, 1981. The white paper was apparently a series of forged documents that were supposed to help justify the reign of terror that the Reagan administration was about to wage in [El Salvador](#), terrorizing the population and killing 75,000 civilians while using about \$6 billion in U.S. taxpayer money.[\[44\]](#)

Similar to the "assassins" of JFK, RFK, Martin Luther King, Jr. and John Lennon, those who attempted to assassinate George Wallace, Gerald Ford and Ronald Reagan were "lone nuts." It is amazing that those "lone nuts" all pulled their triggers at critical or intriguing political moments in American history. Oswald "killed" JFK soon after JFK declared that he planned to pull American troops out of Vietnam. JFK's executive order to pull the troops out of Vietnam was reversed before he was buried. Sirhan B. Sirhan "killed" RFK the night he won the California democratic primary in 1968, vaulting into the front-runner position for the presidency.

George Wallace came out of nowhere in 1968, in the first substantial third party threat in presidential politics since Teddy Roosevelt's Bull Moose party, splitting the democratic vote enough (especially with RFK gone) to usher repeated political loser Richard Nixon into the White House. Wallace won several southern states that were traditional democratic shoe-ins in presidential elections. Wallace ran again in 1972, and it looked as if he might gain enough support to where *no candidate* would win enough Electoral College votes to be elected president, where somebody like George McGovern might sneak into the White House. Right then, a "lone nut" came out of the woodwork and gunned Wallace down, taking him out of the running.[\[45\]](#)

We all know about the Watergate break-in. Or do we? What was that all about, a few bumbling idiots working on Nixon's behalf? One participant was [E. Howard Hunt](#), a man undoubtedly (at least to me) involved in the events that led to JFK's assassination. Harrison Livingstone is one of many who feels that the Watergate burglary was far from relatively innocent intrigue regarding Nixon's smear techniques, but an

attempt to cover up the political murders that accompanied Nixon's rise to power.[\[46\]](#) Then Nixon's own people brought him down.

When Nixon and Spiro Agnew were taken out one at a time, they were replaced with "Magic Bullet" Gerald Ford and Nelson Rockefeller.[\[47\]](#) Nelson Rockefeller was oligarchy personified. Soon after Ford took office, two "lone nuts" tried taking him out, nearly making Nelson Rockefeller the first president who was not on any ballot or picked by an elected president. Maybe it was merely a series of extraordinary coincidences.

Reagan was elected with the help of the Iranian hostage albatross that Carter wore around his neck, and a month later John Lennon was gunned down by another "lone nut." Then Reagan was inaugurated, with the Iranians releasing the hostages on the same day, followed a few weeks later by the fabricated white paper that helped set the stage for a ten-year reign of terror in Central America. John Lennon was eminently qualified to lead the American people in protesting the crucifixion of Central America. Just when Reagan was able to find the White House bathroom on his own, he was gunned down by another "lone nut." That man was "coincidentally" a friend of George Bush's family.

A few months later, [Omar Torrijos](#), the leader of Panama, died in a mysterious plane crash. It was similar to the "plane crashes" of John Tower and Audie Murphy, where the plane may have exploded in mid-air, as though a bomb went off in it. The CIA had earlier plotted to assassinate Torrijos, and it appears as if they may have finally succeeded.[\[48\]](#) That set the stage for the reign of Manuel Noriega. George Bush later led America in [invading Panama](#) to take out Noriega, supposedly for crimes Noriega committed while he was working for the CIA, which Bush once ran.[\[49\]](#) A few months before Torrijos' untimely demise, the helicopter of Ecuadorian president Jaime Roldós exploded in mid-air. Self-admitted economic hit man John Perkins knew both men, and is sure [the CIA assassinated them both](#). The deaths of Mel Carnahan and Paul Wellstone in 2000 and 2002 were domestic "plane crashes" that happened at opportune moments for the Republicans, as those deaths happened just before election day, and their candidates, who previously did not have a prayer, became shoo-ins on election day, except that Carnahan's opponent, John Ashcroft, lost to a dead man, as the people elected Carnahan's widow instead. [Gary Wean](#) saw that kind of "convenient" death of the incumbent in his travails in Ventura County, where the unknown challenger ran unopposed as the "untimely" death happened so close to election day.

After the assassination attempt, Reagan was a near vegetable for the next eight years of his presidency. The Alzheimer's disease he has today probably began its progress with the assassination attempt, if not earlier.

Alexander Cockburn related a revelation from *Washington Post* reporter Lou Cannon's *The Role of a Lifetime*. Four months after the assassination attempt, Cannon interviewed Reagan. In the *Washington Post* on July 23rd, 1981, he reported an interview with a tired but alert president, coming back from an international summit, talking about how successful it was.

Ten years later, in *The Role of a Lifetime*, Cannon had something very different to report. Cannon wrote,

"What was surprising to me was Reagan's condition. He was exhausted to the point of incoherence throughout much of the interview and could not remember the substance of any subject that had been

discussed apart from Mitterrand's expression of anticommunism. I had not seen Reagan at such close range since the assassination attempt nearly four months earlier, and was shocked at his condition... Reagan simply was unable to recall the content of the talks in which he just participated...The interview concluded...at a signal from Deaver, who did not seem to find the president's condition unusual."

Cockburn wrote,

"At the time of the shooting, the press was full of phrases like 'bouncing back,' 'iron constitution,' and other terms indicating that Reagan had emerged from the ordeal in good shape. In fact Reagan very nearly died on the operating table and was a dotard afterwards. He never fully recovered.

"Conclusion: Unless a president is actually dead, the White House press corps can be relied upon to present him as both sentient and sapient, no matter how decrepit his physical and mental condition."[\[50\]](#)

There are stories and film footage of President Reagan falling asleep at conferences and other embarrassing situations. When Reagan testified after he stepped down from the presidency about the Iran-Contra scandal, and said, "I can't remember" far more than one hundred times during his two days of testimony, he may have been telling the truth. His acting career came in handy, though, and he generally remembered his lines and read his cue cards for the rest of his presidency.

All those "coincidental" assassinations and assassination attempts have plenty surrounding them that make people wonder. For instance, every single one of those "lone nuts" was connected in some way to U.S. intelligence operations. The evidence on Oswald is overwhelming. Mark David Chapman, Lennon's assassin, worked for a CIA front organization. Sirhan had strange and shadowy connections to CIA-related mind control operations, and Sirhan acted like a *Manchurian Candidate*. See the movie of that name starring Frank Sinatra, which like *The China Syndrome* was a little too prescient, and was pulled from circulation and not shown for many years in America after the JFK assassination.

E. Howard Hunt was a novelist, among his many talents, and his writing colleague Gore Vidal all but accused Hunt of writing the "diary" of the lone nut Arthur Bremer, the man who shot George Wallace. Vidal thought that Bremer's diary was a little too writerly, something Vidal thought Hunt was just the man to write, doing his part in fabricating another "lone nut."[\[51\]](#)

Besides working for a CIA front organization, there are strange events surrounding Mark David Chapman's shooting of Lennon. Chapman originally purchased a plane ticket to Chicago, but ended up in New York. There were days of unaccounted time. When Chapman signed Lennon's name in Hawaii when he quit his job, it was odd. There is little evidence that Chapman was particularly interested in Lennon from a fan's point of view. Chapman was a big fan of Todd Rundgren, but Chapman was not even as big a Lennon fan as I am. What was going on in his head? Were his handlers preparing him for the deed in Chicago? Immediately after he gunned Lennon down, he sat down on the curb, reached into his pocket, pulled out *The Catcher in the Rye* and began reading it, a kind of *Manchurian Candidate* behavior one encounters if they begin looking into MK-ULTRA and related programs. Chapman has not acted crazy while he has been

in prison.[\[52\]](#)

When Ronald Reagan was shot, even though his limousine left the scene five minutes before James Brady's did, it arrived at the hospital *fifteen minutes after* Brady's did. What happened in those twenty missing minutes? Was Reagan told how it was going to be, while he lay there in agony? Reagan admitted that he did not feel anything until the Secret service agent jumped on top of him in the limousine. It appears that a strange bullet entered Reagan's ribs. The projectile created a small, nearly bloodless wound, and the doctors almost did not find the dime-shaped fléchette. More strangeness was a "lone nut" that was a long-time friend of the Bush family. Bush and Hinckley's dad went way back to the good old Texas oil days. The day of the assassination attempt, Hinckley's older brother had a dinner date with George's son Neil. It's a small world.[\[53\]](#)

In most of those assassinations and attempts, there was evidence of more bullets flying than the assassin's gun actually fired. The "lone nut" was usually immediately apprehended, and all other suspects were immediately released. "No conspiracy" was announced within hours of each shooting, even in the case of Martin Luther King, when there was no suspect immediately after his shooting.[\[54\]](#)

Was political assassination the standard policy by those who really ran America from 1963 to 1981, serving up a "lone nut" scapegoat each time? There were many, many other strange and/or untimely deaths of high-ranking CIA, FBI and political folks, such as J. Edgar Hoover, William Sullivan, William Casey, John Tower, Hale Boggs, William Colby and others. In the 1970s, there apparently was a "spook war" taking place, not much different than a Mafia gang war, except that politicians and bureaucrats were being murdered. As with the rash of strange, violent and untimely deaths surrounding the JFK assassination, political murder while killing more people to tie up the loose ends may be standard practice in America.

There may not have been even one "lone nut" in American presidential assassination history, going clear back to Lincoln. Lincoln's is the only undeniable conspiracy (except the House Select Committee on Assassinations' lame position on JFK's death), as the conspirators tried killing a number of people on the same night. There are interesting theories regarding how far that conspiracy may have reached. The standard right wing theory is that the European bankers bumped off Lincoln because he cut out the central banks and printed "greenbacks," and JFK was initiating a similar program soon before he died.[\[55\]](#)

9/11 – The Mother of all Conspiracy Theories

On the evening of September 10, 2001, I bought airplane tickets to Ohio to visit pals from my [trucking days](#). The next morning I called my old trucking mentor, letting him know I was flying out there in a couple of weeks. He replied, "No you're not," and told me to turn on the television. When I did, both World Trade Center towers were on fire but still standing. At that moment, I knew that my efforts to heal the planet were too little and too late. There have been no surprises since then for me. [Orwell's permanent war](#) was dusted off and used by George Bush the Second and the neoconservatives to justify all manner of imperial outrage. Aggressive invasions in "self defense," in defiance of international law and world opinion, torture centers, outlawed weapons used on invaded nations, police state tactics used on its domestic citizens and so forth - it is no mystery why America became a pariah nation so soon after 9/11, when the U.S. was the object of so much global sympathy.

What was also not surprising was the immediate suspicion among many that 9/11 was too convenient a

“gift” for Bush and neocons, and that they had something to do with 9/11. In 2004, half of New York City’s residents believed that the Bush administration had foreknowledge of 9/11 and allowed it to happen.[\[56\]](#) A friend living in Manhattan was skeptical of the “inside job” angle of 9/11, until Bush named Henry Kissinger, Mr. Cloak and Dagger, to head the 9/11 Commission. Kissinger resigned when he had to reveal his business relationships.

Partly because of my work on the [JFK Assassination](#), the [moon landings](#) and other controversies, I have some access to the 9/11 independent researcher community. In 2004, I made the suggestion that the 9/11 researchers should concentrate on the most provable findings and stay away from the more speculative theories, if they want to make a persuasive case to the public. My suggestion sparked a flame war amongst the researchers, which confirmed the observation I made about the [JFK researchers](#). In late 2005, a physics professor from BYU, a conservative bastion if there ever was one, published an academic paper that supported the theory that World Trade Center building number 7 was [taken down by controlled demolition](#), which led to the theory that the main World Trade Center (WTC) towers were also collapsed in a controlled demolition. The faculties of two Utah universities unanimously accepted his findings. In the wake of publishing his study, he made the same suggestion that I did: researchers should focus their efforts on the most provable aspects of the 9/11 controversy and stop fighting with each other.

Because of the time I spent looking into the JFK assassination, the moon landings and so forth, I realized that it would take time and effort beyond my means and inclination to do a creditable investigation of the 9/11 evidence. However, I have spent more than a hundred hours looking at the evidence over the years, and I think the most compelling and fruitful avenues of investigation today include:

- Only three steel-framed buildings have collapsed due to fire in world history - all WTC towers, all on the same day, and WTC7 was not hit by a plane and only had small fires in it when it collapsed, and all three collapsed in a manner consistent with controlled demolition;
- In the most protected airspace on earth (over Washington D.C.), America’s entire national security apparatus was caught flatfooted, and the Secretary of Defense himself sat in his office as a plane hit the Pentagon, where he was working, nearly an hour after the first World Trade Center tower was hit;
- On 9/11, there were numerous [war games](#) being engaged in by the U.S. Air Force and NORAD, with even one “live” hijacking plane in the air; this may help explain the non-response by the U.S. military to the hijackings, and is eerily similar to the fake assassination attempt on JFK that [turned into a real one](#) - and the Bush family is intimately connected to both events;
- A hijacker’s passport miraculously appeared on the ground after the WTC attacks, emerging unscathed from the fiery crash into the WTC; conversely, no black box information from any of the planes has ever been made public;
- The plane that allegedly hit the Pentagon performed aerial feats that the experts may not be able to reproduce, but a pilot who never trained beyond a simulator supposedly did it (again, similar to Oswald’s irreproducible feats of marksmanship to shoot JFK); all footage that may have shown a plane hitting the Pentagon has been seized by the federal government and never shown publicly, and there are numerous other anomalies with the plane that allegedly hit the Pentagon;
- In the days leading up to 9/11, a highly unusual number of share options of both United and American Airlines were [sold short](#) (betting the share price would decline), and the profits made by those speculators may have amounted to many millions of dollars;

- The plane that crashed in Pennsylvania left more than one debris field, and they were several miles apart, a fact inconsistent with the official version of events - the plane apparently began coming apart before crashing, evidence of either a bomb going off on it, or it being shot down.

Of course, if the U.S. government was complicit in 9/11, they are not going to mount an impartial investigation, and the official 9/11 Commission findings were deficient in numerous areas. At best, there is plenty that the American people are not being told about the events of September 1, 2005. At worst, 9/11 was staged or allowed to happen, to give Bush and the neocons free reign with their imperial ambitions. After all, they *were* the primary beneficiaries of 9/11 (along with perhaps Osama bin Laden). Cui bono?

Is Anything Being Covered up about the Apollo Moon Landings?

Warning: This part of this essay can seem technical and arcane, and will not interest many readers. In summary, after years of looking at the evidence, I proved to my satisfaction that the moon landings happened as officially portrayed, and did not discover anything of great significance covered up about them, while uncovering positive evidence that convinced me that the [moon landings really happened](#). To bypass this Apollo section and skip to the essay's end, take [this link](#).

The single year of my father's career not spent working for the Department of Defense was his year with NASA, working for Chris Kraft in the Mission Control Room in Houston. It was 1966-1967, in the heat of the space race. I was a Houston space brat, and have had an unflagging interest in NASA and the exploration of space. I watched many of the 1960s space shots live on television, and lived in Houston when those astronauts died in the 1967 fire, and its aftermath made my father decide to quit NASA, as the environment became hyper-political, with everybody trying to cover their backsides and pointing the finger at everybody else. As with [Brian O'Leary](#) (see his *The Making of an Ex-astronaut*), my father felt that Texas did not compare favorably to California. I will never forget when those astronauts died, with my father watching on television an event that he experienced at work that day. NASA personnel (including my father) eventually heard the horrifying sounds as those men died. When the Challenger shuttle exploded in 1986, it took me back to that day in 1967, and I felt sick.

My father had a top-secret security clearance, and NASA was quasi-military in its approach to the moon shots.

I have slowly become aware that NASA has been less than honest with the American people. [Richard Hoagland](#) used to be a NASA spokesman, sitting next to Walter Cronkite during the space shots. Similar to O'Leary, Hoagland left NASA's fold and became critical and suspicious of it. For many years, I have read of UFOs accompanying the astronauts through space, watched footage of some of those UFOs, heard legends about Armstrong and Aldrin freaking out on the moon when alien craft landed next to them (during a two-minute television "blackout"), checking the experimental equipment they set out. Through the Apollo program, all the astronauts had military backgrounds, and as such, national security laws could be held over their heads to keep them silent.

My first introduction to a possible NASA cover-up was around 1991 when I read William Brian's *Moongate*. Brian did not make the case that the moon landings were faked, but that there was plenty covered up about

them. He began his book with the well-known military-NASA connection. Then he discussed the “neutral point discrepancy,” which is the difference in various accounts of the point in space where the gravitational pull of the moon and earth would be equal on a spacecraft traveling between them. Brian cited several sources before the moon landings that calculated the neutral point about twenty thousand miles from the moon. Then he cited several sources that described the neutral point during the Apollo moon shots. Those sources cited a neutral point about forty thousand miles from the moon's surface. Brian asked what changed in those intervening years. He made the case that the neutral point should be about twenty thousand miles from the moon's surface, and if it was really forty thousand miles, then the moon has a much stronger surface gravity than previously supposed. Brian derived the neutral point calculation and the moon's surface gravity if the neutral point was forty thousand miles, and derived a surface gravity for the moon that was 64% of earth's, not the 16% we have been told.

Brian then followed a trail of other evidence, such as the astronauts' experiences on the moon, the evidence of a lunar atmosphere and other anomalies, and Brian made the case that NASA probably used non-rocket technology to land on the moon and take off from it, which means that if we have anti-gravity technology, we also have free energy technology. I was impressed with Brian's reasoning, and for years I threw down his work in front of the “skeptics,” challenging somebody to show me where Brian was wrong. For years, nobody ever did. I have seen Brian called a “kook” (see Donna Kossy's *Kooks*, pp. 65-66) and other names. Nobody, however, ever showed me where Brian was wrong; they would just smile.

Finally, in the late 1990s, Leroy Ellenberger directed me to Archie Roy's *Orbital Motion*, the leading text on orbital mechanics. *Orbital Motion* calculated the neutral point.^[57] It was the forty thousand miles in the Apollo-era literature. Brian found a neutral point discrepancy all right, but it apparently was a discrepancy between the less sophisticated equation that Brian and many others used, and the one that Roy derived. The neutral point discrepancy essentially vanished, as far as demonstrating that the moon's surface gravity was higher than one-sixth of earth's. Because the neutral point discrepancy was the foundation of Brian's arguments, I thought it made his entire case shaky, and let him know it.

Mine was apparently the first legitimate challenge that Brian ever received regarding his work. Far less substantial works often receive the full blast of the “skeptics.” My *Moongate* experience was educational, and it showed me one more way that establishment challenges can be flawed.

All that stated, Brian and others highlighted anomalies that made me think. Years after first reading *Moongate*, I slowly became aware of a small group of people who made the case that we never landed men on the moon. Even the seemingly crazy conspiracy theories have received my attention over the years.

The first person to publicly question the notion that we sent men to the moon was Bill Kaysing, with the 1976 publication of his *We Never Went to the Moon*, written with Randy Reid. Kaysing worked for the space program in the 1960s, with a security clearance. Kaysing's book is more of a booklet, less than one hundred pages long. Kaysing made the case that the moon landings were faked. He pointed to the shroud of secrecy that pervaded the entire space program, with accidents being covered up. That was true. The Space Race was more of a Cold War project than anything else. The military was heavily involved, along with many defense contractors, called “aerospace” firms. Kaysing pointed out numerous anomalies regarding the moon shots. Some anomalies had not yet been explained to my satisfaction, but Kaysing's effort in his *We Never Went to the Moon* was not convincing. He presented photos of the Apollo moon landings that he thought were faked. Some evidence was compelling, but more was easily explained. A plausible prosaic explanation does not mean that it is the *correct* explanation. “[Skeptics](#)” have continually

invoked Carl [Sagan](#)'s aphorism, "Extraordinary claims require extraordinary evidence." One problem is that Sagan was not an even-handed practitioner of the skeptical trade. He often played judge, jury and executioner regarding anomalous evidence, unfairly using his reputation to outweigh his arguments, making his own rulings on what an "extraordinary claim" and what "extraordinary evidence" was. If people can rig the game, they always win.

Kaysing admitted that his work was purely speculative, and was about the first to question whether men really landed on the moon.

In the 1990s, Ralph René weighed in. In *NASA Mooned America!* he advanced several lines of evidence that the moon landings were faked. Kaysing made the case, and René makes it more convincingly, that there were faked/alterd photographs from the moon landings and the space program in general. In one photo, René makes the case that a space walk photo of Michael Collins during the Gemini program was actually a composite image fabricated from a photo of him taken in that NASA zero-G plane, during a training mission. The photos in question were from a book by Collins titled *Carrying the Fire*.

René points out several anomalies in a photo of Charles Duke standing next to the Lunar Rover during the Apollo 16 mission. It is about the most famous "moon hoax" photograph. One anomaly is the Rover track that shows it making a ninety-degree turn in a few feet, while bounding over a boulder, a remarkable feat in one-sixth gravity. More intriguing is a rock in the foreground with the letter "C" on it, as if it was a stage prop on a movie set. The "C" has repeatedly been explained away as a fabrication perpetrated by "moon hoaxer" crowd, and has been explained as an innocent later generation image, where a NASA technician put the "C" there as a note to correct the color control for the image. In July 2001, Steve Troy, one of [Richard Hoagland's](#) sidekicks, posted his research on the "C" rock, showing that it was a "hair" that got on a lens in copying a later generation of the image. His work has been the most convincing of all.

René also noted something seen in numerous photos. The detailed foreground quickly becomes a distant background, as if the foreground was real and the background was a matte shot. NASA's explanation is that because the moon is so much smaller than the earth, its curvature is greater, and a fall off from close to far away happens much more abruptly. Also, there is the "crosshair" anomaly. In all the NASA moon photos are gridlines, which are part of the cameras. The gridlines should be superimposed over all images, meaning that they hide what is behind them. The gridlines are made from thin lines, so they do not mar the photographs. There are many NASA space photos with those grid lines going behind the objects. The problem with the "faked" hypothesis is they always seem to go behind white objects. It is possible that in printing the photographs, the white areas bleed over those thin black lines, creating the effect. That is a potentially innocent explanation, although the Collins space walk photo appears to be a composite, though perhaps "innocent." That Rover photograph is about the most impressive case of the white "bleeding" over a crosshair. There has been plenty of analysis on the Internet of the reticle-"bleeding" phenomenon, the moon hoax debunker explanation seems most persuasive at this time. Here is the photograph in question.

Click on image to enlarge

One of René's theories is that the radiation the astronauts would have been subject to after passing through the Van Allen belt (which shields earth from harmful solar radiation) would have fried them. René's calculations show that the astronauts would have been subject to hundreds of rems per day past the Van Allen belt, while on earth getting more than one rem *per year* is beyond the safety limits for most people.

There is substantial literature regarding the radiation risk and the exposure that the Apollo astronauts received. There were two radiation risks. The first was radiation within the Van Allen belt. The second was the radiation the astronauts would have been exposed to beyond the protection of the Van Allen belt.

The Van Allen belt is created by earth's magnetic field, and it protects earth from harmful solar and cosmic radiation. At the poles, the Van Allen belt is weakest and more radiation gets through, causing the northern and southern lights. Radiation workers have a maximum allowable annual dose of one-to-five rems per year. A rem (Roentgen Equivalent Man) is the standard unit of measure in the radiation sciences; it is related to the rad. In the Van Allen belt, an astronaut is exposed to about one rem per hour. The Apollo astronauts theoretically passed through the Van Allen belts quickly, only receiving about one rem for each pass through the belts. So, they received in a couple of hours about what radiation workers on earth should maximally receive in a year.

The National Council on Radiation Protection and Measurements (NCRP) proposed guidelines for astronauts in 1989 that NASA accepted. It set a 30-day skin exposure of 150 rems, and a career exposure of 600 rems. There are two basic kinds of radiation risks. One is the short-term acute risk, and the other is the long-term risk. The short-term risk is relatively uncontroversial. It has been documented in horrifying detail from accidents in America's nuclear program, the Chernobyl disaster, other nuclear accidents and [dropping nuclear bombs](#) on Japan. If a man receives a dose of 1000 rems in a day, he will die within a few days, his insides being literally cooked. If he *only* gets 350 rems, he will likely die within a month. A 35-rem dose will make him sick.

The second radiation risk is what the astronauts would be subjected to past the Van Allen belt. The Van Allen belt contains high-energy sub-atomic particles, but the belt also protects earth from the high-energy particles/waves from space. The two sources from space are the sun and the galaxy. The sun produces deadly radiation continually, and the Van Allen belt and earth's atmosphere (such as the ozone layer) protects us from the worst of it. The sun's most deadly radiation comes from eruptions known as solar flares. The other radiation is galactic cosmic radiation (GCR), which comes from the galaxy.

The largest solar flare ever recorded was in 1972, between the Apollo 16 and 17 missions. If astronauts were beyond the Van Allen belt during that flare, they could have been exposed to more than 1000 rem, which would have killed them before they came back to earth. That is a real risk in going into space, although the Apollo astronauts did not receive acute doses during the Apollo missions. As with today's weather, solar flares are not very predictable, although there can be some warning, and NASA tried to be solar weathermen before the Apollo missions. They were playing solar-flare roulette during the Apollo missions, but NASA assessed the probable risk of a solar flare hitting an Apollo mission and decided it was small.

The acute dose risk is well known. The long-term risk with non-acute doses is more problematic. The American military establishment manipulated and suppressed the data regarding the harm that [fluorine inflicts](#) on the human body. With declassified documents, it is now known that the Atomic Energy Commission [and other federal agencies actively covered up the harmful effects of fluorine and fluorides](#). The cover-up continues to this day. Those same agencies have also produced the data regarding the long-term harmful effects of radiation. A nightmarish Pandora's box is opened when researching the cover-up taking place regarding numerous chemicals produced by industry and government, such as [lead](#), dioxins and other organic compounds. The scientist in charge of the Chernobyl clean up, Dr. Chernousenko, risked his life to make public what he knew about the radiation damage the Chernobyl disaster caused. He estimated that perhaps one million lives will ultimately be lost due to the disaster, and he revealed that the

"International Atomic Mafia" has been actively covering up not only the Chernobyl disaster, but also the hazards of radiation in general. The American doctor John Gofman has been making the same arguments for many years, detailing how the radiation data is being manipulated to minimize the long-term radiation risks. That is a frightening area of research, but the Apollo astronauts would apparently not have been unusually exposed as compared to other radiation workers, and they have not yet died of long-term radiation poisoning, but those effects are not easy to identify, being more statistical effects (usually cancer deaths) rather than obvious symptomatology.

There are solar flares every day, but they are relatively small. In his book, René calculated that the astronauts subject to everyday solar flares would have been subjected to 375 rems per day. His calculations are suspect, partly because few of those solar flares would be "aimed" at earth. All the same, the radiation issue was a hazard that any manned lunar mission would have faced. It appears that the official analyses of the radiation risk involved with a lunar mission, and the subsequent exposures received by the astronauts, "explains away" this anomaly, although it is obvious that the radiation hazard meant that every Apollo astronaut that passed beyond the Van Allen belt was risking his life in more ways than one.

Then along came James Collier, who produced a video titled *Was it only a Paper Moon?* Collier pointed out numerous anomalies in the moon footage, including footage from Apollo 16 that shows the astronauts on two different days, in two locations, with the identical foreground. I practically fell off my chair when I saw it. However, the raw footage that Collier did not have, what NASA produced the footage from, actually took place a few minutes apart, and Collier misidentified the rock-holder sitting next to the astronaut as the Lunar Rover. While that showed that Collier performed a less-than-thorough investigation, it also showed the "Hollywood" aspect of what NASA did. The NASA movie had goofy narrative by Charles Duke as he rhapsodized about the moon's beauty. The raw footage has no dialogue of the sort. They were playing fast and loose in the editing room. It had me going for a while, before I saw the raw footage. That was about the *most impressive* anomaly that Collier presented, and it fell apart under scrutiny. Once again, the lunar hoax theorists failed to convince me.

Then along came David Percy and Mary Bennett with their *Dark Moon*. It presented the best case for faked moon landings yet, although it still failed to convince me. Their work has obvious flaws and is riddled with errors, although it gave food for thought.

Some of the Apollo Mission Anomalies

As I was writing this essay in early 2001, the TV network Fox aired a show about the moon landings, addressing the various anomalies presented by Kaysing, René and others. In July of 2001, members of a moon hoax forum critiqued my work (thanks guys!), and an aeronautical engineer, [Jay Windley](#), convinced me on several issues that I had residual doubt about. Among the issues being debated are:

1. [The American flag rippled in the "breeze" on the moon;](#)
2. [Shadows do not run in parallel lines;](#)
3. [Astronauts standing in shadows are illuminated;](#)
4. [No visible exhaust issues from the lunar lander's rockets;](#)

5. [There is no crater below the lunar landers;](#)
6. [The moon footage from Apollo 11 was of poor quality;](#)
7. [The radiation problem;](#)
8. [The “crosshair” problem;](#)
9. [Odd reflections;](#)
10. [People who might have talked died under mysterious circumstances;](#)
11. [The lack of athletic feats performed on the moon;](#)
12. [The Nazi connection;](#)
13. [The military-industrial complex connection;](#)
14. [The moon missions were relatively hitchless;](#)
15. [Faked photographs;](#)
16. [The Rover’s movement on the moon;](#)
17. [The Apollo 11 footage from Bart Sibrel’s video - a detailed analysis;](#)
18. [Other anomalies;](#)
19. [I hit pay dirt - evidence that convinced me that we landed men on the moon](#)

The American flag rippled in the “breeze” on the moon.

There is a great deal of moon footage where the American flag is flapping, as if in a breeze. Yet, in every scene, an astronaut is holding or touching the flagpole, or he let go a moment before. The astronaut holding the flagpole could easily cause the flapping. The events supposedly happened in a vacuum and low gravity. The flags would not act as they would on earth. That supposed anomaly fails to convince, but during Apollo 12 the solar wind trap bent as though a breeze were hitting it. The Apollo 12 astronauts made note of it, and Houston put forth the explanation that the solar wind did it.[\[58\]](#) The solar wind would have to be billions of times stronger than it is to have bent the solar wind trap. NASA qualified its explanation and ventured the theory that the difference in temperature between the sunlit and dark sides might have done it, although it stopped when the astronauts tried photographing it. This anomaly fails to convince.

The anomaly where shadows do not run in parallel lines.

There is no shadow analysis that is convincing regarding a moon hoax. If the only light source on the moon was the sun, the theory goes that all shadows on the ground should have run parallel to one another. One problem with shadow analysis is that uneven terrain can cause or contribute to the apparent shadow discrepancies. So far, no convincing evidence of this supposed anomaly exists, partly because it takes sophisticated analysis to prove such a notion, and nobody has made such an effort yet.

The anomaly where astronauts standing in shadows are illuminated.

The theory regarding this anomaly is that in the vacuum of space (the moon has precious little atmosphere), there is no atmospheric diffusion, and a shadow on the moon should be pitch black. That should be true, except for two facts. The first is that a reflection of light from the earth can put some light into the shadows, similar to moonshine except far more pronounced, because the earth is much larger. But the sun is 100,000 times brighter than the earth from the moon. That illumination would not be seen for the same reason that stars are rarely seen in the Apollo moon photographs. The second is that if there were any illuminated surfaces with a line of sight to the shadow, they would shine scattered light onto it. That second instance explains every existing lit-in-the-shadows anomaly. Shadows that look gray have always had, as far as the examples I have seen, something illuminated that had a line-of sight to it, usually close-by. Much has been made of astronauts standing in the shadow of the LM (Landing Module, also called Lunar Module), being lit up, or having a “hot spot” on their suits, which supposedly shows a secondary light source, not the sun. Again, the scattering “backward” of light from the surface onto an astronaut above the moon’s surface can explain every instance of the astronaut being “lit up” while in shadow, and it is surprising that this “anomaly” has had such a long life among the conspiracy theorists. The “hot spots” may have a similar explanation.

No visible exhaust issued from the lunar landers’ rockets. The fact of no visible rocket exhaust coming from the LMs when taking off is an impressive anomaly. Various explanations have been posited over the years. One answer is that a rocket firing in a vacuum looks much different from one firing in earth’s atmosphere. One debunker explanation is that in a vacuum, the rocket exhaust stops igniting immediately after it leaves the nozzle, so the bright blast we see in earth takeoffs is not there. Another explanation is that the video cameras during the Apollo 15, 16 and 17 missions were so poor that they would not have picked up the flash very well. Another explanation is that the takeoffs took place in the daytime, so it made the flame less visible than if it took off at night. Yet another explanation is that the fuels used with the LM did not produce a visible flame. All of those explanations may in fact help explain why there is no visible exhaust coming from the LM, except for a brief flash at the beginning, known as an “ignition transient.”

The fuels used on the Apollo Service Module, Landing Module and Space Shuttle stabilizer rockets were similar. They were a combination of a hydrazine mixture and dinitrogen tetroxide, or cousins of that combination. They are known as hypergolic fuels, because they need no ignition to light. The chemicals are so reactive that they ignite by merely coming into contact with each other. To clarify this, at this footnote is a little chemistry and rocketry narrative.^[59] The shuttle stabilizer rockets going off are in the vacuum of space, and are vastly smaller explosions than the blast needed to take off from the moon (the shuttle stabilizer rockets were less than a third as powerful as the LM ascent stage rocket). The fuels were slightly different, though, which may account for the light coming from the shuttle stabilizer rockets and the almost complete lack of light coming from the LM. See below some examples of NASA rockets firing in space.

Click on image to enlarge

On the poor video quality issue, it was definitely true on Apollo 11, and while the video quality is less than superb for the Apollo 15, 16 and 17 liftoffs, it appears good enough to pick up the flash, as for about a second, there is light seen below the nozzle, and it disappears before the LM is ten feet into the “air.” The takeoff appears to kick up some dust, but after the first few feet, there is no light of combustion seen, or ever any obvious exhaust. The best explanation of the rocket exhaust issue is probably at Jay Windley’s [Moon Base Clavius](#). He stated that the invisible exhaust from the LM was not too surprising, but could even appear anomalous to the expert, unless they did some homework. He performed considerable homework to make his case. I am 95% convinced by his explanation.

There is no crater below the lunar landers.

Though there is no crater below the lunar landers visible in any lunar landing missions, in some, a slight disturbance of dust can be seen. The reasons given by NASA and the debunkers is that the engines were throttled down heavily by the astronauts, and a couple of inches down the lunar dust gave way to virtual bedrock, which caused the astronauts many problems, such as taking core samples and planting the flags. The explanations put forth by NASA and the conspiracy debunkers are convincing.

The moon footage from Apollo 11 was of poor quality.

The moon video footage from the Apollo 11 landing was poor, extremely so. There has been much writing on the development of the film used on the moon, and how it withstood the lunar environment’s rigors to take those crystal clear photos we are all familiar with. On the Apollo 11 mission, a state-of-the-art color video camera was in the Command Module. On the moon it was a black and white camera. Not only that, but television stations around the world did not even get a feed of the footage, but had to film a screen provided by NASA. The press was *never* allowed in the Mission Control Room until late in the Apollo program, when *one* press representative was finally allowed into the viewing chamber, directly behind where my father used to sit. It is odd to have sophisticated research and development devoted to the print film and still cameras, but incredibly poor black-and-white live footage produced on the moon, when a state-of-the-art color video camera was in the Command Module.

I am not completely satisfied with the explanations, although [Jay Windley](#) has done a creditable job of explaining the technical issues and how NASA resolved them. That poor quality Apollo 11 video footage is also where I hit my [pay dirt](#).

The radiation problem.

Ralph René’s radiation analysis is not convincing. Even among the conspiracy debunkers, the radiation issue looms largely, with even the most ardent debunkers admitting that NASA was fortunate that a solar flare did not cook any astronauts. NASA stated that one astronaut had a little radiation sickness during an Apollo mission, but it was later chalked up to what he ate. Although the risk was supposedly low, the potential outcome was disastrous, and it makes one wonder about NASA’s control over the dissemination of data regarding the missions, and why they might have staged the moon landings. What kind of public relations disaster would it have been for the world to watch astronauts being killed by radiation as they tried

landing on the moon, especially during the heat of the Cold War? Today, one of the greatest barriers to attempting a manned mission to Mars is radiation. Astronauts going to Mars would be exposed to solar flare risk far longer than the ten days or so that Apollo astronauts were exposed, making the risk unacceptably high, and the radiation shielding needed to survive solar flares would be much heavier than anything that has been officially into space so far. Currently, it is one of the major limiting factors in extended manned missions in the solar system. All the same, NASA assessed the radiation risk, and decided that it was low enough to be acceptable, and they had astronomers carefully watching the sun before the Apollo launches so they could cancel a mission if it seemed that the sun was about to belch out a large solar flare.

The “crosshair” problem. The “crosshair” issue is where the reticles had objects superimposed over them, which should be impossible, and is [dealt with](#) above.

Odd reflections. The issue of odd reflections deserves scrutiny, and the anomalies are interesting. If the footage seemingly shot on the moon was really shot on earth in a set environment, simulating the sun could have been difficult. If it was shot in a set environment, reproducing the sun’s intensity may have required a spotlight larger than the sun appears from the earth or moon. Reproducing a light appearing the same size as the sun would have presented difficulties. One difficulty would be keeping the spotlight always the same distance from the action in order to not appear the wrong size if seen. A relatively small distance difference from the spotlight between “scenes” would make noticeable differences in the “sun’s” apparent size. About the only equipment used during the moon landings that reflected the sun, enabling the NASA cameras to pick it up, were helmet visors. The Apollo astronaut helmets, and that of all NASA astronauts, had convex faceplates. Anything reflected in a convex mirror would appear smaller than it would appear if seen directly. Look at your reflection in the underside of a spoon to get the idea.

The problem with all the “is-it-fake-footage?” analysis is that the published NASA Apollo footage is about the only data on what lunar conditions would look like. The Soviet Union took many thousands of images with its probes, and looks similar to the Apollo missions, but those images are also not easily available. Try to find any of them on the Internet. I found one, after lengthy searching. My local library, the King County library system (the second busiest in the nation, with heavy contributions from Bill Gates and friends) does not have anything on the Soviet moon probe images. One can special order some books, and that is about it. If somebody has nothing to compare it to, how can they tell if it is fake? That cloud hangs over all of the moon footage analysis, both pro and con. The readily available Soviet images, however, look similar to the Apollo images. There are some common aspects of what supposedly happened on the moon and other NASA missions. The rocket exhaust issue is one where we can compare the footage to other NASA missions, because the surface of the moon and the space above earth, where astronauts orbit, are both near-vacuums, but with different fuels and other parameters, the comparisons still have problems.

In [the lunar jump image below](#), images are presented of the sun as reflected in the visors of astronauts during two lunar missions: Apollo 14 and 17. The Apollo 14 image is how most of them appear, with the sun rather small in the faceplate. However, quite a few images, as with that one from Apollo 17, have been produced. See how large the sun’s image is. Many moon hoax theorists have used that anomaly as evidence of fakery, where the “sun” was far closer to the astronaut than 93 million miles. It had me wondering about it for a long time, and I amassed many visor images from lunar photos and footage. However, as [Jay Windley](#) and his [fellow debunkers](#) explained one day, every one of the “small” images were taken with still film, and all the large images are from video footage. That could lend evidence to the theory that the still images and video footage were taken in different sessions, but I believe the likeliest answer has to do with the vagaries of video cameras, especially those early ones, and the sun’s brilliance.

The sun's reflection "overexposed" in the video footage, making the reflection appear larger than it really was. That phenomenon can be easily seen in today's video cameras, if they try directly recording the sun. I consider that anomaly adequately explained by the differences between video and still photography.

There is another reflection anomaly that the *Dark Moon* authors brought up, but it is not as big an anomaly as they say. More evidence that the debunkers use to make the case that the Apollo landings were real events is that the Apollo astronauts put laser reflectors on the moon during their missions, and astronomers have been bouncing lasers off of them ever since. The authors of *Dark Moon* use the fact that the Apollo 11 reflector was 28° from horizontal, and that the Apollo 11 landed about at the lunar equator, so the reflector could not have reflected a laser back at the earth.^[60] Their argument is flawed, because it is a three-dimensional issue, not a two-dimensional one. If the landing site were at the equator and *in the center of the moon*, as seen from earth, then their argument would hold. However, the Apollo 11 landing site was 23.63° (according to NASA) from the center of the moon, as one moves "eastward" along the equator. Think of it as 23.63° of longitude, not latitude. Then the angle of the reflector makes more sense, although there is still a discrepancy of a few degrees, *if* the reflector was aligned properly. In looking at the landing site layout and a picture of the reflector with the flag behind it, it appears to be tilted in the general direction of where it should be. It is one more example of the flawed work that the Apollo conspiracy theorists have put forth. The *Dark Moon* authors brought up other problems with the reflector issue, but when they exaggerated the problem with the reflector-angle issue, it weakened their argument. To their credit however, they bring up the issue that the reflector was only placed 40 feet from the LM in one official account, while other accounts have placed it at different distances.

Those kinds of discrepancies abound with NASA, which is partly why it earned the nickname, Never A Straight Answer. It was claimed that earth-based lasers were hitting the reflector immediately after Armstrong set it up. Another account contradicted that notion, because the lasers apparently will not return a good enough signal during the lunar day. Even stranger, a laser aimed at the moon can return enough of a signal that a reflector *is not even needed*. According to the official explanation, of about one *sextillion* photons fired by an earth-based laser at the reflector in a burst, *one* photon will make it back to be recorded in the collector on earth. In 1962, scientists bounced lasers off the moon and caught the signal coming back.^[61] Apparently however, the signal strength back from lasers aimed at the reflectors on the moon is about a hundred times greater than areas of the moon without reflectors.

People who might have talked died under mysterious circumstances. The issue of mysterious and untimely deaths also plagues the moon shots. Were whistleblowers silenced? The January 1967 death of Gus Grissom, along with Ed White and Roger Chaffee in the Apollo 1 fire, is a possibility. One of the more prominent debunkers of the "we-never-went-to-the-moon" crowd has published his "disgust" that Bill Kaysing would suggest that Gus Grissom was murdered in order to silence him. Who else makes such a "disgusting" claim? Grissom's wife and son do. They both believe that the Apollo 1 fire was no accident, and that the truth is being covered up. They have evidence that such a notion might be true, and Grissom's son Scott is [calling for an official investigation into the matter](#) as of 2002. Grissom was critical of NASA, hanging a lemon on a NASA simulator before he died. People associated with the Apollo 1 simulation on the day of the fire remarked on the strange atmosphere that prevailed. Grissom told his wife that if somebody died in an "accident," it would likely be him, and not because he was accident prone. Straight-talking Grissom apparently made the NASA brass uneasy with his observations. During the Apollo 1 simulation, just before he died, the communications with the Command Module completely broke down, and Grissom said in exasperation, "How are we going to get to the moon if we can't talk between two buildings?"

Lola Morrow was the astronauts' secretary. On the show *Moon Shot* she can be heard describing the atmosphere on the morning of the fire. She described the mood of Grissom, White and Chaffee as one she had never seen before. Before each flight and major event, the astronauts were eager to get to it. Not that day. They obviously did not want to do the simulation. Clark MacDonald, an engineer working for McDonnell-Douglas, was hired by NASA to investigate the fire. He now has admitted that more than thirty years earlier, NASA destroyed the evidence he gathered, as well as the report he produced, for "public relations" reasons. MacDonald determined that an electrical short started the fire when the battery power was switched on. Grissom's son Scott was granted access to the Apollo 1 craft, where he gathered evidence that he says [pointed to sabotage](#), and that there has been a cover-up of it.

Grissom's death (taking White and Chaffee with him) is not the only strange one. Bill Kaysing thinks that another man was silenced by murder. Thomas Baron was an inspector for North American Rockwell, the contractor that built the Command Module. The astronauts are united in the opinion that what Rockwell produced was of initially poor quality. The astronauts comment on it in *Moon Shot*. Baron was not an engineer, and only had a high school education, but was the detail-oriented fanatic that all technical organizations need. His pals gave him the initials "DR," which stood for discrepancy report. His supervisor ran out of discrepancy report forms regularly, because Baron used so many of them. He was the squeaky wheel. He made some of his findings public, and Rockwell fired him about three weeks *before* the Apollo 1 fire. Baron originally produced a fifty-five-page report, and finished a 500-page report that he delivered when he testified to Congress in April of 1967. His testimony received a hostile reception. A few days later he was dead. His car was struck by a train, killing not only himself, but also his wife and stepdaughter. In shades of [Casolaro](#) and [Wilcher](#), his death was officially ruled a suicide. It was worse than that, because he did not only "kill" himself, but also murdered his wife and her child. It took some interesting psychology to arrive at that conclusion, going from being overly conscientious to becoming a murderer. One theory is that he was distraught over the Apollo 1 fire, so he killed himself and his family. I have not heard about anybody else connected to the Apollo program killing themselves or becoming murderers over the Apollo 1 "accident." How strange that the biggest whistleblower did. Just what *are* those odds? The 500-page report disappeared, and has not been seen since. The moon hoax debunkers have lined up behind the official explanation. Jay Windley thinks that Barons' report has come up missing partly because it had little investigative value, and that Baron may have indeed killed himself, but if he were murdered, it would have been a private contractor, not NASA, and if they wanted to silence him, they should have done it *before* he testified. Jay may be right, but I have encountered far too many conveniently timed deaths during my investigations to make my suspicion go away, especially when Grissom's son thinks he was murdered.

Killing whistleblowers such as Thomas Baron was standard operating procedure for the defense establishment, if it related to military matters. I know people who have been involved in Department of Defense whistle-blowing activities. It could get pretty scary. Sometimes, people would simply "disappear," Jimmy Hoffa-style. When billions of dollars are at stake, murdering a few people with "big mouths" or who otherwise stand in the way is standard activity. That is the nature of [American-style capitalism](#). Why should it be different regarding space matters? I was challenged to provide some evidence of what I know about whistle-blowers, and without naming names, this footnote presents a little of what I am aware of.[\[62\]](#)

James Irwin was an Apollo 15 astronaut. He became a Born Again Christian, leading an effort to find Noah's Ark. According to what I have read and heard, in 1991, Irwin contacted Kaysing to have a chat. Why would Irwin call a "kook" such as Kaysing? Four days after allegedly trying to contact Kaysing, Irwin was dead from a heart attack. Did "Born Again" Irwin want to unburden his conscience? Irwin had heart disease, so that may explain it, but the spooks can apparently [induce heart attacks using normally undetectable means](#).

The lack of athletic feats performed on the moon. Before the Apollo program, there were many predictions of what conditions would be encountered in one-sixth gravity. Many athletic feats were predicted, such as running with 14-foot strides, and feats that acrobats could only dream of. That kind of speculation was not from the 1800s, but in the November 1967 issue of *Science Digest*. Even in 1969, such predictions were being made. No feats were recorded of that nature during the Apollo missions. Every explanation for that lack of performance has been marginally valid. [Jay Windley](#) and I discovered what I consider [undeniable evidence](#) of a remarkable feat performed that *does* preclude earth gravity, and it was done on the very first lunar mission, Apollo 11. Millions of people saw it live back in 1969, including me, but it has been an unknown event in all the debates on the issue during the past ten years. The evidence was sitting under everybody's nose, but until now, nobody has brought it up.

The explanations for the lack of feats have centered around: how heavy and restrictive the suits were; how dangerous it would have been to attempt any feats; the feats that *were* performed were spectacular under the conditions; and the astronauts were too busy doing important things to bother with athletic feats; and there were feats, but they were not filmed.

The heavy and restrictive suit issue is pertinent. International Latex Corporation (ILC) made the suits that the Apollo astronauts wore. Hamilton Standard made the portable life support system (PLSS), which was the "backpack." There was fierce competition among various companies to provide the suits and backpacks. ILC produced the A7L model of its suit, which NASA bought. To test their A7L suit, they had a technician get onto a football field with it and run, fall, catch footballs and throw them.[\[63\]](#) NASA was an easy sell after that demonstration. The A7L suit was worn on all the Apollo missions up to Apollo 14. For the last three Apollo missions, the A7LB suit was used, which was even more flexible than the A7L suit. In 1968, Hamilton Standard demonstrated a suit that had a 93% of nude range of motion, which even those who saw the demonstration found hard to believe.[\[64\]](#) The A7LB suit allowed the astronauts to bend over, touch the ground and sit in the Lunar Rover. The Apollo 16 suit even had improved flexibility over the Apollo 15 suit.[\[65\]](#)

There have been numerous misrepresentations of the space suits' weight. The A7L and PLSS weighed about 180 pounds on earth, according to NASA. A fully loaded A7LB with PLSS weighed 212 earth pounds.[\[66\]](#) A 180-pound astronaut with an A7LB on theoretically weighed 392 pounds on earth, or about 65 moon pounds, or about one-third of his earth weight. To gain an idea of what an advantage that would be, try walking around carrying somebody of about your weight on your back, in piggyback fashion. See how long you can walk around. Then imagine carrying around somebody that weighs *twice* what you do. You would probably collapse. Then imagine the difference between carrying twice your own weight versus having no burden at all. The astronauts experienced that difference in the other direction. Weighing one-third of their earth weight would have made them feel as if they were floating. During the Apollo missions, the astronauts showed how flexible and tough their suits were, and took many spills and tumbles on the moon.

The astronauts were fiercely competitive. See *Moon Shot* for the athletic competitions that the Mercury astronauts had with each other, such as water skiing. The astronauts competed against each other, to see who could land closest to the planned landing site. Their competitiveness permeated the entire astronaut program. Until I hit [pay dirt](#), the most spectacular feat performed during the Apollo missions was John Young's Jump-Salute feat. Charles Duke had him jump next to the American flag, and Young whipped off a snappy salute in mid-vacuum. Until now, it was considered the greatest athletic feat that any Apollo astronaut ever displayed on the moon, and nearly 20 years ago William Brian made it a subject of analysis. The image below shows the analysis.

Click on image to enlarge

The debunkers and mainstream media have misrepresented the jumps that Young made. Mainstream captions have stated that he got three feet off the ground, and his leaps have been compared to Michael Jordan's feats. Neither claim is close to the truth. First of all, the leaps Young made got him eighteen inches off the ground, and the image shows how it is easily measured. A standing jump does not take much flexibility. I got about 27 inches off the ground with a standing leap when I was a young man. Eighteen inches is normal for an athletic man under forty years old. All a man needs to do is swing his arms and bend his knees (bending the knees is more important), something easily accomplished in the A7LB suits. Also presented in that above image are video captures of Young's leap. He bent his knees and lowered and raised his arms nearly as a normal earthman would. The official NASA site says that Young barely had to flex his knees to attain his jump. About that same flex is what a man would do for a standing leap on earth. The astronauts would have weighed about one-third of their earth weight in their suits on the moon. However, they would have gotten more than three times as high because it is the velocity at which they leave the ground that determines the leap's height. Because they would have felt so much lighter, they could have jumped more quickly, their leg muscles not burdened as much. The suits would have been somewhat restrictive, but in the Apollo footage, especially the footage from the last three missions, those astronauts moved easily, and their suits did not appear to hinder their movements much at all, especially for the relatively modest flexibility required for a standing leap.

William Brian calculated that a suited astronaut would have attained more than four times the height in a moon jump as an earth jump.^[67] Brian also doubted the 185-pound space suit weight, because the astronauts performed full-suit simulations in the Oregon desert. It is difficult to imagine walking around and performing duties while wearing a suit that weighed as much as the person did. Brian thought the suits might really have weighed on the order of seventy pounds on earth, which is doubtful, but an understandable suspicion.^[68] Young's effort was the equivalent of less than a *five-inch* leap. My grandmother could have done that. It takes more energy to jump up one stair on a staircase. That was the greatest athletic feat ever recorded on the moon. Not much of a performance, for those fiercely competitive and athletic astronauts. In most matters as these, NASA speaks with more than one voice, and they contradict each other. On NASA's site, the description of the jump says it required little effort to attain. Other NASA people have explained the modest altitude attained as due to the restrictive suits. It appears as if Young did not exert himself much to make the jump, particularly as he performed two jumps, back-to-back.

A prominent conspiracy theory is that the astronauts' activities on the moon were staged on earth, and games with the film speed, hidden wires and other tricks were used to simulate the moon's low gravity environment. Some of the footage, if played at twice "normal" speed, looks similar to earth-bound footage. The debunkers counter that not all footage looks earthbound at double speed, such as the Rover footage. It is plausible that only the footage of the astronauts moving around would have the speed altered, where footage such as the Rover driving would not. Until I hit "[pay dirt](#)," I was skeptical of the lack of any athletic feat that obviously precluded an earth-gravity environment.

The Nazi connection. [Henry Ford](#) and the Rockefeller family had close ties with Nazi Germany, [helping to build their war machine](#). As the war ended in Europe in 1945, United States and Soviet Union descended on to the V-2 rocket works. They both grabbed as many German scientists as possible. American space

heroes such as Werner von Braun, Walter Dornberger and Arthur Rudolf came from the V-2 program (the “V” in V-2 stood for “vengeance weapon”). The United States also hired the Nazi intelligence network, nearly in its entirety, and [built the CIA on it](#). The rationale was that the Nazis knew more about the Soviet Union than anybody else, so intelligence agents such as [Reinhard Gehlen](#) would be useful. Nazi spies helped initiate the Cold War, as they lied to the Americans about the Soviet Union's capabilities and intentions. The Nazis were largely playing the Americans as chumps.

Operation Overcast and Operation Paperclip were secret programs that the U.S. ran to bring in useful Germans, and von Braun came to America that way. Von Braun was an SS man and was present at such infamous concentration camps as Dora, Nordhausen and Buchenwald, where hundreds of Allied prisoners of war as well as Jews were tortured, worked to death and experimented on. He handpicked inmates from Buchenwald to become slaves at the rocket works.[\[69\]](#)

Launching V-2 missiles at London was not the only goal of the Nazi Rocketeers. When the war ended, they were experimenting with an “American” missile, which they could launch from Germany that would drop a payload on New York City. There are instances of Nazis performing human experiments at the death camps, and going on the U.S. payroll weeks later.[\[70\]](#) Some of the worst Nazi businessmen (Karl Blessing, for instance) were quickly “rehabilitated” by Allen Dulles of the CIA and placed right back into the positions of power they enjoyed while being ardent supporters of Hitler’s regime.[\[71\]](#)

Another Nazi scientist who became an American space hero was Dr. Hubertus Strughold, later called “the father of U.S. space medicine.” He had a long and distinguished career at NASA and even had an American library named after him. He ran a facility at Dachau where medical experiments were carried out on prisoners and he even had a traveling laboratory, going from camp to camp. He came over in Operation Paperclip. One area of Strughold’s research was a precursor to the CIA’s MK-ULTRA mind control experiments, where drugs were used on prisoners. But the Nazi-NASA connection that relates to my Apollo program concerns is the Nazi penchant for fabrication and deceit, and the Hollywood connection. Fritz Lang was the legendary German filmmaker who created *Metropolis* and the more obscure *Frau im Mond*, which translates to “woman on the moon.” Hermann Oberth, considered the “Father of the Space Age,” was the technical consultant on rocketry in the film.[\[72\]](#) They filmed a dummy rocket being dropped down a chimney, then ran the footage in reverse, creating the illusion of a rocket taking off. They created a promotional film that combined footage from real tests with Lang’s film, passing off the whole thing as a documentary. When they finally got a rocket to fly as it should, von Braun took that footage, combined cartoon footage with it, and produced a movie extravaganza that gulled a skeptical Hitler in 1943. Hitler was so impressed that he bestowed a professorship on von Braun and devoted all possible effort into developing the V-2. They failed to tell Hitler that nearly all their rocket launches were still failing.

The Gestapo confiscated Lang's models for his film. The situation is similar to what conspiracy theorists think may have been the dynamics surrounding the Apollo missions. I believe that the FBI and CIA investigated the Apollo 1 fire and the FBI destroyed all blueprints of the Apollo spacecraft and Saturn rockets.

One of the U.S. government's more reliable studios in the war effort was Disney Studios. During World War II, Disney received up to 90% of its money from federal contracts, and produced many military training and propaganda films. Donald Duck went to war. Walt Disney was a social Darwinist and anti-communist crusader, heartily approving of the McCarthy witch hunts, appearing as a friendly witness during the Un-American hearings and fervently endorsing the Hollywood blacklist.[\[73\]](#) Years before the Soviet Union launched Sputnik, von Braun worked closely with Disney Studios, even directing the animators and

designing Disneyland's Tomorrowland ride called Rocket to the Moon. Also, von Braun hosted the Disney show *Man in Space*. His co-host was Heinz Haber, another NASA Nazi. Haber worked for Strughold at Dachau, subjecting hundreds of prisoners to experiments that simulated the conditions of high speed, high altitude flight. Prisoners surviving the experiments were generally killed, then dissected. When the Eisenhower administration asked Disney to produce a propaganda film regarding the peaceful uses of nuclear energy, Haber was picked to host the Disney show, "Our Friend the Atom." Haber then wrote a popular children's book of the same title. I knew about the CIA and NASA Nazis, but I never thought I would read about the *Disney* Nazis.

In short, Nazi expertise and propaganda in faking film footage has been so inextricably involved with NASA that is not inconceivable that such expertise was employed during the Apollo missions.

The military-industrial complex connection. The Nazi connection is intertwined with the U.S. military connection. The military was deeply involved with NASA, as were the Nazi scientists. In the 1958 law that created NASA, it is described as a "defense" organization. The NSA (National Security Agency) is the military version of the CIA, at least in theory. All the astronauts through the Apollo program had military backgrounds. Virtually all the contractors that built NASA's equipment were military contractors, deeply involved in both the space and arms races. The very companies that produced an amazing array of inferior products for the military, while vastly overcharging for them, supposedly were the same companies that made all that equipment that performed so flawlessly during Apollo missions.

The Air Force has openly admitted that is developing an offensive military capability in space. The Star Wars program is part of it. Here is a quote from the Commander-in-chief of the U.S. Space Command, Joseph Ashy:

"Some people don't want to hear this, and it sure isn't in vogue, but - absolutely - we're going to fight in space. We're going to fight from space and were going to fight into space... we will engage terrestrial targets some day - ships, airplanes, land targets - from space."

Here is something from an Air Force publication in 1996,

"In the next two decades, new technologies will allow the fielding of space-based weapons of devastating effectiveness to be used to deliver energy and mass as force projection in tactical and strategic conflict... These advances will enable lasers with reasonable mass and cost to affect very many kills."

Here is an Air Force official talking about our space dominance, "With regard to space dominance, we have it, we like it and we're going to keep it."[\[74\]](#) As Noam Chomsky made clear in his summer 2001 article "Hegemony or Survival" regarding the Bush administration's push for a satellite based missile shield system, the nations that topped a list of potential future victims of U.S. international violence consider the Ballistic Missile Defense (BMD) system

as an offensive, not defensive weapon. The BMD system would further remove the ability of any nation to directly respond to U.S.-inflicted violence. It would be far easier to sneak a nuclear, chemical or biological weapon in four major cities then launch a missile, with its "return address" on it. If our survival instead of hegemony was the overriding goal, and if containing the spread of weapons to "rogue states" and "terrorists" was truly the U.S. goal, it would not plan on devoting more than 1000 times more money to the Star Wars program than trying to keep the ex-Soviet Union's nuclear weapons from falling into the "wrong hands." In the wake of the [World Trade Center](#) attacks of September 2001, the basic strategy still has not

appeared to change.

In reality, the military domination of space is a logical extension of Britain having the world's most powerful navy, U.S. building forts in Indian country, and other [imperial actions](#) designed to violently protect their interests. The latest version of Star Wars will only make other nations more eager to get better weapons. They do not want to be on the receiving end of U.S. violence, and nuclear weapons are seen as a deterrent, as the U.S. will not pick on nations that can strike back. It is the timeless story of trying to make better weapons than one's enemy. The U.S. attempt to militarize space renders the controversy around the moon landings a meaningless footnote.

The moon missions were relatively hitchless. The relatively hitchless nature of the Apollo missions, and events that seem to be the product of bad script writing, can seem odd. The history of NASA is filled with spectacular failures. The Ranger program was the first U.S. program to try landing on the moon. There were nine Ranger missions. The Ranger probes were supposed to go to the moon and crash into it, sending back data as it flew into the moon. The first six missions were all failures, and by Ranger 7, NASA abandoned the goal of successfully *crashing* into the moon. The Ranger 7 mission was launched in July 1964. The Ranger program followed the unsuccessful Pioneer program launches. The first five Pioneer launches, beginning in 1958, were failures. The sixth Pioneer mission (March 1960, called Pioneer 5) was successful, and was followed by two failed missions. Meanwhile in the Soviet Union, a lunar flyby, returning pictures of the far side of the moon, was achieved on the Luna 3 mission in 1959. The Soviet Union did not send another mission toward the moon for the next four years. The official story is that they were developing their new, larger booster, enabling greater payloads, although there is other speculation about the true reason for the four-year lag. In 1964, the Soviet Union attempted a soft landing on the moon with its Luna 5. It created a lunar crater as it landed at full speed. Luna 6 failed, and Luna 7 also failed to soft land on the moon. Luna 8 also crashed. Luna 9 made a successful lunar soft landing on February 3, 1966. It was the first soft-landing ever made on the moon.

The United States soft-landed the Surveyor 1 on the moon on June 2, 1966. Surveyor 2 crashed into the moon. Surveyor 3 had a strange landing. It bounced 35 feet above the moon when it landed because its rockets kept firing. Surveyor 4 failed, completely “disappearing” 2.5 minutes before touchdown. NASA never figured out what happened. Surveyor 5 nearly failed due to a helium leak, but a jury-rigged landing saved the mission. Surveyor 6 was the first craft to lift off from the moon. It did its takeoff maneuver (getting about 12 feet into the “air”) at the time of the Apollo 4 mission, in November 1967. Until Apollo 11, that was the only test in taking off.

Apollo 4 was unmanned, as all the Apollo launches would be through Apollo 6, because of the Apollo 1 disaster. Apollo 4 was also the first time that the Saturn V rocket was launched, which powered the manned Apollo missions. Apollo 5 used the Saturn 1B rocket, and that mission supposedly tested the LM in earth orbit, and the mission was completely run by remote control. Could they have sent unmanned Apollo missions to the moon? Apollo 6 was a demonstration of that possibility. It was the second launch of the Saturn V rocket, and the goal was to simulate the events needed to send the craft to the moon, and “man rate” the Apollo V rocket. The mission had twenty major failures, and it did not even attain the proper orbit, and the third stage burn that was supposed to send the astronauts to the moon failed to ignite. Not exactly a great record of success to build on to go the moon by 1970. The Apollo 6 mission was launched in April 1968, less than two years before Kennedy’s announced deadline. The official story is that von Braun and all of NASA pulled together and performed technical wizardry that is still hard to believe today, even by those who participated in it.

My father left NASA after the Apollo 1 fire because the environment at NASA became, in his words, “hyper-political,” with everybody trying to cover their backsides and pointing the finger at everybody else. That was not exactly an environment conducive to making the biggest technical achievement in history. Apollo 7 was the first manned Apollo mission, and it *did not use* the Saturn V rocket. The mission was nearly perfect, as were the next five manned Apollo missions. One reason for the vastly lower failure rate for the manned missions was that the precautions, effort expended and expense was far greater in launching human beings into space than hunks of lifeless metal. All those unmanned Apollo launches were due to a disaster on the ground that killed three men. Also, the most sophisticated piece of technology known to man, the human being, was part of the manned missions. Astronauts were continually solving problems during the missions. Humans are also the most error-prone piece of equipment that went to the moon, but the flexibility and problem-solving features apparently outweighed the errors. The satellites and probes of the day had limited problem-solving ability, and the remote control solutions had dimmer prospects than if a human being was on the scene.

The Landing Module was never tested in a “real” landing and takeoff situation until Armstrong and Aldrin supposedly landed on the moon and took off. When Armstrong tried flying a stripped down version of the LM on earth, he crashed it, nearly getting killed. The LM supposedly made six perfect landings and take offs from the moon.

Apollo 10 was the closest thing there was to a “live” test of the LM before landing on the moon. After the LM descended and was getting ready to ascend, it began spinning wildly, and its pilot, Eugene Cernan, thought it was going to crash. He got it under control and made it back to the Command Module. The official reason for that near-disaster is that an abort switch had been inadvertently turned on. That explanation shows how vulnerable the missions were to human error, but according to NASA, human error was minimal during the Apollo missions.

O’Leary was skeptical about the Apollo missions, and his skepticism was precisely where mine has been: the moon landings themselves. The LM had virtually no testing in the environment where it would be used, and the scariest parts of all, the lunar landing and ascent, had no live testing whatsoever before Armstrong and Aldrin supposedly landed and took off from the moon. The LM had to come in sideways, and its rockets to fire perfectly to make a horizontal landing on the moon. Nothing like it in manned space flight has been done before or since, and it was done without having been properly tested in a real environment before the Apollo 11 Mission. In kind, it is a situation similar to NASA never sending an animal beyond the Van Allen belt to test the radiation of space’s effects on living creatures before it sent men out there. Just before the Apollo 11 mission, NASA sent a monkey into earth orbit, to spend thirty days there. The monkey died in a week and the capsule was brought down on July 6, 1969.

If we really landed men on the moon, those astronauts were relatively expendable assets, which their military backgrounds prepared them for. The landing burn was remarkable, never having been tried in a live environment before people risked their lives doing it. Jay Windley informed me that the LM landing burn was relatively easy because there was no atmosphere to contend with. That is true that it would have been easier than an earth landing, but the “flying bedstead” was the only thing used to train for landing on the moon, and they did not do a sideways braking burn to quickly rotate for a vertical landing. They also trained in a stationary LM. NASA held its collective breath as Apollo 11 landed on the moon.

In *Dark Moon*, a series of images depicted the Surveyor 3 as Apollo 12 was landing (p. 160). I had my doubts we were seeing genuine footage taken by the LM in *Dark Moon*, and everybody knowledgeable I have asked about those pictures states that it is not genuine footage. At this time, the burden of proof is on the *Dark Moon* authors to prove it is genuine Surveyor 3 footage, and I think they have presented faulty

information.

I understand why conspiracy theorists have doubts about the moon landings' authenticity. I am not saying they are right, but their doubts are understandable. Apollo 12 supposedly made a pinpoint landing to be near Surveyor 3. Pinpoint is right, even though the lunar dust blinded them as they landed. They also may have landed several feet from their deaths. They landed so near the crater where Surveyor 3 was, that a few feet further would have landed two of the LM's legs into the crater, which could have possibly made a tragic end to the Apollo program. The LM was designed to be positioned no more than 6 degrees from a vertical orientation. It appears that the crater slope had more than a 6-degree slope to it, and appears that as few as ten feet further toward the crater would have had the LM at greater than a 6-degree angle, and they may not have been able to take off. I have not done the work to prove it, but the terrain at the crater's lip appears to be greater than a six-degree slope.

Click on image to enlarge

Another issue regarding the lunar missions was that the re-entry to earth on return from the moon was a maneuver virtually never attempted before. It was extremely dangerous, with a small margin of error. NASA never performed an unmanned test of that maneuver either, except a jury-rigged simulation to try salvaging the failed Apollo 6 mission, which did not quite attain the velocity of a return-from-the-moon situation. In those early days of NASA, with animals going into space long before humans, and the incessant ground-based testing, they never made a "real world" test of that re-entry, nor the lunar landing, nor taking off from the moon. They could have tested those maneuvers with smaller and less costly unmanned craft. At the time of Apollo 11, the Soviet Union tried sending an unmanned probe to the moon, Luna 15, to bring back moon rocks. Officially, the effort failed (the *Dark Moon* authors theorize that Luna 15 brought back the Apollo 11 moon rocks). The Soviet Union successfully returned from the lunar surface with Luna 16 in September 1970, with retrieved moon dust.

At best, giving NASA every benefit of the doubt, it was an extremely hazardous undertaking, with numerous untested, little tested, or poorly tested maneuvers, to land on the moon before 1970. John Glenn was genuinely afraid of the risks associated with landing on the moon. My father told me that Glenn was asked if he wanted to be the first man on the moon. Glenn replied that he would not mind being the first man *safely back from the moon*.

It is interesting to see how NASA spun the missions and tests. NASA pronounced the Apollo 6 Mission a success, with nearly all mission objectives achieved. There were many design problems with the LM, and many test failures. The unmanned LM1 test on earth apparently was a disaster. The Ascent Propulsion System blew apart and caught on fire when tested, and it malfunctioned on the second test, sending the LM into a tumble. The next LM they tested was the LM3, which flew with Apollo 9. The conspiracy debunkers say that practice makes perfect, but when the LM4 on Apollo 10 spun wildly while supposedly above the lunar surface because a switch was thrown by mistake, it had to make the Apollo 11 landing a breath-holding event. It is awesome to consider all the things that had to go *right* on a lunar mission.

NASA called the LM a "skittish" craft mere months before the Apollo 11 mission. To date, a successful landing rocket for earth conditions has never been developed. In the 1990s, the DC-X rocket was tested. It took off and landed vertically. After several successful test flights, the DC-X program was abandoned after the rocket tipped over and exploded during a test in 1996. Part of the reason we have no landing rockets is

the earth's atmosphere and higher gravity, but it is another issue that brings up skepticism in the moon hoaxers' minds.

Beginning with Apollo 11, the rest of the Apollo program went nearly flawlessly...all except for Apollo 13, which appears to be bad script writing. One strange connection with the Apollo program was Stanley Kubrick's *2001: A Space Odyssey*. It was released during our big push for the moon, in 1968. Arthur C. Clarke, the author of *2001*, was not a mere science fiction author. He is an astronomer and space expert. His name comes up regularly in the official histories of space exploration.^[75] He was the first person to describe a geo-synchronous orbit, in 1945. He was a technical contributor to the space effort, a Jules Verne-like visionary. The plot of *2001* revolves around covering up a discovery on the moon and the errant computer HAL. HAL utters a famous line, "Sorry to interrupt the festivities, but we have a problem." For lucky number Apollo 13, launched at 13:13 military time, with a date whose digits add up to 13 (4/11/70), James Lovell, the mission commander, picked the name of the command module: *Odyssey*. On the way to the moon, as they signed off for the night, they played a tape of *Also Sprach Zarathustra*, the famous theme song from *2001*. A few minutes later, they had their famous accident. What did they tell NASA? "Houston, we've had a problem." Was that another strange set of coincidences, or rather unimaginative script writing? Maybe it was synchronicity, or Lovell's fascination with *2001*. These speculations touch on other conspiratorial musings made by the *Dark Moon* authors and others, such as Richard Hoagland's gang. All the 13s associated with Apollo 13 could be part of a conscious numerological staging of events. Hoagland and Bara have been showing for years how NASA events are timed to coincide with significant alignments in the stars and planets. Buzz Aldrin is a 33rd degree Mason, and there is a whole body of conspiracy lore that includes the Masons, especially those at the 33rd level.

The official Apollo 13 story is that an oxygen tank exploded in the Service Module. The tank likely had a fire inside it, and then ruptured. Very near to it were liquid hydrogen tanks. The oxygen tank was at about 1000 PSI pressure when it ruptured. If a hydrogen tank also ruptured, or the nearby hypergolic fuel tanks, Apollo 13 would have become a fireball. As it was, it blew off the side of the command module and created a leak in the other oxygen tank that soon killed the Service Module. If any event during the Apollo program was seemingly influenced by divine providence, the relatively gentle explosion of that oxygen tank was probably it. A tank holding hundreds of pounds of liquid oxygen, exploding at 1000 PSI, sounds scary.

How did NASA resolve that problem of the blast's effect? The official story is that Apollo 13 made it back to earth by an amazing feat of jury-rigging. They used the LM rockets, as the Service Module was dead, they created a contraption to remove their carbon dioxide from the air, and they used admittedly "primitive" means to determine where they were and point the ship in the right direction to get home safely. It was high drama that kept the world on the edge of its seat. The Apollo missions became old news by Apollo 12, and Apollo 13 put Apollo back in the headlines. The timing was fortuitous. When Ron Howard's movie on Apollo 13 came out on 1994, instead of the *Zarathustra* music, they played other music. Why? For a movie that purported to tell the real story, why change the real music which was played?

There are "reasonable" explanations for those strange events, but there are issues with the Apollo 13 mission that will not go away easily. People involved with Apollo 13 have written as if there was divine providence or other strangeness happening. Apollo 13's alarm system engineer, Jerry Woodfill, has posted his account to the Internet, where he states that the Apollo 13 drama seemed to be guided by an "unrehearsed script," and the Apollo 13 drama led him to finding God and religion. NASA sent Arthur C. Clark a report on Apollo 13, and a NASA administrator wrote on it, "Just as you always said it would be." If there was not something funny going on there, it can make one start believing in strange coincidence. Jim Lovell was also on Apollo 8, and the crew later told Clarke that they were tempted to report sighting a large

black monolith on the far side of the moon. Instead, they read from the book of Genesis and Lovell announced that there was a Santa Claus. Is that funny, or “funny?”

There are a number of video shots from the Apollo 13 mission, when they are supposedly well beyond earth orbit, and blue can be seen through the windows of the Apollo 13 craft. The conspiracy theorists believe we should see blue through the windows when the earth is below the window. How can that be? For Apollo 11, there are similar shots. Here are some of those frames.

Click on image to enlarge

As [discussed below](#), I satisfied myself that the Apollo 11 photographs taken on the way to the moon are genuine. One “reasonable” answer has been that ice crystals caused the blue color. Another is that the windows’ coating did it. Could be.

The Apollo 13 drama supposedly showed what great problem solvers NASA was. Here is an anecdote that my father told me many years ago, regarding what great problem solvers the Mission Control boys were. A common phenomenon regarding technical efforts such as the space program is that flying was not just what the astronauts did. Most people in the Mission Control Room were avid amateur aeronauts. They either flew private planes, were ex-fighter pilots such as Gene Kranz, or they were “nerds” who flew model airplanes, balloons and model blimps. One day at the water cooler, the amateur model balloonists were talking about their blimps and balloons, and how high they could go. They were having a lively conversation about how they could get their blimps and dirigibles to go higher. They decided that if they could somehow increase the air pressure in the balloons, they could accomplish their goal. They were brainstorming on how to get increased pressure in the blimps. My father walked by and took in their conversation. It is elementary physics that increasing the pressure in a blimp would increase its weight, thus make it *denser*, not lighter. Increasing the pressure would make the blimp *sink*, not go higher. My father listened to their conversation in amazement, and butted in. He asked them to remember Archimedes and why things float. He said that their brainstorming was going in the opposite direction of making their blimps to go higher. They looked at my father as if he were crazy. As he told me that story many years ago, he said in awe, “And those people put men on the moon!” That may not lend much evidence to the “faking it” hypothesis, but is an example of some pretty poor problem solving. The “problem solving” that happened on the Apollo 13 mission was orders of magnitude more difficult than that. That kind of thoughtless behavior displayed at the water cooler [is common with scientists too](#). It is called “forgetting the basics.”

Faked photographs. Beginning with Bill Kaysing and continuing through virtually every moon hoax theorist since, faked photographs are cornerstones of their arguments. If NASA faked the moon landings, then the images returned would obviously have to be fabricated. There have been times when I thought I found fabricated or altered images, as have many people who looked at the data. I have looked at this area of evidence at great length. With some minor possible exceptions, I have not seen any supposed image fabrication/alteration that has held up to scrutiny, especially regarding the notion that it was consciously done to misrepresent the reality of the moon landings. The shadow-angle analyses, the astronauts lit in the shadows, the disappearing reticles, the lack of stars, the anomalous reflections, the seeming discrepancies between video and still images, and all the rest, do not stand up to scrutiny, as far as it lending evidence to the faked landing hypothesis. There are a number of reasons for this whole “faked image” cottage industry

that has developed. One is that we have nothing to compare lunar images to. We do not live in the lunar environment, and the moon was the first extraterrestrial body we visited. Of course it would look different from earth. There were plenty of artistic conceptions through the ages of how the moon's surface would appear up close, and a gallery of artist's conceptions of the lunar surface over the ages would look pretty funny today, if compared to NASA's lunar images.

I have some areas of professional expertise, mainly with the design and management of information systems, as well as presenting data from them. One axiom of my profession is that those who are not trained in the art of data management, and end up dealing with the outputted data and making decisions from them, often know just enough to be dangerous (often to themselves), and I have ruefully discovered that they cannot be trusted to assess the data on their own, but need to be guided through it, at best. I think that a similar phenomenon relates to the moon images. Most people who have asserted the "faked image" hypothesis for the moon landings are not trained in photography or image analysis. I barely know the rudiments myself. We can get into trouble when diving into image analysis when we are not familiar with the discipline's basics. The experts are not necessarily oracles of truth, either. My work argues just the opposite quite often, but non-specialists can get into trouble when diving into areas where specialists try exercising due caution.

I think that the unique and strange lunar environment, the (at the time) unique event of visiting an extraterrestrial body, the non-specialists who have tried making technical image analyses, as well as lack of caution on their part, have contributed to most of the "faked image" controversy. Factor in some people who may be consciously dishonest (for money or other gain), ego factors, potential provocateurs, a lay audience that is viewing it and people hating to admit they are wrong, and we have the situation today.

The Lunar Rover's movements on the moon. For Apollo 11, the astronauts did not venture far from the LM. For Apollo 12, they ventured further and visited Surveyor 3 (they landed near it, apparently almost too near). For Apollo 14 they had lengthy excursions, and they drug along a cart that held their exploratory and experimental gear, while huffing and puffing (which ran against expectation, in one-sixth gravity). For the last three Apollo missions, the Lunar Rover made its appearance. The Lunar Rovers were the most expensive dune buggies ever made, costing about \$40 million each. They had an earth weight of 460 pounds, and could carry a load of 1080 earth pounds. On the moon, the empty Rover and equipment on it weighed about 120 pounds. The deployment of the Rover from the LM was a more difficult task for the astronauts on the moon than it had been in practice sessions on earth.[\[76\]](#) Why was that, when it weighed one-sixth of its earth weight?

In 1966, Lawrence Maisak published *Survival on the Moon*. One of the book's concerns was with designing vehicles for lunar travel. The one-sixth gravity of the moon presented serious design issues. A ground-based vehicle on the moon would not closely resemble one that worked on earth. Maisak calculated that a Rover-type vehicle would need a tread width of twenty feet (with a center of gravity of six feet high and clearance of three) to keep from tipping over as it negotiated rough terrain.[\[77\]](#) The Lunar Rovers had a tread width of six feet. Not only that, they were top heavy because of the astronauts sitting in them with the heavy backpacks they wore, their center of gravity being at least three feet above the ground. Not only were the Rover dimensions dissimilar from what was predicted, but also it looked almost exactly like an earth-based dune buggy. One plausible explanation was that if it traveled slowly, it could get away with having an unstable design. The Rover was rated to go about ten miles per hour at top speed. The Apollo 16 astronauts put the Rover through a "Grand Prix" test where they drove rapidly and whipped it around, bouncing and skidding. The Rover's wheels left the ground, and it "fishtailed" near the end of the demonstration. That might have been the most foolish activity that the astronauts performed on the moon.

If the Rover had tipped over, it could have come down on the Young, possibly puncturing his suit, if not worse. That would have been a disastrous end to the Apollo program, an astronaut dying to get some redneck thrills. The official movie even played banjo music during the Grand Prix. According to William Brian's analysis, it would have taken little for the Rover to flip over, and the performance during the Grand Prix demonstration seemed to defy a one-sixth gravity situation.^[78] Even if such a performance was possible, having it bounce into the air during the stunt was running dangerously.

Various conspiracy theorists have used the Rover's activities on the moon as evidence of a cover-up or fabrication. There has been considerable speculation regarding the dust the Rover kicked up. The way the moon dust behaved is one of the best pieces of evidence that it is genuine lunar activity. The dust never hangs in the "air" for an appreciable length of time, and many times the astronauts kicked up dust that flew a long way. When watching astronauts walking, dust often sprays out from a footfall. When the astronauts fell, sometimes the dust was kicked a great distance. Unless they made some kind of special moon dust in the fabrication factory, that is impressive evidence of a vacuum. Nobody is theorizing that they built a huge vacuum stage on earth.

If they could play boulder-soccer on the moon, do jump-salutes, play golf, throw around equipment, roll and tumble around and play racecar, why did they never record *any* athletic feat that would have hinted that they were in one-sixth gravity? Much looks like it is not happening in earth gravity, but it could be similar to a magic trick: there is no way of knowing how they did it unless they let you in on the secret. The behavior of the moon dust, however, makes the conspiracy theories harder to support. Until I hit [pay dirt](#) in July 2001, this area of evidence, where no feat was obviously done in low gravity conditions, was one of my primary areas of residual skepticism.

The Apollo 11 footage from Bart Sibrel's video - a detailed analysis. The Fox TV show on the possibly hoaxed moon landings interviewed a TV producer named Bart Sibrel. Sibrel said that he came upon some obscure footage while researching the Apollo 11 mission, which proves that Apollo 11 never went to the moon. He released a video (*A Funny Thing Happened on the Way to the Moon*) that presents some of the footage.

As I played Sibrel's footage repeatedly, something about it made me suspect that while it was potentially embarrassing for NASA, it was not evidence that we never went to the moon, but evidence of NASA playing Hollywood with the mission, trying to give the folks back home a good show. For a couple of days, I thought that I discovered evidence that the photographic record of Apollo 11 was at least partly fabricated, and tried presenting my evidence to the experts, but was snubbed or ignored, and I figured out on my own that I was probably wrong.

I spent long hours analyzing the earth's phase, the visible portions of earth's land, the timeline of the Apollo 11 mission, the time stamps on Sibrel's footage, the NASA images and other data. Basically, it mostly added up, except for some possible issues such as the orientation of Apollo 11 to earth's equator during the mission, and what appears to be incorrect time stamps on Sibrel's footage, and if the cloud pattern over the Eastern Pacific Ocean can be nearly static for two days. It probably can.

One dynamic that makes analysis difficult and can lead to suspicion are all the "errors" that NASA makes in presenting its data. In the official film of Apollo 11, there is a scene where earth is seen from space, and the concurrent conversation has NASA asking how far from earth Apollo 11 is. The astronauts reply that it is 50,000 miles. The view is of Africa. That is wrong. At 50,000 nautical miles from earth, Apollo 11 would have been able to see California, about 12 hours into the mission.^[79] On NASA's web site, they have a

caption on that frame which states that Apollo 11 was 10,000 miles from earth when the picture was taken. With those kinds of discrepancies in NASA's presentation of the data, it is easy to see how conspiracy researchers can develop suspicions, and show how unreliable NASA's information can be. [Richard Hoagland](#) has discussed at length the "Hollywood" aspect of NASA, with its public relations arm altering photographs and performing other manipulations. Never-A-Straight-Answer NASA can give the conspiracy theorists fuel for their fire, and such incompetence (or playing fast and loose with the data) does not help matters. However, when I got my hands on the primary data, or closer to it, the anomalies would often get chalked up to bad editing, sketchy data leading to invalid suspicions, etc.

Some time stamps on the raw footage that Sibrel discovered appear to be incorrect. For instance, one piece of footage was stamped about 36 hours into the mission, but the footage is of the Command Module's computer, which was displaying a time about 30 hours into the mission. Importantly, the footage where Neil Armstrong says Apollo 11 is 130,000 miles from earth has a time stamp on it, and it agrees with the time when Apollo 11 *should* have been 130,000 nautical miles from earth, about 34 hours into the mission.

There was an antenna on the ground in California, called Goldstone, which was specifically designed to collect the TV signal from space. The TV shows from Apollo 11 were transmitted when that antenna was facing Apollo 11. For three days in a row, on the way to the moon, the astronauts beamed down footage to the Goldstone antenna. That is some of the "raw" TV footage that Sibrel received from NASA by mistake.

They also took still images with their cameras. I found these three images. The middle is from the "raw" footage that Sibrel discovered, and the others are from the still frames of the Apollo 11 Mission. There are better resolution images of what I will present here, and anybody who wants to pursue this line of evidence should get the best versions of these images that they can ("GET" means ground elapsed time, or the time since liftoff).

Click on image to enlarge

The images are each taken about one day apart, according to the times I have been able to assign them. In the first image, that is supposedly California peeking out from the clouds. For weeks, I thought that had to be Vancouver Island, because it appears to be a peninsula, but it looked too far south and too large to be Vancouver Island. The latitude of California looks correct, but the land mass does not. It appears as if the "sea" east of the "peninsula" may be the San Joaquin Valley, and I do not know why there appears to be a "sea" to the north of the peninsula. The same appearance is in NASA frame AS11-36-5367. It does not appear to be a valley, but water. I pulled down some satellite images, however, and that illusion was reproduced.

For those three days, the same cross-shaped hole in the clouds hovers over California. For the second and third days, there are entire regions of the clouds that appear to be nearly identical. I doubted it was possible for those clouds to remain unchanged for days. It could be one of the famous high-pressure systems that form over California, and the clouds end up getting shifted where the air pressure sends them. A cloud pattern can remain the same while the actual clouds keep moving. That is most likely what happened, even though the astronauts talked about the Alaska storm that is seen northwest of the cross over California. Also, in the southern hemisphere we have similar cloud patterns that are nearly identical.

For the entire eastern Pacific, there are nearly identical cloud patterns for three days. That is where I thought I found something worth reporting. When I looked at some of Bart Sibrel's "raw" footage, I came to feel that I was wrong with my initial impression. I also informed Bart of that.

Bart Sibrel's theory is that the shots of earth are a cutout, and the earth is being shot from low earth orbit. I doubt that is true. It does appear, however, that the astronauts had trouble filming the earth through the Command Module hatch window. There are quite a few images, both in comparing the still footage with the TV footage, and still images[80], that appear to be where terminator (the line that divides day from night) games are being played. Terminator games I would call a minor deception, but there may also be a more innocent explanation. I was not looking at the best quality images, and I may have been seeing something that was not there. For a few days I thought it was evidence of fabricating earth phases, to make the day the image was taken appear to be different. Those cloud patterns seemed odd to me at first. I then began watching the satellite images for the ocean off America's West Coast, and it appears that it is *possible* for them to look close each day. For the entire hemisphere to look nearly the same I thought was nearly impossible. After getting some of Sibrel's footage (some of it was given an improper time, it appears), some of the patterns are not as identical as it appeared, and now I believe the three-day pattern is genuine. The Sibrel footage was a month-long detour, but was a valuable experience.

Again, as with William Brian's neutral point discrepancy and James Collier's discovery of identical Apollo footage on two separate days, there is a more innocent explanation for the Sibrel footage than it would appear at first glance. There is some controversy over the meeting of Sibrel and Aldrin. I believed that when Bart showed the "raw" footage to Buzz Aldrin, Aldrin became interested in how Bart obtained the footage and asked him probing questions. According to what I understood, Aldrin then said, "If you show this publicly, you are open for a lawsuit, OK?" You can hear Buzz saying that on a video clip on Sibrel's web site. When Aldrin was asked to explain the footage, according to Sibrel, Aldrin replied, "Well you're talking to the wrong guy! Why don't you talk to the administrator at NASA? We're passengers!" The debunkers have stated that Aldrin's response to Sibrel, (they said he "slammed" the door on Sibrel) was because he did not deal with Sibrel's kind. Another version I heard was that Bart "ambushed" Aldrin at his home, and Aldrin then made his threat, but not about the Apollo 11 footage. In September 2002, Sibrel ambushed Aldrin at his hotel and harassed him, and 72-year-old Aldrin punched Sibrel. Somebody related to Apollo, that Sibrel has used for credibly, recently told me that he thought Sibrel was a "flake," as well as Kaysing.

Bart had some horrible things happen to him as he tried taking his footage public. The evidence he discovered may not be proof of faking the Apollo landings, but they may have thought that he *might* have had it. When somebody gets the treatment that Bart did, it can turn one more than a little fanatical, which is an aspect of the psychology that the debunkers never touch. What happened to Bart happens to Americans every day. Even if his footage does not prove that there was faking of Apollo 11's photographic record, he was courageous in coming forward as he has. Also, because of what he went through, it is unlikely that he will ever believe that he does not have evidence that proves we faked the moon landings.

My skepticism had been about where Brian O'Leary's had been: the moon landings themselves. It does not appear that the astronauts shot that Sibrel-discovered film in low earth orbit. Ralph René's radiation analysis is flawed. While radiation was a danger, and NASA was playing the odds, I doubt it prevented humans from going into space beyond low earth orbit. It is possible that the moon landings themselves were staged, but the more I looked into the evidence, the less I thought that was the case, and my hitting "[pay dirt](#)" removed all my doubt that those men were not walking around on the moon.

Other Anomalies. There are many other anomalies regarding the moon landings that the conspiracy researchers address. The NASA defenders have easily explained most of them.

I hit pay dirt. After I finished a draft of this essay in the spring of 2001, I emailed a link to it to some JFK assassination researchers, to get their feedback. The next thing I knew, somebody kicked it into a JFK assassination forum and then an Apollo Hoax forum became aware of my work and invited me to submit it to them. That led to some rewarding exchanges. Regarding the lack of athletic feats performed on the moon, I lamented that although Neil Armstrong said that he leapt up to the third stair of the LM when leaving the lunar surface, the best *visual* record we had was Young's mundane jump-salute.^[81] [Jay Windley](#) replied that it might have been possible to see Armstrong's leap in the film. I got the footage, looked at it, and Jay was right. I still find it amazing the footage of Armstrong's leap was never mentioned in all the long years of debates. I must have seen it live in 1969, as did many millions of other people, but it was a forgotten feat. This evidence sealed it for me. Neil Armstrong performed that leap on the moon.

Most of what I have presented is in the form of negative evidence. The conspiracy theorists present evidence that says photographs were faked, or the LM rocket had no visible exhaust plume, or that the moon dust sure acted strangely, or they ask "what *were* those Nazis and military contractors really up to?" or "why are there no stars?" or "how did they safely get past the Van Allen Belt?" The debunkers counter with their evidence, answering those questions with mundane explanations, but what did we see that *really* told us that we landed men on the moon? Unmanned probes could have brought back the moon rocks; if the laser reflectors were even necessary to bounce back one photon out of one sextillion, probes could have also set them out. Although the debunkers give plausible answers to the questions about why the images were not faked, what about them would give anybody *proof* that they were taken on the moon? Why were they not taken on a billion-dollar set in Area 51, with state-of-the-art (and secret) methods that would have made Kubrick's *2001* seem like a *Godzilla* movie with cardboard cities? Why not?

Then the Clementine lunar probe sends back images that show moon dust being disturbed at the Apollo 15 landing site. Clementine was a military mission. So, the same gang that many suspect of faking the moon landings sends us military probe images that "prove" that Apollo 15 really landed on the moon. It would be far easier to fake what is interpreted as disturbed dust in those Clementine images than it would be to fake the moon landings.

Again, we are brought back to, "where is the *proof* that we really landed on the moon?" Could even Mission Control have been pumped with fake data from the satellite that admittedly was pumping faked data before Apollo 11, hoodwinking them too? At some point, the overarching conspiracy theory begins showing its strain, and people begin brandishing Occam's razor and say that the simplest explanation is the right one, "We went to the moon, period."

When Young leaped 18 inches off the moon, or the astronauts loped across the lunar surface, they did nothing that could not be easily done on earth, with perhaps some film-speed tricks being played. Until I hit my pay dirt, the best evidence I saw of astronaut activities happening on the moon was the way that dust flew and other flying objects behaved, as though they were in a vacuum. If that stuff was faked, my mind went numb trying to figure out how they could have done it. The feather-dropping demonstration was something that could also have easily been faked. Here is the closest thing to "proof" that I have seen.

Click on image to enlarge

Why is it proof to me? For one thing, this is obscure footage, and Armstrong's leap is not easily noticed unless one knows what to look for. Nobody from NASA or the hoax debunker gang has ever used that footage as evidence, as far as I know. The debate has always been involved with Young's jump, the loping astronauts, etc. It is so obscure that I have a difficult time imagining it being staged with wires or some other ruse.

Even though the video quality is poor, the event is unmistakable, and it confirms what Armstrong talked about in Apollo 11's technical debriefing. Armstrong was the first to step onto and the last to leave the lunar surface during the Apollo 11 mission. In the frames presented above, Armstrong put his hands along the rail of the LM's ladder to guide him, bent his knees, and leapt up the ladder. The step he landed on appears to be about chest height, or four feet above the lunar surface. One reason this excited me is that I was a jumping specialist in my youth. From about age 12, I became a jumping bean. I was a high jumper and javelin thrower in college, and was a student of technique. I could achieve about a standing 27-inch vertical jump in my best days. Today's NBA stars, especially the great leapers, have around a 36-inch standing vertical leap. David Thompson, the legendary American Basketball Association star, had a 42-inch vertical leap. The man who holds the world record for the greatest height cleared above his head, Franklin Jacobs, who cleared a bar nearly two feet taller than he stood, had a standing vertical leap of 44 inches, which is the greatest I have heard of. Nobody has ever leapt four feet high in a standing vertical jump on earth, but Armstrong did as he leapt onto the LM. Not bad for a white guy in a space suit. They either played wire games, dressed up a monkey as Armstrong and the spacesuit was only made of cloth, and we are seeing a special effect that they totally wasted because nobody noticed, or he performed his leap in low gravity. I vote for the last option, and it is the "proof" I sought for a long time.

The only rebuttal I have received for this evidence has been that it was staged with wires. There are several pieces of Apollo footage where the hoaxers say it is evidence of wires. I have closely scrutinized all of that footage, and none of them are convincing evidence of wires being used. They are all apparently lens flares (reflecting off the astronauts' antennas, for instance) or what are obviously "strange" movements that are easily explained as the effect of one-sixth-earth gravity, which the moon hoax theorists seem to keep forgetting.

This evidence puts to rest William Brian's theory of high lunar gravity. It also collapses the debunker and NASA defender explanations about how heavy and restrictive the spacesuits were, which precluded any spectacular feats. The astronauts in later missions could have done even better, but nobody tried, partly because the backpacks shifted their center of gravity, and Armstrong had to touch a rail for guidance and leap forward (even adding to his feat of four feet of vertical distance, as he also moved a few feet forward). Armstrong said it was hazardous to jump straight up because of the unbalancing effects of his backpack. It is understandable why nobody on later missions bounded like stags through the lunar vacuum.

As Americans, we are [brainwashed every day](#) with all manner of lies. Regarding the moon landings, at least, I feel that I know the truth. This "proof" has been far more fun to discover. For me, the notion that we may have faked the moon landings has been laid to rest. It still was an effort dominated by the military establishment, and the current push by the U.S. to [militarize space](#) should make *every human being* shudder in terror. *Every* tyrant says that he acts in self-defense. We are [playing with our self-annihilation](#)

in more ways than one.

In August 2001, I spent time with [Brian O'Leary](#), trying to get the California governor interested in [alternative energy](#), being that his job was in jeopardy with the blackouts that California experienced in the winter of 2000-2001. Now, it turns out that [Enron](#) and friends raped California, as hordes of "free market" bandits raided the coffers. The response from the bureaucracy was predictable, similar to what [Dennis has encountered](#) over the years. I had little high hope that the light bulb would go in the governor's head (we never got past his front office, and the governor's energy advisers canceled a planned meeting with us at the last minute), but I went to hang out with Brian. Brian told me that the Fox program misrepresented his interview, excerpting ten seconds from a two-hour interview where they "ambushed" him with a camera crew. Brian had some residual skepticism about the moon landings themselves, but it was a small one. Seeing Armstrong's leap removed Brian's residual skepticism, and he is now *certain* that the Apollo astronauts in fact landed on the moon. He is not happy with how Fox presented his views, and it jeopardized his relationship with his astronaut pals, Mitchell and Aldrin among them.

Possibilities Regarding the Apollo Anomalies

I would like to help raise the bar for the moon hoax theorists to make a compelling case. First of all, they can explain Armstrong's leap.

I have seen no evidence put forth by the conspiracy theorists that has stood up to scrutiny, as far as it helping to prove that we never landed on the moon, although there are quite a few points on where I will agree with the conspiracy theorists, such as:

1. With our national security state and its penchant for secrecy and record of fabrication and cover-up, *nobody* in the public can say for certain what really happened during the Apollo program. There were definitely national security games being played at NASA during the Apollo program. If these kinds of conspiracy musings are to be avoided in the future, the national security state needs to be dismantled. Dismantling the national security state, however, is far more important for the survival of the human species than it is to avoid the propagation of conspiracy theories.
2. Apollo whistle-blowers have probably been murdered or silenced. [Thomas Baron's](#) death is suspicious (and the disappearance of his 500-page report). There is reason for suspicion regarding the Apollo 1 fire, concern regarding Jim Irwin's sudden death, and less violent suppression efforts directed toward people such as Bart Sibrel (him being silenced until his evidence was analyzed). The defense establishment has silenced or murdered many whistle-blowers when it related to military matters, and the same defense establishment players built the equipment that went to the moon. However, when I have encountered dead and silenced whistle-blowers, it was usually for the understandable defense contractor motivation of *money*. Defense contractors do not want whistle-blowers airing the fact that they made substandard equipment or were wasteful. The contractors could get disciplined, lose contracts and get a public black eye. Killing "big mouths" has been typical behavior in the defense establishment, and I am particularly aware of that kind of activity happening back during the Apollo days, while the very same defense establishment was committing [genocide in Southeast Asia](#). They could have silenced whistle-blowers but also taken their criticisms seriously and attempted to make their equipment better. Before Baron died, Major General Samuel Phillips was making observations similar to Baron's, and issued his own report. Murdering a low level

technician would have been a much easier task than bumping off a major general.

3. NASA played fast and loose in the editing room with its official movies, and their web sites cannot be relied on to always give the correct information. There are inconsistencies in the images, such as disappearing and off-center reticles, visor reflections and other anomalies that can appear suspicious, although none appear to be the smoking gun of faked footage.
4. There were definitely screw-ups that can lead to suspicion, such as the inconsistencies in calculating the neutral point in academia, but they have been more innocent errors than proof of a cover-up.
5. There were many substantial risks regarding the Apollo missions. They were awesomely dangerous undertakings. Moon hoax debunkers have agreed with me regarding NASA continually minimizing the problems overcome and the dangers faced. There was plenty of held breath at NASA during the moon shots. Little about them was really "routine."
6. The relatively hitchless nature of the Apollo missions, and the seemingly scripted nature of the Apollo 13 drama, can give one pause. It is awe-inspiring to ponder all the things that had to go *right* for the moon landings to be successful, and when even [Robert Seamans](#) says that it is hard to believe that we went, for the moon hoax theorists to have doubts is understandable.
7. The fact of no visible exhaust coming from the LMs during lift off appears strange, and the moon hoax debunkers have had to invoke several phenomena to explain the situation. However, I heavily lean toward thinking they are right.
8. The poor video quality of Apollo 11 on the moon and the way the TV networks were forced to record it, lends itself to suspicion.
9. Hiring Nazis to help make the space program a reality (as well as [staffing the CIA with Nazis](#)) was one of history's more disgusting instances of realpolitik, and the very Nazis America hired demonstrated their ruthlessness and penchant for deceit numerous times during their Third Reich days. Nazi fabrications at the CIA greatly contributed to the Cold War tensions, and it is legitimate to wonder if von Braun and pals pulled some of their Nazi tricks out of their bag for NASA.
10. With our government's penchant for secrecy it is difficult to know just what really happened, but [John Glenn](#)'s recent strange appearance on television, Gordon Cooper and Ed Mitchell's support for Steven Greer's Disclosure Project, Brian O'Leary's skepticism, Aldrin's seemingly strange reaction to the footage that Bart Sibrel showed him, [David Adair](#)'s incredible testimony and so on, leads to legitimate suspicion regarding things not being as NASA would have them appear. Factor in strange events such as NASA giving the rights to Mars images to a private contractor, the [Brookings Institute](#)'s recommendation to hide signs of intelligent extraterrestrial life from the public, and there is plenty to be suspicious of.

However, although the above points can be compelling, they do not add up to NASA faking the moon landings. They may have tried faking it if they felt they had to, but there are too many strong pieces of evidence that argue for legitimate landings, such as how the moon dust behaved, aerodynamically clumsy objects flying horizontally for quite a ways and other things flying as if they were in a vacuum, and now there is Armstrong's leap to deal with. It has been tiring to watch the conspiracy theorists sift through the same worthless mine tailings over and over. Very little of the photographic analysis, such as shadows not running parallel, astronauts lit up in while standing in shadows, supposed differences between video and still footage, moving mountains and the like have stood up to the slightest scrutiny, and an area of evidence is easily and thoroughly explained, and then a new researcher presents the same evidence. That kind of behavior gives many of the moon hoax debunkers, with more than a little justification, the feeling that all moon hoax theorists are brainless, dishonest, or gullible. Regarding how both sides have behaved, I have this question: is the goal discovering the truth, or attacking or defending the establishment?

If we really landed men on the moon and returned them to earth using 1969 rocket technology, it was probably the technical achievement of all time. It was also extremely risky and foolhardy, with numerous dangerous activities never tested in a real environment until men performed them in space and on the moon. Why? To win a war that we started?

It is not crazy to doubt that men landed on the moon, and it *is* hard to believe that NASA made it there and back with people. For instance, in an article posted to the Internet, written by Elizabeth Thomson, she describes a talk where Neil Armstrong and Robert C. Seamans addressed an audience at MIT. Buzz Aldrin was also in attendance. Seamans was deeply involved with the Apollo program. Seamans and Armstrong talked at length about the various technical problems that were overcome to land on the moon, especially regarding the Lunar Lander. Seamans put the Apollo feats in perspective when he told the audience, "Sometimes I have to admit that when I see the Moon coming over the horizon I find it hard to believe that it really happened." If one of the key technical members of the Apollo effort has a hard time believing it happened, how "unreasonable" is it for the conspiracy theorists to wonder the same thing?

If NASA faked landing on the moon, the explanation that seems to hold the most water is that we had to make it seem as if we landed on the moon in order to beat the Russians, gain national prestige (at least in our eyes), and make it by when Kennedy said we would. It could have become a bureaucratic imperative, and they may have tapped the experiences and talents of Werner von Braun, Stanley Kubrick and others to pull it off. Also, if it was faked, relatively few people had to be "in on it." Before the Apollo missions, there was a satellite put into orbit to beam admittedly fake data to NASA, to test its systems. It could have been the conduit to pump fake data to Mission Control. With the compartmentalization and other dynamics that are common to large governmental operations, people could have created a moon set without knowing it was to be used for faking it, but for "realistic" training exercises. No conspiracy theorist argues that if the moon landings were faked, many people were in on it. Few of the hundreds of thousands of people working on the Manhattan Project knew they were making nuclear bombs, and the true motivation for [dropping nuclear bombs on Japan](#) has only come to light relatively recently, thanks to declassified documents. Of course, in light of [Armstrong's leap](#), the likelihood of that scenario approximating reality is on the order of a small fraction of one percent, in my opinion.

Although I think we landed on the moon with human beings, I have little doubt that the powers that be were not above trying to fake it if they had to. In significant ways, the space race was a grotesque display of nationalism, where we made a big deal of planting the flag each time (it looks like [Columbus in 1492](#)) with the Stars and Stripes all over the Apollo equipment (did somebody think they might be Chinese astronauts?). In addition, I doubt we are being told the whole truth about the Apollo program and its findings.

The Nature of the Moon Landings Debate

On both sides of the issue, the conversation is extremely polarized. On the conspiracy side, most of the moon hoax theorists have not dealt with evidence in an evenhanded manner. Stridency, name-calling, glibness and other deficiencies can readily be seen. Also, there is a bit of paranoia fueling their fire, although some have good reason for being paranoid. Some may be consciously dishonest, and there are also "provocateur" suspicions. Richard Hoagland has called David Percy a possible British intelligence agent. It might seem far-fetched, but with the Machiavellian workings of our system, it is possible that some

moon hoax theorists are trying to keep the controversy alive as a red herring, distracting the public from considering the really important things that NASA is covering up.

On the debunker side there is also stridency, name-calling, condescension and far too much of the style that characterizes the “[skeptical](#)” societies. They are generally better than the conspiracy theorists at sticking to the facts and dealing with them, and have a far better command of the science than most conspiracy theorists. Some have even put forth gentlemanly efforts at doing their debunking. They have, almost to a person, failed to seriously consider or comprehend why so many people think the moon landings may have been faked. Virtually without exception, they chalk it up to paranoid lunacy, idiocy, greed or dishonesty. Although those may all be aspects of various conspiracy theorists’ motivations, [Americans are lied to](#) by the power structure everyday, from all directions, and at some level many people realize it. What most debunkers have in common is being part of the scientific establishment, which in America usually means being part of the military-industrial complex, and few in that arena have avoided absorbing the ideological indoctrination that belonging to that establishment entails.

The Big Cover-up

Whether the moon landings were faked or not is a minor issue compared to what else may have been covered up: humanity is not alone in the universe.

Hand-in-hand with the military connection are “national security” and secrecy, with plenty of deception, which are wonderful tools for the [self-servers](#) who are running the world. Recently (March 2001) there was a strange event on television. My wife was watching one of her favorite shows, *Fraser*, and John Glenn appeared and said,

“Back in those glory days, I was very uncomfortable when they asked us to say things we didn't want to say and deny other things. Some people asked, you know, were you alone out there? We never gave the real answer, and yet we see things out there, strange things, but we know what we saw out there. And we couldn't really say anything. The bosses were really afraid of this, they were afraid of the *War of the Worlds* type stuff, and about panic in the streets. So we had to keep quiet. And now we only see these things in our nightmares or maybe in the movies, and some of them are pretty close to being the truth.”

It was bizarre, coming out of nowhere, not fitting into the show's context. It was “funny,” not funny. It appears that Glenn may have snuck in a disclosure in a forum where it could be passed off as entertainment. In his twilight years, that performance on *Fraser* could be considered a cousin to a deathbed confession. That event also perfectly fits a favored model of how the powers that be will begin disclosure, by first putting it in benign places such as TV programs and tabloids, under the rubric of entertainment. The veil of secrecy and “[national security](#)” virtually never protects national security.

What John Glenn was talking about is far more interesting than if humans have landed on the moon or not. I know many people who have seen UFOs. Some have been taken aboard them, and [I went and saw one for myself in 2005](#). They are very real. It is estimated that tens of millions of Americans have seen UFOs.

I have spent many years looking at UFO evidence. There is a great deal of “unexplained” phenomena. It is even admitted today that the Air Force’s Project Blue Book was more of a disinformation effort than an investigation (Allen Hynek, who *worked* for Project Blue Book, admitted it), designed to discourage public interest in UFOs, rather than resolve the issue. In the *Project Blue Book Special Report*, it was admitted that more than 20% of the incidents remained unexplained by prosaic explanations, even when the game was rigged.

The government disinformation effort is apt at confusing issues it does not want resolved. For an instance of relatively recent government disinformation, those two old geezers who claimed in the early 1990s to make all the [crop circles](#) were probably part of a British Intelligence operation. Immediately after an English tabloid broke the story, the mainstream media immediately and uncritically put it on the front page around the world. Try imagining any other story that a publication such as the *Weekly World News* would break, that would be immediately broadcast on the evening news with Dan Rather, with zero investigation by the TV networks. It perfectly fits Herman and Chomsky’s [propaganda model](#) of the media. Soon after those geezers made their “confession,” I heard a European UFO investigator talk about that event. When they tried tracing the story to its source, the trail passed through a tabloid, which broke the story, and led to a front organization for British Intelligence. It is the standard story. I will not deal with all the UFO evidence that I have seen over the years. There are plenty of resources out there for those who want to do the research.

The establishment UFO debunkers, the “skeptics” Philip Klass and James Oberg in particular, have not done their movement many favors with their behavior. UFO investigator Don Ecker once interviewed Klass on a radio show. When Klass gave one of his standard answers on an aspect of the UFO controversy, Ecker (one of the most personable UFO investigators out there) politely challenged him, and Klass yelled a stream of curses, which Ecker had to keep beeping off the air, as he asked Klass to please stop cussing. Klass then hung up on Ecker and the listening audience. Oberg has more class, but he is irascible. I have rarely seen him do any debunking work where he does not unleash an insult or invective at those who he is dealing with, and he can be gloriously wrong in his analyses.^[82] It is no accident that Klass and Oberg are both august members of the “[skeptical](#)” Committee for the Scientific Investigation of Claims of the Paranormal (CSICOP). For those challenging the establishment on such issues, the road is rough.

There is plenty to be disturbed about regarding NASA. Most Americans do not know it, but NASA has privatized the images coming back from Mars, giving the rights to Michael Malin’s company. NASA has been less than forthright regarding the Face on Mars issue. Malin and the Face on Mars crowd played cat and mouse over the data for years. Recently a full image of the face was released, and NASA says that it is a natural formation because it is asymmetrical. I still wonder. There are strikingly geometric aspects of the face and head. It could be ancient and eroded. Whatever the case may be, privatizing the Mars images not only is contrary to NASA’s charter, but also ridiculous. Imagine if NASA gave the rights to the moon rocks to the contractor who built the LM. Giving Malin rights to the Mars images, because his company provided the camera, amounts to the same thing. It is outrageous, but passes in silence. If the NASA defenders want more credibility with those who are skeptical of NASA, taking on that issue might give them some, instead of the standard apologetics. Oberg recently wrote an Op Ed in *USA Today* (April 24, 2001) where he complained about NASA’s increasing penchant for secrecy. If even Oberg is making that observation, it is difficult to deny.

An impressive strategy to try resolving the extraterrestrial issue has been the Disclosure Project, run by [Steven Greer](#). How can anybody argue with waiving the national securities laws so people can tell what they know? What kind of “nuts” does Greer have lined up to testify? One of them is Mercury astronaut

Gordon Cooper. Greer's co-chair for the secret Congressional hearings was Apollo 14's Ed Mitchell. There are also high-ranking members of government who want to testify. So far, the American government has stonewalled the effort, and Greer is being forced into doing it outside the official channels, if he lives long enough. The situation speaks volumes about our system's legitimacy. Greer's book *Extraterrestrial Contact* confirms most of what I am aware of regarding UFOs. It is well worth reading.

Edwards Air Force Base in California is prominent in UFO lore. A famous meeting supposedly happened there in 1954. Several alien craft landed at Edwards Air Force Base, and had an "open house," allowing scientists to crawl over them. President Eisenhower was there, as allegedly were representatives of the Rockefellers and Rothschilds. Many years ago I read an account by a scientist who supposedly attended that meeting. He wrote that the scientists examining the craft had strange expressions. Here we were, the most powerful nation on earth and the most technologically advanced. We were full of national pride, thinking we were so smart and powerful. As they examined the craft, those scientists realized that we were not far removed from the cave. The scientist who wrote his account was sympathetic toward those bewildered scientists, as their intellectual edifices crumbled. His account reminded me of the [Brookings Institute's report to NASA in 1960](#), where they warned that the scientists might be the group most threatened by the discovery of extra-terrestrial beings of superior intelligence. One event that Cooper wants to testify to is when his squadron filmed a landed UFO at Edwards Air Force Base, which Cooper is certain was not of earthly origin.[\[83\]](#)

For many years I have read accounts of UFO encounters and activity, as well as how our government dealt with it, and the surrounding milieu. There is far more to the situation than just the nuts and bolts of UFOs. Greer has been talking to heads of state about the UFO situation, briefing the CIA director as well as the White House. There apparently is virtually no hostile intent from the ETs. Most extraterrestrial civilizations with representatives on earth are of benevolent intent, trying to help us get over the hump. We are [playing with destroying ourselves](#) these days, but they cannot violate the Prime Directive (*Star Trek* is not *that* fictional). A fair number are neutral, and some are of less-than-benevolent intent. As Creation has apparently been designed, like attracts like, and the power hungry people who run our country have generally interacted with negatively oriented extraterrestrials. The benevolent ones have tried interacting with our governments, but all our power structure wants are new weapons and technologies of domination. The benevolent ETs will have no part of that, so the people who run our planet (called the Sinister Secret Government by [Zoosh](#), the World Management Team by others, and yes, they are related to the various secret societies that have tried running things from behind the scenes for millennia) end up dealing with the "bad" aliens.

Greer confirms the kind of story that Philip Corso wrote of, and others who have come forward. Apparently, our high tech revolution has the aliens to thank in some measure. Part of the technology was given to us, but a lot of it is from reverse engineering captured alien craft. One of the more startling revelations of Greer's book is that the world's governments are not even in charge. The UFO situation began falling out of Eisenhower's grasp when he was President, which may be partly why he warned about the military-industrial complex becoming too powerful when he left office. By the time John Kennedy got into office, he not only had no control over the situation, he could not even find out much about it. Other presidents after Kennedy have tried finding out more about it, Carter and Clinton for example, but they ran into the brick wall of *supranational* security. For the people running the show, United States presidents are irrelevant, left out of the loop, and do not even know where the loop is. The group in control of the UFO situation is largely composed of a variety of private corporations, largely the same defense contractors who built the equipment for NASA to go to the moon.[\[84\]](#) Isn't *that* interesting?

Technology has come a long way since the Apollo days, and the spooks apparently have the technology to create *Star-Trek*-like Holodeck experiences, where those subject to it think they are experiencing actual events, but it is virtual reality. Sound crazy? Try getting into their secret areas to find out, as [Barry Goldwater](#) did. Would they be “above” foisting such technologies on us?

The famous shuttle STS-48 footage, where a ground-based weapon at the super-secret Pine Gap base in Australia apparently shot at a nimble UFO, is also a situation that Greer’s sources confirm.

There is even a Marilyn Monroe connection. Stephen Greer [obtained a CIA document](#) that came from a wiretap on Monroe’s telephone. In a document dated two days before her death, according to the CIA, she talked on the phone about [JFK](#) having a private viewing of a crashed ET spacecraft and dead alien bodies, and she threatened the Kennedys that she would hold a press conference and “tell all.”[\[85\]](#) Maybe that had something to do with why she and Kennedy were killed.

Greer was an MD before he became involved in trying to bring the extraterrestrial situation into public awareness, and was admittedly rather naïve about many things when he began his quest. One area where I disagree with him is where he cautions the Secret Government against making public free energy and anti-gravity technology.[\[86\]](#) I have seen virtually no evidence that the people running the show have any benevolent intent towards the human race. If there is any benevolent intent, it is related to the benevolent intent that a farmer might have for his cows. He wants to keep them healthy because after milking them for years he eventually slaughters and eats them. My [free energy adventures](#) have shown me that free energy is not suppressed because of fears of war, but people protecting their wealth and power. If the self-selected “illuminated ones” (called “Illuminati” in one of the group’s incarnations) had benevolent intent at one time, it long ago became corrupted, largely because of playing with dark path tactics of secrecy and deception, playing at being the elite, and light workers eventually became dark workers. Humanity is doing a fine job of destroying our planet by suppressing clean, renewable energy and other earth-friendly technologies. There are plenty of alternative energy technologies that do not readily become weapons. Humanity has never tried harnessing the tides, nor aggressively pursued solar energy (because oil companies are the biggest “solar” companies), or even geothermal energy (just drill down a ways, anywhere on earth, for steam to run turbines).

Free energy does not have to come from alien technology. Humanity’s energy problems have little to do with technology, per se, but our degenerate [spiritual condition](#), where greed becomes a virtue, winning is everything, we have great national pride ([greed](#) and [pride](#) are two of the [seven deadly sins](#)), and many think if they tell a lie often enough, it makes it true. As a species, we are locked into our third chakra (power). The fourth (the heart) is waiting to be awakened. Jesus was a forerunner of where we are headed, if [we choose to go there](#). The [emotionally crippled condition of Western men](#) is one symptom of our malaise. We may not awaken in time to avoid our self-destruction as a species. It is up to us. The [answers are here](#), if we care to pursue them

After I finished a draft of this essay, Greer assembled twenty witnesses who talked on May 9, 2001 in Washington D.C. The twenty witnesses were apparently the best Greer could come up with, for those who were willing to talk without getting national securities laws protection. They were almost all ex-military personnel. Only one of them said they had actually seen an alien in the flesh. The others talked about tracking UFOs in planes and similar events. The witnesses with the juicy testimony apparently will not talk until they get protection. Greer has done the best he can with what he has, and there is some reason for optimism, but the media dismissed the testimonies as maybe those witnesses did not see what they

thought they saw, even when most witnesses added to their testimony that they were told not to talk about what they saw. The “it will waste congress’ time” angle is again being used. Is it worth waiving the national securities laws so astronauts and generals can testify to what they have experienced?

[3] A photograph of Gary, with his partner pointing to where the bullet hit his belt is in Gary Wean's *There's a Fish in the Courthouse*, facing p. 114.

[4] In Anthony Summers' *Conspiracy* (p. 144-145) he reported a conversation with Victor Marchetti (the first [CIA](#) employee to go public with criticism of the CIA; [Ralph McGehee](#) was the second and perhaps last to do it “legally”), where he asked Marchetti if he knew anything about the ONI espionage operations against the Soviet Union. Marchetti was an expert in Soviet affairs, as the CIA had recruited him out of college in 1955, where he had majored in Soviet studies. Marchetti responded with:

"At the time, in 1959, the United States was having real difficulty in acquiring information out of the Soviet Union; the technical systems had, of course, not developed to the point that they are at today, and we were resorting to all sorts of activities. One of these activities was an ONI program which involved three dozen, maybe forty, young men who were made to appear disenchanted, poor, American youths who had become turned off and wanted to see what communism was all about. Some of these people lasted only a few weeks. They were sent into the Soviet Union, or into Eastern Europe, with the specific intention the Soviets would pick them up and 'double' them if they suspected them of being U.S. agents, or recruit them as KGB agents. They were trained at various naval installations both here and abroad, but the operation was being run out of Nag's Head, North Carolina."

Marchetti seemed to describe Oswald almost exactly. Significantly, the night Oswald was arrested after JFK's death, he tried twice to call a man named "Hurt." His calls were intercepted and disconnected by the jail, possibly at the direction of the Secret Service. Apparently Oswald was trying to call a man in North Carolina, in the Nag's Head vicinity, and the Hurt in question was probably a military intelligence man.

[5] For background on this situation, I recommend Andrew and Leslie Cockburn's *Dangerous Liaison* or Noam Chomsky's *The Fateful Triangle* and his other works.

[6] For more evidence of this tale's possible veracity, several years ago I read a news item about Marilyn Monroe's former home in Los Angeles. The people who bought her house discovered that the crawl space above her bedroom was filled with a jumble of wiring, which was probably related to surveillance equipment. Whether it was the CIA's wiring, the Mafia's or somebody else's is a mystery, but *somebody* knew what was happening in Marilyn's bedroom.

[7] See Chomsky's *The Fateful Triangle*, especially pp. 13-17.

[8] See his brilliant arguments in his *A Little Matter of Genocide*.

[9] See Bamford's *Body of Secrets*, p. 82, in the chapter titled "Fists."

[10] See William Blum's *Killing Hope* for a summary of those American interventions.

[11] See Bamford's *Body of Secrets*, p. 83.

[12] See Bamford's *Body of Secrets*, p. 89.

[13] *All* nationalism is a false consciousness, which fictionally invests the peoples of a political jurisdiction with unique virtue. It is an appeal to human egotism, in order to manipulate people. Such a tactic has *always* been used by ruling classes to manipulate the masses, usually into supporting violence against those not in the same political jurisdiction, or even those in the same jurisdiction, but not of the same political orientation. The masses always have to be deceived/enticed/coerced into doing the elites' dirty work. If there is any trend of history that can be called a "law," it may be that one. When people begin [taking their power back](#), and see themselves (and everybody else) as sovereign, divine beings, that game will end.

[14] Oswald was seen just before and just after the assassination. Carolyn Arnold saw Oswald in the second floor lunchroom fifteen minutes before the assassination, eating lunch, and saw him on the book depository's first floor only five minutes before the assassination. He was seen in the lunchroom two minutes after the assassination, by a few people. The "sniper's nest" was on the sixth floor. See the timeline in Fetzer's *Murder in Dealey Plaza*, for instance.

[15] Perhaps the greatest work of fiction in my lifetime is the Magic Bullet's tale. The official story is that the military-jacketed round was fired by Oswald's rifle, entered JFK's back, exited his throat, entered John Connally's back, made several wounds and shattered bones, to somehow lodge in Connally's clothing, to be found in virtually undamaged condition on an unused stretcher in Parkland Hospital. Here are two pieces of evidence that collapse the Magic Bullet theory. In order for the bullet to traverse JFK's back and exit his throat, it would in all likelihood have passed through the bones of his spine (see David Mantik's diagram in Fetzer's *Murder in Dealey Plaza*, p. 3). If it hit bone, there was no way for it to have exited JFK's body without leaving a very messy exit wound (and even if it did not hit bone, its exit would not have been a "clean" one), and shattering, as the bullet that supposedly hit JFK's head (the next bullet fired) did. In the infamous "Stare-of-Death" autopsy photo of JFK (See Harrison Livingstone's *High Treason 2*, the photo section after p. 432), on the lower edge of the wound made by the emergency tracheotomy, the edge of the bullet wound can clearly be seen, and it is a clean, circular wound, as would be made by an *entrance* wound, not an exit wound (the doctors who saw it at Parkland described it as an entrance wound). The shattering, tumbling bullet that supposedly passed through JFK's spine could not have made that wound. In addition, the back wound was probed during the autopsy, and it shortly ended, not passing through his body. That is only a small part of the evidence that contradicts the Magic Bullet's amazing story. People with ballistics backgrounds have long told me how ridiculous the Magic Bullet's tale is.

[16] See the timeline in *Murder in Dealey Plaza*, edited by Jim Fetzer. It brings up pieces of evidence that contradict the official series of events. It is hard to know just what might be the true series of events regarding Oswald's movements between the assassination and his capture little more than an hour later.

[17] See Gary Wean's *There's a Fish in the Courthouse*, pp. 581-582.

[18] See Gary Wean's *There's a Fish in the Courthouse*, pp. 567-572.

[19] The list of evidence that has disappeared, been destroyed, or is still classified, is vast. For a sketch of the pieces of crucial evidence that have disappeared, consider the following: still pictures and film taken by witnesses of the assassination in Dealey Plaza, bullet fragments found in Dealey Plaza, bullet fragments removed from John Connally's body, as well as fragments removed from JFK; Lyndon Johnson ordering JFK's limousine cleaned out mere minutes after the assassination, which thereby destroyed a great deal of evidence; the Minox camera, the negative to 133-A, the fourth backyard photo, JFK's brain, and one doctor *burning* his notes from the JFK autopsy. That is a minimal portion of the list of missing evidence. Then factor in the many strange and/or sudden deaths of witnesses and others connected to the possible conspiracy, and the holes in the JFK evidence are gaping.

[20] There is a documentary titled *Fake: The Forged Photo That Framed Oswald* that features Jack White's investigation of the photos, and has Marrs talking about the Hesters' experience.

[21] Posner. *Case Closed*. p. 344, n. Then again, Posner may have not solved the mystery. Posner is notorious for misrepresenting or fabricating the evidence he presented in *Case Closed*. See, for instance, David Starks' *The Posner Report: A Study In Propaganda: One Hundred Errors in Gerald Posner's Case Closed: Lee Harvey Oswald and the Assassination of JFK*. See also Michael Parenti's *History as Mystery*, pp. 190-198. That Posner produced flawed scholarship is fairly easy to discern. More important was how the media establishment uncritically embraced his work, when the same establishment mercilessly derided Oliver Stone's *JFK* movie before it was even released. The establishment did not embrace Posner's work because it had any merit, but because it told the story the establishment wanted told. Posner exonerated the government in his next book about the Martin Luther King Jr. assassination. Maybe he will write his next work about the Bobby Kennedy assassination, completing a government-defending assassination trilogy.

[22] See Fetzer's *Murder in Dealey Plaza*, pp. 324-360. See the analysis on John McAdams' site, a page titled "Bogus Conspiracy Photo Experts" and the sub-link "Was Mary Moorman Standing in Elm Street?" I have to side with the analysis that McAdams presents. White apparently made a significant error in his reconstruction, and it defeated his thesis that Mary Moorman was standing in the street when she was taking pictures of the motorcade, while JFK was being shot.

[23] See Harrison Livingstone's *High Treason 2*, p. 464. David Perry wrote "Who Speaks for Roscoe White?" His essay can be found on the Internet, which questions aspects of the Roscoe White evidence, and his connection to Oswald and Ruby.

[24] Robert Groden, who had what is widely believed to be the best cache of photographic materials on the JFK assassination, had his home burglarized and his material stolen in 1999. This is a common theme in the JFK milieu, and the suspicion that people working for the real assassins have been tying up loose ends (or the CIA and FBI covering their tracks), is not easy to dismiss.

[25] *HSCA Report*, Testimony of Calvin S. McCamy. Cecil W. Kirk was the other expert witness to testify regarding the backyard photographs. The HSCA discussion and conclusions are published in Volume VI of their report.

[26] See Anthony Summers' *Conspiracy*, p. 212, for instance. Gerald Posner makes a number of mildly plausible attempts to explain the situation in his *Case Closed*.

[27] For instance, Carlos Hathcock, the senior instructor at the Marine sniper school at Quantico, led an effort to reproduce Oswald's feat at Quantico, reproducing the firing angle, the range, the moving target, the timing, and every nuance of the official scenario, and made many attempts to reproduce Oswald's feat. The Marine's best marksmen could not reproduce Oswald's feat. According to Israeli Mossad agent Victor Ostrovsky, Mossad also attempted to reproduce Oswald's feat, with the best equipment and people, and deemed Oswald's feat "impossible." See, for instance, Fetzer's *Murder in Dealey Plaza*, pp. 42-43.

[56] [Zogby International poll](#), published August 30, 2004.

[57] Moon's sphere of influence = (moon's mass/earth's mass) to the 0.4th power multiplied by the distance from the earth's to moon's centers. (See *Orbital Motion*, equation 12.1, p. 371)

Using a mass of 1/81 of earth and 230,000 miles, the calculation is as follows:

$(1/81)^{0.4} \times 230,000 \text{ miles} = 39,658 \text{ miles}.$

[58] See Richard Lewis, *Voyages of Apollo*, p. 116.

[59] Rockets work by controlled explosions. The entire principle behind conventional rocketry is the violent reaction of expanding gases. The fuel reacts and burns, the burn being done in controlled fashion, where the gases expand in one direction: out of the rocket nozzle. An explosion is simply a quick expansion caused by a violently quick chemical reaction. The reaction causes a great increase in temperature, which makes the gases expand, hence the gases issuing from the rocket. The quick reaction and explosive expansion of the hot gases is accompanied by light given off, which is because some of the radiation given off makes it into the visible spectrum of light. The quicker the reaction, the hotter it is, and the more light produced, such as the difference between "red hot" and "white hot." Not all the electromagnetic radiation given off is in the spectrum of visible light, and different substances give off light in different frequencies. All the same, the hotter a reaction is, the more electromagnetic radiation it will produce. Burning a piece of wood is a quick release of energy that the sun slowly gave to the tree over many years. The hypergolic fuels used in the Apollo missions were used for two reasons. One reason is that if the fuel exploded on contact, no ignition system would be needed, which brings up the second, more important, reason. The fuel on the Service and Landing Modules had to be lifted into space first. Therefore, the more "efficient:" the fuel was (i.e., the more explosion per pound of propellant), the better it was to take aboard the Service and Landing Modules. It meant that less fuel would be needed to send it into space. The hypergolic fuels used on the Service and Landing Modules were the most powerful propellants that NASA had. They created more powerful explosions than the fuels used in the earlier stages. Thus, they burned at a greater temperature, which would have made the light given off relatively even *greater* than the earlier stages, in theory. This footnote was corrected by Jay Windley, who said that the spectrum of light given off by different fuels would be different for each fuel, and a fuel that burned hotter would not necessarily look brighter than a colder one, because of the spectral properties of each substance. He is right. Even though the hotter a reaction is, the more electromagnetic energy given off, it may not be in the visible spectrum, and the tendency of giving off of electromagnetic radiation will vary from substance to substance. Jay also presented an image of the exact fuel used in the LM ascent stage, and it did look fainter than other fuels, but not close to invisible. Jay said that it took him significant time and research to finally explain the lack of visible exhaust plume to his satisfaction, and it could look anomalous even to rocket scientists, until they had done some homework.

[60] See Bennett and Percy, *Dark Moon*, pp. 325-330.

[61] *National Geographic* reported that in its December 1966 issue. See Bennett and Percy, *Dark Moon*, pp. 503, 529, n. 26.

[62] A close relative of mine was a whistleblower in the Department of Defense. Long ago, during the Apollo era, he was on a project where a defense contractor was supplying timing equipment for an oceanographic project. They were similar to atomic clocks, where Mickey Mouse watches would have been adequate. He had seen prodigious waste in the Defense Department before (such as \$500 million studies that nobody would read, stacked in a warehouse, collecting dust), but that one got him more bothered than usual, and he began making noise. He eventually got some attention, and the government did not buy those extraordinarily expensive timing mechanisms, and used the equivalent of Mickey Mouse watches to get the job done. It saved the government about \$400 million. When it came time to award the whistleblower, my relative's boss

stepped up and said that it was his doing. My relative's boss received the highest award a civilian can receive, directly from the president; he also received a check for about the equivalent of two years' wages, and an annual annuity, and my relative got zero. No recognition, no money; typical defense establishment behavior. In fact, his superiors scuttled his career. My relative was fairly early in his career, and was rather naïve. Years later, as a defense contractor tried recruiting him, the issue of that instance of his whistle-blowing came up, and the contractor told him that he was lucky to be alive. For saving a \$400 million contract, the contractor said, quite a few defense contractors would have had him murdered. He was lucky. As my relative's career progressed, he began seeing instances of how other whistle-blowers were silenced. In one case, a federal magistrate disappeared, Jimmy Hoffa-style, as he was about to render an unfavorable ruling regarding a defense contractor. I am not a deeply connected insider, but I know whistleblowers.

A few years ago, a friend of mine testified in a whistleblower lawsuit. Back in the 1980s, he worked for a defense contractor in Silicon Valley, where they built some of the equipment that was used in Desert Storm. He was a computer programmer and analyst, and developed an accounting and inventory system for defective parts. There is plenty of red tape involved in government cost-plus contracts. The contractor needed to account for their defective pieces (they would be paid for them). They would build an assembly for the equipment. If during inspection the assembly was found defective, it was put in a defective bin. A book-to-physical reconciliation, where the accounting system will say there should be 100 items on hand, and the items on hand are counted, to see if there really are 100, assesses an accounting system's accuracy. That defense contractor had production deadlines and other pressures, which were typical situations in manufacturing processes, except the customer was the government, so it really did not have to work all that well (if you have been in the business, you know what I mean). They would periodically run out of parts, but they had deadlines to meet. So, somebody would sneak back to the defective bins, take out the defective assemblies, and put them into the equipment. When it would come time to account for the defective pieces, they would be short. An engineer began making noise. He knew that they were putting out defective product because of that practice (and others), and overcharging the government.

The reason whistleblower laws exist today is because of what happened to them. That engineer was fired and blackballed from the industry. He was an early case of why there are whistleblower laws today. My friend no longer worked for the defense contractor when the situation began making the news, but he followed the events. In Silicon Valley and other defense industry havens, the marketing practices were a little unusual, but not *that* unusual, if one has been in the corporate world much. A local house of prostitution was hired by the defense contractor to service the many Pentagon officials that came visiting. Probably all the local defense contractors periodically hired that establishment, with "the best girls in town." I saw similar things in the [trucking industry](#), and they were minor leaguers compared to the defense establishment. Just as a stink began brewing over the ruckus the whistleblower was making, and just as eyes began being focused on a certain house of prostitution, the madam disappeared. My friend watched what happened, and stayed quiet for several years.

Some sense of justice prevailed in that case. The original whistleblowing engineer received restitution, and waged a class-action lawsuit on behalf of the taxpayer against the defense contractor, asking for more than a billion dollars in damages. It became high profile, easily researched. I will not name names here. Naming names is what gets people in trouble. With enough of a spotlight on the situation, and a defense contractor backed up a few steps, after a bunch of soul-searching and dealing with genuine fear, my friend contacted the engineer's legal team. He was willing to testify about what he saw, how he developed the accounting system and how the defective parts inventory came up short and why. In normal courtroom situations, surprise witnesses are rarely used, but each side knows who is going to testify. When my friend's name was put on the witness list, he no longer lived in California, but lived about 1000 miles away. Suddenly, a private investigator for the defense contractor began beating the bushes hard in my friend's neighborhood. The investigator found my friend's brother's ex-wife, in a distant county, trying to dig up dirt. He contacted my friend and told him what he was doing. It was obviously intended to intimidate my friend. I have been in [kangaroo court before](#), where public officials tried intimidating me as I testified. I counseled my friend on what he could expect, and fortunately they did not try to intimidate him on the witness stand. They probably did not find anything to use against him. The whistleblower won the lawsuit, but such situations are rarely resolved to the plaintiff's benefit. The defense contractor usually assigns a team of lawyers to appeal the ruling indefinitely, and they quite possibly will never part with a dime in damages from the ruling. That is how it works most of the time, if it even gets to the point of a favorable ruling.

The most depressing aspect of whistleblowing, however, is not that their employers try silencing them and ruining their lives (it is part of their "job"), but that their friends and colleagues disown them, ostracizing them for speaking up, because it "rocked the boat." The crime of the whistleblowers has even been called "committing the truth." In whistleblowing circles, that is the most dismaying part of their experience. Some whistleblowers were driven over the edge not because how their

employers treated them, but how their friends and families did.

[82] Richard Hoagland and Oberg squared off on the STS-48 space shuttle footage. If you have not seen that footage, seeing it before reading this might be advisable. The STS-48 footage is the single most spectacular piece of evidence I have ever seen regarding UFOs. The footage was taken in 1991 by the space shuttle Discovery, by a camera that was pointing at earth. What is seen is a point of light that appears near the horizon of earth, apparently many miles above the earth's surface. It moves in independent fashion across the earth. Its appearance and movement alone are strange. For about fifteen seconds the object crosses the screen, then a flash lights up the sky. Instantly, the object makes a greater-than-

ninety-degree turn, launching itself into space, away from the earth. The movement is spectacular. The object can be seen for about ten seconds after its turn, dimming slowly as it leaves earth behind.

A few seconds after the object made its turn, something that looked like a shotgun blast came ripping up through the atmosphere, almost exactly where the object made its turn. By all appearances, it looked like a ground-based weapon shot at an intelligently piloted craft, which dodged the shot. That is *exactly* the kind of situation that Don Corso wrote about. It is *exactly* the kind of activity that Steven Greer writes about, in which highly placed officials have admitted that we are shooting at alien craft, and have even shot some down. Even the high officials think that the "cowboys" who are shooting at non-hostile alien craft are not only stupid, but are endangering the human race if they make the aliens angry.

The implications of that footage are profound. One reason the footage is so spectacular is that there is no debate regarding its authenticity. The footage was beamed down-to-earth and seen live. A college student first obtained the footage from NASA's link, and nobody has disputed the authenticity of the video, unlike nearly all the other UFO images that have been obtained under a wide array of circumstances during the past fifty years.

If objects in the footage are the distances from the camera that they appear to be, which is many, many miles, nobody can laugh at tales of UFOs again. Richard Hoagland has publicized the Face on Mars controversy more than anybody else. Hoagland also presents image analysis that promotes the idea that artificial structures are on the moon. Hoagland belongs to the school of thought that believes that UFO's are likely earth-based craft, made by humans, by military or quasi-military organizations. Hoagland theorizes that the footage may have recorded a test of Star Wars technology on a drone craft controlled by human beings. In late 1998, I saw Hoagland present more shuttle footage that caught a similar "energy beam" event coming from South America. Something strange is happening up there.

The "shotgun blast" appeared to be a much-improved variation of admitted Star Wars technology. The "blast" appeared to be moving hundreds of miles *per second*. No officially admitted earthly technology can fire a projectile that fast. The Star Wars technology could apparently fire a projectile at up to fifteen miles per second. In Corso's *The Day After Roswell*, he described technology that is *exactly* like that "shotgun blast," and he wrote that the whole Star Wars program was designed specifically to shoot at extraterrestrial craft. Hundreds of miles per second is far beyond what has been made public. A craft that made that sudden turn and acceleration is far, far beyond anything that our government has admitted to having. The turn and acceleration produced G-force and acceleration numbers that blow the mind. The calculations show that the object was moving at Mach 73 (about 53,000 miles an hour) *before* it was shot at. After the "muzzle flash" the craft instantly turned and flew away at Mach 285, for a G-force acceleration of 14,000 G's. The most an astronaut has ever experienced is less than ten G's. That kind of nimble maneuvering has been described by thousands of people who have seen UFOs. Subsequent analysis of the tape has determined that the object was near the Pine Gap military base in Australia when it was shot at. Pine Gap in a super-secret U.S. military base in the Australian outback, a perfect spot for such an awesome, ground-based weapon to shoot at UFO's. (See Graham Stewart, "'Star Wars' over Australia?", *Nexus*, April-May 1996, pp. 55-56.)

Hoagland published his analysis. He ventured the opinion that the video records a Star Wars test against a drone. Hoagland has his reasons for thinking that all we were seeing was our own stuff. Hoagland also theorizes that the structures on Mars and the moon are ancient ruins. He has always been reluctant to admit that there might be "aliens" among us. I tend to believe that the shuttle footage recorded a pot shot taken at an extraterrestrial craft. The evidence argues convincingly that if we are seeing earthbound technology, it has been borrowed or stolen from extraterrestrials.

The point of this discussion is contrasting the work of Hoagland and Oberg. Hoagland produced his analysis and made note of possibly related issues, such as NASA ending its policy of producing live, unscrambled footage from the shuttle, immediately after the STS-48 mission. Oberg then produced a rebuttal to Hoagland. Oberg's rebuttal has been published on the Internet, and one place to find it is on Mike Bara's web site. Any analysis of that shuttle footage must deal with the two most spectacular events on it: the sudden turn and acceleration of the "craft," and the "shotgun blast" ripping through the atmosphere right behind it. Looking at the footage is necessary to understand the nature of Oberg's analysis.

Oberg works for NASA, and like Klass is a prominent "[skeptic](#)" and august member of CSICOP. Oberg and Klass are the two most prominent UFO debunkers in the "skeptical" movement. Oberg's analysis is quite technical regarding the footage and space shuttle telemetry when it was taken. He made the case that the footage shows not a craft flying hundreds of miles away over earth, but ice crystals a few feet from the shuttle's camera. He also made the case that the "ice crystal" made its

incredible turn and acceleration not due to intelligent piloting, but it was blown that way by the firing of one of the shuttle's stabilizing rockets. That flash in the sky when the "ice crystal" turned was not the muzzle blast of Star Wars technology, but the flash of the rocket firing.

Oberg states that the event is not occurring hundreds of miles away, but is a remarkable illusion caused by ice crystals and a firing rocket. It was a debunker performance at its finest. Most of Oberg's points have been effectively rebutted by Hoagland and independently by Dr. Jack Kasher, but what blew me away was what Oberg did not see fit to discuss. Again, there are two dramatic events within seconds of each other: a dramatic turn and acceleration of the "craft" and the "shotgun blast" that was apparently fired at it. In order to explain away the entire event as an illusion, both have to be explained away as a remarkable series of coincidental illusions. With all the technical talk by Oberg, he *does not even mention* the "shotgun blast." For his in-depth "analysis" to completely ignore the blast, while giving reams of technical data on ancillary items, makes it a shockingly poor exercise in debunking. Watch the video, and then read Oberg's explanation. His explanation collapses of its own weight. In addition, image analysis expert Dr. Mark Carlotto published an analysis of the STS-48 footage in the *Journal of Scientific Exploration*, Vol. 9, No. 1, pp. 45-63, 1995. It is also available on the Internet from his web site. Carlotto makes the case that what we see in the footage is not debris near the shuttle blowing by a rocket blast, but something in the distance, just as it appears to be. Jack Kasher also performed an intense analysis of that footage. NASA has published its debunking of the footage, and after STS-48, they immediately and "coincidentally" stopped allowing the public to see live shuttle footage, to protect the astronauts' privacy.

Apparently Oberg eventually heard enough about his "critique" that he published an addendum to his explanation. He stated that the "projectile" was an ice crystal that followed the "rocket blast," blown out by the blast and following the other "ice crystal." There is a video produced titled *UFOs and Star Wars*. I got my copy from the publishing house Adventures Unlimited. The footage can also be downloaded on the Internet. *UFOs and Star Wars* gives great analysis and close ups of that footage. For one thing, those two coincidental ice crystals move in decidedly different directions, which is questionable if they were both propelled by the same rocket blast. Another thing is that the second crystal suddenly appears in the middle of the field of vision, looking exactly as if it came up through the atmosphere, hundreds of miles away. If it really were an ejected ice crystal, it would not suddenly appear in the middle of the screen, but appear in the left corner and progress across the screen. Similarly, the first "ice crystal" can be seen moving away for about ten seconds, getting progressively dimmer as it appears to move far away from earth. Oberg's explanation does not account for that, among other anomalies.

Also, there was a second projectile that moved across the sky when the obvious one did. There were other "ice crystals" during that event that also made strange movements, looking as if they were other intelligently piloted craft reacting to the Star Wars show. Oberg also defended NASA's new policy of delaying and scrambling its footage, coming up with another rationale for government secrecy in a supposedly public agency.

Oberg could not help himself from launching inflammatory words while debunking the footage. I have rarely seen a debunking performance that did not call its target names, seriously question their state of mind or motivation, or make glib jokes at their target's expense. Oberg used words of certitude when critiquing Hoagland, using words such as "invalid," "false" and "wrong," when Oberg only had a difference of opinion, garbing himself in the mantle of rectitude while making his critique. In Oberg's essay, he inserted comments when describing Hoagland's critique, such as "I have checked with a NASA Public Affairs official, and have personally verified, that things (as usual) are not quite what Richard Hoagland alleges." In defending NASA's new secrecy policy, Oberg finished up with "Outside of avoiding whines about censorship, there's no reason to do so."

I might be gentler regarding Oberg's analysis if I had not seen similar examples of his craft. Oberg was one of Sagan's comrades in their dubious [debunking effort](#) on the Sirius-Dogon mystery. For another instance of Oberg's efforts, an interaction with Charles Ginenthal will suffice. Ginenthal may be the most vigorous defender of Immanuel Velikovsky's theories. I originally stumbled into Velikovsky's work and the field of [catastrophism](#) by reading Ginenthal's *Carl Sagan and Immanuel Velikovsky* when I was tracking Carl Sagan's debunker career. I have gotten into catastrophism over the past several years, and have read about 10,000 pages of material from all sides of the controversy. Even some of Ginenthal's pro-Velikovskian comrades have called Ginenthal an apologist for Velikovsky. Ginenthal is carrying Velikovsky's torch, but it has been a fairly honorable torch to carry, defending a man whom the scientific establishment mercilessly derided for nearly thirty years. How right or wrong Velikovsky or Ginenthal may be is still an open question for me, although Charles has perhaps bent too far at times in defending Velikovsky's work.

The catastrophic issue is vast, with the Velikovskian thesis so broad and interdisciplinary that it would take many years of study to effectively evaluate. His work delves into seemingly unrelated areas such as mythology, ancient history, archeology, geology, space probe data, physics, astronomy, dendrochronology, glaciology and a host of disciplines. It is not a thesis for quick study artists. Velikovsky's theories exercised Einstein's brain. Most catastrophists do not believe Velikovsky's planetary billiards scenario of near misses between earth, Venus, Mars and the moon, but much about his related theses are not easily dismissed. I have taken up catastrophic theory as a hobby the past few years, getting sucked in far deeper than I had originally intended. I was merely tracking Carl Sagan and slipped into an area that I originally had no intention of pursuing. There is plenty about catastrophic theory to intrigue me for the rest of my life.

There is so much uncertainty and controversy surrounding Velikovsky's theses that nobody can easily and honestly dismiss Velikovsky's work. I doubt that *anyone* can be an "expert" in all the areas Velikovsky tackled, including Velikovsky. Many things often taken for granted in modern physics and cosmology, such as the Big Bang, the nature of the Red Shift, how the planets and galaxies formed, the nature of gravity and electromagnetism, the accuracy of dating methods such as carbon dating and dendrochronology, etc., are subject to enduring controversy.

Leroy Ellenberger has been Ginenthal's harshest critic for years. Ellenberger used to be in the Velikovsky camp, even an assistant of Velikovsky's before he died in 1979. Ellenberger left the Velikovsky camp during the 1980's, and has been the harshest critic of those pursuing his theories ever since. Leroy and I have corresponded many times, as I have investigated the nature of the controversy. Leroy has been quite helpful and cordial with me, although he is merciless in his derision of Ginenthal and other Velikovskians. I will not comment on Leroy's work except to say that Tom van Flandern told me that he thinks part of Leroy's rage has something to do with the verve of an apostate. Henry Bauer says the same thing in his latest book.

Ginenthal publishes his own journal that he named *The Velikovskian*. In the first issue of *The Velikovskian*, published in 1993, Ginenthal wrote an article titled "The Moon in Upheaval," which delved into Velikovsky's theories about the rough time our moon has had in recent history. Ginenthal responsibly fished for "expert" responses to his work, and Oberg penned a response to Ginenthal's article on the moon. Ginenthal published Oberg's response, along with his response to Oberg in the fourth issue of *The Velikovskian*. I cannot say for certain how much Oberg or Ginenthal were "right" in their debate, but I could assess some of it. My point is not about who was right, but how the scientific establishment reacts to fringe stuff such as Ginenthal's.

Oberg again could not contain himself from making snide comments regarding work he criticized. For instance, Ginenthal made a case for explosive projectiles from Io's surface. Oberg's response was,

"The middle paragraph, on page 73, is probably the worst example of confusion and misrepresentation, of arrogant ignorance, of classic pseudoscientific illogic. It refers to Io's 'tidally-induced volcanic explosions,' which eject surface matter upward at 3000 (feet per second). 'In one second, a motionless body sitting on Io's surface will have been struck by a force of such power that will be ejected upward to a height of 3000 feet.' First, some high school physics student should tell Ginenthal that a body starting at zero and winding up at 3000 (feet per second) in one second will travel only 1500 feet in the first second, not 3000 feet."

That is not unusually caustic commentary for Oberg. He is the voice of NASA on many issues, and a prominent member of the "skeptical" movement, a movement that prides itself in its impeccable "rational" worldview and its pure exercise of the scientific method while investigating the strange and offbeat. One might expect such pillars of scientific reason to be far above such name-calling behavior. Unfortunately, the "skeptics" seldom are.

Oberg's attack on Ginenthal would be bad enough, with his insult about high school physics students showing Ginenthal how wrong his analysis was, and how wanting was his understanding of rudimentary physics. Incredibly, on that issue of those hypothetical projectile velocities, Ginenthal was correct, and Oberg dead wrong! To attack somebody as Oberg did was indefensible, but for his critique to also be gloriously wrong moves his attack into bizarre realms.

In his haste to insult Ginenthal, Oberg apparently forgot to think through the problem. For the kind of hypothetical projectile Ginenthal theorized, the projectile would leave the ground at 3000 feet per second. Oberg incorrectly assumed that the projectile would begin accelerating from a velocity of zero at ground level, accelerating like a race car for the next second,

and only reaching the 3000 feet per second velocity after accelerating for a second, and therefore traveling only 1500 feet in that first second. That high school physics student could have told Oberg the result of that thought experiment.

That kind of thought experiment can be tricky, and there have been many problems like that published over the years in brainteaser books. It is a deserving problem to think about for a high school physics student, but most students would derive an approximately correct answer, not Oberg's wrong one. For Oberg to get it wrong is no great crime, and shows that he does not always think things through, and how our scientists are not immune from coming up with wrong answers on relatively easy questions such as what the "muzzle velocity" would be for that hypothetical projectile. The invective Oberg unleashed came back at him 100-fold.

Instead of firing back at Oberg in kind, Ginenthal enlisted George Talbott to compute that distance traveled in one second by that hypothetical projectile. Talbott performed a rigorous calculation, cautioning his readers that it is not as easy as it looks, and many scientists can come up with the wrong answer if they are not careful. Talbott calculates a distance of 2997 feet in that first second (*The Velikovskian*, Vol. 1, No. 4, p. 21.). Talbott then makes astute observations about the nature of the "scientific" criticisms of Velikovsky's work over the generations. Oberg's performance is not unusual when criticizing Velikovsky's theories or his followers.

Racketeering for Fun and Profit

By Wade Frazier

[Racketeering for Fun and Profit](#)

[Footnote](#)

Racketeering for Fun and Profit

A major thesis of this site is that at least half of the U.S. economy is unproductive; with no net benefit to society regarding those activities. They are either intrinsically worthless or they take on a greatly inflated "value" due to an industry or profession protecting its turf. In several instances, it is much worse than that, because some worthless industries and professions are also hastening the demise of earth's inhabitability. Virtually every group of people that ever came together did so to [serve their mutual self-interest](#).

Exceptions to that dynamic can be argued for some groups, such as Peace Corps volunteers. However, the organization itself has often proved disillusioning to its often-idealistic volunteers, when they realized that the native problem was not that they were ignorant farmers, but that the good land to raise crops on was taken away, or they were enslaved to a system that did not look after their needs. The Peace Corps often did far more damage than good as it helped manipulate communities in Africa, for instance, to stop growing food for themselves and instead grow food for export to America. When the volunteers figure *that* out, they are threatened into silence or otherwise dealt with. During the 1990s, the Peace Corps served as a capitalistic vanguard in the rape of the former Soviet Union, where life expectancy collapsed. It is sad to say, but the Peace Corps is really a tool of the American Empire.^[1] Self-confessed "economic hit man" [John Perkins](#) got his start working for the Peace Corps, as a way to test him.

Even an "untouchable" organization such as Mother Teresa's ministry is not above suspicion. I am probably going straight to hell for writing it, but Christopher Hitchens' *Missionary Position: Mother Teresa in Theory and Practice* presents convincing evidence that most of her image

was the result of a public relations campaign. As was the case with [Junípero Serra](#) and too many missionaries over the centuries, attention to the earthly comfort of their charges was seldom in evidence. Similar to Serra, Mother Teresa's efforts seemed to be more directed into making sainthood than really helping her charges. That is surely a bold claim, and Hitchens competently makes his case, presenting photographs of Teresa having photo ops with a very disreputable gang of people, where her name was being used in fund-raising schemes. Besides hanging out with dictators, Charles Keating, the [S&L scandal](#)'s poster boy, generously funded her. Keating did so to the tune of \$1.25 million (using the public's money). Mother Teresa interceded on Keating's behalf, writing a letter to the judge, asking for his mercy. She stated that Keating "has always been kind and generous to God's poor." The prosecutor wrote Mother Teresa back, telling her that the money Keating gave her was stolen money, and asked her to give it back. They never heard back from Mother Teresa.

Some fundraising schemes that Mother Teresa was involved with were garish. Corporate magnate Robert Maxwell shamelessly used her image for a fundraising scheme, and pocketed the money that was raised. In another instance, Mother Teresa posed almost like a cutout of the celebrity she was, with a California "guru" cult leader standing next to her. The photo was taken as a condition of giving her the dough, in a studio setting. Later a scene was inserted into the photo's background, showing Calcutta's poor.

It could be argued that yes, she prostituted herself, but for a good cause. How about all those beneficiaries of that donated money, how did they benefit? The finances of Mother Teresa's ministry were somewhat of a mystery, with nobody really quite knowing how much money came in or where it went. That is strange "charitable" activity. No American charity can get away with that. Hitchens openly wondered where it went. It was not evident in her ministry.

It can be depressing to ask what "good works" she really performed. Nobody can really explain what she did to earn the Nobel Peace Prize. Her acceptance speech was about decrying the evil of abortion, and she remained a staunch opponent of birth control while she ran her houses for the poor and dying. Her response to the Bhopal disaster, brought to India courtesy of Union Carbide, where she rushed to the scene, was little more than saying "forgive, forgive." She said nothing about preventing such a disaster from happening again, or about Union Carbide mitigating its damage.

Many independent doctors and journalists visited Teresa's Calcutta Home for the Dying and other facilities, and a common response was how inhumane the environments were. Although people there were dying and in great pain, painkiller was against Mother Teresa's austere philosophy. Dr. Robin Fox, the editor of *Lancet*, perhaps the world's leading medical journal, visited the Calcutta operation in 1994 and published his impressions. He expected to be impressed, but after remarking on the philosophical approach there that was anti-medical, Fox stated,

"Finally, how competent are the sisters at managing pain? On a short visit, I could not judge the power of their spiritual approach, but I was disturbed to learn that the formulary includes no strong analgesics [painkiller - Ed.]. Along with the neglect of diagnosis, the lack of good analgesia marks Mother Teresa's approach as clearly separate from the hospice movement. I know which I prefer."

Mary Loudon, a Calcutta volunteer who has written extensively about the lives of nuns, said this about the atmosphere at Mother Teresa's Home for the Dying,

"My initial impression was of all the photographs and footage I've seen of (Bergen) Belsen and places like that, because all the patients have shaved heads. No chairs anywhere, there were just these stretcher beds...There's no garden, no yard even."

Loudon told a story of a young boy of fifteen who came there with a simple kidney problem that could have been easily remedied with antibiotics. An American doctor there was trying to treat him, and was begging the sisters to let him be taken to a hospital. It was against their philosophy, so the frustrated and resigned doctor watched the boy slowly dying. As Hitchens stated, the situation there is purposeful:

"The neglect of what is commonly understood as proper medicine is not a superficial contradiction. It is the essence of the endeavor, the same essence that is evident in a cheerful sign which has been filmed on the wall of Mother Teresa's morgue. It reads 'I am going to heaven today.'"

Mother Theresa's Home for the Dying appears to be just that, a Christian death factory, where the people going there are supposed to die. Getting better is not a part of the program. Mother Teresa taught the sisters how to surreptitiously give baptisms to dying Hindus and Moslems in their care, secretly sending souls to the Christian Heaven, racking up their Christian tally.

Hitchens helped produce the British documentary *Hell's Angel*, screened in 1994. In the documentary's wake, he was contacted many times, and by some who worked in Mother Teresa's homes.

One of Hitchens' contacts was Susan Shields, a nun from Mother Teresa's order who worked in her homes in the Bronx, Rome and San Francisco for nearly ten years. She left Mother Teresa's employ because she could not stand it anymore, and wrote *In Mother's House*, an apparently fine manuscript that cannot find a publisher, seemingly because it frankly deals with her experiences of working in Mother Teresa's employ. It was far from a hagiographic account. The nuns working for Mother Teresa were pushed to the extremities of austerity. Upon occupying a convent's premises in San Francisco, they immediately rid it of furniture, carpeting and any creature comforts, including heat in the wintertime. Several nuns developed tuberculosis while Shields worked there. Hitchens stated, "If her memoir reads like the testimony of a former cult member, it is because in many ways it is." The nuns were all indoctrinated that Mother Teresa is divinely guided, and no questioning of her authority is thinkable. The atmosphere cultivated was a total and mindless obedience to Teresa's divinely inspired authority.

Hitchens' assessment was frank,

"Bear in mind that Mother Teresa's global income is more than enough to outfit several first class medical clinics in Bengal. The decision not to do so, and indeed to run instead a haphazard and cranky institution which would expose itself to litigation and protest were it run by any branch of the medical profession, is a deliberate one. The point is not honest relief of suffering but the promulgation of a cult based on death and suffering and subjection."

Mother Teresa herself flew around the world, getting the finest medical care money could buy in her last years. This iconoclastic segment on Mother Teresa may come as a shock. Her defenders are many. Maybe she did some genuine good in the world, but there may be far more image than substance in Mother Teresa's legacy.

If such "saintly" institutions such as the Peace Corps and Mother Teresa's Home for the Dying fail to impress upon further scrutiny, imagine how various industries and highly paid professions fare in the following analyses.

Footnote

[1] For that challenging idea, see Charles MacMartin's "Peace Corps and Empire", *Covert Action Information Bulletin* (Now called *Covert Action Quarterly*), Winter 1991-1992. Even internal U.S. government documents made part of the *Pentagon Papers* make the Peace Corps' role in foreign policy explicit. Generally, whatever beleaguered nation the U.S. military, [CIA](#) and corporate world was focusing its attention on, the Peace Corps would soon flood their volunteers there. The Peace Corps is part of a novel neocolonial strategy.

[The Greatest Energy of All](#)

[Footnotes](#)

Introduction and Summary

Today's energy industry is perhaps the world's most powerful. Energy is the basis of *all* this world's wealth, and for perhaps earth's entire history, the sun's energy has fueled all ecological and economic systems. If early humans did not learn to exploit new sources of energy, humankind would still be living with its ape cousins in the tropical forests. Without the continual exploitation of new energy sources, there would have been no civilization, no Industrial Revolution and no looming global catastrophe.

All [life on earth](#) consumes the sun's energy, originally captured by the process of photosynthesis, except for [chemical-synthesizing bacteria](#), which might be responsible for part of the world's oil deposits. There is an audacious theory recently posited by Thomas Gold of Cornell that all the so-called "fossil fuels" were not created by life processes, but by purely chemical processes of earth's formation. If that is so, the news is worse for humanity's long-term prospects, as we are rapidly depleting a resource, with no way to make more, as well as creating environmental devastation by mining and using it.

Millions of years ago, humanity's evolutionary ancestors lived in [Africa's tropic forests](#), as did their great ape cousins, and fruit was their dietary mainstay. By walking upright and making tools, humanity's

ancestors exploited new energy resources, such as animal remains scavenged from predator kills. Early protohumans migrated from Africa about two million years ago, probably following migrating African predators. They eventually harnessed [fire](#) and invented other energy-consuming/preserving adaptations, such as clothing, which allowed them to survive past their natural range in the tropics.

About 100,000 years ago, [anatomically modern humans](#) appeared on the scene. By about 40,000 years ago, humans improved their weapons technology to the point where they became earth's first and only superpredator, expanding its range across the entire planet. By about 10,000 years ago, humanity had [exterminated all the easily hunted large animals](#), and the hunter-gatherer lifestyle was no longer sustainable on a global basis. Domestication of animals and food crops led to civilization. Domesticating animals, plants and enslaving humans were the significant activities of [early civilization](#), and ideological indoctrination began in those early days, as the slaves needed to be conditioned to accept their status. The positions of the new elite classes also needed an acceptable justification. Often the most ruthless and successful elites became "royalty."

The human journey has largely been about refining methods of exploiting energy and manipulating the natural environment to human benefit. The West calls that process "progress." The extinction of large, easily killed animals was probably the earliest instance of humans exhausting their primary energy source (although original migrations from Africa might have been due to outstripping energy supplies - largely fruit - in the tropical forests). Early agricultural practices also exhausted the lands, although the dynamic of [deforestation](#), farming and desertification persists to this day. As the energy of wood was used up, and the resultant deforested lands were devastated by agricultural practices, other sources of energy were exploited, leading to the "fossil fuel" revolution, which began with [coal mining](#) in Europe and [China](#) about a millennium ago. Less than 150 years ago, [oil](#) became the next fuel to undergo large-scale exploitation, and its use coincided with amassing capitalistic, monopolistic empires, significantly by United States robber barons, [John Rockefeller](#) most notably. His oil companies still dominate the oil industry, and [fossil fuels](#) comprise about 85% of world energy production today. The process of extracting and using fossil fuels is environmentally disastrous. Rapid [global warming](#), mainly caused by burning fossil fuels, is one of the [greatest threats](#) that humanity faces today.

The West's [capitalistic ideology](#) has transformed a traditional deadly sin, [greed](#), into a virtue, and the [racketeering impulse](#) has guided the creation of *all* capitalistic empires. *Every* significant industry and profession is largely a self-serving racket, and the larger and more powerful the industry or profession is, the more it resembles an outright racket, something I discovered that the hard way during [my adventures](#). I participated in a significant effort to bring alternative energy to the marketplace. What happened to the venture that Dennis Lee headed is a [case study](#) of how alternative energy is suppressed. [Alternative energy](#) has been systematically suppressed, on a global scale, for the past century, and free energy technology has probably existed for a long time. Free energy would eliminate the energy industry, help heal the earth, increase humanity's standard of living by perhaps a few orders of magnitude, and could end the [Zero-Sum Game](#) that humanity has been playing for the past 10,000 years. [Tom Bearden](#) and friends are mounting the latest run at it. The extent to which they succeed will probably be directly proportional to the public support they receive. The exploitation of energy may exterminate the human species, but it does not have to be that way. If we wake up and begin caring, solving our problems is easy. If we stay asleep, we are doomed. The problem has a lot more to do with integrity than technology or intelligence. Personal integrity is [the world's scarcest commodity](#), and it needs to become more plentiful if humanity is to avoid its self-extinction. It is up to us.

A Brief Prehistory of Energy and Life on Earth

Ninety-three million miles away is the star my planet orbits. It is an average star, one of about 200 billion in its galaxy, placed on one of the galaxy's outer arms. Our galaxy is unremarkable, one of perhaps a trillion that are within range of today's telescopes. According to today's theories, our star has been burning for about 4.6 billion years, and will burn for seven billion more before it consumes its fuel and dies. As our star settled into its life, something happened on a tiny fragment that orbits it. That fragment - a mere mote in the cosmos - is nearly completely metallic, largely composed of iron, but on its surface a thin layer of lighter elements "rose" and settled. That layer is relatively as thick as an apple's skin, a layer that humanity calls home. Eight elements

- oxygen, silicon, aluminum, iron, calcium, sodium, potassium and magnesium - make up nearly 99% of the earth's crust. Some even lighter elements ride atop those elements, with an oxygen-hydrogen compound covering most of earth's surface, and nitrogen, oxygen and argon comprising 99.9% of the atmosphere. There are merely trace amounts of carbon, sulfur, chlorine, fluorine and some others, with most elements occurring in tiny amounts in the earth's crust.

Scientists have developed theories, partly based upon observations, which guess what [may have happened](#) a long time ago. The oxygen-hydrogen compound that blankets earth, known as water, would be a gas instead of a liquid, except for the peculiar way that [water molecules are attracted to each other](#), due to their electrical polarity. In the atmosphere is carbon dioxide, which makes up less than 0.04% of the atmosphere. However, if it were not there, helping to capture the sun's energy, earth's surface would [probably be about 10-15° F colder than today](#). The fortuitous properties of water and carbon dioxide helped set the stage for something apparently unique in our star system. Today, it is theorized that life [began more than three billion years ago on earth](#). For about three billion years, life was largely confined to unicellular organisms, which lived in the ocean. In order for life to exist, it needed energy, and from the earliest examples we know of, the sun's energy was captured to fuel that life.

According to today's understanding, stars are fusion reactors, mostly composed of hydrogen, the universe's simplest element. Hydrogen is fused into helium, the next simplest element, in a star's core, and a vast amount of energy is thereby given off. The processes of fusion and fission involve an atom's nucleus. When the fusion reaction occurs, energy is given off in the form of electromagnetic radiation (ER), called light when it occurs at particular wavelengths. Light is still an enigma to science, because it seems to be a wave at times and a particle at others. In its wave state, the length of the wave determines how much energy it carries. Radio waves are long waves of ER, and the energy they carry is relatively small. X-rays are short waves, and their relative energy is great. What is called light has a wavelength between those of radio waves and X-rays. The sun produces ER in a wide array of wavelengths (also known as frequencies; the longer the wavelength, the less the frequency, as the velocity is constant). Also, the sun shoots out electrons and other subatomic particles at an extremely high velocity.

If not for earth's atmosphere and magnetic field, its surface would be bombarded with high-energy ER and subatomic particles, and life as we know it would not exist. Earth, however, has a magnetic belt (called the Van Allen belt) and atmospheric layers such as the ozone layer that deflect and absorb much of the high-energy ER that the sun emits. Most of the sun's energy that hits earth's surface is in the visible spectrum of light. Although light acts as a wave, that wave comes in discrete "packets" known as quanta.

An atom is made of a nucleus orbited by electrons. The electrons orbit at varying distances from [the nucleus in "shells"](#), depending on the electrons' energy levels. That variable energy level of the electron shell is what makes life possible.

As life first came into existence on earth, whether through evolution or being "planted" here by our galactic neighbors or from beyond this dimension, there was a trick it "learned" that made life on earth possible: it captured the sun's energy. There is more than one way it happens, but they all fall under the category of photosynthesis (except for heat-synthesizing, subterranean bacteria). The chemistry is complicated, but in essence the photons of sunlight hit the chlorophyll in plant cells, and the electron shells absorb that energy. With that increased energy, the atom can form bonds with other atoms that it could not previously accomplish. Usually, the energy from photosynthesis allows a plant to combine water and carbon dioxide into a sugar known as glucose. Animals fuel their bodies with glucose. Glucose is a sugar, and is the simplest member of a class of substances known as carbohydrates. Other simple sugars are fructose and galactose. Through that captured sunlight energy more bonds can be formed, and glucose can bond with itself and other substances such as water to create more complicated sugars, such as sucrose, lactose and maltose. The bonding can become even more complicated to create complex carbohydrates such as starches and cellulose. Next to glucose, cellulose may be the most important carbohydrate as far as earthly life is concerned, because cellulose comprises the cell walls, and hence most of the structure, of plants. Without cellulose, there would not be trees, flowers, grass, or much of anything living beyond the oceans, and little in them.

A little less than [600 million years ago](#), there was a great leap of evolution. The three billion years of

microscopic organism evolution gave way to a myriad of complicated plant and animal life. Complex sea animals developed, with fish appearing about 500 million years ago. By 430 million years ago, land plants with vascular systems developed. Amphibians and insects appeared about 410 years ago, and by 360 million years ago, great fern forests had developed in the tropical heat. About 330 million years ago, reptiles made their appearance, with dinosaurs and mammals making their debut 240 million years ago, and birds appearing 205 million years ago. Flowering plants appeared about 135 million years ago. About 65 million years ago, [dinosaurs died out](#) and primates appeared. That is about the accepted story in scientific circles today, of course subject to revision, perhaps radical, as more evidence comes to light.

Less than 600 million years ago, when evolution took its great leap forward, the oceans teemed with life. The ocean bottom became the resting place for dead marine organisms, mainly plankton. Those seabeds became layered thicker with dead matter, and where conditions were favorable they eventually formed today's oil deposits ([Gold's theory](#) to the contrary). Beginning about 360 million years ago and continuing for about 70 million years, those fern forests initiated the [carboniferous period](#). Those fern forests probably created earth's coal deposits. With coal and oil, the oxygen was eventually released, as well as most of the hydrogen, leaving behind compounds rich in carbon. Carbon is the chemical basis for all life on earth, due to its unique properties, which [have to do with its electron shell](#). The eight electron outer shell of carbon has four electrons. Its half-empty or half-full electron shell is similar to hydrogen's, but carbon can create amazing bonding arrangements with other elements, forming long chains, and carbon atoms can make double and triple bonds with each other. There is an entire branch of chemistry devoted to carbon. On the first day of my organic chemistry class in 1977, my professor said that although the modern age is known by many names, for organic chemists the modern age would be known as the "age of waste." All those carbon compounds in coal and oil, with all of its complicated bonds, are a treasure trove of potential chemistry, and were probably created from the solar energy captured by photosynthesis. While burning them has powered the Industrial Revolution and today's world, organic chemists see it as an immense waste of a resource. Mining and burning it is about its crudest possible use.

Carbon, oxygen and hydrogen comprise most of living organisms. Nitrogen makes up 78% of earth's atmosphere. Nitrogen is the primary atmospheric gas because it is practically inert. Nitrogen needs temperatures in excess of 3000° F in order to react with other elements. Consequently, it almost never does. There is one major exception, however. The earliest organisms were bacteria, and bacteria are probably still [poorly understood by today's orthodox science](#). Bacteria are essential to all "higher" forms of life. Although nitrogen is generally inert on earth, bacteria are able to incorporate nitrogen into their chemical reactions, and nitrogen is the next most vital element to life. If bacteria did not capture nitrogen in its chemical reactions, life as we know it would not exist. Carbohydrates and fats are composed of carbon, hydrogen and oxygen and provide nearly all of life's fuel, but nitrogen is the essential element that makes DNA, proteins, enzymes and other vital chemicals possible. The human body is about 60% water. If the water is removed, about half of what remains is protein.

Bacteria continually take nitrogen from the atmosphere and combine it with other elements, such as hydrogen (ammonia is made of one nitrogen and three hydrogen atoms), in a process known as *nitrogen fixing*, and that captured nitrogen becomes incorporated into plants, through their roots. Animals eat plants, and that nitrogen becomes part of their chemistry. There are several "nitrogen cycles" in earth's ecosystems, with bacteria taking nitrogen from the atmosphere, and returning it (*denitrifying* bacteria do that) as they digest dead plant and animal material. As evolution continued, animals appeared that ate other animals. In "food chains," energy would cycle through life forms, with predators sitting atop those chains. There cannot be too many predators atop those energy pyramids. Predators are the rarest class of life forms, especially mammalian predators.

Over the eons, the sun's energy shined upon Earth, fueling earth's ecosystems. About 30% of the sun's energy that reaches earth is immediately reflected away by the atmosphere, clouds and earth's surface. The other 70% is radiated back into space more slowly, 90% of the 70% remainder is from the atmosphere radiating energy to space. The energy absorbed and more slowly radiated back to space is what makes air at the earth's surface average about 60° F., makes the rest of the earth's atmosphere as warm as it is, is the main cause of its circulation, and drives what is called the hydrological cycle, which is how water circulates through the earth. The sun's energy makes water evaporate from the earth's surface (mainly the oceans), form clouds, fall as precipitation, and on land circulates through our lakes, rivers and underground aquifers, leading back to the oceans, where the cycle begins anew. A tiny fraction of 1% (one-twentieth of 1%) of the

sun's energy is captured by photosynthesis.

That solar energy captured by photosynthesis is the basis for all life and all "wealth" on earth. In human terms, wealth is what sustains our lives and makes them more livable. In its simplest terms, wealth is food, and for the majority of humanity today, it remains that way. Getting enough food to eat is the primary preoccupation of most people, and it has been that way for humanity's entire journey on earth. Only recently, as humanity learned to mine coal and oil, have humans had to deal with obesity on a large scale, as the West does today. [More than half of all adults are overweight](#). That obesity is directly related to starving other humans, however. There are a little more than a billion each of overweight and underweight people on earth today, [and the relationship is a direct one](#).

There is far more than enough water on earth's surface to have entirely covered it with water. Fortunately, earth's crust has slight irregularities, and the crust poked up through the water in a few places, those high points forming the continents, covering about 28% of earth's surface. Earth does not orbit the sun in a circle, but in a slight ellipse. The earth also has an axis of rotation out of alignment of its plane of orbit, which causes the seasons. That axis of rotation wobbles and has changed over the eons, both relative to earth's surface and relative to its plane of orbit (called the ecliptic). Also, those bits of crust that poke up through the oceans have drifted across earth's surface, colliding with each other, breaking up and drifting apart. Ocean floors became mountain ranges, and vice versa. Ocean sediments and fern forests became buried, forming rock-like substances, containing the energy of that sunlight that was captured eons ago.

There are various theories regarding earth's climate changes, the most dramatic being the ice ages that have come and gone for billions of years, and when comets and other celestial objects have slammed into earth and released energies that make nuclear weapons no more than children's toys. Changing rotational axes and orbital variations, drifting continents, variations in how much energy the sun gives off, possible interstellar dust clouds and the like have been proposed for earth's variable climate, and all may play their role. The eleven-year sunspot cycle is an obvious variable, and the lack of observed sunspots during the late 17th century correlated strikingly with the heart of the "[Little Ice Age](#)" from about 1430 to 1850.

In the latest ice ages, they have predominantly happened in the northern hemisphere, related to the fact that the Arctic Ocean is virtually landlocked. The Pleistocene Ice Age began about 1.6 million years ago, and the latest interglacial period began about twelve thousand years ago.

As life on earth evolved, incredibly complicated and diverse ecosystems developed. Bacteria and other microscopic organisms led to complex plants and animals, and biology became increasingly "sophisticated." Fish evolved more complicated and sophisticated biology, such as in fins and respiration systems. Plants became more complicated and sophisticated, in both forms of growth and reproduction. Land animals became vastly more diverse and complicated. Larger animals learned to fly, and warm-blooded animals appeared. Awesome forms of symbiosis developed between plants, animals and microscopic organisms, where entire ecosystems evolved from the life form interactions. Flowering plants appeared about 135 years ago, with a novel reproductive strategy. Flowers are attractive to insects, birds and other animals, and as they feed from flowers, they spread pollen. Fruit forms from pollinated flowers, and is largely comprised of sugars, from which animals can easily extract energy. Animals in turn [spread the seeds within the fruit](#). Many animals adapted to take advantage of fruit's energy. Producing fruit is a great concentration of a plant's available energy, something done far more easily in tropical regions than otherwise, with the tropics' greater available energy.

Today, scientists think that dinosaurs eventually evolved to be endothermic, which means that they regulated their body temperatures. Mammals further enhanced the endothermic process, and their fur allowed them to survive in colder areas better than exothermic animals, and therefore less dependent on direct solar energy, as today's reptiles, amphibians and fish are.

Primates appeared about the time dinosaurs became extinct. The opposable thumb of primates allowed for manipulative abilities previously unseen on earth. Primates were originally tree dwelling, living in tropical forests, and thumbs probably evolved in response to the arboreal environment, to make navigating branches and eating fruit and other tree foods easier.

With molecular biology coming into its own, the analysis of DNA and genes has provided evidence

previously unavailable. In the United States, DNA testing is proving the innocence of many people who have been on death row, wrongly convicted of murder. DNA research has also determined that humanity's closest biological cousin is the chimpanzee, followed by gorillas and orangutans. More than 98% of a chimpanzee's DNA is identical to human DNA. Although a global effort is trying hard to [suppress all evidence of extraterrestrial influence](#), the day is probably not far off when it is acknowledged that earth is not the universe's only place with intelligent life, and that humanoid life on earth has probably had plenty of help from its galactic neighbors. The various theories of evolution are due for some major revisions once the extraterrestrial/inter-dimensional influence is acknowledged, as well as the role of consciousness. Still, such a revelation will not completely invalidate evolutionary theory. It will simply make it more complete, and will probably eliminate the [materialism](#) from it, something long overdue.

Today's human race probably appeared first in Africa, the first erect, large-brained protohumans appearing more than two million years ago. Today's great ape diet is about 65% live fruit, and the rest is blossoms, seeds, leaves, insects and a slight amount of animal flesh (although the most carnivorous part of the mountain gorilla's diet is insects). Humans, as with all animals, [are designed to eat living food](#), and live fruit should ideally comprise more than half of the human diet. It does not, however, and that is because of the human journey and today's impoverished human diet, as it migrated past its natural range in the tropics.

Those early protohumans are the first animals that began making tools, and those surviving to be analyzed by modern anthropologists are made of stone. Early stone implements were crude, but worked better than hands and strength. The first stone tools obviously made more food available, crushing nuts and exposing difficult-to-reach digestible plant parts. Also, early stone tools probably allowed for more effective scavenging of animals, such as cracking open bones to eat the marrow. Those were the first energy-enhancing inventions of intelligent apes. Over the millennia, more effective tools and uses of them were invented. Bones, wood and other objects were incorporated into early tool-making activities.

The rise of human beings was dependent on three factors. The first was common to all life: the sun's energy. The second was the opposable thumb, which appeared about 65 million years ago, and it created a level of manipulative ability that no other animal had. The third was increasing intelligence, which used that manipulative ability to make tools, and thereby harness more energy than other creatures had available. The requisite intelligence began appearing about two million years ago.

Originally, those early innovations allowed humanoid apes to increase the available food energy in their local environment. It is thought that early protohumans followed African predators such as lions, scavenging from their kills, competing with other scavengers. That relationship is probably why early protohumans left Africa, following the African predators as they migrated from Africa about two million years ago. Humans are slow, weak animals, and could do little hunting on their own at first. Potential prey easily eluded them, and were difficult to kill with the available means. When early protohumans followed those African predators, they largely expanded their range across Asia, staying in the tropical and near-tropical zones, which were similar to their native environment. The problem, however, with moving away from the tropics was that the growing season would not be year-round, and that essential fruit would not be available. As humans followed the African predators, they began modifying their diets, eating less fruit and other plant material, and eating more animal flesh. Although humans have been able to adapt to a more flesh-based diet, it came at considerable cost. Protein constitutes half the dehydrated human body, but the consumption of the amino acids needed to create protein was largely done for structure and chemistry, not fuel. Protein provides about ten percent of the human diet's calories today, although mother's milk is only a few percent protein, when humans do their greatest body-building. As humans became more carnivorous, they began using animal flesh for fuel, not to provide amino acids and nutrients. Humans [are far from ideal carnivores](#). Many serious health problems, including nearly [all epidemic diseases](#), have resulted from humanity's carnivorous ways.

As protohumans continued evolving, their range expanding across Asia and leaving the tropics, they invented means to survive. As they ranged to colder climates, they learned to wear the fur of other mammals, either found dead or killed by enterprising protohumans.

At least 500,000 years ago, protohumans created their first truly great invention, which exploited energy in a way never done before: harnessing fire. By 400,000 years ago, artificially created fire was a regular part of early human life. Wood is largely made from cellulose, which is formed from the bonds created by linking water with carbon dioxide. Wood is mainly made of air and water. When it is burned, the energy captured

by photosynthesis is released, and the water and carbon dioxide are released back to the environment. Ashes are made from the minerals (mainly metals) that the plant extracted from the soil as it grew. By harnessing fire, early humans could exploit the sun's energy of hundreds of years, not just what fell to earth that year. Fire provided warmth, protection from predators, and fire was the first food processor. Again, that invention exacted a great cost, while it allowed for "progress."

About 100,000 years ago, modern humans appeared on the evolutionary scene. They probably first appeared in Africa.^[1] Anthropologists have identified quite a few protohuman species, appearing and disappearing. When modern humans appeared, the Neanderthal people were well established, but died out. All protohuman "competitors" eventually died out (whether "naturally" or by extraterrestrial and/or inter-dimensional intervention is an open question for me), leaving *Homo sapiens sapiens* alone on the human scene.

Ice sheets advanced and retreated in the northern hemisphere during the evolutionary journey of early humans. As near as anthropologists can tell today, about 40,000 years ago, stone tools took a leap forward in sophistication, and humans were able to refine the art of survival and exploit opportunities previously unavailable. About 40,000 years ago, humans greatly expanded their range. They probably invented the first boats then, allowing them to expand their range to Australia and the New World. They also refined hunting to a science, and the extinction of large animals in Australia and the New World seems to roughly coincide with when humans showed up. Human hunters probably drove many large animals species to extinction. Changing interglacial climates and ecosystems surely had their effect, but the over-kill hypothesis is persuasive.^[2]

In historical times, humans migrating to islands such as New Zealand, Hawaii and Madagascar quickly drove many native bird (and large animals, such as a pygmy hippopotamus on Madagascar) species to extinction. When Europeans took over the world, they also drove island human populations to extinction, such as the [Taino of the Caribbean](#) and the [aboriginal inhabitants of Tasmania](#).^[3] What history has seen when humans migrated to islands was probably a microcosm of what happened when humans migrated to Australia and the New World. Although there remains plenty of controversy about the megafauna extinctions in North America, because retreating ice sheets changed the topography and vegetation, South America and Australia did not have ice sheets, and experienced similar megafauna extinctions. The appearance of humans appears to be the most significant variable related to those extinctions.^[4]

The destruction of large mammals probably made for the golden age of hunter-gatherers, and lasted for many human generations. Humankind became a superpredator, excelling at killing and eating anything that moved, and while they hunted large animals to extinction, they also began killing each other. Today's hunter-gatherer people are proportionally more violent than civilized peoples. Although it can be hazardous to extrapolate today's observations to human culture 40,000 years ago, becoming a superpredator also created the means to prey upon each other, a situation nearly unknown in the animal world.

The bow-and-arrow was invented about 25,000 years ago, in the vicinity of Europe, a couple thousand years before pottery appeared in the same region. Pottery allowed for better food preservation and preparation. Fire, clothing, refined tools, weapons, shelter, boats, pottery and the like contributed to rising human lifestyles outside its natural range. It all had to do with the capture of energy, either reducing the loss of body heat, as with clothes and shelter, exploiting new sources of energy, as with hunting large animals and burning wood, or preserving digestible energy, as with pottery and other food preservation and storage techniques.

Early Civilization, Energy and the Zero-Sum Game

The hunter-gatherer lifestyle allowed humanity to migrate to earth's furthest reaches. By 10,000 years ago, there were about 4 million humans on earth, and most of the easily hunted big animals had been rendered extinct. The time scale of those events is vast in comparison to a human life, and relatively rapid events on the geologic or evolutionary timescale happened with few, if any, humans perceiving the trends. The process was far from uniform, but about ten thousand years ago the hunter-gatherer lifestyle was no longer sustainable on a global scale. The [Malthusian limit](#) had been reached. Relatively little wild vegetation provides the energy that humans can digest, particularly in lands beyond the tropics, with their seasons. In at least three separate places, China, the "Fertile Crescent" and Mesoamerica, [humans began domesticating plants and animals](#).

The plant parts that can provide human-digestible energy, mainly in the form of sugars, starches and fats, were largely found in the fruits, seeds and roots of certain plants. Today, it is thought that women began domesticating plants, as an adjunct to their gathering activities (it was not easy dragging along infants on hunts, and men were faster and stronger, better suited for hunting activity). Women experimented with the plants they gathered, and eventually bred plants to possess larger parts that humans could digest, especially seeds and roots. Animals also were domesticated, especially mammals that could digest cellulose: cattle, sheep, horses, goats, llamas, etc. Women also probably domesticated the first animals, breastfeeding infant mammals that had been taken from their parents (that were probably killed by humans). Large tracts of land could not support plants that could provide human crops, due to climate, geology, elevation and the like, but could support grasses and other cellulose-rich plants. Animals that could digest such fare were domesticated, expanding the energy resources that humans could exploit. Those animals were exploited in many ways. Horses and llamas became a source of transportation. Cattle became a source of meat and leather, and could also be put to work pulling a plow. Sheep and llamas could provide heat-conserving wool, as well as meat.

In the Fertile Crescent region, people began consuming the milk of cattle and goats. Today, [70% of the world's adult humans cannot effectively digest milk products](#). Those who can, however, have generally descended from herders who ate milk products, so there has been a slight evolutionary adaptation, although eating milk products is far from ideal. Many allergies and respiratory problems are related to milk product consumption.

Earth cannot support that many millions of people using the hunter-gatherer lifestyle, because of digestible energy. The domestication of plants and animals allowed humans to greatly increase their population densities. Fossil evidence shows, however, that humans became smaller when they [abandoned their hunter-gatherer lifestyles for domesticated life](#). The domestication revolution began with humans having poorer health than they formerly enjoyed. When people were hunter-gatherers, they were always on the move, as no place could provide them the calories they needed for long. Hence, possessions were minimal, largely limited to clothing, gathering and food processing tools, and weapons. Human social conditions were egalitarian, with very little hierarchy, as hunters lived in small bands, traveling the land. As human populations filled up the available land, the bands became competitive, and territories were carved out. People venturing into another band's territory could get killed. It is theorized that somewhere in the misty beginnings of civilization, instead of killing a hunter from a rival band, the hunter was compelled to serve the band that captured him. It was the beginning of slavery, and may have been [the beginning of civilization](#). Harnessing the energy of others quite possibly began with the domestication of plants and animals, as it created the "agricultural surplus" which has fueled all civilizations.[\[5\]](#)

Harnessing human energy can be more productive than harnessing animal energy, because humans possess high intelligence and hands. Draft animals can digest the cellulose that humans cannot, but do not have the intelligence or manipulative ability of humans, although they are much stronger. Also, draft animals are edible, whereas no culture has ever eaten people as a regular food source, at least that anthropologists are aware of.[\[6\]](#) Slaves ate food that could feed the masters, but their intelligence and manipulative ability could be put to tasks that animals could not perform. However, slaves could harbor notions of freedom that would be difficult to stifle. Brute force could keep the slaves subservient, but in the long run would be difficult to maintain. Consequently, methods to teach slaves to accept their condition were implemented from slavery's very beginning, and may have been the beginning of ideological indoctrination. If slaves accept their condition, they are easier to control, which is partly why people born into slavery, never knowing freedom, were easier to keep as slaves. In one form or another, such indoctrination to convince the exploited to accept their position continues to the present day. Without energy however, intelligence and manipulative ability count for nothing.

About 40,000 years ago, as increasing technology led to the human superpredator, humanity began altering earth's environment. They ascended to the top of the food chain, killing off large mammals that had no or few natural predators, and they killed competing predators, as well as all other digestible animals. Wiping out other animals created ecological dislocations, which has been a part of evolutionary activity for eons. However, human intelligence and manipulative ability allowed humans to take over earth's ecosystems as no other animal ever had before. Killing off large mammals and competing predators was probably humanity's earliest large-scale alteration of earth's ecosystems. Such disruptions can lead to population explosions and collapses of animals that were preyed upon, or depended on those missing creatures.

The most significant early use of technology to begin creating the human-dominated ecosystem was probably the introduction of fire as a vegetation-clearing tool. When [Europeans first came to the New World](#) during the Columbian era, the natives of North America's eastern woodlands used fire annually to clear the forest of undergrowth, creating an environment that was conducive to foraging deer and other preferable animals. There is tantalizing evidence that the Great Plains of North America may have been the world's largest pasture, an environment created by millennia of Indians burning the plains, to create an environment that encouraged bison, elk, and deer to flourish. When the diseases and violence of invading Europeans [wiped out the natives](#), woodlands quickly reclaimed the plains.[\[7\]](#)

Burning the vegetation was apparently a sustainable practice, although it altered the landscape immensely, and drove out certain species in favor of others. Far more significantly on a global scale, humans began cultivating the earth to raise domesticated crops. Sunlight that went into making the cellulose in trees was diverted to creating sugars, starches, proteins and fats in domestic crops, as the forests were cleared for crop production, and pastures for domestic animals. The trees were also used for fuel, shelter and other civilized amenities. Deforestation accompanied the earliest agriculture. Earth's [most deforested places](#) are where "civilization" first appeared on a large scale. Forest ecosystems are the greatest soil makers, and wiping out forests has also wiped out soils, not only by erosion. Trees are the greatest circulators of water in ground-based ecosystems, drawing water through the roots and sending it to the atmosphere through their leaves, thus creating a "suction." Rainwater can percolate into the soil, in a great cycle that ecosystems depend on. Killing off the trees killed off that circulation, leading to rising groundwater and eventually soil salination. Without healthy soil, there are no crops. Forests gave way to farms, and farms gave way to deserts. That has been civilization in action, as human methods destroy the very environment that supports life.[\[8\]](#)

In some places, such as the land between the Tigris and Euphrates rivers, diverted water made the land capable of raising crops, at least for a time. Deforestation and irrigation had long-term harmful effects, generally through soil destruction and salination. Rivers that ran clearly before the domestication revolution became clouded with silt, which was soil washed away downstream from deforested land. Creating artificial environments to extract more of the sun's energy carried with it a great environmental cost. In more tropical lands, the soils usually had less organic material in them than in temperate lands, and early agriculture in the Fertile Crescent was disastrous. Sumeria, the world's earliest known civilization, began having serious [soil salination problems](#) within two thousand years of establishment. By 2100 BC, [Ur](#) had abandoned wheat cultivation due to soil salinity, and wheat only amounted to 2% of Sumerian crops. In 1990, Iraq, the seat of civilization, imported 70% of its food. The people of the Nile river valley successfully engaged in agriculture for thousands of years, but largely because silt from upstream deforestation fertilized the land in the annual flood.

As civilization began forming around the world, technology kept increasing in its sophistication. People began working metals. Today, it is thought that copper may have been the first worked metal, in about 10,000 BC. It was first used artistically. Thousands of years later, it is thought, [gold working began](#). Gold was only useful for artwork, because it was so soft and pretty. It later became currency, because it was so rare. All early use of each prehistorically used metal seems to have been artistic. Practical uses were developed later. The primitive fire pit became the hearth, and people eventually created sufficient temperatures to separate metal from other elements in the ore, and metal smelting began. Copper is thought to have been the first metal smelted, more than 6000 years ago. Copper has a melting point of nearly 2000°F, and until humans created high enough temperatures in hearths, copper was obtained from discovered nuggets.

Copper is a relatively soft metal, and although [copper was made into weaponry](#) as early as 5000 BC, it has serious limitations. Bronze is an alloy of copper and other metals, and when copper-smelting cultures learned to alloy other metals with copper, notably tin, then that culture graduated from its Copper Age to its Bronze Age. Bronze is quite sturdy when compared to copper, and weapons and tools made from bronze were superior. The Bronze Age began in Sumeria by about 3500 BC, and the plow was invented about five hundred years later. For about two thousand years, plows, tools and weapons were made of bronze in the Fertile Crescent region. Plow agriculture is great at creating soil conditions favorable for crop production, but also leads to rapid soil erosion, largely from rain and wind. As agriculture and warfare flourished in the Fertile Crescent region, technological advance also marched along, with the wheel being invented in about 3500 BC, and Sumeria became the world's first literate society in about 3000 BC. Written history then began.

With civilization in the Fertile Crescent region, social stratification began. The agricultural surplus allowed for human specialization. Professions developed, with soldiers, priests, rulers, craftsmen, medical doctors and others appearing. Much of what is “bad” about the human species came with the baggage of becoming civilized. Along with specialization and innovation came classes of people who dealt with ideas. Ideologies developed, and the rise of civilized ideology often dealt with justifying the positions of the new elite classes, and those they exploited. The Zero-Sum Game appeared, although it was not called that at the time. The Zero-Sum Game, in the way I use it, is the idea that the only way to improve one’s life was by exploiting others. Jared Diamond and others call the transition to civilization the journey from [egalitarianism to kleptocracy](#). In one form or another, kleptocratic ideologies have survived to the present day. [Capitalism](#) and nationalism, especially the [American](#) variety, are little more than justifications for enslaving the world’s people. The West also plunders their natural resources, as today’s [genocide in Iraq](#) makes painfully clear. In his *Politics and the English Language*, George Orwell wrote,

“In our time, political speech and writing are largely the defense of the indefensible.”^[9]

Little has changed since Orwell’s time. Not all ideologists attempted to justify exploitation. Jesus and Buddha could be considered ideologists (or even anti-ideologists, as they challenged their day’s religious ideology). [Adam Smith](#) and Karl Marx both created economic ideologies that attempted to assist humanity. Those men had enlightening things to say, but the establishments erected in their names often had little to do with them, even turning their visions upside down, as the establishments’ main concerns were amassing and maintaining power (another energy concept), as full of [self-servers](#) as they were, as all earthly establishments have proven to be.

As humanity kept refining its ability to manipulate its environment, the blast furnace and charcoal were created. Higher temperatures were achieved. In about [1400 BC](#), iron was first smelted in the Hittite culture, which occupied today’s Turkey. Iron has a melting point of nearly 2800°F, and early blast furnaces achieved the requisite temperature. Iron was more available than the relatively scarce tin that was required to make the day’s bronze, and its ability to hold an edge made iron a superior metal for tools and weapons. The Hittites did not maintain their technological advantage for long, and by 1200 BC, about the time the Hittite Empire fell, iron weapons were appearing throughout today’s Middle East. By about 1000 BC, the Celtic culture was making iron swords, and they came to dominate most of Western Europe. At about the same time, the Greeks learned how to create heat-treated iron weapons. Warfare became a bloodier affair when iron weapons appeared. Iron plows and tools also allowed agriculture to spread to lands previously considered too challenging to exploit. Warring empires became the theme of early history, a theme that continues to this day. Various cultures became intensely militaristic, such as Sparta’s and Assyria’s.

The struggles and hierarchies were all about securing and consuming energy, and the agricultural and pastoral surplus was the basis of it all. Hearths, kilns and furnaces were ways of refining the exploitation of energy to gain better methods of manipulating the environment and each other, to gain further energy security. Slavery was about exploiting human energy, intelligence and manipulative ability. In various wars, the idea could simply be exterminating the human inhabitants and taking their land and other wealth. The Jews secured their Promised Land by outright genocide of its inhabitants, with their God’s blessing (and demand), with Joshua’s army annihilating not only all of Jericho’s inhabitants, [but also all their livestock, and seizing all their metal](#). That was also the logic behind the [European/American “settling” of North America](#), where they stole what may have been the [world’s richest continent](#) from its inhabitants, while annihilating them. Even today, Christian sites on the Internet serve up religious ideology to justify Joshua’s annihilation of Jericho’s inhabitants.

By about 1000 BC, humanity began exploiting fossil fuel, as coal was used in China to make copper coins. Before the Western Roman Empire fell, they began using coal, as evidence from Britain has suggested.

Empires rose and fell throughout the “known” world, i.e., Europe, northern Africa and the Fertile Crescent. Those ideologies that began with civilization became quite abstract, especially the religious ones, and Egypt

was the first place that gold mining was practiced on a large scale. The Egyptians had a sun god religion, with gold reserved for royal use, as its symbol. The economic logic of the day demanded that [slaves be worked to death to obtain it](#). No Egyptian slaves returned from those early gold mines. Their bones littered mines discovered by modern archeologists. Human energy, intelligence and manipulative ability were put to that use, and the fruit of those labors became seen in early civilization as the universal measure of wealth. Gold became the ultimate currency. It was really a symbol, not the real thing, but many early civilizations became mesmerized by it, throwing away true wealth in pursuit of its symbol.

By 600 BC, Greek agricultural practices severely eroded the land, and in 560 BC [a bounty was given to Greek farmers to plant olive trees](#), the only productive crop that could be raised on hills that had been eroded to the limestone bedrock.

Eventually the Roman Empire made its ascendancy, and the environmental deterioration of the Mediterranean region accelerated. As Rome conquered its neighbors, Italy and Sicily were quickly deforested to meet Rome's needs. After Rome conquered Carthage, today's Libya and vicinity was forced into becoming a big farm. There was no single event that signified what happened, but centuries of those practices rendered Libya the desert nation it is today. Rome helped deforest the Middle East, the cedars of Lebanon becoming nearly extinct. Only 10% of the forest remains that used to run from Morocco to Afghanistan, and much is desert today. The land's ability to sustain life was destroyed in humanity's quest for usable energy. [Whales were extinct in the Mediterranean](#) by the time the Western Roman Empire collapsed. Early civilization's methods of extracting useable energy were not sustainable and often cruel. Little has fundamentally changed.

Rome was the ancient world's most refined practitioner of "Rape and Plunder Economics." Exploiting the peoples and lands of the continually growing empire was the whole point of the Roman Empire, as with all empires. It does not matter if it is olive oil, furs, gold, timber, wheat, fish or other goods; it nearly always boils down to energy.

Not all energy-exploitation systems were so hard on the immediate environment. The world's most sophisticated agricultural system, the paddy system, was developed in China [around 500 BC](#), and spread across Southeast Asia during the next millennium. It was a more sustainable system than dry farming, and its nitrogen-fixing feature, as well as the ability to recycle a great deal of decaying animal and plant matter, allowed for greatly increased crop yields. Southeast Asia's human population always increased to the maximum available yield of the agricultural system (the Malthusian dynamic), leaving most people on the brink of starvation most of the time. The chinampas system of the Aztecs was similar to the paddy system, helping keep [Tenochtitlán](#) about the world's cleanest city, as human waste from the city helped fertilize the chinampas. The peoples along the Andes range of South America created an amazing sustenance system in a hostile environment, through crop experimentation (Machu Picchu may have partly been an agricultural laboratory, testing crops for high-altitude agriculture[\[10\]](#)), terracing, irrigation, high-altitude storage, fertilizer and other means.

No empire lasts forever, because either the imperial activities exterminate the imperial subjects, as [Spain's short-lived plunder](#) in the New World demonstrated, or the environment becomes so degraded that it cannot support human life any longer, as happened in [Sumeria](#) (and neighboring empires invade and conquer declining empires), or the empire's victims rise up from within, overthrowing the imperial overlords (usually after the empire has already severely declined). *All* earthly empires are primarily exploitative, and they all had ideologues who conjured justifications for the exploitation. In the earliest days, the rationales were often religious. Religious rationales exist to the present day (early 2002), as the United States, the [world's first truly global empire](#), is targeting Islamic people, with the current, [unelected, "god-fearing" American president](#) calling the latest "[war on terror](#)" a "Crusade," just as Roman Catholic popes used to do. Religious rationales largely gave way to other ones, such as racial (Europe's [plundering of Africa and the New World](#) being apt examples), social, ethnic, political, economic and "[humanitarian](#)," etc. What *all* those rationales really did, however, was justify exploitation and violence in order to secure the energy of lands and peoples. They were *all* variations on might makes right, and different ways of playing the Zero-Sum Game.

The Rise of Europe and Energy Exploitation

When the Western Roman Empire fell in the 5th century AD, Europe reverted back to a primarily agrarian state and entered what are called the Dark Ages. The Eastern Roman Empire, however, flourished, and the rise of Islam in the 7th century was a cultural awakening. Europe became backward, compared to the Middle East. “Barbarians” who joined the Western Roman armies became the rulers of Dark Ages Europe. Visigothic kings ruled today’s Spain (until the Muslim invasion of 711) and parts of France. Frankish kings ruled over the parts of today’s France, Belgium, Germany and Switzerland. Anglo-Saxons invaded the British Isles, and the Ostrogoths invaded Italy. Carolingian kings from today’s Austria eventually wrested the throne from the Frankish line, the most famous being Charlemagne, who in 800 tried recreating the union of Church and State that characterized the late Western Roman Empire. His attempt to recreate the Western Roman Empire failed, but his empire became the direct ancestor of today’s France and Germany. Around 800, Vikings began invading continental Europe and the British Isles from Scandinavia. Vikings also invaded and conquered the Slavic peoples of Eastern Europe, establishing Russia and adopting Byzantine Christianity. The Normans descended from Vikings who settled in today’s France, and the invasion of 1066 established their rule in England.

The Catholic Church dominated Europe, owning about a quarter of its land. It created a religious monopoly over Western Europe, and the [first Crusade](#) that had its bloody climax in Jerusalem in 1096 is considered Europe’s first united act, with knights and peasants from France, Germany, Italy and England marching to the Holy Land via Constantinople. As a warm-up for the First Crusade, the Christian armies perpetrated the first great European Jew slaughters, in today’s France and Germany. Slaughtering Jews became a European sport from that time forward. In 1056, the Christian “Reconquest” of Spain from the Moorish rulers began, not reaching its completion until 1492. Europe became a milieu of tension between Church and state, serf and lord, Christian and non-Christian, and constantly warring states. Warfare became the European way of life for the next millennium, and technological advances were often devoted to weaponry and warfare.

With historical trends, there is interplay of culture, environment, economics, politics, technology and other factors. The [soul age](#) of the studied cultures should also be taken into account. The materialistic West has yet to discover this. About the time Christian armies began “reconquering” the Iberian Peninsula, Europe entered its High Middle Ages. Cities are devices that concentrate energy. Every city survives by exploiting its hinterland, with the agricultural surplus sustaining the cities. There is no exception to that rule in world history. City dwellers, being freed from agricultural duties, then learned specialized skills, and Europe’s great period of city building was the High Middle Ages. Paris was rebuilt after the Viking invasions, and Notre Dame Cathedral, for instance, began construction in 1163. The Romans founded London, with the population declining when Roman rule ended. It was not until the Norman invasion in 1066 that London began growing into the city it is today. Florence began its rise to prominence in the late 1000s. Munich was founded in 1158. Germanic peoples began invading Slavic Eastern Europe. Accordingly, northern and central Europe began its great age of deforestation. About 75% of northern and central Europe was deforested during the medieval period, and it accelerated after 1050.[\[11\]](#) Today, only about 25% of that forest remains. The trees provided fuel, building material and made land available for crops and pastures. Marshes were drained, and nearly everything was domesticated that could be. New plow technology enabled exploitation of lands previously unavailable for cultivation. By 1200 however, all the good land was under the plow, and increasingly marginal lands were exploited, with the resultant environmental devastation that such methods always bring.

From the earliest days of civilization, the agricultural surplus allowed the elite to pursue luxury items, indulging their senses and egos, usually at the great expense of others. The pharaohs [working their slaves to death in Egypt’s gold mines](#) is an early example. Conspicuous wealth display and consumption has been a characteristic of the elites of probably *all* societies for *all of history*. In Europe, obesity became a sign of wealth. Early humans stole the fur of their fellow mammals, taking advantage of its heat-conserving ability, and as Europeans became more affluent, fashion became a factor.[\[12\]](#) The fur supply and markets were originally local, but as it became a business, fur centers developed, such as the one at Kiev. By 1240, when the Mongol hordes destroyed Kiev, there was hardly a fur-bearing animal to be found in the surrounding valley. Fur-bearing animals were largely driven to extinction in Europe by the 16th century, and the last untrapped region was exploited: Siberia. The demand for fur drove the Russians to expand eastward, eventually to California. The early allure of northern North America for Europe was the fur trade. Beginning on the Atlantic side of North America, the fur trade largely exterminated fur-bearing animals east of the Mississippi

River by 1800, and the European fur rush met, coming from both directions, in the Pacific Northwest. The demand for fur finally circled the globe. A great deal was simply for fashion.

Northern and Central Europe had an advantage over the Fertile Crescent, Middle East and Mediterranean region in that its soils contained more organic matter, and were more resilient than those more southerly soils. Nevertheless, Europe will look like those southern desert lands one day, if the current methods of extracting environmental energy continue their use. That plunder of Europe's lands resulted in a great increase in human population, growing from about 36 million in 1000 to 80 million in 1300. Also, the world's climate was relatively warm from 900 to about 1200, allowing agriculture on lands previously unsuited for it.

European technology began advancing again with the rise of European cities, as did new social institutions. Armor began improving during the High Middle Ages. The fully armored knight, charging on his horse with his lance under his arm, came into being during the 11th century. Crossbows began improving, to overcome the better armor. Crusades became a European constant after the first one in 1096. In order to preserve its religious monopoly, Pope Innocent III declared a Crusade on France to wipe out [Catharism](#) in the early 1200s, which killed about one million people, and was Europe's first great religious war.

The Chinese invented and used gunpowder, but only for firecrackers, and used it several hundred years before Europeans did. Gunpowder began to be used in European warfare just before the Black Death epidemic of the 1340s. Gunpowder was a way to get an explosive *burst of energy*, in order to kill more effectively.

Europe's High Middle Ages, which ended during the 1300s, were partly made possible by a global warming trend (making more *energy* available) that lasted from about 900 to the late 1200s, peaking between 1100 and 1250.[\[13\]](#) It was a great period of deforestation, agriculture and population explosion. By 1300, all the easily cultivated land was under the plow, marginal lands were being exploited, and earth began cooling. The good times were over, and Europe was at its Malthusian limit. Europe constantly hovered on the brink of famine. In 1314 a major famine hit Europe, lasting until 1317. Northern Europeans ate cats and dogs during that famine. As is typical in history, when the pressures of lack of *available energy* (hunger) are keenly felt, people become violent. France and England began their Hundred Years' War in 1337, fighting over control of land. In the midst of the fighting and starving came the plague.

The Black Death probably originated in China, and swept across Asia, via the trade routes, hitting Europe in 1347. It is estimated that it killed between a quarter and a third of all those in its path, with estimates of up to half of Europe dying off. Europeans took vengeance on Jews, lepers and other social outcasts for "bringing the plague," and tens of thousands died from mob violence. Art became obsessed with death. Works depicting the *danse macabre* made their appearance. The four horsemen of the apocalypse were riding during those years, and the fourteenth century was one of unending calamity in Europe.[\[14\]](#) When the century came to a close with another visit of the plague in 1399, Europe's population may have been as low as half of what it had been in 1300.

Gradually, Europe's population grew, and recovered to its 1300 levels during the 1500s. A cultural awakening, which eventually became known as the Renaissance, began in the late 1300s in northern Italy's city-states. Probably the most significant Renaissance outcome was the advent of humanism and the eventual undermining of Roman Catholic authority. The Cathars formed the first threat to Catholic religious hegemony in Europe, and the cultural awakening of the Renaissance eventually brought forth Martin Luther's Ninety-Five Theses in 1517. Concurrent with that cultural awakening was the advent of the "Little Ice Age," which lasted from about 1430 to 1850. Winters became severe in Europe, and growing seasons shortened, with glaciers growing, rivers freezing over and Europe continually living on the cusp of disaster.

The British Isles are an illustrative microcosm of what Europe eventually did to the world. The British Isles have been the scene of successive invasions. The Cro-Magnon and Neanderthal people lived there during the last ice age, and when that ice age ended about 12,000 years ago, the British Isles became islands, separated from mainland Europe. Iberian people settled the British Isles by 3000 BC and farmed the land. The Picts migrated to Scotland in about 1000 BC, and to Ireland in 200 AD. During the first millennium BC, the Celtic people overran Western Europe and also invaded the British Isles, displacing/absorbing the Iberian and Pictish peoples. The Picts battled the Romans, who invaded and conquered England in 54 BC. [Hadrian's Wall](#) began construction in 122 AD, to keep the Picts of Scotland out of England. When the Western

Roman Empire collapsed, the Germanic Anglo-Saxon peoples next invaded the British Isles. Beginning around 800 AD, the Vikings began invading the British Isles and northern continental Europe. The Vikings drove the Irish from the seas, and the Irish were never again a seafaring people.[\[15\]](#) They also settled in northern France and became the Normans (from “Norsemen”). The Normans invaded the British Isles in 1066, setting up the rule of Norman kings in England. Those events led to the Hundred Years’ War, and nearly continual war with France for centuries.

The British Isles were steeped in invasion and warfare. Also, all non-human competitors for energy were driven from the scene, beginning with competing predators. By 900 AD, the brown bear was nearly extinct in the British Isles. In 1486, the last wolf was sighted in England. The wolf was last sighted in Wales in 1576, and the last one in Scotland in 1743. With competing predators exterminated, attention turned to competitors for crops. In 1533, the English Parliament passed a law requiring churches to have nets to catch crows and other birds. In 1566, churches were authorized to pay a bounty on a wide array of birds and mammals. In 1668, John Worlidge’s calendar demonstrated the English attitude toward animals that were “harmful” to agriculture. In February, killing all snails, frogs and tadpoles was the task. In June, it was destroying ants, and in July it was killing wasps and flies.[\[16\]](#) The crane became extinct in Britain during the 1500s, as did the beaver. There were walrus on the Thames as late as 1456. The great auk, which once blanketed North Atlantic Islands, and was the Northern Hemisphere’s version of the penguin, began being hunted in the 1500s for food, and was rendered extinct in 1844. The global [whale rush](#) also began in the 1500s, nearly rendering extinct what is possibly earth’s only other sentient species.

England was largely deforested by the 1500s, and then Elizabethan England needed ships to [join the global empire game](#) that Europe was beginning to play. England’s solution was to [invade Ireland](#) and chop down its forests to build its navy. Ireland has yet to recover its forest. All these activities can be seen as involved with gaining/preserving energy by using trees for fuel and structure, using that newly denuded land to raise crops, killing off all animal competitors for that crop energy, and consuming energy by eating all those animals.

The Carboniferous Period likely laid down great coal deposits in what became Northern and Central Europe, North America, and eastern Asia. Europeans began mining that *great source of energy* during the 13th century. Coal provided household heat, fuel for blacksmiths, and eventually powered the Industrial Revolution. Coal is a rocklike substance, and burning coal not only produced carbon dioxide and water, but coal also contained sulfur and other elements.

Before the British Isles were completely deforested, coal began replacing wood as fuel. Coal smoke from the local vicinity drove Queen Eleanor from Nottingham Castle in 1257. By 1307, coal burning was banned in London, but the edict was ignored.[\[17\]](#) The human world’s first great air pollution came from burning coal, and by the 1600s, residents of London, with its perpetual cloud of coal smoke, had more respiratory disease than [the rest of the world combined](#). Today, China is the great coal-burning nation (as well as the greatest tobacco smoking nation), so, as might be expected, China has more respiratory problems than any other nation. Air pollution is still a great killer of children worldwide, nearly all caused by energy-producing activities.

Europe’s first imperial ventures were about acquiring native land and the fruit of native labor. Marco Polo spent the late 1200s in the court of Kublai Khan, and brought back his amazing tale to Venice. It is thought today that people have used [spice](#) largely to better preserve food (by killing bacteria), again an energy concept, and it also made preserved food taste better, as dead food loses its flavor. Venice had a virtual monopoly on the European spice trade, and charged exorbitant prices. In 1453, Ottoman Turks conquered Constantinople, ending the Eastern Roman Empire, which never completely recovered from being sacked in 1204 by its European “allies” during the Fourth Crusade. With the Turks newly in control of the spice trade route to Europe, [Portugal](#) and Spain began seeking new routes.

Portugal had already been expanding its domain when the Turks conquered Constantinople. Sugar first came to Europe as Arab traders brought it to Moorish Spain. Portugal began colonizing the uninhabited Madeira Islands in 1418. They immediately turned the islands into sugar plantations. Sugar provided two things: calories and sweetness. Similar to the spices, sugar helped provide useful calories, but more importantly, it played to humanity’s ape heritage of eating fruit: the sweet tooth. Refined sugar is an addictive substance and disastrous to health, arguably being the single greatest cause of tooth decay and also [the single greatest cause of diabetes](#), as well as contributing to obesity.[\[18\]](#) European teeth [really began rotting](#) when refined

sugar became a mainstay. Before civilization made its appearance, tooth decay was rare.

On the very first day he met the New World's natives, Columbus observed that those friendly natives would make good Christians *and* slaves, and he [captured six natives that first day](#). The Christian/slave dynamic would figure largely in [Spain's imperial foray into the New World](#). Columbus' very name translated to "[Christ-bearing colonizer](#)," and he called himself the "Christ bearer" immediately after his first voyage. Practice and theory, or reality and rhetoric, were on nearly opposite ends of the spectrum, however. Española, where Europeans first colonized the New World, became history's only instance of [complete genocide](#) of millions of people, as the Greater Antilles' inhabitants were extinct well within a century after "discovery." Although Columbus would [write about his desire to convert the natives](#), his main preoccupation was becoming rich by forcing the natives to mine gold. Columbus literally thought that [gold was the ticket to heaven](#). There was little Renaissance humanism to be found in Columbus' practices.

The first twenty years of Spanish presence in the New World was an unmitigated and genocidal disaster for the natives, with millions dying. Enslaving the natives was the standard Spanish practice, although plenty of semantic games were played. Officially, slavery was outlawed for "friendly" natives, when it became obvious that they quickly died upon being shipped to Spain's slave markets. So, the New World's natives were enslaved and put to work locally, to turn them into "good Christians." The Spanish experience during the early years of the New World's "discovery" is history's only era when people were regularly used as food, as the Spanish [used the natives as dog food](#).^[19] Native Americans had few domestic animals, so the natives themselves were the most available meat, and the soft bodies of native infants made for a canine delicacy. The exploitation and waste of *human energy* was prodigious during those days, as it was seemingly limitless.

As mining operations declined because the natives were so numerically reduced and the easy gold was gone, [sugar became the primary export](#) from the New World's tropics, which is *concentrated, addictive energy*. From northern North America the fur trade flourished (for *energy conservation* and fashion), which drove fur-bearing animals to extinction. From temperate North America came tobacco, the export that funded the English colonies in Virginia and southward. In 1638, three million pounds of tobacco per year made its way from present-day Virginia to Europe. It reached 17 million pounds in 1672, the same year that [American whaling became an industry](#), largely to obtain the *energy-rich* whale oil. Tobacco was different from sugar in that it had *no* beneficial health effects as Europeans used it, being solely an addictive substance, the deadliest consumer good that humanity has seen. As early as 1604, [King James I was campaigning against tobacco consumption](#), noting its deleterious health effects, among other unsavory aspects of its use.

As with sugar, tobacco was raised with slave labor, and both crops depleted soil fertility. Everywhere the Europeans showed up, whether it was Africa, Australia, the New World or the South Pacific, the effect on the natives was disastrous and/or genocidal. The only partial exception was Asia, partly because the natives were better armed and did not fall prey to European diseases.

The Renaissance helped lead to [the rise of science in Europe](#), and waning Church influence. Copernicus' heliocentric theory, first published in 1543, heralded the rise of Western Science, although the Catholic Church fought fiercely against it, as well as the Protestant Reformation, for generations. During the 1600s, telescopes, microscopes, higher mathematics and other tools came into use, and technology began vastly improving. In the early 1700s, Englishman Abraham Darby developed a scientific understanding of brass making and invented coke smelting, using coal to forge brass and iron. It led to a great increase in demand in coal use, and many metallurgical advances. Science and technology interacted. Warfare became a prominent use of technological advances, as Europeans continually [jostled for power](#).

When Europeans invaded North America (the [English most prominently](#)), they stumbled into one of the [world's greatest reservoirs of wealth](#). Eastern North America was almost entirely forested, and it was a human-friendly forest, open and park-like, as the natives burned the undergrowth each year, fostering game for hunting, such as deer. The soils were intact, and agriculture was performed in an environmentally gentle way. The Ohio River ran blue before the white man showed up. The [Great Plains](#) may have been another artificially husbanded environment, creating earth's greatest herds.

Europe plundered North America's real wealth with a vengeance that may have no historical equal. The

[Spanish New World experience](#) during the 1500s exploited human effort for no real wealth gain, but ultimately the wealth is in the environment. The Spanish did not alter their New World domains as drastically as the English and Americans altered North America. Eastern North America was 95% deforested by the invaders, completely exterminating the [passenger pigeon](#), which probably numbered five billion birds before the deforestation and slaughter began. When the woodlands were decimated for fuel, housing and to clear virgin soils for agriculture, coal mining began in earnest, and the Great Plains were ravaged in another prodigious display of destruction. The bison were reduced from 40 to 60 million animals to 23 wild ones in less than a century. The white man did not get around to invading the Pacific Northwest until 150 years ago, and for that reason the Northwest probably has the most intact ecosystems in the continental United States, although that is relative. I have hiked through the few remaining unlogged river valleys in the Cascades, and pondering what Western Washington looked like before the white man showed up is an awe-inspiring experience.

Not only is there evidence that the Great Plains may be at least partly an artificial construction, but there is also evidence that the Amazon rain forest may be the world's largest garden, with the land terraformed millennia ago, turning a rather human-unfriendly environment into earth's most diverse and fecund land-based ecosystem.^[20] It appears that the Pacific Northwest Culture, which stretched from Alaska to California, was probably humanity's first large-scale sedentary culture. The salmon spawning runs were a form of *energy delivery*, taking sunlight that fell on the Pacific Ocean, working its way up the food chain, to be finally delivered directly to the natives' villages. A pipeline could not have done it more effectively. Because of the salmon-based economy (sea mammals provided the fur), the world's first environmentally stable civilization flourished. They did not need to chop down their forests to divert the sun's energy to raising crops, and when the white man finally got around to plundering that part of the world, the trees they chopped down were tremendous.

It may *not* have always been the Rape and Plunder Economy in historical times. The relationship to nature that the Native Americans often manifested may have been a result of a spiritual maturity that the Old World's people had not achieved. North America and large parts of the New World may have been relatively intact not so much because Native Americans were "behind" the Old World in their development, but they had wisdom in relating to nature that was missing in the Old World. The nature-based religions of the Native Americans are evidence of it. It may have to do with [soul age](#) and other factors unrecognized by mainstream science.

Also, their relatively hostile environment may have helped hone the Old World's mentality, especially Europe's. The Puritanical attitude and the Protestant work ethic may have partly derived from the fact that people living in poor conditions, with severe seasons, had to make hay while the sun shined or they would not survive the winter. There may be a negative feedback effect where humans would continually stress their environment through uncontrolled breeding and environmentally-destructive practices, which in turn made for harsh times, which made people's outlooks harsher, greedy and more prone to violence. I once asked [Hinono](#) what the European rape of the world was all about, as nothing happens by accident (in the [mystical perspective](#)), and he said it was about "the dilution of bad ideas," as if Europe was about to become a spiritual black hole unless the "pressure" was released.

About the same time that English colonies in North America became restless, England began conquering Asia, beginning with what may have been the world's richest region, [Bengal](#), as far as readily plunderable wealth went. The triumvirate of energy, intelligence and *manipulative ability* in wealth creation was starkly evident in England's rape of Bengal. Bengal had a thriving textile industry, and England imposed a mercantile exploitation from the beginning, actually amputating the thumbs of weavers so they could no longer manufacture fabric. After several years of English rule, a drought-caused famine (greatly aided by English destruction of the society, [famine accompanied English rule in India](#)) killed off a third of Bengal's peasantry. The country was forced into growing raw materials such as jute and indigo for English factories and consumption, and opium for China. India became a major raw material exporter. Tea sweetened with sugar is an imperial drink, as is coffee and hot chocolate. The Europeans plundered [Africa](#) in the late 19th century, with similar dynamics.

The Industrial Revolution and the Science of Energy

In retrospect, the major event of the 1700s was James Watt's invention of the modern steam engine in 1769. It was a great improvement over the Newcomen steam engine that was first developed in 1712, as it had a steam condenser, making it vastly more efficient. Watt's engine made the Industrial Revolution possible. With steam engines, energy could be harnessed at a level never before dreamed of. The invention of the modern steam engine coincided with the beginnings of the anti-slavery movement in Europe. Machines could perform labor that humans formerly did.

The Industrial Revolution is one where theory lagged behind practice. Adam Smith's *The Wealth of Nations* did not invent capitalism, but formalized an ideological framework that unwittingly prepared the conditions for dogma to take root. Similarly, the steam engine was powering the Industrial Revolution long before the theory was developed to explain it. Capitalism was born in England, and the modern state was born in France. One could be considered economic and the other political, but the two have never been truly separated. Disciplines that attempt that extractive surgery, such as "realism," which tries separating politics from economics, analyzing politics separately, can fail spectacularly. Economic and political activities are about amassing and controlling *energy*; it is no accident that the word "power" describes political "wealth." Terms such as "political capital" demonstrate that "political-economic" is a more appropriate term than either one by itself. Political power derives from economic power, and violence has accompanied the garnering of economic power since the earliest days of humanity. In the [United States](#), history's most materialistic nation, money dominates politics, with all politicians at the national level being essentially owned by the interests that fund their campaigns.

Ever since humans began making machines, attempts were made to make them independent of fuel. All manner of "perpetual motion" devices were dreamed up. None ever worked. When Napoleon tried conquering his corner of the world, forcing the Enlightenment onto his neighbors, a military engineer in his service was Lazare Nicolas Marguerite Carnot, whose military strategies won every battle that he planned. Carnot also was a mathematician who helped develop the mathematical basis for the reason why a perpetual motion machine was impossible. His son was also a soldier, and Nicolas Léonard Sadi Carnot, known as Sadi today, took his father's work further, and in 1824 published his conception of the perfect engine, 55 years after Watt's steam engine made its appearance. When Carnot published his seminal work, heat had only recently been scientifically described. Before the work of Antoine Lavoisier, European scientists thought that combustion was the release of a substance called phlogiston. Lavoisier, before his neck met the business end of a guillotine in 1794, demonstrated that combustion was due to oxygen reacting with the combusted material. In 1798 and 1799, Benjamin Thompson and Humphry Davy demonstrated that heat transfer was an *exchange of energy*, similar in concept to work being done, and that idea eventually displaced the old theories.

Carnot's theory on his ideal heat engine would become known as the second law of thermodynamics, introducing the concept of entropy. Just as theory lagged behind practice, the second law preceded the first, which states that energy cannot be created or destroyed (and the "zeroth," which defines temperature, sort of). The term *thermodynamics* defines the essence of the science; dealing with the relationship between temperature (thermo) and motion (dynamics). The crux of Carnot's theory is that hot things cool off, giving their heat to the surrounding environment.

Carnot theorized that the temperatures it operated between determined a heat engine's maximum possible efficiency. According to Carnot's theory, the hotter an engine ran, the greater percentage of its consumed energy could be converted to work. Today, calculating the maximum possible efficiency of a heat engine is performed by using the temperatures of the heat source and exhaust medium. The heat source and exhaust medium are known as "heat sinks" in thermodynamics jargon. The formula is known as Carnot's equation, and the maximum possible efficiency is the temperature difference between the two heat sinks. See the diagram below.

The $(T_1 - T_2)/T_1$ formula is learned by all thermodynamics students in their first week of class. Putting in some real numbers shows what Carnot's equation means. In today's electric companies, a coal-fired power plant generates about 2000° F in its boiler, where water is made into high-temperature steam. After the steam is run through turbines, a large body of water cools it back down into liquid water, so it can be reintroduced into the boiler. That is also the essence of Watt's steam engine, and the introduction of the steam condenser was what allowed the Industrial Revolution to take off.

If the body of water that cools the condenser is 55° F, the arithmetic works out to 80% efficiency, and the calculation is at this footnote.[\[21\]](#)

That means that for every 100 units of heat introduced at the boiler, the turbines will produce 80 units of mechanical energy, at most. In reality however, the steam turbine's thermal efficiency will be far less than 80%. Today, the national average for heat engine efficiency at the electric companies is about 30%. The highest thermal efficiencies obtained by state-of-the-art equipment is about 40%, or about half the Carnot ideal. The research on gaining higher efficiencies is largely devoted to developing boiler and turbine materials that can withstand higher temperatures. The "visionaries" in the field think that 4000° F boiler temperatures can be reached in the next generation, and 60% thermal efficiencies may be attainable.

As I first began studying thermodynamics in the late 1980s, I wondered where Carnot's equation came from. It turns out to be quite simple. There is a process that reverses the heat engine dynamic, and it is called a heat pump. Where a heat engine takes advantage of the differential between heat sink temperatures to produce mechanical energy, a heat pump uses mechanical energy to move heat between two heat sinks. Take those steam turbine temperatures and imagine a heat pump operating within those parameters. The heat pump would take heat from the 55° F heat sink and raise its temperature to 2000° F, by using mechanical energy. That might seem nonsensical at first, but that is what heat pumps do. Using those temperatures and inverting the Carnot equation, the maximum theoretical heat pump efficiency is developed. See the diagram below.

The maximum efficiency is $T_1/(T_1 - T_2)$

Inserting the previous temperatures into that equation, we get 1.25.^[22] That means that for every 100 units of mechanical energy that is put into the heat pump, 125 units of heat will be moved from the 55° F heat sink and delivered to the 2000° F heat sink, at most. That ratio of 1.25 is known as a coefficient of performance (COP).^[23] Combining both Carnot equations is what makes Carnot's theory clear. See the diagram below.

The maximum efficiency is

$$(T_1 - T_2)/T_1 \times T_1/(T_1 - T_2) = 1$$

Combining the equations yields a result of one. In that ideal Carnot arrangement, all of the mechanical energy that was farmed from the system in the heat engine was used to drive the heat pump, taking the heat from the lower heat sink and depositing it back into the high temperature heat sink. In that ideal world, the perfect heat engine could be hooked up to the perfect heat pump, and it would run forever on its own energy. In the real world, however, hot always goes to cold, and there are always heat losses from any system where heat is converted to work. As shown above, the electric company only gets about half the Carnot ideal in practice, and heat pumps get far less than half the Carnot ideal. Instead of $80\% \times 1.25 = 100\%$, it is more like $40\% \times 0.2 = 8\%$. The 8% number means that in reality, only 8% of the energy farmed from the boiler by the heat engine would make its way back to the boiler to start the cycle again. The other 92% would be largely lost to heat losses, so the majority of energy released by burning fuel would simply be vented to the environment, creating thermal pollution. Electrical power plants, for instance, are notorious for warming up the bodies of water that are used to condense the steam.

Steam turbines at electric companies work by a simple principle. Liquid water is turned into a high-temperature steam at the boiler, its newly liberated molecules rocketing at immense velocities, and then directed at a turbine blade. The energy exchanged during the collision of the water molecule and turbine blade is how the heat energy of the boiler is converted into mechanical energy. It is no different in essence from using my muscles to push my car down the road, or a river pushing a waterwheel. In the case of the steam turbine, it is a high-velocity water molecule banging against a turbine blade.

The heat pump requires a little more explanation. When Carnot came up with his famous equation, heat pumps did not exist. They only existed in theory. They have since been invented and have been put to many uses. The heat pump application that all Americans are familiar with is the household refrigerator. It removes heat from inside the cold refrigerator and dumps it into the warm kitchen, moving the heat from a cold heat sink to a higher temperature one. A brief description of how a refrigerator works is at this footnote.[\[21\]](#)

Physicists have asked if thermodynamics had more debt to the steam engine than the steam engine had to thermodynamics. With Watt's steam engine coming onto the scene, the West entered the age of machines. The motive power of steam could be harnessed in many ways. Richard Trevithick built the first locomotive in

1804. In 1807, Robert Fulton made his famous steamboat run up the Hudson River. Railroads and steamships began crossing the globe.

The forerunners to modern factories began development in England in the early 1700s, in the textile industry. England's [rape of Bengal](#) boosted its industrial advance at India's expense. Machines for transportation and manipulation became feasible with the steam engine, and England's textile factories no longer needed to be situated next to rivers, to take advantage of river power. In 1814 the first cotton mill was built, in Waltham Massachusetts. Raw cotton entered, and finished goods emerged. In the early days of factory textile production, women were hired to work in them, partly because they could be paid less than men. It is not an accident that the women's suffrage movement, the communist movement, and efforts to abolish slavery began in those early days of industrialization. With the ability to *exploit energy* on a scale never before dreamed of, strong backs and hands were no longer as necessary for the creation of human-usable wealth. Wage slavery eventually replaced chattel slavery. Slave owners made the case that people do not take care of things they rent as well as things they own. Their arguments were not easily dismissed, and the world of Charles Dickens came from the Industrial Revolution. In England, the advent of industrial capitalism was a disaster for the masses, as life expectancy fell during the late 18th century, in the hellish conditions of early industrialization. A rich, fat capitalist class developed, while the lower classes labored in horrific conditions, in the factories and mines, with children and women working in virtual slavery.

In the United States, wood was the first fuel exploited, as it was so readily abundant. As the trees quickly disappeared, Americans reverted to coal, just as the English had done. As far as nature's "wealth bank" went, burning trees was the use of sunlight that had fallen on the tree during the years that it grew, while coal was the exploitation of sunlight captured by plants hundreds of millions of years ago (or if [Gold](#) is right, energy put there at earth's creation, and not renewable). Because such a rich continent was plundered, the United States quickly reached the world's highest standard of living, living easily off the land, while exterminating its former inhabitants, as well as incredible numbers of passenger pigeons, and later bison. As [Carl Sauer](#) remarked, all that so-called wealth creation was actually wealth consumption, draining the world's real wealth. [Brian O'Leary](#) stated it succinctly one day when he said there could be no economy on a planet that cannot support life.

The Industrial Revolution is seen as the most important event in human history since the Agricultural Revolution. Mechanized farming eliminated the need for farmers. In the 1830s, the American John Deere began making steel plows, and the American Cyrus McCormick invented the reaper. By the late 19th century, heat-engine-powered machines replaced teams of horses and oxen. The Dickensian world has not quite disappeared. It has partly been exported from the West to sweatshop factories abroad, in places such as [Indonesia](#), where people work in virtual slavery for Western corporations, making clothing for Americans and other Westerners.

The "agricultural surplus" allowed for specialization of labor. In "primitive" societies, nearly everybody was involved in food production. As agricultural systems became more efficient, from a human standpoint (not for the exterminated "pests" or the depleted soils and ecosystems), the surplus grew, and fewer people were needed for food production. Long before the Industrial Revolution, England developed the most efficient agricultural systems, yet even on the cusp of the Industrial Revolution, about half of England's workforce was engaged in agriculture. Although the United States was the world's most industrialized nation when the Great Depression of the 1930s arrived, about a third of the workforce was still engaged in agriculture. That number is 3% today. Today's Western Civilization is possible because of *energy exploitation*, but it is still a Zero-Sum Game being played, with the rise of new ideologies to justify the positions of the [capital](#) and elite classes. The craziness of ideology was not confined to political-economic activities. The growing scientific establishment was intimately involved.

The Energy Racket Takes Shape

Before the Industrial Revolution, economics was a Zero-Sum Game and land was the primary basis of wealth. In Spain, a few rich families owned most of the land. In England, a similar manifestation of greed was taking shape. In Spain, the great sheep herds of the grandees overran Spain, devastating Spanish farms

and helping to make Spain as arid as it is. In England in the 16th century, rich landowners began fencing in the land and kicking the peasants off it. The movement was known as “Enclosure,” and helped spur the [English invasion of North America](#). Enclosure was a way for landowners to kick the peasants off land that they lived off, and turn a profit using the land for either sheep pasturage or saleable crops. Enclosure riots punctuated 16th and 17th century England, and helped lead to the English Civil War, which began in 1640. [25] In England, the evolution of first wiping out predatory competitors for energy, then agricultural “pests,” and then humans themselves, is evident.

Capitalism was born in England, due to a confluence of geography, culture, technology, and unique historical trends. When Adam Smith published his *Wealth of Nations* in 1776, capitalism already existed, although that name would not be used until the 20th century. Ellen Meiksins Wood and other Marxist historians have documented the long process of England’s transformation from feudalism to capitalism, and Wood shows how it grew from the rural agrarian milieu of greedy landowners, not the urban factory. [26] Adam Smith is associated with the “invisible hand of competition” and the notion that everybody pursuing their narrow self-interest, competing against each other, would make life better for everybody. That concept is a cornerstone of today’s [corporate capitalism](#), but Smith had little to do with it. Smith was an Enlightenment philosopher, and to him, more important than his *Wealth of Nations* was his *The Theory of Moral Sentiments*, which he had reprinted several times during his lifetime. The very first sentence of *Moral Sentiments* states:

“How selfish soever man may be supposed, there are evidently some principles in his nature, which may interest him in the fortune of others, and render their happiness necessary to him, though he derives nothing from it except the pleasure of seeing it.” [27]

[Greed](#) was not a virtue in Smith’s perspective. Scholars familiar with Smith’s corpus agree that he would be aghast at today’s corporate capitalism, and would be particularly horrified that he is considered its father. Today’s capitalism bears far more resemblance to Charles Darwin’s vision than Smith’s. Darwin theorized that from the “war of nature,” with everything in competition, comes progress. [28] Darwin’s theories were partly a projection of the English mind onto what he saw in nature.

England industrialized on the workers’ backs, and partly by raping India. With Watt’s steam engine, coal became the Industrial Revolution’s fuel, because the British Isles and Europe had mineable coal and the trees were gone. The famous London Fog was not true fog, but coal smoke. Pictures from European urban life in the early 20th century are readily obtainable today. Everybody is soot-stained in the pictures. London was bathed in a pall of coal smoke from the 1600s to the 1900s, and eventually all of urban Europe looked the same. As with Britain, European invaders first razed eastern North America’s forests, as well as exterminating its human inhabitants. While that was happening, they also [hunted the world’s whales to the brink of extinction](#), mainly for the whale’s *energy-rich* oil. As those resources became scarce, the United States also sat on mineable coal, and coal mining eventually dominated Appalachia’s economy.

New kinds of empires were built in those early days of capitalism and industrialization. Britain was in the early lead, being more than twice as industrialized as France and nearly twice as much as the United States in 1830. [29] By 1860, Britain was three times as industrialized as France and the United States, and nearly six times as industrialized as the Hapsburg Empire. The year 1860 marked the beginning of the United States’ great leap forward as compared to its imperial rivals. As usual, warfare initiated the “progress.” The American Civil War was the most devastating war in American history.

On the brink of the Civil War, American whaling was in decline, because [whales were nearly extinct](#). In 1859 in Pennsylvania, Edwin Drake drilled the first American oil well, and the oil industry began. In the early days of the industry, oil was used for “medicine,” and because whale oil was becoming scarce as lamp oil, petroleum quickly replaced whale oil in the United States. The Civil War was also the first great era of American war profiteering. A class of men known as “robber barons” all got their starts during the Civil War, building new kinds of empires. Corporate capitalism was a new political-economic form. Today,

corporations only exist to [make money for the owners](#), an idle class that skims off the cream. Also, the Industrial Revolution, with its exploitation of energy on a scale never before seen, moved the concept of wealth further from early concepts of controlling land and labor. Controlling *energy sources* eventually became an overriding imperative.

The robber barons got their start during the [Civil War](#), and the fledgling industries all came under the control of a few people, each industry turning into a racket. Empires in steel, [banking](#), railroads and others were built during those days. The most successful robber baron of all, however, was John Rockefeller. As with the other robber barons, Rockefeller avoided military service during the Civil War and, after careful inspection, entered the oil industry in 1863. [Rockefeller](#), the son of a snake oil salesman, realized that if he could control the industry's refining arm, he would control the entire industry, as all oil would have to pass through his hands on its way to market. It was a gatekeeper concept. Soon after he entered the industry, he embarked on a strategy of buying out or wiping out all of his competitors - the hundreds of small refiners that dotted the northeastern United States. By 1880, Rockefeller controlled 95% of U.S. refining. Rockefeller personified a new, ingenious ruthlessness in American industry.

The decades after the Civil War became known as The Gilded Age, with the robber barons ridding the new industries of competitors and creating vast economic empires, empires that still exist. By the early 20th century, monopolies dominated the American economy, and the era of "trust-busting" was supposed to loosen the stranglehold that a few capitalists had over the American economy. The trust-busting activity had limited effectiveness. Rockefeller's Standard Oil was broken up into a few large oil companies, but the oil companies colluded behind the scenes, and the world's largest oil companies were known as the "seven sisters." Two of those Rockefeller oil companies merged back together recently, forming the world's largest corporation, Exxon Mobil (the neocolonial Wal Mart has now exceeded them in revenues).

Corporate power soon dominated America's political-economic environment. As robber barons such as Rockefeller, Morgan, Carnegie, Mellon, Vanderbilt, Astor, Harriman and friends consolidated their empires, they often turned to "philanthropy," a strange term to use for those men, and their philanthropy became a means of social engineering and control, and diversifications of their empires. In the early 20th century, Rockefeller and Carnegie's foundations, working with the American Medical Association, used their "philanthropy" to entrench what became [today's medical racket](#). The hegemony became ideological, as Rockefeller established the [University of Chicago](#), which has created the ideology that dominates today's economic theory, favoring the capitalistic perspective.

The [lies told to American children](#) nearly begin in the cradle. If people can be brainwashed while they are young and impressionable, just forming their personalities and core beliefs, they will largely be unable to critically examine them for the rest of their lives. Today, major corporations are trying to form brand loyalty in children (such as the late 20th century's Joe Camel campaign to addict children to [cigarettes](#)), so they will have customers for life. It is that way in every ideological endeavor, and no different in science, which prides itself in the exercise of reason and observation. Similar to the American media's [self-serving pretense that it is objective](#), the scientific establishment characterizes its membership as being open-minded, seeking scientific truth.

Science and the "Real World"

One of history's greatest physicists, Max Planck, stated,

"a new scientific truth does not triumph by convincing its opponents and making them see the light, but rather because its opponents eventually die and a new generation grows up that is familiar with it."[\[30\]](#)

[Semmelweis](#), the pioneer of sterile medical practices, died in an insane asylum. Those who discovered [anesthesia](#) died penniless. The pioneers of sterile surgical practices, [Lister](#) and [Keen](#), were treated shabbily. [Louis Pasteur](#) may have marched microbiology, and hence medicine, off in the wrong direction, by plagiarizing [Antoine Béchamp](#). [Emil Grubbé](#) was not exactly "welcomed" for discovering radium therapy. [Rife](#), [Naessens](#), [Reich](#) and many other pioneers of medicine have been subjected to vilification and [endless legal and professional attacks](#). Those are standard examples of the fates of scientific pioneers. Nikola Tesla has been written out of the history books. That list can go on and on. A craving for power and control typifies the members of the American government, those who run the world's institutions, most corporate leaders, etc. The world of science is no different, especially as [men dominate it](#). A pithy observation made by a Robber Baron during the Gilded Age was that "pioneering don't pay."

With the rise of science came the Industrial Revolution, and science was an integral part of its progress. Consequently, science needed to be controlled by the capitalists, and it has been. Attacks on scientific pioneers by their "peers" is standard human behavior, no different with scientists than any other group of people. Also, certain scientific and technological breakthroughs can be very bad for business, upsetting the rackets. Therefore, true innovation is largely dead in many industries, such as [transportation](#), energy, [medicine](#), etc. The greater the concentration of power in the industry, the more scientific advances are stifled and crushed. Also, as an example, industrially-sponsored/influenced "scientists" such as [Harold Hodge](#), Gerald Cox, Trendley Dean, David Ast, Edward Largent and others turned an industrial waste, [fluoride](#), into a "medicine," while scientists such as [Phyllis Mullenix](#) had their careers destroyed for reporting data that contradicted the propaganda.

Not only are the obscure pioneers mercilessly attacked and derided. Few Americans know anything about [Royal Rife](#). Few know who [Gaston Naessens](#) is. How many Americans have heard of Thomas Edison and his light bulb?

In 1879, Edison was basking in fame. The year before, he had demonstrated the phonograph. He had more than 150 patents to his name, and was known as the "Wizard of Menlo Park." Edison's crew devoted most of 1879 to solving a problem that had defeated the world's most prominent electrical engineers: electrical lighting. After testing thousands of materials for a filament that would work, and playing with vacuum and various resistances, Edison hit on a combination that worked, a high resistance filament in a vacuum. When the "Napoleon of Science" announced that he had successfully created a practical electrical lamp, how did the world of science react?

England's most distinguished electrical engineer, Sir William Siemens, who had tried solving the electrical lighting problem for ten years, greeted Edison's announcement with, "Such startling announcements should be deprecated as being unworthy of science and mischievous to its true progress." Edison soon perfected his light and publicly demonstrated electrical lighting in Menlo Park, lighting the streets around his laboratory. The public came from miles away to see the night lit up by electrical lighting. Edison was demonstrating the "impossible" to the public. What was the reaction of science then?

Professor Henry Morton lived near Menlo Park, and could not be bothered to stretch his legs to go see for himself. Morton instead wrote that he protested "in behalf of true science." Morton wrote that Edison's experiments were "a conspicuous failure, trumpeted as a wonderful success. A fraud upon the public." Professor Du Moncel said, "One must have lost all recollection of *American hoaxes* to accept such claims. The Sorcerer of Menlo Park appears not to be acquainted with the subtleties of the electrical science. Mr. Edison takes us backwards." Edwin Weston, an expert in arc lighting, said that Edison's claims were "so manifestly absurd as to indicate a positive want of knowledge of the electric circuit and the principles governing the construction and operation of electrical machines." While the public was strolling under the radiance of the electrical lighting in Menlo Park, Sir William Preece, who had studied under Faraday, and was the chief engineer of Britain's Post Office, addressed the Royal Society in London, where he read a paper under the day's murky gaslights. Preece said that Edison's electric lamp was "a completely idiotic idea."

Edison was probably the world's most famous scientist at the time, and he was publicly demonstrating something said to be "impossible." Not one scientist could be bothered to go to Menlo Park and see it for themselves. Human feeble-mindedness also applies to scientists, in spades. Scientists had abandoned one of their most sacred principles, the principle of observation. That is not an anomaly. Today, more than

seventy years since [Royal Rife](#) invented his Universal Microscope, most scientists have not even heard of it, much less tried to reproduce it, so they can view *life processes* on a scale that is still impossible today with "modern" technology. [Gaston Naessens](#) is doing almost the very same thing today, and if his name comes up in scientific circles, it is treated with contempt. Instead of taking the time to look through that microscope themselves, or even buy one (they are cheap), Naessens is treated as if he has the plague, if he is acknowledged at all. The Catholic Inquisitors, who refused to look through [Galileo's](#) telescope to see the moons of Jupiter for themselves, have professional descendents that fill the ranks of today's scientific establishment.

If the world's most famous scientist was treated that insanely, imagine how two obscure bicycle mechanics were received when they achieved the "impossible" - heavier-than-air flight. Perhaps the most amazing sight of the entire Industrial Revolution was human flight, which the Wright brothers accomplished in December of 1903. Similar to electrical lighting, heavier-than-air flight had frustrated science. A few weeks before the Wright brothers first flew, Simon Newcomb, the professor of mathematics and astronomy at Johns Hopkins University, published an article in *The Independent* that scientifically demonstrated that human-powered flight was "utterly impossible." In 1902, the chief engineer of the Navy, Rear-Admiral George Melville, wrote in the *North American Review* that attempting to fly was "absurd." Two months before the Wright brothers flew, Professor Samuel Langley tried flying a craft from a houseboat on the Potomac, and it plunged into the river. He tried it again nine days before the Wright Brothers flew, and his plane was destroyed.

The Wright brothers did not listen to the "experts" and flew at Kitty Hawk in North Carolina. They returned to their bicycle shop in Dayton Ohio, and continued refining their airplanes. They wrote to newspapers and politicians, inviting them to come see human-powered flight, and even sent out pictures of their planes in flight. They were ignored. It did not stop them from continuing to work on their airplanes. They practiced their flying in a field owned by a Dayton bank president, and regularly flew their planes. A rail line ran next to the field. During one flight in 1905, the Wright brothers were flying when a passenger train was rolling past the field. The general manager of the rail line and his chief engineer were on the train, and the manager ordered the train stopped. They and the passengers stared in wide-eyed amazement at the sight of a man flying through the air. Many of those dazed witnesses wrote to the *Dayton Daily News*, and asked why they were not reading about those men flying over "Huffman Prairie."

Not only did the newspapers not send a reporter out to look at such a sight, but letters from people who had seen the Wright brothers in flight were burying them, and the papers complained about the volume of letters they were receiving. Two highways also bordered the field. All the while, the Wright brothers were mailing invitations across the country to media and others to see them fly, an effort that was generally futile. The local newspapers could not be bothered to send even one reporter to check out the story that was happening nearly in sight of the newspaper offices. The managing editor of the *Dayton Daily News* once spoke with Orville Wright, who told him that he flew for about five minutes that day. The editor did not believe him, and no story ever ran. Maybe if they flew a plane *into* the newspaper building, somebody might have come out to investigate.

In January 1905, more than a year after they first flew, science weighed in on the persistent reports that the Wright brothers were flying. [Scientific American](#) ran an article about the Wright brothers' flights. They implied the Wright brothers were hoaxers, and cited the primary reason for not believing the reports:

"If such sensational and tremendously important experiments are being conducted in a not very remote part of the country, on a subject in which almost everybody feels the most profound interest, is it possible to believe that the enterprising American reporter, who, it is well-known, comes down the chimney when the door is locked in his face - even if he has to scale a fifteen-story skyscraper to do so - would not have ascertained all about them and published the broadcast long ago?"

There it is, the [myth of the vigilant, free press](#). The house organ of science stated its reason for not believing the Wright brothers and their claims of flight: because they had not read about it in the papers. It was not until September 1908, when President Roosevelt ordered tests at Fort Myer, Virginia, and the Wright brothers

flew over the town for a week (after first flying over Paris, where they first found fame, because the French were far more receptive to the Wright brothers than Americans were), that the Wright brothers' flights were accepted. It could be denied no longer. Science was finally forced to accept it.^[31] Even then, the Smithsonian Institution, which helped fund Langley's failed experiments, clouded the issue for generations, trying to deny the Wright Brothers their rightful place as the fathers of powered flight.

I lived in Dayton, where Wright-Patterson Air Force Base is (it is built on Huffman Prairie), the biggest Air Force base in the world, and the source of legends such as the Blue Room and Hangar 18, where [extraterrestrial craft](#) and the remains of their hapless occupants were allegedly stored. The Air Force Museum is also there, in the town where the Wright brothers lived and whose feats were ignored for nearly five years. In the museum is exhibited the Wright brothers story and their early days, but the exhibit does not deal with the incredible denial that the American establishment engaged in for nearly five years after they first flew.

Einstein once observed that human stupidity is seemingly infinite. The danger is thinking that scientists possess less of it than the public at large, when sometimes they possess *more*.

Department of Energy scientists tried explaining away what their Geiger counters told them about [Brown's Gas](#) transmuting radioactive material during the 1990s. They had to perform mental summersaults and nearly gouge their eyes out to deny what their eyes and brains told them, but they accomplished it. Getting a diploma from a university does not confer intelligence or make somebody a true scientist. About 99% of those with engineering degrees have little creative talent. [Mr. Mentor](#) once told me that most engineers are plodders. They can be given some numbers to crunch or drawings to make, and they will dutifully perform their tasks, bringing back their results when finished. Not that the work may not be valuable, but there is often little creativity or mental horsepower brought to bear on such activities. Those mundane activities are similar to what [Kuhn](#) called "normal science." The vast majority of educated people cannot think past their textbooks, whether it is in science, mathematics, [history](#), politics, [accounting](#), etc. Creative insight is what drives scientific and technical advances. Without that "right side" of the brain working, analysis and technical drudgery provide little insight, and for those mired in such quagmires, comprehending the possibility of flight or other textbook-challenging ideas is nearly impossible, as [Planck](#) observed.

The academic experience proves little, and negative learning often takes place. Some of the best inventors and engineers were either self-taught or were mediocre students. Einstein barely made it through his curriculum. Edison was self-taught, attending school for three months of his life.

Werner Heisenberg wrote of attending a meeting of atomic physicists in 1952, when he had a chat with Niels Bohr and Wolfgang Pauli. Bohr talked about a lecture that he gave to a group of philosophers, whom he called mostly "positivists," on the subject of quantum theory. After his talk, Bohr was disappointed that nobody asked any questions. Bohr wondered if he had failed in his talk, because quantum theory is so strange that it should have elicited a great deal of questioning. Pauli responded that Bohr should not be so hard on himself, that the positivists accepted Bohr's explanation as received wisdom, and had no questions. Pauli essentially said if that was the case, they did not really understand anything that Bohr had said. Heisenberg wrote,

"The positivists have a simple solution: the world must be divided into that which we can say clearly, and the rest; which we had better pass over in silence. But can anyone conceive of a more pointless philosophy, seeing that what we can say clearly amounts to next to nothing? If we omitted all that is unclear, we would probably be left with completely uninteresting and trivial tautologies."^[32]

Those were the all-too-rare true scientists, shaking their heads. Then Heisenberg and Pauli talked about the nature of the soul.

In the real world, theft has been a primary factor in human interaction. When Europe [sailed the high seas](#), it engaged in history's greatest act of plunder and piracy.

In science, theft has been all-too-common. The theft is not of land and resources, however; it is the theft of ideas, discoveries and [inventions](#). Theft and suppression is typical. Ralph Moss' observation that the pioneers in cancer treatment have been ignored, [while the establishment eventually steals their work](#), is standard. Isaac Newton engaged in a grotesque effort to claim precedence over Leibniz in inventing calculus.[\[33\]](#) The theft of math breakthroughs by college professors from their students is far from unknown. Professors have become famous, while the students they stole from are still unknown.

For centuries, scientists attempted to explain what the auroras were. In 1896, Kristian Birkeland of Norway boldly struck out in the right direction in explaining the auroras when he theorized that electrons from the sun caused the auroras, being deflected to the poles by earth's magnetic field, and the resultant auroras were like magnetic storms. His bold theory was on the right track, but not embraced. Instead, he was fiercely attacked by his peers for his "crazy" theory, and died a broken man in 1917. His work was derided and suppressed for many years, the effort being led by an English physicist named Sydney Chapman. Eventually Hannes Alfvén challenged the auroric citadel that Chapman perched atop, revived Birkeland's theories, and Alfvén was stonewalled by academia. It was not until 1970, when Alfvén picked up his Nobel Prize, that Birkeland was posthumously vindicated. The ghost of Birkeland must have been smiling.[\[34\]](#)

A primary example of how the establishment works today against threatening scientific breakthroughs is cold fusion. When Pons and Fleischmann made their startling announcement of achieving cold fusion in 1989, it came on the heels of superconductors being created at much higher temperatures than was thought possible. After the initial cold fusion announcement, there was a worldwide frenzy, but soon after, it was dismissed as a chimera, a non-reproducible phenomenon. Pons and Fleischmann's names have become anathema in the halls of science. They had to leave America to continue their research, which has now been confirmed more than *one hundred times* in research institutes throughout the world. [Brian O'Leary](#) and [Richard Milton](#) are familiar with the data, which strongly suggests that cold fusion is real. So, why does everybody I talk to think that it was disproven years ago? MIT was the first to attack cold fusion's experimental results, saying they were not reproducible, but it is now known that they fudged the numbers to make their claim. Essentially, they lied. Their voice, and others who were heavily invested in the status quo, as they collect billions of dollars to pursue high temperature fusion (which would be subsequently monopolized), carried the day. It happened recently, and the cover-up continues to this day. [\[35\]](#) Brian O'Leary recently told me that it is even worse today than in the days of the Wright brothers, as breakthroughs such as cold fusion have been mercilessly attacked and dismissed by the scientific establishment. It comes down to money, power, egos and dogma, not what is called science.

I became [mired in the issue of catastrophism](#) while tracking Carl Sagan's debunker career. Ten thousand pages of reading later and a great deal of correspondence, I have concluded that to assess the validity of catastrophic theory, particularly the multi-disciplinary approach that the psychiatrist Immanuel Velikovsky first championed in this century, and has been further pursued by more respectable scientists such as Victor Clube and Bill Napier, is a vast undertaking.

Velikovsky is one in a long line of catastrophic theorists, a body of theory that is becoming respectable again. For one person to fairly assess Velikovsky's theory in whole would take at least twenty years of intense study in fields as diverse as physics, astronomy, mythology, glaciology, archeology, dendrochronology, geology and other fields. *Velikovsky* did not have the time to completely assess his thesis. His theories stretch the imagination, but I cannot call them right or wrong with great confidence. The debate over those issues is fierce and relegated to the margins of scientific discourse, with the catastrophists generally called pseudoscientists and crackpots. [Sagan](#) unfairly used his reputation to hammer the nails into Velikovsky's public coffin, something Sagan did repeatedly. The scientific establishment treated Velikovsky disgracefully, with Einstein being one of the few scientists who treated Velikovsky cordially. If only the rest of the scientists could have been as graceful.[\[36\]](#)

[Richard Milton's](#) *Alternative Science* (formerly titled *Forbidden Science*) is an excellent introduction to how scientific pioneers have been maligned, and how the scientific establishment works today. Joseph Schwartz's *The Creative Moment* is a neat recounting of the fatal turns that science has made over the centuries.

A major reason the world knows about Einstein's theories of relativity is because they posed no immediate economic threat to powerful interests in 1905. If relativity posed an immediate threat to the

Rockefeller Empire or the other robber baron industries, the world may have never heard of relativity, as it would have been suppressed from the outset.

Nikola Tesla's story is a prime example. His theories and inventions had a potentially dramatic impact on the world. Thomas Edison engaged in a disgraceful attack on Tesla's work. Tesla invented the technology to use alternating current, which powers the world today. Edison promoted his direct current. Direct current had the great limitation of only being transmittable over short distances, because its voltage was low, and therefore the resistance relatively high. The voltage of alternating current, however, could be stepped up by transformers and be transmitted great distances while losing very little of its power. Tesla had to forgo the royalties that would have made him one of the world's richest men, so George Westinghouse could survive the battle against Edison. Then [J.P. Morgan](#) bankrolled Tesla...until Tesla began pursuing directions that could have provided free energy. Morgan was a classic robber baron, knowing full well how the racketeering aspect of capitalism worked, and quickly pulled the plug on Tesla when he began making free energy noises. A famous quote, though apocryphal, is that when Tesla showed Morgan how every person could have free energy by simply putting a collector stake into the ground (Tesla was going to build a tower that tapped the electric potential between the upper atmosphere and the ground, to power the entire planet), Morgan responded with, "But where does the meter go?"

Tesla may have invented free energy, or came close. There is plenty of conjecture about what has been suppressed regarding his work. Tesla's inventions are legion. He invented radio before Marconi. He had about 700 patents.

An excellent book that covers the "suppression syndrome," as Brian O'Leary brilliantly puts it, is *Suppressed Inventions and other Discoveries*, edited by Jonathan Eisen. The stories of people discussed on this web site, such as [Naessens](#), [Rife](#), [Hoxsey](#), [Gerson](#), [Moss](#), [Reich](#) and others are covered in its pages. The epic work on Tesla's life is *Wizard, the Life and Times of Nikola Tesla*, by Marc Seifer, but it does not discuss some possible aspects of the Tesla story that are intriguing, such as the alleged Philadelphia Experiment. Although his alternating current prevailed, the electric companies are often named "Edison" companies. Even though Tesla founded an electric company, there is no Tesla Electric Company, except for the one that [Dennis Lee](#) tried reviving. Recently there has been controversy over the Smithsonian Institution's display on Edison and electricity. The Smithsonian is making the bogus claim that Edison invented the modern era of power and that Marconi invented the radio. Tesla has been shunted off to a dark corner by the establishment, while Edison is a household word. Interestingly, Tesla was incensed with Einstein's theories of relativity and assailed them, proposing his own counter-theories.

Jonathan Swift once wrote:

"When a true genius appears in this world you may know him by this sign, that the dunces are all in confederacy against him."[\[37\]](#)

In his [1984](#), Orwell called orthodox thinking a form of unconsciousness. In order for the dunces to think like geniuses, they have to abandon their assumptions and dogmas, and gain some flexibility of thought. Such unthinking has been called inverted logic. That phenomenon has been discernable in every field of mental endeavor, whether it is science, economics, [journalism](#), [medicine](#), [history](#), etc.

Genius is simple, sees the forest *and* the trees, and cuts to the heart of the issue. The greatest geniuses I have known combine creative insight with the power of discrimination. I know some geniuses with great creative insight, but less developed discrimination, which can make them appear "ungrounded." Quite often, geniuses like that need a partner or mate whose feet are more firmly grounded, to keep the balance. Einstein was kind of like that; he never learned to drive a car or work any machinery. It is rare for the genius to have a full balance of creativity and discrimination, and to have it in balance with the heart is rarer still. They exist, but are extremely rare.

Galileo and Newton were devoutly religious. Newton pursued theology for the rest of his life after about age thirty, proving that he was much better in math and science. As with Einstein and numerous other physicists, Newton's major contributions to science and mathematics were made before he was thirty years old. Werner Heisenberg invented quantum physics, which stands with relativity as the two pillars of modern physics, and invented it in a fevered weekend when he was twenty-four years old. Leibniz and Newton invented calculus independently at around the same time. Leibniz was also in his twenties when he invented calculus, and Newton was only twenty-three. Leibniz published his work before Newton did, although Newton invented his calculus first. Erwin Schroedinger was the other father of quantum theory. Schroedinger was an old man in theoretical physics, nearly forty years old, when he published his wave mechanics theory.

What happens is that those fresh to the field, who can look at the problems with new eyes, make the great breakthroughs. After that, they can fall prey to their point of view, and rarely make great contributions later.

The rise of science in the West coincided with the loosening of Christianity's grip, the Catholic Church's in particular, on the minds and hearts of men. Galileo, Newton, Einstein, Heisenberg, Schroedinger... modern physics rides on those men's shoulders. Others also contributed greatly, such as Niels Bohr, Wolfgang Pauli, Arthur Eddington, Max Planck, Louis De Broglie, and others. It is not a very large group of men. In our present day, the closest thing that we have (at least publicly) to those giants of physics is probably Stephen Hawking, the man who lives in a wheelchair with Lou Gehrig's disease. Would it be surprising to know that all those scientists named above were profoundly religious or mystical in their worldview? Every single one of them knew that there was far more to the world than the materialistic worldview espoused by people such as [Carl Sagan](#). The giants of physics were deeply spiritual, each in their own way.

In Ken Wilber's *Quantum Questions*, he put the mystical writings of the fathers of twentieth century physics in one book. The mystical writings of Einstein, Heisenberg, Schroedinger, Eddington, de Broglie, and others are reproduced. Here are some quotes from the world's greatest physicists.

"I don't know what I may seem to the world, but, as to myself, I seem to have been only like a boy playing on the sea shore, and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, whilst the great ocean of truth lay all undiscovered before me." - **Isaac Newton**, to a companion, not long before his death.[\[38\]](#)

"The scientific picture of the real world around me is very deficient. It gives a lot of factual information, puts all our experience in a magnificently consistent order, but it is ghastly silent about all and sundry that is really near to our heart, that really matters to us. It cannot tell us a word about red and blue, bitter and sweet, physical pain and physical delight; it knows nothing of beautiful and ugly, good and bad, God and eternity. Science sometimes pretends to answer questions in these domains, but the answers are very often so silly that we're not inclined to take them seriously...The scientific world-picture vouchsafes a very complete understanding of all that happens - it makes it just a little too understandable. It allows you to imagine the total display as that of a mechanical clockwork which, for all that science knows, could go on just the same as it does, without there being consciousness, will, endeavor, pain and delight and responsibility connected with it - though they actually are. And the reason for this disconcerting situation is just this: that, for the purpose of constructing the picture of the external world, we have used the greatly simplifying device of cutting our own personality out, removing it; hence it is gone, it has evaporated, it is ostensibly not needed...Whence come I, and whither go I? That is the great unfathomable question, the same for every one of us. Science has no answer to it." - **Erwin Schroedinger**[\[39\]](#)

"Please note that the very recent advance [of quantum and relativistic physics - Ed.] does not lie in the world of physics having acquired this shadowy character; it had ever since Democritus and Abdera and even before, but we were not aware of it; we thought we were dealing with the world itself." - **Erwin Schroedinger**[\[40\]](#)

"I should like to stress the following:

1. Modern science, in its beginning, was characterized by a conscious modesty; it made statements about strictly limited relations that are only valid within the framework of these limitations.
2. This modesty was largely lost during the nineteenth century. Physical knowledge was considered to make assertions about nature as a whole. Physics wished to turn philosopher, and the demand was voiced from many quarters that all true philosophers must be scientific.
3. Today physics has undergone a basic change, the most characteristic trait of which is to return to its original self-limitation.
4. The philosophic content of science is only preserved if science is conscious of its limits. Great discoveries of the properties of individual phenomena are possible only if the nature of the phenomena are not generalized *a priori*. Only by leaving open the question of the ultimate essence of a body, of matter, of energy, etc. can physics reach an understanding of the individual properties of the phenomena that we designate by these concepts, an understanding which alone may lead us to real philosophical insight." - **Werner Heisenberg**[\[41\]](#)

"The essential fact is simply that all the pictures that science draws of nature, and which alone seem capable of according with observational fact, are mathematical pictures...They are nothing more than pictures - fictions if you like, if by fiction you mean that science is not yet in contact with ultimate reality. Many would hold that, from the broad philosophical standpoint, the outstanding achievement of twentieth-century physics is not the theory of relativity with its welding together of space and time, or the theory of quanta with its present apparent negation of the laws of causation, or the dissection of the atom with the resultant discovery that things are not what they seem; it is the general recognition that we are not yet in contact with ultimate reality. We are still imprisoned in our cave, with our backs to the light, and can only watch shadows on the wall." - **James Jeans**[\[42\]](#)

"The fact is that there is a point, one single point in the immeasurable world of mind and matter, where science and therefore every causal method of research is inapplicable, not only on practical grounds but also on logical grounds, and will always remain inapplicable. This point is the individual ego. It is a small point in the universal realm of being, but, in itself, it is a whole world, embracing our emotional life, our will, and our thought." - **Max Planck**[\[43\]](#)

"You will hardly find one among the profounder sort of scientific minds without a religious feeling of his own... His religious feeling takes the form of a rapturous amazement at the harmony of natural law, which reveals an intelligence of such superiority that, compared with it, all the systematic thinking and acting of human beings is an utterly insignificant reflection...[regarding this feeling - Ed.] It is beyond question closely akin to that which has possessed the religious geniuses of all ages." - **Albert Einstein**[\[44\]](#)

Those are the words of the giants of physics. Here are the words of the "skeptics."

"...when I say I am glad I live in the century when the universe is essentially understood, I think I am justified." - **Isaac Asimov**[\[45\]](#)

"I am a collection of water, calcium and organic molecules called Carl Sagan." - **Carl Sagan**[\[46\]](#)

“... attitudes and beliefs can have nothing to do with properly conducted research and conclusions drawn therefrom.” - [James Randi](#) [47]

“Parapsychology is a farce and a delusion...” - [James Randi](#) [48]

“This is also a book about God... or perhaps about the absence of God. Hawking is attempting, as he explicitly states, to understand the mind of God... And this makes all the more unexpected the conclusion of the effort, at least so far: a universe with no edge in space, no beginning or end to time, and nothing for a Creator to do.” - [Carl Sagan](#) [49]

“There are only four different forces in existence...” - [Milton Rothman](#) [50]

Wilber made clear that the great physicists saw no conflict between religion and science. Wilber could have said "spirituality and science," but he said "religion," and I will deal with that. Wilber stated that the greatest physicists saw the conflict as not between science and religion, but between the bogus and the genuine, and science and religion has plenty of both. Bogus science and religion are the dogmatic and authoritarian aspects of them. "Religion" has "proofs" as science does. It can be tested. It is not a matter of blind faith or suspending one's mental faculties. I have pursued the mystical and the paranormal, and [I have my own proofs](#), but I cannot prove anything about it to anybody else. Each of us can only find our own proof, which is partly why our current science cannot truly investigate the nature of consciousness. Today's science *assumes* objectivity. Objectivity is probably a myth propagated by our five physical senses. The authoritarian dogmas in science *and* religion were what those physicists had a problem with.

As Heisenberg, Jeans and Schroedinger wrote, the theories and data of relativity and quantum theory showed those scientists that something was awry with the notion that science dealt with *reality*. It became obvious to the giants of physics that science was another artificial way of viewing the world, and had no ultimate answers, which helped propel them to their mystical worldviews. Although the greatest physicists of all time gladly admitted that we barely know anything, and kept science in perspective, realizing its limitations, those such as Sagan and Asimov were confident that science had it all figured out, or nearly. They typified the delusions of every age, thinking they were on the brink of knowing it all, or that they even had the tools and ability to figure it out.

There is a word for the attitude of the Sagans, Asimovs and "skeptics." It is called scientism. It is the worship of science and its methods, believing that it alone has the valid perspective of reality. It is another religion, with its priests and popes. Almost without exception, "[skeptics](#)" have proven themselves establishment defenders, scientific and otherwise. They are true believers of a different kind, and their political-economic situations have everything to do with their perspectives. "Pure science" does not exist.

My First Glimpse

I lived in an area with many professionals and scientists, largely serving the local military bases. Among the adults I knew during my childhood years, I was kind of "adopted" by most of my friends' parents, and one mentor in particular took me under his wing. He was one of the 20th century's greatest inventive minds, with inventions that [revolutionized entire industries](#). Others were so revolutionary that they were suppressed in the interest of preserving the status quo. *Every* invention was either stolen or suppressed, and he never made a dime from any of them.

Mr. Mentor was an engineer, and he spent many years doing mechanical work with his hands, and continually expressed his amazement at how poorly engineered the day's automobiles were, as he worked on them. One day, more than thirty years ago, he was pondering the problems of modern automobiles, and how they utilize energy. He began considering what an energy-efficient car might look like, if he could build one from scratch. Aspects of the issue had been rolling around in his head for years, but one day he was sitting

at a stoplight, and a vision suddenly came upon him. He saw the ideal car engine in his mind's eye, complete. He drove home, got a pencil and paper, and in a few minutes had sketched out his ideal engine for powering a car.

The patent for Mr. Mentor's engine expired long ago, and anybody can try to build one, but patents are meaningless when inventions such as Mr. Mentor's are considered. The protection people need when pursuing such technologies are not patents, but get-out-of-jail-free cards, bulletproof vests and guardian angels. I will present a brief description of Mr. Mentor's engine, to show not only that there are numerous viable alternatives to today's business-as-usual, but to also demonstrate how genius works. Dennis Lee was pursuing this very technology when he was first thrown into jail in 1988.

In the instance of Mr. Mentor's engine, it was not immediately stolen, partly because it was so radically different that it was not easy to initially comprehend. However, he had produced so many startling innovations by that time, even though many of the best were stolen from him, that the higher-ups took him seriously when he proposed one of his new "crazy" ideas. The federal government spent about \$250,000 to have Mr. Mentor's engine patented, and the government claimed rights to its use, because they funded the patent process. The government brought in an outside expert to assess it. He was a rocket scientist who helped save the U. S. space program in the early 1960s. He figured out why so many rockets were exploding as they took off (inconsistent combustion, similar to how a match head flickers when burning, except amplified zillions of times in a rocket, creating stresses that blew apart the early rockets) and also solved the problem. He met with Mr. Mentor, and after a lot of hand waving and blackboard drawings, the rocket scientist comprehended the fullness of what Mr. Mentor had come up with, and became its greatest champion.[\[51\]](#)

Then Mr. Mentor's engine became a big deal. During the hoopla, one person close to the situation told Mr. Mentor that he hoped he was not serious about actually developing his engine and making the internal combustion engine obsolete, because the Detroit car companies would then [have him murdered](#). The engine was a big deal nevertheless, and a rich industrialist offered to go into business with Mr. Mentor and the rocket scientist to develop and sell that engine. The only hitch was that the industrialist would own 95% of the company, with Mr. Mentor and the rocket scientist sharing in the other 5%. With a deal like that, all pursuit of the engine ended, and Mr. Mentor ended his career soon afterward, a bitter man. His engine was not forgotten, however.

Not long after that engine created a stir in the government, 1973 rolled around and the OPEC oil embargo made the world energy situation headline news. In the wake of the energy crisis and Jimmy Carter's "declaration of war" on the energy issue, a huge federal study was launched regarding alternative engine designs, to conserve energy, oil in particular. Building on earlier analytical work performed by the government, the study quickly focused on Mr. Mentor's engine, and devoted about a third of its effort to analyzing it. Many man-years were spent analyzing Mr. Mentor's engine design. The study concluded that Mr. Mentor's engine was by far the most effective engine in the world for powering a car. A United States Senator, who had made a reputation as the alternative energy Senator, began calling Mr. Mentor at home in the wake of the study's published results. He begged Mr. Mentor to come to Washington D.C. to host congressional hearings regarding having his engine developed. By that time, Mr. Mentor was retiring an angry and bitter man, recalled the "make your funeral plans" advice he was given if he seriously considered pursuing the development of his engine, and the engine was pursued no further, although a company *did* make his engine (without consulting him) and drove it in a Rose Bowl parade in the 1970s, announcing that it was going to revolutionize the automobile industry. They quickly disappeared from the scene, probably [suffering the fate](#) that other companies had when they tried challenging Detroit's automotive oligopoly.

The rocket scientist was awed by Mr. Mentor's invention. He said that there were numerous "wrong turns" that his engine design could have taken, and that he estimated that Mr. Mentor's engine should have taken a team of engineers twenty years to design. It came to him in a flash at a stoplight. That was how Tesla also did his inventing. It had a lot to do with [psychic ability](#). The intuitive aspect of human consciousness is almost wholly neglected by the scientific paradigm, though its greatest theoreticians almost always had to thank their imaginations and intuitive ability for their breakthroughs, not their intellects.

Here is how Mr. Mentor's engine worked, my understanding coming partly from studying his expired patents, and partly from conversations with him many years ago. The engine, as with all engines, operated in a cycle.

The engine was an external combustion engine, not an internal combustion engine, meaning that the

combustion took place outside the engine and not inside it, as with a car engine. The working fluid began its journey in a boiler. The boiler was subjected to a flame created by burning the fuel. As the working fluid boiled, the gas expanded and left the boiler through a pipe. The working fluid's steam then met what Mr. Mentor called a pressure intensifier, which was one of his engine's major innovations. A drawing of the pressure intensifier and its position in the engine is presented below.

Crude drawing of pressure intensifier

The principle of the pressure intensifier was that high-pressure steam would come from the boiler and meet the piston head (area A in the drawing). As it pushed the piston down, it gave its energy to the piston, becoming a cooler gas at a lower pressure as it left the cylinder. The boiling point of any substance is determined by the attraction of the molecules to each other, and the temperature and the pressure it is subjected to. A pot of water, for instance, boils at 212° F at sea level on earth, but at less than 150° F on top of Mount Everest. If we put water in a jar and hook up a vacuum pump to create a vacuum, the water will boil at room temperature. The fluid that left the boiler was turned into steam by the heat applied by the flame. It gave energy picked up in the boiler to the piston, as it pushed it down. It left the cylinder cooler and at less pressure, which was closer to its condensing point than when it entered the cylinder. The journey of the working fluid makes its way to the piston's other side in the pressure intensifier (area B in my drawing). The amount of force exerted by the piston is easily calculated, and is the pressure of the gas multiplied by the piston head's surface. If the gas pressure was 100 PSI and the piston head's surface area was 10 square inches, 1000 pounds of force would be applied to the piston (100×10) on side A. On the piston's other side is another head. The pressure the piston exerted on the steam in area B would be the force exerted divided by the surface area of the piston's head. So, if the piston's other head was only two square inches in area, and 1000 pounds of pressure were exerted, the pressure the gas would be subjected to would be 500 PSI ($1000 / 2$). By knowing the pressure of the working fluid leaving the boiler (mainly determined by the boiler's temperature), and adjusting the surface areas of both heads of the piston, any desired pressure could be applied to the working fluid in the back end of the cylinder.

At a certain pressure and temperature, the working fluid would re-condense. Studying my [refrigerator discussion](#) may make some of this easier to understand. Not only would the working fluid re-condense, it could be made to be any pressure needed, just by varying the surface areas of the pressure intensifier piston's two heads. Let us say that 2000 PSI was desired, and the boiler sent out steam at 100 PSI. Then, the surface area of the piston's front end would need to be 20 times the surface area of the far end. In essence, the working fluid worked on itself, making a low-pressure liquid in the boiler a high-pressure liquid in the far end of the pressure intensifier. Some of the energy delivered at the boiler would have been expended driving the

piston downward, and that energy would be stored in the liquid's pressure on the other end. The high-pressure liquid would then enter a hydraulic accumulator, which was simply a reservoir where the high-pressure liquid rested. Because the boiler and pressure intensifier determined the pressure the reservoir was subjected to, the cooling liquid in the hydraulic accumulator would not affect the accumulator's pressure. As it cooled, the pressure would decrease, but would be offset by the pressure coming from the intensifier. A steady state would be achieved in the system, with the hydraulic accumulator's liquid awaiting its further journey. When the accumulator achieved the desired pressure, the boiler would turn off, just as the thermostat in one's home turns off the furnace, except it was pressure, not temperature, sensitive.

Hydraulic motors are highly efficient, at more than 90% efficiency. The fluid in the hydraulic accumulator would be fed to hydraulic motors. In the case of an automobile, the motors would be at the wheels. Each wheel could have its own motor. The car could run with one motor or four. The only limitation was if the car owner wanted to pay for four motors, three, two or one. Four would have been ideal, with every car having four-wheel drive, which is superior to two-wheel drive for safety and other reasons. Yet, three of the four motors could fail, and the car could still run. After the working fluid gave its energy to the hydraulic motor process, it would have been a low pressure liquid, perhaps near its boiling point, and would have been ready to go back into the boiler.

That is a brief description of the working fluid's travels through the engine, but there is more to tell. As a car drove down a city street and the stoplight turned red, when the driver put her foot on the brake, the hydraulic motors would reverse direction and act as pumps, pumping the hydraulic fluid back into the accumulator. Instead of making brake linings hot and wearing them out, the kinetic energy of the car would be put back into the system, not wasted. It was like putting the gasoline back into the tank after it had been burned. That was one of the more ingenious aspects of Mr. Mentor's engine.

Here are the problems that Mr. Mentor's engine solved.

- It was an external combustion engine, and solved several problems that plague internal combustion engines. The pollutants that resulted from incomplete combustion due to the rapid mechanical processes in internal combustion engines, such as carbon monoxide, would no longer be produced. Another issue was the high temperatures and pressures of internal combustion engines making atmospheric nitrogen react with atmospheric oxygen, creating the nitrogen oxides that not only make the air brown, but are also a component of acid rain and a greenhouse gas. With an external combustion engine, the burn could be perfected to the ideal burn, at a lower temperature and pressure than was in internal combustion engines. Mr. Mentor's engine would have produced almost exclusively carbon dioxide and water, which is the least polluting form of combustion there is.
- The prime mover (pressure intensifier) would operate at one speed, and in doing so could be made to operate at its ideal speed for maximum efficiency. No more running up and down the efficiency curve, as with today's car engines, as they operate over a wide spectrum of engine speeds. That was accomplished largely by uncoupling the prime mover from the drive train. Think of the engine and transmission of a car. The transmission directly relied on the engine moving in order to operate and propel the car. Another source of the pollution was the variable speed at which today's engines operate. The widely variable combustion is not only inefficient, but also partly how pollutants are created. In Mr. Mentor's engine, the pressure intensifier and hydraulic motors were separated by the hydraulic accumulator, which made them operate independently of each other, increasing the prime mover's efficiency.
- Mr. Mentor's engine would have reclaimed the energy lost due to braking in today's vehicles, putting it back into the hydraulic accumulator. That had numerous benefits, some not immediately obvious. One was that city driving MPG would have skyrocketed. The experts estimated that a mail truck driving through neighborhoods might achieve 200 MPG with Mr. Mentor's engine, mainly because it would be traveling so slowly that air resistance would have been minimal, which is where most energy is used in a car traveling down the highway at 60 MPH. Air resistance increases at the square of the vehicle's velocity. If city MPG for cars leapt to a mere 100 MPG, it would mean that only 20% as much fuel would be burned in town, meaning that 80% of the potential air pollution would have been eliminated, as well as reducing the thermal pollution that all Western cities experience. Not only that, the external combustion engine would have had near-perfect burning, and most American urban air pollution problems would have immediately disappeared. Also, it would have been a quiet engine, eliminating a great deal of noise pollution.

Not bad, for coming to him in a flash at a stoplight. Heisenberg's quantum physics came to him in a fevered weekend. Einstein's relativity came to him, complete one morning, as he woke up.^[52] They had the technical/analytical ability and training to assess how feasible their bright idea was. Many years later, I had a more mundane version of how Mr. Mentor had his stoplight vision, when I saw a way to get [every American truck driver home every night](#). I know that the intellect cannot claim credit for that flash of creative insight.

As with others like him, Mr. Mentor was intimately familiar with the technical issues, spending many years pondering the automobile's internal combustion engine and its problems. He had enormous analytical ability, getting the highest math score on a standardized test in his home state, earning him a full-ride scholarship to a major university. Without his great technical ability, what came to him at a stoplight would not have gotten very far, and the vision probably would not have come to him in the first place.

His long pondering of the issues brought him to the place where his insightful moment at the stoplight was valuable. Practical genius needs both the left and right sides of the brain to be working together, or stated another way, the creative and analytic abilities working in harmony. The creative spark can make itself known in a flash, while the analytical part often has to spend years validating it. Analysis without the creative spark can be virtually worthless, or worse. Many scientists have been frozen into the analytic and intellectual mode, and are unable to comprehend or experience the creative spark that illuminated the greatest geniuses, both scientific and spiritual. Even a far lesser light such as [Carl Sagan](#) had some idea regarding the importance of the intuitive side. Sagan was an inveterate marijuana smoker, believing that his best ideas came while stoned.

Mr. Mentor's engine never went anywhere, largely due to the inertia and corruption in today's system. The major government study was dutifully filed away and forgotten. Our system wastes a vast amount of talent and genius. Mr. Mentor was far from alone in being stolen from or ignored for his genius. It is [standard operating procedure in today's world](#). The military base Mr. Mentor worked at had many thousands of employees. Mr. Mentor estimated that the only creative talent there that amounted to much consisted of a handful of people. Birds of a feather flock together, and he knew the other great talents there. Generally, they were treated like he was. Mr. Mentor's superiors and "peers" even waited for people such as Mr. Mentor to come along, so they could steal their ideas. One thief actually laughed in Mr. Mentor's face, telling him that he was "stupid" enough to allow him to steal his idea.

His superiors would not even be sly about their theft. For instance, one standard procedure was when a scientist or engineer would write a scientific paper worthy of publication or oral delivery to a symposium, the bosses would step in, call the paper their work, and deliver it to accolades at the symposia. One oceanographer pal of Mr. Mentor wrote an outstanding paper. His boss told him that he would deliver it to a symposium and call it his own. The oceanographer was able to get into the symposium, watch his boss deliver the paper as his own, and see the accolades it received, with his boss bathing in the spotlight. He at least had the satisfaction of seeing that his work was well received, even though he received no credit for it. A major university try to recruit another one of Mr. Mentor's pals. One of the perks they waved under his nose was telling him that he would have many bright graduate students working for him, and when they came up with anything good, he could steal it and call it his own. It was standard operating practice at the university. That is how the "real world" works.

The thieves often could not even steal properly. They knew Mr. Mentor's inventions were something worth stealing, but they often could not even understand the rudiments. One system Mr. Mentor designed was stolen by one of the thieves, who rushed it into production. The thief had such a poor understanding of what he stole that it was made and installed upside down. Mr. Mentor laughed about it, but in truth, he would have been happier if the thieves had actually built it right side up.

How long will an inventor invent, when everything he does is suppressed or stolen? Not forever. Although nearly every home in the West uses technology that Mr. Mentor's inventions made possible, and companies made billions of dollars off of them, Mr. Mentor never received a dime of compensation or recognition. His tale is not that unusual. The military base where he worked raped all inventors such as Mr. Mentor, and all his buddies with any talent soon left that base, and most abandoned their careers. When Mr. Mentor slipped into his rocking chair in the 1970s, that base, which employed many thousands of people and made up the majority

of the local economy, did not have one operational system. The entire base and surrounding community was completely worthless, if deriving any benefit to the American people was its goal, all due to greed and stupidity.

At age 16, I gained some understanding of what Mr. Mentor's engine could mean for the world, and how there were people "in charge" who would not welcome such innovations. At age 16, I began having my alternative energy dreams, and when that [voice spoke to me twelve years later, in 1986](#), I was able to pursue those dreams, although it did not turn out as I had hoped. We were trying to [marry Mr. Mentor's engine to the panels of Dennis Lee's heat pump](#) when the Big Boys lowered the boom on us.

World Energy Economics

With the U.S. leading the way, the world's white people (Europeans and their descendants, such as white Americans, Canadians, Australians, South Africans, New Zealanders, white residents of the former Soviet Union, etc.) comprise about 18% of the world population but consume more than 60% of its energy. Today, there is scarcely an ecosystem on earth that has not been plundered past its near-term recoverability, or has not been put under humanity's yoke, to primarily serve human needs and desires. The goal of ecosystem exploitation is nearly invariably the extraction of useful energy, usually in the form of food.

It is well known that the most reliable indicator of economic production is *energy consumption*. The first table below shows the gross domestic product for various nations, from the poorest to the richest. The per capita income of a Swiss citizen is more than 400 times higher than the per capita income of an Ethiopian citizen. The disparity is vast, but as the second table shows, the per capita income divided by the energy consumed is nearly a constant number. For Great Britain and Ethiopia, with a 200-fold disparity in income per capita, the ratio of income to energy consumption is 0.30 to 0.32, nearly identical.

In the table below, the nations on each end of the scale evidence special circumstances, such as Switzerland's reliance on efficient hydroelectric production, Japan's lack of control over its energy sources, or the economic hardship cases of India, Pakistan, Poland and Russia, largely because of the penalty they have paid for escaping the West's domination ("free market" exchange rates also affect this ratio), however temporarily. The ratio of income and energy consumption per person is fairly constant among the world's nations, from richest to poorest, from \$0.20 to \$0.50 of income per unit of energy (the energy derived from burning one KG of coal) consumed.

Click on image to enlarge.

In 2000, 23% of the United States' energy consumption came from burning coal, 24% by burning natural gas and 39% by burning oil; about 86% of U.S. consumption thusly came from burning fossil fuels. Nuclear energy was 8%, with hydroelectric and biomass at 3% each, with the typical "renewable" energy (geothermal, solar and wind) totaling about half of one percent of U.S. energy consumption. The United States accounts for slightly more than 25% of global energy consumption. Globally, the fossil fuel percentages of consumptions were nearly identical, and nuclear and hydroelectric energy were about 7% each, and "renewable" energy accounted for less than 1%.[\[53\]](#)

The "developing world" is "undeveloped" because the white world [actively prevented its development](#). With only so much of the world's resources to go around, preventing the world's poor from industrial development ensured that they would not compete for the world's resources, especially energy resources.

In the United States, more than 90% of its coal production is burned to make electricity (most of the remainder

is exported). Burning coal fuels about half of the United States' electricity production. Going back to [Carnot](#) and the limitations of heat engines, about two-thirds of the heat generated by burning coal is lost to the electric production process. In the parlance of the energy industry, such losses are known as "conversion losses," or "waste heat." Largely due to those losses of conversion, electricity is more expensive than other fuels, per unit of energy delivered to the home. Of the 97 quadrillion BTUs consumed in the United States in 1999, about 26 quadrillion were "wasted" in conversion losses during electricity production.

In summary, nearly 100% of U.S. consumption is used for the creation of heat energy (hydroelectric power generation is the only significant exception), and about 50% of that heat is directly used to heat things (mainly to create human-friendly environments), about 30% is wasted in conversion losses, and about 20% creates mechanical energy, to either propel transportation equipment or run electric devices (air conditioners count in that category). Those are rough numbers.

Because of those conversion losses, the cost of building and maintaining electricity plants and the electric grid, and the vast and still largely unaccounted costs of nuclear energy, electricity is nearly four times as expensive as natural gas. There are regional variations, and electric companies can give preferential pricing to consumers who use electricity for heating, but the 1999 price differential of 3.75 (residential electricity costs divided by residential natural gas costs) is close to the 4.0 rate that existed in 1980, when U.S. energy costs were near their all time highs in constant dollars. This discussion will use the 4.0 rate.

Of that 50% of U.S. energy consumption that goes to heat, most is used to heat human environments. Natural gas is used for about 70% of American residential space heating, with electricity used for less than 8%. The U. S. residential heating market is around \$45 billion per year, with the residential electric market around \$90 billion, and the U.S. energy bill is around \$600 billion.

A Case History in Alternative Energy Suppression

The adventures of Dennis Lee constitute an extraordinary case history of how alternative energy has been suppressed in America. His effort is perhaps the most sustained ever made to try bringing alternative energy to the American marketplace. An [ancillary essay](#) tells his tale, with the highlights presented here.

Dennis was raised in a family of migrant farm workers, left home at age 13, was a medic in the army and [ended up in combat in Southeast Asia](#). He had a [timely paranormal experience](#), just as he was about to commit suicide, and he devoted his life from that time forward to making the world a better place. After nearly being murdered by [organized crime](#) in Alaska, he fled to New Jersey and went to college, studying Utopian literature and social psychology. After his [college days](#) he went into the [construction business](#), trying to bring craftsmanship back to home building. His business was destroyed during America's first energy crisis, and he then [invented a card](#) that today has reincarnated in watered-down form as the Discover Card. He began that company with no capital and learned many hard lessons about how the business world operated. The [Mafia tried killing him](#), he became a Christian, and eventually the company went out of business. Dennis tried [giving it away](#) to the Christian community, but the company died.

Then Dennis got into the [energy conservation business](#), and eventually the [insulation business](#). He invented the energy industry's first [shared savings program](#). He had companies stolen from him, and just as another gangster was about to break his legs, Dennis became [paralyzed with Guillaine Barre Syndrome](#), from the neck down. The VA hospital that treated him nearly killed him three times due to their negligence. As he recovered from his paralysis, he [became involved with a company](#) that invented the [world's best heating system](#). He immediately became the most prolific seller of that equipment ever, and was flying high when the owners of the [heating system company stole all his money](#), and then the Mafia stole the rest. Dennis was on the brink of a [billion-dollar deal](#) to carpet America with that heating system when those criminals made their move.

Dennis ended up in [his home state of Washington](#), just when the "Whoops" energy disaster hit, and tried making the heating business happen in his hometown. His business associates again thwarted him, and [he went](#)

[to Seattle in 1984](#) to try it there. In [Seattle in 1985](#) he mounted what may be the greatest effort ever made to bring alternative energy to the American marketplace, and discovered that the energy establishment and the Mafia have a lot in common, except the Mafia may act more honorably. In the energy industry's attempt to wipe Dennis' company out, they were responsible for the [death of one of his employees](#).

[I met Dennis in Seattle](#), and worked for the company until my [boss helped steal it](#). Dennis was run out of the state and tried rebuilding his effort in Boston. [I followed him](#). In Boston, Dennis got his "[free energy](#)" idea, and we moved to California to tie into talent and money to make it happen, and that is when it *really* got rough. Technical innovations came to us that might have made free energy possible, and then they [lowered the sledgehammer on us](#), with Dennis nearly going to prison for life, and many lives were shattered. A handful of us stood up to the judicial establishment's criminal actions as it did the energy industry's bidding, and we prevailed, sort of. Dennis *only* spent two years behind bars, and has continued his free energy quest ever since.

Why Is There No Alternative Energy?

My [journey with Dennis](#) was a traumatic learning experience, and I went through years of slow disillusionment, with various salient moments ([1](#) - [2](#) - [3](#) - [4](#)) punctuating the process. It hit rock bottom for me when I, a committed pacifist, saw myself [in my mind's eye killing people](#), and liking it. When I had my lowest moment, I instead mortgaged my life to spring Dennis out of jail, and it worked.

It was in those days that my most surprising and painful realization hit me: [personal integrity is the world's scarcest commodity](#), and the reason we not only do not enjoy alternative or free energy today is not because there are energy gangsters doing their dirty deeds, but that not enough people care enough. As I began looking into [medicine](#), [American foreign policy](#) and elsewhere, I saw the same phenomenon. People to whom doing the right thing is more important than their reward for doing it is on the order of one in thousands. With that level of integrity, we just might be doomed. The only answer I can see is for more people to care more, and those who care more can also begin seeing vistas that have previously been largely invisible, which this web site is trying to help them see. Paradoxically, caring for others is probably the only way we can save ourselves.

The point of this essay is not if free energy is possible or not, with what Dennis is promoting or not. The point is that there is an energy establishment, and any move to try bringing innovation to the marketplace is met with the sledgehammer, Dennis' adventures being a historic example. With what happened to a relatively mundane effort to bring alternative energy to the marketplace, who can confidently say what else has, or has not, been suppressed? What happened to us [was fairly typical](#), but harsher, because Dennis' efforts threatened to have an *immediate impact in the marketplace*. That is when they take the gloves off. Inventors [tinkering in their garages](#) are largely left alone, unless they try getting something market-ready, or begin making noise.

On several fronts, our energy-production practices threaten to doom humanity. Today, the United States is engaging in [genocide in Iraq](#), as part of an effort to control the Middle East's oil. Under the rubric of the [War on Terror](#), the U.S. is moving to militarily control the world's most lucrative store of unexploited oil and gas deposits, in Central Asia. Atmospheric carbon dioxide makes the earth's surface 60° F warmer than it would otherwise be, making life on earth possible. During the 1700s, before the Industrial Revolution, there were about 275 parts per million (PPM) of carbon dioxide in earth's atmosphere. Burning fossil fuels has been almost entirely responsible for increasing the PPM to 365 today, for an increase of about 33%.

Other greenhouse gases have been increasing rapidly, due to humanity's ways. Methane is the other naturally occurring greenhouse gas. The destruction of the world's forests have increased the termite populations, as they feed off of the wreckage, and they produce methane as a byproduct of their digestion, as do domestic cellulose-digesting animals, which have also greatly increased. In addition, the paddy system of China creates a great deal of methane, from decaying manure and plant matter. Those factors have created more than a 140% increase in atmospheric methane since the 18th century. Methane makes up less than 2 PPM in earth's atmosphere, but it is also twenty times as effective at trapping infrared radiation as carbon dioxide is,

and makes up about 17% of today's greenhouse effect.

Chlorofluorocarbons (CFCs) are artificial chemicals made for refrigeration and other uses, and although they make up a tiny fraction of the atmosphere, their effect is tremendous. They not only are probably part of why the ozone layer is under duress, but they are thousands of times as effective as carbon dioxide at trapping infrared radiation, and CFCs make up 12% of the greenhouse gas effect.

Lastly, all the nitrous oxides created by high-temperature combustion (the brown haze in urban smog) are 120 times as potent a greenhouse gas as carbon dioxide, and nitrous oxides comprise 5% of the greenhouse effect.[\[54\]](#)

It does not take a rocket scientist to figure out what the effects may be, and we are seeing it today. Global warming is already happening. In the Northern Hemisphere, the glaciers have been rapidly shrinking. In the summer of 2001, I was on an arm of Glacier Peak, looking in awe at where the glaciers *were*. It appears that in about twenty years, Glacier Peak will be misnamed. People who have hiked in the Cascade Mountains for more than sixty years have told me that the rapid disappearance of the glaciers has been incredible to witness. I may witness the complete disappearance of the Arctic icepack. The effects will be far more dramatic than the polar bear becoming extinct. With the Arctic permafrost melting today, it is predicted that great amounts of methane will be released from that process, among the many catastrophic effects such a melting will bring (such as killing off all the far northern forests). There are also other theories about what is behind global warming, such as increased solar output[\[55\]](#) and increased volcanic activity, but those theories do not invalidate the increase in atmospheric carbon dioxide or its radiation-trapping effect.

Humanity has already commandeered more than half of the fruit of the world's ecosystems, and the greatest mass extinction episode since the [dinosaurs became extinct](#) 65 million years ago is underway. Today, one-fourth of earth's mammal species are in immediate threat of extinction, and one-eighth of earth's bird species.[\[56\]](#) Most of the world's fishing grounds have either collapsed due to over-fishing, or are on the verge of it. Wiping out the world's ecosystems for human benefit cannot continue much longer, and ecosystem collapses are already happening, initiated by human exploitation.[\[57\]](#)

The energy racket works on many levels. The automobile and oil companies banded together to create an industry front group called the Global Climate Coalition. They have tried defeating all international efforts to curb fossil fuel emissions. Their undermining of the Kyoto Protocol, which called for extremely modest reductions in fossil fuel emissions, is a case in point, especially with the current, [un-elected American president](#) in their back pocket. In 2000, even oil companies began admitting that global warming was a real phenomenon, and they abandoned the Global Climate Coalition, which then had to reorganize. Ideology and disinformation are two powerful tools they use. Academics such as [Julian Simon](#) purvey "scholarship" that shows that all is well. As [David Edwards](#) and others have been noting for many years, the oil companies bought up a handful of scientists to publicly display their "skepticism" that global warming is real, or a hazard.[\[58\]](#) Then, people such as Julian Simon and our [supine media](#) feature them as [credible scientists](#), their interest-conflicted opinions counting just as much as that of the 3000 scientists that make up the United Nations' Intergovernmental Panel on Climate Change (IPCC). It goes further than that.

The IPCC has been charting the effects of global warming, and the potentially catastrophic effects that are just around the corner. The only real debate is whether earth's surface will increase by "only" a few degrees or ten in the next century, an event that may be unique in earth's multi-billion-year history. Oceans will rise, perhaps dramatically, as the polar ice caps disappear. Superstorms are already happening, with natural disasters increasing at a rate of 6% per year for the past generation, as the casualty insurance industry well knows. Island nations such as the Maldives will simply disappear under the rising ocean. Where I sit as I write these words may be underwater in my lifetime, if the oil companies have their way. If we get the predicted several degree rise in temperatures, under the current methods and technologies employed, it may mean the deaths of billions of people from [starvation](#) and [disease](#), which will likely trigger nuclear wars, or worse, even if we do not [wage Armageddon](#) over the energy sources. Each IPCC report has been more ominous than the last, and the mainstream news today is filled with articles on shrinking and collapsing ice caps.[\[59\]](#)

There is a plethora of other problems created by burning fossil fuels. Atmospheric oxygen is captured

and combined into water when hydrocarbons are burned, which has been [decreasing atmospheric oxygen](#). Atmospheric oxygen is the raw material for the ozone layer. So, declining atmospheric oxygen may be contributing to the ozone layer hole. Polluting the oceans is killing off the photosynthesis that ocean algae produces, which comprises about 80% of all earthly photosynthesis, which creates oxygen as a byproduct.

The United States is the only nation on earth that has [consistently opposed any limitations on the use of nuclear weapons](#), undermining every treaty it can. Nuclear weapons are the ultimate energy weapons these days, creating a horrific *burst of energy*. In April 2002, the United States snubbed the Comprehensive Test Ban Treaty meeting in Vienna. It has attacked and undermined every organization, and attempted to sack every official, who attempts to limit chemical weapons (Jose Bustani was sacked in April also), unconventional weapons inspectors (Hans Blix was "investigated" by the [CIA](#) in April, because his findings did not support the "weapons of mass destruction" fraud angle the U.S. is trying to use to justify [invading Iraq](#)) and anything or anybody else who gets in the U.S.' way.[\[60\]](#) If there ever was a rogue state, it is the United States.

Demagogues throughout the millennia have exploited human gullibility and complacency, and quite effectively. Adolf Hitler wrote in his *Mein Kampf*,

"The great masses of people in the very bottom of their hearts tend to be corrupted rather than consciously and purposely evil...therefore, in view of the primitive simplicity of their minds, they more easily fall a victim to a big lie than to a little one, since they themselves lie in little things, but would be ashamed of lies that were too big."

Hitler exploited that human tendency to deceive to mount [history's most destructive war](#), born of economic hardship. Germany and [Japan](#) wanted to come to the imperial card game with the other big players - Britain, France and the United States in particular - but the [imperial powers already "owned" the world](#). Today's political-economic systems are simply more refined means of exploitation, with most Americans scarcely realizing the ways in which they are exploited. The [Zero-Sum Game](#) is still being played, but a [huge body of lies](#) has been erected (in America, at least) to make it seem that it is not. The term "[American Empire](#)" seems like an oxymoron to most Americans, which demonstrates how effective the indoctrination systems are.[\[61\]](#)

In theory, the [Industrial Revolution](#) increased humanity's real wealth, as human-friendly products were made in factories. The world's *real wealth* bank account, however, shows no such thing. In reality, the bank account has been drained at an unprecedented rate. All those fossil fuels were the result of life forms putting energy into earth's "wealth bank" (or even worse, if [Gold](#) is right). Drawing that energy wealth out "of the bank," at a rate about one million times greater than it went in, has fueled the past 200 years of Western "progress." *Hundreds of millions of years* of fossil fuel creation will be burned up in mere *hundreds of years*.

As [Carl Sauer](#) wisely perceived, the so-called wealth created during the Industrial Revolution is largely fictitious; our system measures the output, but not the cost. If our fossil energy sources went away tomorrow, the West would largely and quickly revert to the pre-industrial economy of Europe, using feet and animals for transportation, and most who survived the transition would become farmers again. The human population would decline, commensurate with the available food energy, which would decline with de-industrialization. Plundering ancient reserves of sunlight is not wealth-creating activity, and the long-term environmental devastation is a cost that humanity will be repaying for a long, long time, if we even survive it.

The energy industry probably does not deserve to exist. Dennis was working toward a thermodynamic answer to free energy. Others work with vortex energy, magnets, energy from the "vacuum" and other things. What is coming soon for humanity is the end of moving part technology. Future free energy machines will have no moving parts and last nearly indefinitely, eliminating the energy industry. Even conventional solar technology could probably meet the world's energy needs today, but the energy oligopolies have bought up those technologies and seem to be developing them at a snail's pace. Why is this?

During the past generation, the energy bill in America has fluctuated between 7% and 10% of the national economy. Right there is 8% of the economy that is total deadweight, lining the pockets of the energy gangsters while devastating the environment, and murdering millions of people in places such as [East Timor](#), [Nigeria](#) and [Iraq](#) to keep the cheap oil flowing. Eight percent is conservative. Most of America's [defense budget](#) today (around 4% of the economy) is there to secure access to foreign oil supplies and other commodities. The interest on the national debt is about 40% of the energy industry's revenues, and is mainly the result of all the military spending since World War II. A significant chunk of that is related to keeping the international arena safe for oil production and importation to the United States. Between 1973 and 1995, the share of foreign oil in America's consumption doubled, from 26% to 52%.^[62] The number will only climb, and is one more factor that brings recent events in Iraq and [Afghanistan](#) into a sharper focus.

When discussing the *real* economy, where price tags are put on things the market does not value (such as environmental devastation, the cost of the military, interest on the national debt, the human cost of mass murder and genocide to keep control over the oil), the total become immense. Could the true cost of the energy industry be half of our economy? More? Putting a price on human life is macabre. If our oil greed leads to World War III, what price tag goes on destroying humanity and the planet? I doubt the economists can perform that analysis.

When Dennis teamed up with [Yull Brown](#), Dennis and I spoke at Department of Energy (DOE) hearings regarding the disposal of nuclear waste in America. Brown's Gas can apparently transmute nuclear material, once again doing something that [conventional physics](#) regards as "impossible." The Brown's Gas and nuclear material demonstration has been done many times, even in front of DOE personnel with their Geiger counters in hand. The nuclear waste hearings were a ruse to create a fig leaf of consent for the program that was already chosen by the Big Boys. At the hearings, I spoke first about Brown's Gas and its potential, and Dennis went next, trying to convince the DOE to at least look into the Brown's Gas solution, instead of burying the waste in the earth, hoping that nothing happens to it for the next 250,000 years.

The meeting we attended was in South Carolina, next to the Savannah nuclear facility that nearly glows at night from the waste of America's nuclear weapons program. The hearings were sparsely attended, mainly by the contractors who stand to make a killing from "managing" nuclear waste. As it stands today, there will probably be more than one trillion dollars spent to "manage" the nuclear waste problem, and managing it just means sticking it in the ground and hoping it never comes back up. It is similar to whistling in the dark, but if something bad happens, future generations (if there are any) will likely pay for it, not us. The Brown's Gas proposal could do the job for a few percent of the trillion dollar total, and it would be a permanent solution, not something that would come back to haunt future generations.

When I began speaking, it got people's attention as I related the facts of Brown's Gas and the numerous demonstrations of its transmutational properties. The recent motion picture *Chain Reaction* is a thinly disguised story about Yull Brown and his discoveries. The people who made that movie picked Brown's brain for a few days, years ago, leading him to believe they were going to help his project get off the ground. After they picked his brain they disappeared, and a couple years later their movie *Chain Reaction* appeared, without giving Brown a cent.

After I related the facts, Dennis went into his salesman's mode and a DOE man who ran the hearings approached us in the parking lot after our first presentation. He said that we were the *third group* that had spoken at the hearings, presenting a neutralization technology to solve the problem. He said he was excited about what we had presented and would do what he could at the DOE, but admitted that he was an underling with little power. Then he said something I will never forget,

"There are people who stand to make a lot of money in managing nuclear waste. If your solution does not make them money, it will not go anywhere."

That is the reality of nuclear waste management. The point is making a financial killing today, and setting up

a racket that will see the [dollars flow in for generations](#).

When I was with Dennis briefly in 1996 -1997, there was an “inventor” who was making bootlegged versions of Brown’s Gas machines, while saying that there was no real patent protection that Brown had, which was probably true, but it was not exactly an ethical position to take. He also criticized Dennis, saying that he treated Brown poorly. The opposite was true. We treated Brown like a king, and paid him like one. Back in 1996, Dennis told me that the Brown’s Gas “inventor” was a different kind of provocateur than [Mr. Hit Man](#) was. Mr. Hit Man worked on a ruthless level, [where people can die](#). The Brown’s Gas “inventor” however, just copied whatever Dennis did, trying to take the wind out of his sails by offering a pirated version of his wares. I did not know why Dennis thought that way about the inventor, besides seeing what he was doing with Brown’s Gas. The next year however, a “fringe science” journalist wrote a book about the “coming energy revolution.” She featured that Brown’s Gas “inventor,” and featured his “Low Temperature Phase Change” invention, where he was going to try making free energy by using heat pump energy to try running a heat engine.^[63] When I read that, I began thinking that he might be exactly what Dennis said he was, because “[Low Temperature Phase Change](#)” was the exact term that Dennis coined when he began making his free energy noise in 1986.

Marginalizing the true pioneers is how the establishment works, even on its fringes. [Tom Bearden](#) has documented the T. Henry Moray story well, as have others.^[64] Moray was a generation ahead of his time in developing the first semiconductors we know of, in the 1920s, and developed a free energy device that was demonstrated many times in conditions that seemed to preclude any other conceivable energy source. The device was disassembled and reassembled many times. Franklin Roosevelt directed the U.S. Rural Electrical Administration (REA) to work with Moray, and an agent from the REA destroyed Moray’s prototype with a hammer. Moray had gunfights in his lab with various saboteurs. His car was fired on and bullets passed through his car. It is one of the more high profile cases of how a free energy pioneer was wiped out. Writing [Tesla](#) out of the history books is standard operating procedure, while his failed rival Edison is a household word.

What this essay has not yet discussed are “free energy” demonstrations that members of our organizations have witnessed over the years. [Tom Bearden’s talk](#) at Hoagland’s conference might seem to be paranoid conspiracy theorizing but Bearden was talking about *experiences*, not theory. One free energy demonstration we had was from an inventor that Bearden also worked with. The technology appeared extremely genuine, but the inventors were receiving awe-inspiring suppression. There are also stories about technologies being violently wiped out, entire families murdered, and their houses set on fire and bulldozed, tales not told me by “conspiracy theorists,” but hard-nosed scientists.

It appears as if Tom Bearden, as he has reached his 70s, has finally [decided to go for it](#). The free energy technology that he and his friends hope to put on the market is similar to technology that I have known of for many years. As with [Fischer challenging Carnot’s assumption of an ideal gas](#), or Einstein’s challenging of Newton’s *assumption* of absolute time and space, the technical paper that Bearden and friends have published challenges the [theories of electricity at their root](#), going clear back to when James Maxwell was doing the original work. I know highly qualified scientists who have watched that technology in action. It is very real.

Whether Bearden and friends live long enough to make it happen depends on many factors, including how the public supports them, or does not. Hearing Bearden talk about his technology is an amazing experience, and not something the layman can easily follow. It was difficult to keep up with him, and the explanation borders on the surreal, where Bearden says the key is taking advantage of a “negative time wave,” making time run backward, and taking advantage of the fourth dimension. It might seem ludicrous, but the proof is watching it work, and scientists I respect have done so. With no moving parts, and being able to send excess energy back where it came from, for zero environmental impact (not even thermal pollution), this may be the energy of the future.

The potential of free energy is a lot bigger than just eliminating earth’s most destructive industry. Free energy is probably the greatest single step in toppling the [Zero-Sum-Game](#) paradigm that humanity has been operating under for the past 10,000 years. With free, renewable, non-polluting energy, especially when combined with machines, robotics and computers (going back to the basics of the [rise of humanity](#) - energy, manipulative ability and intelligence) the reasons why humans exploit each other and the environment can evaporate, and humanity can finally begin to grow up. The kill-and-be-killed game that humanity has played

for the entirety of history can end, and free energy is probably the most important first step. Without free energy, the rest may be close to impossible, unless the world human population declines to a tiny fraction of today's.

Accordingly, it is collective insanity to sit and wait for Dennis Lee or Tom Bearden to make it happen, or criticize them if they do not. It is time for humanity to grow up and accept responsibility for what is, and [dare to create](#) the world that prophets such as Jesus spoke of: heaven on earth. Technically, it is child's play, but if we do not wake up and care, it is an impossible dream, and this nightmare will continue until humanity exterminates itself.

The Greatest Energy of All

There is a lot more to this energy business than Dennis Lee, burning oil, and razing forests to burn it and plant crops. Einstein's immortal $E=MC^2$ makes everything in our universe equivalent to energy.[\[65\]](#) Few scientists will try disputing Einstein's equation. However, what is the basis of energy? What happened before the Big Bang? Did everything come from nothing, as the Big Bang asserts, in a theory that seems to be a warmed-over version of "Let there be light"?

The greatest scientific minds I have known were mystical in their perspective, realizing science's limits. History's greatest physicists [thought similarly](#). If I may be so foolish, I am going to hazard some speculations about the nature of energy and its relationship to this alternative/free energy conundrum.

Mystical literature often discusses the emotional journey that humanity is on. Emotions are a source of truly unimaginable power. [Seth](#) once said that an average, garden-variety human emotion, the kind one might experience while reading the newspaper, has more energy in it than it takes to send a rocket to the moon. If that is the case, it sure does not appear that way to earthly humans, though the fear of strong emotional states is highly evident in American culture. Many American men, especially those of older generations, are [emotional cripples](#).

Nevertheless, sources I respect, such as Robert Shapiro's [Zoosh](#), say that human emotions are incredibly powerful, and the uncontrolled (or unconscious) aspect of human emotions can be highly dangerous for other physical species to be around. That is apparently one reason why "[alien abductions](#)" seem to always happen with the humans losing consciousness. "Abducted" humans are put to sleep partly because if they were awake, their emotional reactions can kill the "aliens" in the vicinity. Most humans will agree to the power that emotions possess, although it is not always pleasant to have them. Yet, what underlies emotions? There is interplay of emotion and mind happening. They do not seem to be the same thing, and mystical sources state that that is the nature of the polarity and paradox of our world. Beyond this plane, there comes a point where feelings and thoughts unify into the same thing, as all of creation is one. Nice idea, but nobody here can really experience such a concept.

Humanity is on an [evolutionary journey](#), and the critical goal at this time is to come to a new level of emotional maturity, and bring the heart into its rightful place, which is being awake and in charge. Mystical sources have long stated that all emotions are aspects of love energy, which is what God *is*, and it is the energy that has created this universe, and all of Creation. Emotions can be seen as aspects of love, and rigidly (fearfully) holding onto any of them is where we get into trouble. Embracing all emotional states at once reduces it all to love. That is partly what Jesus was all about: demonstrating the power of love. With love, anything is possible, in terms we can barely glimpse. Love can move mountains, because mountains *are* love, as are we.

As we walk this immense spiritual journey, learning who and what we are, in this dense dimension of limitation, some are using us, [feeding off of our negative emotional energy](#). [Michael Roads' encounters with them](#) are mind-blowing. Although [George Bush and friends](#) may think they are "only" grubbing for money and power, and inducing fear and misery in the general population for dark ends, beings are above them in the food chain, feasting off of Bush and friends as well, and the fear they induce and experience themselves. In this system, *everybody* is ultimately a loser, in ways that most cannot, and dare not, imagine.

Even if that seems too way out, the tactic of taking advantage of fear, and controlling the great herd of people, is easily comprehensible. Even a materialistic rationalist such as Noam Chomsky says that “induced fear” is how the ruling classes manipulate the masses, especially in “democratic” societies. [Orwell's 1984](#) stated the same thing. That is what drives the “war on drugs,” the “war on terror,” the “war on communism,” the “war on cancer,” etc. Chomsky sees little hope that humanity will manifest enough collective intelligence to prevent its demise by its own hand. He is one of the most humane and courageous people that America has produced, and he is having a difficult time staying optimistic, particularly after the [World Trade Center attacks](#).

A great deal of the manipulation can be chalked up to reality control, as Orwell also wrote about in his prophetic [1984](#). I was told a [steady stream of lies for my entire childhood](#), which apparently was to set me up to believe all the “reasonable” lies I would be fed as an adult. As we unthinkingly adopt the paradigms that are fed us, they [blind us](#), so we can be easily manipulated and controlled. The scientists who laugh at “free energy” as “impossible” are the professional descendants of those who laughed at the notion of [Edison's light bulb](#), the [Wright brothers' airplane](#), the findings of [Naessens'](#) and [Rife's](#) microscopes, the transmutational properties of [Brown's Gas](#) and [LamCo COPs of seven](#). Until they investigate with an open mind, they *cannot have* an informed opinion on the issue. Also, they will need to use a little creativity, so they can see past the barriers to comprehension that reductionistic analysis can produce.

As we are brainwashed into what is “possible,” we are easily manipulated. As “scientists” and others automatically reject “free energy” as “absurd,” the [Zero-Sum Game](#) is further enforced, on a subtle and largely unconscious level. Then, transparently false rationales are concocted to create a superficially noble cover story for [killing off a generation of Iraqi children](#), so the United States secures [cheap access to oil](#) and big profits for the oil companies who own the American president. All the exploitation is justified, because everybody is operating from the Zero-Sum-Game *assumption*. There has been some “[progress](#),” where legal slavery has supposedly been abolished, but it has largely been replaced with subtler forms of slavery. That is what ideology is mainly about: getting the exploited to accept their circumstances, and making the violators and exploiters “right.”

The foundation of earth's ecosystems - the acquisition and use of energy - which humanity rides atop, has never changed. Kill-or-be-killed is not only a tired game; humanity has reached the stage where the arena is being destroyed, due to the game itself. The, “I win, you lose” game is the epitome of the [Young Soul](#) awareness. Free, gentle, non-polluting, forever renewable energy [can trigger the next step in our journey back to our divine origins](#), to where we were before we took our “[fall](#).”

In very real terms, the love for humanity that Dennis Lee has is directly related to his “free energy” quest. Love *is* energy, and love is the *only* answer.

Peace.

Footnotes

[1] Nobody working in the field of anthropology disputes that the fossil evidence supports the notion that humanity's evolutionary ancestors lived in Africa. In early 21st century anthropology, the primary question is if *Homo sapiens sapiens* evolved in Africa or among descendents of the members of *Homo erectus* that began migrating beyond Africa somewhat less than two million years ago. The majority view today is that *Homo sapiens sapiens* evolved in East Africa somewhere between 200,000 and 100,000 year ago, and as they migrated across the planet, particularly after their “great leap forward” about 40,000 years ago, they displaced all other hominid species, including Neanderthals, who are likely also descended from *Homo erectus*. Recent advances in molecular biology (where DNA can be tested) have tended to support the “Out of Africa” hypothesis, although there is controversy swirling around even some of the most elementary concepts. For some relatively recent popular books on the subject, see Ian Tattersall's *The Fossil Trail*, Jared Diamond's *The Third Chimpanzee* and Christopher Stringer and Robin McKie's *African Exodus*.

[2] For this early history of energy and humanity, I have used many sources. The Internet has helped at times, as have encyclopedias such as *Encarta*. Also, books such as Andrew Goudie's *The Human Impact on the Natural*

Environment, Clive Ponting's *A Green History of the World*, Jared Diamond's *Guns, Germs and Steel*, and other works have helped, such as some of my college textbooks. There is plenty of controversy about numerous aspects of the distant human past, and this rendition hews more toward the orthodox viewpoint today. This web site points out numerous suppressions of data that have failed to conform to the orthodox theories, such as what happened to [Virginia Steen-McIntyre](#). All views of the ancient past are subject to radical revision as more becomes known. If the [UFO phenomenon finally comes into the open](#), a lot may change.

[3] Jared Diamond's *The Third Chimpanzee* surveys the mass extinctions that followed in humanity's wake, including how the English completely exterminated the native inhabitants of Tasmania in the 18th and 19th centuries.

[4] Paul Martin of the University of Arizona first presented the "overkill" hypothesis for North American megafauna extinctions in 1967. Peter Ward of the University of Washington is considered a leading investigator/author in the field of mass extinctions. Don Grayson, also of the University of Washington, is the leading voice on refuting the idea that humanity drove the megafauna to extinction, particularly in North America.

In his *The Call of Distant Mammoths*, published in 1997, Ward presents a multi-disciplinary inquiry of the subject and shows how driving the megafauna to extinction did not mean killing off every last one, but reducing their numbers to a level where they could easily go extinct if other factors impacted them, such as a few years of bad weather or other natural disaster. Ward finished his book by presenting what he considered the last word on the subject (at least for now), which was the research of Dan Fisher on mammoth tusks. By studying the growth rings on mammoth tusks (like tree rings), Fisher was able to determine gestation rates for females, because their tusks have little growth when gestating, as their available nutrients (especially calcium, as far as tusk growth goes) are dedicated toward the growing fetus. The ring study showed that as mammoths were going extinct, the females were reproducing at vibrant rate, a rate that would not occur if they were starving, and a rate (a birth every four years) that suggested they bred quickly to make up for rapidly declining numbers, as the birth rate equaled the birth rate of today's elephants that are actively hunted by humans. Grayson has been also publishing his research findings, and recently made the case that there is not enough evidence of humans at megafauna kill sites to support the notion that humans hunted them all to extinction.

There are other concepts such as "keystone" species that support arguments that the Pleistocene hunters did not need to kill off every member of every species to tip the scales in the direction of mass extinctions. The debate will probably rage for many years, but I consider the evidence for mass extinctions soon after humans first arrived to be quite persuasive, particularly when there is so much evidence for it happening in historical times. Also, the primary other theory of late-Pleistocene mass extinction, climate change, has serious shortcomings, such all those extinct species survived drastic climate changes during the previous millions of years of glaciation cycles, to "coincidentally" go extinct when the latest interglacial period was accompanied by a new super-predator that those species had never encountered before. Also, mass extinctions happened where there was no drastic climate change (as in South America and Australia), but the megafauna all became extinct soon after humans arrived. It is theorized that humans did not necessarily hunt the Australian megafauna to extinction, but used fire to clear the land as a subsistence tool, and thereby drove the megafauna there to extinction.

[18] William Duffy's *Sugar Blues* is the classic treatment of the ills that refined sugar causes "civilized" humankind.

[19] The English "settlers" also used the natives of Tasmania for dog food as they "settled it." There were *only* 5,000 aboriginal Tasmanians, so the dog food period could not have lasted long.

[20] See Charles Mann's "1491," *The Atlantic Monthly*, March 2002.

[21] Fahrenheit is known as a relative temperature scale. The temperature needs to be converted into an absolute temperature in order to calculate the maximum possible efficiency. William Kelvin was knighted for his work with gases, and he theorized a minimum possible temperature, known today as absolute zero. The Rankine (R) temperature scale is the absolute temperature scale that uses the Fahrenheit degree interval. 0° F is equal to 460° R. So 2000° F and 55° F convert to 2560° R and 515° R, and the Carnot equation equals $(2560-515)/2560 = 80\%$. That means that the steam turbine at the local electric company can get no more than an 80% efficiency.

[22] $2560/(2560-515) = 1.25$

[23] The reason why heat engines combined with heat pumps can provide more energy than simply burning heat engine fuel for heat is because the heat pump is not heating the exhaust medium back to the temperature of the heat engine's boiler. If a steam turbine burned coal to get 2000° F boiler temperatures (as today's electric companies do), getting electricity-conversion 35% efficiency, and a heat pump used the resultant electric energy to heat up a lake to 2000° F, its COP would obviously be low, probably far less than 0.5. Then $35\% \times 0.5$ is 17.5%. If the coal was burned in the home, it would be burned at more than 90% efficiency, so it would obviously be cheaper to heat the home with coal. In the real world, however, most heating energy is used to merely create human-friendly environments, so coal burned in the home is only used to heat a home to 72° F, not an electric company boiler to 2000° F. A heat pump taking heat from the environment at 40° F, and moving it inside a home to heat it up, could theoretically reach a COP of 16.6 $((532)/(532-500))$, in degrees Rankine). If heat pumps could reach half the Carnot ideal, as steam turbines do, then we have a COP of about 8, which, combined with steam turbine efficiency of 35%, means that for every unit of heat released when coal was burned at the electric company, 2.8 (0.35×8) units of heat could be delivered into the home. On a macroeconomic basis, this is highly energy efficient, nearly three times as efficient as burning coal to create heated, human-friendly environments.

[24] In an electric company steam turbine, water is the working medium, going through its cycle of liquid to gas and back to liquid. In a household refrigerator, a substance called Freon is most often used. Freon is an artificial compound made from carbon, chlorine and fluorine, which has a low boiling point, -22° F at atmospheric pressure. Every substance has a melting and boiling point, and the pressure it is subjected to will determine that point. Water can boil at room temperature if it is subjected to a vacuum. Pressure cookers work by the reverse principle. Subjecting water to greater than atmospheric pressure will raise its boiling point. So, the pressure cookers that Americans use in their kitchens may operate at 230° F instead of the usual 212° F at sea level, so the food cooks faster.

In a refrigerator, the boiling and condensing point of the Freon is manipulated by altering the pressure it is subjected to. The diagram below depicts Freon's journey through a kitchen refrigerator.

In this illustration, the Freon's journey will begin in the receiver, as a liquid, lying in the receiver's bottom. It is at 80° F. The Freon will boil at -22° F at atmospheric pressure, but in the receiver, it is under about 100 pounds per square inch (PSI). The pump circulates the Freon through its cycle, and the Freon is pushed through a tube where it meets an expansion valve. An expansion valve merely allows the liquid Freon through at a measured rate, where the other side of the valve has a lower pressure. As the Freon goes through the valve (the valve works just like the valve on an aerosol can), it meets a lower pressure past the valve, of 37 PSI. At that pressure, Freon will boil at 40° F, and boil it does. When something boils, it takes a great deal of energy to break the bonds that attract the molecules to each other. It takes about six times as much energy to make water boil when it is at 212° F than it does to raise its temperature from 55° F to 212° F. To test that number, if you put a pan of water on the stove to boil, it will take about six times as long for it to boil dry than it took to make it boil in the first place. That threshold at the boiling point is known as a state or phase change (the water changes from one state to another, liquid to gas in this case), and it is an immense energy sponge. The energy is going into breaking the inter-molecular attraction of the water molecules.

As that Freon boils at 40° F in the evaporator (it is obvious why that component is so named), the evaporator attains a 40° F temperature. The air in the refrigerator compartment, where the lasagna sits, is 45° F. According to Carnot's observation, the air in the refrigerator compartment will give its heat to the evaporator, because the air is warmer. In a running refrigerator, that evaporator is where the heat is being continually sucked from the refrigerator, keeping the lasagna cool, slowing its decay rate. As the Freon boils, the pressure goes up, and oddly, the high-pressure liquid becomes a low-pressure gas at a much cooler temperature. As the Freon gas continues its journey through the refrigerator, it encounters the pump that makes it all work. The pump slams the Freon to the other side, and the Freon gets "squeezed." As it is "squeezed" by the pumping process it attains a much higher pressure, such as 100 PSI, and accordingly gets much hotter. Energy systems have entropy and enthalpy, or disorder and useful energy. In that instance, increasing entropy would be greater disorder of the molecules, and increasing enthalpy would be the increase of temperature. With nowhere to go, even losing its entropy, as the molecules are forced closer together, the temperature increases.

The Freon reaches 130° F on the pump's other side. The high temperature gas then enters the condenser. The condenser is exposed to the kitchen air. Sometimes a fan will force the kitchen's air across the condenser. Again, going back to Carnot, the 130° F condenser (usually put on the back of refrigerators or underneath them, so nobody gets burned touching it) will give its heat to the 72° F kitchen. As the Freon gives its heat to the kitchen air through its contact with the condenser, it cools down. As it cools down, it again crosses the temperature/pressure boiling/condensing "line," and turns back into a liquid, which is why that component is called a condenser. The resultant liquid/

gas mixture is dumped into the receiver, the liquid settling to the bottom, where the intake tube sends it to the expansion valve to begin the cycle anew.

That is how a refrigerator works, continually sucking heat from inside the refrigerator and dumping it into America's kitchens. It is a heat pump.

[36] It is easy to descend into that fray. On the Internet are numerous sources of information on that debate. Books such as Henry Bauer's *Beyond Velikovsky*, Pensee's *Velikovsky Reconsidered*, Charles Ginenthal's *Carl Sagan and Immanuel Velikovsky*, *Scientists Confront Velikovsky*, edited by Donald Goldsmith, and *Stephen J. Gould and Immanuel Velikovsky*, edited by Dale Ann Pearlman, are a good introduction to the Velikovsky controversy, with, of course, the book that started it all, Velikovsky's *Worlds in Collision*, which is not easy to find today. There are journals published regarding the work of Velikovsky such as *The Velikovskian* and *Aeon*. David Talbott's Kronia Group is also carrying on the work of Velikovsky. There are forums that have "debunked" much of the pro-Velikovsky crowd, such as the Talk Origins group. Leroy Ellenberger is a Velikovskian apostate who is glad to provide evidence of his thesis, which is that the pro-Velikovsky crowd is largely delusional. It is an invitation to madness to descend into that fray. There is a lot of mud wrestling going on there. My opinion on the issue today is a big "maybe, but I doubt it." The issue is intriguing, and I will probably keep my hand in it. If I ever find the time, I plan on resuming my science studies, and study the dating issue, which impacts a number of areas of interest for me, including Velikovsky's thesis. Velikovsky's thesis exercised Einstein's mind, and it is easy to see why.

[51] Many years later, I interviewed that rocket scientist as I was on a document hunt regarding Mr. Mentor's engine, and while the rocket scientist indeed was awed by the engine, he recalled how he came to comprehend its potential differently. He said he largely came to understand its potential on the basis of his own analysis, with little help from Mr. Mentor. They are probably both right, to a degree, but it also shows how we all remember things differently.

[53] The sources of my information regarding energy use, prices and sources comes from the U.S. Department of Energy's data, mainly from its *2001 Annual Energy Review* and associated reports. I have also used *The American Almanac, 1996-1997* for some of this information, such as tables 1334 and 1358, for my economics/energy analyses.

[54] See Clive Ponting's *A Green History of the World*, pp. 387-389. See also Goudie's *The Human Impact*, pp. 333-343.

[55] Unmanned probes to Mars during the 1990s have recorded what appears to be rapid melting of the carbon dioxide ice pack. Those stories hit the global media in late 2001.

[56] In late 2000, the World Conservation Union published its Year 2000 *Red List of Threatened Species*. More than 11,000 species risk extinction today. That list is only composed of those species that have been identified. More than 14 million species of life are estimated to live on earth, and less than two million have been identified. Perhaps a half million or more species became extinct during the 1990s.

[57] For instance, the decline in perch and herring populations off the Alaskan coast depressed the populations of seals and sea lions, which were killer whale prey. The killer whales ate otters in the absence of their usual prey, which collapsed the otter population, which in turn caused a population explosion in one of the otter's favorite foods - sea urchins. The sea urchin population explosion in turn devastated the kelp beds on which they feed. The disappearance of the kelp beds in turn threatens the existence of numerous species that depend on them, including fish, birds, marine mammals and numerous other creatures. See Chris Bright's "Anticipating Environmental 'Surprise'" in *State of the World 2000*, pp. 22-38. Numerous fish species also face human-caused extinction; something that orthodox theory previously held was impossible.

[58] For instance, Fred Singer is a leading scientist who downplays the notion of global warming, and has "consulted" for several oil companies. Patrick Michaels is another prominent scientist who downplays global warming, who also makes big money "consulting" for coal companies and other energy interests (they both are prominent authors in [Julian Simon's](#) *The State of Humanity*. See also Ehrlich and Ehrlich, *Betrayal of Science and Reason*). In the year 2000, several events happened which should take most of the air out of the sails of the oil company "skeptics" regarding global warming. According to the National Oceanic and Atmospheric Administration (NOAA), the U.S. winter of 1999-2000 was the warmest on record. The spring of 2000 was also the warmest spring in U.S. history. Since measurements began over a century ago, the eleven hottest years on record, globally, have all been since 1980. Though the *New York Times* reported a mile-wide hole in the Arctic ice at the North Pole in the summer of 2000,

a report that has been discredited as normal summer thawing, the Arctic ice pack is 40% thinner than it was fifty years ago, and the Antarctic ice shelves have been breaking up. Glaciers have been retreating across the planet. The polar bear will be extinct in the wild in a generation at the rate that warming is happening today. The U.S. National Research Council in January 2000 issued a report titled, "Reconciling Observations of Global Temperature Change." The report states that "the warming of surface temperature that has taken place during the past 20 years is undoubtedly real, and it is at a rate substantially larger than the average warming during the twentieth century." In February 2000, scientists at the NOAA's National Climate Data Center (NCDC) reported that the rate of global warming is increasing over the past twenty-five years (in a report published in the March 1 issue of *Geophysical Research Letters*). The evidence is strong that the rate of increase since 1976 is likely human-induced, according to the NCDC scientists. In June 2000, the U.S. Global Change Research Program released a report that predicted that global fossil fuel emissions would increase the U.S. temperatures by 5 to 10 degrees Fahrenheit by the year 2100. In the September 15, 2000 issue of *Science*, the findings of an international scientific expedition were published. Lonnie Thompson of Ohio State University led the 1997 expedition, and it obtained ice core samples from the Dasuopu Glacier on the Himalayan mountain Xixabangma. The ice cores were obtained at 23,500 feet of elevation above sea level, the highest elevation ice cores ever obtained. The global warming models predict that higher elevations and higher latitudes will show the effects first. The highest latitudes are the Polar Regions, and the Himalayan ice cores reveal what is happening at high altitude. The ice cores showed that the past fifty years have been the warmest in the past thousand years. Dust particles had increased four-fold in the past century, and the ice layers gave signs of desertification happening in the region. Thompson said, "There is no question in my mind that the warming is in part, if not totally, driven by human activity. I think the evidence for that is so clear - not only from this site but also from Kilimanjaro in Africa." Thompson led a team to Kilimanjaro in 2000, where the ice on it has declined by over 75% in the past century. Such dramatic warming can create unprecedented human suffering, with droughts and other climate changes that could kill off billions of people and destroy entire ecosystems. Recently, companies like Texaco, Shell, British Petroleum, Ford, DaimlerChrysler and General Motors quit their membership in the Global Climate Coalition, which is an industry front group that is determined to undermine any global efforts to reduce fossil fuel emissions. In the wake of the massive corporate abandonment of the coalition, it had to reorganize. Those were items from 2000, and in 2002, each report coming out for the past two years has been more alarming than the previous one.

[59] For a mere sampling of current information that is easily available, on May 14, 2002, the World Wildlife Fund (WWF) issued a report on the peril the polar bears face. *Reuters*, a non-U.S.-based media organization, reported it. (Will Dunham, *Reuters*, "Arctic Warming Imperils Polar Bears, Report Says." May 14, 2002). The WWF report noted that industrial pollution, including mercury and other heavy metals, radioactive waste, pesticides and industrial toxic waste are imperiling the polar bear, but the effects of global warming are the most ominous. The polar ice has declined in thickness by about 40% since World War II, and current computer models show that summer sea ice may decline by 60% in the next 50 years. The polar bears in the Hudson Bay area are already exhibiting early signs of what is in store for them. Going into the birthing season, female bears are in poorer condition than they used to be, reflecting a decline in food sources, among other stresses. On the same day, *Reuters* ran an article on the breakup of the Antarctic ice cap. (Michael Byrnes, *Reuters*, "Antarctic Ice Melt Poses Worldwide Threat." May 14, 2002.) Scientists are already calling the breakup of the Antarctic ice cap the biggest one since the end of the last ice age, 12,000 years ago. In April 2002, a 500-billion-ton chunk of the Larsen Ice Shelf - more than a thousand square miles and 650 feet thick - broke off, climaxing an unprecedented summer of ice shelf disintegration, in the Antarctic's warmest recorded summer. That is highly abnormal activity, and is one of a series of recent events that may presage a catastrophic disintegration of the Antarctic ice cap.

Whether tracking species threatened with extinction or global warming, today's common dynamic is scientists eventually realize that their earlier reports, though alarming, have often been understating the true threat, as conditions conflate, creating mutually reinforcing runaway events that the models do not predict. The IPCC reports have become more ominous with each one. The rapid disintegration of the Antarctic ice shelves will not immediately raise the world's sea levels, because they are largely floating, so their net displacement is small (similar to an ice cube floating in a drink not raise the drink's level in the glass as it melts). However, as they disintegrate and float away from Antarctica, it will expose the continental ice shelves, and their melting *will* increase the world's sea levels. The reality is that nobody really knows how fast the continental ice shelves can collapse. The disintegration of the Larsen B ice shelf was dramatic and not predicted, and could herald similar rapid collapse around the entire Antarctic ice shelf.

At this time, the predicted rise in the global ocean level is perhaps "only" a meter or two in the coming century. The leading scientists readily admit, though, that models are only guesses, no matter how sophisticated, and in light of the Larsen B ice shelf collapse the past few months, a "snowball" effect is admittedly quite possible. Also, the rising of ocean levels is but one component of the environmental effect. The release of fresh water from Antarctic melting could also affect the circulation patterns of earth's oceans. The Gulf Stream, that makes European winters as relatively warm as they are, for how far north Europe is, could be diminished by Antarctic melting, and Antarctica is the main source of introducing oxygenated water to the ocean floor. That dynamic will also be diminished. It is already estimated that the "bottom water" production by Antarctica has already declined by 20% since pre-industrial times. The continued decline in "bottom water" production will further threaten earth's marine life. These dynamics are part of "[cascading](#)"

environmental disasters, which defy the relatively simple models that scientists have developed.

Corporate mouthpieces such as Rush Limbaugh have been crusading against the notion of global warming or any true environmental problems being created by corporate greed. With these recent, alarming developments, Big Oil has been making its countermoves. Not only is the United States giving the finger to the world on issues of controlling greenhouse gas emissions, but a recent memo from ExxonMobil to George Bush the Second, brought to light by a Freedom of Information Act action, called for the removal of the IPCC head, Robert Watson, because his stance was a little too "aggressive" in trying to confront and solve the issues of global warming. On April 20, 2002 ExxonMobil got its wish, as Watson was replaced. (See George Monbiot's "Diplomacy, U.S. Style," in *The Guardian*, April 23, 2002. See also Paul Brown's "Oil giant bids to replace climate expert" in *The Guardian*, April 5, 2002.) That is [typical](#) ["diplomatic" behavior](#) by the United States. Tellingly, the [U.S. media](#) is not where I am finding these reports, but in Europe's media.

Disclaimer: I am a layman, and do not give medical advice. Please do not take my word, or anybody else's, regarding your health. Take responsibility for your health, and do not give it to "experts" or anybody else. Your life is *your* life, and giving the responsibility for your health to others is a dangerous path. Talk to your doctor, read this essay, research the areas presented here if you feel inclined, but in the end, please make your own decisions. Doctors only know what they are taught, and if they are taught incorrectly, their advice can be less than helpful, and their treatments can kill you. Please do nothing simply because an "expert" or other authority figure tells you to.

Timeline

This essay is overflowing with names, dates and events, and takes an iconoclastic look at today's medical establishment and how it came to be, while also arguing that legitimate alternative paradigms exist, and far preferable to today's. Early readers informed me that it could be an overwhelming amount of information to digest, as well as emotionally trying. This timeline is designed to make the reading experience easier, so readers can refer to names, dates and events in the larger scheme of this essay. The early human data is controversial in many quarters, and this timeline hews more toward today's orthodox theories. The early population estimates, until the modern age, are probably within 25% of the actual population, at least as far as orthodoxy is concerned. The timeline is broken into two pieces, to 1491, directly below, and [from 1492 onward](#). There are far more links to this medical essay from the [1492 onward piece](#). This timeline is an abbreviated version of the [site timeline](#).

	This timeline relates to the rise of today's Western/ American medical establishment and its prevailing paradigm	
Date	Event	Human Population Statistics
> 4 million BC	First erect protohumans appear in Africa, differentiating from their great ape cousins.	Human population = 0
> 2 million BC	Large-brained bipedal hominids, of the genus <i>homo</i> , appear in Africa.	
< 2 million BC	Homo erectus begins migrating from Africa, and fire was first used as a tool. The African ape diet was partly abandoned as fruit, blossoms, seeds and leaves were less available beyond the tropics, meaning more meat eating.	Human population <100,000
c. 400,000 BC	Fire consistently used. First regular food processing practiced – cooking.	>100,000
c. 130,000 - 100,000 BC	First anatomically modern humans appear in Africa and migrate across Asia, eventually displacing other hominid species.	
c. 40,000 BC	Advances in hunting skill and technology allow humans to hunt larger animals . Boats invented. Modern humans first appear in Europe and Australia.	

c. 30,000 BC	Extinction of most large animals in Australia possibly caused by human over-hunting. Humans probably first appear in North and South America. Cave murals are first drawn, in European caves. One of the earliest artistic works, and possibly a religious artifact, the Venus of Willendorf, is made in central Europe. It, and many works like it, is evidence that goddess-based religion flourished from humanity's earliest days.	
c. 25,000 BC	Pottery first appears, in Europe.	
c. 23,000 BC	Bow and arrow invented, probably in Europe.	
c. 11,000 BC	Methods for processing and storing food appear in Fertile Crescent.	
c. 10,000 BC	Extinction of most large mammals in the Americas, also possibly caused by human over-hunting, probably also influenced by climate changes. Dogs are the first domestic animals, appearing in the Fertile Crescent region.	
c. 8500 - 8000 BC	Hunter-gatherer lifestyle is increasingly unsustainable. Domestication revolution begins in Fertile Crescent and the Americas. Wheat, peas and olives domesticated in Fertile Crescent. Squash and pumpkins first domesticated in Mesoamerica.	4 million
c. 7500 BC	Domestication revolution begins in east Asia.	
c. 7000 BC	Sheep and goats begin domestication in Fertile Crescent region.	
c. 6500 BC	First large human communities, such as Catal Huyuk, appear in present-day Turkey. The clearing of forest to make farm fields, and the resultant puddles, led to the spread of malaria, probably originating in Africa.	
c. 6000 BC	Cattle and pigs begin domestication in Fertile Crescent region. Chicken and rice begin domestication in east Asia.	
c. 5500 BC	Agricultural communities appear along the Nile river.	
c. 5000 BC	Civilization begins forming in the Fertile Crescent. Early societies are egalitarian. The agricultural societies have goddess-based religions, while the pastoral, herd-tending societies develop male-based religions. The mobile pastoral societies begin invading the sedentary agricultural societies. Irrigation is first used in the land between the Tigris and Euphrates rivers, and in Nile river valley. Metallurgy first practiced near mountains of Eastern Europe. Copper weapons developed by herder societies of steppe regions. People of Greece and the southern Balkans adopt agricultural practices.	5 million
c. 4500 BC	First large religious facilities built at site of today's Iraq. Stratification of early society begins, with elites - priest class, craftsmen, rulers and probably the first medical doctors.	
c. 4000 BC	Horse domesticated in steppe region north of Black Sea. Llama and Alpaca domesticated in South America. Camel first domesticated near Fertile Crescent. Invasions from steppe regions wash across Europe, Fertile Crescent and Middle East. Warfare practiced on large scale.	

c. 3500 BC	Migrating farmers from Fertile Crescent settle Indus valley in present day Pakistan. Bronze age begins in Fertile Crescent, and plow agriculture begins there. Soil salination begins affecting Mesopotamian agriculture, and salt resistant barley is raised in place of wheat, comprising half of southern Mesopotamian grain production. Siltation of river water from upstream deforestation also contributes to environmental degradation. The wheel is invented in Mesopotamia. By this time, corn, potatoes, manioc, beans and turkeys are domesticated in the Americas.	
c. 3000 BC	Sumeria becomes the world's first literate society. History begins. State bureaucracy and military establishment are developed. The earth-based Mother Goddess begins being replaced by thunderous, male, sky gods in Middle Eastern mythology.	14 million
c. 2600 BC	Imhotep is credited with building the world's first large stone building, a step pyramid in Egypt. Imhotep was also a physician. He was later deified, and was probably the model for the Greek god of medicine, Asclepius.	
c. 2400 BC	Crop yields continue declining in Sumerian fields. Wheat yields decline by 42% between 2400 and 2100 BC.	
c. 2100 BC	Ur abandons wheat cultivation. Wheat comprises only 2% of Sumerian crops.	
c. 2000 BC	Great migration wave of pastoral societies from steppe regions (generally between the Caspian and Black Seas) into the Fertile Crescent, India and Europe. Third Dynasty of Ur collapses. Violent, male, sky-god religion accompanies the invaders. Feminine, earth-based religion and mythology in the Fertile Crescent, Mediterranean region and Europe are eventually overthrown by the invaders, replaced with male, sky-god religions. Helen of Troy becomes a famous female healer and mythological figure, but female healers begin disappearing from medicine at this time. Intense deforestation of the region from Morocco to Afghanistan commences. Today, only about 10% of that forest remains; much has turned to desert.	
c. 1900 BC	Indus valley society collapses. Declining food production due to soil salination probably led to population decline and internal collapse, combined with foreign invasion.	
c. 1700 BC	Wheat yields in Sumeria decline by 65% since 2400 BC. Fields turn white from salt. Sumer declines as a power, and the center of Mesopotamian civilization shifts north.	
c. 1500 BC	A four hundred year period of chaos and warfare begins to sweep Europe, the Fertile Crescent and Mediterranean region. The violent, male sky-gods come to dominate religion, including one named Jehovah.	38 million
c. 1400 BC	Iron first smelted by Hittite civilization in present-day Turkey. Agriculture begins in Japan.	

c. 1200 BC	Iron made into weaponry. Iron weapons rapidly replace bronze and become common throughout Europe, the Fertile Crescent, Egypt and elsewhere. The feminine-friendly Minoan civilization on Crete collapses, as does Mycenaean civilization.	
c. 1000 BC	Agriculture collapses in central Mesopotamia due to soil salination. In 1990, Iraq imported 70% of its food. The anti-feminine culture of ancient Greece develops, known as Greece's "dark age." Women are gradually excluded from public life. Although male gods dominated Greek mythology, women were also present, if subservient.	50 million
c. 900 BC	Asclepius lives at this time, and eventually became "sainted" in Greek culture and became the Greek god of healing during its classical period. The mythological Asclepius was the son of Apollo, who was the son of Zeus. Hygeia and Panacea were Asclepius' daughters.	
c. 700 BC	A village that began with shepherd's huts, eventually known as Rome, is growing.	
c. 650 BC	Expanding Greek settlements begin causing noticeable environmental degradation.	
590 BC	Solon argues against agriculture on steep slopes in Greece because of rapid erosion.	
560 BC	Peisistratus becomes tyrant of Athens, and pays bounty for farmers to plant olive trees, as they can survive on the badly eroded land, and put down roots to penetrate the exposed rock.	
c. 500 BC	Celts begin invading the British Isles, absorbing the Iberians. Women enter the healing profession in Danish Celtic culture. Pythagoras, the world's first mathematician and the West's first vegetarian, dies. His followers taught that the earth orbited the sun. Etruscan civilization is at its peak influence, to eventually fall to neighboring states.	
432 BC	Peak of the Greek classic period. Hippocrates , Socrates, Thucydides and Aristophanes are alive. During Peloponnesian War (begun in 431 BC), war-crowded Athens is afflicted with a plague (probably smallpox or typhus) in 430 that lasts three years, killing about a third of the population and leading to Athens' decline.	
c. 400 BC	Centuries of Greek deforestation and agricultural practices devastate the environment and soils, remarked upon by Plato and other observers. The degraded environment led to falling crop yields and Greece's decline, as had been happening to other empires for thousands of years. Rome begins rising as a power, eventually defeating the Etruscans of today's northern Italy, and incorporate Etruria's cultural and technical achievements. By the time of Jesus, Etruscan culture was almost entirely absorbed into Roman culture.	

334 BC	Alexander the Great of Macedonia conquers Persia and tries uniting East and West. The short-lived Macedonian Empire helps pave the way for the Roman Empire. Alexander supposedly said that he “died by the help of too many physicians.”	
264 BC	After subduing Italy, Rome engages in its first war against Carthage. Italy and Sicily are rapidly deforested to meet Rome’s needs.	
202 BC	Rome defeats the forces of Carthaginian general Hannibal, ending the second Punic War.	
197 BC	Rome invades Greece and conquers them. Rome would incorporate much of Greek culture into its own, borrowing its gods and technology, although denigration of Greek physicians and medicine was typical.	
146 BC	Greek resistance to Roman rule leads to the complete destruction of Corinth and the sale of its inhabitants into slavery. That same year, Rome does the same to Carthage. The Roman Republic begins expanding across Europe, northern Africa and the Middle East.	
58 BC	Rome begins handing out free food. Eventually, hundred of thousands of Rome’s citizens received free food for political reasons. Intensive agricultural exploitation of imperial lands are undertaken to feed the empire. Places such as today’s Libya are forced to become farms for Rome, with the agricultural practices eventually turning Libya into the desert nation it is today.	
1 AD	Jesus is alive. Much of Palestine, Syria, Lebanon and surrounding regions are deforested by Rome, eventually turning it into desert.	World population: 170 million.
C. 30 AD	Roman writer Celsus translates works of Hippocrates, writes a mammoth series of books, and the eight devoted to medicine have survived.	Roman Empire’s population: 50 million
66 AD	First Jewish revolt against Roman rule. Rome responds with typical brutality, the revolt ending with the mass suicide at Masada in 73 AD. Jews begin their dispersal from Palestine.	
132 AD	Jews revolt against Roman rule again. Rome responds in standard fashion, completely destroying the Jewish state in 135 AD and laying waste to the entire region. Hundreds of thousands of Jews die, the survivors sold into slavery, and dispersed across the Roman Empire and beyond.	
165 AD	The Antonine plague, probably smallpox, sweeps through the Roman Empire, brought back by returning soldiers from Syria. It rages for 15 years, killing about five million people, or about a quarter to a third of all of those exposed to the disease, including Emperor Marcus Aurelius in 180, as it did his predecessor in 169.	
c. 169 AD	Marcus Aurelius appoints Galen to be personal physician to his heir, Commodus. Galen writes prodigiously, his work guiding Western medicine until the 1500s.	
c. 200 AD		200 million

251 AD	An epidemic again sweeps through the Roman Empire until 270, killing 5000 of Rome's citizens each day during the epidemic's peak, including the Emperor Claudius in 270. Rome was forced by the population loss to recruit barbarian troops. The first mass conversions to Christianity were apparently a consequence of the epidemic.	
476 AD	Western Roman Empire falls. Germanic peoples invade the Roman Empire's lands in Europe during the late 400s, including the Anglo-Saxon invasion of Britain. The Eastern Roman Empire lasts nearly continually for the next 1000 years, with Constantinople (earlier named Byzantium and later Istanbul) as its capital city. Europe, however, fell into its Dark Ages. Ancient Greek texts were burned as pagan, including Hippocrates' works. The Roman Catholic Church largely took over medicine, and Galen's work became dogmatized by the Church. That situation would dominate Western medicine for more than 1000 years.	
541	First recorded instance of bubonic plague, beginning in Egypt and racing to Constantinople, where it killed off as many as 10,000 people per day and 40% of the population. Epidemic diseases would periodically sweep Europe and Asia, with cities such as Rome suffering greatly.	
562	32-year drought begins to afflict the Moche culture in South America. El Niño cycles regularly affect South American civilization, and elaborate food production and storage systems are designed to cope with them, as well as other environmental challenges. That region's people become the world's greatest agricultural experimenters.	250 million
711	Islamic armies invade the Iberian Peninsula. Jews live under Moorish rule in Iberia, and it is their golden age in Europe, lasting for 300 years. Learning was an Islamic ideal, and Islamic scholars kept the teachings of the ancient Greeks alive in the West. Influential doctors such as Abu'l Qasim (936-1013) and Maimonides (1135-1204) came from Moorish Iberia.	
C. 800	Mayan civilization begins its collapse. It attained a peak population of several million, before its overtaxed environment failed to support the population. Famine, war and disease accompanied the collapse of the Mayan population to perhaps a million before 1000 AD, similar to Fertile Crescent dynamics. The forest recovers and covers the Mayan ruins.	
c. 1050	Northern and central Europe, especially the Germanic lands, engage in great age of deforestation, making way for civilization, clearing about a third of the forest in a couple of centuries. By 1900, about 25% of the forest remains.	
1056	Ferdinand I, who proclaimed himself the Emperor of Spain, undertakes "Reconquest" of the Iberian peninsula.	

1066	William the Conqueror leads the Norman invasion of Britain.	
1096	Christian Europe makes its first united act: the first Crusade to Palestine. The first wide-scaled Jew slaughters in Europe take place as a warm-up for the first Crusade, in France and Germany. Jews would no longer be safe in Europe, and warfare would be the European way of life until World War II ended.	
c. 1200	Polynesian people begin colonizing New Zealand. The Islamic culture attains the world's highest standard of living.	
1244	Massacre at Montségur, the last stronghold of the Cathars . The Catholic Church eliminates the greatest threat to its religious monopoly, until Martin Luther posts his Ninety-Five Theses in 1517.	360 million
1314	Europe is gripped by major famine that lasts until 1317.	
1346	The Black Death probably originated in China. In 1347 it swept across Asia to Europe. The death toll for Europe and Asia was about 50 million people by 1351, wiping out one quarter to one-third of Europe's population, and periodically recurring for the next three centuries. Epidemiology being what it was in those days, Jews were accused throughout Europe of causing the plague, and 50,000 Jews were consequently killed. War and death imagery would become prevalent in European art.	Europe's population declines from about 75 million to 50 million. It would not regain 1345 levels until the 16 th century.
c. 1385	Turkish ruler Tamerlane's armies catapult smallpox victims into cities they are besieging, in perhaps history's first instance of biological warfare.	
Late 1300s	Beginning in northern Italy's city-states, a multifaceted phenomenon begins which is now called the Renaissance. Humanism takes root, which eventually undermines the Catholic Church's influence.	
1399	The Black Death makes a final visit to Europe, and then disappears for many years.	
1400	After a century of unrelenting epidemics, warfare and calamity, Europe's population is about half of what it had been in 1300.	400 million.
1418	Portugal begins colonizing the Madeira Islands, the Azores in 1427 and the Cape Verde Islands in 1450. The prominent cash crop is sugar, which played to the biological predisposition of humans to sweet food, reflecting the distant ape past in Africa, when fruit comprised most of the diet. Settlers to Madeiran island of Santo Porto introduce two rabbits, and soon they rapidly reproduce and denude the entire island.	
1444	Portugal enters the African slave trade.	
c. 1450	"Little Ice Age" begins, and runs for four centuries, until about 1850.	
1453	Ottoman armies capture Constantinople, which puts an end to the Eastern Roman Empire, controls Europe's trade route to the Orient, and inspires effort to find another European route.	

1474	Paolo Toscanelli of Florence suggests to Prince Alfonso V of Portugal that the quickest way to the Indies (spice trade) is sailing across the Atlantic. Toscanelli was wrong. Christopher Columbus eventually obtains the letter from Toscanelli that makes the suggestion.	
1479	Portugal cedes Canary Islands to Castile, and Queen Isabella I mounts their invasion. The conquest of the Guanche was complete in 1496 , and the Guanche became an extinct culture by 1600.	
1488	Portuguese explorer Bartolomeu Dias rounds the southern tip of Africa , and Portugal abandons the idea of reaching Asia by crossing the Atlantic Ocean. Columbus, who made a living in the Portuguese slave trade, takes his plan to sail across the Atlantic Ocean to Castile, which the experts thought was an impossible plan because the distance to Asia would be too great. Columbus had badly miscalculated the earth's circumference. His early attempts to convince the Castilian court fail.	

**Timeline
from
1492
Onward**

1492	The Spanish "Reconquest" of the Iberian peninsula ends in January with the conquest of Granada, the last city held by the Moors. Jews are given the options of conversion, expulsion or death. In April, Columbus finally gets authorization for his doomed plan to reach Asia via the Atlantic Ocean. He stumbles into the New World in October, enslaving the first humans he meets.	World population: 470 million, at least half in East Asia and India. Population in the Americas: 50 to 100 million (this site uses 80). Europe's population: 70 to 80 million. Taino population: 2 to 10 million. At least one million on Española (this site uses 2)
1496	The genocide of the Taino is well underway on Española.	
1497	Vasco da Gama sails from Portugal to India around Africa; Arab traders cure his crew of scurvy in 1498 , and he returns in 1499 with trade specimens, including valuable spices.	
1511	Portuguese traders capture Malacca, in today's Malaysia, establishing themselves in the spice trade.	

1517	Martin Luther publishes his Ninety-Five Theses, which leads to the Protestant Reformation.	
1518	First New World smallpox epidemic begins, wiping out most of the surviving Taino on Española, who were already only about 1% of their 1492 population.	
1520	Smallpox epidemic that began on Española in 1518 comes across with the Cuban governor's army, probably killing several million people in Mesoamerica.	
1525	European epidemic sweeps through Incan Empire, kills emperor and ignites civil war.	
1535	Native American medicine man cures Jacques Cartier's crew of scurvy on Saint Lawrence River with evergreen foliage and tree bark tea, which was high in vitamin C.	
1537	Ambroise Paré accidentally ends the practice of pouring boiling oil on battlefield wounds and initiates more gentle treatment.	
1543	Nicolas Copernicus ' posthumously published work theorizes that the earth orbits the sun, re-establishing what Pythagoras thought 2000 years earlier. Considered the first work of the scientific revolution. Andreas Vesalius ' <i>De Humani Corporis Fabrica</i> is considered the first work of modern scientific medicine. It challenges a thousand years of dogma based on Galen's work. The Catholic Church increases its efforts to ban books.	Taino population on Española: 200
1553	Michael Servetus publishes an accurate description of pulmonary circulation. Escapes Spanish Inquisition to only be burned at the stake in Calvin's Geneva for his heresies.	
1559	Catholic Church publishes its index of banned books. Index survives until the 1960s. Tristán de Luna expedition goes where de Soto's went, hoping to find rich lands to plunder as de Soto did, and finds the region depopulated from aftermath of de Soto expedition.	
c. 1570	Hiawatha and Deganawidah form the Great Law of Peace and the Iroquois Confederation, which influences the creation of the U.S. Constitution .	
1585	Walter Raleigh establishes the ill-fated Roanoke colony, to try growing tobacco for export.	
1593	South Pacific islanders cure Richard Hawkins' crew of scurvy with citrus fruit.	
1599	Bubonic plague visits Spain, carrying off 10% of its population. Spain ends the 16th century probably worse off than it began it .	Native population of the Americas: 8 million
1600	Giordano Bruno burned at the stake for his heresies, notably for stating that the earth orbits the sun.	
1604	King James I publishes A Counter-Blaste to Tobacco , and tours England to warn of its dangers.	
1610	Galileo Galilee publishes his discovery of Jupiter's moons, using the newly invented telescope.	
1614	Squanto is captured by John Smith's men.	

1618	Thirty Years' War, Europe's last great religious war, begins.	
1619	Squanto returns as interpreter with English, and discovers that his entire tribe had been wiped out by European disease. The Puritans would settle on that tribe's land.	
1620	Puritans land at Plymouth, and Squanto teaches them how to survive in the New World. Squanto dies in 1622 of disease.	
1628	William Harvey publishes his research on function of human heart.	
1638	Three million pounds of tobacco per year are exported from present-day Virginia, reaching 17 million in 1672. Caribbean sugar growing becomes a business on Barbados, the great period of New World sugar growing begins.	
1650	By this time, the Dutch have taken the Asian spice trade from the Portuguese.	
1668	Antoni van Leeuwenhoek invents the microscope.	
1682	Frenchman La Salle explores Mississippi river , finds it deserted, depopulated by disease left by de Soto's expedition.	
1687	Isaac Newton's <i>Principia</i> is published.	
1750	The Enlightenment begins in France at about this time.	
1754	James Lind's experiments aboard HMS Salisbury prove that citrus fruit cures scurvy .	
1763	Lord Jeffrey Amherst suggests deliberately introducing smallpox amongst the Native Americans who resisted the English invasion. The subsequent epidemic kills more than 100,000 natives.	
1769	James Cook visits New Zealand and claims it in the name of Great Britain. The Maoris had eliminated about a third of New Zealand's forests by that time, and large animals, such as the Moa, were about extinct. In the first century after the European invasion, more than 75% of the Maori population dies off. Similar population collapse accompanies the Europeans wherever they appear in the South pacific. James Watt patents the modern steam engine.	
1770	British exploitation of Bengal leads to a great famine that killed one-third of Bengal's peasantry. Famines always greatly increased wherever Europe had colonial dominance.	
1776	American Revolution begins. Adam Smith published his <i>Wealth of Nations</i> .	
1778	James Cook "discovers" the Hawaiian Islands. His crew's venereal disease rapidly spreads through the islands, quickly depopulating Hawaii. The Hawaiian population possibly approaches one million inhabitants. Within 100 years, fewer than 50,000 Hawaiians were alive.	
1881	William Halsted begins his surgical career in the United States.	

1786	Because of the American Revolution, England can no longer ship its criminals to North American penal colonies. Australia is picked as the next English penal colony. The population of the aborigines in southeastern region of Australia (site of the penal colony) declines by about 95% in 60 years.	
1788	Britain claims Tasmania, and the 5000 aboriginal inhabitants are rendered extinct in only 40 years.	
1789	French Revolution begins.	
1793	Benjamin Rush begins era of “heroic” medicine in U. S. during yellow-fever epidemic.	
1794	Antoine Laurent Lavoisier is beheaded in France. His work with oxygen, combustion and respiration founds modern chemistry.	
1795	260 years after Jacques Cartier’s crew is cured of scurvy , and more than one million preventable deaths later, the British navy begins issuing citrus juice to its sailors.	
1796	Samuel Hahnemann first uses the term homeopathy to describe a new system of medicine that he was developing. Edward Jenner performs first smallpox inoculation.	
1825	Homeopathy comes to the United States.	Humanity passes 1 billion
1835	Charles Cagniard-Latour works with yeast, and theorizes that it is alive. Theodor Schwann , the father of histology, confirms Cagniard-Latour’s work at about the same time and takes it further.	
1839	Three million Americans use Samuel Thomson’s brand of medicine.	
1844	American Institute of Homeopathy founded. Anesthetic properties of nitrous oxide first used by American dentist Horace Wells.	
1845	American Medical Association (AMA) founded. Irish potato famine begins.	
1847	Ignaz Semmelweis invents Western medicine’s first sterile practices, used in maternity wards.	
1848	Louis Pasteur discovers molecular chirality , beginning his career. Revolution sweeps Europe. Marx presents his <i>Communist Manifesto</i> .	
1854	Antoine Béchamp begins his Beacon Experiments . German parasitologists have documented parasitic pleomorphic life cycles , ending the spontaneous-generation controversy regarding parasites.	
1858	Rudolf Virchow publishes his <i>Cellular Pathology</i> .	
1859	First American oil well drilled. Charles Darwin publishes his Origin of the Species.	
1861	American Civil War begins. Calomel is the standard medicine for the troops. Antiseptic surgery is not yet invented. Pasteur tried taking credit for discovery of Béchamp. Semmelweis publishes his great work on sanitary practices.	

1863	John Rockefeller enters the oil industry and concentrates on taking over oil refining.	
1864	Pasteur publicly takes credit for overturning spontaneous-generation theory. The germ theory of disease follows from his work. The AMA steps up its anti-abortion campaign .	
1866	Béchamp calls the sub-cellular life forms that he discovered <i>microzyma</i> .	
1870	Joseph Lister produces his first report of the success of sterile surgical procedures.	
1876	El Niño-caused drought that lasts three years, combined with European export crop imperialism, devastates India, China and Brazil , causing as many as 30 million deaths from starvation and disease. William W. Keen begins using Joseph Lister's sterile surgical procedures at the St. Mary's Hospital in Philadelphia.	
1878	Yellow-fever epidemic begins in New Orleans. People treated with homeopathy have less than half the death rate of the general population. Congress is impressed. One million American families use homeopathy.	
1880	Homeopathy movement splits in United States, leading to its demise. John Rockefeller's empire controls 95% of U.S. oil refining.	
1881	William Halsted begins his surgical career in the United States.	
1884	New York Cancer Hospital opens . Later named Memorial Sloan-Kettering Cancer Center, the world's most influential cancer research organization.	
1887	John Rockefeller begins rebuilding a Baptist seminary into the University of Chicago .	
1896	Emil Grubbé invents X-Ray treatment of cancer.	
1899	George Simmons hired by the AMA. He soon takes it over.	1.6 billion
1910	Flexner Report is issued, and directs Carnegie and Rockefeller "philanthropic" funding of medical schools.	
1913	Ludlow Massacre committed by Rockefeller strikebreakers. Rockefeller founds American Cancer Society predecessor organization. Morris Fishbein is recruited to the AMA by Simmons.	
1914	Pasteur Institute confirms bacterial pleomorphism.	
1924	Divorce scandal forces Simmons to step down at AMA. Fishbein takes over . He tries to buy out Hoxsey's cancer treatment and begins persecuting Dinshah Ghadiali .	
1927	John Rockefeller begins funding the Memorial Hospital, later named Sloan-Kettering. Rockefeller's Empire enters into its first cartel agreement with I.G. Farben .	

1929	American Tobacco Company begins campaign to addict American women to tobacco . Wall Street collapses later that year.	
1930		2.0 billion
1931	The findings of Royal Rife's microscopes begin generating great scientific interest, and Thomas Rivers of the Rockefeller Institute tries discouraging it. Three independent studies conclude that the fluorine ion is responsible for tooth mottling .	
1935	Under Fishbein's guidance, Phillip Morris launches an ad campaign for its cigarettes , making a health claim to do so, quickly becoming the biggest U.S. cigarette seller. JAMA's pages are filled with cigarette ads for a generation.	
1939	After hearing of miraculous success with Rife's treatment , Fishbein tries buying into Rife's company. When that fails, the AMA wages lawsuit, destroying Rife's company. Nazi Germany is in midst of anti-smoking campaign led by Hitler , as well as beginning World War II.	
1942	The FDA has Dr. William Koch thrown into jail.	
1946	Dr. Max Gerson presents recovered cancer patients using his treatment to a U.S. Senate committee.	
1947	Oscar Ewing , ALCOA's lead counsel and the world's largest fluoride polluter, heads government effort to fluoridate America's water supplies.	
1949	In the wake of Harry Hoxsey's victory in court, Morris Fishbein is dumped from the AMA, ending his 25-year reign. Fishbein goes to work for cigarette-maker Lorillard .	
1950	Right after Fishbein's fall, JAMA publishes its first report on the link between smoking and cancer . ALCOA is selling its sodium fluoride refining waste to municipal water districts in the most profitable hazardous waste disposal program in history.	
1952	With Fishbein's well-paid help, Lorillard begins an ad blitz promoting its asbestos cigarette filter , using research that Fishbein helped design.	
1953	Fitzgerald Report finds that organized medicine wiped out a dozen alternative cancer treatments, including Krebiozen and Hoxsey's treatment.	
1954	JAMA finally discontinues running cigarette ads , because the drug advertisers complained.	
1957	Wilhelm Reich dies in a U.S. federal penitentiary. His work was burned, in U.S. and Nazi Germany.	
1960	John Crane thrown into prison for pursuing Rife's work.	3.0 billion
1964	American Surgeon General releases report that makes smoking hazard clear . The AMA and tobacco companies produce their own "research" that attempts to counter the Surgeon General's report. Gaston Naessens is run out of France.	

1977	Sloan-Kettering rejects laetrile as a cancer treatment, although its famous chemotherapy researcher Kanematsu Sugiura found positive results. It fires Ralph Moss for making that contradiction public.	
1983	Dr. Ernst Krebs , the discoverer of laetrile, goes to jail.	
1984		5.0 billion
1989	Gaston Naessens is put on trial.	
1991	Jimmy Keller is kidnapped by U.S. Justice Department from Mexico.	
1996	Dr. Stanislaw Burzynski is put on trial.	
1998	Charles Pixley is released from prison. His crime was trying to make 714X a legal import. Jimmy Keller is put back into prison.	
1999		6.0 billion
2001	714X treatment making news in the U.S. Keller gets outs of prison again, has stroke.	

Introduction

Thomas Kuhn coined the modern definition of the word “paradigm” in *The Structure of Scientific Revolutions*, published in 1962. A paradigm, according to Kuhn, is a conceptual model that explains a set of scientific observations, creating a framework to fit the observations. Paradigms are structures that scientists use to order information, and are similar to what we call “worldviews.” Kuhn described how paradigms changed. Scientists perform “normal science,” staying within their paradigm as they perform experiments. When observations occur that fail to fit into their paradigm, those stray observations are often discarded as experimental error, or the prevailing paradigm is patched up to account for them. When the prevailing paradigm becomes increasingly unable to explain the strange observations piling up, eventually somebody would see that those stray observations pointed to a different paradigm. Kuhn presented several instances of that happening, and the most famous was the paradigm shift that Einstein ushered in.

The oddity of the Michelson-Morley experiment’s results - that the speed of light was independent of the speed of the light’s source - was a classic instance of an anomalous result while pursuing normal science. Physicists wrestled with the meaning of the Michelson-Morley experiment for a generation. Then a young clerk in the Swiss patent office proposed a theory that accounted for the experimental results, although Einstein said he was only indirectly aware of them. He proposed his relativity theory, and the Newtonian paradigm was subsequently overturned by the Einsteinian paradigm, and 20th century physics was born. Einstein challenged Newton’s assumptions of absolute time and absolute space, instead seeing them as relative. Previous assumptions were challenged and replaced, which overturned the paradigm.

Einstein realized that his theories would fall by the wayside one day, stating that every theory is eventually killed by a fact. Einstein also realized the limitations of scientific theories. He wrote that a theory “determines what we can observe.”^[1] A paradigm can illuminate, [but it can also blind](#). The trick is keeping one’s eyes and mind open, and not become captive to one’s point of view. In science, unfortunately, scientists are rarely able to see beyond the paradigm they were inculcated with. Max Planck best put it when he wrote,

“a new scientific truth does not triumph by convincing its opponents and making them see the light, but rather because its opponents eventually die, and a new generation grows up that is familiar with it.”^[2]

It is no accident that the greatest theoretical breakthroughs in scientific history were usually made by men less than thirty years of age, such as Newton, Einstein, Heisenberg, Maxwell and Bohr. They saw the old paradigms with fresh eyes, and proposed new ones. Even Einstein could become dogmatic, as late in his life, as he “reproached” Heisenberg, saying that he surely could not believe that “God plays at dice.”[3]

Kuhn argued that scientists adopt new paradigms not because the new one is more accurate, but because it becomes something they believe in. Kuhn’s observations helped ignite raging controversies about science, truth and reality. Those debates will not end anytime soon. Today, a materialistic paradigm rules the [scientific establishment](#). Everything is seen as a mechanism. There is no role for consciousness to play.

Ironically, the very men whose shoulders modern physics rides on – Einstein, Heisenberg, Schroedinger, Bohr, and others - did not subscribe to the scientific establishment’s materialism. They were all, to one degree or another, [mystics](#). [4] That has not stopped the various “[skeptical](#)” [societies](#) from mounting holy wars against anything not conforming to scientific materialism. There are striking similarities between the views of the scientific fundamentalists and the religious fundamentalists, as their worldviews have little to do with the visions of their prophets, and can be inversions of it. The members of skeptical societies often operate from a faith, a faith known today as *scientism*, which is the worship of science, believing its methods to be the only valid path to knowledge. Einstein wrote that “cosmic religious feeling” motivated the greatest religious *and scientific* heretics of history. [5]

Today, paradigms are being challenged across the entire spectrum of human thought. Mark Woodhouse’s *Paradigm Wars* is a formidable introduction and review of the current state of paradigm challenge and defense. Woodhouse discussed paradigm challenges in the areas of: environment, education, society, patriarchy, economics, religion, personal identity, science, and extraterrestrials. [6] The paradigms often center around dualities, such as patriarchy/matriarchy, but there is also seen a third way that attempts to integrate the polarities, such as Riane Eisler’s conception of gylany, which posits a harmonious co-existence of male and female principles. [7] Dualities being examined these days include: male/female, fear/love, destroy/create, objectivity/subjectivity, control/freedom, victim/creator, competition/cooperation and materialism/spiritualism.

One trap can be falling into the either/or [false dichotomy](#) regarding the dualities. One can be for neither patriarchy nor matriarchy, but gylany, which honors both genders. During the Cold War, Americans were fed the false dichotomy of choosing capitalism or communism, and falsely calling capitalism the “free” system, and communism the one that imprisons people. When the United States overthrew the *elected* Marxist government of Chile (and many others like it), the false dichotomy the United States purveyed of free/unfree about capitalism/communism was laid bare. Any attempt by the [colonized peoples to shed Western domination](#) was [rubber-stamped “communism,”](#) thus demonized, then subjected to military and covert attack by the United States, with [millions of people dying in the colonized world](#). Some dichotomies appear to have little middle ground, such as [love/fear](#). Various paradigms have become entrenched, with great economic, political and sociological consequences attending the adherence to paradigms, or challenging them. Each of the prevailing ideologies, whether it is [capitalism](#), nationalism, [materialism](#) or consumerism, has its foot soldiers, defending the paradigm that puts food on their table.

In medicine, there is a broad picture to see, which has numerous facets, some of which will be presented in this essay.

Masculine, Feminine and "Modern" Medicine

As Riane Eisler and others have made clear, two powers have been worshipped throughout human history: the power to make life, and the power to take it. Their correspondence to female and male principles is obvious. There is substantial evidence of goddess-based religions in the past, and evidence that the male, sky-god Judeo-Christian religions are ideological successors to a time when male-based religion wiped out

female-based religion.[8] Although feminists write about that issue at length, so did Joseph Campbell, the United States' greatest mythologist.[9] Campbell wrote that ancient mythology in west Asia (today's Middle East, Fertile Crescent region, etc.) evolved from female-dominated creation myths to male-dominated creation myths. It reflected the power struggles of the day, when herd-tending warrior societies, with their violent, male, sky-god deities invaded and conquered the agricultural societies with their feminine, earth-based, life-giving deities. The mythology eventually reflected who was in charge.

A prominent instance of the male-based corruption of feminine mythology was the evolution of the snake in symbology. Snakes were associated with women, healing and the regeneration of life (related to how snakes shed their skin) in ancient times. The Adam and Eve story in the book of Genesis turned feminine mythology upside down. Instead of being the source of life, Eve and the serpent were relegated to inferior, even malevolent, roles as they ruined the paradise deal that the Jewish god dictated to humankind.[10] Even though such refashioning of ancient myths to favor men persists to this day, the feminine symbolism persists in less obvious ways. Asclepius was the Greek god of medicine. His staff was entwined with a serpent, and the serpent-entwined caduceus is the symbol of today's American Medical Association (AMA). Among Asclepius' offspring were Hygeia and Panacea, the goddesses of health and healing. The word *hygiene* derives from the same word that Hygeia does. Hygeia represented the principles of prevention, sanitation, nutrition and healthy living. Hygeia represented the gentle principles of feminine-oriented medicine. They have largely been denigrated or ignored by male-dominated medicine for thousands of years, coming back into vogue only recently. They are largely minimized in medical circles even today, as there is no money in *preventing* disease. The current paradigm provides funding for treating diseases, not for preventing them. "Cure" can be sold by the pound, while prevention is only needed by the ounce, as Ben Franklin observed.

Below are some images related to the evolution of the serpent in Western mythology and iconography.

Click on image to enlarge

The West has engaged in a war against women for thousands of years; women are history's most consistently oppressed group. The power to give life is a decidedly feminine undertaking, but in the war against women, men have dominated and have exalted the power to take life as the ultimate power, hence our wars against each other, mother earth, our bodies, etc. Healing the human body is the province of the feminine principle, but men have taken it over. In a might-makes-right world, the mightiest rule.

Historically, women have dispensed most health care, but it was usually done for family members, and those women were not financially compensated. Even when saint-like figures such as Florence Nightingale brought women into the modern healing profession, along with the principle of sanitation, they initially had to work for free, and had to be completely subservient to the male doctors. In the standard, male-written histories of medicine, women are so scarce that they stand out as remarkable when mentioned.[11] There are debates about how many women died in the witch hunts (likely several tens of thousands, at least – and about 75% of all witch executions); how many were healers and midwives is also a source of debate, but what is not debatable is that when the Catholic Church's ideological dominance eventually gave way to the rise of Western science, the baton passed from one male-dominated establishment to another. When science rose in the West, generally considered to have begun with [Copernicus](#)' heliocentric theory, women were conspicuously absent. That was partly due to women often being forbidden formal education. Western religion and science were united in their misogyny. The conquest-of-nature attitude that still dominates Western thinking also reflected the denigration of all things feminine.

The witch-hunting centuries nearly wiped out herbal medicine in Western Europe, even though Paracelsus, the great Renaissance medical iconoclast, claimed that the best medicines he had seen came from women healers.[12] Medicine evolved from the gentle medicine of women healers to the leeches, purgatives, bleedings, mercury and other barbarities of male-based medicine. Even men of the day knew that women's medicine worked vastly better than the male-based tortures that masqueraded as medicine, but that did not stop the burning of "witches" and other suppressions of women healers. The archbishop of Saint

Andrews summoned a woman healer to cure him, which she did. He then had her burned to death for practicing "witchcraft" on him, partly to prevent having to pay her bill.[\[13\]](#)

Feminine medicine operates from the principle that prevention is best, that well treated bodies take care of themselves, being their own best medicine. When the body needs healing, feminine medicine is gentle. Remedies such as herbs and nutrition coax the body back to health.

Masculine medicine sees the body as a soldier on a battlefield. Not gentle, masculine medicine does not see the body as able to care for itself. As in cowboy movies, it is always riding to the rescue. It is the body versus the hostile world, or even against itself. The body becomes a battlefield, needing the intervention of medical violence.[\[14\]](#) It is life-taking, instead of life-giving. It uses antibiotics to kill off "invading" microorganisms. It violates the body with knives. It uses powerful drugs that violently manipulate the body's chemistry. It does not give the body what it needs to heal itself. It does not trust the body's wisdom, certain that it is clever and powerful enough to manipulate the body into health. It operates from the victim principle.

In the case of cancer and vascular disease, masculine medicine sees the body itself as the enemy. With cancer, parts of the body "turn traitor" and the goal of masculine medicine is annihilation. Surgery, chemotherapy and radiation all operate under the paradigm of attacking the body, asserting that it is discerning enough to kill the "bad guys" while sparing the "good guys."

The issue of masculine versus feminine medicine is a conflict between paradigms. That mentality can be seen throughout Western Medicine, from childbirth interventions (and even before, as with amniocentesis) until a patient's deathbed.

The masculine medical paradigm has waged war specifically against women's bodies. Women used to give birth in a squatting position, which is by far the most effective method. Louis XIV changed the practice from women squatting to them lying on their backs. It was done so he could have a good look at one of his mistresses giving birth. The birthing stools of the day did not afford him a clear and salacious view, and he had the practice changed so he could peek from behind a curtain at the festivities. Giving birth on one's back is much harder on the mother than letting gravity help. Fortunately, that practice is waning somewhat. It has taken "medicine" three centuries to begin undoing the damage of a perverse king.

Changing the childbirth position is the least of it. Male, Western doctors devised fiendish methods of "treating" women's problems. Clitoridectomy was used in the nineteenth century, prescribed for maladies such as hysteria. The Greek word *hysterikós* meant womb, and is the root of the word *hysteria*, a decidedly misogynistic word. If a woman was insufficiently obedient to her husband, a diagnosis of hysteria could be obtained, and a clitoridectomy was performed. In the 1870s, a London doctor specialized in performing clitoridectomies without obtaining informed consent from his patients, which got him kicked out of the business, not for performing the operation, but for doing them without consent, and also because he was a self-promoter. He simply moved to the lax regulatory atmosphere of the United States and continued practicing his treatments. Suspicion of the vile behavior of masturbation was grounds for the operation. If a woman was too orgasmic during sexual intercourse, the operation was also the recommended "cure."[\[15\]](#) Part of that practice's justification was contraception, as the day's theory stated that if a woman did not attain orgasm, she could not conceive. Male Western doctors have never advocated castration or penisectomies for "curing" male maladies.

In the 20th century, lobotomy was one method of "curing" many maladies, prominently used on women. Hysterectomy and mastectomy have been very "popular" over the past century, invented and performed almost exclusively by male doctors. They operate from the principle of "when in doubt, cut it out." From foot binding in China, to Suttee in India, to hunting witches in Europe, to clitoridectomy in Africa, to the "enlightened" practices of modern medicine, the record is long and grim.[\[16\]](#)

In America, Caesarean section "childbirth" is performed in about a quarter of all births. In Europe, where they did not wipe out all the midwives, the rate is half of America's, and in Japan, the rate is only 7%. In profit-making hospitals, the rate in America is more than a third, and some doctors warn that it will go over 50% in

the current legal climate, where the "when in doubt, cut it out" philosophy guides hospital doctors. It already is 50% in some hospitals, if the woman is white with medical insurance. As America's Caesarian rate has gone up, its infant mortality ranking among the world's nations has correspondingly dropped. The Caesarian rate in the United States is more than three times Japan's, and its infant mortality rate is nearly twice as high, and is higher than that of any nation in Western Europe.

When a Kansas insurance company began paying doctors the same amount for delivering a child, whether the birth was Caesarean or not, Caesarean sections declined by over half within one year. In a hospital in Pithiviers, France, supervised for many years by an enlightened male obstetrician, where they do not induce labor or unduly interfere, the Caesarian rate is less than 7%, substantially less than nearly any Western hospital. At a home birth community in Tennessee known as The Farm, the Caesarean rate was less than 2%. The stress on the infant and mother is enormously higher with Caesarean birth, as well as "complications" that risk their lives. Even with "normal" births, the episiotomy rate in U.S. hospitals approaches 100%, where it is about 6% in Scandinavian hospitals.[\[17\]](#) Episiotomy is a painful and dangerous practice that causes severe complications with mothers, but in the rush to cut, the practice is standard in American hospitals. Midwifed births have a far lower infant mortality rate than doctor-supervised hospital births. Women report far more satisfaction with the childbirth process if they can deliver it outside of a hospital environment, particularly in America, where women are often seen as little more than packages to be opened to remove the prize. A mother's complication rate is many times higher with Caesarian section births than vaginal delivery, and their death rate much higher.[\[18\]](#)

There have been some victories in the area of childbirth. After the medical profession nearly rendered them extinct, midwives have staged a comeback in America. In Washington State in the year 2000, House Bill 2031 was passed, and my medical insurance company was forced to provide coverage for midwifed births.

Western medicine is a money machine. America spends more than one trillion dollars a year (\$1.3 trillion in 2001) on health care. A tiny fraction is spent on prevention, and the prevention is worse than the disease in many instances, and even causes disease.[\[19\]](#) Instead, nearly all the money goes to dramatic interventions, dominated by drugs and surgery. Dr. Julian Whitaker once challenged his readers to try naming a common mainstream medical treatment in America that *was not* a drug or surgical procedure. Whitaker bet that they could not.[\[20\]](#) The entire Western medical paradigm may be built on a shaky foundation.

Lessons in Reversing Heart Disease

During my father's career, he gradually gained weight. He was an exceptional athlete in his youth, but by age 34 the American diet combined with his desk job took its toll. He went from about 155 muscular pounds in his youth to more than two hundred. He also drank heavily. Early in 1970, he began having kidney problems, quit drinking cold turkey, and has not had a drop since. He quit smoking around 1960 the same way.

In June of 1970, although he had stopped drinking, he weighed about 200 pounds, had high blood pressure and incipient angina. He was developing arthritis. His father had similar problems, and soon had a string of heart attacks that forced him into retirement. The naval base where my father worked was a high-stress environment, and the coronary care unit in nearby Oxnard was filled with professionals from the base. My father was obviously heading for a heart attack, and he wanted to prevent it.

My father was suffering from arteriosclerosis. Arteriosclerosis, like atherosclerosis, is a disease of the blood vessels. Those and related diseases kill one million Americans annually today. What happens is that the blood becomes "polluted" with matter that helps form deposits on the blood vessel walls. A deposit breaks off from the wall, or the turbulence created by the rough cell walls allows a blood clot to form, which eventually lodges in a blood vessel supplying the heart, brain or other vital organ, which often kills the person. The process of arterial clogging and hardening begins very early with Americans. Recent research has found that the process can even begin in the womb. In 1970, Western medicine considered hardening of the arteries to be a normal aging process. The blood pressure tables of the day had the ideal blood pressure steadily increasing as one got older. When I told that to an uncle recently, he said, "Yes, the formula we

were taught was 80 plus your age.” I was able to look that advice up in *The Book of Health*, published in 1973.[\[21\]](#)

Since arteriosclerosis was considered a normal part of the aging process, my father was told that the hardening and clogging of his arteries was normal, and that the only hope of avoiding a future heart attack was taking some pills. That was the best that “medicine” could do. Essentially, my father was given his death sentence, to be executed at some future date, perhaps before long. In those days, medical doctors in America were a short step below God in the hierarchy of existence, yet my father sought a second opinion, and not from another physician.

He obtained a booklet titled *Stale Food vs. Fresh Food: The Cause and Cure of Arteriosclerosis*. It was the result of research by American biologists from Arkansas. It presented the theory that arteriosclerosis was a disease of civilization, particularly the consumption of “civilized” food. Wild animals and “primitive” humankind had virtually no hardening of the arteries. Only modern man “[preserves](#)” his food. The booklet stated that the process of “preserving” food robbed it of its nutritional value. More than that, the process of “preserving” food created the substances responsible for hardening the arteries.

According to *Stale Food vs. Fresh Food*, dead food, particularly flour products, caused hardening of the arteries, and live food was its cure. The vast majority of Americans are so addicted to processed food that they cannot imagine changing their diets. I have seen only a few people significantly change their diets, even when their eating habits were killing them and they knew it. I have never seen an adult change his/her diet when their spouse and/or family did not support it. People are creatures of habit, and the eating habit is perhaps the most ingrained one we have, but my father was trying to save his life. When he stopped smoking and drinking, and when he decided to eat live food, he just did it. Nobody else in the family smoked or drank, but we ate like the average American family. In California, there was more fresh produce available than in other states, so we already ate more fresh food than most Americans, but our family diet was not otherwise remarkable.

At that time, my breakfast consisted of a huge bowl of Cornflakes, drowned in sugar. My culinary specialty was making inch-thick peanut-butter-and-jelly sandwiches, eaten with a soft drink. Twelve-year-old boys can eat like there is no tomorrow. I was the average American kid, diet-wise. One memorable day in June 1970, as I sat at the kitchen counter, eating my bowl of Cornflakes, my mother walked into the kitchen and said, “Do you know those Cornflakes are bad for you?”

My father embraced *Stale Food vs. Fresh Food*’s findings and was determined to try it, and decided the family would follow suit. I read *Stale Food vs. Fresh Food* and was impressed. The booklet laid out its thesis and research clearly. It presented numerous case histories of health miracles attending the change of diet from processed food to live food. Old people suddenly began acting and looking twenty years younger when put onto live-food diets.

The booklet had photos of cadavers' arteries sliced open and laid flat. The photos were of arteries at various ages, from age three to seventy, of *average* Americans. At age three, the plaque could be seen beginning to finely coat the artery wall. By age twenty, the process had begun in earnest. As the person aged, the artery became distorted, no longer running straight. The artery walls got thicker and thicker with the deposits, and instead of running straight they began looking serpentine, like question marks. By age seventy, the artery was almost unrecognizable. They were some of the most obscene pictures I have ever seen, and those were *average* American arteries.

My entire family changed eating habits, and I was a willing participant. It was not a complete change to live food with no looking back, but it was radical. We ate junk food from time to time, and I know firsthand how hard it is to swim against the current of society in something as fundamental as eating. My father was trying to save his life, however, and followed it to the letter. It worked. Results were seen almost immediately, and in two years my father’s health made a complete turnaround. He lost forty pounds. The angina and arthritis disappeared. His blood pressure went from abnormally high to “abnormally” low. It was not really abnormally low, but according to the inflated blood pressure tables of the day, where arteriosclerosis was considered normal, it was. He turned himself into a superman. He later said it was the healthiest he had ever felt. He spread the news of his cure to all who would listen. He began preaching the virtues of live food to relatives, friends

and coworkers.

That was 1970, and it was radical talk to state that your diet could make you well. To a degree, it still is. The mainstream medical doctrine of the day stated that hardening of the arteries was irreversible. That belief is still entrenched today, even though they now admit that when they said that hardening of the arteries was a normal aging process, *they did not know what they were talking about*. The issue of irreversibility is a medical dogma even today. I just reviewed my *Mayo Clinic Family Health 1996 Edition* CD ROM, and regarding vascular disease and diet there was virtually no mention, and no mention at all of diet as a way of treating it. The Mayo Clinic's advice was solely devoted to drugs and surgical procedures.

To date, I know of nobody who radically changed their diet to live food and did not benefit immensely from it. The problem is that very few people do it. Hardening of the arteries is indeed reversible. Modern medical doctrine aside, [Dr. Dean Ornish](#) has had success in reversing heart disease with his health regimen, which is mainly about eating a live food diet.[\[22\]](#)

My father convinced some of his coworkers to try out a live food diet, and one man lost more than fifty pounds while eating more than ever, and reversed his health problems. A few coworkers and his immediate family were about the only people that my father ever persuaded to change their diets. The most common reaction was to call it all "crazy." The term "health nut" came into use around that time. That my father was living proof that it worked made no difference to people addicted to processed food. They looked to the pronouncements of the medical establishment for guidance, and there was nearly complete silence on the issue of diet. I talked to people about it, and was amazed at the hostile reactions I received. At age 12 I learned that few want to hear that their addictions are harmful, and it was no different with processed food.

I learned to be cautious about voicing unpopular opinions. I only give health advice to those around me when it appears it will be received, which is rarely. I have watched numerous people die at the hands of Western medicine over the years, and it has not been easy to watch. American physicians receive almost zero nutritional training, and what little they do receive is often propaganda from the food processing industry. Consequently, they *cannot have an informed opinion* on the issue.

When I was 17, my father brought home Paul Bragg's *The Miracle of Fasting*, which was his magnum opus. Today, evidence points to Bragg lying about his age and other things. I present the evidence in [this essay](#), with the background at this footnote.[\[23\]](#) With the fraudulent misrepresentations aside, [Jack LaLanne](#) was one of Bragg's pupils (he was the classic 98-pound weakling when he met Bragg as a teenager), and Jack is still going strong in his 90s. Bragg promoted other health ideas such as regular fasting, which has been part of my health regimen [for more than thirty years](#). His charlatanry aside, Bragg's advice is about all I have ever needed, and I doubt that anybody will come along and improve on it much. The ways of health are quite simple: eat live food, exercise, fast, drink pure water, have pure thoughts, get out in nature. That is about all anybody needs to know. It is the essence of Hygeia's role in medicine. There is nothing of significance to add, except perhaps realizing that humans are poorly designed to eat animal flesh. I have been a [vegetarian](#) for many years, with no ill effects and many positive ones.

The medical paradigm regarding the biggest killer in America is obviously false. Prevention is the only answer worth talking about, and what prevents heart disease also cures it.

The same kind of gangsterism that we encountered in the [energy industry](#) is possibly worse in medicine. In 1990, I obtained a book titled *Medical Dark Ages*, by Ralph Hovnanian.[\[24\]](#) The book chronicled the studies that have been performed with alternative cancer treatments, and their success rates. They nearly all had higher batting averages than surgery, chemotherapy and radiation. They are, nearly without exception, harmless. They are nearly all vastly cheaper than mainstream methods, *and they are all illegal in the United States*. In many states, doctors have gone to prison for prescribing them to their patients. *Medical Dark Ages* listed the results of hundreds of studies that covered dozens of treatments. I had already been obtaining other material about alternative cancer treatments, but *Medical Dark Ages* was my wake-up call.

For all the information involving alternative cancer treatments, what bowled me over in *Medical Dark Ages* were

the more than [100 pages of quotations](#). I would read the quotes for an hour or so and get a kind of intellectual vertigo, overwhelmed by the quotes. With Ralph's enthusiastic permission, I reproduce many of them [on this web site](#), organized slightly more than Ralph has. Ralph spent years collecting a vast array of quotes from various sources about the medical industry, the cancer industry in particular. Before I deal with the cancer industry, here is a quote that lays out another aspect of the medical establishment. Here it is.

"Although I found that the booklet (*Stale Food vs. Fresh Food*) contained some helpful suggestions and its author, Mr. Robert Ford, is a knowledgeable and sincere person (i.e. no intent to defraud), I found the representations in the Respondent's booklet to be unproven and contrary to the weight of informed medical and scientific opinion. As indicated by Dr.____, (the only U.S. Post Office medical witness) a danger of this publication is that it will deceive people who have arterio-sclerotic problems into believing that they can cure these problems by diet alone instead of seeking medical (AMA) help. Because the ads and this booklet contain materially false representations, they violate the provisions of 39 US Code Section 3005. Therefore...a mail stop order...should be issued..." - **E.S. Bernstein, Administrative Law Judge, (1982)**.

That booklet saved my father's life. The mail stop order made it illegal to send it through the U.S. mail system, effectively banning it in America. In effect, it was similar to the Nazi/Catholic book burnings. [Using the U.S. Post office](#) is an effective tactic to wipe out alternative health practitioners. It is only one weapon in the medical establishment's arsenal, but it is an effective one. Here is a [link](#) to a full account of the banning of *Stale Food vs. Fresh Food*.

One million people per year in America die of vascular disease, and our dietary and health habits are nearly solely responsible for it. The most obvious factors are things such as smoking tobacco and drinking alcohol, but diet may be responsible for most of it.

In short, our bodies are designed to eat live food, as are all animals. We are the only animal that eats dead food, and the diseases we fall prey to are almost unique in the animal kingdom, particularly in their frequency. Living processes provide the nutrition that we get from food. When food is killed, those life processes cease, and it begins decomposing. Enzymes, vitamins and other vital substances can rapidly decompose. When [humanity ventured out of its natural range in the tropics](#), we eventually learned to domesticate plants and animals and preserve food in order to survive the seasons. We have done it so long that it is taken for granted, yet it is not a natural or ideal process.

We have huge industries based upon food processing, and through their wealth and power they have completely obscured the issue of how harmful dead food is to human biology. It is related to the corruption of medical science discussed in this site's [fluoridation essay](#). In the materialistic and reductionistic way that modern science has defined nutrition, a bowl of shredded cardboard sprayed with vitamins (which is close to describing most breakfast cereals) can be more nutritious than a bowl of fresh strawberries.

Pets also suffer from the degenerative diseases that humans manifest, because they are the only non-human animals to eat processed food. It can be argued that we get degenerative disease (degenerative disease kills two-thirds of all Americans) because we live so long, but the experiences with the Hunzas and other "primitive" societies, demonstrate that age may have little to do with it.

Degenerative diseases are cumulative chronic conditions, so they largely show up in later ages, although there has recently been a great increase in cancers in American children, for instance. The medical profession incredibly still advocates drugs and surgery to "correct" heart disease. That is arguably not because it is the best answer, or even really works, but because they make big money from providing their "treatment."

In the 1970s and 1980s, three major studies were published on the effects of coronary bypass surgery, and they are the only studies published to date. None of them demonstrated a significantly higher survival rate for

the group that had bypass surgery versus those who did not.[25] Even the angiogram that supposedly diagnoses people who “need” bypass surgery is virtually worthless, as attested to by all the studies published to date.[26] Even though the diagnosis and treatment are worthless, the coronary bypass business is among earth’s most lucrative, raking in more than \$50 billion per year in America. When Dr. Henry McIntosh at the Baylor College of Medicine, where the first bypass surgery was performed, published an assessment of the first ten years of bypass surgery results, he stated that there were virtually no measurable benefits from bypass surgery. Soon after publishing his paper, he was forced to leave Baylor.[27] His is not an [unusual fate](#). People with private insurance are 80% more likely to have an angiogram than a Medicaid (welfare) patient, and are 40% more likely to have bypass surgery.[28] In his book, *Heart Frauds*, after Charles T. McGee, M.D. exposes the scam that American medicine is regarding artery and heart disease, he then recommends what people should do to prevent those diseases. His advice is almost all about eating live food, just as in [Stale Food vs. Fresh Food](#). [29] Fortunately, his book has not yet been banned.

The medical profession is not alone in its anti-scientific methods. The food processors, similar to the fluoride polluters, have been busily buying up scientists who will tell Americans that processed food is good for them. The food processors, chemical companies and [agribusiness](#) companies all have a mutual self-interest in making their products appear safe and beneficial to the public eye. They are not really safe or beneficial, but people such [Frederick Stare](#), [Elizabeth Whelan](#) or [Steve Milloy](#), who are scientists in their employ, will tell us that most of what they produce is healthy. Tobacco company front man Milloy then has the gall to turn around and state that, “One in three Americans develops cancer as a function of being alive.”[30] Those overlapping areas of self-interest form what can be variously called a “power structure,” an “industrial complex” or an “establishment.”

Early Western Medicine

The study of anthropology impinges directly on the issue of medicine. As a science, anthropology is multifaceted, multidisciplinary, and has come a long way from its Victorian-era roots. The aspect of anthropology that deals with the distant human past is fascinating, replete with controversy, competing theories, new tools (such as DNA testing of fossils), and varying degrees of agreement regarding the human past. Again, as Kuhn observed, agreement does not mean that anthropologists as a whole are “right,” but that they agree. Nevertheless, there are areas of general agreement that appear to conform to the evidence adduced thus far, when the evidence has not been suppressed, such as how the findings of [Dr. Virginia Steen-McIntyre](#) apparently were, when they suggested a far earlier date of human habitation of the New World than the prevailing theories. Such suppression of anomalous data is far more common in the sciences than most think. [Dr. Phyllis Mullenix](#) encountered similar career destruction when she discovered that the fluorine ion damaged the brain. There is evidence that can argue for technologically advanced civilizations long ago, extraterrestrial genetic intervention in evolving humanity, greatly shortened or lengthened timelines, and room for the use of such tools as psychometry. Reintroducing a creator and consciousness into the framework is necessary if humankind is to escape the materialistic orientation that [threatens it with self-extinction](#). [31] Anthropology has a long way to go, but with all those caveats, there is a generally agreed upon story of the human past.

According to today’s prevailing theories, humankind on earth evolved in Africa long ago, as an evolutionary offshoot of the tropical apes that lived there. *Homo erectus*, the first erect, large-brained protohuman, appeared on the evolutionary scene more than two million years ago. *Homo erectus* migrated beyond Africa and the tropics more than one million years ago. *Homo sapiens* also likely first appeared in Africa, eventually displacing all other hominid species. As *Homo erectus* migrated beyond the tropics, the year-round supply of fruits, blossoms and seeds that make up about 80% of today’s great-ape diet could not be found in the harsher climates, with their seasons. *Homo erectus* had poor plant-scavenging prospects beyond the tropics for most of the year, mainly because they could not digest cellulose the way that ruminant animals can. [Cellulose](#) makes up the majority of plant structure (it forms the cell walls), and most animals cannot digest it. Gorillas have that ability, to a degree (chimpanzees also, to a lesser extent), and can thus adapt to leafier diets better than other apes. Dormant plants cannot provide much of the starch, sugar and fat that hominids use to fuel their

bodies in their native habitats. In order to survive beyond the tropics, early humans adapted their behavior. They hunted and ate animals, and wore the fur of their prey. They sought shelter from the elements, as in caves. They developed tools to help them hunt and eat, made of stone, wood and bone. Early humans learned how to control and use fire. Some of those behaviors originated in Africa, but they were refined to an art form in order to survive beyond the tropics.

Life was far from easy, and early humans died from injuries, starvation, infections, parasites, and some diseases. Also, those early hunter-gatherer humans invented a new behavior, nearly unknown in the animal world: as humans learned to kill large animals, [they also killed each other](#). What are called modern humans appeared on the evolutionary scene perhaps around 100,000 years ago. They learned other adaptive behaviors, such as building dwellings and boats. Those innovations enabled humankind to migrate further than before. The arrival of humans to the continents known today as Australia and North and South America is commonly thought to have coincided with the [extinction of large mammals](#). Humans may have caused the so-called megafauna extinctions. The issue is not settled, but the “overkill” hypothesis is persuasive.[\[32\]](#) [Humans are poorly designed to eat flesh](#). For one thing, true carnivores have high acid concentrations in their stomachs, which not only digest the rotting flesh rapidly, but the high concentrations kill parasites and deadly bacteria in the meat. Carnivores produce ten times as much hydrochloric acid as humans, cows, horses and other herbivorous species do, at twice the concentration, for twenty times the amount. A carnivore has a stomach pH of between one and two while the stomach is full, while a human stomach has a pH of between four and five. Humans do not enjoy the carnivorous stomach’s protection, and parasitic and bacterial infection was one effect of eating flesh, particularly in the large quantities that the early hunter-gatherers could ingest.

As humans pursued the hunter-gatherer lifestyle, their numbers grew as they migrated across the planet. What led humans to domesticate plants and animals? The Victorian era’s dominant hypothesis was that the domestication revolution of about ten thousand years ago was merely part of humankind’s endless progress. Today, it is more generally thought that population pressures forced the issue, in Malthusian fashion.[\[33\]](#) The big, easily killed game was extinct, hunter-gatherer methods cannot sustain dense human populations, and domestication may have been more a child of necessity than progressive invention, although there was probably interplay of those factors. So, beginning around ten thousand years ago, most earthly animals and plants that could be effectively domesticated were. There have been few species of plants or animals domesticated in recorded history. The last large mammal productively domesticated was the camel, about 4500 years ago. In modern times, moose, bison and other large mammals have been subjected to domestication attempts, with limited success.[\[34\]](#) Strawberries, raspberries, pecans and some other plants have been domesticated during history, but nearly all human plant consumption is of species domesticated before history was recorded. However, the fossil record does not tell a healthy story about the transition from hunter-gatherer to shepherd and farmer. Human skeletons became significantly smaller when the domestication revolution happened.

Violence is apparently proportionally greater in the hunter-gatherer lifestyle than in “civilization,” even including civilization’s innumerable wars. Civilization spawned many things both beneficial and disastrous for the human species. Permanent dwellings, writing, specialized professions and other “advancements” were part of civilization’s seeming benefits. Their companions, however, were [organized warfare](#), environmental degeneration, social hierarchies, exploitation on a grand scale, and - what concerns this essay - epidemic and degenerative disease. Hunter-gatherers ate living food. They had to constantly move around, because there was little vegetation that humans could eat, especially during periods of plant dormancy. Although chimpanzees are the most carnivorous of the great apes, flesh only amounts to about 1 to 2% of their diet, and they do not eat carrion. The mountain gorilla eats insects sometimes, and that is the most carnivorous part of its diet.

The great apes subsist mainly on live fruit, not hunter-gatherer fare, and the domestication revolution further altered the human diet. Not only were great amounts of flesh eaten, but grasses were domesticated for their seeds, hence wheat, corn, barley, millet, oats, etc. Legumes (mainly beans) were domesticated, as well as root crops. Domestic grains, legumes and root crops are relatively new innovations in the human diet, yet they make up the majority of it today, and humans have not evolved to ideally eat them. In addition, [fruits are designed to be eaten by animals](#), as a way of dispersing the seeds. Fruit’s sweetness is attractive to

great apes and other animals, hence the human sweet tooth. Such is not the case with grains, legumes, roots and much of what are called vegetables. That is why a sweet dessert rewards eating an unsweet and often disagreeable main course.

Flowering plants appeared on the evolutionary scene about [135 million](#) years ago, about 70 million years before primates did. When flowers are fertilized, they grow into fruit, which is an evolutionary adaptation where the plant is not eaten to satisfy animal hunger, but the fruit provides the animal with energy, and the plant a means to distribute its seed. Primates are primarily tree dwellers, and fruit comprises 65% of the great ape diet. It is a perfect symbiosis of plant and animal. That symbiosis is not evident in roots, for instance, as eating a plant's root kills the plant. The same goes for vegetables. Grains and legumes are seeds, and are not ideal foods, and many are highly toxic, and even through domestication, there are toxic and other properties of grains and legumes that make them difficult to digest. Humans eat only about 2% of all legume species. The natives of California used acorns as a staple food. However, they had to leach the tannic acid from the acorns in order to eat them. Seeds rarely have symbiotic relationships with animals, and plants have many adaptations to minimize animal predation, such as thorns, thick husks, etc. The castor bean is toxic to all animals, even insects. Some insects eat toxic seeds and use the seed's toxic properties to make *themselves* toxic to animals that would otherwise eat them. Those non-fruit plant parts are not ideal foods, which is partly why organs such as livers and kidneys exist, to deal with the toxins. Those crops have not had all their toxic and non-digestive properties bred from them, and it may not be entirely possible.

Cooking and other food processing can minimize certain toxic chemicals (such as acid in acorns and the cassava root), make more of certain substances digestible (such as protein in grains), and kill parasites and bacteria in flesh, but such processing also destroys enzymes, vitamins and other nutritious substances. Domesticating and growing those plant parts that humans can digest (largely non-cellulose parts) is a mixed bag. The same goes for the domestication of animals and eating large quantities of flesh and milk products. Also, our food animals are often raised on grain diets, which they are not suited for, and they become fatter than normal (among other health problems) also [by design](#) (feed, genetics, drugs, hormones, etc.), but obviously not ideal for those consuming their flesh. Most of adult humanity (about 70%) is lactose-intolerant, which means that they cannot effectively digest milk products. There has been some evolutionary adaptation in adults who can digest milk, but as somebody who has eliminated milk products from his diet more than once, I can say that even descendants of pastoral societies are far from ideally adapted to consume milk products. We are the only creatures on earth that consume milk as adults, and it is not from our species. Less than one percent of humanity is gluten-intolerant, which is a protein found in wheat. I cannot comfortably digest quinoa, a New World grain. Many people have allergic reactions to corn, peanuts, eggs, milk, meat, the nightshade family, etc. (although some of those reactions are undoubtedly due to how the food was raised and prepared, or attendant chemicals such as pesticides). Those are some of the prices humanity has paid for leaving its natural habitat.

Civilized people developed methods to survive the seasons, which were largely based upon food preservation. Cooking, grinding, salting and other methods were used to preserve food. What is largely overlooked is that preserving food means preventing further decay. Food preservation is often a method of decaying food to a level where it takes a long time to decay further. Cooking destroys enzymes and robs food of its nutritional value. Grinding food destroys its structure and hence creates a rapid deterioration in what remains. Modern methods of bleaching flour further rob it of nutritional value, and are performed by design. Bleached flour is far less inviting to insects that eat unbleached flour, because there is little nutritional value left. One way to kill the mice that infest mills is to let them eat all the bleached flour they want. They then quickly die. Spicing, salting and drying are other methods of food preservation, but living food is obviously far more nutritious than the cooked, spiced, salted, or dried versions. With animals, domesticating them allowed humans to keep living food around during the winter, killing the animals as needed. The prevailing theories today hold that nearly every epidemic disease is a consequence of domesticating animals, civilization's dense human populations, and civilization's filth. Accordingly, measles came from dogs or cattle, bubonic plague from rodents, influenza from pigs and ducks, smallpox from cattle, the common cold from horses, and so on. Infectious disease needed dense human populations in order to spread to epidemic proportions. The sparse, relatively clean hunter-gatherer populations did not experience epidemic disease.

With the rise of civilization, humanity began soiling its nest. In the early days of civilization, there were no

sewers, dumps and other measures for keeping civilization clean. Filth accumulated and disease flourished. The filth was closely related to “germs,” and improving sanitation and nutrition ended most epidemic disease, with [vaccination](#) receiving little or no credit (perhaps even negative credit).

Civilization began before history, as it took time for writing to develop. The first known writings were the cuneiform tablets used in Sumeria, and of the 30,000 surviving cuneiform clay tablets discovered in Mesopotamia (literally “land between the rivers,” today’s Iraq, part of the Fertile Crescent), about 1,000 dealt with medicine.[35] Women’s status declined during the Sumerian centuries, reflecting not only the culture’s degeneration, but also the conflict between masculine and feminine principles. In addition, the agricultural methods, relying on irrigation, eventually [degraded and salinated the soil, making it infertile](#).[36] Filthy urban conditions, undernutrition and malnutrition lead to susceptibility to epidemic and degenerative disease, and in conjunction with Old World civilization. The earliest medical professionals undoubtedly noted the contribution of filthiness and poor nutrition to disease. While the historical record of long ago is sparse, and was written to favor the victors (men and masculine principles), the notion of sanitation and nutrition as disease prevention survives in the mythological Greek figure of Hygieia, a woman.

By the time of Hippocrates, when the foundations of Western medicine (and modern democracy) were supposedly laid, men had taken over the medical profession. Aristotle theorized that women were inherently inferior because of their biology. In ancient Rome, women were treated relatively better and were better represented in the healing arts. Even though Rome had sewers (they first showed up in Assyria and Crete, as far as today’s archeological evidence suggests, but they also may have existed earlier in civilization) epidemic disease swept through ancient Greece and Rome, and is thought of as partly a consequence of their imperialism, bringing new diseases back with the soldiers, slaves and imperial commerce.

One problem with historical investigation of early medicine or any ancient culture is that the analysis is often of stones, bones, the writings of the elite, the lives of kings and so on. It is difficult to get an intimate sense of the times, and what life was really like back then. My [paranormal experiences](#) showed me that there is far more to consciousness than the West admits. When modern commentators scoff at ancient “superstitions” and “witch doctors,” how much of that is a self-serving projection? Psychic healing is real, and the “placebo effect” only hints at the potential of human consciousness to create disease or health. People used to be much more connected to their dreams, and they had importance in their waking lives. Some of today’s scientists pass off dreams as some kind of garbage that the mind sheds during sleep. The most open-minded of them may have little appreciation for the inter-dimensional doorway that dreams could represent. What were the dreams of ancient humans like? Studying stone axes, pottery fragments and bones provides little evidence.

While the West *has* “advanced” in some important ways, it is also evident that even though there surely was superstition in ancient healing, and a poor understanding of anatomy, in some ways those “primitive” doctors are still ahead of Western medicine. Socrates could well have been speaking of today’s medical establishment when he said, “The cure of many diseases remains unknown to the physicians of Hellos because they do not study the whole person.” Holistic medicine is still marginalized in Western medicine, more than two thousand years later. The feminine-oriented (they did not have to be women to be feminine-oriented) healers of an earlier era may have had a better grasp of the role of the patient’s personality and spirit in healing than those Hellos doctors, or today’s.

Today’s books about Western medicine’s history largely focus on two men from ancient times: Hippocrates and Galen. Their work formed the foundation of Western medicine. Hippocrates lived during Greece’s classic period, about 400 years before Jesus was born. Many works attributed to Hippocrates are not his, but from the school of thought he came to represent. The Hippocratic method was founded upon observation and reason, and its primary dictum was “first, do no harm.” Western doctors take the Hippocratic oath today.

Galen was also Greek, lived during the second century AD, but made his mark in Rome. Galen was a prolific writer, and he furthered the Hippocratic notion of observation. Galen dissected animals and applied his findings to human anatomy. Unfortunately for the West, Hippocrates’ work fell victim to Roman Catholic hostility toward all things Greek, and Galen’s work became dogmatized. The principle of observing nature was abandoned, Galen’s works ironically became a bulwark *against* observing nature, and medical authorities uncritically repeated his work for more than a millennium.

The Catholic Church, which largely took over the healing profession when the Western Roman Empire collapsed, helped dogmatize Galen's work. The Church was a misogynistic institution, the Western healing profession largely passed into its control, and women were shut out. Early Christian theorists denied that women, being made from Adam's rib, had souls. There were still plenty of women midwives and herbalists, but they were rarely part of the Church-dominated healing profession. During the Middle Ages men dominated professional medicine, with some women healers, such as Trotula of Salerno and Hildegard of Bingen becoming prominent in the late Middle Ages, although many male doctors today cannot believe that Trotula could have been a woman, as prominent as "she" was.[\[37\]](#)

The Catholic Church had all the classic Greek texts burned as pagan, and about the only reason the West knows much about Hippocrates, Socrates, Pythagoras and friends is that Islamic scholars translated their works into Arabic, to finally come back to Europe in Latin after 1000 AD. The "[Reconquest](#)" of the Iberian Peninsula opened the great Islamic libraries to European Christians, and the logic and reason of the Greeks began "infecting" Italy and elsewhere in Europe during the High Middle Ages. The fall of Constantinople to the Ottoman Turks in 1453 helped further the revival of Greek scholarship in the West. The fall of Constantinople also set in motion [Portuguese](#) and [Spanish](#) attempts to find another route to gain [Asian spices](#) and goods, followed by the Portuguese sailing around Africa and [Columbus' fateful voyage](#).

In the healing arts and science, the Islamic culture far outstripped Church-dominated Europe. Around 1200 AD, the Islamic culture had perhaps the world's highest standard of living. Islamic medicine expanded the West's pharmacopoeia, kept the classic Greek teachings alive, and Jewish doctors such as Maimonides were influential in European medicine. The Renaissance era saw a European revival of interest in ancient Greek teachings, and discoveries across the Atlantic Ocean spurred [genocides](#), [gold rushes](#), massive population movements and [empire building](#). The [printing press and widespread literacy](#), instead of becoming a tool of a proselytizing Catholic Church, became a tool of the Protestant Reformation and political revolutions. From the ferment of renaissance and imperial Europe came the rise of modern science and medicine.

In 1543, Nicolaus Copernicus lay on his deathbed and happily examined an advance copy of his newly published book, a work that ultimately overturned more than a millennium of Ptolemaic theory that made earth the center of the universe.[\[38\]](#) Copernicus, although he was a devout Catholic, eventually defeated Catholic dogma with his book, a work so influential that it is widely considered to have initiated the rise of Western science. Although Giordano Bruno was burned alive for holding to Copernicus' view (and other radical notions) and [Galileo Galilei](#) was forced to recant (which dissuaded people such as René Descartes from further considering heliocentric theory), Copernicus' work eventually prevailed.

Galen's work guided "knowledge" of the human body until Andreas Vesalius appeared. A native of Brussels, Vesalius published another work that overturned a millennium of dogma. It was published in the same year as Copernicus' seminal work. As with Galen, Vesalius dissected animals, but he also dissected human beings (by raiding gallows and other grim places) in a way the West had never seen before. He eventually discovered that hundreds of Galen's findings were incorrect, largely because Galen extrapolated findings on dissected animals to humans. Vesalius' book, *De Humani Corporis Fabrica*, is considered the first work of modern scientific medicine.

Galen and Vesalius had important similarities. Galen parlayed his work into becoming the personal physician to the West's most powerful men: Roman Emperor Marcus Aurelius and his heir Commodus. Vesalius also used his work to become the personal physician to the West's most powerful man: Charles V, Holy Roman Emperor and King of Spain during the peak of Spain's power. Although Galen and Vesalius' names are hallowed in the annals of medicine, there are other parallels less savory. Both men not only dissected animals, they both dissected *living* animals. Those men were the West's first vivisectionists. That fact demonstrates the life-taking, masculine paradigm, and it is also spiritually primitive. The [spiritual](#) probably cannot be effectively divorced from the material, and Western science has eliminated the spiritual to its detriment.

Spiritual perspectives will be presented throughout this medical essay. My first major mystical influence, [Seth](#), once said that when a scientist robs a frog of its life in order to dissect it, the scientist ends up knowing *less* about life, not more, when the dissection is complete. Dissecting an animal *while it still lives* is far

more degenerate. When Western science justified the sacrifice of “lesser” life forms in its quest for knowledge, it was taking large steps *backwards* in its understanding of life and reality, although such a sentiment is largely unrecognized even today, while tens of millions of animals are [killed in experiments in the United States each year](#), in the name of science and medicine. Taking a life to “save” a life, in the long run, is arguably taking two steps backwards to take one step forward, and the step “forward” may be in the wrong direction.

With the works of Copernicus and Vesalius, Western science began its fitful rise, and religion gradually lost its grip over the masses. In the 1600s, William Harvey further proved Galen’s work wrong. Although [Chinese writings](#) from nearly 5000 years ago stated that the human heart was a pump that circulated blood throughout the body, that understanding in the West did not occur until William Harvey’s work appeared. Just as Copernicus did not immediately overturn Ptolemaic dogma regarding an earth-centered universe, Vesalius did not immediately overturn all Galenic dogma. In 1628, Harvey published his research into the heart and its function. Similar to Galen and Vesalius, Harvey was a court physician, in his case to England’s King James I. In addition (and this is a central concern of this medical essay), Galen, Vesalius and Harvey were all viciously attacked by their colleagues, who [defended the day’s dogma](#). Vesalius became so disgusted by the attacks that he lit a bonfire, destroying his notes and works, and got out of anatomy altogether. Harvey endured years of attacks, to finally see his theories vindicated before he died.^[39] Not coincidentally, that warfare over those theories and dogma was entirely waged by men, and Harvey was another vivisectionist.

The Beginnings of Today’s Medical Establishment

The rise of Western science is inextricably connected to the rise of Western medicine, as is [European imperialism](#), the decline of the Catholic Church, the [Industrial Revolution](#), modern [warfare](#), political-economic ideologies such as [capitalism](#) and communism, and other factors. When studying the development of medical science and its attendant establishment, the interplay of scientists, their nations of origin, dominant religious sects and other factors can be seen to influence the course of scientific theory as well as the data. There is no such thing as “pure science.”

It is no coincidence that Copernicus and Vesalius both published their works in 1543. Long-standing dogma was challenged on many fronts, not least of which was the Protestant Reformation. In 1543, the Catholic Church, although it had burned books many times in the past, dramatically toughened its policy and levied heavy penalties for selling books that the Church had banned. Cardinal Carafa went so far as to declare that no books could be published without permission from the Inquisition.^[40] In 1559, the infamous *Index Auctorum et Librorum Prohibitorum* was first published, a list of banned books that would endure until the 1960s.

Harvey was not the first European to describe the heart’s circulation of the blood. In 1553, Michael Servetus anonymously published *The Restoration of Christianity*. In his work, he challenged Galenic dogma and correctly described the pulmonary circulation between the heart and lungs, although it was in the context of how the Holy Spirit enters man. He escaped the Spanish Inquisition only to land in Calvin’s Geneva, where both he and his work were burned. Burning the heretic and his books ensured that his theory about the heart and circulation would not influence European science.

Joseph Schwartz persuasively made the case that [Galileo](#) and Newton couched their work in mathematics to make it less susceptible to the Church’s attacks. Those strategic decisions helped send science awry, making it too reliant on mathematics, and more occult than it needed to be.^[41] I have virtually never needed to use mathematics to explain a scientific theory.

Ambroise Paré, a contemporary of Vesalius, advanced the science of surgery, honing his craft in battlefield hospitals, introducing the practice of binding arteries to reduce hemorrhage, and ending the practice of pouring boiling oil on wounds to cauterize them. That was discovered accidentally when one day he ran out of oil and used soothing lotions instead. Paré brought to Western surgery the notion of gentle treatment of wounds, and he engaged in the customary academic fisticuffs with his rivals. As with the others, Paré became

the surgeon to several kings of France.

During the next three centuries, Western science made its advances. Vivisection became the norm in medical research. Witches and heretics burned across Europe, and devastating wars endlessly raged back and forth, often over religion. The distinction between saint, heretic and witch was largely a *political-economic* one.

The gradual elimination of the spiritual perspective was a complex affair, with various schools of thought rising and falling. The writings of Francis Bacon (1561-1626), an English statesman and philosopher, were influential in their materialistic perspective. Bacon argued for relying on what our senses tell us, using reason to interpret it, and staying within that framework. The materialism of Bacon would influence the materialism of Marx and others. Newton explained the effect of gravity with equations, and he, along with Copernicus, Kepler and Galileo helped initiate the science of celestial mechanics. Seeking the mechanism behind everything became science's Holy Grail. The world of the spirit gradually fell away, and Western science put nature "on the rack," torturing her secrets out of her (vivisection being an obvious example of that approach). A wide array of scientific and medical theories proliferated. Bacon, Descartes and other philosophers initiated an age of rational thought, although the outright rejection of religion would not occur until the Enlightenment, during the 18th century. Materialist and spiritualist theories vied with one another, some explaining life as a mechanism, others denying that mechanics could ever explain the ineffable spark of life.

The new lens-making technologies that made telescopes possible also made microscopes possible, exploration of the previously invisible world began, as well as exploration of the earth's farthest corners (usually in the name of conquest). Midwives and herbalists still practiced, although they were increasingly subject to repression. Disease was studied by the new science of medicine. The practice of Western medicine, however, did not change much during the 16th through 18th centuries. While women specialized in the gentle medicine of herbs and nutrition, the male-dominated medical profession used leeches, purgatives, emetics, surgery and other violent methods. European women healers found it increasingly difficult to work from the time of Vesalius onward.^[42] Epidemic disease swept through Europe regularly. European cities were [hellish arenas of violence, filth and disease](#). With numbing regularity, famine, disease or warfare (or all three) would march through, carrying off vast numbers of souls. The only way that Europe's cities kept their populations stable was through a constant influx of "surplus population" from the countryside, to replace those who died off in the cities. As Europeans sailed the high seas, natives in the New World, Australia, the South Pacific and elsewhere died off from European-introduced disease in stupefying numbers. Fifty million Native Americans may have died off from European-introduced disease during the 16th century, with perhaps another twenty million being worked to death, in the [greatest single demographic catastrophe](#) in history, killing off 90% of a hemisphere's human population.

The Enlightenment era, with its egalitarian ideals, a faith in science, reason and a promotion of humane principles, was the fruit of centuries of ferment. That era saw the creation of the greatest music that humanity has yet produced. Medicine for the masses became popular. To be sure, there were men who subscribed to the principles of Hygeia, such as William Buchan, John Wesley, Johann Frank and others of the Enlightenment era. Also, the age of quackery largely coincided with those days. While "quack" may have described many folk healers and their seemingly nonsensical medicine, the notion has also been greatly abused ever since to suppress medical innovation. Less than a month before I wrote these words, a "skeptic" challenged me about [Dennis Lee](#) and alternative energy's plight. He stated that the *unmistakable mark of a quack*, medical or otherwise, was the *claim of being persecuted*. As we shall see, it is also the unmistakable mark of a pioneer. In 1761, the German physician Leopold Auenbrugger invented the method of rapping on a person's chest, listening to the sound produced, a method familiar to any American who has ever had a physical examination. An amateur musician, Auenbrugger began cataloguing what the various sounds might mean. He realized the importance of his work, but had no illusions of becoming a medical hero. He wrote,

"In making public my discoveries I have not been unconscious of the dangers I must encounter, since it has always been the fate of those who have illustrated or improved the arts and sciences by their discoveries to be beset by envy, malice, hatred, destruction and calumny."^[43]

In North America's colonial settlements, women had a freer hand to practice medicine. The restrictive atmosphere of European medicine could not entirely prevail an ocean away. The Enlightenment also helped spawn political revolutions, beginning with the [American Revolution](#). Also, finally, Western medicine began understanding how to cure some diseases.

When Europeans began sailing the high seas, scurvy attended their voyages. In 1498, Arab traders [cured Vasco de Gama's crew of scurvy](#) by feeding them oranges. In 1535, [Jacques Cartier's](#) crew came down with scurvy on the Saint Lawrence River. Twenty-five members of his crew died before a local Indian showed them how to make bark and evergreen needles into a drink. The drink was high in vitamin C, and his men were cured. When Cartier reported the incident to the medical authorities upon his return, they laughed at the ignorant practices of the "savages," and never followed up on it. In 1593, Richard Hawkins, [Francis Drake's](#) relative and fellow pirate-explorer, sailed to the South Pacific and noted that the natives used citrus fruit to cure scurvy, something that also cured his men. His observation was also not acted upon by the day's medical profession. In 1601, Captain James Lancaster sailed his fleet of four ships, and gave lemon juice to the crew on the ship he sailed. The other three vessels' crews came down with scurvy. In 1636, John Woodall published *The Surgeon's Mate*, where he unequivocally wrote that scurvy could be prevented by eating fresh vegetables and citrus fruit. The medical establishment ignored those findings, while an estimated million sailors lost their lives to scurvy (5000 per year, from 1600 to 1800). It was not until the Scottish James Lind performed an experiment that Western medicine began considering the cure. His experiments aboard the HMS Salisbury in 1754 proved that citrus fruit cured scurvy, although he did not know why. In the 1760s, James Cook sailed around the world, embracing hygienic principles, and he used citrus fruit to cure scurvy in his crew. Cook only lost one man from disease during the three-year voyage, and it was to tuberculosis. Many thousands more sailors died on the high seas, and it was not until 1795, largely due to the efforts of Gilbert Bane, that the British began issuing citrus juice to its sailors, and "limeys" soon ruled the high seas. Establishment histories of medicine, such as Roy Porter's *The Greatest Benefit to Mankind*, often do not mention anything about people curing scurvy before Lind's work. That is always a hazard of reading mainstream history. The official story can leave plenty out, incidents that can cast an importantly different light on the story.

The Enlightenment came to an end with the French Revolution and Napoleon. The Industrial Revolution was underway, capitalism was evolving in ways that Adam Smith did not foresee, and the world of Charles Dickens came to pass. The early years of the 19th century are typically considered the beginning of the modern era. In the early 19th century the stethoscope was invented. [Auenbrugger's method](#), neglected for more than forty years, was finally used. Diagnosis finally began being earnestly practiced in Western medicine. Again, was that a step forward? [Seth](#) said that cataloguing disease is not dealing with the issue in the most enlightened way. He said that focusing on health and how to be healthy (Hygeia's principles once again) is far preferable to studying and treating disease. Studying disease has helped lead to today's medicine refining the art of symptom management, instead of the underlying cause. Also, any treatment that does anything other than suppress symptoms (with male-oriented knives and drugs) has largely been outlawed in the United States.

In the United States, one of the Declaration of Independence's signers, Dr. Benjamin Rush, became America's most famous doctor. He taught at the University of Pennsylvania for more than forty years, and his impact on American medicine can still be felt today. Rush represented the early medical establishment in the United States. He did, however, write this prescient paragraph,

"Unless we put medical freedom into the Constitution, the time will come when medicine will organize into an undercover dictatorship...To restrict the art of healing to one class of men and deny equal privileges to others will constitute the Bastille of medical science. All such laws are un-American and despotic... and have no place in a republic...The Constitution of this Republic should make special provisions for medical freedom as well as religious freedom."[\[44\]](#)

Rush's friend Thomas Jefferson wrote,

"If people let the government decide what foods they eat and what medicines they take, their bodies will soon be in as sorry a state as are the souls who live under tyranny."

Although Rush warned against a medical racket taking shape in the United States, his work was the epitome of masculine medicine. Rush began using mercury in large doses to "cure" patients during a yellow-fever epidemic in Philadelphia in 1793. Rush patented his "cure," and his Rush's Pills became a mainstay of American medicine. Rush's pills were a violent purgative made from calomel (mercury chloride) and jalap. A person's bowels would virtually explode after ingesting Rush's cure-all. Rush' pills were informally known as "Thunderclappers." Rush believed that nearly every disease condition could be cured with Rush's Pills.

The deadly effects of mercury have been well known since ancient times. Mercury poisoning may have killed Isaac Newton as well as destroyed his mind, as he worked with it in alchemical experiments, probably trying to make gold. Rush's logic was that the ingestion of mercury and jalap would blast out any diseased matter in the intestines. If that failed to provide the cure, the patient would also get mercury poisoning, which "altered" the original disease, somehow combining it with the mercury poisoning. The logic was that if patients survived the mercury poisoning, their recovery would also cure their original disease.[45] That type of treatment, in typical masculine fashion, became known as "heroic" medicine. In those years of heroic mercury therapy, there were instances of cadavers being dissected, and mercury would run from their bodies.

Using large doses of mercury was not the only innovation that Rush blessed America with. He was probably the person who initiated "heroic" bleeding. The bleeding practices of the past were not enough. Rush believed in bleeding the better part of a gallon (the adult human body only holds about five quarts) of blood from his sicker patients. Not only adults were bled under Rush's ministrations, but also infants as young as three months old. Because newborns are so small, the jugular vein was often the only one large enough to be opened for bleeding. Rush noticed that newborns could not survive being bled as much and as often as adults, so he could not be quite as heroic with infants.

Calomel was not banned as "medicine" until my lifetime, to demonstrate how influential Rush was to Western medicine. Mercury, bleeding and other "heroic" methods clearly reflected masculine medicine's principles. Rush distrusted nature. He saw disease as a failure of nature, so heroic intervention was the only effective approach. Rush's outlook became the orthodox American medical paradigm of the 19th century, and that medical establishment had the audacity to call alternative practitioners "quacks."

Rush, the physician general to [George Washington](#)'s revolutionary army, subscribed to warfare ideology in his medical approach. Said Rush, "It is necessary that (the remedies) be so - that is, more powerful than the disease, or they cannot overcome it." [46] Washington was probably [bloodlet to death](#) by doctors practicing "heroic" medicine. That heroic philosophy is still prevalent in today's American medicine. Rush pointed to surviving patients as proof that his treatments worked, but millions of people paid the price of his certitude. Rush was hostile toward plant-based remedies, but believed in metallic medicine. Highly toxic heavy metals such as mercury, lead and antimony (in the same chemical family as arsenic) found their way into the day's orthodox medicine. Rush's methods were in keeping with the assembly-line strategies that accompanied the Industrial Revolution. Orthodox doctors could treat up to thirty patients in an average morning, prescribing nearly the same treatment to every one, no matter their condition. It was a "one-size-fits-all" medicine.

The Enlightenment began in France, and in no small measure had the European experience in North America to thank. Although the Enlightenment looked back to ancient Greece's democracy for political inspiration, in major ways classical Greece was a poor example: slaves outnumbered citizens in Athens, and women were

nearly prisoners in their homes. When the Enlightenment began, humanity's only functioning democracy was the [Iroquois Confederation](#), in the area of present-day New York State. Iroquoian women elected the chiefs, ran village life and cast their children's vote in proxy, for a balance of power between the sexes that no Western society has yet approached. History being the ultimate ironist, George Washington led the effort to eliminate Iroquois society. The [Iroquois saw Washington](#) in much the same way as 1940s Jews saw Adolf Hitler. The largely classless societies among the North American natives, and the freedom that was such a natural part of native life, were attractive to Europeans, which led to a long-standing colonial problem: colonists [running off and "going native."](#)^[47] Later theorists such as Friedrich Engels drew upon the Iroquoian example.^[48] The Iroquoian government was very democratic with decentralized power and had no executive branch, something that monarchical Europe could not countenance, so the framers of the United States Constitution invented the executive branch, which has undermined the other branches ever since, amassing power to itself (so those who control the president control the government). Ben Franklin, the American ambassador to France, [was profoundly influenced by the Iroquoian form of government](#).

One Enlightenment outcome was the improvement of women's lives. Gone were the days of being burned alive as a "witch," although full citizen rights for American women would not come until the 20th century, on paper at least. Victorian prudery would soon appear, transforming women's sexuality from something to be feared into something to be repressed. Chattel slavery was transformed into wage slavery, communism would appear as a challenge to capitalism (although both movements would betray the spirit of their founding theorists), and revolutionary activities characterized the nineteenth century, as well as European imperial land grabs throughout the world. Throughout the chaos, social movements grew, counterattacks by various establishments were waged, and the 19th century was humanity's most tumultuous...until the 20th.

What happened in Western medicine parallels what happened in Western politics. While the divine right of kings was challenged, to more violent effect in France than in Britain, male-dominated heroic medicine was also challenged. Understandably, people feared the day's orthodox medicine, with their bleedings, mercury, lead and other deadly methods that passed for medicine. The foundation of orthodox medical practice and philosophy came under fire from several quarters, largely motivated by disgust with orthodox medical practice. In the early 19th century, there were three major challenges to American orthodox medicine. One was a revival of herbal medicine, largely based upon Native American remedies. Those practitioners became known as "Indian Doctors."

Samuel Thomson mounted another challenge to orthodox medicine. Thomson was a New Hampshire farmer who devised a medical system for the masses that utilized Native American steam baths and an herbal pharmacopoeia that eventually encompassed 65 herbal remedies. Thomson learned his herbal medicine from a woman herbalist. Thomson's system created an army of folk healers, where the ideal was "every man his own doctor." By 1839, one-sixth of the United States (three million people) used his system of medicine.^[49] Orthodox doctors saw Thomson as such a dire threat that they had a law passed that named Thomson specifically. What did the law state? Thomson was [forbidden to treat people without charging them](#). Those challenges to orthodox medicine were nearly the antithesis of heroic medicine.

The third challenge to American orthodox medicine came from within its ranks, from Europe. It was the most substantial challenge to American orthodox medicine, as it was the most professional. In the late 18th century a German physician, Samuel Hahnemann, developed a system of medicine wholly at variance with orthodox medical theory. He rejected the materialistic perspective of science and medicine, and saw disease and health as spiritual conditions. Hahnemann thought that dissection and attempts to describe the mechanics of the human body, as a way to guide treatment, was a useless undertaking. Hahnemann borrowed from the ancient Greeks and Paracelsus in developing a "law of similars." Hahnemann's theory was that if a healthy person were given a medicine that produced certain symptoms, an ill person with those same symptoms would be cured by the same medicine. It was a case of "paradoxical" therapy. It was not the first, and not the last, paradoxical therapy. Ericksonian therapy in psychology, for instance, is used today with great success. Hahnemann's style of medicine became known as homeopathy. While purgatives and other violent medicines were given by orthodoxy, and the more concentrated the better, Hahnemann took the opposite approach, *based on his experience with treating patients*.

Hahnemann's medicines were highly dilute, and the more dilute, the more powerful the apparent healing

properties, even when so dilute that not even one molecule remained of the original substance. It might seem like nonsense, but it worked, and there is experimental data to support the notion. The effect and philosophy of homeopathy markedly differs from drug therapy. Homeopathy uses dilute substances to help stimulate the body to heal itself, a helpful reminder of sorts. Drug therapy, on the other hand, overwhelms the body, taking over its chemistry, manipulating it to “health.” Whereas homeopathy stimulates the body to heal itself and to correct the underlying condition, which is classic feminine medicine, drug therapy reflects masculine principles of warfare and domination, taking over the body’s processes, usually acting by suppressing disease symptoms.

I have used homeopathy to dramatic effect, and have seen it work miracles. It is similar in some ways to the concept of vaccination, stimulating the body to ward off disease. In the attacks against homeopathy that continue to this day, the orthodox assailants always say how “absurd” homeopathy is, while the homeopaths respond, “OK, it may seem that way to our conditioned minds, but it works, and nobody is harmed by it.” In fact, there *is* a theoretical basis for homeopathy, which is largely unchanged from Hahnemann’s day, but it is radically different from orthodox theory.^[50] Hahnemann was banned from practicing in Germany. He had to keep moving his place of residence because of the attacks, and homeopathy was introduced to the United States in 1825.^[51]

During the early 19th century, the United States’ citizenry began abandoning orthodox medicine. Monopolistic medical laws were overturned across America, and orthodox doctors had to compete with the alternative movements. As far as millions of Americans were concerned, abandoning orthodox medicine was an exercise in freedom. In the words of one senator who introduced a law that helped overturn the orthodox medical monopoly,

“A people accustomed to govern themselves and boasting of their intelligence are impatient of restraint. They want no protection but freedom of inquiry and freedom of action.”^[52]

That statement was similar in spirit to Ben Franklin’s observation that people who give up freedom for security will get (and deserve) neither. Orthodox medicine had plenty going against it. For one thing, their “medicine” was widely considered to be deadly. Another factor was the minimal training that orthodox doctors received. Orthodox training was so poor that between 1853 and 1873 only about a third of all applicants, with medical school diplomas in hand, passed the examination to become a naval doctor.^[53] The director of naval medicine thought another ten percent could have passed an easier examination, but the remaining majority of applicants were hopelessly unqualified.

Medical schools flooded America with those unqualified doctors, dispensing their “medicine.” Homeopaths made far more money per practitioner than orthodox doctors, because demand for them was relatively higher. The “Indian Doctors” and Thomsonian practitioners merged in the 1840s to form the “eclectic” school of medicine. About one-sixth of America’s homeopathic practitioners were converted orthodox doctors. In 1844, homeopaths formed the American Institute of Homeopathy. Orthodox medicine was being rapidly abandoned. Accordingly, it mounted a counterattack. The first blast came from Oliver Wendell Holmes, who published *Homeopathy and its Kindred Delusions* in 1842. Holmes led the attack on feminine-oriented medicine and its, “nature-trusting heresy.”^[54] It is no accident that Holmes invoked the Inquisition’s terminology. To this day, the American medical establishment has never performed *any* scientific investigation into homeopathy or its results.^[55] A quote from Herbert Spencer is appropriate here, as it will apply to the medical establishment in dozens of instances before this essay is finished.

“There is a principle which is a bar against all information, which is proof against all argument, and which cannot fail to keep man in everlasting ignorance. That principle is condemnation without investigation.”

One of the greatest minds in American history, William James, said in 1898 to the Massachusetts legislature, as he argued against a law that would make psychology into a monopoly run by orthodox medical doctors,

“When I was a medical student I feel sure that any one of us would have been ashamed to be caught looking into a homeopathic book by a professor. We had to sneer at homeopathy by word of command. Such was the school opinion at that time, and I imagine that similar encouragement to superficiality in various directions exist in the medical schools of today.”[\[56\]](#)

More than a century later, the situation is identical. A couple of months before writing this, an orthodox doctor gave me his opinion that homeopathy and alternative cancer treatments were worthless scams, as they did not have solid science behind them. He stated that the very principle of homeopathy, of dilute medicines, was absurd on its face and not worthy of serious consideration. Had he performed any investigation himself? Had he even read the results of a scientific investigation that found homeopathy wanting? I believe that the answer was no, although my homeopathist lived in the same town. What was the basis for his opinion? As far as I could tell, he was reciting the fairy tales that American orthodox doctors have been indoctrinated into for the past 150 years. In kind, it was nearly identical to the [fairy tales](#) I was told about capitalism in business school.

In 1845, in direct response to the threat of alternative medicine, the American Medical Association (AMA) was formed. As has been the case with probably every professional group in world history, the AMA was primarily concerned with serving the well-being of its members. They couched their public image as coming together to serve the public, which is the standard *modus operandi* of EVERY [self-serving](#) operation. The AMA is the doctor’s union, and protecting the public is *the world’s biggest protection racket*. Nathan Smith Davis formed the AMA, and although one of his goals was improving medical education and training, it was politically inexpedient to push for it. Davis needed allies in the war against feminine-oriented medicine, and few of the day’s orthodox practitioners would have met Smith’s proposed standard of medical training and competence. One early AMA strategy was banning consultation with non-orthodox doctors. This helped stanch the bleeding of orthodox conversions to homeopathy. Using standard business strategy, in order to compete with the homeopaths and other gentle medical approaches, orthodox medicine had to abandon some of its more egregious practices such as bloodletting. The gigantic doses of calomel and other “medicines” continued late into the 19th century. Davis was about the first great American crusader against “quacks,” although somehow the practice of administering calomel did not qualify as quackery.

As orthodox medicine waged its war against competition from alternative therapies, surgery was not really part of the battle. That is because surgery was not held in high esteem, although some successful surgeons could command hefty sums in Europe. Many people considered surgery a last resort, fit mainly for battlefield hospitals; to try putting soldiers back together. The surgery of Rush’s time was similarly heroic, with doctors vying to see who could remove the greatest portion of a patient’s body without causing death.[\[57\]](#) No [life insurance company](#) would insure a surgeon’s wife in those days. If patients did not die from the pain or too many removed organs, they would likely die from infection. Sanitation was not a concept in orthodox medical practice, and surgery was the ultimate in pain, surpassing even explosive purgatives and the ghastly effects of mercury poisoning. Events in the 19th century would eventually rescue surgery from its disrepute.

Science, Medicine and Money in the 19th Century

The life-giving and life-taking aspects of Western medicine are in strange juxtaposition regarding the first breakthrough that would change Western interventional medicine for the better. Sanitation, Hygeia’s principle, was first practiced in places where life begins and ends: maternity wards and battlefield hospitals.

John Pringle, the physician-general of the British army and physician to the royal family, studied infection, disease and antiseptics and in 1752 strongly recommended that cleanliness and hygiene were the best preventives.^[58] His observation did not become a universal practice, far from it, but battlefield hospitals were real-world laboratories that have led to a great deal of today's emergency medicine.

The earliest Western medical doctor to establish sanitary practices was Hungarian obstetrician Ignaz Semmelweis, who made his discovery at the Vienna General Hospital in 1847. Vienna was the heart of the Austrian empire and Europe's most progressive city, and the Vienna General Hospital was a teaching hospital. Men and women were both trained there, men to be doctors, women to be midwives. Semmelweis was a bright young doctor from Hungary, but being from the imperial hinterland, with foreign dress and speech, he was subjected to numerous harassments. He weathered those difficulties and was appointed as assistant to the director of obstetrics at the Vienna hospital. Although obstetrics was not a glamorous branch of medicine, Semmelweis was doing well for a foreigner. In that era, pathology was popular and male medical students learned their craft by dissecting cadavers and handling diseased organs. In those days, puerperal fever raged through maternity wards. Puerperal fever was killing off great numbers of women who gave birth in European hospitals, especially its teaching hospitals. At times it galloped across swaths of Europe. In the Lombardy region of today's Italy, not one woman survived a teaching hospital-delivered childbirth for an entire year, during the 1770s.^[59]

Two maternity wards were in the Vienna General Hospital. The male medical students served the first ward; midwives-in-training serviced the other. The maternity wards of the teaching hospital only attracted desperate patients, the poor women of Dickens' Europe. Semmelweis witnessed cases where expectant women would be admitted to the hospital when only the first ward was open. Women got on their knees and begged to be admitted to the second ward. Semmelweis once watched a woman leave the hospital to give birth in an alley rather than be admitted to the first ward. What did those desperate women fear? It turned out that the death rate from puerperal fever was more than 20% in the first ward, served by the medical students. The ward served by the midwives-in-training had about a 2% mortality rate. What those desperate women obviously knew, Semmelweis eventually noticed.

As he began wondering why, one of his favorite teachers accidentally cut himself during an autopsy and died in the same fashion that those poor mothers did. Semmelweis then theorized that something was passing from the cadavers in the autopsy rooms to the mothers in the first ward. In those days, surgeons gloried in the gore they became coated in as they performed their heroic labors. The Vienna medical students would go straight from the autopsy room to perform pelvic examinations on the women in the first ward. Their hands smelled cadaverous. Semmelweis theorized that there were "invisible cadaver particles" that clung to the medical students' skin. Semmelweis had his medical students thoroughly wash and scrub their hands, then rinse them in a chlorine solution until the cadaverous smell was gone. During the first month of that program, the mortality rate in the first ward fell to 2%. Semmelweis was on his way to making the history books.

Although the initial reception to his work by his superiors was positive, Semmelweis' tale is one of medical history's more tragic. Probably at least partly because of impediments he had already encountered because he was foreign, he did not immediately approach the Viennese medical establishment with his findings. An immediate realization of Semmelweis' findings was that the doctors were inadvertently killing their patients. Not surprisingly, many doctors contemptuously dismissed his findings. Also, those were the days before the germ theory of disease, and the idea that invisible "particles" could cause death were laughed out of medical meetings. Semmelweis was also part of the revolutionary movement that swept Europe in 1848, and his political views helped get him shut out of any employment opportunities in Vienna. He lost his job at the Vienna General Hospital and went back to Hungary. His findings and preventive method fell into obscurity. In 1843, Oliver Wendell Holmes suggested that hospital attendants might transmit childbirth fever to the mothers, but his theory was quickly dismissed by orthodox medicine.

Many subsequent observers have blamed Semmelweis for not promoting his findings as vigorously and properly as he might have. Semmelweis obviously deserved some of the responsibility, but the greater share probably rests with the medical establishment. There was an anti-Semmelweis movement among European orthodoxy, with even a luminary such as [Rudolf Virchow](#) chiming in with his negative view. Semmelweis did not weather the opposition well. In 1861, he finally published his great work on his findings. He was only about 43 years

old, but aged greatly during those years of attacks from his professional brethren.[\[60\]](#)

Although he is a major figure in Western medicine's history, his 1861 magnum opus receives negative reviews even today. The most recent treatment of the Semmelweis affair is Hal Hellman's.[\[61\]](#) Hellman is more sympathetic than other recent writers, and rounded up doctors of Semmelweis' day and medical historians of the 20th century who thought that his work was epochal, one recent specialist calling Semmelweis' book one of the "most moving, persuasive and revolutionary works in the history of science."[\[62\]](#) Semmelweis came to a dismal end, dying in an insane asylum in 1865. His mental faculties rapidly diminished during his last years. An investigation into his final days has unearthed harsh facts. His body was exhumed and examined in 1963, and further research was undertaken in the 1970s, with a summary published in 1995. Semmelweis was lured to one of Vienna's shabbier asylums under false pretenses, and then involuntarily committed by three physicians who had no psychiatric training. He soon died of infection that apparently resulted from severe and untreated beatings administered by the asylum staff.[\[63\]](#) Semmelweis was a forgotten figure for many years, with his "crazy" treatment abandoned. In 1891, in the wake of the successes of sanitary practices, his body was exhumed and moved to Hungary, and he was honored in 1906 by a statue in Budapest. Semmelweis' theories went beyond "cadaver particles." Before there was a germ theory, Semmelweis had broadened his theory to include any putrid and decaying matter, which will have relevance later in this essay.

It would not be until [Joseph Lister](#)'s work became embraced, Lister beginning to pioneer sanitary surgical techniques soon after Semmelweis died, that Semmelweis' discovery would begin recovering from its neglect.

From the earliest days of the New World's invasion by Europe, the [quest for riches and fame](#) would characterize the West, especially the United States. The quest for riches and fame casts a dark shadow over the story of the first great innovation to rescue surgery from its barbaric status: anesthesia.

Dentists, not surgeons, brought anesthesia to medicine. Painless dentistry and tooth extraction would also rescue dentistry from its reputation. One of mercury poisoning's chief effects is damage to and loss of the teeth. Rush's medicine created business for dentists. Mercury is put into dental fillings even today, and its toxic effects are minimized by the same kinds of scientific groups that have minimized the damage that [lead](#) and [fluoride](#) do to the human body. At nearly the same time that Semmelweis was watching women begging to be admitted to the Vienna General Hospital's midwife-served maternity ward, general anesthesia was discovered in the United States. Humphry Davy experimented in England during the 1790s on the intoxicating effects of nitrous oxide, and recommended that it might be used for painless surgery. His discovery was quickly forgotten.

Nitrous oxide would eventually become famous as "laughing gas," a party favorite among the educated class. In 1844, a young dentist named Horace Wells attended a laughing gas show in Connecticut and saw one of the inebriants wound himself, which he did not feel until the gas' effects wore off. The point was not lost on Wells, who arranged to have a tooth painlessly extracted that same evening while under a nitrous-oxide-induced stupor. As he regained consciousness, Wells envisioned a new era of tooth extraction. Wells enlisted the assistance of William Morton, a former student of his, in gaining an introduction to Boston's surgical community.[\[64\]](#) Morton successfully used ether in 1846 to anesthetize a patient for a leg amputation. Unlike the statistical and theoretical case made by Semmelweis, the effects of anesthesia were dramatically obvious to any observer, and anesthesia quickly became an integral part of Western medicine. Its pioneers, however, received no benefit. The battle for priority and money over the discovery of anesthesia is a sordid tale.

Morton studied chemistry under Charles Jackson, who gave Morton some important information and suggestions about using ether. Subsequently, Wells, Morton and Jackson became embroiled in the battle of who had precedence in discovering anesthesia. Wells became a chloroform addict and committed suicide in prison in 1848, after throwing acid on two prostitutes. Morton engaged in many fruitless legal battles over his rights to anesthesia, and died in 1868. Jackson also tried cashing in, lost his mind, and spent his last years in a psychotic state, dying in 1880. Crawford Long, a country doctor, used ether successfully in 1842, but did not engage in the self-promotion of the others. He died in obscurity, and his discovery was not vindicated until after his death in 1878.[\[65\]](#)

It was not until Joseph Lister began experimenting with the sterilization of surgical implements that surgery became relatively painless and safe. Before Lister, death rates from post-surgical infection ranged from 25% to 60% in Western Europe's hospitals. Lister came upon Pasteur's work and his germ theory, and invented a carbolic acid treatment of surgical implements, wounds and dressings. In 1870, he published the first results of his new technique: death from infection quickly fell from 45% to 15%. Lister was also spraying the air with his acid, however, a misdirection that came from Pasteur's work, which did not help his patients much, but still the death rate fell. Lister taught in Scotland during the years of his great advances. Similar to Semmelweis, Lister's findings were not immediately embraced by surgeons, although he did not receive the vociferous attacks that Semmelweis' work did. Doctors proposed other theories to explain his findings. Lister himself thought it would take a generation for orthodox medicine to wake up and embrace his findings. He was right. In the late 1880s, Lister's discoveries were still held in contempt by many in the medical establishment, although he had many successes and converts.^[66] The early reception in the United States was also poor. A quote from [Medical Dark Ages](#), about one of America's most famous surgeons, is appropriate here:

"I spent a part of ...1923 with...Dr. W.W. Keen...In the...Civil War...he was a surgeon...and had seen many men die from suppuration of wounds after he had operated. ...He would hold the sutures in his teeth and sharpen his knife on the sole of his boot, after he had raised up his boot from the muddy ground. That was the accepted practice at the time."

"...He went to Scotland and studied under Lister...("Lister was persecuted by the British Medical Association. He was threatened with having his license revoked.") Yet in Lister's hospital virtually no one died as a result of operations because Lister had developed a carbolic acid wash and disinfectant. Dr. Keen came back from Scotland...He was referred to as a crazy Listerite...He was denied an opportunity to practice in every hospital in Philadelphia."

"Finally there was one open-minded surgeon in the great Pennsylvania General Hospital. He said, 'Let us give this young fellow a chance.' So they let him operate."

"...No one died from infection under Keen. ...He (Keen) began to chronicle the results in statistical articles. He was threatened with expulsion from the Pennsylvania Medical Association...This was in the 1890's...Finally was accepted as the greatest surgeon in the US. The old man told me - and he started to cry...'I nearly went under. I was nearly shut off.' - **US Senator Paul Douglas, Congressional Record, 1963.**

There have been three great watershed events in United States history, and they have been wars: the [American Revolution](#), the [American Civil War](#) and [World War II](#). Each marked the beginning of an epoch in American history. One effect of those wars was that great fortunes were made. [George Washington](#) became the richest man in America, partly from native land that his armies helped steal. World War II was the greatest era of war profiteering, even worse than during World War I, but the Civil War was when war profiteering became an American science. A group of young men seized the initiative during the Civil War. They all bought their way out of military service (an option in all American wars), and then engaged in war profiteering on a vast scale. The Civil War kicked the American Industrial Revolution into high gear, initiated The Gilded Age and made vast sums for a group of men who became known as robber barons.^[67] Their legacies can be felt today, with men such as [John Rockefeller](#), James Mellon, J.P. Morgan, Philip Armour and Andrew Carnegie beginning their empire building during the Civil War. American empires in railroads, steel, oil, [banking](#) and other industries were founded during the Civil War. They became the great trusts that the American government tried breaking up in the early 20th century.

The American pharmaceutical industry also got its start during the Civil War. Pharmaceutical empires such as Squibb's and Stearns' received their starts making pharmaceuticals during the Civil War, to be soon joined by Lilly, Merck, Abbott, and others.^[68] The specter of [Benjamin Rush](#) loomed over the Civil War, as the

major “medicine” vended to the Union Army was [calomel](#), the cure-all. Along with vending calomel, the new pharmaceutical companies vied with one another, each vending its own “patent medicine,” which was a misnomer, because not only were the formulas not patented, they were secret, which was officially frowned upon by the AMA. In 1876, Frederick Stearns invented the concept of proprietary medicine, which solved the problem of divulging ingredients yet retaining monopoly rights, which unleashed a flood of mixed drugs and other substances, designed to cure one malady or another. Thousands of those proprietary “medicines” were on the market by 1880. Many items in the eclectic and homeopathic pharmacopoeia were adopted directly into the new proprietary medicines.

The AMA also condemned the proprietary-medicine craze, but was economically subservient to it, allowing proprietary and “secret ingredient” medicine ads in the *Journal of the American Medical Association* (JAMA). Prescription medicine also got its start in those days, with doctors prescribing proprietary medicines to their patients. The doctors had almost no idea about the efficacy of the drugs pumped into the marketplace. Prescribing the new medicines was an American fad, and drug stores began dotting the landscape. That dynamic still dominates today’s orthodox medical paradigm. Financial incentives were waved under doctors’ noses to prescribe certain drugs, and true “medicine” was the last thing being practiced. A handful of “cure-all” drugs (fever reducers) became standard ingredients, used by orthodox doctors for nearly every disease condition. Assembly-line medicine continued to be practiced by orthodoxy, as it is today. American orthodox doctors eventually became highly paid marketing and administration conduits for the pharmaceutical companies.

Investigating Life’s Mysteries

While heated battles were waged by American orthodox medicine against alternative practitioners from the 1840s onward, events in Europe would initiate big changes in medical practice. Although Semmelweis would endure many attacks for his work, as is typical for medical pioneers, there was great scientific ferment in Europe. Science and industry helped transform the West in the 1800s, and medicine was not immune to its march. Paris, the hotbed of political revolution, became the center of a revolution in Western medicine in the early 19th century. Hospitals became laboratories in France, and the science of pathology was established, with autopsy results compared to bedside diagnoses. The Enlightenment ideals of empirical investigation took root in medical research, although that was relative. Medical students flocked from across the West to Paris to learn the new medicine. In Germany, laboratory science began its rise, partly due to improvements in microscopes, and by 1850, laboratory science was an important part of medical research, which used chemistry, dissection, vivisection, microscopes and other empirical techniques to learn about life and nature.

The 1850s were a time of radical new theories and discoveries in European science and medicine. There were distinct schools of German, English and French thought and practice. In England, clinical medicine and private medical practice dominated, with little emphasis on research that was not directly applicable to medicine. England and the United States were considered relatively backward with respect to research and the application of science to the medical arts. German science and medicine was publicly institutionalized, locally supported, with emphasis on the laboratory. Germany was the center of “pure” research. France had a centralized system that focused on Paris. Their hospitals were the center of treatment and research, but it was mainly concerned with training doctors. The French, however, have long been renowned among Europeans for their creativity. All three imperial rivals played their role in dealing with a hot issue in the 1850s: what is life, and how did it come to be?

With the ascendancy of Western science, those issues were earnestly addressed. Paracelsus and Descartes taught that the spontaneous appearance of life from dead matter was a normal chemical occurrence. In those days, many considered such a materialistic understanding to be common sense. Eels came from mud, parasites formed inside humans, rotting meat created flies. The idea had been around since antiquity (see Genesis and the creation of Adam from mud). As experimental science became established, the source of life became the focus of a debate that continues to this day, although today’s scientific establishment generally subscribes to a materialistic interpretation of evolution.

In the 1600s, Robert Boyle was impressed with the experiments of Jean-Baptiste van Helmont. Van Helmont put a 5-pound willow shoot into a pot of soil. After five years, the willow tree weighed 168 pounds but the soil weighed the same, leading van Helmont to conclude, “All vegetables do materially arise whole out of the element of water.”[\[69\]](#)

Microscopes made possible the discovery of an amazingly complex microscopic world, and sexual reproduction in the smallest insects. English and French philosophers in the late 1600s rejected Descartes’ notion of the spontaneous emergence of life from laws of motion acting on inanimate matter. Antoine Lavoisier eventually demonstrated in the late 18th century, before his neck met the business end of a guillotine, that water was only nourishment for the plants, not its source. Lavoisier was the first to describe plant and animal respiration, and his work with oxygen, respiration and combustion became the foundation of modern chemistry, and was one of Kuhn’s examples of revolutionary, paradigm-founding work. Religious philosophy was also involved in the spontaneous-generation debate, as life coming from random processes, by mere “chance,” was directly opposed to the day’s theology. In the late 17th century, the pre-existence of souls and the seeds of life were popular ideas. [William Harvey](#) wrote *Generation of Animals*, and was concerned with sexual reproduction, but he was rather neutral about the ultimate spontaneity of life. The issue was a chicken-or-egg argument, with the egg position prevailing at times.

By the end of the 18th century, spontaneous-generation theory was again in vogue. Its rehabilitation was mainly due to evidence and theory involving parasitic worms. Largely because the parasitic life cycle had yet to be understood, the prevailing theory was that parasitic worms must spontaneously manifest within the host organism. In the 19th century’s early decades, spontaneous generation was largely accepted, and there were different schools of thought. Germany, led by its parasitologists, accepted spontaneous generation. In France it was also largely accepted. In Britain during the eighteenth and early nineteenth centuries, there was open hostility to the notion, as it was “atheistic” and “contrary to an unerring law of nature.”[\[70\]](#)

Beginning around 1830, spontaneous-generation theory was subject to challenges in France and Germany. Experiments were showing that the organisms associated with decay were not spontaneously generated, and chemical and biological theories vied for supremacy.

During 1835-36, the Frenchman Charles Cagniard-Latour studied beer yeast and determined that fermentation was the result of the yeast’s biological processes. He concluded that yeast was a living organism. His conception of fermentation was original, and was confirmed at about the same time and taken further by Theodor Schwann. Schwann, a German, is today considered the father of histology, the study of plant and animal tissues. Schwann investigated cellular structure, putrefaction and fermentation, and concluded that yeast was a living fungus. He also demonstrated that vacuum-sealed boiled meat did not rot or produce the microscopic organisms associated with rotting. With Cagniard-Latour and Schwann’s work, the notion of fermentation as a purely chemical process was challenged. There were counterattacks to that idea, most prominently from the German chemist Justus von Liebig. Liebig refused to look through microscopes. He did not subscribe to spontaneous-generation theory, but also saw fermentation as a purely chemical process, with no life involved. During the 1840s and 1850s, there was a plethora of confused theories about fermentation and spontaneous generation.

The Whigs were a British political party, and what was called “Whig history” was writing history as a tale of progress, a linear story beginning in a primitive past to climax with humanity’s crowning achievement: modern Western civilization.[\[71\]](#) About thirty years ago, John Farley took a sabbatical from his teaching position at Harvard. His sabbatical produced *The Spontaneous Generation Controversy*, published in 1974. Farley partly wrote his book because many episodes in science history were still written in Whiggish terms.[\[72\]](#) Farley thought that the textbook treatment of the spontaneous-generation controversy was a “paradigmatic” case of Whig history in science. His book sought to help curtail spontaneous generation’s Whiggish treatment, particularly in how its major figure, Louis Pasteur, has been seen by history. The standard histories of the spontaneous-generation issue have it slowly discredited by scientific experiments until Pasteur came along and ended the controversy for all time with his “brilliant” experiments, winning a public contest to resolve the issue. Pasteur will be a focus of this medical essay, not because of his unique virtue, but because his triumph may have placed modern biology and medicine on a false foundation.

In the 1850s, the spontaneous-generation controversy was contested in three areas. One dealt with parasites, another was the area of fermentation, and the third was an overarching theory that largely ended the controversy in the scientific community, not in the 1850s, but in the 20th century. The new overarching theory was Charles Darwin's theory of evolution, which exploded onto the scene with the *Origin of the Species*, published in 1859. Darwin was influenced by the gradualist theory of geology produced by fellow British citizen Charles Lyell (as contrasted with [catastrophic theory](#)) and the theories of the British economist Thomas Malthus, which posited that humanity would always be struggling to survive because of its uncontrolled breeding. Darwin's work would bring Britain back to the spontaneous-generation issue because the logical outcome of evolutionary theory was that life somehow came into being by a gradual evolution from non-living matter. That theory would not be more fully worked out until the 20th century, however.

In the early 1850s Western scientists, largely German, discovered the life cycles of parasitic worms. The pleomorphic (it means "changing shape," the way a caterpillar and butterfly are the same species, but in different "morphic" stages) properties of parasitic worms were not discovered until the 1850s. That discovery was a severe blow to spontaneous-generation theory. Similar to [Semmelweis](#) in Vienna, Rudolf Virchow lost his job in Berlin because of his revolutionary activities in the late 1840s. Virchow performed extensive work with parasitic worms in the 1850s, which further justified his belief that spontaneous generation was an invalid theory. In 1858 Virchow published his *Cellular Pathology*, which theorized that the cell was the smallest unit of life. Where Schwann theorized that cells could "crystallize" from a disorganized "mother" medium, Virchow firmly stated that cells only arise from the division of existing cells. Cells have largely been seen ever since by orthodox science as the elementary unit of life, although it somehow evolved from protoplasm (today called cytoplasm). Virchow theorized that the health of an organism was dependent on the health of its cells. Today's study of healthy and diseased cells, such as Pap smears and biopsies, grew from his work.

Darwin's evolutionary theory and the findings in parasitology created more debate about spontaneous generation. The logical conclusion of evolutionary theory would demand an abiogenetic (life coming from inanimate material) explanation of the ultimate source of life, although parasite research discovered that they do not spontaneously form within host organisms. In the 1860s, both Germany and England grappled with the issue of spontaneous generation, generally agreeing with it. As Farley notes, their stance may seem at odds with the textbook story of Pasteur's work sounding the death knell to spontaneous-generation theory in the 1860s. Pasteur battled for many years against the spontaneous-generation theorists after his work supposedly gave spontaneous-generation theory its fatal blow.

A brief summary of Louis Pasteur's life is in order. Born in 1822 in a French village to a tanner who served in Napoleon's army, Pasteur came from humble roots. A morally rigid young man, Pasteur did well in school and had artistic talent. He took the academic route, going to school in Paris. He had some major academic failures early in his collegiate career, but through extra effort was able to get into college and eventually earn his doctorate. As with the men who discovered anesthesia, Pasteur was consumed with ambition to become rich and famous. In 1844, Pasteur the chemistry student performed his first experiment, isolating phosphorous from cattle bones. It was successful, and Pasteur advertised his feat by putting a big blue label on the flask that held his result.[\[73\]](#)

In 1848, Pasteur was working in crystallography, a subdiscipline of geology. During 1848, revolution gripped Paris, and Pasteur left his laboratory for a few moments to show some of his patriotism (he must be categorized as a political conservative). If he lived in the United States today, he would probably be a [George Bush](#) supporter, or perhaps lean even further to the right. In 1848, Pasteur made his first discovery, and it was a worthy one. Solutions of dissolved substances could evidence optical activity, which meant that if polarized light were shined through it, the light would become rotated from its original orientation when it came out the other side. French physicist Jean-Baptiste Biot discovered the phenomenon in 1815. Nobody knew why some substances rotated light. Pasteur discovered why in 1848. He was making crystals of sodium ammonium tartrate, which is not an optically active solution. As the crystals formed in solution, Pasteur noticed that some crystals were mirror images of each other. He picked them out by using tweezers, and separated them into two piles. He then made solutions of them. One solution rotated light to the right, and one to the left. It was a major discovery, and Pasteur immediately rushed out and dragged a physics instructor who was passing by into his laboratory, and explained his discovery to him. Pasteur would later theorize that the rotation

of the light was due to the molecule's structure. He was correct.

My organic chemistry textbook gave Pasteur high praise for his finding.^[74] Pasteur's discovery had profound implications for the life sciences. It turns out that stereoisomers (molecules that are identical except for being mirror images of each other) are one of life's mysteries that remain unresolved. Optically active substances only come from living organisms. They use one version of a substance, but will not use its mirror image, because of the way it fits with the other molecules. To imagine the situation, try shaking a person's left hand with your right hand. Nobody can really shake hands that way. Try right hand to right hand, and it works.

How living organisms came to incorporate chiral (right and left handed) molecules into their chemistry is a mystery to evolutionary theorists today. Nevertheless, optically active solutions are only made from living organisms (or, as in Pasteur's fortunate case, he was able to pick out the right handed and left handed crystals). Solutions derived from chiral molecules not produced by life processes will have equal distributions of right-handed and left-handed molecules, making the solutions optically inactive. Pasteur correctly theorized that optical activity was related to life processes. He successfully repeated the experiment for the skeptical, elderly Biot, and gained an academic patron.

Unable to land a suitable position in Paris upon completing his doctoral studies, in January 1849 Pasteur moved to Strasbourg to take a position as a chemistry teacher. Within three weeks of his arrival, Pasteur proposed to marry the college rector's daughter, a move that may have reflected his ambition more than his ardor.^[75] The college head was cautious, but Pasteur was persistent and married the woman in May of that year. Pasteur worked hard in his laboratory with his crystals, and an insight into his motivation may be reflected in an incident early in his marriage. He told his wife, who scolded him about his long hours in the laboratory, that he would make it up to her by "lead(ing) her to fame."^[76] His wife anticipated that fame and the benefits it brought, writing to Louis' father one day that, "Louis always worries a little too much about his experiments. You know that those he is planning for this year will give us, if they succeed, a Newton or Galileo."^[77]

Pasteur is a controversial figure. During the 1990s, Gerald Geison, a history professor at Princeton, spent a year reading Pasteur's experimental notebooks. In 1995 he published *The Private Science of Louis Pasteur*. In the final analysis, Geison respected Pasteur's contributions to science and medicine, but he found a disparity between Pasteur the public scientist and Pasteur the experimenter. Geison's book created an uproar in France, and he received plenty of scorn. One irony of Geison's work is that Pasteur tried to ensure that his laboratory notes were never made public, partly because a row erupted over the posthumous publication of Claude Bernard's notes. Bernard, Pasteur's friend, was shown to subscribe to a more chemical theory of fermentation. Pasteur published a devastating critique of Bernard's notes, and Pasteur then made his family promise to never make his notebooks public, a promise that his grandson eventually betrayed.

Geison presents several events where the public and private science of Pasteur were at odds, the first of which was Pasteur's discovery of chirality. Pasteur made public presentations about his discovery of crystal chirality, and Geison shows that they were highly abbreviated versions that were in part self-serving. Geison's central figure of Pasteur's presentation of his discovery is Auguste Laurent. Laurent was a major figure in the early days of crystallography, and Pasteur studied under his tutelage. Pasteur changed the subject of his doctoral chemistry thesis at Laurent's suggestion, which set him on his path of discovery.

By analyzing Pasteur's notes, Geison could find little evidence in Pasteur's early work that suggested how he came upon his discovery of chirality. Pasteur was treading down paths that Laurent and others had blazed for him. He was dealing with complicated issues regarding crystal formation, and he was not focused on the optical activity of crystals for most of his doctoral work. He was researching anomalies that arose from Laurent's work. Pasteur's discovery was unexpected, and his laboratory notes do not show how he stumbled onto it. It is a mystery. Nevertheless, nobody has suggested that Pasteur's discovery was not his own. However, when it came time to present his findings, Pasteur wrote Laurent completely out of the picture. His wallpapering over Laurent not only happened during his future talks about his discovery, but Pasteur began minimizing Laurent's contributions to his work in the early drafts of his papers.^[78] By the time Pasteur published the first major paper about his discovery, Laurent's contributions had been completely eliminated. Pasteur went further than that, making clear his low opinion of Laurent's work in

private correspondence with one of Laurent's chief rivals, Jean-Baptiste Dumas.

Geison speculates that Pasteur's disavowal of Laurent likely had much to do with his maneuvering in the day's fierce political climate. Laurent was a political radical. Jean-Baptiste Dumas was Laurent's rival in matters of molecular theory, and Dumas was the epitome of the establishment scientist, holding high positions in France's academic establishment, eventually parlaying his activities into being named a senator by Napoleon III, the autocrat of France, a man who named himself emperor, just as his uncle did.^[79]

Pasteur sought the fame and prosperity that he promised his wife. When a promised medal from Dumas did not arrive quickly enough for his liking, Pasteur complained.^[80] While it would be a mistake to say that Pasteur did not have friends, he was not a particularly likeable fellow. In interviews and speeches, Geison stated that Pasteur "was by no means always humble, selfless, ethically superior...Quite the opposite." Geison found Pasteur's "behavior and conduct in general unlikable through much of his career."^[81]

Pasteur cultivated patronage and fame while he worked with crystals. His theory of the relationship between chirality and life led him into the spontaneous-generation controversy. Pasteur gained a prestigious appointment to the University of Lille in 1854, and became involved with fermentation in 1856 due to his position as a chemistry instructor and the industrial problems of the local beet sugar industry.

A few years earlier, parasite research had shown that intestinal worms do not spontaneously manifest. Regarding the issue of intestinal worms, an unfortunate dynamic was evident in the practice of science. The French Academy of Sciences held contests to decide the truth of scientific matters. In 1852 it offered a prize for the best explanation of how intestinal worms are transmitted. The winner, P.J. van Beneden, held a powerful university position in Belgium, and John Farley thinks that van Beneden's political connections, more than his scientific efforts, may have won him his prize. In addition, van Beneden made claims of priority of discovery that were obviously false, the true credit due to German scientists.^[82] When scientific truth is decided by contest, objectivity can easily go flying out the window. The practice continues today and further underscores Kuhn's point that paradigms prevail because scientists believe in them, not because they are more accurate than other paradigms.

With discoveries in parasitology disproving the notion that parasitic worms were generated spontaneously, fermentation was the last great, unresolved area of contest. Pasteur was one of many scientists investigating the area, and Pasteur had about zero training in biology. He originally subscribed to the notion of spontaneous generation, those theorists called *sponteparists*.

According to the official stories, Pasteur quickly discovered that yeast was alive, and he published his first results in 1857. In his 1857 writings, Pasteur described the yeast and its associated fermentation products as taking "birth spontaneously...every time that the conditions are favorable."^[83] While Pasteur theorized that the yeast was alive, he also thought the yeast had spontaneously generated, reflecting his early *sponteparist* position. Pasteur's position was far from original. There was a strong minority position that yeast was alive, and Pasteur's position was merely a rehash of Cagniard-Latour's work a generation earlier. Although Pasteur campaigned heavily to be admitted to the French Academy of Sciences in 1857, he failed. His residency in Lille weighed against him. Paris was the center of French academic life, and Pasteur knew that he would not realize his ambitions in the relative hinterland of Lille. He received a promotion and moved to Paris in 1857. In the classroom, Pasteur was notoriously unpopular with his students and academic colleagues. He was a humorless martinet, running the classroom as if it were a boot camp.^[84]

As late as 1860, Pasteur was describing yeast and the products of fermentation as spontaneously produced. In 1862 he finally gained admittance to the French Academy of Sciences, in its mineralogy section. In all the accounts of Pasteur's career I have read, he clearly was a showman and self-promoter. Around 1860, Pasteur began theorizing that there were germs in the air, and that they were responsible for fermentation. In late 1860, he performed a theatrical experiment where he traveled across France and into the high Alps, sampling the air, his experiment proving that germs exist in the air. The history books portray the issue as one in which Pasteur had a conflict with Felix-Archimède Pouchet, who had a theory of heterogenesis, as opposed to abiogenesis. Heterogenetic theory states that life arose from life or organic matter, and abiogenetic theory avers that life ultimately came from non-living substances. The distinction was vitally important in the debate

on spontaneous generation.

In France, spontaneous-generation theory was unpopular by the time Pasteur became embroiled in it, and Pasteur was considered to have only delivered spontaneous-generation theory's deathblow. The French Academy of Sciences held contests on the issue, in 1862 and 1864. As Farley pointed out, both the 1862 and 1864 juries were composed of men hostile to spontaneous generation. The 1864 jury was even more biased than the 1862 jury, with Pasteur patrons Dumas and Antoine Balard presiding. History books have told of Pasteur's triumph, but Farley's account portrays them as shamelessly rigged.^[85]

Before the 1864 jury convened, Pasteur gave a public speech about his findings and the mortal blow it gave to spontaneous-generation theory. It was given at the Sorbonne, and was attended by the Parisian literati, including Alexandre Dumas, George Sand, and Princess Mathilde. It was an educated audience, but not really a scientific one. Pasteur was embarking on his career as a popularizer. Pasteur gave a brief account of the controversy, as well as its religious and philosophical implications. Then he delivered his coupe de grâce, announcing that his experimental findings had shown that when he was able to keep airborne organisms from touching a nutrient-rich medium, no life was seen to take place, because, "I have kept away from it the germs that are floating in the air, I have kept it away from life, for life is the germ, and the germ is life."^[86] The largely lay audience greeted his pronouncement with thunderous applause. Pasteur's reputation was thereby made. He became the savant of germs in the air. In Pasteur's work at the time, he failed to even mention the role of parasitic worms in the controversy, and he regularly assailed rival scientists. He became famous for his thunderous orations at meetings of the French Academy of Sciences.

Even sympathetic historians and biographers admit that Pasteur's fame was due in no small part to his efforts at self-promotion and his rhetorical talent. In 1863, soon after his election to the French Academy of Sciences, Pasteur was introduced to Napoleon III, and he told Napoleon of his ambition to understand and cure disease. Pasteur was realizing his ambition, and was subsequently seen hobnobbing regularly with French royalty, Pasteur "always being receptive to flattery from high places..."^[87] While exhibiting artistic talent in his youth, Pasteur was aghast at innovation in art, and consistently supported the old school, being highly contemptuous of Manet and the Impressionists.

With imperial patronage under his belt and his avowal to cure disease (even though he still had no medical or biological training), Pasteur was asked to look into diseases that were plaguing French industries. Pasteur's germs-in-the-air philosophy led to the germ theory of disease. In 1863, Pasteur was asked to look into a disease that was harming French grapes and their wine industry, and in 1865, he was commissioned to look into a disease that was devastating silkworms and the French silk industry. The history books give Pasteur full credit for resolving those issues and saving those industries, to later take on such diseases as anthrax and rabies. For his entire career, Pasteur battled his rivals and critics. Even his friends were not immune, as with his posthumous attack on Bernard's notes.

Pasteur's germ theory led to introducing those germs to people as a way of preventing disease, hence his anthrax and rabies vaccines. Geison presented cases where Pasteur "cooked" his data, getting the data to conform to his theories. In dealing with his anthrax work, Geison crosses the line and accuses Pasteur of outright fraud, telling his readers that, "Pasteur deliberately deceived the public and scientific community about the nature of the vaccine actually used..." in his famous demonstration of his anthrax vaccine in 1881.^[88] Pasteur misrepresented how his vaccine was prepared, apparently to triumph over his rival Jean-Joseph Henri Toussaint over the anthrax vaccine. Pasteur's public victory over the anthrax issue appears to have been the final blow for Toussaint, who lost his mind the next year and never recovered. Geison notes that one must consider the financial considerations that may have prompted Pasteur's deception. Pasteur soon began building a financial empire on his work, and by the mid-1880s his laboratory earned a 130,000-franc profit from anthrax-vaccine sales.^[89]

Pasteur ventured into outright human experimentation, using his rabies treatment on humans before he had used it on animals.^[90] His private notebooks yielded that finding, but it comes as no surprise to those who have read a letter that Pasteur wrote to the emperor of Brazil. In 1884, Pasteur wrote that people condemned to death should become subjects of human experiments, given the option on the eve of their planned executions. The choice presented would be execution or becoming subjects for rabies vaccine testing, injecting them

with rabies and seeing if the vaccine would cure them. Pasteur predicted that the condemned would all consent to becoming experimental subjects, as a “person condemned to death only fears death.”^[91] Pasteur performed his experiments on his patients after he wrote his letter to the Brazilian emperor. Patrice Debré, who authored a sympathetic biography of Pasteur, wrote that one could not read Pasteur’s letter to the emperor without thinking of the Nazi’s death-camp experiments.^[92] Even one of Pasteur’s disciples said about Pasteur’s human rabies experiments, “The scientist’s conscience smothered the conscience of the man.”^[93]

It should be made clear that Geison, Debré, Rene Dubos, John Farley and others have generally praised Pasteur’s contributions to science and medicine, even if their work has removed some of the luster from Pasteur’s heroic journey.

Geison’s book created quite a splash when published, as Pasteur is in science’s Pantheon of the great, and a French national hero. Not everybody agreed with Geison’s assessment of Pasteur’s work, both public and private. Hal Hellman wrote that while Geison’s work was careful and not easily dismissed, it “does much to smudge a shining image of a real medical hero.”^[94] Hellman felt that there were few true “heroes” in science’s history, and he did not like to see Pasteur’s image deconstructed.

Unfortunately, Farley’s work had little impact on the Whiggish history that first-year microbiology students are taught. All the microbiology books I obtained, written long after Farley’s book was published, all told the same utilitarian fairy tale of Pasteur and spontaneous generation.^[95] The spontaneous-generation debate was not finally settled in scientific circles until Aleksandr Oparin and the 1936 publication of his *The Origin of Life on Earth*. Oparin was a Russian biochemist whose work was influenced by the dialectical materialism of Karl Marx and friends. Marx’s influence went far beyond political-economic theory, which may surprise most Americans, as Marx is a discredited, even demonized, figure in the West. Oparin theorized that the primordial soup of the young earth gave rise to higher orders of molecular organization, leading eventually to an abiogenetic origin of life. The scientific community has embraced Oparin’s work as completing the theory of how life arose on earth, and there the matter rests...for now.

Pasteur’s legacy is enormous. Today’s germ theory grew from his work. Pasteurization wears his name. He pioneered vaccination. Robert Lister based his carbolic-acid treatment on Pasteur’s work, making surgery largely free of infection. Pasteur industrialized science, applying scientific findings to industry, and helped create the academic institutions that feed industry with scientists. Before Pasteur died, Pasteur Institutes dotted France, becoming major institutions of science and medicine. René Dubos wrote a number of books about Pasteur, his work and legacy. Under a heading of “The Benefits of Precise Knowledge,” Dubos listed dozens of major corporations that are primary beneficiaries of Pasteur’s legacy. All the major oil companies headed Dubos’ list, followed by food-processing, pharmaceutical and biomedical companies.^[96]

This essay is not intended to assassinate Pasteur’s character. He was human, as with all of us. Hellman noted that Geison’s critics stated that his critique veered from purely scientific matters, taking Pasteur’s legacy to task perhaps unfairly. Hellman is convinced that Pasteur fudged his data, but it was understandable given the circumstances. This essay’s point is that if he fudged the data, how accurate were his findings? We go back to Kuhn here. Pasteur prevailed, but was he *right*? Probably more than any other single figure, Pasteur’s work founded the paradigm under which today’s medicine operates. Is our health *better* because of his work? Was there another paradigm that could have been adopted? That is a major crux of this essay. What if Pasteur was wrong? Not just a little wrong, but profoundly wrong, so wrong that his legacy has killed far more people than it has helped? Are microbiology textbooks understandably expedient in telling the Whiggish tale of the germ theory’s foundation, or do they march students off in the wrong direction on their first day of class?

There is a large and impressive body of evidence that suggests that the Pasteurian paradigm prevailed due to considerations of money and power more than the accuracy of his science. This essay will now explore that allegation.

A Paradigm Lost?

In the several biographies of Pasteur I have read through, as well as works such as Farley's, there is an obscure figure who receives little mention, and the only place I saw his work dealt with at all was in Geison's book. While dealing with the Pasteur myth, Geison spent a paragraph dealing with a book by Ethel Douglas Hume titled *Béchamp or Pasteur*. It was originally published in 1923. Geison felt that the book was plagued with a "ludicrous incomprehension" of the true nature of Pasteur's work and science. Geison, while admitting that Pasteur probably treated Béchamp poorly, did not feel that Pasteur plagiarized him.^[97] Who was Béchamp, and what plagiarism was Pasteur accused of?

Pierre Jacques Antoine Béchamp lived from 1816 to 1908. Béchamp, a physician, unlike Pasteur, had plenty of biological and medical training. He was also a doctor of science, a pharmacist and a college chemistry, physics, pharmacology and toxicology professor. He is a known figure in industrial science, as he developed an economical process to produce aniline and the many dyes and drugs based on it. Regarding his life's work, however, he is virtually unknown today. He was a leading figure in his time, but today his name is all but unknown in the orthodox histories of biology and medicine. I first heard of Béchamp in 1990 as I began my education in alternative [media](#), [history](#), medicine and related areas. His story is worth telling, and the rest of this medical essay will deal at length with the idea that Béchamp was only the first in a long line of researchers whose work pointed toward a different paradigm in biology and medicine, a paradigm that still may be adopted one day.

In the 1850s, Béchamp was one of many scientists investigating fermentation. By 1854, the chemical explanation of fermentation was the prevailing one, the work of Cagniard-Latour and Schwann disregarded by the mainstream. It was known that yeast initiated fermentation, and was seen as a chemical reagent by the mainstream and chemists such as Liebig. As such, yeast was called a "ferment," since it initiated fermentation. However, Cagniard-Latour and Schwann's theory that yeast was a living organism was not altogether discarded. Yeast was not the only focus of research into fermentation. In May of 1854, Béchamp performed an experiment investigating a phenomenon known as the inversion of sugar. If cane sugar (sucrose) were put into water and left to sit, the sugar would slowly transform into glucose and fructose (which is also called grape sugar). That process was called the inversion of sugar, and was thought to be a strictly chemical transformation. The transformation could be detected by using polarized light and a polarimeter, seeing if the angle of rotation changed. If the angle changed, it meant that inversion took place.

In Béchamp's 1854 experiment, he took four flasks and filled them with a sucrose solution, sealed them, and left a small amount of air in the flasks. One flask held distilled water and cane sugar. The other three solutions held calcium and zinc chlorides and cane sugar. The first flask had inversion while the other three did not. Also, mold appeared in the distilled water solution and not the others. Béchamp published the result of that experiment in February 1855 in the French Academy of Sciences' official record, the *Comptes Rendus*. It was the first in a series of experiments now known as the Beacon Experiment. Another researcher published similar results to his in 1856, and Béchamp considered two questions:

1. Are molds endowed with chemical activity?
2. What is the origin of the molds that appear in the sugared water?^[98]

As Pasteur did in 1854, Béchamp moved on from Strasbourg to greener academic pastures, Béchamp taking a position at the university at Montpellier in southern France, where he spent many happy years. For an eighteen-month period, beginning in June 1856, Béchamp performed a new set of experiments designed to answer those two questions. Pasteur had yet to involve himself in fermentation when Béchamp began publishing his Beacon Experiment findings. Béchamp's new round of experiments introduced several substances into cane-sugar solutions, including creosote and several metallic salts. Creosote is a close cousin of carbolic acid, the substance that [Lister](#) would make famous with his sterile surgical procedures. The zinc, calcium and mercury chlorides prevented inversion, while other substances seemed to promote inversion, with some inverted solutions becoming very moldy. Béchamp also performed a litmus test and found the inverted solutions acidic.

In March 1857, Béchamp set out to investigate the role of creosote more fully. He prepared several cane-sugar solutions. In some, he boiled the water, and the air was passed through a sulfuric acid solution before introduction to the flasks. In others, he allowed no air and the flasks were completely filled with boiled

water and cane sugar. In others, he added creosote, both with filtered and unfiltered air. Two of his filtered-air flasks with only sugar and water displayed inversions. Béchamp noted that those two flasks were imperfectly manipulated and contaminated by unfiltered air. He also noted that the more mold seen, the greater the rotation of light, hence greater inversion. The perfectly sealed flasks of boiled water and filtered air had no change in light rotation, and no mold. It became obvious to Béchamp that inversion was not a strictly chemical process. Béchamp deduced two conclusions from those experiments.

1. Boiled water and cane sugar, when put into an airless flask, will not undergo inversion.
2. The same solution, boiled or not, enclosed with air, would invert, with mold forming and the solution becoming acidic. To prove that air alone could not account for the inversion, no matter its volume, a little added creosote would prevent it whether the flask was sealed or not.[\[99\]](#)

It was common knowledge in those days that nitrogen was present in albuminoid matter. Albumin is a simple protein. There is no nitrogen in sugar or water. In those days, the prevailing view was that fermentation could not occur in the absence of albuminoid matter, which was why Pasteur worked with sour milk. Because mold accompanied the inversions, Béchamp reasoned that they were responsible for them, because his work had shown that air alone did not do it, although air was a required component of inversion and mold formation. Schwann was the first to perform experiments to prove that the organisms that accompanied fermentation, seen through microscopes, were introduced through the atmosphere. Béchamp analyzed the mold and discovered that they had nitrogen in them. The only place the nitrogen could have come from was the air in the flask. Béchamp's conclusions from his Beacon Experiment were firm, and he first submitted them to the French Academy of Sciences in December 1857. An extract of his findings was published by the Academy in January 1858, with the full paper included in *Annales de Chimie et de Physique*, published in September 1858. Béchamp's conclusion was very clear, writing that the,

“germs brought by the air found in the sugared solution a favorable medium for their development.”

Béchamp wrote that the,

“new organism, making use of the materials present, effects the synthesis of the nitrogenized and non-nitrogenized materials of its substance.”[\[100\]](#)

With his Beacon Experiment, Béchamp was the first to prove that not only could fermentation take place without the presence of albuminoid matter, but also that the organisms responsible for the fermentation actually created them by incorporating nitrogen from the air. When Béchamp submitted his findings to the French Academy of Sciences in late 1857, Pasteur was still experimenting with sour milk and calling fermentation a spontaneous process. Béchamp was far more interested in investigating nature's mysteries than becoming rich and famous. Béchamp sought no fanfare, and after submitting his seminal experimental results, pursued the implications of them. Béchamp had conclusively demonstrated that fermentation was not due to spontaneous processes in 1857.

Most official stories of Pasteur do not even mention Béchamp, and Geison's quick dismissal is misleading. Ethel Douglas Hume published under the names E. Douglas Hume and Douglas Hume, to hide the fact that she was a woman, to further demonstrate Western civilization's ingrained misogyny. Geison disparaged and dismissed Hume's work, also stating that Hume's book did not persuade him that Pasteur had “plagiarized” Béchamp. In reading Geison's brief account, the impression is easily received that Hume was about the only person making the case. Béchamp makes the case for Pasteur's plagiarism in his work, notably in the preface to his *The Blood and its Third Anatomical Element*. Hume's work was largely based on

Béchamp's account of events, and he did not mince words, describing in detail four instances where Pasteur apparently plagiarized him, then Pasteur added indignity to injury when he led a campaign against Béchamp. Béchamp noted the fate of [Galileo](#) and others who run up against the establishment, and he finished his summary of the issue of Pasteur with,

"It is that part of mankind which allows the plagiarist to calumniate and vilify the victim whose work he has plagiarized."[\[101\]](#)

In dealing with Pasteur and Béchamp, a quote from William James is pertinent.

"First...a new theory is attacked as absurd. Then it is admitted to be true but obvious and insignificant. Finally it is seen to be so important that its adversaries claim that they themselves discovered it."[\[102\]](#)

Pasteur's alleged plagiarisms of Béchamp were not innocuous: they may have marched biology and medicine off in the wrong direction. When Béchamp had proven that fermentation in sugared water was initiated by the "germs brought by the air," Pasteur was still adhering to his *sponteparist* view. Pasteur observed the lactic ferment created by one of his experiments, and wrote that the ferment "takes birth spontaneously as easily as beer-yeast every time that the conditions are favorable."[\[103\]](#) An extract of Béchamp's work appeared in the Academy's Reports on January 4, 1858, while Pasteur's report appeared in April 1858. It appears that Pasteur was aware of Béchamp's discovery when he published his paper. Accompanying the sentence "takes birth spontaneously as easily as beer-yeast every time that the conditions are favorable" is a footnote stating that he used the word "spontaneously" as "the expression of a fact," but he backpedaled on its truly spontaneous nature. Pasteur then threw in some platitudes about his results that others had discovered earlier. There was nothing original in Pasteur's work to that time. Pasteur was badly out of his field in interpreting his experimental results, partly because he had no biological training. He was a chemist. By 1857, Pasteur had made no original statements about the nature of fermentation, and hewed toward the *sponteparist* position.

In December 1857, Pasteur published the results of his experiment with putting yeast into sugared water and observing the fermentation. In his conclusion, Pasteur stated, "Fermentation then takes place as it does in a natural sugared liquid, juice of the grape, or sugar cane, etc., that is to say, spontaneously..."[\[104\]](#)

Pasteur adhered to the *sponteparist* position long after Béchamp had produced his enlightening results. In 1859, Pasteur seems to have glimpsed the importance of Béchamp's work. He performed an experiment but omitted the yeast, and described the origin of the yeast as coming from the air. Pasteur persisted in giving the phenomenon a spontaneous-generation explanation. He wrote, "As to the origin of the lactic yeast in the experiments, it is solely due to the atmospheric air: we fall back here upon the facts of spontaneous generation...On this point the question of spontaneous generation has made progress."[\[105\]](#) In an 1860 memoir, Pasteur still referred to the spontaneous generation of yeasts and fermentations. Béchamp would later criticize Pasteur's experimental conclusions, stating that Pasteur's deductions proved that he did not understand "the chemico-physiological phenomena of transformation, called fermentation, which are processes of nutrition, that is to say, of digestion, followed by absorption, assimilation, excretion, etc,"[\[106\]](#)

In 1860, Pasteur finally grasped the importance of Béchamp's work. Instead of acknowledging Béchamp's trouncing of the whole field, Pasteur seemingly labored to make Béchamp's discoveries his own.

In September 1860, Pasteur performed the experiment that put him in the history books. Two German

scientists had already performed the experiment he proposed, but not so flamboyantly. Working quietly in a laboratory, filtering air into flasks to prove that "germs" were in the air, had already been done. Pasteur embarked on a tour of France, carrying 73 vials with him. He opened and sealed the vials at different locations and altitudes, ending with the famous opening and sealing of 20 vials on a French Alp, above Chamonix. Pasteur was "proving" that germs existed in the air. He was also making a radical U-turn from his *sponteparist* convictions.

The campaign that Pasteur waged to claim credit for the work of others began soon thereafter. In a meeting at the Sorbonne in 1861, Pasteur, in the presence of Béchamp, tried claiming credit for proving that living organisms can appear in a medium devoid of albuminoid matter. Since that claim was a direct theft from Béchamp, Béchamp did something he was not accustomed to: he spoke up regarding Pasteur's attempted theft. Béchamp did not accuse Pasteur of plagiarism in that meeting, but merely recounted the results of his Beacon Experiments and his published conclusions derived from them. As he returned to his seat (Pasteur sat next to him), he asked Pasteur to be so kind as to admit his knowledge of the Beacon Experiment work. Pasteur hastily admitted his knowledge of Béchamp's work, and stated that the results Béchamp put forth were of the "most rigid exactness."[\[107\]](#)

Years later, Pasteur would attack Béchamp's work, calling his conclusions "an enormity." In what appears to be an instance of opportunism, Pasteur quickly abandoned a theory that he had held for years (spontaneous generation), did a complete about face based upon the work of others, then tried to claim credit for the discovery.

Béchamp was not immediately hailed for his breakthrough. Because his results and conclusions were so novel and far ahead of his day, scientists attempted to explain his results as due to impurities in the sugar he used. Even when that was disproved, they continued to question Béchamp's work.

As late as 1872, Pasteur was still woefully ignorant about what fermentation really was. He wrote "That which separates the chemical phenomenon of fermentation from a crowd of other acts and especially from the acts of ordinary life is the fact of the decomposition of a weight of fermentative matter much superior to the weight of the ferment."[\[108\]](#) Pasteur was repeating the day's misunderstanding that many scientists subscribed to. Béchamp put forth a simple explanation of fermentation that should have made it clear why a ferment could affect a medium of vastly larger proportion than itself. Béchamp proposed the following analogy:

"Suppose an adult man to have lived for a century, to weigh on an average 60 kilograms; he will have consumed in that time, besides other foods, the equivalent of 20,000 kilograms of flesh and produced about 800 kilograms of urea. Shall it be said that it is impossible to admit that this mass of flesh and of urea could at any moment of his life form part of his being? Just as a man consumes all that food by repeating the same act a great many times, the yeast cell consumes a great mass of sugar only by constantly assimilating and disassimilating it bit by bit. Now, that which only one man will consume in a century, a sufficient number of men would absorb and form in a day. It is the same in yeast; the sugar that a small number of cells would only consume in a year, a greater number would destroy in a day; in both cases, the more numerous the individuals, the more rapid the consumption."[\[109\]](#)

[Jonathan Swift](#) wrote that the way to spot a genius was by the dunces who unite in confederation against him/her. Pasteur used his position, with imperial patronage and help from his friends, to begin a campaign to discredit and suppress Béchamp's work, organizing, in Béchamp's words, a "conspiracy of silence."[\[110\]](#)

After Pasteur's failed 1861 attempt to claim credit for his "germs in the air" theory, his public speech in 1864 at the Sorbonne apparently completed his plagiarism. While Béchamp is not mentioned in any microbiology or biology textbook I could find, Pasteur's "discovery" of "germs in the air" is supposedly what overturned spontaneous-generation theory. Geison is not convinced of Pasteur's plagiarism in that matter, but at this time, I am.

In the wake of his 1864 speech, Pasteur became the toast of Parisian intellectual life, and by invitation he spent a week at the Emperor's palace in 1865. Pasteur eagerly lapped it up. His imperial patronage gave him the "Teflon effect" for the rest of his life. Many scientists, particularly French ones, became decidedly timid in confronting or criticizing a man who had blessings from French society's highest levels. While Pasteur was realizing his lifelong ambition to rub shoulders with the rich and powerful, as a ticket to wealth and fame for himself, Béchamp had unceasingly continued his investigations into life's mysteries.

Pasteur took the position that life was in the air, and that bacteria came from the air. Although Pasteur would deny that flesh could be alive independently of the organism that housed it, Charlton Bastian was producing experimental results that had no easy answer, particularly in light of Pasteur's germs-in-the-air evangelizing. Bastian found bacteria on the inside of animal organs and fruits and vegetables. Pasteur's air-germ theory did not account for them. In fact, Pasteur's air-germ theory misled scientists for some time. [Lister](#) encountered Pasteur's germs-in-the-air theory, and sprayed his carbolic acid spray into the air around his patients, trying to kill those germs in the air. That led to many unnecessary deaths. Lister would later reject that idea, and admit that the only germs of consequence were the ones introduced by "other than atmospheric sources."^[111]

Béchamp took his fermentation studies much further, and the microscope became a source of revelation in Béchamp's hands. Preceding Béchamp, other scientists had noticed minute "granulations" that appeared to be organized and perhaps alive. They were smaller than cells. [Rudolf Virchow](#) postulated in 1858 that cells were the primary unit of life, which Béchamp's findings contradicted. In Béchamp's early experiments, he noted the granulations and movements, and called them "little bodies." He had nothing further to add in those early days, so the little bodies were merely noted.

During Béchamp's fermentation experiments, he added various salts to the sugar solutions. In one experiment, he substituted calcium carbonate for potassium carbonate. The calcium carbonate's source was a form of chalk. When he added creosote to the sugared water, inversion still took place. Béchamp had already proven that creosote inhibited the formation of mold from exterior sources. The experiment with chalk was a contradiction. Béchamp believed the results were due to some faultiness in his procedures, left out the chalk results from his published work, and resolved to investigate them further.

Béchamp then began a series of intensive investigations into chalk that should have shaken the foundations of biology, but today few know his name. He undertook many experiments with chalk and fermentation. Béchamp performed numerous experiments where he created an air-free environment. When chemically pure calcium carbonate was added, no inversion took place. Ordinary chalk inverted the sugar. Béchamp took elaborate precautions to ensure that atmospheric germs could not gain access to the flasks, yet chalk still inverted the sugared water.

Béchamp then obtained chalk, and subsequently a block of limestone from a quarry, where he engaged in great precautions to ensure they did not contact the air. The limestone inverted the sugar, even when creosote was added. Béchamp was shocked to find that a mineral such as limestone would invert the sugar. It became obvious that there was a difference between chalk and pure calcium carbonate. Béchamp then began his epochal observations with his microscope. He was amazed to find the same "little bodies" in the chalk as he had earlier seen in living cells. The little bodies moved rapidly, similar to what was known as Brownian movement, but Béchamp noticed a difference between Brownian movement and what the "little bodies" were doing. The little bodies refracted light from their surroundings differently from particles agitated by Brownian movement. Béchamp determined that the "little bodies" were inducing the fermentation. Although they were much smaller than [Virchow's](#) cell, they were more powerful at inducing fermentation than anything else Béchamp had seen.

There were two tenets that guided Béchamp's work at that time, based on his experiences. One was that no chemical change takes place without a cause. The other was that there is no spontaneous generation of living organisms. Béchamp concluded that if the little bodies were truly alive, then he should be able to isolate them, prove them to be insoluble in water, and find them composed of organic matter. Through rigorous procedures, Béchamp proved those notions. He also was able to "kill" the little bodies by heating

them. When he heated chalk to 300° C (572° F) it no longer inverted the sugar, and the little bodies no longer made their characteristic movements.

His experimental results brought him to strange musings. If the little bodies were alive, as Béchamp had proven to his own satisfaction, how did they get into limestone and chalk? The limestone block that Béchamp obtained was considered to be millions of years old, and was a powerful fermentative agent. How could something survive in limestone for millions of years? He experimented with tufa limestone, coal deposits, peat bogs and the dust of cities. Ancient peat bogs and city dust proved to be powerful fermentative agents, while the coal and tufa proved weak.

The pursuit of his "error" in observing chalk initiate fermentation took him into territory never trod by science before. Béchamp discovered new realms of investigation and left his contemporaries far, far behind. What Béchamp discovered was that the little bodies were indeed alive, and apparently capable of lying dormant for millions of years. Furthermore, they were far smaller than Virchow's cell, and seemed to be building blocks and the organizers of cells. Béchamp's microscopic investigations of chalk, limestone, peat and the like showed him that the little bodies might be the living remnants of ancient cells. Béchamp recalled that Jacob Henle had earlier (1841) observed that the little bodies were structured, and suspected that they might be the cells' building blocks. Béchamp was not much given to speculation, but built his theories upon what he observed. His experiments took place in the late 1850s and early 1860s. Béchamp soon bestowed his own term to the little bodies, calling them *microzymas*, which meant "tiny ferment" in Greek.

Alfred Estor, a physician and surgeon at Montpellier's hospital, was captivated by Béchamp's discoveries. Estor wrote enthusiastically about Béchamp's work, and the two men became partners in further investigating the microzyma. Béchamp also discovered the cause of fermentation in beer yeast, and called it *zymase*. Although Béchamp coined the term *zymase* and its purpose in 1864, credit was given to E. Büchner for "discovering" it in 1897.[\[112\]](#)

In 1863, Pasteur's most powerful patron, Napoleon III, gave him his first task: researching the disease that was decimating France's vineyards. The year before, in 1862, Béchamp was already investigating the vineyard disease, on his own. Through his experiments he concluded that the disease's cause was a mold that was found on the leaves and stalks of the grapes. He thoroughly published his results in 1864, while Pasteur had barely begun his investigation.[\[113\]](#)

In 1865, Pasteur was assigned another task: discovering the cause of the disease of silkworms, which was destroying France's silk industry. Pasteur was handsomely paid by the state for his efforts in the vineyard problem and silkworm disease, known at the time as *pébrine*. Again, before Pasteur had even laid eyes on a silkworm, Béchamp, working on his own and unpaid, had solved the riddle of *pébrine*. Béchamp's experimentation yielded the fact that *pébrine* was a parasitical disease, and could be prevented with an application of creosote. Béchamp spoke before the agricultural society in 1865 about his findings. Pasteur, again demonstrating his misunderstanding of life processes, performed his own experiments and in 1865 announced that *pébrine* was neither animal or vegetable, but something akin to pus or starch. Pasteur's understanding was abysmal, but he had imperial patronage and France's ear.

While Béchamp was explaining the parasitical nature of *pébrine* and how to prevent it, Pasteur stated that thinking of the disease as parasitic "would be an error." Béchamp called the disease the result of a vegetative ferment, transmitted by spore. Béchamp differentiated *pébrine* from another silkworm disease called *flacherie*. He discovered that *flacherie* was not due to an outside disease, but was related to ill health in the silkworm's microzymas, and appeared to be hereditary. In other words, *flacherie* was a degenerative disease of the silkworms' constitutions, and *pébrine* was a parasitical disease that attacked the silkworms. Béchamp solved those problems in his *spare time* at his own expense, while Pasteur was blindly wandering on behalf of the Emperor. In 1866, Pasteur admitted that his earlier conclusion of *pébrine* resembling starch or pus was badly mistaken.[\[114\]](#)

Because Béchamp understood the diseases, he also suggested treatments: use creosote to prevent infection of *pébrine* and do not breed moths with *flacherie*. Here is where Pasteur apparently began inflicting damage on Western science and medicine due to his lust for fame, wealth and power. The ingenious investigations

of Béchamp were far ahead of his time, and although they were clear and precise, the bureaucracies of the day looked to the oracle of Napoleon III for his pronouncement. Pasteur demonstrated his complete misunderstanding of the disease, stating that *pébrine* was contagious and hereditary, and his preventive was finding eggs free of the disease, and only breeding those. Although the history books today credit Pasteur with saving the silkworm industry (called sericulture), the numbers tell a different story. When the troubles began with sericulture in about 1850, France produced about 30 million kilograms of cocoons annually. By 1866-67, the production had fallen to 15 million kilograms. After Pasteur's "preventive" was introduced, it fell to 8 million kilograms in 1873 and as low as 2 million kilograms in subsequent years.[\[115\]](#)

After summarizing the plunge in silkworm production, apparently accelerated by Pasteur's "preventive," here is what Dr. Lutaud, the one-time editor of Paris' journal of medicine, had to say about Pasteur's "miracle."

"This is the way in which Pasteur saved sericulture! The reputation, which he still preserves in this respect among ignoramuses and short-sighted savants, has been brought into being, (1) by himself, by means of inaccurate assertions, (2) by the sellers of microscopic seeds on the Pasteur system, who have realized big benefits at the expense of the cultivators, (3) by the complicity of the Academies in the Public Bodies, which, without any investigation, reply to the complaints of the cultivators - 'But sericulture is saved! Make use of Pasteur's system!' However, everybody is not disposed to employ a system that consists of enriching oneself by the ruination of others."[\[116\]](#)

Hume observed that perhaps the greatest harm that Pasteur inflicted on science was deflecting notice from Béchamp's discoveries, marching biology and medicine off in the wrong direction as he continued claiming credit for Béchamp's discoveries, while being so ignorant that he did not understand what he stole. Pasteur tried taking credit for Béchamp's silkworm discoveries, particularly Béchamp's explanation of *flacherie*, which was founded on his microzyma investigations, of which Pasteur knew literally nothing, and had done no original work on.[\[117\]](#) When Pasteur tried taking credit for Béchamp's silkworm discoveries at the Academy of Sciences, Béchamp was once more compelled to make reference to his earlier publications, and even told of how a French bureaucrat had quietly approached him about his solution to the problem.

In the meantime, Béchamp was continuing his investigations into the world of the microzyma. Béchamp and Estor labored long and hard at Montpellier, microscopes in hand. Their discoveries were startling.

Microzymas could be seen moving about inside cells. In healthy cells the microzymas looked one way, and appeared to be vital for the cells' healthy functioning. It seemed that microzymas were required for cells to form, and were essential building blocks of life. When tissue was diseased, microzymas seemed related to the bacteria they were seeing. The microzymas in chalk and limestone appeared to be surviving remnants of the creatures that became the rock, and incredibly came alive after millions of years of dormancy.

Béchamp and Estor tirelessly performed experiments that lasted for years. When a freak frost hit Montpellier in the winter of 1867-1868, Béchamp obtained a large cactus that had frozen. It was a cactus with a large, thick skin, impervious to invasion by organisms. Béchamp sectioned the cactus and looked deep within its interior. He found it teeming with destructive bacteria. They concluded that the bacteria they saw in damaged tissue, as in the frostbitten cactus, *came from the microzymas*.

Béchamp held that microzymas were both the beginning and end of life, in a category all their own. Microzymas initiated the formation of cells, and also initiated the cells' destruction. Béchamp stated that nothing is the prey of death, but everything is the prey of life. When animals and plants decay, organisms are nourished by consuming them. The organisms that live inside them are apparently responsible for their life in the first place. The decay initiated by the microzymas when cells die is identical to the fermentation process in wine, beer, and the inversion of sugar. Microzymas exist at the beginning of life, and when the cell dies, microzymas are eventually the only organized material left, and the rest is broken down into its constituent elements. The microzymas can survive in limestone for millions of years. The recent "revival" of ancient bacteria by

today's scientists is more confirmation of Béchamp's work. Microzymas, not the cell, appear to be the smallest unit of life, and its building block. A cell is a higher level of organization of life processes, similar to the manner in which a multicellular creature is another, higher level.

Béchamp and Estor were discovering a dynamic that has profound implications for today's medicine. They set forth a theory known today as pleomorphism. What it meant was this: one day a microbiologist looks through his microscope, seeing a rod-shaped bacterium; the next day he sees a spherical-shaped bacterium; with his microbiology training, based in large measure upon Pasteur's germ theory of disease, those bacteria are considered separate species; according to pleomorphic theory, that rod-shaped bacterium one day and spherical-shaped bacterium the next is the same organism, but has "mutated."

That might seem a minor difference, but it has profound implications for the entire foundation of modern medicine. In the view of Béchamp, a bacterium was not the *cause* of disease, but one of its *effects*. Béchamp noted otherwise healthy microzymas going through pathological mutations when cells were ill or dying, mutating into bacterial and other forms.

Pasteur apparently unsuccessfully tried plagiarizing Béchamp's microzyman work when he tried taking credit for Béchamp's explanation of the wine-grape problem. Béchamp was eight years ahead of Pasteur, and provided a much fuller explanation than Pasteur's terse explanation.^[118] Pasteur's 1872 attempt at plagiarizing Béchamp's analysis of the wine-grape problem, was in Béchamp's words, "his boldest plagiarism; he discovered all of a sudden, eight years after my discovery thereof, that the ferment of vinous fermentation exists naturally upon the grape." Béchamp said that Pasteur's announcement of his "new discoveries," and his claim that he "has opened a new path to physiology and medical pathology" was "too much: up until that time I had treated the man with consideration; but now he must be properly exposed."^[119]

When Pasteur's alleged attempted plagiarism of Béchamp's microzyman work was thwarted, Pasteur used his considerable powers to banish microzyman theory from French science, and he largely succeeded. Maybe Pasteur's appropriation of Béchamp's work was not as consciously dishonest as Béchamp averred. Maybe Pasteur was right and Béchamp wrong. The case is not that Béchamp's evidence and theories were carefully researched and found wanting. It is not that today's microbiology students are introduced to the subject in a way that develops the history of the germ theory and deals with rival theories and why they may be incorrect. Béchamp's work has never been pursued by mainstream microbiology, and Pasteur led an effort to erase Béchamp's name from the history books, and it largely succeeded. Estor was greatly grieved at Pasteur's plagiarism and corruption of their discoveries, and Béchamp wrote that Estor died with a broken heart over what Pasteur had done.^[120] I have tried for several years to obtain an English language copy of Béchamp's magnum opus, *Les Microzymas*, without success. If Béchamp's work is never investigated or reproduced, how can anybody tell if it is wrong? It looks as if Pasteur *did* investigate Béchamp's work to steal what he deemed useful, and then buried the rest. The good news is that many scientists have pursued the line of Béchamp's research, sometimes independently. They are still at it. Béchamp's paradigm may yet prevail, and if we want to be healthy, it probably should.

Today's germ theory of disease guides every medical student from the first day of class. Béchamp's work has shown the shaky foundation that the germ theory may rest upon. Pasteur later applied his germ theory to diseases such as anthrax and rabies. While the history books laud Pasteur's achievements, along with his "saving" of the silkworm industry, an analysis of the original data from Pasteur's treatments of anthrax and rabies not only show that he arguably did not cure anybody of anything, his treatments caused their death rates to go up.^[121]

Pasteur's germ theory of disease and the [vaccination](#) paradigm it inspired are examples of male-oriented medicine in action. Vaccination proceeds from a premise that there are particular organisms that cause disease by attacking the host body, and by injecting weakened organisms through vaccination, the body builds up immunity to the real thing. It is based upon Pasteur's germ theory. There is an impressively large body of evidence that shows that vaccination does not really work. Furthermore, it creates new diseases while making the disease it supposedly fights more deadly. Just as [fluoridation's proponents](#) cannot realistically claim credit for a decrease in tooth decay in America during the past generation, or as [Benjamin Rush](#) could hardly claim today that his calomel and bleedings really helped his patients, vaccination can claim little credit, if any, for

eradicating diseases. What deserves most and maybe all the credit for the elimination of mass diseases such as tuberculosis and whooping cough is the introduction of public sanitation, a healthier diet and a reduction in absolute poverty.[\[122\]](#) Vaccination just might be a major component in the great increase of cancer in the West, because it harms the immune system, and cancer and other degenerative diseases are related to immune-system failures.

Is there such a thing as infectious disease? Sure, but what is it, and how is it really transmitted? Is there really a species of disease organism that induces the disease, or is it a pleomorphic stage that any diseased tissue will eventually manifest under certain conditions? The early data from vaccination research shows it was a disaster, arguably never preventing one instance of disease, and causing endless death and suffering for millions of people.[\[123\]](#) Whatever benefits vaccination may appear to convey may be outweighed by other disease dynamics that vaccination sets in motion. Vaccination may help make one disease "disappear," but another takes its place. Many respected scientists have believed that vaccination is responsible for the increase in cancer rates in this century. Many think that AIDS was born via vaccination. When one understands how poorly the current disease theories may be founded, those ideas do not seem farfetched.

There is a major obstacle to challenging the dogma, however: a multi-trillion-dollar industry has grown up around it, and it fiercely protects itself, as all power structures do. In Hume's book, her main lament is that Pasteur pioneered the corruption of modern medicine. Dubos was not being ironic when he described Pasteur's legacy and how the corporate world is heavily invested in Pasteurian medicine. There may be no greater enemy of the public's health than the collective effort of those corporations, working hand-in-hand with Western physicians.

Hume noted with irony that Pasteur was not even a doctor, but he was the first to prostitute modern medicine by commercializing it. Vaccines became a big money maker. His "preventive" for silkworm disease was lucrative, even though it probably did not work. Pasteur founded institutes bearing his name, in order to further his work. Nobody knows where medicine may have led if Béchamp's discoveries had been given their due. All the Whiggish presentations do not even address that possibility.

A scientist at the Pasteur Institute performed one of the first modern confirmations of Béchamp's pleomorphic theory. In 1914, Madame Victor Henri subjected bacteria to ultraviolet light, and created a new species of bacteria from a species already known, transforming a rod-shaped bacterium into a spheroid bacterium.[\[124\]](#) With great irony, a woman at the Pasteur Institute confirmed the accuracy of Antoine Béchamp's theories, pariah that he was.

One problem with microscopic investigation into biology is the microscope itself. The wavelength of visible light is the theoretical limiting factor in optical microscopes. The smaller the wavelength of light shined upon something, the finer the image resolution. Resolution of optical microscopes is traditionally described in terms of diameters. The limit of optical microscopes has been around 2000-2500 diameters for many years. It does not matter how fine your lenses are, and it does not matter how hard you look, 2000-2500 diameters is the limit of optical microscopes, because of the wavelength of visible light, which is about 4000 angstroms. I doubt they attained 2000 diameters in Béchamp's time. Microzymas existed at the limits of resolution back then, and even today, optical microscopes have difficulty viewing the microzyman world.

A dynamic surrounding Béchamp played itself out repeatedly in succeeding generations of microbiologists. Béchamp seemed to be a man of high spiritual attainment. He sought to prevent cruelty to animals, while Pasteur engaged in numerous cruel animal experiments with dogs, rabbits and other mammals.[\[125\]](#) Pasteur pioneered a process whereby a dog's skull would be opened while it was alive, and the brain studied. Pasteur's trephination practices were merely one more instance of his spiritual perspective and the degeneracy of scientific practices that do not respect life. Pasteur's animal experiments, like those of his colleague Claude Bernard, became the target of animal-rights groups in the 1800s, even Bernard's wife and daughters campaigned against his experimentation on live animals.

Béchamp seemed to have a spiritual affinity with the microzyma, which was quite possibly related to his discoveries. That offends the scientific notion of objectivity, but other microbiologists had similar proclivities. Barbara McClintock won the Nobel Prize in Medicine in 1983 for her work on corn genetics. For

many years she worked in obscurity, and was even derided for seeing things in her microscope that others could not. She later said that she "had a feeling for the organism."[\[126\]](#)

One thing that primed me for Béchamp's revelations was that many years earlier I had read Jane Robert's [Seth](#) state the facts of pleomorphism. Seth said that viruses were constantly "mutating" according to what the host body told them to do. Seth said that a scientist would look through a microscope one day and see Virus A, and the next day he would see Virus B, and little did he know that it was the same virus, but it had "mutated."[\[127\]](#) It is a harmless virus one day, and harmful the next, depending the conditions it is subject to. Seth wove a fascinating tale regarding the interrelationship between body, mind and spirit, making the case that to study one without taking the others into account was a dead end, similar to sawing the legs off a chair, thinking it would serve as well with two legs as four.

The Developing American Medical Racket

During the first half of the 19th century, Great Britain was the world's leading industrial nation. Its per capita level of industrialization was more than twice as high as France's and nearly twice the United States' in 1830, and its gross industrial output was significantly larger than France's and the United States' combined. American industrialization per capita increased by 50 percent between 1830 and 1860, while British industrialization nearly tripled. In 1860, the United States had a per capita industrialization greater than every nation but Great Britain's, which was three times higher. In gross industrial output, the United States' was about a third of Britain's in 1860.[\[128\]](#) The American economy was a dichotomy of an industrialized north and an agricultural south. Although the reasons for the [American Civil War](#) were multiple, with the slavery issue and European influence receiving nods of recognition, my perception is that the overriding issue was holding the empire together, a motivation of every nation and empire in history. Lincoln even said that he would allow slavery if it would keep the "union" whole.

The United States still bears the scars of the Civil War, the bloodiest war it has fought, as far as domestic casualties are concerned. Disparagement of "Yankees" still can be heard in Southern conversation. Although the slaves were freed, they were in near-slave status for a long-time. At the dawn of World War II, black income per capita was only about 30% of white America's, an even lower ratio than it was in 1900. Lynching blacks was an American pastime well into the 20th century, where entire communities would assemble to celebrate the murder of people whose crime was having black skin. Women would pose in their Sunday best in front of the burning or hanging corpse, while the local newspaper reporter [would take pictures of the event suitable for framing.](#)[\[129\]](#) It was common for those "dead nigger" photographs to be made into postcards and mailed to family and friends, commemorating America's civilized ways. While the North was supposedly fighting to free the South's slaves, the genocide of Native Americans in Western North America was at about [its zenith](#). American women would not obtain voting rights until after World War I. The humanitarian impulse was muted at best, and the veneer of American civilization thin.

Beginning with the Civil War, the United States rapidly caught up and surpassed Great Britain in industrialization. By 1928, the United States' industrialization per capita was 50% higher than Great Britain's, and its gross industrial output was higher than Britain, France, Germany, the Soviet Union, Italy and Japan combined.[\[130\]](#) Industry dominated the United States, and what is known as the medical-industrial complex was well on the way to its current hegemony.

If that milieu is considered, it is not surprising that a class of men largely took over American industry, beginning during the Civil War. They all bought their way out of military service, and not because they were pacifists. They then began building industrial empires, and war profiteering during the Civil War was where they got their start. Of the big name robber barons, it is generally acknowledged that the most ingenious, ruthless and successful of them all was [John D. Rockefeller](#). The first American oil well was drilled in 1859 in Pennsylvania. After carefully sizing up the new industry, Rockefeller joined it in 1863. He quickly realized that if he could control the industry's refining arm, he could control it all. All oil production would have to pass through his hands if he controlled refining. His strategy was diabolically ingenious. He

used the business of his competitors to get kickbacks from the railroads. He then marched through the new industry, giving his competitors two options: sell out or be wiped out. Those who resisted his offer were quickly run out of business. There were mysterious refinery explosions and deaths in those days for those who refused to sell out. By 1880, Rockefeller controlled 95% of U.S. refining. When he wiped out or bought out a competitor, if his prey put up a vigorous and talented fight, he would try to hire them. He soon amassed a team of the most capable and ruthless businessmen around.[\[131\]](#) Once he controlled the oil industry, he began diversifying. Through direct investment and “philanthropy,” Rockefeller would eventually cast a long shadow over mining, [banking](#), government, the [media](#), [education](#), and - what concerns this essay - medicine. Rockefeller’s father was a genuine snake oil salesman and con man who sold cancer “cures.” John D. learned the business at his father’s knee, when he was around. His father funded his early ventures.

While Rockefeller and the other robber barons built their empires, the AMA was also building its monopoly. The AMA charter stated that one of its goals was “eliminating the competition.” In the 1850s, the AMA launched its first political campaign, which sought to ban abortion. Before the AMA's campaign, abortions were legal if they were performed before the baby could be felt kicking, and even the Catholic Church did not oppose it. The AMA campaign was stepped up in 1864, decrying abortion’s evils, eventually calling abortionists murderers and executioners. It worked, as between 1875 and 1900, every state but Kentucky passed laws banning all abortions. Hundreds of thousands of American women died during the years that abortion was illegal, as they had back alley abortions and died from the complications. Not only was the AMA campaigning to ban abortion, it also actively discouraged contraception and even information on fertility. While the AMA clothed itself in righteousness, an examination of the internal record revealed that the AMA’s motivation had nothing whatsoever to do with the sanctity of life. Their war was waged to wipe out female healers. Midwives were the traditional administrators of abortion and contraception.[\[132\]](#) It would take nearly a hundred years before abortion was made legal again, and today the right is under siege once again in America, although the effort is unlikely to succeed. The effort is about controlling and punishing women, and has little to do with a reverence toward life, as evidenced by most anti-abortionists’ support of capital punishment (their attitude epitomized by today’s American president, [George Bush the Second](#)), as well as murdered doctors and blown-up clinics.

Also in the 1850s, the AMA began campaigning against homeopaths. As with most inquisitorial behavior, the early campaign was relatively gentle. Books were written to ridicule “alternative” medicine, AMA members were forbidden from associating with homeopaths, and AMA pressure began getting homeopaths expelled from medical societies. The Thomsonian school of medicine also came under fire, but as they were generally laypeople, they were not as much of a threat as homeopaths were.

Although it would be a mistake to chalk it all up to a conspiracy, there is a familiar pattern when rival movements are attacked and destroyed. For instance, the Catholic Inquisition got its start in the early 1200s, as a response to internal corruption that left the Catholic Church’s religious monopoly in Europe vulnerable to challenges from reformists. By the early 1200s, the Catholic Church was holding ecumenical councils that [attempted to curb the corruption in its priestly ranks](#). Christian Europe’s most socially progressive and cosmopolitan region was France’s Languedoc region. Returning from the Balkans with Crusading soldiers was Catharism, a dualistic sect whose roots predated Christianity. The [Cathars](#) lived the austere lives that people imagined Jesus lived, and the pious example of the Cathars’ spiritual practice was a marked contrast to the Catholic Church’s priests’. The Cathars took vows of poverty, fasted, and apparently the most advanced of them could heal with a touch. Catharism spread like wildfire throughout Languedoc, and by the early 1200s, about half of the Languedoc region was Cathar. The Church had to deal with other threats in those days. The followers of Peter Waldo comprised an internal challenge to the Church’s corruption. Waldo’s attempts to reform the Church and bring Christianity back to its humble roots got him excommunicated.

The early attempts to curb Catharism were largely restricted to counter-preaching, with Dominic leading the effort to bring the Languedoc citizens back to the fold. He had little success, and Pope Innocent III crafted an effective solution. In businessmen’s parlance, it consisted of putting cement shoes on the competition while marketing an ersatz version of their product. Innocent called a Crusade on Languedoc and simultaneously sanctioned the mendicant orders, the Dominicans and Franciscans, who imitated the austere practices of the Cathars. The Albigensian Crusade was waged over decades, completely depopulating parts of France and killing about one million people. The Cathar threat to the Catholic

Church's monopoly was wiped out in a prodigious bloodbath, and the Church enjoyed another three hundred years of religious racketeering, until Martin Luther came along. The [Dominicans and Franciscans](#) became the Inquisition's foot soldiers, enforcing the faith with the rack, hot tongs and flaming stakes.

In significant ways, the offensive mounted by orthodox medicine is reminiscent of how the Catholic Church operated. Orthodox medicine abandoned its more egregious practices. The public rightly feared the heroic bleedings and large doses of "medicines" such as calomel. The highly dilute doses administered by homeopaths had great appeal. During its crusade against the competition, American orthodox medicine curtailed its heroic bleeding practices, as well as its heroic doses of calomel and other "medicines." It began co-opting homeopathic medicines into its pharmacopoeia. There was a trend ever since the 1830s, when the alternative movements began in earnest, to begin trusting nature again. Orthodox doctors began allowing the body to heal itself, or at least assist it, instead of bludgeoning it with heroic medicine. Orthodox medicine was raiding the alternatives for what it deemed useful, so it could offer a competing product. At the same time, orthodox medicine tried putting cement shoes on its competition. Getting homeopaths kicked out of medical societies were some of the early AMA successes in the 1850s.

The spiritual, political and social perspectives often have parallel in one's scientific and professional orientation. The homeopathic movement was not only revolutionary in the medical field. Most American homeopaths in the 1850s were also abolitionists and members of the nascent Republican Party. When Abraham Lincoln came into office in 1861, his Secretary of State, William Seward, had a homeopath as his personal physician. Homeopathy enjoyed political support in Washington in the 1860s, helping to blunt the orthodox assault.

The 1860s through 1880s were the period of greatest influence for homeopathic practitioners. The press and public were fairly unanimous in their criticisms of the orthodox medical establishment, and sympathetic toward homeopathy. By the 1870s, about a million American families were loyal to homeopathy. In 1878, a yellow-fever epidemic swept from New Orleans into the Mississippi Valley. There were about 20,000 deaths. Yellow fever was the most feared disease in the South, and official commissions were launched to investigate the 1878 epidemic. One commission investigated the records of homeopathic physicians where the epidemic raged. It turned out that people treated by homeopaths had a yellow-fever death rate of less than 7%, which was less than half the death rate of the general public. When the results were announced to the U. S. Congress, they were impressed.[\[133\]](#) The attacks on homeopathy by orthodoxy relaxed during those years, although homeopathy had been so demonized in the AMA's ranks that many orthodox practitioners would go berserk at the mere mention of it. There were various factors that doomed homeopathy. Orthodox medicine's alliance with the drug companies loomed largely, but the seeds of its destruction came largely from within its ranks.

Hahnemann's system was developed through experience with patients, and his practice made the homeopath both diagnostician and pharmacist. The homeopathic pharmacopoeia was vast, and the proper application of it took years of careful study. Homeopathy was not for quick study artists. There was no one-size-fits-all treatment, no universal "medicine" such as calomel, no assembly line to run the patients through. Not surprisingly, a movement arose in homeopathy that tried making homeopathy easier to learn and use. Its practitioners were influenced by the universal prescriptions that orthodox practitioners were handing out. With the relaxation of attacks from orthodox medicine, the internal division of homeopathy became evident. In 1880, it divided into the "purists" who followed Hahnemann's teachings to the letter, and the revisionists who tried making homeopathy easier to learn and apply. The subsequent internecine warfare was the major reason the homeopathic movement began disintegrating in the late 19th century. The homeopaths that I have dealt with or been aware of in my life have usually been from the "purist" school.

Another factor deserves mention. Although the heroic treatments of orthodox medicine were feared by millions of people, and rightfully so, they were by no means the majority of Americans, at least to the point of refusing to submit to them. Heroic medicine enjoyed the benefit of being spectacular. When a patient ingested calomel, the effect *was* dramatic. *Something* happened, even if it nearly killed the patient. I have experienced and watched homeopathy produce instant and dramatic results, for many ailments. For chronic conditions, however, the treatment could take many months, as the body gradually healed itself, in subtle, feminine fashion. There was often self-discipline involved with homeopathic treatment, and most people preferred to take a quick-acting pill for their afflictions. That dynamic can readily be seen today. True health in today's United

States comes from taking care of one's self. Eating well, exercising, refraining from tobacco, alcohol and other stimulants/depressants, and other aspects of a healthy regimen require some self-discipline, the kind that most people do not exercise. Most people would rather take a pill to make their symptoms disappear, so they can continue to pursue their addictions and deadly lifestyles. Symptom suppression is the essence of Western medicine today, and its appeal is largely to people who refuse to take responsibility for their health. Most want a pill or spectacular intervention, such as surgery, to make the problem "go away."

The homeopathic movement largely had itself to blame for its demise, but its internal weakness was also exploited by other competitors, the most damaging among them orthodox doctors, who teamed up with the burgeoning pharmaceutical empires. The homeopathic remedies administered by the "purists" were highly dilute and never mixed with other substances. It was the opposite approach to the polypharmacy of the proprietary medicine craze that gripped orthodoxy during the Gilded Age.

The final blow to homeopathy, however, was dealt by diversifying robber barons, John D. Rockefeller and Andrew Carnegie in particular. Rockefeller and Carnegie amassed enormous fortunes during the Gilded Age, through ingenuity and ruthlessness. As they came to dominate their respective industries, they branched out and became "philanthropists." Their "philanthropy" was more directed toward social engineering than humanitarian activity. Rockefeller and Carnegie exercised "institutional control" over American medicine.

By 1900, homeopathic schools had largely abandoned Hahnemann's methods, and the "make homeopathy easy" faction dominated. That "short cut" school of homeopathy was close in spirit and practice to orthodox medicine, and both pumped great numbers of graduates into the medical marketplace. Homeopathy suffered from the internal division, and its colleges relied almost solely upon student fees. Homeopathy also probably lost its effectiveness as Hahnemann's methods were abandoned. The same economic situation in relation to student fees existed in orthodox medical schools until 1910 and the Flexner Report, which was funded by the Carnegie Endowment. Medical schools that received Flexner's approval received Carnegie and Rockefeller funding, while those that failed to gain approval did not. Not surprisingly, the favored paradigm prevailed, with the AMA and drug industry allying itself with Rockefeller and Carnegie, forming a power structure that dominates Western medicine to this day.

The AMA worked hand-in-hand with Flexner, and government was soon a player. State boards refused to license doctors that did not come from AMA-approved schools. That interlocking institutional control spelled the death knell for homeopathy. In 1900, there were 22 homeopathic colleges. In 1918, there were only seven. Homeopathic colleges were not the only casualties of the institutional control that Rockefeller, Carnegie, the AMA, licensing boards and drug companies would exercise over medicine. That process also closed most medical schools for women and blacks. The alleged strategy was bringing science and education to medicine, but it was also obviously a power play to consolidate wealth and power. Ironically, Rockefeller would not take the drugs that his empire promoted. His personal physician was a homeopath, and John D. lived to be nearly 100 years old. To gain some insight into Rockefeller's motivation, a quote from *Medical Dark Ages* is appropriate:

"...a surgeon told John D. (Rockefeller) that everyone should have an appendectomy before the age of 16 as a preventative. The oil wizard saw the point at once. 'Why, you've got a better thing than Standard Oil!', he exclaimed." - **In Nat Morris, *The Cancer Blackout***.

Rockefeller was creating paradigms in Western society, using his ill-gotten money to shape and dominate institutions that he funded, and it goes far beyond the drugs and knives paradigm that rules Western medicine. Soon before he began taking over medicine, he was reshaping the University of Chicago, remaking it to his liking. The University of Chicago would spawn social control ideologies. [John Taylor Gatto](#), one of America's finest teachers, noted that today's grade schools were designed by theorists from the University of Chicago, where they were honed their "instruments of scientific management of a mass population." Gatto's thesis is that our educational system "dumbs us down," so we can be controlled.

From 1990 through 1997, in the wake of the Soviet Empire's collapse, in every year but two, the Nobel Prize in Economic Sciences was awarded to a University of Chicago economist, their work generally concerned with scientific, capitalistic, means of managing the world economy. There was about zero humanitarian impulse in Rockefeller's "philanthropy." He only became excited when pondering how rich he would become.

The knives and drugs paradigm prevailed due to considerations of wealth and power, not because it works. In 1913, a few years after the publication of Flexner's report, Rockefeller strikebreakers turned machine guns on a camp of striking miners in Colorado, killing forty people, including women and children. Exploiting workers was always the way the [capitalists](#) primarily amassed their fortunes. Several years ago, a member of Dennis Lee's organization had lunch with a Rockefeller heir. The heir said that he knew of no rich American family (at the level of dynastic wealth) that made its fortune honestly. In America at least, behind every great fortune is a great crime. Even the "radical" Carnegie was a crafty strikebreaker, the bloody Homestead Strike staining his reign. Machine-gunning one's employees could be effective, but was a crude method of exerting control. Rockefeller and the other robber barons pioneered and refined methods of manipulating public opinion and shaping the public mind. Rockefeller's image in the wake of the Ludlow Massacre, especially as it became evident that he authorized it, was at about the level of Attila the Hun, and Rockefeller then waged one of history's first public relations campaigns. He hired Ivy Lee in 1914 to help manage the Rockefeller Empire's image. Lee is considered the leading pioneer of today's [public relations industry](#), working first for J. P. Morgan, then for Rockefeller.^[134] John D. Rockefeller soon engaged in the charade of carrying around a bag of dimes, handing one to everyone he met.

Before Rockefeller and Carnegie became involved, the AMA was getting its act together. In 1899, the AMA hired George Simmons as the new editor for its *Journal of the American Medical Association* (JAMA). Harris Coulter described Simmons as one who had considerable "political abilities."^[135] JAMA was a deeply hypocritical publication. Its primary source of revenue was drug ads, and the ads it ran for "secret ingredient" and "proprietary" medicines violated the AMA's code of ethics. In the 1890s, the AMA came under fire from state boards and other organizations for its unethical ads, and was on its way to becoming a laughingstock. Simmons rescued the AMA, largely by turning JAMA into a money machine by closely allying itself with the drug industry. Drug ads bankrolled the AMA, especially after Simmons became involved in 1899. Coulter did not delve into Simmons' credentials in his work, but Eustace Mullins did, in his *Murder by Injection*.

An Englishman, Simmons settled in the Midwest in 1870 and began a journalism career. After several years as editor of the *Nebraska Farmer*, Simmons opened a medical practice, advertising that he specialized in homeopathy and the "diseases of women."^[136] He apparently was an abortionist when the AMA was campaigning to ban abortion. Simmons advertised that he received his training and diploma at Rotunda Hospital in Dublin, Ireland. That hospital never issued diplomas. There is no evidence that Simmons ever received any medical training. Simmons then got a diploma from Rush Medical School. There is no evidence that Simmons ever set foot on the medical school campus. He apparently received a mail order degree. Simmons appears to have been the classic "quack."

Simmons was ambitious and resourceful. He organized a Nebraska chapter of the AMA. In 1899, he was invited to Chicago to take over the editorship of JAMA. Simmons saw that the AMA was not properly seizing its opportunities. He quickly named himself the AMA's secretary and general manager. Simmons then found a capable assistant, a man who had been arrested for embezzlement as the Secretary of the Kentucky Board of Health, who may have bought his way to a pardon, and was then encouraged to leave the state. He became Simmons' right hand man.^[137]

Simmons turned the AMA into a gold mine when he initiated an approval racket. For a price, the AMA gave its "Seal of Approval" to drugs. It was a form of extortion, and the AMA engaged in no real research. Their "research" was a form of "green research." Simmons, like a shrewd horse trader, would set his price based on how badly a drug company wanted the AMA's Seal of Approval. The racket soon led to a troubled situation with Wallace Abbott, the founder of Abbott Laboratories. Abbott refused to knuckle under to Simmons' blackmail, and therefore the AMA never approved Abbott's drugs. One day, so the story goes, Abbott went to see Simmons and showed him the investigative file that he had built on Simmons' "career." Simmons had sex charges brought by some of his patients, and charges of negligence in the deaths

of others. That, combined with the fact that Simmons had no credible medical credentials, caused a sudden change of heart at the AMA. Abbott's drugs were suddenly approved every time, and Abbott did not have to pay for them.[\[138\]](#)

Simmons was soon raking it in hand over fist. *JAMA's* advertising revenue rose from \$34,000 per year in 1899 to \$89,000 in 1903. By 1909, *JAMA* was making \$150,000 per year, becoming the AMA's cash cow. Other racketeering strategies involved threatening firms that advertised anywhere except in the pages of *JAMA*. Simmons was ingenious in making *JAMA* the icon it became, exerting institutional control over the up and coming industry. Simmons' efforts made the AMA and drug companies into natural allies of the Rockefeller and Carnegie foundations.

Simmons recruited Morris Fishbein to the AMA in 1913. Simmons was a wealthy man by the 1920s, sitting at the AMA's helm. He openly had a mistress, and attempted to get rid of his wife. A standard technique in those days was having one's wife committed to an insane asylum. Simmons heavily drugged his wife and then tried convincing her that she was going insane. His strategy backfired. Mrs. Simmons took her husband to court in 1924, and the sensational trial ruined Simmons' image. The trial inspired numerous books, plays and movies, the most famous of which was *Gaslight*, starring Charles Boyer and Ingrid Bergman. Simmons stepped down at the AMA and his protégé, Morris Fishbein, took over. Fishbein ran American medicine with an iron fist for the next twenty-five years, becoming a household name and a rich man.

Fishbein soon extended the drug approval racket to food, where for a price a food would garner the AMA's Seal of Acceptance. The testing involved seemed limited to seeing how much money was in the bank account of the companies seeking AMA approval. At the same time Fishbein was announcing the Seal of Approval and citing two tuna companies as meeting the AMA's stringent requirements, the FDA was seizing shipments of those very brands because "they consisted in whole or in part of decomposed animal substance."[\[139\]](#) Fishbein's first customer for his food approval racket was Land O'Lakes Butter Company, a company that had been criminally prosecuted many times for adulterating its product to hide spoilage and watering it down.[\[140\]](#) It widely advertised its new, AMA-approved, status. The AMA's Seal of Approval racket for food lasted until the 1940s, and it always teetered on the verge of damage lawsuits, as it performed virtually no testing on its "approved" foods. The drug Seal of Approval racket, however, proved long lasting, but drugs comprised only one pillar of the developing racket. The other was surgery. When anesthesia and antiseptics made surgery respectable, the surgeons sought to make surgery into a monopoly.

Surgery was not rescued from its barbaric status in the United States until the 1880s. Keen was not the only American pioneer of antiseptic procedures. The most famous is William Halsted. Germany, with its focus on laboratory science, became the center of medical research and training during the last half of the 19th century, not France or England. Halsted was a rich boy from Yale who studied in Germany and brought back the German philosophy of medical practice. Halsted pioneered sterile surgical procedures in Baltimore. As happened often in those days, Halsted became a cocaine and morphine addict, and never beat his addiction. Along with pioneering sterile surgery, Halsted also refined the practice of invasive surgery. Halsted invented the radical mastectomy.

This essay will now largely concern itself with the development of today's cancer racket. With Halsted's innovations helping it along, surgery became the favored, even sole, way to treat cancer in the late 19th century. Cancer is a disease of civilization, and the greatest doctors of history knew that treating cancer by attacking the tumor was futile. Cancer was also seen long ago as a disease of the "humors," the body's fluids. Western medicine gradually abandoned the humoral perspective to adopt the "solidist" one. Studying and treating the humors (blood, lymph, bile) was largely abandoned in favor of treating the body's "solids." Such a change was partly based on the cell theories of Virchow and others, but the rise of surgery also contributed greatly, because it is impossible to use a scalpel on blood.

The world's most influential cancer research institution is Memorial Sloan-Kettering Cancer Center in New York. Its "spiritual founder" was J. Marion Sims. Sims received minimal training during the 1840s before he began performing experimental surgeries on slave women. Slave women were at the bottom of the America's social hierarchy, and as such made ideal subjects for human experiments. Performed without anesthesia, Sims' surgeries were accomplished by having friends hold down the slaves as he

operated. According to his sympathetic biographer, his operations were “little short of murderous.” Sims’ friends could only endure about one stint of holding down his experimental subjects, as the subjects’ thrashing and shrieking were too much for them to endure. When local plantation owners refused to lend Sims any more subjects for his experiments, he bought a slave woman for \$500 and performed 30 operations on her in a few months. After a few years of his experimental surgeries, he may have been run out of town, as he had the reputation of being some kind of Dr. Frankenstein.

Sims abruptly moved to New York City from the South, and in 1855 helped found Women’s Hospital, a charity hospital. He again began performing experimental surgeries, that time on immigrant women, and the Dr. Frankenstein rumors began anew. In the 1870s, he began performing experimental cancer surgeries. His brutal experiments, called life threatening by the hospital trustees, combined with his open contempt of his women subjects, got him expelled from the hospital. Sims cultivated wealthy women as his professional clientele (his specialty was operating on vesico-vaginal fistulas), and those contacts got him reinstated. An Astor heir died of cancer, and the Astor family offered the Women’s Hospital \$150,000 if they would open a cancer treatment wing of the hospital. The trustees associated cancer treatment and research with Sims’ barbarities, and hesitated to accept the money. Sims double-crossed the trustees and negotiated directly with the Astors to set up a new hospital with the money. His negotiation worked, although he died before New York Cancer Hospital opened in 1884. He would have been its first director had he lived. The name was changed to Memorial Hospital in the 1890s, and to its current name in the 1950s.[\[141\]](#)

Cancer treatment by surgery grew during the late 19th century and well into the 20th. Ever more drastic surgeries were devised to treat cancer. Using war terminology and imagery, one cancer treatment that removed the entire jaw was known as the “commando” because it reminded the doctors of the slashing attacks of World War I commandos. Memorial Hospital surgeons invented procedures that virtually hollowed out the entire body, trying to get every last potential piece of cancerous flesh. Another innovative surgery at Memorial Hospital was called a hemicorporectomy, where half the body would be carved away (everything below the pelvis) as a way to treat advanced pelvic region malignancy. Many patients elected to die rather than submit to such surgeries.[\[142\]](#)

James Douglas, who owned the world’s largest copper mine, also owned large pitchblende deposits, from which come radium and uranium. Douglas began experimenting with radium as a cure all, and not long before World War I became the leading “philanthropist” of Memorial Hospital. His \$100,000 donation was attached to the condition that Memorial Hospital would begin using radium treatments for cancer. With the adoption of radium as “medicine,” the price of radium instantly increased by more than 1000%. Douglas died in 1913, probably from radiation poisoning. By the 1920s, Memorial Hospital’s radium treatments constituted its single largest source of income.

In 1927, John D. Rockefeller and his son began contributing millions of dollars to Memorial Hospital, including money and land to build a new hospital in the 1930s. The same year that the Rockefellers began “donating” to Memorial Hospital, Standard Oil of New Jersey signed its first agreement with I.G. Farben. Farben was Europe’s largest and most notorious cartel. Farben ran the rubber works at Auschwitz, and invented Sarin, Tabun and the Zyklon B used in the gas chambers. In 1934, the Rockefeller Empire sent its PR wizard Ivy Lee to Germany to help improve Farben and the Third Reich’s image.[\[143\]](#) The Rockefeller Empire worked hand-in-hand with Nazi Germany, [as did many other American industrialists](#), including Hitler’s hero, [Henry Ford](#). The Rockefellers even renewed their contract with Farben in 1939, the contract stating that they would continue doing business even if the United States and Germany went to war, an agreement that was kept clear until 1942, after Germany had declared war on the United States. It was not until the American government investigated the Rockefeller companies, one investigator calling their relationship with Germany bordering on “treason,” with a resultant publicity black eye, that the Rockefellers discontinued their open support of Nazi Germany, although they apparently kept dealing with Hitler’s regime clear to the end of World War II.

The Rockefeller/Farben connection influenced Memorial Hospital to begin pursuing chemotherapy research before World War II broke out, with Standard Oil executive Frank Howard sitting on Memorial Hospital’s Research Committee. Before World War II was over, Howard recruited two General Motors executives, Alfred P. Sloan and Charles Kettering, into becoming donors for an ambitious plan to make Memorial Hospital into

a research and treatment center. Kettering also bankrolled [Kettering Laboratories](#) in Cincinnati, which was notable for producing “research” that proved the “benign” properties of industrial substances such as lead, fluoride and aluminum. Sloan was a long-time representative of the Morgan family interests, and the Rockefeller and Morgan interests shared power in running Memorial Sloan-Kettering.^[144] Today more than ever, Wall Street runs Memorial Sloan-Kettering, and Memorial Sloan-Kettering dominates the direction of Western cancer research and treatment. “Corporate philanthropy” is an oxymoron. Corporations “give” money with an eye toward the benefits that might accrue in the end. Everything a corporation does is ultimately designed to increase its profits. [Earning a profit is about the only reason that corporations exist](#), but few will ever state it that baldly.

Today’s cancer treatment paradigm attacks the tumor as a way to eradicate cancer. What did the great doctors of history have to say about attacking cancer tumors? From [Medical Dark Ages](#) I obtained these quotes:

"It is better not to apply any treatment in cases of occult cancer; for if treated (by surgery), the patients die quickly; but if not treated, they hold out for a long time." - **Hippocrates, (460-370 BC)**.

(Advanced cancer is)" irritated by treatment; and the more so the more vigorous it is."

"Some have used caustic medicaments, some the cautery, some excision with a scalpel; but no medicament has ever given relief; the parts cauterized are excited immediately to an increase until they cause death."

"After excision, even when a scar has formed, nonetheless the disease has returned, and caused death; while ... the majority of patients, although no violent measures are applied in the attempt to remove the tumor, but only mild applications in order to sooth it, attain a ripe old age in spite of it." - **Celsus, (1st century AD)**.

"When [a tumor] is of long standing and large, you should leave it alone. For myself have never been able to cure any such, nor have I seen anyone else succeed before me." – **Abu'l Qasim, (936-1013 AD)**.

"It should be forbidden and severely punished to remove cancer by cutting, burning, cautery, and other fiendish tortures. It is from nature that the disease comes, and from nature comes the cure, not from physicians." - **Paracelsus, (1493-1541 AD)**.

The same mentality was held by the Hawaiian kahunas. The kahuna lore stated that "If it is (cancer), do not treat it."^[145]

The heroic medicine of [Benjamin Rush](#) was diametrically opposed to such a sentiment. He wrote that one of the “Vulgar Errors in Medicine” was to “let tumors alone.”^[146]

With surgery coming into vogue, it became a monopoly as a way to treat cancer. Today, there are basically three legal ways to treat cancer in America: surgery, radiation and chemotherapy. The second legal way to treat cancer was discovered in the 1890s. How was that pioneer treated? Again, from [Medical Dark Ages](#):

"The surgeons. They controlled medicine, and they regarded the X-ray as a threat to surgery. At the time surgery was the only approved method of treating cancer. They meant to keep it the *only* approved method by ignoring or rejecting any new methods or ideas. This is why I was called a 'quack' and nearly ejected from hospitals where I had practiced for years." - **Dr. Emil Grubbé**. Dr. Emil Grubbé, ...discovered...X-ray therapy (for cancer) in 1896...X-ray was not recognized as an agent for treating cancer by the American College of Surgeons until 1937...Dr. Grubbé...still was not recognized as late as 1951." - in **Herbert Bailey, *Vitamin E, Your Key to a Healthy Heart***

The third legal way, chemotherapy, came directly from World War II chemical warfare experiments. Using chemicals to treat cancer had been around since Paracelsus, but the chemicals killed the patients more often than not, since they were based on arsenic, lead and other deadly substances. In the early 20th century, chemical treatments and finding the "magic bullet" (more masculine imagery) to kill cancer cells became an intensive area of study. In the 1930s, chemotherapy research was noted for its deadly and barbaric effects, and those who used surgery and radiation battled against chemotherapy. World War II was a watershed in the use of chemicals. [DDT](#) was first used during World War II, the Nazis invented nerve gases, the allies invented [napalm](#) and [nuclear weapons](#), and the notion of "better living through chemistry" became entrenched due to the experience of [World War II](#).^[147]

The racketeering impulse has been with Western medicine for many years and is deeply embedded today. The rise of the Western medical paradigm coincided with the rise of the corporation and new kinds of empires. The reason that American medical doctors are the highest-paid professionals on earth is not because they perform valuable work. They are technicians in what is arguably the West's greatest racket, where the power of life and death is in the hands of the world's most lucrative professions and industries. The fact that only violent methods of cancer treatment are legal is no accident. Here are two quotes from *Medical Dark Ages*.

"The thing that bugs me is that people think the FDA is protecting them. It isn't. What the FDA is doing and what the public thinks it's doing are as different as night and day." **Dr. Herbert Ley, Commissioner of the FDA**. (*San Francisco Chronicle*, 1-2-70).

(In response to above quote) "What *is* the FDA doing? As will be shown by the material that follows, the FDA is "doing" three things:

"First, it is providing a means whereby key individuals on its payroll are able to obtain both power and wealth through granting special favors to certain politically influential groups that are subject to its regulation. This activity is similar to the 'protection racket' of organized crime: for a price, one can induce FDA administrators to provide 'protection' from the FDA itself.

"Secondly, as a result of this political favoritism, the FDA has become a primary factor in that formula whereby cartel-oriented companies in the food and drug industry are able to use the police powers of government to harass or destroy their free-market competitors.

"And thirdly, the FDA occasionally does some genuine public good with whatever energies it has left over after serving the vested political and commercial interest of its first two activities." - **G. Edward Griffin, *World Without Cancer***.

Ley was the commissioner of the FDA in the 1960s. That quote of Ley has some history and previously incorrect reporting, including in earlier versions of my work, and its tale is told at this footnote.^[148] The

FDA apparently acts as [Mr. Deputy](#), [Ms. Prosecutor](#) and [Ms. Deputy Attorney General](#) did in protecting the turf of its patrons.

The insurance companies are an integral part of the racket, keeping the money from the alternatives because they are "not approved." "Not approved" becomes a self-fulfilling Catch-22 by mainstream medicine, as they refuse to investigate alternatives, so therefore they are not approved. It goes even further, as laws are passed making it a criminal offense for a doctor to use an "unapproved" treatment.[\[149\]](#) It is an impressive use of circular logic to produce an insulated racket. Evidence for that bold charge will be presented in this essay.

The Cancer Racket Begins

This essay sketched the path the big three took in becoming about the only approved cancer treatments in America, although the data shows that cancer patients usually do not live longer by using their treatments. The evidence suggests that people can live much longer by doing nothing rather than allowing themselves to be treated by orthodox, attack-the-tumor methods. For instance, Hardin B. Jones, a professor at the University of California at Berkeley, studied 23 years worth of cancer mortality statistics. His research was simple: when was somebody diagnosed with cancer, how long did they live after diagnosis, and did they have mainstream cancer treatment? His study was done in the 1950s and was published in 1956. For treated patients, their life expectancy after diagnosis was three years, a number that is about the same today. For untreated patients, those who generally refused treatment, their life expectancy was 12.5 years.[\[150\]](#) For mainstream treatment, Jones found no evidence that early detection or "aggressive" treatment increased patients' life expectancies, and that the data that showed that we were "winning" the war on cancer was largely due to statistical games.[\[151\]](#) Researchers have collected those kinds of statistics only a few times since Jones' work, and their data always confirmed Jones' findings.[\[152\]](#) Ironically, as alternatives are attacked because they allegedly do not work, there is no evidence that the mainstream treatments work, if by "working" we mean increasing a patient's life expectancy. By the standards imposed on alternative cancer treatments, the mainstream treatments are worse than complete failures, causing immense suffering while they do not work, and "coincidentally" making huge sums of money for the cancer treatment industry.

The "improvement" in cancer statistics since the 1950s is largely a statistical chimera, gained by factors such as earlier detection of the cancer, giving other reasons for the patient's death, calling benign conditions cancerous, etc. One of the statistical sleights of hand played in the cancer game is nearly identical to the one they played with heart disease a generation ago. Blood pressure tables were age-adjusted, making hardening of the arteries appear to be a normal aging process. Although cancer rates sharply increased during the 20th century in America, if one "age adjusts" the data, the increase does not appear so large. Again, it *assumes* that cancer is a normal aging process. Although nearly a quarter of all Americans die of cancer, it is no "epidemic" in the mind of [Elizabeth Whelan](#).[\[153\]](#) Maybe in another generation, the geniuses who dreamed up age adjusting the cancer data will make the same admission the blood pressure age adjusters did: they did not know what they were talking about.

One of the potentially hilarious, if it were not so tragic, aspects of modern manipulation of the cancer game is the statement, "We got the cancer, but lost the patient." The evidence strongly points to cancer being a systemic disease, not one part of the body "turning traitor." Where the tumor first manifests is merely the result of the body's weakest part manifesting a tumor first. Attacking that part of the body to "kill the cancer" would therefore be insane, but that is how the paradigm operates.

As with most of Western medicine, attacking a tumor has nothing to do with curing the disease, but suppressing its symptoms. When oncologists talk about how successful their treatment is, it is nearly always in terms of how responsive the tumor is. Cancer patients hear the hopeful news that their type of tumor usually has a high response rate to the treatment proposed. Sure, the tumor responds. It is being attacked, but the attack is similar to America's attacks on [Iraq during the 1990s](#): most of the bombs miss the target, causing "collateral damage." When people undergoing chemotherapy lose their hair and have other maladies, that is "collateral damage." Their hair falls out because the chemotherapy kills all dividing cells, so it not only kills off tumor cells, it kills off hair follicles and tissue much more vital than hair.

See John Robbins' *Reclaiming Our Health* for an excellent summary of where American cancer treatment stands today. In [Ralph Moss](#)' *Questioning Chemotherapy*, he presents the results of more than 400 technical papers regarding the results of chemotherapy clinical trials. Time and time again, Moss demonstrates that the data itself shows no increase in the patients' life expectancies.^[154] They sure suffer a lot however, and big money rolls in by treating them. At its most optimistic, chemotherapy "works" for about 4% of all cancers, although 90% of mainstream cancer patients receive at least some chemotherapy.

Although Western medicine's history is not an inspiring one, and the rise of the AMA and the robber baron empires during the last half of the 19th century were ominous trends, Morris Fishbein is largely credited with turning cancer treatment into the racket it is today. Fishbein took over American medicine in 1924 when Simmons was forced to step down in the wake of the scandal over his divorce.

As with Simmons, Morris Fishbein graduated from Rush Medical School, even though he failed his anatomy course. He interned for only six months and never practiced medicine a day in his life. He refused to go through a two-year internship at an accredited hospital, which was the standard back then. Fishbein was seriously considering a career as a circus acrobat, and was working part-time as an extra at an opera company. Before he could leave medicine, Simmons recruited him to work at the AMA's offices in 1913.

The name "American Medical Association" said a lot about the organization. The very name "medical" was a smokescreen designed to hide the fact that the organization was formed to look after the interests of its doctors, but calling it "medical" gave it a benign, selfless feel. It was an [Orwellism](#) before there was Orwell. How many people would be fooled if the American Bar Association suddenly changed its name to the American Justice Association? Would people then believe the organization was not primarily concerned with the welfare of its lawyers, but was about selflessly seeking justice in America?^[155] Yet, the AMA is portrayed as an association of selfless healers, although its members make more money than lawyers. Of course, the AMA cultivates that image, just as the [mainstream media](#) characterizes itself as "free." American lawyers and doctors are about earth's two highest-paid professional groups. It is no coincidence. One capitalizes on conflict and misery, while the other capitalizes on illness and misery.

As I was graduating from high school in the 1970s, doctors' incomes were skyrocketing, and becoming a doctor was the ultimate goal for many of the best students. During the mid-1970s it was nearly impossible to get into medical school. Only about ten percent of the applicants were accepted. Something quite interesting happened by the mid-1980s: applications for medical school had declined drastically. I read a business analyst's opinion during those days. He stated that the kind of the people who tried getting into medical school in the 1970s were going into investment banking and other "hot" professions in the 1980s. The implication was obvious. The big money was easier to make as a corporate raider and other 1980s glamour professions than as a doctor.

The grand gentleman of alternative cancer treatment, [Ralph Moss](#), wrote,

"Over the past twenty years I have heard many stories of how people are treated by their oncologists. Some of these are truly heartening and there are clearly many caring individuals out there. More often, however, I have been shocked by some of the profession's lack of empathy and sensitivity in both language and behavior... In my own experience at Memorial Sloan-Kettering Cancer Center, the way I heard doctors speaking to and about their patients added to my growing disillusionment with the war on cancer. For instance, I routinely heard some doctors refer to their advanced patients as 'waste-basket cases.' I heard the widely used drug BCNU jokingly referred to as 'Be seen' you,' and 5-FU as 'Five Feet Under.'

"At Grand Rounds early one morning, a prominent doctor displayed a *Playboy* centerfold and said, 'Some of our patients look like this.' He then displayed the picture of a seriously overweight woman, her breasts hanging down to her waist. 'Others,' he said, 'look like this.' Another celebrated surgeon who I interviewed for *Center News* had a lamp in the shape of a woman's breast on his office desk. I was so astonished I could hardly get out a single question. Have doctors changed? In 1994, the *New York Times* described a

top clinical researcher as "self-confidence with a manner that is often perceived as arrogant and abrasive."[\[156\]](#)

History demonstrates that outlawing abortion and/or birth control has always been part of the war against women. The Third Reich and Ceausescu's Romania outlawed abortion. The AMA's anti-abortion campaign that began in the 1850s is easily seen in a similar light. High abortion rates usually accompany low contraception rates. The practice of abortion reflects an ignorant or repressed population, but banning it is even more repressive, compounding the problem, not ameliorating it. Similar to the [war on drugs](#), crime, and the renewed [war on terror](#), abortion is not a cause of the problem, but a symptom, and criminalizing it is always the path of disaster, a lesson that America never seems to learn, but is doomed to repeat over and over.

Texas oilman Harry Hoxsey made a deathbed pledge to his father to distribute a family remedy discovered by one of their horses, a remedy that cured cancer. It is an herbal remedy. The Hoxsey method treated tens of thousands of American patients during the 1920s and 1930s.

Hoxsey looked like the classic "quack." He was a fast-talking Texas oilman. He never claimed, however, that he developed his remedy. He was merely passing on a family tradition and making it available to humanity. He opened his first clinic in early 1924, with immediate and spectacular results. An impressed doctor arranged to have Hoxsey treat a Chicago policeman who had terminal cancer and was given only a few weeks to live. Hoxsey's treatment was used only to determine if it was toxic. The doctor who arranged the trial was not expecting the policeman to improve, as he had already been subjected to surgery and radiation, and his condition was rapidly deteriorating. The doctors were using the policeman as a human guinea pig, but Hoxsey felt that his treatment could cure the man.

See the attached image for the progress of the policeman's condition with Hoxsey's treatment.

Click on image to enlarge

When the policeman astoundingly recovered, Morris Fishbein, through his agents, offered to buy the rights to Hoxsey's treatment. The sticking point in negotiations related to the deathbed pledge that Hoxsey made to his father: people would get the treatment regardless of their ability to pay. Hoxsey made that a non-negotiable issue, and he treated countless patients for free over the years. The response of Fishbein and his pals was that they would charge whatever they wanted for the cure, once they bought it. That ended negotiations, and thus began a vendetta against Hoxsey, led by Fishbein and the AMA, that lasted for a generation. Fishbein, who never practiced a day of medicine in his life, led a "war on quacks." Eventually the Hoxsey clinics were run out of America, and today the only one operates in Mexico, run by one of Hoxsey's nurses until she recently died. Kenny Ausubel produced a documentary on Hoxsey's story in 1987, and a superb book in 2000 of the same title: *When Healing Becomes a Crime*.

Immediately upon assuming the AMA's helm in 1924 (although his official position was merely JAMA's editor), Fishbein began cancer treatment racketeering. Hoxsey's was only one in a long line of harmless, effective and cheap cancer treatments that Fishbein helped wipe out.

My mystical mentors have informed me that light will be one of the remedies of the future. Subjecting the body to varying frequencies and intensities of light can eliminate disease and keep a body well. When one begins studying the [human aura](#), the idea becomes a natural one. Dinshah Ghadiali was a gifted scientist who rubbed shoulders with Edison and Tesla, and came to America from India in the 1890s, believing the "land of the free" propaganda and Horatio Alger tales. In the 1920s, Ghadiali developed and used with great success what he called "Spectro-Chrome Therapy" (SCT). It was simply subjecting people to light waves. In certain respects, it was little different from Royal Rife's therapy (presented in this essay soon). As soon as he came into power, Fishbein attacked Ghadiali and SCT in the January 24, 1924 JAMA. Fishbein led the attacks that saw Ghadiali put on trial eight times, and he eventually spent eighteen months in prison.[\[157\]](#) In a pattern that will become familiar, a 1945 fire of mysterious origin destroyed Ghadiali's main research building

just before an important trial. At that trial, with the fire eliminating most of the evidence that he could defend himself with, part of the judgment was to *burn his books*.

Royal Rife and Morris Fishbein

While Fishbein was wiping out cancer cures that he could not monopolize, a San Diego biologist was developing a microscope that today stands as one of biology's greatest breakthroughs. [Royal Rife](#) originally attempted to find an electromagnetic means to cure disease. The direction of Rife's work can be considered male-based medicine, to a degree. Rife sought a way to kill the bad guys while sparing the good guys. Although Rife may not have attained the ideal solution, he still stands among science's giants.

Rife was trying to cure tuberculosis by electromagnetically killing the organism responsible for it. He needed a microscope that could view the tuberculosis organism, but such a device did not exist, so Rife conceived and built his own. He began building his first one in 1917, and completed it in 1920. For the next five years, Rife prepared and viewed about 20,000 tissue specimens, but his microscope was not powerful enough. Rife completed a second microscope in 1929, and in 1933 a third microscope was built, named the Universal Microscope. It was an impressive contraption, containing about 5000 parts. Below is a photograph of it, from [Barry Lynes](#)' definitive account of Rife's discoveries, *The Cancer Cure that Worked!*, on page 162.

Click on image to enlarge

Modern optical theory cannot explain how Rife's microscope worked. The 1929 microscope attained a resolution of 17,000 diameters, far greater than the 2000 diameter limit that optical microscopes have. His 1933 Universal Microscope attained a resolution of 31,000 diameters. In September 1998, I heard [Tom Bearden](#) talk about Rife's microscope. Bearden speculated that Rife may have been generating gravitons (a mythical subatomic particle) to gain that high resolution. Rife's Universal Microscope was by far the world's most powerful microscope. It attained new vistas of microbiology. Rife had such incredible personal focus that he was able to sit at his microscope for days at a time, barely moving. Many years later, one of his colleagues would say,

"I've seen Roy sit at that doggone seat (his Universal Microscope) without moving, watching the changes in the frequency, watching when the time would come when the virus in the slide would be destroyed. Twenty-four hours was nothing for him. Forty-eight hours. He had done it many times. Sit there without moving. He wouldn't touch anything except the little water. His nerves were just like cold steel. He never moved. His hands never quivered.

"Of course he would train beforehand and go through a very careful workout afterward to build himself up again. But that is what I would call one of the most magnificent sights of human control and endurance I'd ever seen.

"...I'll always remember Roy as my ideal. [after expressing his awe of Rife's mind – Ed.]... He had so many wrinkles [ways to make money with his discoveries – Ed.] that he could have cashed in and made millions out of it if he wanted to, and I mean millions of dollars. Which would have benefited the human race, irrespective

of this tremendous thing that he built which we call the Rife ray machine.

"...In my estimation Roy was one of the most gentle, genteel, self-effacing moral men I ever met. Not once in all the years I was going over there to the lab, and that was approximately 30 years, did I ever hear him say one word out of place.

"All the doctors used to beat a path to Rife's lab door and that was a beautiful lab at one time."[\[158\]](#)

Because there was nothing else like it, doctors and scientists beat a path to Rife's door. Peering deeper into the microbiological milieu than anyone had ever done before, Rife clearly saw the pleomorphism that Béchamp had documented. Rife was able to stain his specimens with light, not the crude staining procedures of the day, which killed what was observed. Rife was able to see his specimens *in vivo* and *in vitro*. In watching life processes under unprecedented magnification, Rife accomplished a feat that has still not been reproduced by modern orthodox science.

In 1931, Arthur Kendall was challenging the dogmatic assertions of Thomas Rivers, the father of virology, and Kendall heard of Rife's microscope. Rife and Kendall had a historic meeting in San Diego. With Rife's microscope, they observed a typhoid culture that Kendall produced, which he called his "K Medium." The typhoid bacillus was theoretically filtered out of the K Medium, but they could see the typhoid bacillus in its smaller, previously invisible stage.[\[159\]](#) It should have been a momentous event in medical history. The *Los Angeles Times* first broke the story in November 1931, under the heading "The World's Most Powerful Microscope." Rife was making demonstrations of his microscope to hundreds of scientists. His laboratory became a scientific Mecca, but it was a threat to the medical racket that was steamrolling along.

In 1932, Kendall was invited to deliver a paper to the Association of American Physicians. There he presented his epochal observations. In a crass demonstration of raw power, Rivers tried having Kendall's talk canceled. When that proved impossible, Rivers ascended the podium after Kendall presented his results. Rivers and Hans Zinsser of Harvard proceeded to tear Kendall limb-from-limb professionally, concluding that since they could not reproduce Kendall's results, he was lying to the audience. Just as Pasteur's apparent plagiarism prevailed partly because his imperial patronage and public image cowed other scientists, nearly all the doctors in attendance were cowed by Rivers' and Zinsser's performance. Rivers had the Rockefeller Institute, a highly powerful and rich institute during the depths of the Great Depression, behind him. Naturally, Rivers and Zinsser could not reproduce Kendall's results if they did not have the world's most powerful microscope at their disposal, but the herd of physicians and scientists was easily dissuaded from taking such a novel direction in microbiological research.

Rife took his cue from Kendall, using the K Medium in his further work. Kendall obtained a Rife microscope and used it in his Chicago laboratory. In 1932, Rife had a fortuitous "accident." He had been experimenting with the field produced by an argon-filled electrified tube. It seemingly altered the culture he was observing, and through that serendipity, Rife isolated what he dubbed the "BX cancer virus." Rife performed hundreds of experiments, and described a four stage life-cycle of the virus:

1. BX (carcinoma)
2. BY (sarcoma - larger than BX)
3. Monococcoid form of the monocytes of the blood of over 90 percent of cancer patients. When properly stained, this form can readily be seen with a standard research microscope
4. Crytomyces pleomorphia fungi - identical morphologically to that of the orchid and of the mushroom.[\[160\]](#)

Besides isolating the cancer virus (something never before seen) Rife had also proven the pleomorphic theory of microbiology that was first elucidated by Béchamp. In 1932, Rife was using his frequency device to destroy the typhus bacteria, the poliovirus, the herpes virus, the cancer virus and others using experimental animals. Human treatment was not far off.

Rife fortunately had a powerful ally in Milbank Johnson, an influential doctor in Los Angeles circles, and a

member of the Pasadena Hospital's board. Johnson began laying the political groundwork for Rife's cure to be used on humans. In 1934, Rife began using his frequency device on humans, and Johnson began the University of Southern California Medical Research Committee, a committee that Johnson ran until his death in 1944.

The Rife frequency treatment worked on cancer from the beginning. Fourteen of his first sixteen cancer patients were cured using his device within three months. The patients all had "terminal" cancer that orthodox medicine had given up on.[\[161\]](#) The device was simple. It created an electromagnetic field that Rife calibrated to the resonant frequency of the cancer virus. Once every three days, a patient was subject to the field for a few minutes. The patients felt nothing, and no tissue was damaged. All signs of cancer quickly left those patients. The device could also be calibrated for other diseases such as syphilis, and several diseases could be cured at the same time.

In 1935, Johnson's clinic was going full steam, clinical results were carefully documented, and Rife was perfecting a production model frequency device. Rife was also making a microscope that could be produced for under \$1000, and would give a magnification of "only" 10,000 to 15,000 diameters. That was still several times what conventional optical microscopes could give, and was high enough to see the pleomorphic forms that Rife had discovered and described.

In 1936, Rife met with the International Cancer Research Foundation, in hopes of getting their support for his methods. In an illustrative instance of bureaucratic stupidity, the research foundation took the arrogant position that they did not need guidance from Rife to replicate his results. Sailing blindly, they failed. Meanwhile, Dr. E.L. Walker at the Hooper foundation in San Francisco isolated one of the BX virus forms, using one of Rife's microscopes.[\[162\]](#)

Rife began having trouble with his eyes, and his doctor restricted his time spent at the microscope. Those events transpired during the depths of the Great Depression, and money was scarce. Rife had help refining his frequency device from an electrical engineer named Philip Hoyland. A company was formed to build and sell the frequency generators. It was called Beam Ray, and Hoyland, Rife, James Couche (a doctor who had been using the frequency device to treat patients for years), Ben Cullen (a long-time friend of Rife's) and a promoter named Hutcheson were the company's owners. The company made 14 frequency devices, and they were used with phenomenal success. Cancer, cataracts and other diseases simply melted away with the device, properly calibrated to the disease forms.

One doctor, Richard Hamer, was running forty cases a day through his San Diego clinic, and the results were miraculous.[\[163\]](#) One of Hamer's patients was an elderly man from Chicago, in his eighties. He had skin cancer on his face and neck. His face looked like hamburger. He had already lost the lower half of one eyelid, the lower lobe of one ear, and it was eradicating other facial features. After six months of treatment at Hamer's clinic, the man only had a small black spot on the side of his head, and that was about to fall off. The man returned to Chicago with skin as smooth as a baby's bottom.[\[164\]](#) Milbank Johnson was trying to gather enough clinical evidence to prove beyond any doubt that Rife's treatment worked, and they were trying to keep their patients quiet about their treatment.

The old man returned to Chicago, but could not remain quiet about his miraculous cure. He came to the attention of Fishbein. Fishbein was a household word in those days, so famous that his name was used in a Marx Brothers movie and his face graced the cover of *Time*.

Fishbein heard of the man's miracle cure, and invited him to his office. The AMA's headquarters were in Chicago, and still are today. The old man was reticent about his cure, but Fishbein wine and dined him, and eventually pried the information out of him that Dr. Hamer in San Diego had cured him.[\[165\]](#) Those events with the old man and Fishbein happened in 1938-1939. Through his agents in Los Angeles, Fishbein approached Beam Ray and tried buying into the company, and their offer was rebuffed. Hoyland was the weak link that Fishbein went after. After Beam Ray rejected the AMA's offer, the AMA bankrolled a lawsuit by Hoyland to try seizing the company. The lawsuit led to a trial. The brutal realities of [America's legal system](#) were too much for Rife's constitution. The trial destroyed Rife and stopped Beam Ray in its tracks. The lawsuit would be considered a frivolous one today, and Hoyland would have never waged it if not goaded and bankrolled by

the AMA.

Rife was subpoenaed in 1939, and the AMA attorney tore into him on the witness stand in a way that Rife had never experienced. Rife had never been in a courtroom before, and [I can sympathize](#) with what he lived through. Rife's doctor suggested that he take a drink to calm his nerves, and Rife's alcoholism began. If Fishbein and his pals could not own the Rife device, they would destroy it.[\[166\]](#) They hunted down all the doctors using the device. Everybody was threatened with losing their license if they kept using the Rife frequency device. Hamer quickly gave up his device.

Milbank Johnson was not intimidated. Johnson had demonstrated his motivation years earlier. He was a doctor who had seen the suffering of countless patients, and he had dedicated his life to discovering a cure for cancer. While Fishbein and his buddies tried wiping out the Rife frequency device and discrediting Rife's research, Johnson continued to amass data, getting authorities (even international) involved, and led the effort to get Rife's device the recognition it deserved. Apparently on the brink of making a very public announcement about Rife's device, Johnson suddenly took ill in 1944 and died. His death remains mysterious. In the late 1950s and early 1960s, two federal inspectors examined Johnson's hospital records and concluded that he was likely poisoned.[\[167\]](#)

During the same period when Johnson suddenly died, a new technician in Rife's lab stole one of the quartz prisms from Rife's microscope, rendering it inoperable. Just before that theft, Dr. Raymond Sidel published a description of Rife's microscope in the *Smithsonian*, where Sidel ran the censorship gauntlet that the AMA had dropped on Rife's work. In the *Smithsonian*, Sidel described how the cancer virus "may be observed to succumb when exposed to certain lethal frequencies." That public exposure made somebody irate, for soon after the article was published, Sidel became aware that somebody was following his car and a bullet crashed through his windshield. Dr. Couche defied the AMA and continued using Rife's frequency device until the 1950s, when they revoked his license.[\[168\]](#) The judge in Hoyland's lawsuit was accusatory of Hoyland when rendering the verdict, telling Hoyland that he thought he was crooked, and he ruled in favor of Beam Ray. The judge even told Beam Ray that he would be happy to represent them in a lawsuit against the AMA, but the trial had bankrupted Beam Ray. Ben Cullen even lost his house in the ordeal.[\[169\]](#) Rife was a ruined man who never recovered from the 1939 trial.

Just prior to the AMA-funded attack on Rife, the other quality "electronic medicine research lab" in America mysteriously burned to the ground in New Jersey, while that lab's owners were visiting Rife's lab in California, for another "coincidence."[\[170\]](#)

With Rife, the spiritual perspective once again comes into play. While Pasteur and orthodox medical researchers performed horrific experiments on animals and even humans, Rife also performed animal experiments, but his animals were not sacrificed. He would induce cancer and other diseases to his animals, then cure them. He performed exacting operations on them. His experimental subjects were his pets, and they died of old age, not from his experiments.

[From my experiences with Dennis Lee](#), I discovered that few people can weather even a "fair" trial, being smeared in the media, and bearing the brunt of other establishment attacks. [Sammelweis'](#) fate is not unusual or perplexing. Rife was never the same man after Fishbein waged the 1939 trial, yet he never completely gave up.

In 1950, John Crane became aware of Rife's story and approached him, proposing to collaborate with him in producing his frequency device again. For the next decade, Crane devoted his life to doing just that. After a decade of research, corresponding with the medical authorities and hiring experts to further develop the Rife frequency device, Crane made some major breakthroughs, making the device far more effective than it was in the 1930s.

In 1960, Crane was making and selling the device, along with a detailed technical manual on how to use it, and was attempting to get it patented. The medical authorities raided Crane's facility in California and seized everything: machines, engineering data, research records and reports, pictures off the walls, etc. They did not even have a search warrant. Then the railroad treatment began, with the [kangaroo court tactics](#) I know so well: none of the seized material was made available to Crane so he could defend himself; no testimony of

the other doctors and researchers working with the technology around the country was allowed into evidence, much of it impeccable in its methods and findings; the jury foreman was an AMA doctor, and the rest of the jury was carefully stacked. The only medical authority allowed to testify was an "expert" from the AMA who had never actually seen the device working. Crane was convicted and sentenced to ten years in prison, and Rife fled to Mexico. Crane was not the only Rife follower to go to prison. Another of Rife's assistants was imprisoned.

Crane got out of prison in a little over three years. An insanely dedicated man, he went right back at it, trying to get the frequency machine out there. In October 1965, he submitted an application to the California Board of Public Health, trying to get official sanction for the frequency device, as he tried doing before they threw him into prison. The authorities threw up the "there's not enough evidence" roadblock, one of their favorite tactics, while they were busily hunting down and wiping out doctors who used the device.

Rife died in 1971, and his Universal Microscope eventually ended up in Crane's home, being cannibalized for spare parts for a radio! In the mid-1970s, Christopher Bird began researching the Rife saga, and began the search for his microscope. The results were published in *New Age Journal* in March 1976, under the title "What has Become of the Rife Microscope?" In 1978, Wilhelm Reich's daughter told Bird that there was another Rife, who was working in Canada, and Bird found Gaston Naessens. Naessens' story is coming soon enough, but this essay will first cover the rest of Fishbein's illustrious career.

Shaking down the food and drug companies was only part of the racket. Wiping out cancer cures was another. Fishbein also helped cover up health disasters, such as an outbreak of amoebic dysentery at the World's Fair held in Chicago in 1933. His complicity in the hush job caused many people to contract the disease.^[171] Fishbein regularly approved drugs with his Seal of Approval program that later proved deadly or ruinous to health.^[172] Most deadly, however, was his *promotion of tobacco*.

Native Americans used tobacco for medicine and ceremonies, but they were not addicted to it. The Spaniards first brought tobacco to the Old World. When the [English began colonizing North America](#) they sought gold, [just as the Spanish did](#). When gold proved scarce in North America, another economic gold mine had to justify the New World's invasion. For the English it became tobacco and furs. [Jamestown](#) would not have survived if not for tobacco revenues, which kept the colony afloat. [Walter Raleigh](#) had big plans for tobacco and his Roanoke colony, but failed. By 1638, three million pounds of tobacco a year were making their way to Europe from the Chesapeake. By 1672, it had grown to 17 million pounds a year. Europeans were becoming addicted.

Although the science of epidemiology did not exist in those days, it did not take a rocket scientist to realize that regularly inhaling smoke into one's lungs was unhealthy. Smokers had the most atrocious coughs and often died of respiratory diseases. Here are some *Medical Dark Ages* quotes to bring some perspective to what people suspected about smoke in the lungs all those years ago.

"Smoke... makes a kitchen also oftentimes in the inward parts of men, soiling and infecting them, with an unctuous and oily kinde of Soote as hath been found in some great Tobacco takers, that after their death were opened." - **James I, A Counter-Blaste to Tobacco, p. 32; 1604 AD.**

"The Hellish and dismal cloud of...Coal...perpetually imminent over (London) ...that her inhabitants breathe nothing but impure and thick mist...corrupting the lungs and disordering the entire habit of their bodies; so the Catarrhs, ...Cough, and Consumption, range more in this one City, than in the whole Earth besides." - **John Evelyn, 1661 AD.**

Although "science" did not begin making a "persuasive" connection between smoking and disease until the 20th century, many people could easily see the connection between smoking and ill health. The cigarette was

an industrial idea applied to tobacco consumption, and the tobacco company propaganda was clever.

In the 1929 Easter Parade in New York City, marching in the parade was a group of attractive young women, smoking cigarettes. It was seen at the time as a great victory for women's freedom. It was later discovered that those marching, smoking debutantes were fashion models hired by [Edward Bernays](#) at the behest of the American Tobacco Company. Bernays is considered the "father of public relations," a professional descendant of Ivy Lee. He was a nephew of Sigmund Freud, and Joseph Goebbels used Bernays' *Crystallizing Public Opinion* in his campaign against the Jews. The tobacco companies were cynically manipulating American women into thinking that smoking was a badge of freedom.^[173] Bernays was a non-smoker who lived to be 103, who also designed the [propaganda campaign to fluoridate America's water supplies](#).

Although Hitler's propaganda minister took pages from the tobacco guru's book in his campaign against the Jews, the Third Reich itself was not keen on cigarettes. Germany, the world's center of scientific medical research, began its own war on cancer in the 1920s, as it had one of the world's highest cancer rates. German doctors were documenting the health hazards of tobacco during World War I, and before that, many German researchers suspected that cancer did not involve local disturbances, but was a systemic condition and was based on numerous factors, such as diet, stress, genetics and other factors. Those researchers proposed largely dietetic solutions that were low in fat, sugar and protein, and high in fruit and fiber.^[174] During the 1920s, German researchers were documenting the link between smoking and cancer. In 1939, Franz Lickint published *Tobacco and the Organism*, which Robert Proctor called "arguably the most comprehensive scholarly indictment of tobacco ever published."^[175]

Hitler's goal was turning Germany (and Eastern Europe, once the "subhumans" were removed) into a land of Aryan supermen. The Third Reich investigated cigarettes, tobacco consumption and health, finding them to be bad news indeed. Hitler said that tobacco was the red man's vengeance from the grave upon the white man. Hitler became the centerpiece of a German propaganda campaign against smoking. Hitler was also against drinking and eating meat, but it appears to be partly a PR stunt to project an ascetic image. Hitler apparently liked beer and meat once in awhile, although he correctly considered live food to be humankind's natural diet. Hitler took gleeful satisfaction in the fact that he did not smoke, but Churchill, Roosevelt and Stalin did. Hitler and Nazi Germany was a strange combination of the enlightened and the insane, but when it came to improving the health of the chosen race, German researchers were far ahead their Western rivals.

While the Third Reich was trying to discourage tobacco consumption in Germany, because it was harmful to health, the United States was actively promoting the same substance for its populace. George Seldes, considered by many to be the father of investigative journalism, was writing back in the 1930s about the American press covering up the dangers of cigarette smoking, while taking big money from the tobacco companies for cigarette ads.^[176]

Fishbein applied Simmons' "Seal of Approval" racket to food for a generation. Fishbein also began an active campaign of *promoting cigarettes* in the 1930s. From the 1930s to the 1950s, the pages of *JAMA* were filled with cigarette ads, and they were making medical claims. What follows are some of the witty slogans that graced cigarette ads in those days. "Not a cough in a carload" (for Old Gold). "Not one single case of throat irritation due to smoking Camels." "More doctors smoke Camels than any other cigarette." "Just what the doctor ordered" (slogan of L&M cigarettes). Philip Morris said its cigarettes were "recognized by eminent medical authorities." "For Digestion's Sake, Smoke Camels" because the magical Camel cigarettes would "stimulate the flow of digestive fluids." Another was "Chesterfield Is Best for You." Former smoker turned smoking reformer, Senator Maurine Neuberger (D-Oregon) said, "The American smoker during the '30s and '40s could have been forgiven for confusing his favorite brand of cigarettes with the latest wonder drug."^[177]

Not only was Fishbein raking in money from cigarette ads, he was advising cigarette companies on how to structure their "research" so they could make ever-grander medical claims. In 1935, Philip Morris began a new ad campaign, *JAMA* being the most prominent place for its ads, touting a new additive that made its cigarettes superior to the competition's. The additive was diethylene glycol. Philip Morris stated that its research showed its additive was superior to the rest of the industry, which used glycerine as its

moistener. Ethylene glycol is what goes into car radiators today as antifreeze. Diethylene glycol is its cousin.

What Americans did not know about diethylene glycol was that Fishbein was working behind the scenes with Philip Morris, helping design their research. After looking at the original data that Philip Morris produced, Fishbein told them how to create "good data" that they could promote. They took his advice and hired Michael Mulinos, a pharmacologist at the Columbia University College of Physicians and Surgeons, to perform a study on diethylene glycol. Mulinos' study appeared in the *New York State Journal of Medicine* in June 1935. Mulinos reported that rabbits that smoked Philip Morris cigarettes with diethylene glycol had three times less swelling of their eyes than those who smoked the brands using glycerine. That study became the cornerstone of Philip Morris' promotional campaign. Philip Morris' chief chemist and nine of his assistants canvassed the nation, speaking at major medical conferences, hyping the research results and targeting doctors in particular. Their ads offered free cigarettes to doctors, and Philip Morris even sent representatives to doctors' offices to give them free cigarettes while hyping diethylene glycol.^[178]

The Philip Morris campaign was a major success, making Philip Morris the America's leading cigarette seller. Those experimental results were used in Philip Morris' ad campaigns clear into the 1950s. Philip Morris was so grateful to Fishbein that they offered him a retainer for his continued good advice. Fishbein uncharacteristically declined their offer, probably because it might show favoritism to the other tobacco companies. Fishbein was raking it in from the ad money anyway.^[179]

As fate would have it, diethylene glycol made headlines in 1937 when a drug company put diethylene glycol, without first testing it, in the first antibacterial medicine ever sold in America, sulfanilamide. Within weeks of introduction, sulfanilamide began killing people across America, including children. About 100 people died. The AMA even helped prove that diethylene glycol was the culprit. Fishbein had a problem on his hands, and he acted characteristically. He ran an editorial in the midst of the tragedy, noting that diethylene glycol was used safely in many American products, including cigarettes. Helped by Fishbein's damage management, Philip Morris was able to continue promoting its diethylene glycol for another generation.

In 1949, Fishbein was finally overthrown as the dictator of American medicine, largely due to the legal victories that [Harry Hoxsey](#) was winning. As with his mentor Simmons, Fishbein was thrown out when his public image suffered. Even President Truman's brother testified on Hoxsey's behalf, as Hoxsey's treatment cured his skin cancer. Truman's brother talked to the sitting president about saving Hoxsey from the AMA's vendetta, but the President said his hands were tied because of the political-economic realities of the medical establishment.^[180] Truman would call the AMA, "just another mean trust." Fishbein soon went to work for the cigarette manufacturer Lorillard at a retainer of \$25,000 a year. That was big money in those days, the equivalent of about \$160,000 a year today.

Probably not coincidentally, in 1950 (the year after Fishbein was deposed at the AMA), for the first time *JAMA* published research results about the harmfulness of tobacco. Medical student Ernst Wynder and surgeon Evarts Graham of Washington University in St. Louis found that 96.5% of lung cancer patients in their hospitals had been smokers.^[181] American science and medicine finally produced research results that confirmed the obvious. Nearly 400 years ago, King James I toured England, holding up the blackened lungs extracted from dead smokers, blasting the effects of smoking. The Nazis quickly found out how deadly smoking was. George Seldes was excoriating the American press in the 1930s for covering up the ill effects of smoking. *Reader's Digest* began a heroic campaign in 1941 against smoking, a campaign that continues to the present day. It took *JAMA* until 1950 to produce their first word on the hazards of smoking, and that did not even slow the ad campaigns for cigarettes in *JAMA*.

Fishbein was working hard for his new employers, helping to design more research that Lorillard could promote. Fishbein helped mastermind the last advertising blitz for cigarettes that graced *JAMA*. The hullabaloo centered on Lorillard's Micronite filter, a "breakthrough" in cigarette technology. It was the first "mineral" filter. During the cigarette advertising wars that raged on *JAMA*'s pages, the AMA Advertising Committee directed their chemical laboratory to study the effectiveness of cigarette filters. None of the filters worked very well, and actually worked against the desired effect of cigarettes in the first place: filling the lungs with smoke. There was a marginal improvement with the Micronite filter, the only mineral filter tested. Lorillard was attempting to reproduce the resounding success that Philip Morris had with its

diethylene glycol blitz of the 1930s. In 1952, Lorillard began running ads in *JAMA* with headlines announcing, "Have you Heard the Story of New Kent Cigarettes, Doctor?" And "Doctor, Have You Tried the New KENT Cigarette?" In their ad campaign Lorillard proudly announced, "At the recent convention of the American Medical Association, thousands of physicians heard the Kent story, and saw a convincing demonstration of the MICRONITE FILTER'S phenomenal effectiveness."[\[182\]](#)

Physicians began complaining to the AMA about those shameless displays, especially when increasing evidence was submitted from the American scientific community about the harmfulness of cigarettes. *Reader's Digest* was in the midst of a tremendous anti-tobacco campaign at the same time that Lorillard's Fishbein-inspired ad blitz was taking America by storm. *Reader's Digest* was running articles with titles such as "Cancer by the Carton," and cigarette smoking began declining in the early 1950s, as America began waking up. [Reader's Digest](#) took one of the most heroic stands that any American media organization ever took, as its competitors had their pages filled with cigarette ads.

It finally came to a head in 1953. It was not due to an episode of conscience overcoming the AMA. The drug companies, which had long been the financial backbone of the AMA, began complaining. They thought that cigarette ads running alongside their drug ads in *JAMA* were discrediting them, because cigarettes were likened to miracle drugs. Faced with that economic reality, *JAMA* announced that it would no longer accept cigarette ads beginning January 1, 1954. It was a decision that cost *JAMA* \$100,000 a year in cigarette ad revenues, but that did not stop Lorillard's ad campaign. In 1954, Lorillard ran ads in *Time*, *Life* and other popular magazines, citing the AMA experiments that "proved" how superior Kent's Micronite filter was to other cigarette brands' filters. In 1954, a war broke out in between the AMA and Lorillard. *JAMA* editorials blasted Lorillard for using its name without permission, while Lorillard countered with ads that told its readers that while the AMA did not endorse any particular brand of cigarette over another, their research still showed that Lorillard's Kent filter was the best of the bunch.[\[183\]](#)

In one of many ironic twists to the Lorillard story, guess what the magical ingredient was in the Micronite filter? Asbestos! Asbestos had already been linked by researchers to a number of respiratory diseases, including lung cancer. Truth can be stranger than fiction. In Fishbein's autobiography, published in 1969, he lauded the Micronite filter, and wrote how it spurred all the cigarette companies to put filters on their cigarettes, but that:

"Within two years, however, the talk about the relationship of cigarette smoking to cancer began to assume the proportions of a great propaganda. Now many years have passed, the campaign is intensified, and one begins to wonder how long it will be before some definitive answers are found for the questions that make people anxious and doctors despondent."[\[184\]](#)

On the same page that Fishbein displayed his stalwart allegiance to the tobacco companies (without mentioning the hefty sums he also earned from them), he stated that he campaigned for [fluoridation](#) at the same time. There was Fishbein, campaigning for fluoride and asbestos, and calling the effort against smoking a "great propaganda."

Even after the Lorillard affair, the AMA and the tobacco interests stayed in bed together for nearly another forty years. Immediately after the U.S. Surgeon General issued a report in January 1964, which was damning of smoking and cigarettes, the AMA spent \$500,000 of its own money, and the tobacco companies kicked in another \$10 million, to fund a "study" to counteract the Surgeon General's report. The AMA issued a brochure in May 1964 titled: *Smoking: Facts you Should Know*. The brochure downplayed the hazards of smoking, stating that smoking's greatest health hazard was smoking in bed and burning the house down. The brochure tamely suggested that some research pointed to some health problems, although "some equally competent physicians and research personnel are less sure of the effect of cigarette smoking and health." The brochure concluded with "Smoke if you feel you should, but be moderate." The tobacco companies were so pleased with the AMA's stance on smoking that they kicked in another \$8 million for

further AMA "research."[\[185\]](#)

It was not until a 1980s investigation revealed that two AMA board members owned a farm where tobacco was raised, and that the AMA's retirement fund was invested in tobacco stocks, that the AMA finally began speaking out against cigarette smoking. In the 1980s, some young, idealistic doctors in the AMA's ranks began making noise. Even then, the AMA has rarely been at the battle's forefront. Until the 1980s, if people walked into the AMA's headquarters they could find cigarette vending machines in the bathrooms and lobbies.[\[186\]](#)

Fishbein was the face of modern medicine in those days, a household name, writing his health column in hundreds of American newspapers and the editor of two AMA publications, including *JAMA* (the other publication that Fishbein edited was named *Hygeia*, of all things). Eustace Mullins, the author of *Murder by Injection*, is derided as a conspiracy theorist. Conservative and highly respected writers such as Ralph Moss prefer the "structural analysis" view of the racket. The conspiracy theorists are nearly always tagged as delusional and paranoid nut cases.

Consider Morris Fishbein. Here is a theory that few are willing to ponder, because few will admit that anybody could be so diabolical, especially somebody who runs the medical establishment. The "[spiritual perspective](#)" section of this web site gives a glimpse into what may have motivated Fishbein. Here is an unpleasant thought to consider: Fishbein was actively promoting the single greatest cause of cancer while simultaneously wiping out the cancer cures that worked, cures that were harmless, and Fishbein knew *exactly* what he was doing. His cigarette promotion was creating a market (patients) for a racket where the cash registers rang resoundingly, and anything that could cheaply cure the disease was ruthlessly wiped out.

I have never seen anybody make that argument for Fishbein before. If we accept that some people are actively committed to evil, and it probably has to be admitted if one believes in free will, then this argument about Fishbein is not easily dismissed. Maybe he was merely greedy and blind, with low intelligence. Although Fishbein has been compared to Hitler a number of times, I will be gentler and call him the Al Capone of modern medicine, whose racketeering efforts greatly contributed, wittingly or unwittingly, to the suffering and deaths of many millions of people around the world in the 20th century. He gets my vote for medical gangster of the 20th century. However, in significant ways, the medical racket is worse today than it was in Fishbein's time.

The "War on Quacks"

[Hoxsey](#), [Rife](#) and [Ghadiali](#) were far from the only cancer treatment pioneers wiped out by Fishbein and his boys. Fishbein led a war on "quackery" during the 1940s, and eventually the AMA's "quack" files included 300,000 names. Parallels to the 1950s communist black lists are not coincidental.

Dr. William Koch developed glyoxylide in the 1940s and found himself in Fishbein's gunsight. [This link](#) presents some pertinent *Medical Dark Ages* quotes about Koch. Koch apparently experienced numerous attempts on his life. Doctors who supported his treatment were physically attacked and some died violently or mysteriously. Koch died in disgrace, his treatment abandoned. Today, modern medical orthodox research has borrowed from his work, without giving him any credit or mention. Koch's fate was part of Fishbein's self-proclaimed "war on quacks," an AMA dynamic going clear back to the [AMA's founder](#). It was really a war on the competition, Al Capone-style.

Another 1940s snuff job was on Max Gerson, another genius who came to the land of the free, trying to make the world a better place. More *Medical Dark Ages* quotes lay out a [brief version of Gerson's tale](#). Gerson also survived murder attempts, his clinic was also run out of the country, where like Hoxsey's clinic it now resides in Mexico. Gerson's daughter Charlotte Gerson runs the clinic, and Norman Fritz helps out.[\[187\]](#)

Another casualty of the Fishbein era was Howard Beard. More *Medical Dark Ages* quotes give a [brief overview](#)

of [Beard's fate](#). In Beard's case, it was the relatively gentle methods of repeatedly burning down his laboratory and throwing him into prison.

Over and over, the pattern repeats itself. Sometimes it is an attempted buyout. When that is rejected, the attacks come. Gunshots, poisoning, hit and run "accidents," kangaroo courts, prison, media smears, mysterious fires, the litany goes on and on. It is frighteningly similar to [Dennis' story](#). The Fishbein era was probably the most notorious, but the same tactics have been repeated in different combinations to the present day. There are dozens of instances of alternative cancer cures being wiped out in America during the 20th century.

Fishbein was not a lone crusader against "quacks." In 1913, the same year as his men were machine-gunning striking workers, John D. Rockefeller founded the organization that would reincarnate as the American Cancer Society (ACS). The ACS was also part of the "war on quacks." When Fishbein had to admit in court, during his battles against Hoxsey, that he never practiced medicine, failed anatomy (and Fishbein's lawyer even admitted that Hoxsey's treatment worked), his star fell quickly, and he went to work promoting cigarettes and fluoride. After Fishbein was deposed, the "war on quacks" did not abate.

In the 1950s, the cancer treatment known as Krebiozen was championed by one of America's most respected doctors, Andrew C. Ivy. Ivy held many high positions in the medical profession during his career, including a board member of the American Cancer Society, a dozen international awards, a dozen honorary degrees, high-ranking university positions, etc. Krebiozen and Ivy were wiped out in the early 1950s, after Fishbein was forced down at the AMA. Ivy's career was ruined because of his support of Krebiozen and Dr. Durovic. The attacks on Hoxsey and Ivy became the focus of a congressional investigation in 1953. The [Fitzgerald Report](#) found that more than a dozen promising cancer treatments were wiped out by organized medicine. Under oath, Dr. Durovic told a familiar story. Durovic alleged that J.J. Moore, the AMA's treasurer at the time, asked him to give distribution rights to Krebiozen to two businessmen who were friends of his. When he was rebuffed, Moore threatened to use his power at the AMA and the university to destroy Durovic, Ivy and Krebiozen, which subsequently happened.^[188] *Medical Dark Ages* provides pertinent quotes about [Ivy and Krebiozen](#).

The attacks that Hoxsey, Rife and Durovic endured have little documentation to support the conscious and conspiratorial nature of what happened. The kinds of offers that Fishbein, his friends and Moore made to Hoxsey, Durovic and Beam Ray would not initially be in writing. Gangsters and government officials have long known the game of not leaving a paper trail for those kinds of offers. It is part of the plausible denial strategy, not letting the right hand know what the left hand was doing. When [Dennis was given the billion-dollar offer to go away](#) and leave the energy racket intact, the offer was not in writing, and those giving the payoff would not beseech the courts for recourse. They would simply resort to murder. All that can be pointed to are the testimonies of their victims. When one sees the same pattern repeated over and over, of poisonings, shootings, buyout offers, public and legal attacks, mysterious fires and the like, how can it be all dismissed as "coincidence" or "delusion," especially when the motive is so clear?

Eustace Mullins is a scholar of the political right. Scholars of the right often [propose conspiracy theories to explain events](#). One major problem is that by their very nature, conspiracies do not leave much of a paper trail.

Generally, the right's scholarship can seem uneducated and paranoid when compared to the left's scholarship. On the cancer issue, Mullins' *Murder by Injection* comes from the right's perspective, and Ralph Moss' *The Cancer Industry* comes from the left. Mullins' book is not worthless, or even wrong in its assertions. It is a valuable piece of work, but it has no footnotes or index. Although many of his assertions are backed up by plenty of documentation and are hard to dispute, he does not always present them with the factualness of a scholar. His work is decidedly informal, as if he knows he is not addressing a sophisticated audience. On the other hand, Moss' *The Cancer Industry* is an awe-inspiring piece of scholarship.

Mullins writes about the "Rockefeller Syndicate." There may in fact be a "Rockefeller Syndicate." The Rockefeller name has popped up so many times during the research that went into making this site, that if they were at the heart of the global conspiratorial octopus (or one of its biggest arms) it would not be surprising.

I *would* be surprised if the Rockefeller interests were *not* somehow involved with [the offer that Dennis received](#), especially as it was delivered in *Chicago*. Mullins is decidedly conspiratorial in his outlook, further reinforced if other work of his are read, such as [The Secrets of the Federal Reserve](#). Compare Mullins' writings with Moss'. In the politics of the right and left, the conspiracy theory versus structural analysis dynamic is easily seen. In wrapping up his research into the "Cancer Industry" Moss wrote,

"Distant circles of power have formed which, while differing among themselves on many issues, are sufficiently cohesive and interlocking to form a 'cancer establishment.' This establishment effectively controls the shape and direction of cancer prevention, diagnosis, and therapy in the United States...Within the cancer field it appears that the major decisions are made at the top of four or five organizations. If a doctor or scientist exercises real decision-making power, it is as a result of his or her inclusion in one of these groups, rather than through professional expertise per se."

"Doctors who still believe that they are free to give whatever treatment they consider best for a willing patient are, in fact, toying with "quackery," as it is defined by these leading bodies."[\[189\]](#)

In one respect, the perspectives of Moss and Mullins are not far apart. Moss views it as more of an institutional phenomenon, but a select few people are making the decisions that direct the entire industry. Mullins says virtually the same thing, but he sees another layer of control behind those people, such as the "Rockefeller Syndicate." Moss sees the issue as more institutional, where the people at the top, making the decisions, may not realize the full implications of their actions, guided by merely protecting their industry's turf, and not really thinking through the full impact of their selfish actions. Mullins thinks that the actions at some level are quite conscious, and engaged in by a few diabolical people.

One "[skeptic](#)" who might leap to Fishbein's defense is Martin Gardner, the granddaddy of the modern skeptical movement. He outranks even [James Randi](#). In 1952, he published *Fads and Fallacies in the Name of Science*. The book's cover states that it is "a study in human gullibility," and it is still in print. Chapter 16 of *Fads and Fallacies* is titled "Medical Cults." Gardner calls homeopathy and naturopathic medicine "world-wide medical cult(s)."[\[190\]](#) Gardner also calls osteopathy a cult. He finishes the chapter by calling chiropractic "the greatest of American medical follies." In Chapter 17, titled "Medical Quacks," Gardner tells the story of Dinshah Ghadiali, from a point of view decidedly less sympathetic than the article I read. Gardner also tells the story of Koch, telling his readers, "There is not the slightest doubt about the complete worthlessness of the 'Koch treatment'." In the appendix of *Fads and Fallacies*, Gardner gives a brief review of the fates of Hoxsey, Ivy and Krebiozen. Gardner candidly admits that the primary source for most of his chapter on medical cults was Morris Fishbein's *Fads and Quackery in Healing*.[\[191\]](#) When *Fads and Fallacies* was published, Fishbein was spearheading the asbestos cigarette filter "research" scheme for Lorillard, while being paid the equivalent of \$160,000 per year for his efforts. I would be careful about how I threw around the word quack (Fishbein even looked kind of like a duck).

In the same book where Gardner shows his great respect for Fishbein, he also writes a very unflattering account about Hoxsey, obviously influenced by Fishbein's version of events. By the time *Fads and Fallacies* was written, Hoxsey had already won a libel suit against Fishbein, which ruined Fishbein's AMA career. One will not see that little fact appear in Gardner's work, even although the award was one dollar.

Gardner ends *Fads and Fallacies* with a paean to the scientific establishment. His message is that establishment scientists almost unerringly reject the "preposterous" and are alone in telling us which scientific unorthodoxies may have merit and which do not. He ends his book with "By all means let the Don Quixotes of science be heard. But let them be heard in a manner befitting their position on the spectrum of unorthodoxy, and let that position be determined by those who alone are qualified to do so."[\[192\]](#) In medicine, Gardner appears to mean that Morris Fishbein was "alone" in being qualified to determine who is a quack and who is not.

Fishbein was far from alone in abusing his power from the medical racket throne. [Steve Milloy](#) is about the closest thing to his professional descendant today, as far as his relationship to the tobacco companies goes. One of Fishbein's direct professional descendants is Dr. George Lundberg, who was *JAMA*'s editor until he was fired in January of 1999, when right in the middle of the Bill Clinton-Monica Lewinsky scandal, Lundberg published a survey of college students that questioned whether having oral sex was really having sex. That was not exactly a pressing medical issue (related to making a medical determination on whether Bill Clinton really smoked pot, if he did not inhale). That was the last straw, and Lundberg was fired, after about seventeen years as the *JAMA* editor.

The AMA leapt into the [JFK assassination fray](#), acting as the establishment bulwark that they are.^[193] In 1992, Lundberg called a press conference where he gave his own "case closed" speech on the medical evidence, again supporting the "lone nut" contentions. In his speech, accompanied by articles in *JAMA* by *JAMA* staff writer Dennis Breo, Lundberg went further than his lone nut announcement. He slandered Charles Crenshaw, one of the doctors who attended Kennedy in Dallas. Lundberg called Crenshaw's book, *JFK: Conspiracy of Silence* a "sad fabrication." One of Breo's articles stated that Crenshaw was probably not even in the same room with JFK in Dallas, and none of the other doctors remembered seeing him, and Breo wrote that Crenshaw is not mentioned in the *Warren Report*. There was a sad fabrication. Crenshaw is mentioned several times in the *Warren Report*, by staff in the emergency room who worked with Crenshaw on JFK. Confirming that Crenshaw is in the *Warren Report* is one of the easiest things to do. I looked it up in the *Warren Report* in about a minute. For Breo to make the statement that Crenshaw was not even in the same room with JFK in Dallas is the kind of mistake that a *National Enquirer* cub reporter would probably avoid making. Breo had no defense. He published libelous statements while attacking Crenshaw.

That Breo and Lundberg made such statements about Crenshaw was bad enough. What made their actions worse was not letting Crenshaw respond to set the record straight. They failed to apologize for writing something about him that was grievously false, something that anybody with the *Warren Report* in their hands could see was not true. All Crenshaw originally wanted was a retraction printed in the same journal where the lie was published. His request was denied.

Goaded by the AMA's impudent stance, Crenshaw took them to court for libel, and won. The settlement of more than \$200,000 to Crenshaw caused *JAMA* to lose its liability insurance. *JAMA* was forced to publish Crenshaw's rebuttal, more than three years after they first libeled him. Even then, they censored and truncated his rebuttal, and buried it in the obituary section in fine print. Then they launched another smear attack on Crenshaw.^[194]

Regarding medical pioneers, Ralph Moss echoed [William James](#) when he wrote,

"More often than not, attempts are made to deprive the pioneer of all credit. For example, hundreds of articles have been written about the role of free-radical scavengers in cancer; few have acknowledged their debt to disgraced pioneer William Koch and his Glyoxylide. Dactinomycin was marketed as an orthodox anticancer drug without any recognition of the fact that it comes from the same ray fungus as was used in the production of Krebiozen. Emanuel Revici was exploring the relationship of a nontoxic form of selenium to cancer as early as 1955, yet this fact is never mentioned in current articles on that mineral. The discussion of vitamin A and cancer is totally devoid of any recognition of the pioneering work of Max Gerson, a pattern of neglect Albert Schweitzer already discerned in 1959." "In 1976 the author was in a private conversation with a high official of Sloan-Kettering Institute, during which the man closed the door and asked, 'Do you want to know where we get all our new ideas?' This leading scientist proceeded to take down from his shelf a copy of the American Cancer Society's *Unproven Methods in Cancer Management*. 'This is our Bible,' he said simply and eloquently."^[195]

The American Cancer Society's *Unproven Methods in Cancer Management* is the cancer industry's black list. People who are listed in that book can pretty much consider their career finished. The people on that list go

to prison, get shot at, have their licenses revoked, that sort of thing. The ACS is an integral part of the racket.

Ralph Moss is the most conservative writer on alternative cancer methods working today. He has a doctorate in biochemistry, and was a science writer for the Memorial Sloan-Kettering Cancer Center. He was originally a big believer in chemotherapy and the war on cancer. He gradually became disillusioned, and when Sloan-Kettering essentially lied about their research results with Laetrile, Moss called a press conference in 1977 to publicize the positive Laetrile results by one of the world's most respected cancer researchers, Kanematsu Sugiura, who did his research at Sloan-Kettering. Although silenced by his employers, Sugiura never backed down from his findings. Sloan-Kettering fired Moss the next day.^[196] Although Moss has written extensively about Sloan-Kettering in his subsequent work, I have never seen or heard of Moss uttering a bitter word about Sloan-Kettering.

In chapter six of *The Cancer Industry*, Moss dismembered the ACS' Unproven Methods blacklist, and he did it like the gentleman he is. As with the best critiques of such things, Moss lets the ACS hang themselves with their own rope. The ACS used to call their Unproven Methods Committee the "Committee on Quackery." Their descriptions of those practitioners of those "unproven methods" include, "ignorant, uneducated, misguided persons, to highly educated scientists who are out of their area of competence supporting a particular form of treatment. A few hold Ph.D. or M.D. degrees."^[197] Then Moss analyzed the credentials of those on the Unproven Methods list, and found that 77% of them have either M.D.s, often from major medical schools, or scientific doctorates. Moss dryly summarizes the ACS position on the credentials of those on the black list, "Recall, however, that the ACS primer on unproven methods states that 'a few' hold M.D. or Ph.D. degrees; a few in this case is 77%."^[198]

It does not get any better for the ACS and its list. The *Unproven Methods* list calls to mind the Inquisition's Index. The list is one of the most concrete indicators of the racket's existence. In one *Unproven Methods* list, of sixty-three methods on the list, 44% of them were *not investigated at all* by any independent agency before making the list. In 11% of the cases, the investigative results were *positive*.^[199] In only *one* case that I am aware of, was an Unproven Method subject to a medical double-blind study, which is the only way, according to the medical establishment's own rules, that it could be proven or disproven (something that the orthodox treatments have never really been subject to).^[200] In that case, with [laetrile](#), the [trial was arguably rigged](#).

Here is the classic Catch-22. If they never test an Unproven Method, there is no chance that the treatment could ever be proven, according to their standards. Then states pass laws outlawing the use of an Unproven Method, and about ten states have criminal laws where the doctor can go to jail for even recommending it to a patient. That is why I call it a racket. It is designed so that there never can be any competition to cut-burn-poison methods of cancer "treatment." It is a totally insulated racket, engaging in circular logic to wipe out the threat of an actual cure appearing on the scene, and the United States is [called a free nation](#).

Perhaps the greatest irony is that the actual data shows that orthodox methods not only do not work, but they hasten the deaths of the patients, causing agonizing pain and suffering, while making huge amounts of money for the racket. Radiation, surgery and chemotherapy are spectacular failures, "proven" only in fantasy, while methods that are vastly more effective, and also cheap and harmless, are banned for being "unproven." The great fear of the people running the racket is the appearance of an actual cure, because then the game would be over.

Investigating "unproven" cancer treatments quickly yields "quacks" such as double Nobel Laureate Linus Pauling promoting "moonshine" such as Vitamin C. Here are some quotes from Nobel Laureates about the cancer industry in America.

"Everybody should know that the 'war on cancer' is largely a fraud, and that the NCI and the ACS are derelict in their duties to the American people who support them." - **Linus Pauling 1954 Nobel Prize in Chemistry for "his research into the nature of the chemical bond and its application to the elucidation of the**

structure of complex substances," and 1962 Nobel Peace Prize.

"(The National Cancer Program is) a bunch of (obscenity)."

"The American public is being sold a very nasty bill of goods about cancer." - **James Watson, co-discoverer of the DNA double helix, and 1962 Nobel Laureate in Medicine for that discovery and related work.**

"The American Cancer Society tried to ruin my research foundation." - **Albert Szent-Gyorgyi, discoverer of vitamins C and P, 1937 Nobel Prize , " for his discoveries in connection with the biological combustion process, with special reference to Vitamin C and the catalysis of fumaric acid."**

"The American Cancer Society has done the American public a really great disservice." - **Dr. David Baltimore, 1975 Nobel Laureate in Medicine for, "their discoveries concerning the interaction between tumor viruses and the genetic material of the cell."**

"...The truly fraudulent claims must be discarded. But novel methods of therapy should not be rejected because they are novel, or because they run counter to some generally accepted belief, or because we do not understand the mechanism of the proposed treatment, or because it has come from an unconventional source." - **Linus Pauling**

"...cancer...there is no disease whose prime cause is better known...In the meantime, millions of men must die unnecessarily." - **Otto Warburg, Nobel Laureate in Medicine in 1931 "for his discovery of the nature and mode of action of the respiratory enzyme."**

"But how long prevention will be avoided depends on how long the prophets of unbelief will succeed in obstructing the application of scientific knowledge in the cancer field. In the meantime, millions must die of cancer unnecessarily." **Otto Warburg.**

"...It would be possible to make much more progress than has been made if the NCI (National Cancer Institute) knew its job better, knew how to make discoveries...The NCI really does not know how to make discoveries...So long as the NCI is not willing to follow up ideas that seem good to people who have had experience making discoveries, the work of the NCI is going to be pedestrian." - **Linus Pauling.**

"...What kills science in this country now, (is) that you must tell in advance what you will find, and what you will do exactly, and what you will spend your money on. And if you knew it all, then you wouldn't need to do it. ... And so you cannot have (any) new discoveries. - **Albert Szent-Gyorgyi.**

Béchamp's Professional Descendants

Many scientists continued Béchamp's line of investigation during the 20th century, either directly, finding their path independently, or taking a parallel route. They include [Rife](#), [Kendall](#), Guenther Enderlein (his work followed directly from Béchamp's, and he called his tiny bodies "endobionts"), Ernst Almquist, Edward Rosenow, Roger Wyburn-Mason, Lida Mattman, Wilhelm Reich and Gaston Naessens. They usually endured similar slings and arrows to what Béchamp experienced, and some experienced far worse.

Wilhelm Reich saw organisms through his microscope that he called "bions." Reich had an extraordinary life and career. A pupil and colleague of Freud, Reich blazed paths of scientific inquiry that orthodoxy still has not explored. Reich was a Jew and Communist who left Germany after Hitler came to power, and lived in Norway before coming to his final refuge: America. Reich was the first experimenter (and is still about the only one) who made the subjective feelings of his subjects an integral part of his experiments. He experimented with the electrical charge of one's skin and the feelings of pleasure. He theorized that the building and releasing of electrical charge accompanied sexual behavior, and his experimental evidence supported it. He investigated the connection between consciousness and the human body, something largely taboo even today in science, and his research into sexuality may never get a fair hearing in our Puritanical culture.

Reich's bions were similar if not identical to Béchamp's microzymas. In his defense, Reich said that he saw bions when others could not, because good microscopists had to learn to "resonate" with the specimen. Reich's work on sexuality and electricity led him to his bion research, which in turn led him to investigating something that he called "orgone" energy. He performed numerous experiments with the energy, and built orgone accumulators that defied present notions of physics, where the temperature inside the accumulator was greater than outside it. Reich even had the interest of Albert Einstein for awhile, before Einstein came up with untested explanations for the temperature increase and lost interest (World War II was raging at the time, so Einstein can be perhaps somewhat forgiven for that unscientific attitude). When Reich had advanced cancer patients sit in his accumulators, they lived much longer than those who did not. Numerous people and animals that sat in orgone accumulators experienced remarkable healing episodes.

Reich's work has influenced fields as diverse as psychology and physical therapy. Near where I lived in Ventura worked a chiropractor that called himself a "Neo-Reichian." He could induce an out-of-body experience by simply pressing on certain parts of one's spine and body. I know people who he did that to, who were in the medical field and knew that he did something quite beyond what orthodox medical science had acknowledged was possible.

Nazi Germany cheerfully burned Reich's books, *The Mass Psychology of Fascism* among them. During the early 1950s and the McCarthy witch hunt years, while the medical establishment was forcing [fluoridation](#) onto the American population and concurrently covering up its harmful effects (including [brain damage](#)), while the pages of the *Journal of the American Medical Association* were filled with cigarette ads making medical claims, and while it was relentlessly wiping out doctors and scientists who had developed cancer cures that did not involve surgery, chemotherapy or radiation, the Food and Drug Administration (FDA) targeted Reich. While Reich never claimed that his orgone accumulators cured cancer, the FDA misrepresented his work and performed badly flawed (if not *intentionally* flawed) "reproductions" of his research.

The story of Reich is similar to that of many other pioneers. The genius of Reich was accompanied by personal idiosyncrasies and character "flaws" that everybody can lay claim to. The nature of his research led him far beyond the prevailing paradigm, and his work was generations ahead of its time. He lived with the frustration of having nobody whom he could fully collaborate with, because nobody could truly comprehend the full scope of his work. Orthodoxy quickly dismissed his work as of no consequence, and the highly charged nature of his work (sexuality, emotional health, cancer, etc.) resulted in a career that suffered attacks from all quarters. [Genius](#) and insanity have a lot in common. In addition, men such as Reich are susceptible to paranoia, especially considering the circumstances he lived through. Reich became somewhat mentally unbalanced and strident during the FDA's inquisition. Few have the emotional resources to survive being the object of that kind of vendetta without receiving deep psychic scars. Usually, those who endure such treatment receive emotional and mental wounds that cripple them.

The FDA investigators, for their part, acted like Dominican inquisitors, openly admitting that they made up their minds before they ever "investigated" Reich's work. The fruits of genius are often [incomprehensible to minds mired in orthodox paradigms](#), and it was no different with the FDA and Reich. The FDA was more interested in stopping Reich than in stopping people from pursuing his work, yet it accomplished both. As with most people, Reich was naïve about how the U.S. legal system really worked, and he provided essentially no legal defense against the FDA, even refusing to appear in court to defend himself, saying that he was a researcher and the FDA had no jurisdiction in the area of pure science.

Reich did make extra-legal defenses of his work. He made an "orgone gun" called a "cloudbuster," which could apparently affect the weather. During the FDA's attack, Reich announced that he would create an unexpected storm around his laboratory in Maine, and an unexpected one appeared. His demonstrations and wide-ranging body of work were no help, and he was arrested and put on trial in 1956. As is standard with those kinds of court activities, whether there was merit in Reich's work was specifically *not* the issue, and the judge even had a prosecution witness' testimony stricken from the record when he admitted that his use of the orgone accumulator had ameliorated his medical condition.

Reich was predictably found guilty of violating the FDA's injunction. Then came the tactics of the Catholic Inquisition and Nazi Germany. Reich (who was nearly sixty years old at the time) was ordered to prison for two years, he was forced to destroy his accumulators, and his *books were burned*. The FDA would not do the dirty work themselves. Reich was ordered to destroy his own work. The FDA would merely supervise. That was similar to the Catholic Church's stance when they would not burn their heretics themselves, but "relax" them to the secular authorities for their execution. Reich's organization was even forced to pay for the expenses of destroying its work. One of Reich's followers, who was a member of the book-burning event, which burned six *tons* of literature, wrote,

"All the expenses and labor had to be provided by the (Orgone Institute) Press. A huge truck with three to help was hired. I felt like people who, when they are to be executed, are made to dig their own graves first and are then shot and thrown in. We carried box after box of the literature."[\[201\]](#)

Reich's twelve-year-old son had to take an ax to his father's accumulators, under the FDA's watchful eyes. Technically, the books to be burned were only those dealing with orgone energy, but not being too particular, the FDA also burned his earlier works such as *The Mass Psychology of Fascism*; one of the books that the Nazis burned with glee. As Reich watched his books burn in the FDA bonfire, he commented to the FDA agent standing next to him that his books had been burned in Nazi Germany, but he never dreamed that he would see his work burned again.[\[202\]](#) To this day, neither the American mainstream media nor the history books give much notice to one of the most outrageous acts of inquisitorial behavior in American history. George Orwell wrote in his *Notes on Nationalism*, "The nationalist does not disapprove of atrocities committed by his own side, but he has a remarkable capacity for not even hearing about them."

In another show of bureaucratic vindictiveness, the FDA issued a report, full of distortions of the record, which tried to influence the prison officials into denying Reich parole and to treat him harshly in prison. Reich died in prison a year later, and his work has ever since been legally forbidden by the FDA and ignored by orthodoxy. An entire body of research, which could lead to brand new ways of looking at the universe and life, has been marginalized, burned and buried. Those who pursue Reich's work do so at their peril. New psychological therapies have incorporated Reich's work since his death, generally without acknowledging his contribution, which is another standard fate of the pioneers. The FDA has even bragged that wiping out Reich's work was one of its greatest achievements.

The work of Béchamp, McClintock and other pioneers was limited by the resolution of their microscopes. Science has developed electron microscopes that get resolutions measured in millions of diameters, yet they cannot research life *processes*, because an electron microscope kills what it looks at. There are other microscopes today, such as ultraviolet microscopes and near field microscopes, that slightly increase

the resolution by reducing the wavelength of light, getting slightly more than that 2000-2500 diameter limit.

Eighty years ago, when Hume was writing about Béchamp and Pasteur, optical microscopes were all that existed. Electron microscopes did not appear until after World War II. The resolution limit of optical microscopes had a significant bearing in coining a new biological term: virus. The size of viruses versus bacteria became a major point of distinction between them. Only one "virus" could be seen with an optical microscope: the smallpox virus. The others were too small to see. Dr. Thomas Rivers of the Rockefeller Institute was influential in establishing the science of virology as a subdiscipline of microbiology in the 1920s. It appears that the distinction between bacteria and viruses may be a rather arbitrary one.

[203] Pleomorphic dynamics have finally been admitted to be of significance by mainstream science, but are still pushed toward the margins. When it is finally admitted how important it is - I predict it will be critical in overturning the current false foundation of Western medicine - it would be advisable to recall what [William James](#) said.

Fortunately, Fishbein and his pals could not entirely eradicate Rife's work. In the 1940s, a French biologist began pursuing an independent path that ended up in the same territory that Béchamp and Rife trod. [Gaston Naessens](#) was another gifted scientist who came upon the problems of the resolution limits of optical microscopes. After intensive work with lenses, Naessens realized that playing with the wavelength of light was the only avenue open to him in seeing life processes at higher resolutions. He experimented with magnetic fields, polarizing filters and ultraviolet light and developed a microscope that got up to a 30,000-diameter resolution, and could resolve objects as small as 150 angstroms, far less than the 4000-angstrom wavelength of visible light. As is the case with Rife's microscope, current optical theory cannot explain how it works, but again, one does not need optical theory to believe what one's eyes reveal. Newton's optical theories are due for an overhaul; just as Einstein and friends modified his celestial mechanics work.

As with [Rife](#), when Naessens began his microscopic explorations, viewing life processes that nobody else could see, he confirmed Béchamp's pleomorphic observations and theories. Unlike Rife, electron microscopes existed when Naessens developed his microscope, but electron microscopes cannot view life *processes*. Because electron microscopy subjects its specimens to a vacuum, electronic bombardment, and desiccation, it kills or seriously distorts any life process it might view. Thus, electron microscopes produce snapshots of dead matter, which is another variation on masculine research, terminating life in order to observe it. Because orthodox research does not use microscopes that can see it, the discoveries of Naessens are as ignored today as Béchamp's and Rife's were. It is obvious that what [Béchamp](#) discovered is available to today's technology, but technology is far from the only ingredient of successful research. It is similar to the forest and trees analogy. Microbiologists have been seeing the forms that Béchamp, Rife and Naessens have described for more than a hundred years, but when one is asked what they are, the responses are usually a variation of,

"Oh that, it is only a bacterium."

"It is an artifact of the staining process."

"It is merely intercellular debris" (platelets were seen exactly that way a century ago).

"That junk? Whatever it is, it can't be important."

As Ralph Moss notes in his *Cancer Chronicles*, the medical and microbiological textbooks are completely silent on the forms discovered by Naessens and others.[204] Once in awhile, I hear of an honest and open-minded reaction by orthodox microbiologists after glimpsing the world of the microzyma and bion. They stagger away from the microscope (usually dark field), dazzled and overwhelmed, seeing a world they never

knew existed, even though it had been under their noses for their entire careers. Most react with thinly veiled fear, with the paradigm they were indoctrinated into wobbling before their very eyes. The shaky laughter of denial can sometimes be heard.

Naessens delved into that dazzling world. Naessens coined his own term, naming those little guys somatids, meaning "little body" in Greek. While giving full credit to the pioneering work of Béchamp and his numerous professional descendants, Naessens seems to have taken the work further than anyone has yet done. After many years of research, work that began in the 1950s and even earlier, Naessens documented a sixteen-stage somatid-mutation cycle. As with Béchamp, Naessens concluded that the somatid was essential to life. Naessens believes that the somatid may be a precursor to DNA, and might be the elusive link between inanimate matter and life. Naessens discovered that in a healthy body the tiny somatid is found in its three primary forms. In a healthy body, the somatid-mutation cycle would be confined to its initial state and a single and double-spore stage.

When a body's biochemistry becomes unbalanced, through factors such as smoking, drinking, poor diet, stress and chemical poisoning, the somatids undergo thirteen more stages of their mutation cycle, which is a pathological process. Naessens found that the somatids would mutate into bacterial, yeast and other forms. Again, the pleomorphic observations of Béchamp were confirmed. Naessens dubbed his microscope a Somatoscope, after the little bodies it was able to see.

Here is a diagram of the somatid cycle that Naessens discovered, accompanied by some images from his Somatoscope.

Click on image to enlarge

Naessens discovered, just as Béchamp had, that somatids are virtually indestructible. He tried killing them with radiation, acids, even cutting them, breaking diamond micro-knives in the process before he was finally able to cut one. The notion of somatids surviving in limestone for millions of years does not seem farfetched in light of those derided pioneers' discoveries. In the 1940s, Naessens developed an anti-cancer substance that was successfully used in Europe. Later, in a horse-related experiment, Naessens developed an antibody serum he called *Anablast*. It became very successful, in fact, too successful. Medical gangsterism is not the exclusive province of the United States. Twice the French medical authorities dropped the hammer on Naessens, closing his laboratory, heavily fining him, and confiscating most of his equipment, but somehow sparing his microscope. When he was practically run out of France, he was invited to establish his laboratory on the island of Corsica, which, although part of France, is more like an occupied nation than a willing part of the French Empire.

Armed with his Somatoscope, Naessens soon developed more treatments for cancer and degenerative diseases, and word got out about the miracle cures coming from Corsica. Soon, desperate patients besieged Corsica, flying to Naessens' lab from across the world. When one begins flying high, it attracts the establishment's attention, and in the wake of people flocking to Naessens' lab from across the world the French medical authorities convened an inquisition. Naessens was run out of Europe and fled to Quebec in 1964.^[205]

Naessens lived under a hailstorm of bad publicity and retired from the medical field to become a handyman, fixing electronics devices and car engines. He kept a low profile for years, just trying to get by. In 1971, fortune smiled upon him. David Stewart, head of the prestigious McDonald-Stewart Foundation, which was devoted to cancer research, had witnessed the bottomless pit of orthodox cancer research (more than a trillion dollars by some estimates) that has to this day produced very little that can be said to truly help cancer patients. As with [Milbank Johnson](#), Stewart was extremely moved by the suffering of cancer patients, and would look anywhere that seemed promising for a cure, even if it meant going against the attack-the-tumor dogma.

Stewart became aware of Naessens the handyman, and discovered that he was *that* Naessens. He set up Naessens in his own lab in Montreal to continue pursuing his cancer research, but the outrage by the orthodox cancer crowd in Canada became so heated that Stewart decided to put Naessens' lab in the country, out of the limelight. Naessens moved to the small town of Rock Forest where his bride-to-be lived. The lab stands there to this day.

Naessens continued his research, and there he developed the treatment I would use if I got cancer. If one has the microscope that can see things that others cannot, then one will make discoveries that others cannot. One common denominator of those microscopic pioneers was that they were usually using *dark-field* microscopes. A dark field microscope works quite differently from the light field microscopes that most Americans are familiar with. A dark-field microscope creates different lighting conditions for the specimen, whereby the field of vision is dark, but the organisms are lit up, usually in outline. The above image demonstrates that difference. In that unusual lighting, the world of the somatid, bion and microzyma light up.

What follows is what Naessens discovered. The single and double-spore stages of somatid development appear to be healthy and even necessary stages for cellular life. That mutation dynamic appears to be required for cellular division to occur. When the body's biochemistry becomes unbalanced from factors such as poor diet, stress, chemical poisoning and the like (our industrialized world has created many new stresses on the human body that it was not designed to withstand), the next thirteen stages of the mutation dynamic are in evidence, where bacterial and yeast forms, among others, are seen. Naessens discovered that during the normal mutation cycle, a substance was secreted that initiated cellular division. Naessens called it a *trephone*, a name originally coined by Nobel Prize winner Alexis Carrel, who first discovered it.

In a healthy body, trephone production is normal and necessary for life. In an unhealthy body, those next thirteen mutation stages are accompanied by tremendous trephone production. When that occurs, two things happen to the cells. The first is that they undergo a fermentation process (remember [Béchamp](#)) whereby the cells lose their differentiation, undergoing a kind of reverse evolution where they become amoeba-like, and look like primitive, unicellular organisms. The second effect is that the cells begin dividing wildly, stimulated by the trephone production, or more properly, trephones produced because the trephone inhibitors (chemicals in the blood) have largely disappeared. That series of events leads to the production of cells that are called cancerous, i.e., typical cancer cells. They lose their differentiation and rapidly divide. They stop becoming team players in the body, stop doing anything useful, and instead hog nutrients as they wildly divide. In a sense, the cancer cells are helping to break down the body, similar to the way in which Béchamp's microzymas would break down the body after death. With cancer, however, the person is not quite dead yet.

Naessens discovered that all of us have that dynamic in our body every day, as [Béchamp also stated](#). In a healthy body, those are unusual conditions, probably due to localized trauma. When a pocket of cells acts that way, our immune system rides to the rescue and absorbs those errant cells. It happens in healthy bodies, but not that much, and our immune system easily takes care of such aberrations. In anybody who is chronically unhealthy, that dynamic is more widespread within his/her body.

After pondering those dynamics for years, I have an anthropomorphized way of describing what is happening. This may make it easier to understand. Every part of our bodies is a community of cells, working together in a marvelous and barely understood fashion that enables them to function. The inner workings of our best-run cities bear only the faintest resemblance to the miracle of cooperation that happens within our bodies every moment. The human body *is* a miracle. When those cells undergo those mutations due to poor body chemistry, the immune system is like a fire station, sending out the firemen to put out the fire.

What Naessens discovered was that in an unhealthy body, the sixteen-stage pathological-mutation dynamic gallops along. Trephones are created in great quantities, and cells are rapidly dividing, fermenting and losing their differentiation. The body's immune system then rides to the rescue, putting out the fires, absorbing those "bad" cells, treating them as if they were an infection. In most parts of the body, the fire station is well manned, with the best equipment, and the fire is just around the corner. Not all the body is so fireman-friendly. In the lung tissue of a smoker, for instance, the "streets" have already been damaged by daily ingestion of smoke, and what are clean, readily accessible city streets in the liver, for instance, in the lung are streets clogged with burned out cars, and buildings have collapsed into the streets. The fire there is as bad as anywhere else, or even worse, but the fire crews have to work extra hard to get there. The water mains may

have also been damaged on those burned-out streets, so when they turn on the hoses nothing comes out, and they have to rely on the water in their truck, if the truck could even make it down the street to the burning building.

I have to have a little fun in writing about the cancer racket, and this illustration is about all the fun I get, so please bear with me. In the "bad neighborhoods," the firefighters have a difficult job. Just when they put out one fire, another springs up a few blocks away. The immune-system firemen in damaged lung tissue, for instance, are much more beleaguered than firefighters elsewhere. Eventually the fires in the bad neighborhoods rage for days. Naessens found that a fire left to burn long enough takes on a new characteristic. Like Dr. Frankenstein's monster, lying on the table, it opens its eyes and becomes self-aware. Those errant cells, left alone to ferment and divide wildly for long enough, become a pocket of cells that redirects its biochemistry. Those cells are long past the stage of doing useful work for the body as lung cells, for instance, and begin pursuing their own agenda.

Naessens discovered that when a "critical mass" of errant cells was reached, those cells secreted a new substance. It is well known in orthodox cancer research that the nutritional needs of cancerous cells are markedly different from those of normal cells. Naessens noted that those pockets of cancerous cells became "nitrogen traps." Their altered biochemistry gave them an avid thirst for nitrogenous substances.

Naessens discovered that the new substance produced by the pocket of errant cells did two things. What it did was easy to understand, and seemed almost diabolical. The substance attacked the neighboring healthy cells, robbing them of nitrogenous compounds, and it paralyzed the immune system in the local vicinity. That seems natural and logical. The pocket of errant cells needs nitrogen, and robbing the neighboring cells is the only way to get it. Simultaneously putting the local firemen to sleep is logical, because attacking the neighboring cells should turn a local disturbance into a five-alarm fire, where the body's entire immune system would rush to the lungs and put out the fire that was threatening to destroy the entire city. In putting the local firefighters to sleep, the errant cells could feast on the spoils of intercellular plunder without interruption by annoying firefighters. The fire rages out of control, the cancerous pirates devastate the cellular neighborhoods of the lung, and the body now has full-blown cancer. The fire begins to spread throughout the body. The immune system is disabled wherever the fire spreads to next, and eventually the entire body becomes an inferno of cancer.[\[206\]](#)

Without a microscope that could observe the sub-cellular milieu of the somatid, and with a mind blindered by modern microbiological training, orthodox cancer researchers could not reach square one in blazing the path that Naessens' research discovered. As with Béchamp and Rife, Naessens left his contemporaries far, far behind.

Armed with the knowledge of how cancer really worked, Naessens invented a brilliant solution. He also discovered what the ancient doctors knew but "modern" medicine had completely forgotten. Ancient doctors saw diseases such as cancer as a problem in the body's fluids, or "humors." Modern medicine has rejected the "humors" philosophy, particularly regarding cancer research and treatment. The "modern" paradigm looks solely at the tumor, and devises strategies to get those bad guys. In looking at the humors again after centuries of neglect, Naessens and others have discovered that cancer is a systemic disease, directly related to the humors' state. Attacking the tumor is insanity when the systemic nature of cancer is understood.

Naessens discovered the reason why those pockets of pirate cells attacked their neighbors, and secreted the substance that robbed them of nitrogen compounds and paralyzed the immune system. He called that substance CKF, for Cocancerogenic K Factor. He then experimented with substances that were high in nitrogen content, and eventually decided on a derivative of camphor. The substance he developed and patented in Canada was composed of camphor, ammonium chloride, ammonium nitrate, sodium chloride, ethanol and water. He dubbed it 714X, after the initials in his name. Here is what he did with his 714X.

The lymphatic system circulates body fluids, as the bloodstream does, but the lymphatic system is largely ignored, since it only circulates "humors." Modern cancer research and treatment knows that the lymphatic system is how cancer metastasizes in the body, but they do not really treat the lymphatic system, at least not in the ingenious way that Naessens does. What Naessens did was take his 714X and inject it into a lymph node of a cancer patient. The lymph nodes in the groin have proven the easiest to inject, and the most effective for distribution throughout the body. The 714X then flushes into the lymphatic system and is carried throughout

the body. The cancer tumors have been secreting the CKF and attacking their neighbors to extract nitrogen, while simultaneously paralyzing the local immune system. When the 714X hit, those pirate cells would suddenly find themselves awash in nitrogenous booty beyond their wildest imaginings.

When a pirate suddenly gets wagonloads of plunder delivered onto his ship's deck, he is too busy counting up the booty to get too excited about plundering the next port. He quickly becomes complacent and may even settle down to a life of luxury, perhaps even becoming respectable, because that was his dream in the first place. Similarly, when those cancer colonies found themselves awash in 714X, they began feasting on the booty the lymphatic system so kindly delivered to their front door, and stopped attacking their neighboring cells. They stopped secreting the CKF. Then the firemen in the immune system gradually awakened. They heard about those fat pirates feasting down the street. Those pirates were oblivious to the fact that the firemen were awake. They were not very smart pirates. The immune system came back to life and easily mopped up the cancer cells so intent on their feast that they forgot they were unwelcome members of multicellular society. That was the end of the cancer. Again, please forgive these anthropomorphic excesses here, but it was fun to write. It might make the cancer dynamic easier to understand for some, as well as Naessens' brilliant solution.

Also, a little sympathy for the pirate is in order. The pirate originally was a happy member of multicellular society. It was only when society began letting the pirate down, with him going hungry periodically, that he began reverting to the primitive behaviors his ancestors engaged in, when it was every man for himself. He was going to survive, and if society could not provide the proper nourishment, he would take the matter into his own hands. Eventually, he would recruit others to his little band, and they would embark on their new careers as pirates. The breakdown of intercellular society (poor diet, smoking, etc.) was what led to their life of crime. Importantly, the dynamic that Naessens discovered for degenerative disease - when the cells were not properly nourished, they ceased becoming productive members of the body and looked out for their interests at the expense of the body – is also the most prominent dynamic yet proposed for [why civilizations collapse](#).

It can be breathtaking to consider how Naessens had flipped the entire cancer paradigm upside down: instead of attacking the tumor, Naessens was feeding it! When I read Bird's book on Naessens in 1990, I was primed to devour its revelations. I had not yet heard of Béchamp, and Naessens' 714X treatment was one of the first alternative cancer treatments I had ever heard of.

[Seth](#) discussed exactly what Béchamp, Rife, Naessens and others had discovered. Jane Roberts was a poet, and very probably had no earthly knowledge of the work of Béchamp or Rife when [Seth talked about virus mutations](#). There have been many scientific confirmations over the years of channeled material, and I leapt all over Naessens' pleomorphic somatid-mutational dynamic when I read it. Naessens' inversion of the prevailing paradigm was something I had seen Dennis and other [ingenious mentors](#) of mine do many times. When Seth talked about pleomorphism, the stories of Béchamp and Rife were deeply buried in obscurity. It was only when Christopher Bird, Barry Lynes and others began researching Rife's story that the pleomorphic tales of Béchamp and others were revived in Western thought. Their discoveries should have overturned the entire medical paradigm long ago, but there is a money machine hooked up to it, and it will not willingly turn itself off so people can have reasonable things such as cheap, harmless and effective cancer cures.

Of course, the medical establishment would not acknowledge that Naessens' miracle treatment actually worked. The medical establishment will not easily let an actual *cure* get into mass circulation. In 1989, Naessens was arrested, thrown into a filthy jail cell, and prosecuted for practicing medicine without a license and other "crimes." They were going for life imprisonment. That trial is the centerpiece of Bird's *The Persecution and Trial of Gaston Naessens*. The railroad tactics used by Fishbein and friends were readily evident in Naessens' trial.

Naessens developed his 714X elixir, and it is not a drug. There are no known side effects of its use. It is so dilute that it is considered in the class of homeopathic remedies. 714X is essentially food for cancer cells, something completely harmless to the human body. Naessens began giving the 714X to cancer patients. He even showed them how to self-administer it. In a few hours, a person would be trained to give himself/herself the treatment. Naessens would then send them on their way with a bottle of 714X. With Naessens' treatment, as with all alternative treatments, patients will virtually never pursue alternative

treatments when they get cancer or other diseases. They always go the conventional route first. It is only when their doctors pronounce their death sentences that some decide they will not give up so easily, and they look into alternatives. It was no exception in Naessens' case. The people who came to him for 714X treatment were usually people that orthodox medicine had already given up on, their bodies usually already badly damaged by the orthodox therapies, not to mention the original disease. Charlatan that Naessens was, people often got 714X for free. By 1989, about 1000 people had used the 714X treatment. The 714X treatment completely cured 75% of those patients. Here is a 75% cure rate with a harmless treatment for cancers usually deemed terminal, and the people did not lose their hair, had no missing organs to show for their trouble, were out virtually no money, and had new leases on life.

There is much, much more to Naessens' research and story not yet told here. He discovered that the somatid mutation dynamic he chronicled for cancer was common for every degenerative disease he studied, including rheumatoid arthritis, multiple sclerosis and AIDS. Naessens found that the somatid cycle leading to the various diseases were simply different manifestations of the same underlying dynamic, and 714X works for them all. The nature of somatidian theory is so deep and startling that our very understanding of life itself will be radically altered if the medical racket does not succeed in snuffing out the revival of the lines of inquiry that Béchamp initiated so long ago.

One patient that testified at Naessens' trial was Roland Caty. Caty developed a form of prostate cancer that is almost invariably fatal. Caty was working in Africa, building a university. The orthodox treatment his doctors prescribed for him was removing all his genitalia, for starters. Caty was understandably not too keen on such a treatment, and refused to go through with it. His doctors told him he was "crazy," and that he would be dead in three months. Caty heard of Naessens' 714X treatment. He visited Naessens' lab, got a bottle of 714X, learned how to inject himself in a few hours, and went back to work in Africa, injecting himself with 714X. He quickly and completely recovered, something considered impossible in the halls of orthodoxy. Eleven years after he was cured, he testified at Naessens' trial.[\[207\]](#) Bizarrely, he was called to the stand by the prosecution, in order to show what a crime Naessens' treatment was.

Jacques Viens was only 39 years old when he developed stomach cancer. Nearly his entire stomach was surgically removed. It did not work, the cancer had infected his lymph nodes, and Viens went home to die. On his deathbed he heard of 714X treatment, and was secretly given it by a member of the medical establishment, whose name he refused to reveal, because of the repercussions that he knew would be visited on him/her. A few months later, Viens had recovered to the point where he went hunting. He returned to work, fully recovered.[\[208\]](#)

In 1981, Gary Diamond, who lived in California during the 1989 trial, was diagnosed with Hodgkin's Disease. His doctors recommended chemotherapy and radiation, to which Diamond submitted, and his condition gradually worsened. In 1983, while he was slowly dying of Hodgkin's Disease, which the treatments he was getting did nothing to arrest, he visited Naessens' lab in Quebec. He received about sixty days of 714X injections while he completed his orthodox chemotherapy. After the 714X injections, Diamond made a quick and complete recovery.[\[209\]](#)

At Naessens' trial, many of his patients showed up on their own initiative to tell their stories. One was Bernard Baril, a thirty-three year old Quebec-born restaurant and catering consultant. He contracted HIV while living in Paris. HIV is theoretically what causes AIDS, although many alternative practitioners will dispute that. Again, with the germ theory of disease being such a poorly understood distortion of Béchamp's work with the microzyma, as well as what the same work shows about degenerative disease, nobody should take for gospel *any* mainstream theories on disease or its treatment. After Baril was diagnosed with HIV, he came down with cancer tumors that filled his mouth, and a Kaposi's Sarcoma that attacked his palate. The doctors at the Montreal General Hospital excised the Kaposi's Sarcoma, and the biopsy was classified as type IV-D, which is termed "extremely advanced." The doctors told him that treatment was pointless, and Baril refused conventional treatment and waited to die. He was going to become one more AIDS statistic.

The tumor soon reappeared, and Baril's weight declined from 165 to 115 pounds. It got so bad that he was barely able to eat. On his deathbed he heard about Naessens through a friend, and began taking the 714X treatment. In a few weeks the tumor began shrinking, and within three months the lesions began disappearing. Barely holding back his tears at the press conference, Baril exclaimed, "Look at me! I

now weigh 170 pounds! I feel entirely fit! Don't I look in the pink of health?"[\[210\]](#) Dozens of AIDS patients had similar results with the 714X treatment by 1990.

Naessens' trial demonstrates that the Canadian medical racket is not as powerful and corrupt as it is in America. They tried turning it into kangaroo court, but there was too much public outcry. There were picketers at the trial, mainly cured patients. The trial became highly visible in Quebec.

In Quebec, Augustin Roy was its highest-ranking medical official, and he led the attack against Naessens. Bird aptly compared Roy to Fishbein, a "doctor" who had virtually never practiced medicine, but ruled the Quebec medical establishment with an iron fist. As patient after patient paraded to the witness stand, telling of their miraculous cures after mainstream doctors had given up on them, the prosecution's response was astonishing: none of those miracle cures were cures at all; they had all been misdiagnosed in the first place, and none of them had cancer to begin with! When Hoxsey was on trial, the prosecution made the same motion to dismiss the testimonies of an army of patients who were cured with his treatment, including President Truman's brother.

The prosecution was going for life in prison for Naessens. Just before the jury verdict was rendered, Quebec's most famous poet and songwriter, Gilles Vigneault, suddenly appeared at the trial after taking a red eye flight from France, where he had been on tour. He was coming to show his support for Naessens. In Quebec, it was as if Bruce Springsteen had showed up.

Naessens was acquitted, which made headlines in Quebec. Not a peep was heard in America when that happened. I found out about Naessens because I was mail-ordering mystical material from Canada, and read of the trial and book. For years, I mail ordered the book from Canada. In 1991, a mystical book company began publishing an American printing of the book, and slowly, over the years, more Americans have been finding out about the stories of Naessens, Rife, Béchamp, etc.

There are other amazing aspects of Naessens' story. Like Béchamp, Naessens has not just invented a cure for diseases, he has ventured so far out onto the leading edge of science, and his discoveries are so hard to believe that the most common reaction to them by mainstream scientists is "impossible!" For instance, one of his experiments reminded Bird of doctor Dr. Frankenstein's lab. Naessens took a piece of meat, the kind anybody can get straight from a butcher's shop. He separated out somatids from an *in vitro* culture and injected them into the meat. The meat was then placed in a sealed vessel in a vacuum. Not only will the meat not rot, it will retain its healthy looking color, and even continue to grow, as if it were still part of the cow.[\[211\]](#)

Another "impossible" experiment is to take two rabbits, one white and one black. Somatids are extracted from the blood of the white rabbit. A solution of the somatids is prepared and injected into the blood of the black rabbit, at a rate of about 1CC per day. After about a month of that treatment, the fur of the black rabbit begins turning gray. A close examination of the fur yields the fact that the rabbit's fur is composed of 50% black hairs and 50% white hairs. The same effect is observed in a white rabbit that is injected by the somatids of a black rabbit. Furthermore, when a patch of skin from the white rabbit is subsequently grafted onto the black rabbit who is now a gray rabbit, there is no rejection of the graft. According to orthodox biological theory, the experimental results are not only impossible, but also ridiculous. Yet, that experiment has been reproduced many times.[\[212\]](#) Again, those results are so startling and profound that the entire foundation of microbiology may have to be eventually discarded, in a much needed paradigm shift. Here are pictures of some I consider to be the true heroes of science and medicine, with their subtle, feminine, humanitarian and profound work:

Click on image to enlarge

Unlike his professional ancestors, Naessens is alive and does not have to die in obscurity, disgrace or prison. Whether he does or not is not up to the medical and scientific establishments, as much as I would like to see them wake up. It is up to the average person, probably most importantly, the average American.

His discoveries can have immediate and dramatic effect on the lives of millions, if not billions. The French can trade in their questionable national hero for two genuine ones.

One of the awe-inspiring parts of Naessens' work is that the somatidian-mutation dynamic is easy to see when one is properly trained. The somatids and their mutational forms have been seen by microbiologists for the past century and longer. The somatid-mutation forms are not invisible to modern optical microscopes, although they are more easily seen with the rarely used (by mainstream microbiologists) dark-field microscope. The somatid mutation forms are far larger than the single somatids themselves. If a microbiologist operating under the mainstream paradigm looks under the microscope, he might see what Naessens calls a stage-six somatid mutation, but the mainstream microbiologist would call it a rod-shaped bacterium. Naessens would agree with the microbiologist, but would add that yesterday it was a double bacteria form, and next week it might become a yeast form.

The final stage, stage sixteen of the somatid-mutation dynamic, is a husk Naessens calls a fibrous thallus. The thallus is left over after the mutation forms eventually develop into something like a cocoon. One day the cocoon explodes, spreading zillions more somatids into the area, where each somatid then begins the mutation cycle anew. Microbiologists throughout this century have seen that empty thallus, but in their understandable ignorance they have always thought that the thallus was an artifact of the staining process. They could see the trees, but had no idea what the forest looked like.

When one looks through a dark-field microscope at a drop of live blood, and have the proper paradigm to guide one's eyes and brain, a world of information previously invisible becomes available. Ten years ago, I had had my own living blood analyzed by a dark-field microscope, where I saw it myself on a television screen. For an hour of my time and \$35, a man told me more about my health than thousands of dollars of conventional medical tests could. Naessens does the same thing. When somebody comes to his lab and asks for his help and insight, he draws a drop of their blood and they both look at it on the TV monitor that is hooked up to the Somatoscope. Right away, by looking at what the somatid forms are doing in that drop of blood, Naessens can tell the state of his/her immune system, and much more. The man that read my blood (not affiliated with Naessens, but who knew his work well) was able to point out a stage-six somatid mutation in my blood, and many other things.

By looking at a drop of blood, Naessens and others can tell people how healthy they are, and here is the stupefying part: they can tell if somebody is on the road to getting cancer, *up to two years before there is a tumor to find*. Since the late 1990s, Naessens and his wife have run a school in Quebec to train technicians to do just that. Think of that potential. There is evidence that mammograms may cause as much cancer as they discover. Even the conservative Ralph Moss recently wrote about research results that show that there is no credible evidence to show that mammograms have anything to do with an increased survival rate of women with breast cancer.[\[213\]](#) The same holds for cervical cancer. Early detection combined with orthodox treatment does not increase life expectancy at all. Naessens produces a video that shows and explains the somatidian forms and shows people how to treat themselves using 714X. The entire current paradigm can come crashing down and be replaced with sanity. It is up to the average person whether the insanity ends and sanity begins. Looking to the medical establishment to lead the way is like asking the wolf to stop eating the sheep, and believing him when he says that he ceased indulging that habit long ago, even when there is a little wool hanging from his chin.

Pasteur's Germ Theory, Vaccines and Alternate Paradigms

[Semmelweis](#) eventually enlarged his sanitation theory to include any decaying matter as infectious. He died before [Pasteur](#) developed his germ theory of disease. [Béchamp](#)'s work supported Semmelweis' theory that any rotting material can induce infection. Rotting, put more scientifically, is fermentation, or the digestive processes of microscopic organisms. Béchamp ended his *The Blood and its Third Anatomical Element* with,

“The living being, filled with microzymas, carries in himself the elements essential for life, for disease, for death and for destruction. And that this variety in results may not too much surprise us, the processes are the same. Our cellules [cells – Ed.], it is a matter of constant observation, are being continually destroyed by means of a fermentation very analogous to that which follows death. Penetrating into the heart of these phenomena we might really say, were it not for the offensiveness of the expression, that we are constantly rotting!”[\[214\]](#)

It is a testament to Béchamp’s keen talent that he documented the microzyman world with his day’s microscopes. With bacterial and fungal forms (and recall Rife’s cancer virus) as morphic stages of microzyman/somatidian/bionic/endobiontic evolution, there is a direct connection between degenerative and infectious disease.

Pasteur’s germ theory sees the body is a victim to organisms that attack from outside the body. Microzyman theory sees the destruction as coming from within. Béchamp was not alone in his theorizing about “harmful” organisms being created by the disease, not the other way around. Pasteur’s friend Claude Bernard thought the same way, as eventually even [Rudolf Virchow](#) did. Bernard theorized that the environment the germs lived in was all-important, not the germ. The “harmful” germs were only reacting to a dangerous environment. Legend even has it that Pasteur acknowledged the same thing on his death bed, saying that Bernard was right, the “the microbe is nothing, the terrain everything.”[\[215\]](#)

Béchamp theorized that the so-called germs in the air were only the floating microzymas of dead organisms, and would initiate fermentation and turn to bacteria if given a favorable medium. They would not cause disease, in Béchamp’s opinion. Lister eventually abandoned Pasteur’s air-germ theory and stopped spraying carbolic acid into the air, and eventually stated that only germs from non-air sources were harmful. From that time forward, Lister only sterilized surgical implements, wounds and dressings, which led to today’s sterile surgical procedures.

Pasteurization, antibiotics and vaccination derive directly from Pasteur’s germ theory. Pasteurization involves subjecting fluids such as milk, beer and orange juice to high heat, to kill microorganisms that can lead to illness. According to microzyman theory, Pasteurization stops the fermentation process by halting the microzyman nutritive process. Pasteurization also destroys all enzymes and most vitamins. The nutritional value of food is greatly reduced through pasteurization. Pasteurization is the ancestor of today’s irradiation. Those processes are attempting to overcome filth and putrefaction with scorched-earth-style destruction. Far healthier is a clean product that has not been subjected to destructive heat or radiation. Then there would not be any need for such practices. Even better is adopting a live food diet, eliminating those processed foods.

Antibiotic theory comes directly from the germ theory, where powerful drugs and organisms kill those invading germs. According to microzyman theory, the deadly germs are usually not of the invading variety, but are local germs reacting to a diseased environment, taking a new shape in response, in the germ’s *struggle for survival*. That is similar to Naessens’ theory of how healthy cells become pirates when their environment is poor, and diseases such as cancer result.

The antibiotic era began in 1928 with the discovery of penicillin. In the 1940s, penicillin became publicly known and immediately became the Wonder Drug. Penicillin, however, was another scorched-earth treatment. It killed all bacteria, not just the “bad guys.” According to microzyman theory, something such as penicillin did not make the diseased “terrain” healthy, it just wiped out all bacteria in the environment, or more precisely, a morphic stage of a pleomorphic life cycle. The other stages still existed. The bacteria also adapted to the new scourge, as they have adapted to change for billions of years.

In 1952, staphylococcus infections were about 100% curable with penicillin; today that number is less than 5%. New antibiotics are continually invented to overcome the developing resistance of bacteria. The weakening and destruction of the immune system is one outcome of antibiotic use. Antibiotic use is nearly universal in the American population, and new “super bugs” appear every year, so more powerful antibiotics are developed. Now, hospitals are the realm of those super bugs, and about 80,000 Americans die

each year due to infection that they acquired in hospitals, infections that will not respond to antibiotics. At the rate it is going, the antibiotic age will be over soon, as the “bad” bacteria will have adapted to all the antibiotics that have been thrown at them. The effect on the immune systems of those who have taken antibiotics has been immense, especially as Americans take antibiotics these days for the slightest sniffles. The price for short-term relief will likely be long-term disaster, and [Naessens](#)’ work demonstrates what other problems collapsing immune systems can lead to. The antibiotic age is a form of arms race, in typical masculine fashion, always seeking ways to make the perfect weapon. Arms races never have a happy ending.

Vaccination is another outcome of Pasteur’s germ theory. Pasteur was not the first vaccinator, as Edward Jenner and others had the idea for smallpox much earlier, but Pasteur provided the theoretical basis, and he was the first great commercializer of the process. His anthrax and rabies vaccinations were two early instances of the commercialization of vaccination. As with [fluoridation](#), assessing vaccine effectiveness is a numbers game. In Hume’s book, she deals at length with the effectiveness of vaccination, especially Pasteur’s. Before Pasteur pursued his vaccines, smallpox vaccination became mandatory in England, and the numbers are illuminating. In 1840, smallpox vaccines became free in England and Wales. In 1853, the vaccine became compulsory. In 1867, those who did not submit to vaccination were prosecuted. The deaths in England and Wales from smallpox are presented for the pertinent years.[\[216\]](#)

Epidemic years	England and Wales smallpox deaths
1857-1859	14,244
1863-1865	20,059
1870-1872	44,840

In addition, smallpox mortality increases in vaccinated populations. While the U.S. fatality rate from smallpox was less than 3% of cases around 1900, in the far more vaccinated U.S. Army in the Philippines, the fatality rate was more than 25%.[\[217\]](#) The highest death rate in the Philippines during the smallpox epidemic of a century ago was in Manila, with a fatality rate of 65%, and Manila was the most heavily vaccinated place in the Philippines. Vaccination makes the disease more deadly when contracted. [George Bernard Shaw](#) remarked on the statistical fraud that took place in England in trying to make vaccination appear more successful than it was.

The standard history books fail to mention that Pasteur’s early experiments with his vaccine were disastrous. Pasteur’s plagiarized vaccine was used on thousands of sheep in Southern Russia. The vaccine was administered to 4564 sheep, and 3696 died almost immediately from the vaccine.[\[218\]](#) Pasteur had to pay for all the animals he killed with his “preventive.” The numbers show similar success with Pasteur’s rabies vaccine. He may have even invented a new disease with that vaccine. Time and again, the actual effects of vaccination show something very different from unqualified success. A chapter of Hume’s book is devoted to the vaccination lessons of World War I. Disease caused nearly as many casualties during the disaster at Gallipoli as those dead and wounded in battle, with heavily inoculated troops. The grand finale of World War I was an “influenza” epidemic that swept the world in 1918-1919, beginning at a U.S. military base and killing probably at least 25 million people and crippling my grandfather, who was in the trenches during World War I. They thought he was dead, and put him in a makeshift morgue with other soldiers. He awoke days later in the charnel house, and nearby soldiers were spooked to watch a man crawl out of there. Rheumatoid arthritis accompanied his illness, which crippled him.

If Hume’s work was all I had seen about the “success” of vaccination, Geison’s criticism of Hume’s poor understanding of Pasteur’s work might have been convincing, but there is little evidence that vaccination gets any credit for preventing or eradicating disease. The Hygienic principles of sanitation and nutrition have apparently eliminated most epidemic disease, not vaccination. The tuberculosis death rate in Great Britain was 4000 per million people in 1840. The tuberculosis bacillus was identified in the 1880, when the

death rate had fallen to less than 2000. Antibiotics were introduced at the end of World War II, when the rate had fallen to about 400, and the tuberculosis vaccine was introduced in the early 1950s, when the death rate had fallen below 300. How can vaccination receive any of the credit? Measles mortality, as a death rate per million people, had fallen from 1100 per million in 1910 to only a few in the 1970s in Great Britain, when immunization was introduced.[\[219\]](#) Whooping cough, now called pertussis, had already declined by more than 80% from 1900 in Great Britain when the vaccine was introduced, in the late 1930s. In 1984, 46% of children contracting whooping cough in the United States had previously been vaccinated, as well as 58% of all children contracting measles.[\[220\]](#)

There are far more ominous aspects of childhood vaccination to report than merely not preventing disease. In 1985, Dr. Viera Scheibner developed a baby-breathing monitor with a biomedical engineer in order to study and prevent Sudden Infant Death Syndrome (SIDS), which used to be called “crib death” in the United States, and is called “cot death” in Australia, where Scheibner is from. Scheibner put 150 of the Cotwatch units into the field, and began amassing data. It turned out that babies reacted to stress by breathing shallowly during sleep. In extreme cases, their breathing would stop. The Cotwatch alarms sounded with shallow breathing as well as when breathing stopped. Of the first babies monitored, 28 actually stopped breathing, but the Cotwatch alarm allowed them to be resuscitated. Scheibner began documenting the breathing incidents and various stresses, such as illness and tooth cutting. One area of highly significant evidence was the DPT (diphtheria-pertussis-tetanus) vaccine. DPT injections caused infant breathing incidents for about two months after administration.[\[221\]](#) In an American study of SIDS, of 103 children who died of SIDS, more than two-thirds had been vaccinated prior to death, 70% of them within three weeks of death, with 13% dying within 24 hours of injection.[\[222\]](#) In 1975, Japan raised the minimum vaccination age to two years, and SIDS virtually disappeared. In the 1980s, Japan lowered its vaccination age to three months, and SIDS reappeared.

Between 1973 and 1983, according to the U.S. Centers for Disease Control and Prevention, 87% of all U.S. polio cases were *caused by the vaccine*.[\[223\]](#) Polio was also quickly disappearing well before the vaccine was invented and administered, declining by 60% from 1923 to 1953, the year the vaccine was introduced, and polio cases *increased* in the New England states when the vaccine was introduced.[\[224\]](#) By 1930, U.S. diphtheria deaths had already declined by 90% since 1900. In 1939, Germany instituted mandatory diphtheria vaccination, and immediately there were 150,000 cases of it. Occupied France was forced to submit to diphtheria vaccinations, and had 47,000 cases by 1943. Norway successfully resisted implementing the Nazi diphtheria vaccine, and only had 50 cases.[\[225\]](#)

There are arguably no cases where vaccination vanquished a disease. In England and Wales, smallpox disappeared only when people refused to be inoculated. In 1881 there were nearly 4000 smallpox deaths per one million population, and the population was 96% vaccinated. By 1941, only 40% of the population was vaccinated, and smallpox deaths declined to one death per million. In heavily vaccinated Japan, 29,000 people died of smallpox in a seven-year period during the late 19th century. At the same time in Australia, mandatory vaccination was terminated when two children died from the vaccine, and there were subsequently only three cases of smallpox in Australia in fifteen years.[\[226\]](#) The smallpox vaccine not only failed to prevent the disease, it actually introduced it, and the fatality rates of those vaccinated were higher than those who were not. Today, the smallpox vaccine is officially credited with eliminating smallpox in 1977. As Scheibner demonstrates from the scientific literature, today Africans are dying from “monkeypox,” not smallpox.[\[227\]](#) It is partly a semantics game happening, to declare humankind free of smallpox. Yes, there is little smallpox today, but there is also little bubonic plague. No mass bubonic plague vaccine program was ever introduced.[\[228\]](#)

Again, my experience in reading [Seth](#) primed me to accept what science uncorrupted by commercial considerations has discovered. Seth stated that our vaccines are not a genuine disease, and injecting them into the body confuses it. Our medical systems ultimately create as much disease as they “cure.” Seth stated that epidemic diseases are more psychic in nature than anything else. Every soul leaves earth when it is ready, and mass death events are to some extent a mass protest by the participants to the times they live in. Seth said that with epidemic disease,

“Initially there is psychic contagion: Despair moves faster than a mosquito, or any outward carrier of a

given disease. The mental state brings about the activation of a virus that is, in those terms, passive.[229]

If humanity is to survive on earth much longer, perspectives such as Seth's need to be heard, to help form the new paradigms. Seth also talks about sanitation and poverty as factors, but they are also outward manifestations of inward realities. Poverty and disease [will be eliminated](#) by love, not technology and ideologies, although they will play their role. Mystical material has always stressed the spiritual nature of health and illness. The greatest healer of all time is probably Jesus, and he carried no medicine bag. According to a book I read everyday for years, the [Aquarian Gospel](#), when Jesus was in India, during the "lost years" of his life in the *New Testament*, Jesus became a pupil of India's greatest healer, Udraka. Udraka spoke of obeying nature's laws, and that obeying them would ensure health, and Udraka taught about physical medicine and the laws of harmony, and that there was a remedy in nature for every physical ailment. Udraka, however, taught:

"Of course the will of man is remedy supreme; and by the vigorous exercise of will, man may make tense a cord that is relaxed or may relax one that is too tense, and thus heal himself.

"When man has reached the place where he has faith in God, in nature and himself, he knows the Word of power; his word is balm for every wound, is cure for all the ills of life.

"The healer is the man who can inspire faith. The tongue may speak to human ears, but souls are reached by souls that speak to souls." [230]

Udraka spoke of herbs, water, earth and other substances as having healing properties in the proper situations, but that "Thought, reinforced by love, is God's great sovereign balm." Jesus, "bowed his head in recognition of the wisdom of this master soul, and went his way."

I have participated in and witnessed amazing psychic healings. The phenomenon goes far beyond the "placebo effect."

Scheibner makes the case that today's vaccinations for childhood diseases actually impair the immune system's development, and that measles, mumps and chicken pox are not fatal diseases, but necessary steps the body takes in developing its immune system. Vaccinating against those childhood diseases leads to chronic illness later in life, as well as causing neurological damage.

Scheibner also writes at length that the adverse reactions to vaccines support Hahnemann's homeopathic theories.[231] A century after it was vanquished, homeopathy may yet stage a comeback. In studying homeopathic theory one encounters Hering's Law, which states that diseases pass from acute to chronic forms, and when they do so, the symptoms move from the surface of the body to the interior, from the lower body to the upper, from less vital organs to more vital ones. That dynamic is evident in vaccine reactions, where mild childhood diseases can become killers.

Beginning with Pasteur, vaccination became a huge money machine. As with [fluoridation](#) and the cancer racket, the vaccine makers are not going to let their grip on the money relax, even if their treatments ruin people's health and kill them. At this time, only laymen such as Neil Miller or myself, or retired scientists such as Dr. Scheibner, are able to publicly deal with the findings that do not support vaccination, because they cannot destroy our careers for speaking out. The racket is well in hand, and it up to average people whether it continues.

Fortunately, not only laymen are writing about Pasteur's grim legacy. Dr. Nancy Appleton's Ph.D. dissertation was titled, "An Alternative to the Germ Theory," and her *The Curse of Louis Pasteur: Why Medicine is not Healing a Diseased World* was published in 1999. In the end, Pasteur's batting average, as far as helping humanity, may be nearly zero. Appleton covers much of the same territory this essay does, and her work was

helpful. Appleton concludes her book on a Hygeiac note, reviewing the mental, dietary (as well as other substances we put into our bodies), environmental and harmonic aspects of our health. Her regimen is based on feminine, gentle, preventive practices. Her dietary advice is nearly all about eating live food.

Appleton writes about the pleomorphic discoveries of Béchamp and his professional descendants, “Now that it is possible to view these pleomorphic changes through a camera, it is hard to ignore these filtrationists’ views.” Bird’s first title for his book called Naessens the “[Galileo](#) of the microscope,” because just as those who condemned Galileo’s discoveries about Jupiter’s moons refused to look through his telescope, orthodoxy has generally refused to look through Naessens’ Somatoscope, as his work has been simultaneously denigrated.

There are many valid avenues of investigation and practice taking place today. The danger is not adopting new paradigms, it is turning them into dogmas and rackets. While there are numerous schools of thought, and I will not invalidate them (except to poke holes through orthodox dogma), I believe that the upcoming new medical paradigm will complement new perspectives in politics, science, economics, history and spirituality. In general, the new medical paradigm will incorporate the following:

1. The principles of Hygeia will take their rightful place at the head of the new paradigm. Prevention, nutrition, sanitation – these will be seen as the key principles of health. Humans, as with all animals, are designed to eat live food, and the human diet should be two-thirds live fruit, and most of the rest live vegetable matter. [Vegetarianism](#) will probably become the norm, although meat eating will still be allowed (in the world [I envision](#), *everything* will be allowed), although the less sentient (a descending scale of humans/cetaceans, mammals/birds, fish, insects and microorganisms), the better for them and all involved. Virtually all animal experiments will cease, especially those that harm or kill the subjects. Instead of studying disease, people will study health, and how to be well.
2. Masculine medicine will be largely discarded, as life-taking principles have little place in a life-giving discipline. Some masculine principles and treatments may have their place in certain situations, such as Rife’s treatment. There may be a place for *some* drugs, sometimes. Maybe *some* antibiotics, sometimes. Although it is doubtful, maybe the vaccination concept will survive in some muted form. The racket aspect is making them the only way to practice medicine (even compulsory, as in vaccination and [fluoridation](#)), and forbidding all else. The masculine (disease coming from outside) victim-oriented germ theory will be replaced with feminine (disease coming from inside) creator-oriented theories. Invasive and violent “medicine,” or “torture as treatment,” (Ralph Hovnanian’s phrase) will rightly be seen for the barbaric insanity that it is, and gentle, effective and inexpensive treatments will take their place. Surgery, drugs and most of today’s “medicine,” especially for the degenerative diseases that kill most Americans, will largely be abandoned. Interventional medicine will become less and less invasive, and will eventually lead to predominantly using light (e.g. Ghadiali) and conscious energy, and preventive medicine will be the dominant practice. Homeopathic and other gentle principles will return to prominence.
3. The principle of consciousness will enter medicine, as it will enter science. Consciousness will not only be seen as an intellectual phenomenon, but intuition and emotions will be seen as parts of the whole. The soul will be recognized, as will the Creator. Currently unrecognized energy systems, such as the ones that acupuncture and aura reading deal with, will be “discovered” by science and medicine. Love will be seen as the greatest healer, and the greatest power.
4. [Greed](#), which has been elevated to a virtue in today’s ideology, will no longer be the primary operating principle, for medicine or any other human endeavor. Love will reign, not fear.

That is the good news, as far as what is possible. New paradigms such as those will not be achieved, however, until humanity has accepted responsibility for what exists today. For Pasteur, Rockefeller, Fishbein and gang could not have played their games if the human race did not allow them to. We are all sovereign, divine beings, yet the medical racket could not function if people did not give their responsibility away. There truly are no victims, and until people stop giving their responsibility and power to others, this deadly game will continue until humanity exterminates itself. The choice is ours. Many people are pursuing the paradigms outlined in this essay, but they are a tiny fraction of humanity. This essay must now deal with an issue that not many readers will enjoy reading, but it must be understood, if the current paradigm is to

be overturned. We always have been, and currently are, responsible for our fate. Nobody needs to blame John D. Rockefeller for today's situation.

The March of the Lemmings

The alternative cancer treatments that I have investigated nearly without exception abandon the attack-the-tumor paradigm. They are examples of feminine-based medicine, and almost without exception, the treatments are harmless. They generally rehabilitate the body's natural defenses so it can deal with the cancer itself.

How on earth could we have a system where only violent medicine is legal, and gentle, harmless medicine is outlawed? The give life/take life duality is nowhere more evident than in understanding the modern cancer racket.

As I discovered at age 12, nobody wants to hear that they have an unhealthy diet, especially one they are addicted to. The American medical paradigm plays into people's sense of learned helplessness and their desire for immediate self-gratification at all costs. In believing their diets to be "adequate," they do not have to engage in any self-discipline to change. When the day comes that they face health problems, the doctor will make it better by giving them a pill or surgically removing the offending organ. Their worldview requires no self-discipline, and puts their fate in the hands of a highly paid specialist who can easily remedy the problem. The medical racket relies on people's complacency and addictions. Modern medicine says, "Don't worry, your diet is fine, and if you get heart disease as a function of being alive, well, we have the answer to that, but your death may be 'normal.'" More than thirty years ago, [my father was told exactly that](#) by his doctor.

Today, nearly the same thing is told to cancer patients. Modern medicine says, "Give us your responsibility, and we will make everything OK. You must trust us." One doctor friend I recently talked to encourages his patients to change their health habits to be healthy (mainly diet, exercise, and the obvious "stop smoking"), but they do not want to hear it. They want a pill to make them well.

From the feminine perspective, cancer does not occur because some part of our bodies "turned traitor" and needs to be killed, but because our organisms are run down, and cancer is one way that our bodies self-destruct. Virtually all alternative cancer treatments operate from the premise of seeing cancer as part of a systemic condition. An integral part of their approach is addressing our lifestyle. The centerpiece of the feminine answer is making changes to give us more life-giving energy. That nearly always means changing our diet from dead food to live food, because that was a big part of our getting cancer (arterial disease, diabetes, etc.) in the first place.

The medical profession has various ways of categorizing cancer: type I, II, III and IV (often used for breast cancer), and the TNM system, which refers to tumors, lymph nodes, and distant metastases, for example. The methodology has changed over the years, but there is a stage where your doctor says, "You are going to die." It used to be called "terminal" cancer. Today there comes a stage where the patient's likelihood of recovering using conventional methods is so low that the doctor gives up, often refusing to treat the patient, and asks if he/she wants to die at home or the hospital. That is something that the more compassionate doctors do. There are many, many instances of patients with no hope given treatment until they die, while the hospital racks up big money for providing their worse-than-worthless treatments.

Of those patients given no hope by orthodoxy, very few are willing to make the lifestyle (mainly dietary) changes required to pursue the alternative treatment. Here is a *Medical Dark Ages* quote to make that idea clearer.

"Though it is a great frustration to realize that less than 10% of all cancer patients are willing to make necessary lifestyle changes required by most alternative cancer therapies, all we can really do is inform the patient as thoroughly as possible and then let him or her make the final decision. ...(:) To undergo the Orwellian nightmare of conventional cancer treatments or ..(the) non-toxic alternative, the Utopia choice of Earth as a beautiful place...Pro-Life Freedom of Choice..." - **Hellfried Sartori, MD, MPH, MS, U. of Graz**

Medical School, Austria, President, Life Sciences Universal (1200 Medical Centers Worldwide) *Cancer 1984.*

A guess has been made that as high as 25% of cancer patients are willing to make those changes, but is the optimistic extreme.^[232] My experience is that fewer than 10% of terminal (doomed by orthodoxy) cancer patients are willing to make the dietary changes in order to have a chance at surviving. If I had not seen it with my own eyes, I would not have believed it. In nearly thirty years of never seeing *anybody* take my advice of changing their diets to reverse their health problems, I have had the same batting average in trying to introduce people to alternative cancer treatments. I have never pushed it on anybody. I have watched loved ones go to their graves at the hands of modern medicine, because I knew they could not believe that the doctors *were not* God, and I silently watched them get butchered by their doctors and die. It was not easy to watch, especially when I knew it was unnecessary.

Since I became aware of 714X in 1990, I have spent hundreds of dollars getting literature into the hands of cancer patients who gave me an indication that they were willing to consider alternative cancer treatment. Two of those people had AIDS. That happened more than ten years ago, when having AIDS was a death sentence with no negotiation. By 1990, 714X treatment had reversed AIDS in dozens of patients.

I had Bird's book on Naessens mailed from Canada to those two men, one of them an in-law of mine. I spent hours on the phone, telling him the theory behind it, the data behind it, and he had the book in his hands that repeated what I was saying. He could have taken two days out of his life, driven to Canada, visited the lab, and observed and obtained the treatment for himself at very low cost. His doctors had given him the death sentence. What did he have to lose? The only thing he had to lose was a couple days and a few hundred dollars for a chance at life. But...he would also have had to rethink the whole medical game he had been taught, and question authority. He was not willing to pay that price. I would talk to him for awhile, and he would get excited about looking into the treatment, and when I called a month later to see how it was going, he would wonder what I was talking about.

The last time I called him, asking him if he had any more questions about the process, he brushed me off in seconds, saying that he had to get ready for a party that evening. I stop trying. He died two years later in unspeakable agony. My in-law went through the entire spectrum of horror that AIDS patients went through. He would probably be alive today if he had taken two days out of his life and gone to Quebec.

Another man with AIDS was directed to me at about the same time. I give a lucid explanation on how 714X works and the dynamics of immune deficiency diseases. I do not even want to talk to anybody unless they are interested, and I spent hours talking to that man. He worked for an airline, and could have flown to Quebec for free, on a day off from work. He could have checked it out with nearly no effort. I bought the book and mailed it to him, then had a long talk with him. He never pursued it, and died in agony several years ago. My friends nursed him on his deathbed, and said his death was the most horrible and agonizing thing they ever witnessed. The man never looked any further into 714X treatment after talking to me, and accepted the certain death verdict of his doctors. Those were AIDS patients.

If *AIDS patients* were not even willing to consider a cheap and painless alternative to the death sentence that their doctors gave them, what are the chances that mere cancer patients are willing to consider alternatives? I have tried turning about a dozen people over the years on to alternative cancer treatments. I never convinced anybody to pursue alternatives. Instead, I watched them lose their hair, have parts of their bodies chopped off, be fried by radiation, go through horrific sufferings and usually die as the coup de grâce. As I have watched them file into the hospitals and morgues, dying terrifying deaths at the hands of modern medicine, I have come to call it the March of the Lemmings. Their blind and dogmatic faith in modern medicine is what also keeps the alternatives at the margins.

In recent years I have been bombarded with cases of women close to me getting breast and other cancers. It has been extremely difficult to sit and listen to story after story of women having "preventive" double mastectomies, "preventive" chemotherapy and radiation. I have watched women gulp down "medicine" that poisons their bodies. I have had to hear about how the cancer spread and went to their brains. They

had surgery followed by radiation, and died within weeks in appalling agony, and their relatives have even admitted that it was not the cancer that killed them, but the treatment itself. I have looked at photos of bald women, taken while they were having their chemotherapy. None of them can conceive of trying an alternative.

Nobody like me begins their journey by being political in their perspective. How it nearly always starts is with the naïve belief that we can help the world become a better place, and we think the world will welcome our efforts. Only after we are crucified, while the very people we were attempting to help are cheering our fate, do we begin to realize why the better mousetraps are not sold. It is because the people selling the old, inferior mousetraps wipe out or buy out anybody who comes along with a better mousetrap, and the masses are so easily manipulated that they fall right in line with the program, against their own interests. Dostoyevsky's parable of the grand inquisitor described a less fictional dynamic than it might seem.[\[233\]](#)

With cancer patients, I never begin by talking about the corruption in the medical establishment. I try explaining how the new technologies or methods work, and wait to see the person's eyes light up when they understand. What they usually come back with is, "If it really worked, why isn't it available? Has the FDA approved it?" The dynamic is nearly identical when I talk about [alternative energy](#) and [my adventures](#). When I discuss free energy possibilities, the reply is "If it is so great, why can't I buy it?" Then I have to begin the long, grim story of why the better mousetraps are nearly *always* suppressed. I do not go into chapter and verse, but I present a few examples of how the real world works. What happens next is predictable: I am goring their sacred cow. I am telling them that the medical establishment might not know what is best for them, or worse, may be actively killing its patients. I then watch the light go out of their eyes. Sometimes I have seen them consider what I have said, and then say they will ask their oncologist what he thinks. That outcome is predictable, and is like asking a *Fortune* 500 executive what he thinks about Karl Marx's work, or reading what priests during the early 1200s were writing about the [Cathars](#). Asking an orthodox oncologist what he/she thinks about alternative cancer treatment is a similar situation.

In a number of states, a doctor can go to prison if he/she merely tells a patient an alternative treatment might work. In California, if a doctor even tells you that 714X treatment might work, he/she is subject to going to prison for five years.

I finish wasting my breath, and the next time I see those friends, they are on chemotherapy and their hair is falling out. I stay quiet, biting my tongue. It is not easy to watch.

Naessens is living proof that the medical establishment's grip on the medical racket in Canada is not nearly as firm as it is in the United States. Not only was Naessens acquitted, but also legislation was passed in Canada to allow people to legally use 714X treatment. Under the emergency drug section of Canadian law, article C.08.010 of the Food and Drug Law, a patient can take 714X at their own risk. To date far more than 10,000 people have had 714X treatment, and there has not been one case of an adverse effect with it.

Why the System Works the Way it Does

We are all responsible for what happens in our world, and it is a clear dynamic in the system of modern medicine. Modern medicine is a holocaust of immense proportions, with its death camps hospitals and oncology clinics, and its death chambers are operating rooms and radiation chambers. It dwarfs what happened in Auschwitz, and is happening every day in America and around the industrialized world. In that light, the comparisons of [Fishbein](#) to Hitler I have seen are not so outrageous.

It appears that most people go into American medicine today because of the big money in it. If the people who enter the profession are mainly motivated by money, how much will they really care whether the treatments they provide really work, as long as they are well paid to administer them? If their experience begins telling them it does not work, how many are willing to consider questioning what they have been taught, as long as the big money keeps rolling in?

Doctors receive about zero nutritional training in medical school, and what little they *are* taught is

largely agribusiness propaganda, not true nutritional training. Their indoctrination is all about knives and drugs. For instance, a survey several years ago asked new, first-year medical students if they thought that nutritional advice and prevention would be a significant part of their future medical practices, and about 80% of them answered that it would be. Those same students were asked the same question in their last year of medical school, and around 15% thought the same way. Even when people go into Western medicine with the best intentions, their ideals are usually slowly beaten out of them. The same thing has happened to [lawyers that I know](#). They go in starry-eyed, to emerge bitterly cynical years later. I remember when I [believed in the Easter Bunny](#). Without people willingly playing the game, giving away their responsibility, this system could not function.

The alternative treatment Mecca of the world is Mexico. The doctors' offices are often in California, but the patients go to Mexico for treatment.^[234] There are many "skeptical" shills of the medical establishment who have traveled to Mexico and loudly proclaimed that all that is practiced down there is quackery, and they get loud cheers from the orthodox medical crowd. I happen to know better.

As an example, [Mr. Professor](#) developed diabetes in the 1960s. It ran in his family, and America's industrialized diet, environment and sedentary lifestyle (Americans are history's [most sedentary and obese people](#)) makes it the world's capital for heart disease, cancer, diabetes and a host of degenerative diseases (with new ones catalogued regularly), where the body self-destructs.

Mr. Professor's doctor in Ventura County had diabetes, and advertised himself as an "alternative" diabetes practitioner. Diabetics often lose their legs because their disease destroys the blood circulation. The feet, then the legs, are usually the first to go. In about 1990, with the stress of the [Ventura events](#) contributing, Mr. Professor's feet began turning black, as were his calves, with pits forming on his skin. His "alternative" doctor said that Mr. Professor's legs were exhibiting the first signs of gangrene. He said that the condition was irreversible, that he could do some things (involving drugs, of course) to slow the progress, but Mr. Professor would have his legs amputated one day, perhaps soon.

Meanwhile, Mr. Professor's wife had developed severe allergies in the 1960s. She was so highly allergic to nearly everything that she became a prisoner in her own home. Driving to the store would expose her to so many environmental toxins that she would be incapacitated for days. After many years of going to one orthodox specialist after another, none of whom were able to help her, although they would prescribe the awesomely expensive "treatments" vended by the pharmaceutical industry, Mrs. Professor eventually began investigating alternative treatments.

During Mrs. Professor's research, she eventually connected with the alternative medical field, and when the doctor pronounced his sentence on Mr. Professor's legs, she said, "We're going to Mexico." They spent a few weeks at a Mexican clinic while Mr. Professor was treated. Mr. Professor had chelation therapy, a blood treatment that has also been largely driven from the United States, in the standard medical gangster style. After a few weeks of treatment, the condition of Mr. Professor's legs was completely reversed, and the gangrenous condition disappeared. There were not even any scars on his legs. It was as if he never had gangrene. He had new legs and feet. According to today's orthodox medical doctrine, reversing gangrene in that fashion is impossible. Mr. Professor was living proof of the "impossible."

Mr. Professor went back home and visited his "alternative" doctor. As the doctor examined Mr. Professor's legs, he could not believe his eyes. "These aren't the legs I saw a few weeks ago. It is a miracle! The state I saw your legs in is impossible to reverse. What in God's name happened?!" Mr. Professor began his response with, "Well, my wife and I went to Mexico..." That was all the "alternative" doctor needed to hear. "Mexico?!" he shrieked. He ran out of the room, nearly holding his head in his hands. He did not want to hear any more, even when he saw its "impossible" results. He was genuinely afraid to hear any more.

Most Americans have only heard about Steve McQueen dying of cancer after he visited Mexico for laetrile treatment (actually, he was doing OK until he acquiesced to his doctor's request to perform surgery). Numerous medical doctors in America know that alternatives work, and often far better than what they are administering to their patients. They are terrified to use them, however, knowing what happens to doctors who do, and often they engage in sophisticated games of denial in order to live with themselves.

A "barrier of entry" protects the racket. In the unholy union between the FDA and the drug companies, today it takes hundreds of millions of dollars of "testing" to approve any substance for medical use. As the long arm of the FDA seeks to regulate herbs and vitamins (and who knows what else is on their wish list?) the issue of health is increasingly one that only large corporations can play. The way the FDA paved that road was a reinterpretation of its mission in the 1960s. Originally, they were charged with food and drug *safety*. Then they appended the word "effective" to their charge, which the drug companies initially fought, but subsequently perverted into a great way of protecting the racket. All those alternative cancer treatments are "safe" because they are harmless, unlike the mainstream treatments, which are anything but "safe." The FDA creatively defined "safe" so it exempted chemotherapy treatments that destroyed the body (as well as surgery and radiation). Then they creatively defined "effective" so that mainstream cancer treatments that drastically shorten patients' life expectancies were surreally labeled "effective." Then they got creative in the other direction to define harmless treatments as "ineffective." Then they used their police powers to wipe them out.

Even though the FDA is an immensely corrupt racketeering organization, with an actual mission almost the opposite of its publicly stated one, most of those doing the dirty work believe in the publicly stated mission. As I [discovered in my profession](#), most people will do plenty of lying to themselves in order to sustain that belief in what they are doing, and do it quite creatively. [Orwell](#) called it [doublethink](#).

To hold beliefs contradictory to a person's experience is difficult, and leads to the condition known as [cognitive dissonance](#). When that contradiction happens, there are three ways to deal with it. The healthy reaction is to change the beliefs to account for the experience, which also can lead to *knowledge*. The other reactions are pathological. The most common pathological reaction is eliminating the "negative cognition" by quickly averting the eyes or otherwise [denying the experience](#). The other reaction is burying the negative cognition with "positive cognitions," so the negative cognition is simply overwhelmed by the positive cognitions. The [American flag-waving after the World Trade Center attacks](#) is a textbook example of trying to overwhelm the negative cognitions (people hate America, and for good reason) with positive ones (America is the greatest and most noble nation). Eventually, if whatever is behind the belief-challenging experiences are not addressed, those events keep occurring, and often keep escalating. If validating the experience is not done, and instead negative cognitions are suppressed and positive ones are emphasized, or even manufactured from whole cloth, at some stage there will be a breakdown.

That dynamic is a cousin to how paradigms shift in science, the "anomalous" evidence piling up in the corner, often ignored, until somebody comes along and accounts for it with a new paradigm. People rarely are willing to change their beliefs (or replace it with *knowledge* gained from experience, a far superior treasure), especially deeply inculcated ones, as it can call for an exercise of personal integrity that most appear incapable of mustering, particularly when the belief is self-serving.

Even big names in medicine have their careers ruined when they run afoul of the dogma. For instance, one of the world's most prominent virus researchers, [Peter Duesberg](#), has challenged the orthodox perspective of AIDS. He argues that HIV does not cause AIDS. He has a radically different way of looking at AIDS, a perspective that echoes [Seth's](#). This essay is not concerned with whether Duesberg is right or not. Before he began challenging the emerging dogma in the late 1980s, Duesberg was a leading figure in viral research. He received the Outstanding Investigator Grant from the National Institutes of Health (NIH). When he challenged the dogma, his perspective was not carefully considered, to finally be rejected when it proved inaccurate. Instead, all funding to test his hypothesis has been cut off, in a familiar pattern. Two-time Nobel laureate Linus Pauling ran afoul of the cancer establishment when he began investigating vitamin C as a cancer treatment.

The cancer racket also devours its own. The denial theme plays well, even when it kills those who work for it. It might be surprising to know how many oncologists will be the first to try an alternative cancer treatment, or prominent chemotherapists refusing to undergo chemotherapy, as they can see how much the results of their labors "help" their patients.[\[235\]](#) The reaction of Mr. Professor's "alternative" diabetes doctor is telling. Although there are a disturbing number of orthodox oncologists who will opt for alternative treatments for themselves and their families, most go the orthodox route, fully swallowing their indoctrination, even when

their eyes tell them what a deadly disaster orthodox cancer treatment is. Even then, the machine they are a part of can devour them. For instance, in 1992 the *New York Times* published the story of Norman Paradis, the director of emergency medicine at Bellevue Hospital in New York, and his father, also an M.D. The elder Paradis, who had been in perfect health his entire life, was diagnosed with advanced pancreatic cancer at age 75. Advanced pancreatic cancer has about a zero survival rate with mainstream treatment (but about 100% recovery has been documented with some alternatives). The father implored his son,

“I have been a surgeon for almost 50 years. In that time, I have seen physicians torture dying patients in vain attempts to prolong life. I have taken care of you most of your life. Now I must ask for your help. Don't let them abuse me. No surgery, no chemotherapy.”

The son did his duty. He told the attending physicians that his father only wanted and needed painkiller and a bed, and no other treatment. All agreed to the plan. Soon after that meeting, however, Norman discovered that his father was subjected to surgical and radiological procedures. The doctors agreed to stop, but the juggernaut kept rolling. Norman's brother was an attorney, and together they tried getting the hospital to stop treating their father. They kept getting promises, but the hospital kept on with the testing, surgery and radiation. On one trip to the hospital the brothers found their father in a hallway, alone, after another “test.” The man pleaded with his sons, “They are treating me like an animal. Please get me out of here.” The doctor in charge of the father's treatment was again contacted, and the assurances came again. As soon as they walked out the door, the treatment continued. The useless but expensive surgeries continued unabated, and every time they tried taking their father out of there, he was involved in a test or procedure, and was unmovable. When they found their father alone in a hallway again, skeletal and nearly dead, they got him out of there and into a hospice, where he died the next day. The hospital racked up \$150,000 in Medicare charges, and Norman complained to Medicare about the outright fraud the hospital engaged in regarding his father. They told him that a \$150,000 case was too small for them to pursue.[\[236\]](#) The hospital saw Dr. Paradis as a lucrative piece of meat, while he still lived.

If the head of emergency medicine could not prevent the hell his father went through before he died, what chance does the average patient have? I have known many people in the medical business over the years, including nurses and others who work directly with the dying. Within the hospitals, patients are often seen as gold mines. When people are dying, there reaches a stage when they are obviously on their way out. People who work with the dying know the stages well – the pallor, the breathing, etc. I know ex-nurse types who candidly admit the money-machine aspect of those last days. They have watched people who were obviously on their way out become the subject of intensive procedures, obviously useless if keeping them alive was the goal. The numbers are awesome. Something like 60% of all the medical service dollars that Americans consume in their lifetimes is “consumed” in the last months of life, and almost no medical industry dollars are ever spent on prevention. It is a huge cash register that feeds off death and misery. Here is one last tale, to make it clear how the system devours its own.

Betsy Lehman was a prominent health columnist for the *Boston Globe* who three times won the American Cancer Society local chapter's top award for her journalism. In 1994, she underwent chemotherapy at a prestigious cancer treatment facility, getting the best that orthodox medicine could provide. As she underwent chemotherapy, she began vomiting sheets of tissue. Her entire digestive tract was shredded, but her reaction was the “normal” one for that treatment. Even though her electrocardiogram was showing enormous stresses to her heart, the doctors continued their treatment. She died from the ordeal, and was just another lost patient for the doctors, who did not feel that anything really went wrong. Her death was a typical treatment outcome. Her autopsy showed that the cancer had been eradicated. Her doctors even said that the treatment “worked” in her case, even though she had died. Two months later a clerk discovered that she had been given four times the recommended dose.[\[237\]](#)

One friend used to be a nurse, and she admitted that during her ten-year career she had a good record; she only killed one patient. She regularly saw patients killed by mistakes and negligence by the hospital staff, but it was always covered up. Hospitals rarely perform autopsies, and can easily bury their mistakes. My friend

related one instance when a nurse replaced an IV drip solution with something that stopped the patient's heart in a few beats (I think it was a potassium solution). The hospital told the patient's family it was a heart attack. When that friend got cancer and went to the hospital, her nurse friends would sit with her at times and make sure the attending nurses and doctors did not screw up. Even then, their negligence nearly killed my friend when they let her IV go dry, and her blood started pumping out the IV tube and filling the IV sack while she was asleep. Anybody with much time in hospital environments has many stories like that to tell, but they will not admit them publicly, not if they want to continue pursuing their careers. My solution is to never darken their door. If I never get in their clutches, they cannot harm me. I have never been a hospital patient (except when I was admitted for muscle spasms when I was ten), and do not plan on ever being one, unless I am in an accident. Medical doctors have virtually never treated me.

The accomplices in the medical establishment holocaust are many, from pharmaceutical executives to FDA investigators to oncologists to medical journalists to surgeons to nurses to medical schools. They all participate in the system, and making money is the preoccupation of all of them. The drug industry is America's most profitable industry, American medical doctors are the highest paid professionals on earth, and everybody takes their cut. The biggest accomplices of all, however, are the masses who eagerly believe the propaganda that relieves them of personal responsibility for their health. We are all responsible to one degree or another for this state of affairs. Since we are all in this together, we have to get out of it together. The only answer I know is love, and with love comes truth, and that is the only way out of this mess.

My Early Experience with the Medical Racket

These medical racket writings are more than research and theory. I was exposed to another aspect of the racket in California when [Dennis Lee was in jail](#) the first time. I began working at a medical lab in Los Angeles the week before Christmas, in December 1988, which was my life's blackest month. I would finally be in a stable corporate environment, not the cliffhanging that was my daily life with Dennis. I was in for a surprise. The lab was the nation's largest privately owned medical lab, owned by a black pathologist who was about America's richest black man, worth about two hundred million dollars at the time. He took an interest in me because we were both vegetarians, as even in Los Angeles in the 1980s, [vegetarians were rare](#), especially in the business world.

The week after I began work, federal investigators came to the lab. They were engaging in an unprecedented investigation, as part of a politician's crusade. A Pap test for one of his family members had been misread. Our lab had one of the nation's largest Pap labs, reading about three thousand specimens each night.

Pap smear reading is more of an art than a science. In America, a technician called a cytologist, who is specially trained to read Pap slides, reads nearly all Pap smears. I have been out of the business for many years, but in reading up on the current state of the Pap industry, it has changed only slightly. Then, as now, a pathologist would reread 10% of the slides, checking the cytologist's work. There were five categories of results for reading the Pap smear. A result flagged as class one meant that all was well. A reading of class two meant that the patient should get another Pap smear in six months. A reading of class three was serious, and the suggested response was having a biopsy performed. A reading of class five meant that the patient had cervical cancer. The Pap specimen was read by looking for cellular abnormalities, mainly known as dysplasia. If enough sample cells showed abnormalities, the rating would rise, anywhere from category two to five.

Although Papanicolaou published his results for fifteen years before he got anybody's attention, and there are much better ways to test for cancer, the Pap test was an advance over previous methods. It is considered the best early cancer detection technique in existence today. It is not, not compared to Naessens' methods and others, but it is better than any other *mainstream* technique. It is still an art, however. Five experts can look at the same sample and derive five different diagnoses.

During the 1980s, the federal government sent out class five Pap samples to many labs, seeing how well the labs diagnosed them. About seven percent of the time, the lab gave the specimen a class one rating. That was

for class fives. Today, the statistics show that about twenty percent of the Paps read are given what is known as a "false negative." That means there were abnormalities in the specimen, but the cytologist did not note them. There can be hundreds of thousands of cells in a specimen. A cytologist does not look at every one of thousands of cells in a specimen, because only a few minutes are devoted to looking at each one. A sampling is made. Finding a few strange cells can move the sample from a class one to a class two. Yet, "strange cells" are subject to interpretation. Again, it is an art, subject to a wide range of interpretation and error.

In addition, cytologists' pay practices were not ideal, which is unfortunately standard throughout the capitalistic world. The cytologists were largely paid by the slide. In an eight-hour shift, a cytologist would typically read about eighty slides. Even today, cytologists can read up to a hundred in a shift. Being paid by the slide encourages them not to read them as thoroughly as they might otherwise. A number of our cytologists moonlighted for our competitors, as they were in great demand. Cytologists in the medical lab field were like specialists anywhere. They were all trained in the same institutions, and often played the medical lab merry-go-round, going to whichever lab gave them the best deal. We were just one player in a highly competitive environment.

Because our lab was one of the nation's largest Pap labs (the Pap lab only made up a few percent of the company's revenues, however), we were one of the first labs to undergo an unprecedented investigation by the federal government. Federal investigators came in and reread our Pap slides, giving them their own rating. They read more than a thousand slides. In the Pap business, well more than 90% of the slides are assigned a class one result. It was like that across the nation. The investigators, however, felt that about two hundred slides from their sample should have been assigned a class two. That cannot really be called an error. The difference between a class one and a class two is on the level of quibbling. Those two hundred slides corresponded exactly to the data today of a twenty percent "false negative" rate. There were a dozen specimens that the federal investigators thought should be class three, that we had called class one or two. For those dozen, it was still a matter of opinion. The entire investigation was an unprecedented act by the federal government. Our lab was one of two in Los Angeles selected for the investigation, the *first of its kind in U.S. history*.

The investigators produced their results and met with our company's management. Their investigation had virtually no legal status. It was a fishing expedition. They had nothing at all to try measuring our results against, because they had never done it before. There were no procedures for determining what their findings meant. By the statistics in the industry then and even today, they discovered that we were an "average" lab. Some data today suggests that there can be up to a fifty-percent false negative rate. It does not mean that cervical cancer is going up; it means that the procedures are getting better at detecting "abnormalities." Being the bureaucrats that they were, the federal investigators called their differences "errors." They played investigator, policeman, prosecutor and judge, in a type of court that had never been convened before. They were critical of our lab. Frankly, some of their criticisms were understandable, as it was run in a mom-and-pop style, with plenty of "homegrown" talent working there, meaning the chief programmer used to be a specimen courier, as was the personnel director. That is common in privately held companies. There are good things and bad things about that phenomenon, and one downside is that the staff is not as professionally trained as in a more standard corporate environment. That did not apply to the cytologists, however, or the pathologist who ran the lab. Some of their criticism was well founded, but we were singled out, from the entire United States, for that investigation. How much of the attention we were getting was because we were the largest privately owned lab and not part of a corporate conglomerate as all the other big labs were, and how much was because the owner was black?

My boss, the controller, challenged their right to even be making the investigation, much less trying to be critical of the company. He was probably right, but telling a bureaucrat he has no power is not a good idea. Those bureaucrats did the only thing they had power to do, and even then it was unprecedented. They revoked the Pap lab's Medicare reimbursement status. The lab could have fought that decision. It did not hurt the company much, as Medicare is not that big a part of the Pap lab revenues, since women more than sixty-five years old are not exactly the big Pap market, even though they make up a disproportionately large percent of women who die from cervical cancer. Because they were bureaucrats, they would inflict their vengeance on our impudent company that dared challenge their authority. They attacked us through the media. The same tactic has been used against Dennis in Seattle and other places. Media power can quickly destroy a company.

I had been at the lab for only a month when it was splashed across the papers and evening news. Then the federal bureaucrats did what they could; they sicced the state authorities on us. The state health authorities came in and did their own unprecedented audit, just as the feds did. Their results were virtually identical: about two hundred class-one/class-two disagreements, and about a dozen others. They never found a class five that we missed, which would have been an instance of really making an error. Two unprecedented audits, and they never found one harmful diagnostic error.

Next, the California State equivalent of the Surgeon General, who, like so many "health" authorities was an obese man, made a theatrical announcement to the Los Angeles media. We were a "Pap dungeon" with a twenty-percent error rate. Most other labs had the same rate, but we were made an example. The news stations in Los Angeles made us the leading story. We were splashed across the media for weeks. They were even telling women who had a Pap reading done in the past year to call their doctor to see if our lab did the diagnosis. If so, they should get another reading, because the "Pap dungeon" could not find their cytology backside with both hands. The media was inciting hysteria among the women of Los Angeles for no good reason. It was one of the most unconscionable things I have ever seen the media do. An attack like that can put a company out of business, quickly. In the wake of that onslaught, we closed down the Pap lab. If it had just affected the Pap lab, that would have been one thing, but the entire lab's revenues declined by about thirty percent in a month. Many companies would have been driven out of business by a falloff in business that sharp, with the entire organization unraveling. The owner was rich, however, and weathered the immediate storm, but he wanted out.

The owner had built the company from nothing to a hundred-million-dollar-per-year lab business in a generation. He was one of the most successful black entrepreneurs in American history. He treated his loyal employees very well. He sold out to a major corporation a few months later for more than a hundred million dollars and retired. The lab's employees, in the meantime, were frantic. I have seen numerous corporate slaughters, and that was a classic one. The people around me were panicking, people who had worked at the lab for more than twenty years. With all I had been through with Dennis, the mayhem there seemed to possess a pastoral calm, although I sympathized with people who watched their careers disintegrate. After the large corporation took over, the blood flowed fast and furiously. A year after I began there, I was the highest-ranking person in administration to survive the takeover.

The California equivalent of the Surgeon General was a spiritual cousin of Morris Fishbein. Again, legally he did nothing, nor could he do anything. He led an unprecedented state audit on the heels of an unprecedented federal audit, and their findings would have been duplicated at most labs they would have audited. He was merely carving a notch on his belt, as a "tough protector of the public interest," whipping up hysteria among the women of Los Angeles and putting a head on a platter. He blindsided us one day by holding a press conference on our front steps, without warning. He announced that he would investigate other labs in California in light of the dungeon he had discovered, to see if the problem was widespread and if reform was needed. About a month later, he quietly announced that they investigated other labs, and their error rate was only about one to two percent, which was what he expected to find. That was a Big Lie of the Goebbels variety. Undoubtedly the one percent "error rate" for those "investigations" was the same one percent that the audits disclosed at our lab: class three versus class one or two disagreements. The labs they audited had some of the same cytologists working for them who worked for us. Somehow, *our* error rate was ten times as high. That happened *before* I really began investigating the medical racket.

Modern American "Justice"

Today's racketeering methods are more refined than the crude gangster tactics of Morris Fishbein's day, with the racket well in hand. Outright violence, such as being hit by a car, shot or poisoned, is relatively rare today. If kangaroo court and prison get the job done, they do not need to get violent, and they know that a trail of bodies gets messy. [Fishbein](#) would not have a much of a chance of buying out a cure and monopolizing it anymore. The racket is so deeply ingrained that nobody will allow one group to appear on the scene with the magic answer. In today's world, if Fishbein tried pulling the buyout stunt he tried with Hoxsey and Rife, he might end up dead himself. I have not heard of one buyout rumor since those early days of [Hoxsey](#), [Rife](#) and

[Ivy](#). The recent [energy buyouts](#) were only to bury them, not monopolize them.

The medical racket is a rather novel monopoly. It is a monopoly of method. No biomedical company accounts for most of the industry's revenues, such as Standard Oil and refining in 1880. The [auto company oligopoly](#) and other robber baron industries also do not quite compare in structure to the medical racket. In medicine, it is a monopoly of method, whereby the AMA, ACS, FDA, NIH, medical schools, state medical boards and other organizations work closely with the pharmaceutical and other biomedical companies to form a monopoly of their brand of masculine, lucrative, "medicine." The term "medical-industrial complex" is apt, and it has an immune system to ensure that nothing becomes a substantial threat to the cash flow. People in the know have told me that the [secret teams](#) and others who protect the energy racket are not as ruthless as those protecting the medical racket. The [Fitzgerald Report](#) uncovered definite conspiratorial activities by the medical establishment in wiping out a dozen alternative cancer treatments. Those activities did not end in the 1950s.

In the 1940s, Dr. Ernst Krebs chemically isolated an optically active isomer of amygdalin, which has been derived from bitter almonds and other plants for thousands of years. He called it laetrile. It was originally proposed as a chemotherapy agent, and it appeared to have a "cyanide" effect on cancer cells. That aspect of laetrile's theoretical function is masculine and magic bullet-ish. Krebs began using laetrile in cancer treatment in the 1950s. More importantly, laetrile appears to have the properties of a vitamin, and has been called vitamin B-17. In 1970, the McNaughton Foundation filed an Investigational New Drug (IND) application with the FDA. Amygdalin has been used for millennia and was grandfathered when the FDA was founded, which meant that the FDA could never regulate it. The experiments performed by the McNaughton Foundation had quite positive results.[\[238\]](#) In the 1970s, laetrile became the most popular alternative cancer treatment in U. S. history, with tens of thousands of Americans using it. The cancer establishment ruthlessly [wiped out laetrile](#) in the late 1970s and early 1980s. Krebs was [shot at and jailed in California](#), and laetrile was driven from the United States. Most practitioners did not use laetrile as a magic bullet, but as part of a holistic regimen that included diet and lifestyle changes. Most practitioners thought of laetrile in the vitamin category, and saw cancer as a systemic condition, consistent with other alternative treatments.

Dr. Krebs' adventures highlight another aspect of the racket. Because California is the cutting edge of American society in many ways, there are more people in California willing to pursue alternative treatments, and more doctors are willing to provide them, than any place else in America. Consequently, California has the most draconian anti-alternative-cancer-treatment laws and enforcement in the U.S. The racket must be most vigilant where the herd is most restless. There is more medical gangster activity happening in California than any place else in America. For that reason among others, California also has America's most corrupt legal system, as [Dennis](#), [Gary Wean](#) and [Rodney Stich](#) discovered at great personal cost.

The medical establishment in California took out [Dr. Bruce Halstead](#). They raided his home and put him through kangaroo court. Halstead was even forbidden to discuss nutrition with his patients. Halstead watched the medical inquisitors kill his patients by denying them treatment, remarking after he watched one die, "I could not think of a single tyrannical country in which this scenario could have taken place."

They also yanked the license of [Dr. John Richardson](#) for using laetrile. His colleague, Dr. Douglas Brodie (who died in 2005 at age 80), endured many years of harassment from the California medical establishment before he escaped to Nevada and set up shop. I have relatives who are his patients, who traveled great distances to see him.

[Dr. James Privitera](#) also enjoyed a kangaroo court trial and prison for using laetrile. He worked on a road gang in prison, just like in the movies. [Dr. Emory Thurston](#), a professor at the University of Southern California, also had his office raided and was jailed for using laetrile.

Here is a [Medical Dark Ages](#) quote about how it works in California.

"...testifying for Dr. Privitera...To these 19 cancer victims, the enforcement of (California) Health and Safety Code Sect. 1701.1, the denial of them medical treatment, albeit unorthodox, albeit unapproved by a state agency, must surely take on a Kafka-esque, a nightmare quality. No demonstrated public anger, no compelling interest of the state warrants an Orwellian intrusion into the most private of zones of privacy."
- **California Supreme Court Chief Justice, Rose Bird, dissenting opinion.**

Chief Justice Bird was a holdover from the "liberal" days of Governor Jerry Brown. She was about the highest-ranking woman in the U.S. judicial system. During the [Reagan-Bush](#) years, Justice Bird came under fire for all sorts of unpopular "liberal" stands, such as opposing the death penalty. A political campaign was waged and Chief Justice Bird was removed from the bench.

Laetrile also [cost Ralph Moss his job](#). In 1988, John Fink published *Third Opinion*. A second edition came out in 1992. A third edition was published in 1997, but the book is out of print today. The book is a compendium of the world's alternative cancer treatment clinics, and lists more than 100 clinics. In *Third Opinion* were the names Naessens, Privitera, Hoxsey, Gerson, Rife and others that this essay has not mentioned, in the interest of space. Either the pioneers themselves were still at it (such as Privitera after working on a road gang in prison), or their professional or genetic descendents were, such as Gerson's daughter Charlotte.

Dr. Douglas Brodie is in *Third Opinion*. As with Naessens and others, Dr. Brodie's main diagnostic tool is a dark-field microscope, where he can see what is going on before a patient develops clinical cancer.

The goal of virtually all alternative practitioners is preventing cancer in the first place, which means quit smoking, eat healthy, stop drinking, etc. They all encourage their patients to stop the habits that can give them cancer. They never advertise their cure as a "magic bullet." They see their "cure" as part of a holistic treatment designed to bring human bodies back to their naturally healthy state, following the [Hygeiac paradigm](#). When Dr. Brodie saw that his patients were unhealthy by looking at a drop of their blood, his goal was not to be right a year later when they finally manifested tumors, but for them to change their habits before they developed tumors or other disease manifestations such as rheumatoid arthritis.

To use a truly useful alternative cancer treatment, patients often must leave the country. Here is a common dynamic: the main office is in Southern California; they go to the clinic in California and get examined; they do not treat patients in California, or even recommend treatment; they recommend that they visit their clinic in Mexico; then the patients go to Mexico for treatment. That is how they work around the system. There are still dozens of clinics in California, but they play a dangerous game, walking the legal tightrope.

The alternative doctors and clinics in California cannot legally say that they treat cancer, per se. They will say that they are boosting immune systems. They cannot even utter the words "cancer treatment." If people want to survive, they have to play the game and usually end up going to Mexico. The AMA and other medical gangsters do not let up even then. They beat the propaganda war drums, calling Mexico the very bastion of quackery, sending "investigators" down there to expose all the medieval tortures going on in Mexico, the kind of quackery that impossibly reversed [Mr. Professor's gangrene](#).

That is not always enough to keep California doctors out of trouble. There are tales of Mexican clinics mysteriously burning to the ground at night, and stories of doctors mysteriously dying. One got on an elevator alone on the ground floor, and two men got in the elevator with the doctor. When the elevator got to its destination floor, the two men walked out of the elevator and promptly disappeared, and the doctor lay there dead in the elevator, with no sign of foul play. If a thorough autopsy were done, they may have discovered an injection mark in a hard-to-find and unlikely spot. Those folks can bring sophisticated methods into play if they think they need to.

[Dr. Julian Whitaker](#) is one of America's few doctors to stand up to the medical establishment. He has been politically active and high profile. Whitaker has a clinic on the East Coast where he reverses heart disease and diabetes using natural methods and treatments such as chelation, which the medical establishment has been moving to outlaw for a long time. In the March 1995 edition of his *Health and*

Healing newsletter, Whitaker tells it like it is. He knows that gangsters run the medical racket, and candidly admits why he will not treat cancer patients at his clinic.

"I do not, as a rule, treat cancer patients. My reasons for this are very simple. I do not want to live in Mexico, and I do not want to go to jail."[\[239\]](#)

In the July 1994 *Health and Healing* Supplement, Whitaker wrote of two recent FDA Gestapo actions in America. One snuff job happened here in Washington, where the FDA, with guns drawn, raided the clinic of Jonathan Wright. They confiscated over \$100,000 in equipment, patient records, his medical library and even his postage stamps as part of their "investigation." That is the kind of "investigation" that I am all-too-familiar with. They never charged Wright with a crime. Wright was waging a successful lawsuit against the FDA for its banning of L-Tryptophan, and the raid is widely perceived as FDA vengeance on somebody who challenged them. Dr. Whitaker wrote:

"More recently, Lawrence Taylor, a California physician who practices chelation, began treating cancer patients with a nontoxic, innovative therapy comprised of three readily available - and legal - pharmaceuticals. He was also writing prescriptions for a cancer drug (714X) approved in Canada, and his patients were obtaining the drug in a perfectly legal way from that country, and had signed detailed informed consent papers for the therapy.

"At the behest of the FDA, Dr. Taylor was raided by local authorities and FDA representatives. His offices and home were searched, and he was put in jail. His charges included "treating cancer patients with illegal drugs," which is a misdemeanor.

"His bail was set at \$1 million - surely a record for a misdemeanor charge. Bail was reduced to \$100,000 on the condition that he not practice chelation therapy. However, chelation therapy was not mentioned in the affidavit or search warrant. Chelation therapy is used for patients with atherosclerotic diseases - a therapy that I dispense every day in my clinic. It is a perfectly legal and, in my opinion, superior to many surgical therapies used for blocked arteries. This is another example of the arbitrary way in which government authorities squelch innovation and creativity in the medical community.

"For trying to help patients with a promising innovative therapy, Dr. Taylor, like Dr. Wright, will be in the legal fight of his life - against his own government."[\[240\]](#)

In 1988, *Third Opinion* listed a clinic in Tijuana. The clinic operated in Baton Rouge for seven years before moving to Tijuana and was named St. Jude International. [Jimmy Keller](#) was a one-time cancer patient himself, and ran the clinic. He had facial skin cancer, originally went the orthodox route and lost some facial features. Before he lost his entire face, he discovered an alternative treatment, which saved his face and life. He opened a clinic to use it on cancer. The treatment did not attack the tumor. The patients ate strictly raw fruits and vegetables, and nothing else was permitted. The therapy itself consisted of polypeptide injections, vitamin injections, amino acid IVs, prayer and the like. That holistic treatment built up the body so it could deal with the cancer itself. The recommended three-week treatment cost less than \$4000, paltry by American medical standards. The same treatment in an American hospital would cost \$20,000 at the very least. Many miracle cures accompanied Keller's eclectic treatments.

Keller's clinic is not listed in the 1992 edition of *Third Opinion*. Why? Although Keller moved to Mexico, he did not count on how far the American medical gangsters would go to get him. An account of what happened to Mr. Keller comes from [the husband of a woman who was being treated in Keller's clinic when they came for him](#). In 1991, Keller was abducted at gunpoint by bounty hunters working for the U.S. Justice Department, at the

behest of the FDA. In a blatant violation of international law and Mexico's sovereignty, the U.S. Justice Department paid to have Keller kidnapped from Tijuana. When his kidnappers arrived in California with their prey, Keller was placed in the custody of the U.S. Justice Department. His "crime" was wire fraud: making interstate telephone calls to attract people to his clinic in Mexico. Keller was convicted to spend two years in a federal penitentiary. That is why he was not listed in the 1992 edition of *Third Opinion*. That is justice, American style.

Examining U.S. law, its enforcement, and how the United States respects international law begins treading bizarre territory. Not even Hitler could get away with kidnapping people and bringing them back from foreign soil. In 1937, a German emigrant was kidnapped by Himmler's boys in Switzerland and brought to Germany to face the Third Reich's wrath. The Swiss government protested, citing basic international law, and the Third Reich returned the person to Switzerland.^[241] America has about zero respect for international law, and has been the world's leading nation in [undermining humanitarian efforts](#). In light of the U.S. record of respect for international law and order, kidnapping Jimmy Keller to wipe out another person curing cancer is a minor instance of U.S. international gangsterism.^[242] Jimmy was released from prison and put on parole, and mere days before his parole was complete in 1998, they threw him back in prison, and he got out in 2001 and suffered a stroke that incapacitated him. Such is the fate of the true medical heroes of our time.

Keller's case was part of a trend of U.S. government kidnappings abroad, in full defiance of international law. In 1990, the Drug Enforcement Agency had Dr. Humberto Alvarez Machain kidnapped from Mexico. Dr. Machain was a Mexican citizen. In [an incredible U.S. Supreme Court ruling](#), the kidnapping was determined legal, because the extradition treaty with Mexico did not explicitly state, in the words of Chief Justice William Rehnquist, "no kidnapping allowed."^[243] The kidnapping of Keller was also the first salvo in a campaign of FDA raids and snuff jobs that swept the nation during the 1990s. Patients died from interruption of treatment, etc.^[244] The Supreme Court's ethical bankruptcy and outright criminality was displayed on the world stage as it participated in the banana republic, [coup d'état "election" of George Bush the Second](#), while the [media covered for them](#).

I have only met one person who ever pursued an alternative cancer treatment. At age thirty-eight, in 1992, she developed an ovarian cyst and underwent surgery to remove it. When she awoke from surgery, her doctor gave her the bad news. While operating, he discovered ovarian cancer and gave her a hysterectomy. He said that her only chance of survival was beginning chemotherapy immediately.

My friend is quite a woman. She escaped the Kentucky holler where she was raised, got an education and became the kind of schoolteacher that every student wants and remembers. The woman is not possessed of a dazzling intellect, something she readily admits, but she did something that not one person in a hundred (thousand?) would have done in her position.

She knew nothing about alternatives, and knew almost nothing about cancer. She vaguely remembered an acquaintance who was seemingly cured of prostate cancer by using an alternative method. Her naïveté worked to her advantage. She asked her doctor if he had ever cured anybody of ovarian cancer. After beating around the bush, he admitted that he had not. He said he had three living patients, but that one would likely die soon. He added that he had only been an oncologist for five years, and did not have a record of accomplishment built up yet. She then asked him then if his experienced colleagues could give her the names of their surviving patients. Her doctor said that he did not know anybody.

She called and talked to the Fred Hutchinson Research Center (one of the most respected cancer clinics in the world, here in Seattle, which has recently been the center of scandal, because it performed involuntary human experiments), the American Cancer Society, the National Cancer Institute, various cancer treatment centers in the United States, and cancer hotlines and support groups. Her ear was red and sore from being on the phone for about two weeks, calling all over America, spending hours on hold. She got copies of her slides and medical reports, obtained as much literature as she could find, and shopped for a doctor. She talked to her acquaintance about his prostate cancer cure. He said his doctor was Glenn Warner, and Dr. Warner cured him using immunotherapy. Orthodox medicine repeatedly told her that the survival rate for her cancer was about 10%. She was not encouraged.

She went to seven doctors, all orthodox oncologists except Dr. Warner. She asked each doctor for the names and phone numbers of surviving patients. To those orthodox oncologists, giving references to patients was beyond the pale of appropriate doctor-patient relations. Only Dr. Warner consented to give her names of his surviving patients (the others may not have had any, or none that were willing to talk about their experiences under that doctor's care). That was the main reason she chose Dr. Warner. The other reason was that he treated her the most kindly and personably of the seven doctors.

She and her husband radically changed their diets and became vegans. Today her husband is a stricter [vegan](#) than she is and runs marathons, and is in better physical condition than anyone I know.

My friend underwent Dr. Warner's gentle treatment, fully recovered from ovarian cancer and looks forward to living to a ripe old age. The year she began treatment with him, the witch hunt began. The medical authorities swooped down on Dr. Warner, although practically everything he was doing was mainstream treatment. As with other doctors who attract the medical inquisition's attention, Warner's greatest defenders were his patients, and my friend was active in campaigning to protect him. It did not matter however, and they yanked his license to practice medicine. Recently the state revoked the license of about the only other alternative cancer treatment doctor in Washington, Dr. Bolles. With the alternative doctors taken care of, the Seattle option is to go to mainstream oncologists who will never give out the name of a patient who survived their treatment.

Dr. Warner died in 2001 at a ripe old age, and my friend attended his funeral. She considers Dr. Warner about the kindest and most loving person she ever met, who also possessed integrity of the highest order. At his funeral, the church was packed to the rafters with hundreds of people, coming to celebrate his life. During the ceremony, somebody stood up asked for everybody who was a patient of Dr. Warner to raise their hand, and most did. Then those whose loved ones were treated by Dr. Warner were also asked to raise their hand, and nearly every hand in the church was raised. Probably no mainstream oncologist ever had a funeral like that.

Are They Really that Blind?

When orthodoxy "investigates" alternatives, their investigations often seem doomed from the start. At [Naessens'](#) trial, a booklet was introduced into evidence about orthodox experiments using 714X. The experiments of Gaétan Jasmin were prominent, and he testified about his results. The prosecution held up Jasmin's work as "proof" that Naessens' treatment did not work. Jasmin performed cancer research using 714X, used on rats. As my work makes clear, 714X does not attack the tumor, as typical chemotherapy does, but instead rehabilitates the immune system. It also must be administered via the lymphatic system in order to be effective; intra-lymphatic injection is the most effective route of administration. Although originally in contact with Naessens, Jasmin made unilateral decisions, unknown to Naessens, which doomed his research. Since rats are rather small creatures, their lymph nodes would be difficult to locate and inject, so Jasmin simply injected the rats under their skin or in their abdomen, completely defeating the research. If you cut your finger, would drinking hydrogen peroxide disinfect the wound? Would rubbing cough syrup on one's neck help alleviate a sore throat? Would swallowing a suppository ameliorate hemorrhoids? To be charitable, Jasmin's work could merely be called uninformed and sloppy. Jasmin testified that 714X had no "antitumoral" effects.[\[245\]](#) In other words, 714X did not attack the tumor. Jasmin may have been so [blinded by his paradigm](#) that he had no idea how 714X worked, as well as no understanding of how to properly administer it. Such shoddy and worthless research would be embarrassing enough to admit even being done, but it was used as "proof" that 714X did not work. Was that an intentional sabotage of the research? Just how blind was Jasmin, really?

The dynamics demonstrated in this essay are not unique to the medical racket's cancer arm. It extends to heart disease and the cozy relationship that the drug and biomedical companies have with the FDA, NIH, NCI, AMA, ACS, etc. It extends to the insurance companies, as they control the purse strings. Taken as a whole, of the well more than one trillion dollars spent each year on health care in America, at least 80% is probably a complete and fraudulent waste of money. It might be as high as 90%. The food processing, tobacco and chemical companies are part of the scene, helping to create the patients that keep the cash

registers singing. There is a comprehensive infrastructure that creates and is nourished by all the death and suffering.

If America had a sane system, the nation's food bill might go up as Americans spend more time and effort to have a truly healthy food supply, without all the processing to make it "better," and the chemicals, hormones and other poisons that are put into it. Dead food is inferior food. The nation's health bill would consequently drop to almost zero if we went back to live food, the food processors would go out of business, and chemicals would stop poisoning the environment and our health. At the footnote that ends this sentence, are presented sources of information to find out more.[\[246\]](#) There are avenues to pursue today to begin making a [healthy food supply globally available](#), with zero environmental impact.

A generation ago, high fiber foods became fashionable. Many breads were suddenly advertised as containing high fiber, but the breads sold by the big food processors are nearly devoid of nutritional value. Bleached flour is "enriched" by spraying it with vitamins, etc. It turned out that the fiber being put into those breads was sometimes sawdust, as wood is full of cellulose, the ultimate, indigestible "fiber." Granola was a conscious attempt to counter the non-nutritional breakfast cereals that the food processors sold. In my late teens I saw an advertisement for granola "puffs." It was a perfect, Orwellian parody of the cereal companies' attitude, but it was a real product.

There are countless instances of that type of "nutritious" food being sold to Americans, and it is legitimate to wonder if it is a conscious plan to ruin America's health, as [fluoridation](#) may be. Author Bill Bryson commented on the American diet with:

"Clearly, some time ago makers and consumers of American junk food passed jointly through some kind of sensibility barrier in the endless quest for new taste sensations. Now they are a little like those desperate junkies who have tried every known drug and are finally reduced to mainlining toilet-bowl cleanser in an effort to get still higher."[\[247\]](#)

If Bryson's observation does not make sense to an American, turn on the TV and count the junk food commercials (fast food qualifies) that air in a typical hour of commercial TV. Then take an inventory of the percentage of overweight adults (it is more than 50%, in the United States) encountered during an average day in public venues. If smoking adults are eliminated from the sample, might it be as high as 65%?

In *Racketeering in Medicine*, James Carter, M.D., writes about "secret teams" and "strike forces" that wipe out alternative medicine to keep the racket protected. There is evidence for their existence, similar to the [secret teams that protect the energy racket](#). The story of how the FDA wiped out L-tryptophan is an example of how conscious the gangsterism might be. L-tryptophan is an amino acid, a naturally occurring building block of human bodies. The body readily metabolizes L-tryptophan into serotonin, another natural body chemical that makes people feel good. For many years, people across the world had been taking L-tryptophan for a variety of maladies, including insomnia and depression, with no ill effects.

Via the mechanism that [Edward Griffin](#) described, the biomedical and pharmaceutical companies essentially own the FDA. It is a classic case of [capturing the regulator](#), transforming a public watchdog into an industrial attack dog. Consequently, the FDA's general philosophy is protecting and promoting drugs and other lucrative products sold by its rich patrons, and wiping out natural remedies and other inexpensive health solutions. Under the FDA's ministrations, natural remedies, health supplements and their practitioners are wiped out, replaced by lucrative artificial "medicines." The FDA has been trying to regulate vitamins and herbs for many years. Every time they try it, there is public outcry, senators and congressional representatives feel the heat from their constituents, and the FDA is beaten back. They are not thwarted for long, however, as health supplements can be a lucrative business, once they become classified as drugs and can only be made by drug companies, sold only with a doctor's prescription. That might seem extreme, but it accurately describes what the FDA has been doing for generations. The case of L-tryptophan is a standard case of

FDA racketeering.

Because millions of people had taken L-tryptophan and had no ill effects while receiving substantial health benefits, the drug companies were chomping at the bit to take over that market. In 1989, a Japanese company began manufacturing L-Tryptophan, using a new process and a genetically engineered organism to produce it. That is exactly the kind of [biomedical "invention" that may kill off humanity someday](#), but since the companies doing those Frankensteinian experiments own the FDA, the FDA cannot seem to see any danger in new processes that use genetically engineered organisms.

The new process used by the Japanese company introduced a toxin to the L-tryptophan that they produced, and it caused a new disorder known as Eosinophilia-Mayalgia Syndrome. In 1989, more than two thousand Americans contracted the disease, and twenty died. The case of L-tryptophan and the Japanese company is a cautionary tale of humankind's cleverness and its dangers. Using artificial methods of producing natural substances is perilous. What did the FDA do when the L-tryptophan produced by genetically engineered organisms killed twenty people? The FDA banned L-tryptophan! That is similar to banning milk because one company created genetically engineered cows that produced milk that caused disease.

At first, the disease was traced to L-Tryptophan, but that was obviously not the end of the trail. The FDA saw its chance to enact its long-held wish to ban L-tryptophan. A child could have taken the investigation further, and shown that all the L-tryptophan that killed people was traced to the same Japanese company. The FDA pounced on all the naturally produced L-tryptophan, and ignored the Japanese company. They continued letting the Japanese company's L-tryptophan get sold in making intravenous feeding solutions and infant formulas. While the FDA was "heroically" banning naturally produced L-tryptophan, it continued to allow the sales of the artificially produced L-tryptophan.

When one child subsequently died, the FDA finally (and quietly) banned the Japanese company's L-tryptophan.[\[248\]](#) Instead of taking a hard look at genetically engineered products, the FDA banned a naturally occurring one, which has consequently been a gold mine for the drug companies. With that natural antidepressant banned, the path was cleared for Prozac and the avalanche of antidepressant drugs that dominated the 1990s. The drug company cash registers are ringing mightily, thanks to the FDA. Many years later, L-tryptophan is still banned, but Americans can get it with a doctor's prescription...for six times what it used to cost, only obtainable through drug companies. How blind are they, or did I just see them wink at me?

The FDA continues its campaign against vitamins and herbs. The goal is making them only obtainable through a drug company with a doctor's prescription, making it several times more expensive than it is today. It is gangsterism, pure and simple, done to "protect" the public. The logical conclusion of that mentality is making food and water prescription drugs, maybe even air. Then the biomedical companies will have it all locked up. In addition, with patenting all of their genetically engineered "products," the dark path that trajectory is charting will eventually have the biomedical companies owning life itself. The logical conclusion to that mentality will be outlawing natural and "inferior" procreation, only allowing genetically engineered, test-tube-hatched babies. Science fiction stories have been written about those futuristic events. They are not so fictional. Some people alive today may [reincarnate in a world like that](#).

The organic food industry made the mistake of asking the USDA to regulate it, since there were many unscrupulous "organic" farmers who sold food that was not really organic, as organic. In 1998, there was a major consumer effort to stop an [agribusiness](#) takeover of the industry, and the battle is not finished.

Similar to "[vegetarian](#)," "organic" is a misnomer, as the movement is more of an effort to counter the agribusiness mentality, with its artificial fertilizers, genetically engineered life, radiating food, and so on, and get back to natural methods. Agribusiness companies control the USDA, just as the drug companies control the FDA. In response to the organic industry's request, the USDA drafted some standards, all right. Among the practices the USDA was going to certify as "organic" were: genetically engineered products, crops fertilized with [highly toxic sewage sludge](#), and radiated food. It was the agribusiness definition of organic. An internal USDA memo that *Mother Jones* obtained in 1998 showed that the USDA was influenced by the biotech companies, which was why its original standard classified genetically engineered food as organic.

The organic industry is also far more holistic than what is put on the crops. The [humane treatment of farm animals](#) is also part of the program, something the USDA has ignored.

The USDA's originally proposed standard would have eliminated organic food as it is known today. Because about 250,000 Americans protested, the USDA backed down on round one, but the issue is far from resolved. Part of the law the USDA is trying to push through is outlawing any higher standards. If they alter the organic standard so that genetically engineered produce can be called "organic," it will become illegal to create a "higher" organic standard. It is as if Lucifer himself is writing the law. Is the USDA really that blind, or do they know exactly what they are doing?

The way carcinogens are identified, and how foods are called healthy or not, is also part of the insanity. What the geniuses who designed this system do is take broccoli, for instance, and feed it to a million white rats. Then they look for statistical differences between those rats and a control population. That practice is evil simply because nearly 100 million animals die each year in those experiments. The insane part is its reductionistic aspect. The revelations of [Béchamp](#) and others are completely lost on today's scientists. The dynamics of life and disease are profoundly misunderstood. Live food gives life. Dead food gives death. It is nearly that simple, but do not tell that to those scientists in their lab coats with their millions of caged animals. Can they really be that blind?

Around 1995, I heard something on the radio that made me laugh. There was a major announcement: scientists had discovered that eating fresh fruits and vegetables prevented cancer, but they had not yet isolated the exact chemical responsible for it. If they do (they will not, because it is not one chemical, but because they are live foods), there will soon be marketed the fruit and vegetable pill, provided by our friendly drug companies. Can they really be that blind?

Human beings, as with all animals, are not designed to digest the concentrated carbohydrates that refined sugar provides. Human bodies react as if a bomb is dropped into it. All those concentrated carbohydrates entering the stomach are like a five-alarm fire sounding in the pancreas. Insulin is what the human body produces to digest carbohydrates.

Fruits have sugars in them, but human bodies are specially designed to digest fruit, as humanity's [great ape cousins demonstrate](#). The human pancreas reacts to fruit as it is supposed to, releasing insulin gradually to assimilate the fruit's sugars. When refined sugar hits the human digestive system, it is another matter entirely. Cane sugar is sucrose, and fruit sugars are usually fructose and glucose. Glucose runs the human body. The unusual sucrose is a minor issue when compared to its highly concentrated nature. No animal (except bears and skunks raiding beehives, although they raid the hives to eat the bee larvae more than the honey) is subject to the concentrated carbohydrates of refined sugar. The pancreas is subject to a jolt it has never encountered in nature. It immediately produces great amounts of insulin to deal with the threat of that sugar hitting the body. In a sugar-eating society, after years of that abuse the pancreas gives up the ghost, leading to what is known as diabetes. Also, insulin helps digest fat, and the high fat content in the "civilized" diet contributes to diabetes in the same way that sugar does, and ditto for relationship with insulin, protein and the high protein content of the American diet. In fact, as with cancer, rheumatoid arthritis and many other degenerative diseases, diabetes is an immune system problem. With diabetes, the immune system attacks the pancreas.

Similar to the situation with cancer and arterial disease, the other two degenerative disease killers in America, one will not find the medical establishment stating that a disease where people can no longer digest sugar, has anything to do with ingesting refined sugar! There are many financial interests that use sugar in their food processing, and preventing disease takes money from the medical establishment's coffers. I just looked through my Mayo Clinic CD-ROM, and not one mention was made of that relationship. Scan the Internet and try to find that relationship mentioned or even suspected in mainstream sources. I could not. I do not know of a relationship more obvious, but their "research" has not quite made the connection yet. A five-year-old can see that relationship, but billions of dollars in medical research, with highly trained "experts" cannot seem to see it. Wink, nudge. Just as "medicine" could not find any relationship between smoking and disease, or diet and heart disease, or diet and cancer, or it believed that hardening of the arteries was "normal," or that developing cancer is a normal aging process, it still cannot detect a relationship between refined sugar

and diabetes. Can they really be that blind?

Refined sugar creates more tooth decay than any other "food." The ADA gets a lot of money from sugar companies, just as the AMA got a lot of money from the tobacco companies. Refined sugar is another aspect of the "civilized" diet whereby people become obese.

Agribusiness and food processing companies sponsor nutritional training in American schools and universities. Food processors bankrolled the Harvard Department of Nutrition, and "coincidentally" the department founder and head, [Frederick Stare](#), could never seem to doubt the salubrious nutritional properties of processed food. With [Steven Milloy](#)'s now known role as a tobacco company front man, it is difficult to chalk up his stance to blindness, especially when his "sound science" challenged the EPA's findings on the damage that second-hand smoke produces. McDonalds opens outlets in schools and hospitals. It is well known that [its nutritional value is abysmally low](#), and even admitted by McDonalds. Can they all be that blind?

Morris Fishbein [actively promoted cigarettes for a generation](#). Even in Fishbein's time, cigarettes were well known to be highly carcinogenic. The same man also helped wipe out numerous cancer cures and tried buying some out so he could monopolize them. Is it really so ridiculous to ponder that he was intentionally promoting the single greatest cause of cancer while trying to cash in on providing its treatment? Was he really that blind? If Fishbein and his buddies looked no further than their greed and lust for power, did nobody else see the dynamics that are so clear to others and myself? Are all the medical gangsters really that blind, or do some know exactly what they are doing?

Artificial chemicals are proliferating at an exponential rate, while human biology slowly evolves. Modern "medicine's" answer to degenerative disease is introducing more artificial chemicals into the body, drugs that violently manipulate the body's biochemistry, while medicine is confident that new artificial practices can overcome the artificial practices that created the disease in the first place. One definition of insanity is doing the same thing over and over, expecting a different outcome each time. Can they really be that blind?

One critical aspect of that system I have never seen addressed is the barrage of artificial chemicals that are introduced to human biology these days. It is guaranteed that each new chemical confuses the human body. The body may think it is a vital enzyme and will try incorporating it, but it obviously fails to properly do so.[\[249\]](#) The body may correctly eliminate the chemical from the body, but it may not. All those chemicals create problems for the human body, even the most "benign" of them. What is the effect of bombardment of all those chemicals at once, although none of them are ingested in large amounts? To my knowledge, science has not pursued that line of investigation. The exponential proliferation of chemicals, particularly in the past half of the twentieth century, has subjected Westerners to a barrage of chemicals never before encountered. It is wishful thinking to believe that humanity has evolved to effectively adapt. The cumulative effect of those artificial chemicals and dead food may be helping to weary the body to the point of degeneration.

Because the process of becoming "modern" has taken many thousands of years, people psychologically adapt to their artifices even if their bodies do not. Consequently, few in America seem to think it remarkable that two-thirds of Americans die of degenerative diseases such as arterial disease, cancer and diabetes. They think it is "normal." Ancient practices such as fasting are viewed by Americans with consternation. Much of the ancient wisdom has been lost in the rush to "modernize." Less than 20% of the chimpanzee's (our closest biological cousin) dietary calories come from fat. The "low fat" heart disease reversal diet of [Dean Ornish](#) has fat comprise about 10% of calories at most. A few years ago, research results were announced in which American women were put on a "low fat" diet to see if it helped prevent cancer, and it apparently did not. What was the fat percent in that "low fat" diet? 25%. It may have been "low" as compared to the average American diet's 43% fat content, but how can it really be considered low? Is that blindness? Is it intentional?

Are We Really That Free?

This essay is attempting to make clear that there is a *medical-industrial complex*, and its main concerns are amassing and maintaining wealth and power. The public's health is far from its main concern. The same is true for [energy](#), my erstwhile profession of [public accounting](#), and [every profession and industry](#) I have looked into. More than two centuries ago, Adam Smith observed that every professional and trade organization is a conspiracy against the public's interest, its members attending to their mutual self-interest, not the public's. Nothing has changed from his time. Dennis Lee, the most astute observer of the human condition I ever met, once told me that our society's institutions are corrupt because people are corrupt.

Just how free are we in the United States, supposedly the world's freest nation? Mexican citizens enjoy far more freedom in choosing their cancer treatment than American citizens do. [Benjamin Rush's prophetic warning](#) has apparently come to pass. Regarding energy, the same situation exists. People have little viable alternative to what the big energy companies sell, and [wiping out the competition](#) is also how today's energy racket was created and is maintained. Similarly, Americans theoretically have freedom of information access. America's media is [anything but free](#). If people do not have easy access to important information, how can they make intelligent decisions? There are many instances of censorship in the West's free press that far surpasses anything that the Soviet Union or communist China pulled off. The Western press' awe-inspiring censorship of [Mark Twain](#) and [George Orwell](#)'s work are two examples.

How can Americans choose their cancer treatment when they are not even aware of the alternatives, and if they are ever mentioned, it is usually in the context of its practitioners being jailed and demonized? How free is America, really?

Not *all* drugs and surgical procedures are useless. They are based on male principles, and violent medicine has little place in the healing arts. During these times, with the attitudes that prevail, there may be *some* place for *some* surgical procedures and *some* drugs. I do not advocate making *any* drug or surgical procedure illegal. If people want to use them, fine, but do not *force* people to, and wipe out options for gentle medicine, to "protect" them. Killing patients with violent and expensive medicine, while the gentle, inexpensive, and arguably far more effective medicines are outlawed, is a racket. Outlawing books that tell me how to heal myself (such as [Stale Food Versus Fresh Food](#)) is racketeering activity. What the medical gangsters have done to [Rife](#), [Hoxsey](#), [Gerson](#), [Ivy](#), [Durovic](#), [Privitera](#), [Krebs](#), [Koch](#), [Crane](#), [Warner](#), [Keller](#), [Ghadiali](#), [Beard](#), [Taylor](#), [Wright](#), [Brodie](#), [Naessens](#), [Burzynski](#), [Halstead](#), [Richardson](#), [Thurston](#), [Pixley](#), [Bolles](#) and many others are great crimes, nearly invariably done in the name of "protecting the public." [Morris Fishbein](#)'s efforts to help tobacco companies produce highly dubious "research" in order to make [health claims for their cigarettes](#) was surreal. Fishbein covering up disease outbreaks, leading to more people getting the disease, was not the practice of "medicine."

Are we really that free? Regarding big issues of life and death, Americans appear to be one of the world's least free people, although their cage is seemingly invisible, and when they notice those bars once in awhile, they think they are there to keep the bad guys out, not to pen themselves in. Also, with the U.S.' global cultural, economic and military hegemony, this American-based medical paradigm is taking over the entire planet's medical system, as the medical racket goes global.

My Personal Encounters with 714X

After years of talking to whomever I thought might listen, I finally got somebody convinced to at least try Naessens' 714X treatment. The person did not have cancer, but psoriasis (it seems that 714X works for that too), and an awesome case of it. The person would not do the intra-lymphatic injections, which is the most effective route of administration, but opted for a far less effective inhaler method, and he only did it for a week, then stopped treatment and never started it again. That was no victory at all, but I obtained the 714X for him, and that was an adventure.

In Julian Whitaker's February 1995 supplement of *Health and Healing* I was excited to see that somebody was importing 714X into the United States. I kept that in mind, and when I finally convinced somebody to try

714X in 1996, I called the number in Whitaker's newsletter.

The 714X importing company was in nearby New York (I lived in New Jersey at the time), but when I called, they were out of business. Charles Pixley ran the company, but I talked to his son-in-law. I heard the long, sad story from him. Pixley had been playing the FDA's game, and contacted them to get the ball rolling to legally import 714X to the United States, so people could legally use it under the informed consent concept (which means that the patient signs an affidavit stating that they are aware of the "unapproved" nature of their treatment, but are exercising their free will to take it...an unassailable stance, but one that the American medical establishment has assailed many times). Pixley initiated an Institutional Review Board (IRB) in 1992, which is the standard first step in making the substance legal to use in America. Here is part of what *The Winds* web site published on what happened next.

"Pixley states that from the inception of the IRB in April of 1992, they were visited regularly by the FDA who "requested and received copies of all available research, toxicology studies, spectrographic chemical evaluations, rat studies, patient histories, books, tapes, and samples of the 714X." Even though they cooperated fully with the FDA, in 1995 their office was raided. Computers, books, tapes, business records and patients' personal medical records were seized.

"After several attempts, the U.S. Attorney succeeded in having a Grand Jury indict him and his corporation as co-conspirators for "conspiring to defraud the United States by importation of an unapproved new drug," a felony under Title 18 U.S.C. 321. Pixley later determined through the Freedom of Information Act that this FDA regulation had never been published in the Federal Register and, therefore, was not promulgated according to the law. This did not seem to matter. Pixley was ordered into Federal Court in April of 1996."

When I talked to Pixley's son in law, they had already convicted Pixley, and they had already spent hundreds of thousands of dollars trying to defend themselves, and were trying to raise money for an appeal. *The Winds* tells what happened next.

"As a defense Pixley planned to expose the evident policy of the FDA to suppress life-saving therapies, both to protect the profits of the medical/pharmaceutical cartels and to carry out a larger agenda of population reduction. The prosecution "filed a 'motion in limine', which was designed to prevent me from saying anything or putting up any defense whatsoever," Pixley told The WINDS. "Even though they didn't know what my defense was going to be, they had an inkling that I was going to start accusing the government of genocide" before the jury. "Their goal was to put me away no matter what." Pixley was found guilty and sentenced to nineteen years in prison. His sentence was later reduced on appeal to a year and a month, partly, he feels, because he was allowed to present arguments detailing the government's suppression of non-orthodox therapies.

"During his interview with The WINDS, Pixley did not dwell on his trial and imprisonment or even his financial devastation and lifetime status of "convicted felon." He speaks and writes mainly of the medical monopoly and its protectors at the FDA, as well as the thousands of cancer patients that are denied alternatives. "In my view," he writes, "the ones who are being punished are the American people who are denied access to life-saving therapies."

That did not happen in the 1940s with Fishbein at the helm, but in the "enlightened" 1990s. At the same time the skids were being greased for Mr. Pixley, another Eastern European who had come to the land of the free was fighting for his life in Texas. The same week that I was talking to Pixley's son-in-law, I was contacting [Dr. Stanislaw Burzynski](#)'s clinic in Texas, offering them support in his battle against the FDA. Burzynski was

a medical/scientific prodigy from Poland who came to the land of the free in 1970. He eventually developed an ingenious cancer treatment that dealt with peptides and amino acids. His treatment "reprograms" cancer cells. It plays with their "heads," as 714X does. Burzynski's treatment, as with nearly all the alternative cancer treatments, is non-toxic and harmless. Patients can take it all day long with no ill effects. It does not attack the body. In Moss' *The Cancer Industry*, he devotes his largest chapter to the attacks Burzynski has been weathering from the FDA, ACS and other cancer establishment members since the early 1980s. The FDA had been after Burzynski for many years.

The 1996-1997 trial was an attempt to put Burzynski behind bars for the rest of his life. In 1996, Burzynski's clinic in Texas had about 100 medical doctors and scientists working at it. Dr. Burzynski's fiercest supporters are the patients who have been rescued from certain death by his treatment. The videotaped testimony by his patients in Washington D.C. was heartbreaking and heartwarming.

They do not usually wipe out somebody like Burzynski for a crime of moral turpitude, but by some obscure regulation that nobody has ever heard of. In a neat Orwellian twist, Burzynski's trial had nothing to do with whether his treatment worked or not. The judge even ruled before the trial that whether or not his antineoplaston treatment worked was irrelevant to the issue being tried, and he would not allow patient testimony. The trial was about such highly important issues such as whether his treatment had crossed state lines. The common people made noise with his trial, similar to what happened at Naessens' trial. The media across the U.S. was openly wondering if Burzynski was the target of an FDA vendetta. Burzynski was acquitted, while the nation witnessed the types of witch hunting activities that the FDA engages in. It was encouraging.

Pixley's son-in-law said that they could not help me, and had me contact Naessens directly. They were opening an academy to train people to evaluate somatidian dynamics. When I ordered the 714X, they sent it to me and enclosed a bill. I have never gotten anything by mail order like that, and internationally to boot. They sent it for free, and trusted me to send them a check later.

Naessens, as with Rife, worked hard on making a microscope that can see the little bodies for a reasonable price. He sells a retrofit kit for a few thousand dollars. From scratch, for less than \$10,000 and some training, anybody can be a junior Naessens, analyzing somatidian dynamics (at their academy, they want somebody with *some* technical skills). It is a pittance compared to electron microscopes and other high tech medical technology. Naessens referred me to somebody in America who could help me get a scope together and be in business. The man was helpful. The new biology is there, and it is accessible. It is not arcane, only for the initiated. Naessens' organization sells an excellent video that not only shows the somatid forms, but shows people how to inject themselves with 714X.

Far more than 10,000 people have now taken 714X, mainly in Canada. Many lives have been saved. Unfortunately, when it gets that popular, many people are probably using it as a magic bullet and not changing their diets, etc., which Naessens also recommends. As with all the other alternatives, its long-term effectiveness is directly proportional to how well the patients adopt a healthy lifestyle once the 714X kick-starts their immune system. Naessens has never sold 714X as a cure for cancer, per se. He says 714X is designed to help the immune system recover, not to cure disease.

To my delight, when I got the 714X, enclosed was a copy of Ralph Moss' 1995 2nd edition of his *The Cancer Chronicles*. He devoted an issue of his newsletter to Naessens. In Moss' words,

"Hardly a week goes by that I am not approached by advocates of some new cancer treatment. There are 102 methods in my book *Cancer Therapy*, and future editions will hold more. One can go batty sorting out the claims.

"This spring I decided I need to go deeper into a few such methods. Just then, a longtime friend suffered a relapse of her breast cancer. IAT therapy, which for years had held her cancer at bay, was no longer working. But when she added 714X, her breast tumor vanished. It made me sit up and take notice."

Moss made three trips to Canada, investigating Naessens, and that issue of *The Cancer Chronicles* was Moss' first double issue. Moss is the most conservative and informed voice in alternative cancer therapy, but he was nearly giddy when describing Naessens' discoveries, writing, "If he is right (and I think he is) then he is a really great genius."

The battle continues in America, although there is reason for hope. In the April 30, 2001 edition of *People* magazine, the cover story was Suzanne Somers and her use of an alternative cancer therapy. At least alternatives are getting *some* coverage, although the *People* headline was "Is She Risking Her Life?" While giving rather sympathetic treatment of Somers' choice, *People* ran a side box interview of a woman, Barrie Casileth of [Sloan-Kettering](#), under the title "Let the Patient Beware." The Casileth interview concluded with a [Rush](#)-style, masculine medicine admonition, "Surgery and radiation and/or chemotherapy become crucial. Cancer is a terrible foe and it requires the most powerful treatment that we have available."

In the 1960s, the AMA organized an attack on chiropractors, and was convicted of a conspiracy against them in 1987. Just as it lost its legal battle, a spiritual descendant of Fishbein began his career. Nearly identical to Fishbein's "war on quacks," Dr. Stephen Barrett founded a "quackbuster" effort. In substance and sometimes tenor, his work is not far removed from [Steve Milloy's](#). Anybody can read the "quackbuster" work for themselves, and see how the "quackbusters" ply their trade. Similar to Fishbein, Barrett is not a practicing physician, and does not even have a medical license, losing a libel suit not long ago over being called a quack himself.

Fortunately, more than a TV personality such as Somers is making headlines over the cancer issue. In the June 4, 2001 issue of *The New Yorker*, Jerome Groopman's article, titled "The Thirty Years' War - Have we been fighting cancer the wrong way?" was the featured article, running under the headline "No Cure for Cancer." Groopman's article discusses the complete failure of the "war on cancer." While not straying from orthodox treatments and its paradigm, Groopman admits the obvious: the orthodox war on cancer is a failure. Also, note the masculine warfare imagery.

In January 2002, there was noise being made in Boston, as local cancer patients got 714X from Canada and cured their cancer. Naessens is finally making the news in the United States. Whether this time has a happy ending for American cancer patients is largely up to the patients themselves.

As this site was being finished, Ralph Moss published his impressions after attending the 2002 Meeting of the American Society of Clinical Oncology (ASCO).[\[250\]](#) It is a huge event, with 26,000 attendees. Moss noted that at least there was "some" rational discussion about alternative therapies, not the hysterical "anti-heretic" diatribes directed toward it during the 2000 ASCO meeting. However, Moss was disappointed to see that virtually none of those who spoke about alternative therapies had *any experience* with them, and none of them had much good to say about them. Many people in the audience had vast experience with alternative therapies, very positive experience, but none of them were invited to speak. Moss said the meeting left him with a "hollow feeling." In the oncology business, all alternative therapies are called "Complementary and Alternative Medicine," or CAM. CAM is commonly used as an epithet. I get a sinking feeling that if the derision declines and the orthodox herd begins discovering the merits of therapies that do not attack the tumor, the observations of [Moss](#) and [James](#) will again be borne out: *the orthodox establishment's members will claim they discovered it themselves*.

As is obvious, the state of American medicine is horrifying. Millions of people are being sacrificed in the name of [greed](#). Most of what is spent in Western medicine produces mainly suffering and death. As Robert Mendelsohn brilliantly laid it out in his *Confessions of a Medical Heretic*, the God of Western Medicine is death. If a person wants to meet their maker, and soon, then they should submit to modern medicine's ministrations. [Barry Lynes](#), who also wrote the definitive book on [Rife](#), in his heartfelt and thoughtful monograph *Helping the Cancer Victim*, summed up the obstacles in bringing sanity to the world of cancer treatment. He wrote,

"The crafting of new cancer laws will require great care and wisdom. The selection of unbiased, competent witnesses will be a difficult task, especially when orthodox medicine begins pushing its political weight around to stop the process, to silence the voices of change, to water down any proposed legislation, to continue...the killing.

"The outcries against the proposed new cancer laws will be loud, emotional and designed to distract attention from the real questions and legitimate health concerns. The behind-the-scenes actions by the Medical Monopolists will be cold, calculating and brutal. Too much money is at stake to imagine that this conflict will be anything but bloody, with good and evil having a monumental showdown before it is over."[\[251\]](#)

Amen Barry, Amen.

[\[7\]](#) See Eisler's *The Chalice and the Blade*.

[\[8\]](#) For some reading relating to that idea, see Merlin Stone's *When God was a Woman*, Riane Eisler's *The Chalice and the Blade*, and for a more conservative investigation see Margaret Ehrenberg's *Women in Prehistory*. For a broad summary of that issue, see Michael Parenti's *History as Mystery*, chapters two and three. The issue of matriarchal societies in prehistory is a heated issue, with the firestorm generally centering around the pioneering work of Marija Gimbutas. While there may be no "solid" evidence for there ever being a true matriarchal society, there is good evidence that many ancient societies and religions had women holding a high place, and women's status degenerated along with a society's decline. When men and warriors held unchallenged supremacy, the societies were violent and declining, with women living in some form of bondage. When women had higher status, violence was less prevalent and society was healthier. That does not hold true for only prehistoric investigations. Elizabeth I was the first woman English sovereign, and the Elizabethan Era was the most culturally auspicious era that England ever had, with its literature hitting a high point that is still unsurpassed. Nobody is arguing that women are the source of violence in the ancient world or today's. The furor surrounding the work of Gimbutas and others like her is obviously at least partly an issue of gender bias, with the West's patriarchal academic system fighting back against a challenge to its power and privilege. The issue has been extremely politicized, but when the dust settles, if it does in my lifetime, I think it will be acknowledged that societies have been much healthier when women had higher status, and when their status was reduced, that society was in decline, and often on its way to extinction.

[\[11\]](#) See a brief discussion of that fact in Jeanne Achterberg's *Woman as Healer*, pp. 18-19. See, for instance, the nearly complete absence of women in Roy Porter's *The Greatest Benefit to Mankind* and Sherwin Nuland's *Doctors*,

The Biography of Medicine. Even though they are recent works, they typify how infrequently women appear in the standard histories of medicine.

[12] See Jeanne Achterberg's *Woman as Healer*, pp. 106-109. For more on women healers, see Elizabeth Brooke's *Women Healers*.

[13] See Jeanne Achterberg's *Woman as Healer*, p. 90. See Ellerbe, *The Dark Side of Christian History*, pp. 134-135.

[14] For instance, read about the war-based paradigm that has guided modern male doctors in Sherwin Nuland's *Doctors, The Biography of Medicine*, pp. 429-430. Nuland wrote that he and his fellow male doctors thought of themselves as "Spitfire" pilots, and the patient's body was merely the theater of their glorious battles against disease. That indoctrination was partly so the doctors would not become "emotionally involved" with their patients. Nuland rightfully calls such boyish attitudes what they were: anti-feminine. They were also anti-human.

[23] In 2006, for the first time ever, I influenced somebody to [change his diet](#), to save his life. It was an old friend who recently had a cancerous kidney removed and had further, deeply invasive, surgery. He has adopted a holistic regimen, with a live food diet, meditation and other holistic, preventive practices. In May 2007, a friend of mine was looking into adding more live food to his diet, partly due to my influence. I told him that, as with my [vegetarian ways](#) and [free energy](#), I really did not keep up much on the "state-of-the art" of such practices. I explored those health habits many years ago, they worked for me, and I did not do much further research into those areas. It is not difficult to understand that humans, as with all animals, are designed to eat live food and that dead food is less nutritious. As my friend was asking about books on live foods, I thought I might buy him a copy of Paul Bragg's *The Miracle of Fasting*. As I searched for the book on the Internet, I came upon evidence that Bragg lied about his age and other aspects of his life's story. He was [eighty-one when he died](#), not ninety-five. Not only that, but his accounts of his ancestry, [being cured of tuberculosis as a teenager](#) and [wrestling in the Olympics](#) were image-making fabrications. His "[daughter](#)" is really his former daughter-in-law.

Bragg spent many years in Southern California, and [Jack La Lanne](#) lives a short drive from the university that I graduated from. I have friends and family members who have met both men, as well as Patricia Bragg, who is carrying on Paul's work as his "daughter." Patricia once spent the evening at a friend's house, regaling them with Bragg tales. According to La Lanne, Paul Bragg believed that diet was the most important part of the health regimen (including fasting), with exercise less important. La Lanne switched the priorities, with exercise as his regimen's most important factor. It is hard to argue with somebody who is one of earth's most fit nonagenarians.

In light of the recently adduced evidence, Bragg appears to have been a charlatan, but Jack La Lanne really *is*

living evidence of the benefits of exercise and proper nutrition. Will Jack live to be 110? Time will tell, but I believe the enlightening essence of Jack's philosophy is in an interview that I read many years ago. Jack was asked how old he thought he would live to be. Jack responded that he did not know how old he would live to be, and did not much care. He said that what was important to him was, "while I am alive, I am *living*."

Bragg recommended water fasts, and from age seventeen to twenty-four I performed water fasts. However, my longest water fast lasted only six days, and it was the weakest I ever felt. I read other works on holistic health practices in those days, including Paavo Airola's *Are You Confused?* Airola recommended juice fasting, as did others. At age twenty-four, I tried a juice fast. I did a weeklong fast, and it was easy. A few days later, I did a thirty-two-day juice fast, and it also was easy. My longest juice fast was for forty-five days, [in Boston](#), but was done partly because it was cheaper than eating. I have encountered people who greatly exceeded my personal fasting record. One friend did a ninety-day juice fast, and said he looked like a concentration camp inmate when he finished it (he may have taken it a little too far). Another friend cured his bladder cancer with a seventy-day juice fast. Steve Meyerowitz cured his allergies and asthma, after orthodox medicine had failed him, through diet and fasting. His longest fast was one hundred days, which is the longest I have heard of (see his *Juice Fasting and Detoxification*, which is a better reference book than Bragg's works). My fasting habits have waxed and waned over the years. I have often fasted while backpacking, and my life's best backpacking experience was while alone, fasting, and so deep into the trailless wilderness that if I had died out there, it would have been many years before my remains would have been discovered. I went about fifteen years without fasting longer than a week, but in 2004 rediscovered longer fasts (twenty-to-forty days), and plan to keep longer fasts as a permanent part of my health regimen. The effects of long fasts can be profound. I discovered for myself that while water fasting may be the "best" fast, it is often incompatible with modern life's demands. I could not perform my job duties if I water fasted. While juice fasting, I can perform at levels *above* what I am normally capable of – working fifteen-hour days and still feeling energetic when I go home. I also need one-to-two hours less sleep each night, along with increased mental alertness and a spiritual high that is unique to fasting. I am on day thirteen of a fast as I write this. Fasting can be a truly miraculous process, but juice fasting works best for the vast majority of people. I have skepticism about Bragg's water fasting advice and [other parts of his regimen](#).

[24] Ralph's book is a gold mine of information, but is not in an easily readable format. It takes effort to decipher his cancer treatment tables. The book is one of a kind, and I have spent many hours riveted to its pages. It was very influential to me. Ralph is a friend, and a kind and eccentric soul who has performed epic labors on humanity's behalf. The suggested donation for receiving his book is \$12.00. People can get the book through Ralph Hovnanian at 2128 Prospect Avenue, Evanston, IL 60201.

[31] There is no inherent contradiction between evolution and the notion of a creator, or the role that consciousness can play in it. The battle between creationists and evolutionists is partly a [false dichotomy](#). The Creator's handiwork can also evolve. Evolution does not happen haphazardly, but in accordance with consciousness, which is ultimately in charge of the process. The material world is the [manifestation of consciousness](#), and there is interplay between consciousness and its material manifestation, in my opinion. That is a large and controversial subject, and not one for this essay.

[32] See discussions of the various theories regarding the megafauna extinctions in Diamond's *Guns, Germs and Steel*, Goudie's *The Human Impact on the Natural Environment*, and Clive Ponting's *A Green History of the World*.

[33] See Roy Porter's *The Greatest Benefit to Mankind*, p. 17. Diamond's *Guns, Germs and Steel*, pp. 104-113, provides a more thorough survey of the issue, but still gives the main impetus to the decline in available hunter-gatherer foods.

See discussion in Clive Ponting's *A Green History of the World*, pp. 37-67.

[34] See Diamond's *Guns, Germs and Steel*, pp. 166-168. Diamond's work is very useful as far as marshalling the evidence. As to his thesis, I do not entirely agree with it (it is too materialistic for me, among other issues), and to read a fairly thorough critique of his overall thesis, see J.M. Blaut's *Eight Eurocentric Historians*, pp. 149-172.

[44] I have seen that quote in many places for many years. Nobody that I know of, however, had ever cited the direct quote from a publication. I hunted for it. I obtained three volumes of Rush's writings: *The Autobiography of Benjamin Rush*, edited by George Corner; *Letters of Benjamin Rush, Volume 1*, edited by L.H., Butterfield, and *The Selected Writings of Benjamin Rush*, edited by Dagobert D. Runes. I did not find the exact quote, but found one close enough that I am sure his famous quote can be found somewhere in his vast correspondence. Rush was a prolific writer. He was also a remarkable man. He was an early campaigner against slavery, capital punishment, alcohol and tobacco. Although his medical practice and philosophy would have disastrous effects on American medicine, his overall philosophy had much to recommend it.

In a lecture he gave regarding the progress of medicine, he enumerated the causes that retarded the progress of medicine. Some of his points are relevant even today. His 19th point: "The attempts which have been made to establish regular modes of practice in medicine, upon experience without reasoning, and upon reasoning without experience." His 21st point: "The interference of governments in prohibiting the use of certain remedies, and enforcing the use of others by law. The effect of this mistaken policy has been as hurtful to medicine, as a similar practice with respect to opinions, has been to the Christian religion." Here is the relevant quote, the 22nd point: "Conferring exclusive privileges upon bodies of physicians, and forbidding men, of equal talents and knowledge, under severe penalties, from practicing medicine within certain districts of cities and countries. Such institutions, however sanctioned by ancient charters and names, are the bastiles (prisons - ed.) of our science." His 23rd point was: "The refusal in universities to tolerate any opinions, in the private or public exercises of candidates for degrees in medicine, which are not taught nor believed by their professors, thus restraining a spirit of inquiry in that period of life which is most distinguished for ardor and invention in our science. It was from a view of the prevalence of this conduct, that Dr. Adam Smith, has called universities the 'dull repositories of exploded opinions.' I am happy in being able to exempt the University of Pennsylvania, from this charge. Candidates for degrees are here not only permitted to controvert the opinions of their teachers, but to publish their own, providing they discover learning and ingenuity in defending them." However, not all of Rush's observations are necessarily something to subscribe to, in my opinion. His 12th point was: "An undue reliance upon the powers of nature in curing diseases. I have elsewhere endeavored to expose this superstition in medicine, and shall in another place, mention some additional facts to show its extensive mischief in our science." Those points were taken from *The Selected Writings of Benjamin Rush*, edited by Dagobert D. Runes, pp. 227-234.

Here is another observation that was less than salutary: "Mercury was prescribed empirically for many years in the cures of several diseases, in which it often did great mischief; but since it has been discovered to act as a general stimulant

and evacuant, such a ratio has been established between it, and the state of diseases, as to render it a safe and nearly an universal medicine.” From *The Selected Writings of Benjamin Rush*, edited by Dagobert D. Runes, p. 249. In fairness to Rush, his general medical philosophy was to warn of blind adherence to orthodoxy. Just as Christians betrayed the spirit of the Christ, just as capitalists and communists betrayed the spirits of Smith and Marx, so did orthodox American medicine betray the spirit of Benjamin Rush. Rush was certain that medical science was in its infancy, and he would be the first today to react in horror to the universal practice of administering mercury to patients, which he initiated in the United States, as well as his heroic bloodletting. The enemy of science, reason, spirituality and enlightenment is dogma; it always has been and always will be, because its root is fear. Those who enforce adherence to dogma are those who profit by it.

[71] In the history profession, there is a concept known as present-mindedness, also called presentism. It is writing history from the perspective of the present, which is impossible to completely avoid. The greatest sin of presentism is writing about the past in a way that justifies the present, rather than helping to explain it. Presentism is practiced in the heroification of [Junípero Serra](#), [Christopher Columbus](#) and [George Washington](#) because their efforts led to the American civilization that exists today. They were all fanatical and bloody conquerors, obsessed with wealth, fame and building empires, largely at the expense of Native Americans. Their legacies are not much to cheer about, and research into their feats can create revulsion toward those "heroes." American high-school history books are prominent examples of the presentism phenomenon, portraying United States history as [one grand tale of state as hero](#). The many dark chapters of United States history are swept under the carpet or polished up and sold as glory stories, turning night into day, focusing on the few "winners," not the multitudes of losers. The point of the story as taught to American high school students is glorifying the state and its heroes, not gaining a useful understanding of the American nation's past. The past is only seen in terms of how it contributed to today, that best of all possible outcomes. Events and trends that led to other possible outcomes are treated as "errors" or otherwise disparaged.

American history as taught in high school is far from the only place that presentism is practiced. The mainstream histories of capitalism portray it as mankind's natural state. The history of capitalism's triumph is seen as merely the removal of obstacles to mankind's highest state. Competing ideologies such as communism (never really practiced in the Soviet Union or China, as Adam Smith's ideology was never really practiced either) or socialism are rejected as systems that do not honor human nature. In reality, the salient feature of "human nature" [that today's capitalism honors is greed](#), which is one of the seven deadly sins. Capitalistic ideologists have transformed greed into a virtue, turning reality upside down. In history circles, the practice of presentism is called "Whig history." In that light, both Christian theology and the theory of evolution can be seen as Whiggish interpretations. Men are the apple of God's eye in Genesis, and the human race being the current flower of evolution. "Whig history" has always been a pejorative appellation, and can be seen in many history texts describing the histories written *by others*. At times, it has seemed that in describing certain histories as Whiggish, the author was unconsciously telling the reader that his/her work is *not* Whiggish.

- [148] I discovered Ralph Hovnanian's *Medical Dark Ages* in 1990 by reading Barry Lynes' *The Healing of Cancer* (pp. 162-163). Ralph's book was my big wake up call on how the medical racket works. In 1993, I spent days keying in those quotes that are in the [Medical Dark Ages](#) section of this site. Probably my favorite quote from *Medical Dark Ages* was the quote by Ley. As I discovered, however, the quote as presented in *Medical Dark Ages* is inaccurate. Ralph is a friend of mine, and he conscientiously called me in the spring of 2002 to tell me that his quote of Ley was inaccurate, and that if he ever published another edition of *Medical Dark Ages*, he would correct it. He said that Lynes was the first person to tell him that he quoted Ley in error. It was an honest mistake by Ralph. This situation is an example of the hazards of relying on secondary scholarship, a problem I have had to deal with continually. I have tried to mitigate those potential errors, and have sought primary sources whenever I can, and I have often gone to great lengths to try finding the primary evidence, such as that famous quote by [Benjamin Rush](#). Ralph originally combined the quote by Ley with the quote by [Griffin](#), making them both appear to be Ley's. The combined quote made for a great impact. Correctly attributing them definitely takes some of the wind out of its sails. The [Rush](#) and Ley quotes were the two from *Medical Dark Ages* that related the most directly to this essay, and last winter I hunted for the original source for the Rush quote, as I have seen it quoted across the Internet dozens of times, but nobody ever gave its source, accurately.

I had been queried about the Ley quote before, by people who found it hard to believe, and running down the original

Ley quote was on my list of things to do, before I really took my site "public," and then Ralph called me. So in May 2002 I descended into the University of Washington's microfilm archives and located that *San Francisco Chronicle* article. The Ley quote that this footnote ties to is accurate, and the Griffin quote is also accurate, but [Griffin](#) is obviously not an FDA official, although he does credibly demonstrate why his sentiment is probably correct. The Ley interview was given to Richard Lyons of the *New York Times*, given in Ley's home, soon after he was sacked as the FDA commissioner, after three years of service. Ley was a Harvard professor before being tapped to head the FDA. The article is sobering. Ley said that he was under "constant, tremendous, sometimes unmerciful pressure" from the drug industry. Ley said, "Some days I spent as many as six hours fending off representatives of the drug industry." Ley commented that the FDA staff was a poor one to effectively protect the American consumer, its ranks being full of "retreads" and others who were not motivated to do their jobs effectively, and that "there has been total lack of topside support from the current administration." Ley admitted that his former boss, the HEW head, was a Republican Party fundraiser, but it was not his boss' fault, as the Nixon administration was "a business-oriented administration." Every administration since Carter's has been even more so. Ley said that the drug company lobbyists, combined with the politicians who worked on behalf of their patrons, could bring "tremendous pressure" to bear on him and his staff, to try preventing FDA restrictions on their drugs. The interview concluded with Ley stating that the entire issue was about money, "pure and simple." The situation has become much worse since Ley's day, him being the last commissioner who tried standing up to them.

[149] Many states have those criminal laws on the books. For example, California Health and Safety Code Sect. 1701.1, makes it a crime punishable by five years in prison to administer or prescribe an unapproved cancer treatment. California is the worst state of all in persecuting alternative cancer treatments. The only treatments approved are surgery, radiation and chemotherapy. My wife's doctor endured fifteen years of persecution in California for curing cancer using an "unapproved" treatment that worked.

[193] A particularly disturbing aspect of the [JFK assassination](#) milieu is that critical conclusions regarding Kennedy's wounds do not jibe with the testimony of the doctors who treated Kennedy in Dallas. The back of Kennedy's head was blown out, consistent with a frontal shot, and completely at odds with the "lone nut" theories involving Lee Harvey Oswald. Gerald Posner's *Case Closed* is establishment apologetics at its most strained. Posner is a Wall Street lawyer. The establishment lined up in praise of his *Case Closed*, and he was so "successful" at debunking the conspiracy theories surrounding the JFK assassination, so the story goes, that he then published a book debunking any government-involved conspiracy theory surrounding the Martin Luther King assassination. I wonder if his next work will be on the Bobby Kennedy assassination, completing his debunker trilogy.

[245] See Bird, *The Persecution and Trial of Gaston Naessens*, p. 107-109

[246] Once in awhile a great soul comes to earth, on special assignment from the Creator, and I believe that John Robbins is one of them. His *Reclaiming Our Health* may be the most important book on this list. His gentle and enlightened voice is easier reading than this essay's tour of the dark side of the force. Here is a list of books to help find out what is going on, and can also provide ideas on how to heal the mess. Wolinsky and Brune, *The Serpent on the Staff*; Moss, *The Cancer Industry*; Robert Mendelsohn, *Confessions of a Medical Heretic* (an excellent and easily readable book on the medical racket); Fink, *Third Opinion*; Brown, *AIDS, Cancer and the Medical Establishment*; Mullins, *Murder by Injection*; Moss, *Questioning Chemotherapy*; Hovnanian, *Medical Dark Ages*; Lynes, *The Healing of Cancer*; Lynes, *The Cancer Cure that Worked!*; Lynes, *Helping the Cancer Victim*; Bird, *The Persecution and Trial of Gaston Naessens*; Carter, *Racketeering in Medicine*; Moss, *Cancer Therapy, The Independent Consumer's Guide to Non-Toxic Treatment and Prevention*; Thomas, *The Essiac Report*; Brown, *Forbidden Medicine*; Goldberg, *An Alternative Medicine Definitive Guide to Cancer*.

[247] See *The Sun*, January 2002, p. 48.

[248] What the FDA did to L-tryptophan is well known and well documented. For one place of many, see Carter, *Racketeering in Medicine*, pp. 171-175.

[249] For instance, the body mistakes strontium 90, one of the many radioactive isotopes introduced into the environment by modern "progress," for calcium. If a human being ingests strontium 90, the body will incorporate the strontium into the body, where it can become part of the bone or teeth. The strontium will not do the job of calcium, and will eventually radioactively disintegrate, harming the body with radiation and particles as it decays. Strontium 90 is a component of radioactive fallout, which is partly why nuclear bombs have such devastating long-term consequences.

Section 1

I discovered Ralph Hovnanian's *Medical Dark Ages* in 1990. It was a seminal experience for me in understanding how the [medical establishment works](#). I spent many hours reading his quotation collages, and several years ago I copied seventy pages of quotes from *Medical Dark Ages* into a book that I wrote. In that version, I inserted many editorial comments regarding how the quotes related to my experiences. The rest of my web site does that talking, and I have decided to let the *Medical Dark Ages* quotes speak for themselves. Ralph's book is more than just quotes, and what follows are not all of them, but the next seventy pages will be a wild ride if you decide to take it. I have broken it into seven sections, to make it easier to plow through. In *Medical Dark Ages*, Ralph also summarized the results of published studies on alternative cancer treatments and their success rates. Ralph did it for hundreds of studies on dozens of alternative treatments. The suggested donation for receiving his book is \$12.00. You can get the book through Ralph Hovnanian at 2128 Prospect Avenue, Evanston, IL 60201.

Ralph is a friend of mine, and will always have my gratitude for the years of effort that he spent in compiling *Medical Dark Ages*. After reading this section, I hope he has yours.

"The thing that bugs me is that people think the FDA is protecting them. It isn't. What the FDA is doing and what the public *thinks* it's doing are as different as night and day." - **Dr. Herbert Ley, Commissioner of the FDA**, San Francisco Chronicle, 1/2/70. (for more on this quote see [this link](#))

(In response to above quote) "What *is* the FDA doing? As will be shown by the material that follows, the FDA is "doing" three things:

"First, it is providing a means whereby key individuals on its payroll are able to obtain both power and wealth through granting special favors to certain politically influential groups that are subject to its regulation. This activity is similar to the 'protection racket' of organized crime: for a price, one can induce FDA administrators to provide 'protection' from the FDA itself.

"Secondly, as a result of this political favoritism, the FDA has become a primary factor in that formula whereby cartel-oriented companies in the food and drug industry are able to use the police powers of government to harass or destroy their free-market competitors.

"And thirdly, the FDA occasionally does some genuine public good with whatever energies it has left over after serving the vested political and commercial interest of its first two activities." - **G. Edward Griffin, *World Without Cancer***.

"There is a principle which is a bar against all information, which is proof against all argument, and which cannot fail to keep man in everlasting ignorance. That principle is condemnation without investigation." - **Herbert Spencer**.

"Beware of prejudice; light is good in whatsoever lamp it is burning; a rose is beautiful in whatever garden it may bloom." - **Abdul Baha**

"There are a thousand hacking at the branches of evil to one who is striking at the root." - **Henry David Thoreau**.

"If any man can convince me and bring home to me that which I do not think or act aright, gladly will I change; for I search after truth, by which man never yet was harmed. But he is harmed who abideth on still in his deception and ignorance." - **Marcus Aurelius Antonius**.

"There are three things which build and maintain civilization throughout time: pure air, pure water, and pure food. And as an eternal truth I say unto you, that there are three things which bring the end of civilization, even the mightiest that have ever been and shall ever be, from the beginningless beginning to the endless end of all time: impure air, impure water, and impure food." - **Zenda Avesta, c. 3000 BC**.

"All the blood of the body is under the control of the heart and flows in a continuous circle and never stops." - **Chinese writing, 2697 BC**.

"The cure of many diseases remains unknown to the physicians of Hellos (Greece) because they do not study the whole person." - **Socrates, (470-399 BC)**.

"It is better not to apply any treatment in cases of occult cancer; for if treated (by surgery), the patients die quickly; but if not treated, they hold out for a long time." - **Hippocrates, (460-370 BC)**.

"It is part of the cure to wish to be cured." - **Seneca (4 BC to 65 AD)**.

(Advanced cancer is)" irritated by treatment; and the more so the more vigorous it is."

"Some have used caustic medicaments, some the cautery, some excision with a scalpel; but no medicament has ever given relief; the parts cauterized are excited immediately to an increase until they cause death."

"After excision, even when a scar has formed, nonetheless the disease has returned, and caused death; while ...the majority of patients, although no violent measures are applied in the attempt to remove the tumor, but only mild applications in order to sooth it, attain a ripe old age in spite of it." - **Celsus, (1st century AD)**.

"When (a tumor) is of long standing and large, you should leave it alone. For myself have never been able to cure any such, nor have I seen anyone else succeed before me." – **Abu'l Qasim, (936 - 1013 AD)**.

"It should be forbidden and severely punished to remove cancer by cutting, burning, cautery, and other fiendish tortures. It is from nature that the disease comes, and from nature comes the cure, not from physicians." - **Paracelsus, (1493-1541 AD)**.

"Smoke.. makes a kitchen also oftentimes in the inward parts of men, soiling and infecting them, with an unctuous and oily kinde of Soote as hath been found in some great Tobacco takers, that after their death were opened." - **James I, A Counter-Blaste to Tobacco, p. 32; 1604 AD**.

"Sugar...ingrendreth...cachexias...rotteth the teeth, making them look blacke... and therefore let young people especially beware..." - **James Hurt, Doctor, The Family Companion, 1633 AD**.

"The Hellish and dismal cloud of...Coal...perpetually imminent over (London) ...that her inhabitants breathe nothing but impure and thick mist...corrupting the lungs and disordering the entire habit of their bodies; so the Catarrhs,...Cough, and Consumption, range more in this one City, than in the whole Earth besides." - **John Evelyn, 1661 AD**.

"Disease is nothing else but an attempt on the part of the body to rid itself of morbid matter." -

Thomas Sydenham, (1624-1689).

"Nearly all men die of their medicines, not of their diseases." - **Moliere, (1622-1672).**

"He's the best physician that knows the worthlessness of most medicines."

"God heals and the Doctor takes the fee." - **Benjamin Franklin, (1706-1790).**

"An enormous mass of experience, both of homeopathic doctors and their patients, is invoked in favor of the efficacy of these remedies and doses. But the regular profession stands firm in its belief that such experience is worthless and the whole history is one of quackery and delusion." - **William James (1842-1910).**

"You may honestly feel grateful that homeopathy survived the attempts of the allopaths (orthodoxy) to destroy it." - **Mark Twain (1835-1910).**

"The doctor of the future will prescribe no drugs but will interest his patients in the care and nutrition of the human frame and in the cause and prevention of disease." - **Thomas Edison (1847-1931)**

"To protect herbalists from persecution by the Company of Physicians and Chirurgeons. Company of Surgeons in London, minding their own gain, and doing nothing for the profit or ease of the diseased, have sued, troubled and vexed honest persons (herbalist) ... Said persons have not taken anything for their pains and skill...Surgeons have small cunning, yet take great sums of money and do little for it." - **Act of Parliament, 1512 AD. Appendix 2, chapter 2. p.2.**

"The answer of Richard Guy, Surgeon...to certain insidious Falsehood and Reflections upon his Method of Curing Cancers without Cutting...London 1764 AD. 100 cases Successfully treated..Breast...incipient cancer...how easily in that State they are remediable by Care and Proper management;...the cancerous Humor is a Virus...the lymphatic vessels are the immediate instruments of its Circulation...carried and lodged..to those more remote ('glands')."
- **Richard Guy, Practical Observations, 1762 AD.**

"Unless we put medical freedom into the Constitution, the time will come when medicine will organize into an undercover dictatorship...To restrict the art of healing to one class of men and deny equal privileges to others will constitute the Bastille of medical science. All such laws are un-American and despotic..., and have no place in a republic...The Constitution of this Republic should make special provisions for medical freedom as well as religious freedom." - **Dr. Benjamin Rush, signer of Declaration of Independence; member, Continental Congress; B.S. Princeton U.**

"...This large and expensive stock of drugs will be unnecessary. By...doses of...medicines... multiplying...combining them properly, 20 to 30 articles, aided by the common resources of the lancet, a garden, a kitchen, fresh air, cool water, exercise, will be sufficient to cure all the diseases that are at present under the power of medicine." - **Dr. Benjamin Rush.**

"Samuel Thomson (1769-1843, herbalist) so upset New Hampshire doctors that they persuaded the state legislature to pass a law specifically naming him, not for practicing medicine 'illegally' ('the usual charge with which to charge non-allopathic practitioners') but to prevent him (from) healing people without charging them." - **Donald Law, A Guide to Alternative Medicine.**

"The entire medical profession of the United States in so far as its organization is concerned, is today at the mercy of one man and a board of trustees that is subservient to him." - **Editorial, Illinois Medical Journal, Dec. 1922, p.478.**

"The efforts of the medical profession in the US to control:...its...job it proposes to monopolize. It has been carrying on a vigorous campaign all over the country against new methods and

schools of healing because it wants the business...I have watched this medical profession for a long time and it bears watching." - **Clarence Darrow, (1857-1938)**.

"A conspiracy, not a profession...Every doctor will allow a colleague to decimate a whole countryside sooner than violate the bond of professional etiquette by giving him away."

"... I was a member of the Health Committee of London Borough Council, and I learned how the credit of vaccination is kept up statistically by diagnosing all the re-vaccinated cases (of smallpox) as 'pustular eczema, varioloid' or what not - except smallpox." - **George Bernard Shaw, (1856-1950)**.

(allow access of cancer patients to) "unconventional therapies, (i.e.) any method used for the control and cure of cancer which has not been approved by the Federal FDA." - **Cancer Therapeutic Research Bill of 1981, State of Florida, HB747 passed by legislature, vetoed by governor.**

"(The AMA is) "just another mean trust." - **Harry S. Truman.**

"...the right of the individual to elect freely the manner of his care in illness must be preserved." - **Dwight D. Eisenhower.**

"(Doctors) collectively have done more to block adequate medical care for people of this country than any other single group." - **Jimmy Carter.**

"I've heard drug experts say they believe if penicillin were discovered today, the FDA wouldn't license it." - **Ronald Reagan.**

"But the doctors in the past, as the review of the evidence showed, branded Jenner, Semmelweis, Oliver Wendell Holmes, Sr., Pasteur, Lister, Koch and Keen as charlatans... Napoleon said that war is too important to be left to the generals. We go on the assumption in the Senate that foreign relations are too important to be left to the diplomats...this question (on a novel cancer cure) is too important to leave purely to doctors..."

"It's a terrible thing that we cannot really trust the FDA or NCI (National Cancer Institute). We need, therefore, an independent scientific investigation." - **US Senator Paul Douglas, Congressional Record, 1963.**

"Yet, not only has the FDA done everything it could to discourage ('a good or better and non-toxic') treatment of human cancer, but also the NCI appears to have been negligent in not pursuing this whole line of investigation."

"Government controlled medical research, which verges on monopoly, may possibly delay medical advances

"There has been very little emphasis in NCI on relatively non-toxic approaches, some radically different."

"..serious shortcomings in the administrative practices...of the FDA..there is no appeal to the courts in cases involving medical research." - **US Senator Edward Long, "Enzyme Treatment of Cancer", Congressional Record, 1966.**

"The hearings have revealed police-state tactics...possibly perjured testimony to gain a conviction,...intimidation and gross disregard for the Constitutional Rights...(of) First, Fourth, Fifth, and Sixth Amendments, (by the FDA)

"The FDA (is) bent on using snooping gear to pry and invade..."

"Instance after instance of FDA raids on small vitamin and food supplement manufacturers. These small, defenseless businesses were guilty of producing products which FDA officials claimed were unnecessary."

"If the FDA would spend a little less time and effort on small manufacturers of vitamins...and a little more on the large manufacturers of...dangerous drugs..., the public would be better served." - **Senator Long from various Senate hearings.**

"(It) could involve the AMA and others in an interstate conspiracy of alarming proportions..."

"Public and private funds have been thrown around like confetti at a country fair, to close up and destroy clinics, hospitals, and scientific research laboratories which do not conform to the viewpoint of medical associations."

"The record in the Federal Court discloses that (the NCI) took sides and sought in every way to hinder, suppress and restrict...(a) treatment of cancer." - **Benedict Fitzgerald, Special Counsel to the Senate Interstate and Foreign Commerce Committee, "A Report to the Senate IFCC on the Need for Investigation of Cancer Research Organizations" 1953.**

"I and many other Members of Congress have received a large volume of mail from individuals...benefited from Laetrile treatments,...who believe the Government is party to a conspiracy to suppress an inexpensive, non-toxic and effective anti-cancer drug. ...public confidence in our Government has not been strengthened by the highly unusual actions of the FDA in first advising...that clinical studies with Laetrile could be initiated and then terminating this authorization..."

(There is a) "deeply held conviction of a large number of Americans that they are being forced by their Government to leave the country in order to obtain therapy with a drug that is both safe and effective for the control of cancer... (A) review should be done by cancer experts who have no conflicting interest and who are able to evaluate the evidence objectively...In light of the tremendous sums of money that have been spent with relatively little productivity..., I find it very surprising that the NCI has not sought on its own initiative to do further animal testing with this drug which apparently has shown some activity in the tests sponsored by the McNaughton Foundation." - **US Congressman L.H. Fountain (in a letter to HEW Secretary), 1971.**

"Amygdalin ('Laetrile')..has been employed medically for many centuries. Ancient herbal pharmacopeias recommended the bitter almond for the treatment for a variety of illnesses..."

"Six patients with advanced cancer were treated with amygdalin at dosages similar to those employed by Laetrile practitioners....intravenously... (and) orally...No clinical or lab evidence of toxic reaction was seen (by us)."

"One patient had severe pre-treatment pain resulting from skeletal meta-stases...at 5 weeks

after the onset of (laetrile and metabolic) therapy, she claimed complete relief..." **Charles Moertel, MD, (and 3 MD's and 2 PhD's), Dept. Oncology and Comprehensive Cancer Center., Mayo Clinic / Foundation, "A Pharmacologic and Toxicological Study of Amygdalin." Journal of the American Medical Association (JAMA), February 13,1981.**

"Amygdalin (Laetrile) is listed in the US Pharmacopeia of 1870...so the Grandfather Clause in the Food and Drug (and Cosmetics) Act prevents FDA from claiming jurisdiction. The US Court of Appeals, 4th district, #71-1243, May 23, 1972, upheld this..."

"...Amygdalin..is listed in (FDA's) GRAS (Generally Accepted As Safe) list.." - **Walter Ermer, International Health Council, inserted by Senator Edward M. Kennedy into Banning of the drug Laetrile from Interstate Commerce by FDA, Hearing, 1977.**

"Most shocking, from the point of view of scientific ethics, is...that...every one of their (SRI - Southern Research Institute) errors was in the direction of lowering the efficacy of the (Laetrile) treatment (of animals). ...There is essentially zero probability that such a system of misrepresentation is inadvertent. There is no doubt to give anyone the benefit of!" - **Dr. Bernard Kenton, City of Hope National Medical Center, in Harvard Political Review, 1977.**

"...The NCI...retrospective analysis...of Laetrile(:) ...among 67 case records that were all submitted...the NCI...could find complete responses in only two patients..."

"The NCI...prospective trial...of...Laetrile could be neither controlled and randomized nor blinded...The lack of concurrent controls was partially offset by the fact that all patients were in advanced stages of a disease known to be almost uniformly and rapidly fatal. Any objective responses in tumor size or prolongation of survival could be identified by comparison with historical controls." - **Arnold Reman, Editor, New England Journal of Medicine, "Closing the books on Laetrile" 1982.**

"The (Laetrile) efficacy tests...clinically in humans..(by) the US NCI...were obviously conducted so that a negative result could be formulated. The limited number and types of human cancer cases selected...the omission of necessary additional measures ('e.g dietary'), the far too short observation periods, and the undefined chemical properties of the (Laetrile)... all contributed to devaluation of...conclusions."

"The oral (Laetrile) had been 'toxified' by adding cyano-urea in the NCI...(NCI's) Mayo (Clinic) dismissed well responding patients to discard them from statistical evaluation...This kind of fraud which I expressed...and which was openly published...has...not resulted in any denial." - **Hans Nieper, MD, President, International Academy of Preventive Medicine; Director, German Society for Medical Tumor Treatment; author of over 200 articles, listed in Who's Who of World Science, and many other credentials.**

"...About Laetrile...we submitted two articles. The editor turned the article over to his medical advisor and received the same advice that had been given to another (another magazine): Don't touch it."

"...We were told that owners of drugstores, a vital outlet for paperbacks, had been notified that any druggist who displayed my book on his paperback racks, would not receive any more prescriptions from members of the AMA."

"...After years of paying my income tax without any problems, in 1964, after my Laetrile book came out, I was summoned by the IRS for an audit...It took three years...Again (in) 1974. The year before I had (written) a book about corruption in Congress. I was summoned for another (IRS) audit, and there went another three years.

"...The Salk polio vaccine :) When the final report of the (Salk) tests was ready for publication, there were no takers in the scientific field. The report was handed out at a press conference..." - **Glen D. Kittler, (author of 40 books, and articles in Reader's Digest, The Saturday evening Post, etc.) Laetrile: Nutritional Control for Cancer with Vitamin B-17.**

(In)" 1970, in Camp Hill, Pennsylvania....Bruce Butt...convened a meeting at which he showed...Nature's Answer to Cancer. The film was made by the International Association of Cancer Victims and Friends (IACVF)....(The) attorney...defending Mr. Butt (said): Mr. Butt is criminally charged with 'unlawfully procuring and showing the film, Nature's Answer to Cancer, which the state of Pennsylvania claims 'constitutes dissemination of false or misleading advertisement, concerning the efficacy of Laetrile , as a cure or treatment for cancer'. (And) this constitutes a misbranding of a drug, ...although ...all parties ("stipulate") that no drug ("Laetrile") was sold or offered for sale! Present at the preliminary hearing were...USDHEW, and the FTC,...and FDA... Again when the film was advertised for showing in a public theater in San Jose, the owner was threatened by the DA's office with a criminal charge, arrest, and seizure of the film." - **IACVF, Cancer News Journal, 1964.**

"The slight variations in extracting procedure cause many of the amygdalin (Vitamin B-17, Laetrile) molecules to change to a form unknown to nature(:) isomers...There are ...purveyors who label their 'iso-amygdalin' products 'amygdalin' contrary to all of the recognized specs... For commercial or political purposes, they certainly cannot justify such a fallacy...This scientific heresy and commercial fraud...(is) tremendously reducing the effectiveness of amygdalin therapy. ...To mislabel iso-amygdalin as amygdalin is scientifically, medically, and morally indefensible." - **Dr. Ernst T. Krebs, Jr. discoverer of vitamins B-15 and B-17.**

"..Dr. Krebs...is facing the possibility of a jail sentence stemming from violation of a 1977 court order not to speak publicly about Laetrile" - **Voice of Medical Freedom, April 1981.**

"Dr. Ernest J. Krebs, Jr., (and his secretary) ...began serving a six-month prison term in May (1983) in the San Francisco County Jail. (They) were found guilty of continuing to promote the merits of Laetrile in cancer therapy in violation of terms of probation they had originally secured following their 1973 conviction." - **Choice, spring 1983.**

"Five hours after presenting a ...lecture on cancer before an audience of about 400 in L.A., the windshield was shot out of my car on the road back to San Francisco. The next night the glass window in the tailgate (the back window) was shot out (300 miles removed from the first shooting)...The late Arthur T. Harris, MD, was threatened by two men with assassination if he continued to use Laetrile." - **Dr. Ernst T. Krebs, Jr.**

(FDA's ban on Laetrile is)"arbitrary, capricious, an abuse of discretion, and as a matter of law, unsupportable." - Dec 1977

(What) "disturbs me mostly...is the willful, deliberate denial (by the FDA, of) our own citizens, a fair chance to use Laetrile, when all the record (shows) it is not toxic, ... is safe, ... and is effective."

"...to say...that Laetrile should not be continued to be used by those who are suffering from terminal cancer, I would have to hang my head in shame." - Aug 1980

(The FDA is) "to refrain and desist from interfering with terminal cancer patients, in their use of Laetrile acquired through the 'Affidavit System.'" - **May 1981, Judge Luther Bohanon, US District Court, Oklahoma City; Rutherford vs US**.

"Dr. (Donald R.) Cole (formerly of Sloan-Kettering and St. Vincent's Hospital in New York) was charged with three counts: giving false hope to the terminally ill, using experimental drugs illegally, and practicing medicine in an unlawful and dishonest manner....The illegal drug charge was defined as the use of vitamins, enzymes, and Laetrile. ...Dr. Cole administered Laetrile at the request of patients in the legally prescribed manner with a signed affidavit....An oncologist from Rosewell Park (Memorial Institute) who was brought in by the hearing panel... could not substantiate a single case of incompetence or negligence. ...Dr. Cole's license was revoked." - **CCS, Cancer Control Journal, January 1978**.

"Dr. Emory Thurston, PhD, ScD, (lecturer, College of Pharmacy, USC; member APA (American Pharmaceutical Assoc.), Executive Secretary of Nutritional Research (had) ... inspectors from the Calif. Food and Drug office armed with a search warrant, (who) raided his business office. They confiscated several bottles of Laetrile...and every piece of literature that contained the word 'cancer'. (They) serve(d) a warrant for the arrest of Dr. Thurston on the charge of selling Laetrile and practicing medicine without a license. He was taken to county jail..." **International Association of Cancer Friends and Victims, Cancer News Journal, 1973**.

"The (MSKCC) Memorial Sloan-Kettering Cancer Center report on amygdalin, or Laetrile(:) It is incomplete because at least half a dozen experiments with amygdalin performed at the (MSKCC) between 1972 and 1976 have been omitted from the report. (These,) the positive experiments (showing effectivity against cancer) with amygdalin, carried out by veteran researcher Kanematsu Sugiura appear to be valid and are not successfully challenged by the report. (In contrast,) there are numerous errors in many of these (reported) experiments which allegedly prove amygdalin's ineffectiveness as a palliative or cure for cancer." - **Second Opinion, Special Report: Laetrile at Sloan Kettering, 1977, published January 1978**.

"In 1977, when the Laetrile bill was first introduced to the North Dakota Legislature, I was the only MD to testify for it...After that, my successful tenure...was ended and I was called before the State Medical Examiners Board in ND, for using vitamins and Laetrile. ...I travelled...to work...with Dr. Davis, Dr. Cole, and Dr. Manner...When I returned...I was refused re-instatement to the medical staff...We are being investigated by the (state) attorney general's

office because our methods are not 'usual and customary'."

"The doctors at M.D. Anderson (Hospital) in Houston...were recently developing a cancer prevention program for Texas, the money and direction for which were appropriated by the Texas legislature 40 years ago." - **Brian Briggs, MD, in a letter, 1981.**

"Toxicity of Laetrile in dosages currently employed for human cancer is assumed to be minimal." - **NCI Clinical Protocol for Laetrile.**

"Despite intensive effort over many years, the FDA, the AMA, the ACS (American Cancer Society), the NCI and independent researchers have been unable to find any scientific evidence that Laetrile has any effect on cancer." - **FDA (press release, Feb 17, 1977.).**

"The cyano group of vitamin B-12 (cyano-cobal-amin) is more labile and potentially more harmful than the cyano group found in Laetrile. Yet we know how safe and essential vitamin B-12 is." - **Dr. R.A. Passwater, testimony, FDA docket # 77N-0048.**

"On the very day that the NCI announced Laetrile's alleged worthlessness..., West Virginia became the 24th state to allow the use of Laetrile...In signing the bill into law, Gov. Jay Rockefeller said the study, 'made no difference at all.' - **National Health Federation, July, 1981.**

".The woman...had been relieved of her cancer by Laetrile.....In the hospital they would not inject Laetrile as it was illegal. She died. This so incensed the editors of the Santa Ana Register (Dean and Martinez) that they wrote ("Laetrile Story") a series of articles on cancer and the true story for the first time was sent by UPI to (almost) every country in the world." - **Howard H. Beard, ScD, PhD, Yale U. The Anthrone Test.**

"... The cancer statutes (are) discriminatory against the cancer patient.... No other disease is

so restricted by politics.... It is also discriminatory against the Negro because Laetrile helps sickle cell anemia.... It is discriminatory against the poor because the poor can't afford to go to Mexico or Germany (for therapies outlawed in the US)..."

"...In July 1974 About 15 agents (of Cal. Food and Drug) arrested me on the charge of selling Laetrile and other substances in the diagnosis, cure and alleviation of cancer. In Citrus Municipal Court, West Covina, on Feb 3, 1975, Judge Sam Cianchetti declared this statute unconstitutional. On Oct. 1974, I received a phone call from...police at 1 (AM, Saturday morning) and he told me that my office was broken into. I went down to my office...and 2 agents arrest(ed) me on a felony charge - conspiracy...The law states that before you are even arrested, they must give you a hearing (Cal. Health Code 1707.4) (Another) judge denied this motion for a ...hearing and he gave no reason." - **Dr. James Privitera; Roswell Park Memorial Institute; Scripps Clinic; "The Nutritional Battle."**

"...testifying for Dr. Privitera...To these 19 cancer victims, the enforcement of (California) Health and Safety Code Sect. 1701.1, the denial of them medical treatment, albeit unorthodox, albeit unapproved by a state agency, must surely take on a Kafka-esque, a nightmare quality. No demonstrated public anger, no compelling interest of the state warrants an Orwellian intrusion into the most private of zones of privacy." - **California Supreme Court Chief Justice, Rose Bird, dissenting opinion.**

"In 1964 (we) conduct(ed) an intensive investigation of Laetrile...conclud(ing) that there was no justification for making (it) illegal...Yet, 16 years after... , doctors are still being jailed for (it). Dr. James Privitera,... was recently released from 55 days...much of it doing hard labor...on a road gang...If he were solely interested in making money, as he points out, there is a great deal more to be made from traditional cancer treatments, than by use of Laetrile." - **Santa Ana, The Register, April 13, 1980.**

"Does it make sense that a (Laetrile) smuggler who is supposed (by the Medical Establishment - Ed.) to be making millions of dollars off of what he is smuggling, would spend five years of his life trying to legalize it.?" - **Frank Salaman, grad., northwestern U.**

(In)"1970, the Pennsylvania Health Dept., swooped down on a meeting...after the movie Laetrile,...was shown. The film was confiscated and the association president arrested." -

Michael Culbert, Vitamin B-17, Forbidden Weapon Against Cancer.

"Important Elements of FDA Policy: Encourage local medical licensing authorities to investigate and take appropriate action to deal with the use of Laetrile by physicians in their practice." - **FDA Division of Federal-State Relations Director, 1974.**

"Not that there are not real quacks in the field of cancer... But ...no legitimate MD...with a thriving practice and after years of study and faithful service would give all that up to become a quack and subject himself and his family to Hell..." - **John Richardson, MD, Laetrile Case Histories.**

"I had to stand three expensive trials in California courts, where in all three actions against me, the charges were dismissed. Then I had to stand and even longer and more expensive trial in Federal Court in San Diego, where I was convicted of 'conspiring to smuggle Laetrile' and was fined \$30,000. ... Cal. then revoked my license. - **John Richardson, MD.**

"The ...Times..headlined the Assistant US Attorney...grand jury investigation of myself, six months before the grand jury was even selected. ...Soon after Bantam printed 200,000 copies of our book, ...Times bought the serial rights to it. ...After sitting on the serial rights for a suitable period, the ...Times...unctuously begged Bantam to be released from their gentlemen's agreement, and the serial market had been destroyed. ...Most libraries will not accept a book that has not been reviewed by the ...Times or its affiliate..." - **John Richardson, MD, Richardson Newsletter, 1979.**

"Federal, state, and local police raided Dr. (John) Richardson's Clinic,...beat up a(n) aide, manhandled a nurse, and dragged the business manager off in handcuffs."

"20 Federal agents in 13 undercover cars...arrested and...jailed...Robert Bradford (President, Committee for Freedom of Choice in Cancer Therapy.)...on leave from Stanford University... and two Mexicans..on charges of conspiracy to smuggle (Laetrile)."

"The Food, Drug, and Cosmetic ACT,...defines any article 'intended for use in the diagnosis, ... treatment, or prevention of disease' as a 'drug'...Water...to an individual dying of thirst could ... be called a 'drug.'" - **Michael Culbert, Freedom From Cancer**.

(This MD)"utilized (Vitamin B-15 & 17) as therapeutic agents in the treatment of cancer. (These) are not recognized vitamins in human nutrition. Laetrile...is unsafe for self medication..."

The management of cancer patients with...vitamins...to the exclusion of...conventional modalities is an extreme departure from the standard practice of medicine."

(MD)"Certificate...of John A. Richardson...is revoked." - **California Board of Medical Quality Assurance, 1975. - the four paragraphs above in John Richardson, Laetrile Case Histories**.

"What water is to thirst, so normal metabolism is to cancer." - **John Richardson, MD, Richardson Newsletter, 1978**.

Section 2

"In early 1978 I sent a serious article on approaching trends of unorthodox cancer treatment to a major British doctor's publication,..., to which I had frequently contributed before. It was declined, as was the editor's privilege. This decision I accepted without comment...But when I published a similar article for a more general readership in a non-medical publication, the Deputy Editor of ... published a most offensive attack on me and my views. ...This year another major medical publication, Doctor, was pleased to accept and print my views. A huge correspondence from doctors seeking further information ensued."

"The violent disagreements and vehement proclamations of different 'experts' at cancer symposia are now well-known, as each defends his own pet programme."

"In most European countries amygdalin (Laetrile) has never been illegal...Bitter almond, ... peach (are some) sources of amygdalin.... Celsus in ancient Rome used almond to treat 'putrid flesh'. Largus, another Roman, used it for bladder tumours. Galen,,,used almonds for 'scirrhus of the liver'. ...Avicenna also used (almond) oil for tumours of uterus, spleen, stomach,

and liver."

"The psychosomatic element...in cancer causation and treatment.(;) Gendon in 1701, Burrows in 1783, Nunn in 1822, Walshe in 1846, the famous Sir James Paget, describer of Paget's disease, in 1879, Snow in 1893 and Elida Evans in 1922, are the names of just a few (Doctors). - **Dr. Dick Richards, Kent Private Clinic, England, The Topic of Cancer: When the Killing Has to Stop.**

""...HH Beard has perfected ...3 excellent (urine) cancer tests, all of proven accuracy of 95% or better..... in 1942 and onwards."

"The enzyme beta-glucoronidase is necessary to ...'trigger off'.. laetrile.....after the laetrile injection, we injected directly into the tumor...beta-glucoronidase. The result was white slough which encompassed the (tumor) growth. ...The slough resorbed and was replaced by normal (tissue)." - **Arthur T. Harris, MD, U. Edinburgh (under John Beard); PhD, Med.; DSc, Biochem.**

"Early one morning in 1946 our lab was mysteriously destroyed by fire....We then established a lab at ...our present location. Then again one morning in 1947, this lab was set on fire and completely destroyed." - **Howard H. Beard, ScD; PhD, Yale U. Porter Fellow, Physiology; MA, Columbia U; Professor and Director., Biochem Dept., author of 150 articles and three books, etc., etc. Director John Beard Lab of Clinical Biochemistry.: A New Approach to the Conquest of Cancer, Rheumatic and Heart Diseases.**

"...Medical mankind in particular, were supposed to be waiting for the advent of some new scientific discovery concerning the nature of cancer... ...The physical martyrdom was lacking; but there are, as I can testify from experience, many more ways than one of burning a scientific man at the stake." - **John Beard. D.Sc., The Enzyme Treatment of Cancer and its Scientific Basis. c. 1911 AD.**

"Dr. (Howard H.)Beard 'was ...charged with...mail fraud...rendering fake and medically worthless cancer reports...Postal Investigators satisfied themselves the reports were willfully falsified...' On Oct. 30, 1967, Dr. Beard was sentenced in US Federal Court, Ft. Worth, Texas, 'to...mail fraud...He alleged he could detect the presence of cancer in urine in 95% of all tests

made." - **FDA Papers, 1967-1968 (in ACS, Unproven Methods of Cancer Management, 1967)**.

"Arthur Harris (MD, PhD)..was soon forbidden to use Laetrile on hospitalized patients. ... In...1953, Harris reported: 'Of total number of cases (82) treated with Laetrile, 43 have been pay patients, many have paid only a part of their bills...' ...Dr. Harris...received a summons from the LA County Medical Association to appear for trial...for unethical conduct in overcharging 3 patients for Laetrile...Files showed that the (3 patients) had not paid a cent of their bills....Harris received notice that he had been expelled from the county medical society." - **Glenn D. Kittler, Laetrile: Nutritional Control for Cancer with Vitamin B-17, c. 1963**.

"Why is it that the US Supreme Court says physicians may perform abortions on the ground that the physician - patient relationship is inviolable; but that the same physician is not permitted to prescribe Laetrile for his patients...but not to destroy life but to save it? Why are we told that a patient has the "right to die with dignity", but may not take Laetrile in an attempt to live?" - **Alan Stang, American Opinion (from Princeton paper, "The Political Implications of Laetrile...")**.

"The average citizen in this country does not have...the background that will enable him to make enlightened decisions concerning the selection and use of therapeutic agents." - **Acting director, National Cancer Institute**.

"In a study of 252 people who attended a Laetrile symposium sponsored by the CCS (Cancer Control Society), we found that those attending were predominantly white, female, rural, and highly educated." - **Gerald E. Markle and James C. Petersen, Professors of Sociology, Western Michigan University; editors of Politics, Science, and Cancer; the Laetrile Phenomenon**.

"Nearly 8 out of 10 persons agree that, 'since we don't know how to cure cancer, if Laetrile is harmless, people ought to be able to buy it if they want to use it.' Reinforcing this view are public doubts about the FDA and other government health agencies." - **Lou Harris Poll of 1600 Americans, July 1977**.

"A nationwide Harris Poll showed that the public favoured the use of Laetrile by a 30% margin. ...In over 250 cases of cancer with which I have been associated, all of whom used (Laetrile, vitamin) B-17, not a single one had side effects as a result...." - **Leon Chaitow, ND, DO, Member, British Naturopathic and Osteopathic Association., An End to Cancer?**

"Such letters...from the FDA, are, filled with objectively demonstrable lies, practiced deceptions and deviousness, red herrings, directed misinformation, misdirected information, etc. ...Once FDA-NCI-AMA-ACS...concedes that Laetrile anti-tumor efficacy was indeed even once observed...a permanent crack in bureaucratic armor has taken place." - **Dr. Dean Burke, co-founder, National Cancer Institute (NCI), Cyto-chemistry section: open letter July 3, 1973.**

"I was about the most negative person in the country about interferon." - **Dr. Frank Rauscher, Director, NCI, vice president, ACS (American Cancer Society) in Time, 3-31-1980.**

I would certainly not turn off Laetrile if it had an iota of activity that we could pinpoint. Unfortunately, there's no evidence at all." **Dr. Frank Rauscher, 60 Minutes 3-31-1974.**

"We don't have any pesticides showing up in the food chain anymore." - **NCI Director and ACS vice president, Dr. Frank Rauscher.**

"...there is no basis for the use of Laetrile in man based on data derived from experiments on animals.": - **Dr. Jesse Steinfeld, Surgeon General, US Public Health Service.**

"The data provided by the McNaughton Foundation certainly indicates some activity (of Laetrile) in animal tumor systems.: - **Dr. Carl Baker, Director, NCI 1970-1972.**

(Laetrile)"may be useful in sickle cell anemia...(Laetrile) used in animals with tumors show: a decrease in lung metastases; slower tumor growth; and pain relief." - **Lloyd Old, MD, vice president, Sloan-Kettering Institute for Cancer Research, at FDA 7-2-1974.**

"When results of the (Laetrile) toxicity tests at Loyola (University, Chicago) were complete, (Dr. Harold Manner, Chairman Biology Dept., author 50 articles, 5 texts) asked NCI to publish the findings in Journal NCI. This the agency refused to do. Publication in other journals was also denied him." - in **National Health Federation, Bulletin, Nov. 1977.**

"When Dr. Manner reported on the total remission of breast cancer in lab animals (Using 'Laetrile in conjunction with vitamins and enzymes')..., ACS President, Ben Byrd, criticised (him) for making his announcement in public, and said such announcements should be made only in a proper scientific forum."

"But, as all scientists know, there is a time lag of 12 to 18 months between the time a manuscript is submitted and the time it is published in a scientific journal."

"...Delay, says Dr. Manner, is a luxury which people with right-now cancers cannot afford." - **Paul Harvey, "Cancer Remission with Laetrile", LA Times, 10-10-1977.**

"...The ...experts of the FDA have declared Laetrile to be worthless...quackery and fraud... These experts are the professional descendants of experts...confident that mental illness should be cured by drilling holes in the skull, the better to let the demons out. ...This is the Orwellian fashion in which the medical establishment throws its weight around...." - **James Kilpatrick, Washington Star, 1976.**

"For some places you want harsh regulations backed by full weight of the law - (we) have had IND's (request to test on humans and Investigational New Drug) for Laetrile, for example, and other hoax remedies...Sometimes we say it is proper to hinder research."

(The FDA has)"what some people call the worst personnel in government...Open

drunkenness...for months...intimidation...tittering in corners, throwing spitballs; I am describing physicians, (who) slouch down in a chair, not respond to questions, moan and groan with sleeping gestures, a kind of behavior I have not seen in any other institution as a grown man." - **FDA, Bureau of Drugs Director, Dr. J. Richard Crout.**

"Dr. Helen Calvin...spearheaded...Indiana to approve Laetrile, and then she used the Laetrile and metabolic program...until the FDA arbitrarily and illegally held up her Laetrile shipments...patients started dying...When four of them had died, Dr. Calvin ended her own life." - **Arlin Brown, Cancer Victory Bulletin, Oct. 1978.**

(Maurice Kowan, MD)"served three months in jail, paid a fine of \$3,000, and was forbidden to see a cancer patient...for three years. Before sentencing, it had been suggested to Dr. Kowan...to sign a statement that...Laetrile...had proved no benefit....He refused any 'deals'..." - **Betty Lee Morales, "The National Health Federation, Do We Need It?".**

"The jury had never been allowed to see any evidence that Laetrile actually worked. (Yes Virginia, they can bury medical breakthroughs in court this way also.) Dr. Kowan...was...age 70..." - **G.E. Griffin, Cancer Control Journal, 1977.**

"...In treating approximately 100 cancer cases, most ...terminal, (Dr. Kowan) was able to achieve dramatic relief from pain in virtually every single case. ...Several patients told...that the fees Dr. Kowan charged were ridiculously low.... Dr. Kowan was sentenced (including) 30 days in the workhouse..." - **David Martin, Staff member, US Senate Internal Security Committee, in Cancer News Journal, Jan 1971.**

"In a free society men and women should not be prevented by Government from seeking medical remedies which they believe will be effective. ..."

"Despite the fact that a predicted 350,000 persons in the US will die of cancer this year, the cancer bureaucracy keeps a closed mind. ...the basic issue is not the efficacy of Laetrile, but the infringement of freedom in what amounts to a life and death question."

"Freedom of choice must be brought to bear upon the US Medical practice." - **US Congressman Philip M. Crane, Congressional Record, 1975.**

"More than half of all great remedies known to medical history have come from empiricists...'irregulars'...of no or little scientific training. There is no reason to believe that conditions have essentially changed." - **Dr. Alex Carrel 1912 Nobel Prize in Medicine, "in recognition of his work on vascular suture and the transplantation of blood-vessels and organs."**

"Patients have been cured almost instantaneously of...lupus...,cancer ...,ulcers..., tuberculosis ...In a few seconds, at most a few hours, the symptoms disappear and the anatomic lesions mend. The miracle is characterized by extreme acceleration of the normal process of healing." - **Dr. Alexis Carrel,**

"...the influence of the factory upon the physiological and mental state of the workers has been completely neglected."

"The modern city consists of...dark, narrow streets full of gasoline fumes, coal dust, and toxic gasses, torn by the noise..."

"Enormous amounts of money are spent for publicity. As a result, large quantities of alimentary and pharmaceutical products, at the least useless, and often harmful, have become a necessity for civilized men." - **Alexis Carrel, Man the Unknown.**

"Dr Alexis Carrel,...(:) After his book was published in 1935, titled Man the Unknown, he was eased out of the Rockefeller Institute of Research, and he went to France...When he arrived, he was arrested on a false charge and put into prison...Two months later he died.: - **Professor Hilton Hoptema, Health Research Sheet.**

"The discovery of radium by the Curies was facilitated by observing a witch doctor treating sick people by burying them up to their necks in radium-bearing mud." - **Donald Law, A Guide to Alternative Medicine.**

"Everybody should know that the 'war on cancer' is largely a fraud, and that the NCI and the ACS are derelict in their duties to the American people who support them." - **Linus Pauling** **1954 Nobel Prize in Chemistry for**"his research into the nature of the chemical bond and its application to the elucidation of the structure of complex substances.", and **1962 Nobel Peace Prize**.

"..The truly fraudulent claims must be discarded. But novel methods of therapy should not be rejected because they are novel, or because they run counter to some generally accepted belief ("which may just be biased"), or because we do not understand the mechanism of the proposed treatment, or because it has come from an unconventional source." - **Linus Pauling**

"'Cancer dialogue '80'...(was) sponsored by the Omega Institute, and co-sponsored by the American College of Preventive Medicine, and the American Holistic Medical Association.... The New York Times reported on Oct. 13, 1980 that 9 of the 27 (speakers: NCI Directors, Drs. Arthur Upton and Frank Rauscher, Sr. V. President of ACS; Dr. Emil Frei III, Director, Sidney Farber Cancer Institute; et al)..had withdrawn about two weeks before the opening...from this discussion of traditional and 'alternative' approaches to cancer treatment...Some of the speakers said that pressure had been put on them...the Medical Tribune (Oct., 1980) 'Most of the 8 dropouts received influence-wielding phone calls from (the) chairman of the ACS's committee on unproven methods of cancer management, or other ACS officials.'" - **Linus Pauling**

"...Terminally ill cancer patients,...100...who took 10 grams of Vitamin C daily lived four times longer (from date of diagnosis as 'untreatable', than controls)...Dr. (Linus) Pauling submitted these findings in a scientific paper to Journal of the AMA, and New England Journal of Medicine, and both have refused to publish this illustrious Nobel Laureate's work." - **D. Ian Thierman, Yale U. Grad., (in International Association of Cancer Victims and Friends, Jan. 1979).**

"Dr. Anthony Verlangieri, ..Rutgers U. ..., was refused funds for...reducing athero-sclerosis with Vitamin C. ..Dr. Jorgen Schlegel (is) combatting cancer with vitamin C at Tulane Med. ...And Dr. Eli Seifter (discovered) that vitamin A (fights) cancer tumors of viral origin. Yet both distinguished scientists have been refused funds. ...Dr. Linus Pauling,...two time Nobel Prize winner..., has found it impossible to get federal funds for his research in treating cancer with...

vitamin C." - **Jack Andersen, "Tired Blood in Federal Health Research". Rocky Mountain News, 1975.**

"The American Cancer Society tried to ruin my research foundation." - **Albert Szent-Gyorgyi, discoverer of vitamins C and P, 1937 Nobel Prize , " for his discoveries in connection with the biological combustion process, with special reference to Vitamin C and the catalysis of fumaric acid."**

"(The National Cancer Program is) a bunch of (obscenity)."

"The American public is being sold a very nasty bill of goods about cancer." - **James Watson, co-discoveror of the DNA double helix, and 1962 Nobel Laureate in Medicine for that discovery and related work.**

"The American Cancer Society has done the American public a really great disservice." - **Dr. David Baltimore, 1975 Nobel Laureate in Medicine for, "their discoveries concerning the interaction between tumor viruses and the genetic material of the cell."**

"...cancer...there is no disease whose prime cause is better known...In the meantime, millions of men must die unnecessarily." - **Otto Warburg, Nobel Laureate in Medicine in 1931 "for his discovery of the nature and mode of action of the respiratory enzyme."**

"But how long prevention will be avoided depends on how long the prophets of unbelief will succeed in obstructing the application of scientific knowledge in the cancer field. In the meantime, millions must die of cancer unnecessarily." **Otto Warburg.**

"...It would be possible to make much more progress than has been made if the NCI knew its job better, knew how to make discoveries...The NCI really does not know how to make discoveries....So long as the NCI is not willing to follow up ideas that seem good to people who

have had experience making discoveries, the work of the NCI is going to be pedestrian." - **Linus Pauling.**

"...What kills science in this country now, (is) that you must tell in advance what you will find, and what you will do exactly, and what you will spend your money on. And if you knew it all, then you wouldn't need to do it. ... And so you cannot have (any) new discoveries.: - **Albert Szent-Gyorgyi.**

"Money appropriated for FDA in 1945 (was) \$3 million; in 1968, \$66 million. Number of employees in 1945, approximately 850; in 1968, 5100. Seizures of foods in 1945, 2504; in 1968, 384. Injunctives for violative foods in 1945, 26; in 1968, 3....Prosecutions for violative foods, in 1945, 278; in 1968, 70. - **US Congressman L.H. Fountain (In Beatrice T. Hunter, Mirage of Safety).**

"Anyone may logically wonder why this information has not been put into proper investigative format and presented toward various medical bodies. The answer is simple. With the powerful alliance of the media, the federal agencies and orthodox medical groups, anyone attempting to present such...would be destroyed with orchestrated cries of 'Quackery.' There is ample evidence to document this beyond question." - **US Congressman Larry McDonald, MD.**

"When it was first introduced, the claims for penicillin were also a minority view, and it (penicillin) was suppressed for 11 or 12 years. - **Congressman Larry McDonald, MD. (in Steven Fredman, MD and Robert Burger, Forbidden Cures).**

"No one seems to care. Certainly, no one in the million dollar fund-raising cancer clinics are excited over the almost miraculous ...record of...Krebiozen..."

"Maybe the raising of millions of dollars of funds for charitable projects has become 'a racket', and the longer they remain in the test-tube stage of development, the longer patronage and job payrollers remain in their soft berths."

"...this charity...They quibble too much over procedures...while we seek a cure. They complain too loudly against another who, seemingly, has perfected a work that the public expects its charity dollars to do. Maybe we should investigate the American Cancer Society's operations."

"..Dr. Andrew C. Ivy, (is) the champion of the scientific doctrine of freedom of research, which has suffered in recent years through the falsity of certain politico-physician leaders of the AMA, who faked reports, suppressed honest information, brutally slugged the opposition, both physically and through pressures, used to prevent the truth about Krebiozen reaching the American people." - **US Congressman Roland V. Libonati, Congressional Record, 1959.**

"...Whereas spontaneous cure (of cancer) remains a scientific curiosity with a rate of 0.00001%, the administration of Krebiozen has given a recovery rate of 12.5% or a 1,250,000 fold increase." - **Steven Durovic, MD, post-graduate at U. of Vienna, and Pasteur Institute,; "Cancer and Krebiozen...", Today's Japan Orient/West, May 1961.**

"...All the TV stations in the NY-Philadelphia metropolitan area refused to sell time to Timex to permit public showing of a documentary it had produced on Krebiozen. ..Where the AMA previewed the documentary..." - **American Jewish Ledger, 1964.**

"The FDA and much, but not all, of the orthodox medical profession are actively hostile against vitamins and minerals... They are out to get the health food industry...And they are trying to do this out of active hostility and prejudice." - **Senator William Proxmire (in National Health Federation Bulletin, April, 1974.**

"This dogged, same track approach (by the NCI) is even more astonishing..."

"This total failure to address the diet/cancer relationship is most disturbing to ...those... informed..." - **Senator George McGovern. 1978 Subcommittee hearings on Nutrition.**

"Even though the nutrition research budget has increased 21 fold in the last four years, it still remains less than 1% of total NCI budget, even though one half of all cancers are diet related..."

Does the peer review simply turn into a 'buddy' system for awarding grants? - **Senator Bob Dole., 1978 Subcommittee hearings on Nutrition.**

"Eminent nutritionists have traded their independence for the food industry's favors." - **US Congressman Benjamin Rosenthal.**

"There are only three proven ways - and only three- to curb cancer: (1) X-ray, (2) radium, (3) and surgery, either singly or in combination..." **ACS , Cancer Facts, 1955.**

(Why is there frequent criticism that the cancer research system is unreceptive to unorthodoxy?) "Because its true. Not cancer research, all research systems. It's a very important issue...The entire system...tends to exclude people from the fringe who have ideas that are radical departures, and we ought to pay a lot more attention to them....I try." - **Dr. Vincent DeVita, Jr., Director NCI.**

"Non-acceptable type of therapy, including Laetrile, Krebiozen,etc." - **NCI 1976 SEER Code Manual.**

"Because of the vast areas of ignorance that still exist in our understanding of the cancer problem...areas of basic research are essential...This...must be supported at an adequate level." - **Report of the President's Cancer Panel, 1975.**

"The main criterion for an award (of a research contract from the NCI) is the capacity to demonstrate the relevance of the project to the program's target. But the only sure way to prove this relevance is to have, in fact, already proved it." - **June Goodfield, FRSM The Siege of Cancer.**

"During the 1960's...HIP...study showed no gain from mammography to women under 50, ('yet') all women over 35 were invited to participate in the (Breast Cancer Detection) Demonstration Project (of the ACS &) NCI..."

"In 1973, Alan S. Rabson of the (NCI) Division of Cancer Biology and Diagnosis (said) mammography was the real risk, (the test itself causing cancer). William Pomerance (Chief, Diagnostic Branch, same NCI division, wrote:) '...At a meeting of some contractors, ...I made the statement...I would change the initial age to 45...They 'fell on me' and went so far as to decide (to) start at age 30...Their reaction is hysteria...' ...John Bailer III (of NCI) published in Jan. 1976...that for women under 50, the risk...might equal the chance (of detecting)..."

(When)"the controversy became public....An independent NCI committee (found:) Of 1850 women diagnosed (by mammography) as having cancer, the review of the (pathological) tissue showed that 66 did not have cancer at all...NCI 'reclassified' (18) cases. For the remaining 48 cases, there appears to have been no evidence of cancer; 37 of 48 women have undergone mastectomies. The National Women's Health Network...complained...Dr. Vincent DeVita (Director), NCI responded (in) 1980, that NCI chose not to inform the women...' and that 'NCI does not acknowledge that 'there were serious problems' in this program.'" - **Susan Rennie, National Women's Health Network News, March 1981.**

"...When I submitted my manuscript for clearance, I was called...in to the office of my (NCI) director. He said, 'Now, the medical official of the AEC (Atomic Energy Commission) objects against that. They said there are quite other reasons why uranium miners develop cancer; it's not radioactivity. You shall omit that from your presentation."

"My...studies on occupational cancer...in...industries was forcefully and abruptly brought to a halt in 1952 by an order of the Surgeon General...(This followed) a protest by the Public Health Service (PHS) by....(an) industry...alleg(ing) that my activities were detrimental to their interests...I was forbidden (by PHS) to contact, thereafter, state health departments and industrial concerns on all matters of occupational cancer. (I was) to discontinue all field work..." - **Dr. Wilhelm C. Heuper, Chief, Environmental Cancer Section, NCI (In Larry Agran, The Cancer Connection).**

"The problem with 'prevention' is that it does not produce revenues. No health plan reimburses a physician or a hospital for preventing a disease." - **NCI Deputy Director, Division of Cancer Cause and Prevention; and of Diet, Nutrition and Cancer Program.**

"...Search for the cause may be a hopeless pursuit because most disease states are the indirect outcome of a constellation of circumstances." - **Dr. Rene Dubos, Rockefeller Institute.**

"The evidence is truly overwhelming that disease is pluri-causal." - **E. Cheraskin, MD, DMD, Professor Emeritus and of Medicine and Chairman Dept. of Oral Medicine, U of Alabama Med School, in Diet and Disease.**

"In 1906,...Upton Sinclair's sensational novel, The Jungle, (appeared)...Meat consumption in the US fell by 25% in the year following publication of The Jungle. (In) ...1967, President Johnson signed the Wholesome Meat Act into law. Upton Sinclair, in a wheelchair, was at his side. ...130,000 cattle carcasses were held back by federal inspectors in 1969 for removal of carcinomas and cancer eye."

"On fatal poisoning, in Dade County, Florida, ...in the under 5-year (old) group, pesticides were the leading cause of death.

"...Environmentalists...rarely leave energy in reserve for monitoring enforcement...The constituencies mobilized by the original event tend to equate enactment of a program with solution of the problem...FCC Commissioner Nicholas Johnson...(to) Senate Subcommittee:'... Then the pressure starts - on those who have been handed the job of investigation and reform. Corporate interests that will be adversely affected will move to delay, to water down, to remove 'dangerous people', and then finally to participate in the final whitewash." - **Harrison Wellford, Cambridge U., England, and a bunch of other credentials (Sowing the Wind).**

"The chief, if not the sole, cause of the monstrous increase in cancer has been vaccination." - **Dr. Robert Bell; V. President International Society for Cancer Research, British Cancer Hospital.**

"Dr. David Grasetti...said, 'The spread of cancer in mice...is astounding after they are given a dose of Rifampin'...a miracle antibiotic...in 1973, (a manufacturer of Rifampin) Dow Chemical, received almost \$900,000 in contracts from the NCI. (the) research (results were) permitted to remain confidential." - **Health Writers, Health Newsletter, 1974.**

"During three different strikes by MD's (in) the mid-1970's (in Israel, Columbia, and California), death rates fell between 18% and 50%..." - **Peter Chowka, "The Failure of Specialty Medicine", Journal of the Nutritional Academy**.

"Doctors...make periodic surveys of their techniques. I don't know why. After they're done, nobody seems to pay much attention to them..."

"One of the first controlled community studies on tonsillectomy (in Rochester, NY, in 1922), showed it had no effect...; yet this past year (1970), 1/3 to 1/5 of all children hospitalized in that same area (Rochester) were admitted for tonsillectomies!" - **Leonard Tushnet, MD, The Medicine Men**.

"I have given orders to my Death units to exterminate without mercy or pity men, women and children belonging to the Polish speaking race...After all, who remembers today the extermination of the Armenians?" - **A. Hitler, Aug 22, 1939, (in James Nazer, The First Genocide of the 20th Century,...Armenian Massacres)**.

"...In Europe at the present time (1943, it is) A crime punishable by death to spread information in regard to nutrition in Norway, Belgium, Holland, and all other conquered countries." - **D.T. Quigley, MD, Fellow American College of Surgeons, in The National Malnutrition**

"It has been common...to combine such unproven ingredients as bio-flavinoids, rutin..., with such essential nutrients as Vitamin C..., thus implying that they are all nutritionally valuable for supplementation of the daily diet. The courts have sustained FDA legal action to prevent such practices, and the new FDA regulations preclude this type of combination in the future... Similarly, it has been common...to state or imply that the American diet is inadequate because of soil deficiencies, commercial processing methods, use of synthetic nutrients, and similar charges. FDA recognizes that these false statements have misled, scared, and confused the

public, and is prohibiting any such general statements in the future...The medical and nutritional professions have shown strong support of this policy,..." - **FDA (Assistant General) council's letter to 5 US Legislators, Hearings, US Congress, 1973.**

"A citizenship of wholesale delegation and abdication to public and private power systems, such as prevails now, makes such periodic checks as elections little more than rituals." - **Ralph Nader.**

"The food industry, its trade associations, and research foundations, is well financed and highly organized to pressure the FDA." - **Ralph Nader.**

"22 of 52 top (FDA) officials have worked for regulated industries, or organizations that cater to those industries...During a hearing held in 1969 by the House Inter-governmental Relations Subcommittee, it was disclosed that of 49 high ranking FDA officials who had recently resigned or retired, 37 joined or served as consultants to regulated industries." - **Michael Jacobson, Food for People, Not for Profit.**

"...FDA was allegedly using one standard of safety, efficacy, and design of clinical tests for the little investigator...,but a different (more lax) standard for government paid NCI investigators using the drugs of the big drug companies." - **Dr. Miles H. Robinson, inserted by US Senator Edward V. Long into Congressional Record, 1966, "Is the FDA Hamstringing Cancer Research?"**.

"The Establishment...undismayed by the futility of funds dumped into the bottomless barrel of its 'proven methods', it remains adamant in refusing to investigate 'unproven methods'..."

"Nobody in the science and medical departments (in the ACS) is capable of doing real science...They don't know how to prevent cancer or cure patients; instead, they close the door on innovative ideas. ACS money goes to scientists who put on the best show to get grants, or who have friends on the grant-giving panels." - **American Cancer Society Science Editor (for 25 years), ACS Science Writers' Conference originator, Pat McGrady, Sr.**

"I've heard of cancer politics, but I've never seen anything like this in my entire life. In fact, I wouldn't believe it, if I hadn't seen it with my own eyes."

"...Everybody's afraid. Fear is overriding scientific inquiry and the ability to let the audience to make up its mind."

"The whole set-up (NCI-ACS) is a farce and a fraud." - **Joseph Gold, MD, Director, Syracuse Cancer Research Institute, March 1981.**

"The surgeons. They controlled medicine, and they regarded the X-ray as a threat to surgery. At the time surgery was the only approved method of treating cancer. They meant to keep it the only approved method by ignoring or rejecting any new methods or ideas. This is why I was called a 'quack' and nearly ejected from hospitals where I had practiced for years." - **Dr. Emil Grubbé**. Dr. Emil Grubbé, ...discovered...X-ray therapy (for cancer) in 1896...X-ray was not recognized as an agent for treating cancer by the American College of Surgeons until 1937...Dr. Grubbé...still was not recognized as late as 1951." - in **Herbert Bailey, Vitamin E, Your Key to a Healthy Heart**.

"...students were obliged...to learn about an interminable number of drugs, many...valueless, ...useless, some...harmful."

"...there is less intellectual freedom in the medical course than in almost any other form of professional education in this country." - **Harvard Medical School Dean, Dr. David Edsall.**

"...Members of the US 'cancer cartel' have staked their reputations on their oft repeated claims that the non-toxic, nutritional therapy of cancer is ineffective...The time will...come when (its) efficacy...will be officially acknowledged here in the US, as it already has been in many other countries." - **Albert Schatz, PHD, discoverer of streptomycin, and many other credentials.**

"Gregor Mendel, who had never received a teaching certificate because he couldn't pass in biology, began in 1856...(his) work, which was virtually the birth of genetics, wasn't widely

appreciated until the end of the century. ...Charles Darwin...dropped out of medical school because he couldn't stand science." - **C.R. Scriver, MD, "Inborn Errors of Metabolism, A new Frontier of Nutrition." Nutrition Today, 1974.**

"In 1966 the ACS formulated a State Model Cancer Act which was instrumental in the enactment of anti-quackery laws now enforced in 9 states...In California (it is a) felony...The use of unproven methods is also a criminal offense in Colorado, Illinois, Kentucky, Maryland, Nevada, North Dakota, Ohio, and Pennsylvania." - **Jane Brody of New York Times, and Arthur Holleb, MD of ACS, You Can Fight Cancer and Win.**

"The California cancer law places the burden of proof of efficacy and safety of a cancer agent on the proponent...In Sept, 1974, the State of California enacted new legislation which makes a conviction of a 'quackery' charge a felony..., with jail terms of 5 years and fines as high as \$10,000." - **ACS, Unproven Methods of Cancer Management. - 1976.**

"On April 17, 1952 the Dickinson County, Iowa chapter of the ACS ran a full page ad in ...'The Spirit Lake Beacon', asking society to enter the new field of investigating cancer cure claims. They cited 4 such 'cures'. The chapter was expelled from the ACS. Its chair(woman), Mrs. Roy Tatman, felt compelled to declare: 'We were asked to help conquer cancer. We tried to do just that. Has the society (ACS) another motive?'" - **Arlin Brown, March of Truth on Cancer.**

"'The historical phenomenon' of the 'long interval which' elapses 'between the making of a fundamental discovery and the general understanding of its importance and full realization of its benefits'...Nowhere today is this delay more unhappily evident than in the field of cancer research. The accumulated data of Rous, Shope, Coley, Bittner, Strong, Andervont, Green, Williams, Taylor, Furth, Twombly, Cowdry, Diller, Bawden, Pirie, Stanley, Wycoff, Kunits and others indicate...the path for...something of practical benefit to the cancer patient...other than surgery and radium." - **Frederick S. Hammett, Lankenau Hospital Research Institute, Science, 1946.**

"The...commission on Professional and Hospital activities maintains a computer bank of information on...American hospitals, including comparative death rates for procedures,

accidents, infections, errors....with a vengeance the government would envy...the information is 'classified'...this computer bank contains the potential for a 'Pentagon Papers' and 'Watergate' combined." - **Robert Mendelsohn, MD, Chairman, Medical Licensing Commission, State of Illinois, and many other credentials.**

(You)"would be shocked...at the amount of unnecessary surgery that is performed (for) money...And I can prove it." - **Paul R. Hawley, MD, Director, American College of Surgeons, 1953.**

"... A class action effort by 150 Iowa chiropractors (is) seeking \$300 million on charges of conspiracy by the AMA. Exhibits for evidence,...include...a 1965 letter from (an AMA organized) Quackery Committee, warning AMA members it was unethical to associate with 'the cult of the chiropractic'..."

"Last year the AMA adopted a new code of ethics allowing MD's to work with chiropractors." - **Voice of Medical Freedom, March 1981.**

"The belief of some trustees and staff members (is) that the selection of (the new Chairman, Board of Trustees) was in part engineered from within federal prison (by the) former board chairman now serving an 18-month sentence for bank fraud."

"...Control of the (AMA) is solidly in the hands of a layman of whom most AMA members have never heard of..., (a) **former executive director of AMPAC - the American Medical Political Action Committee.**"

"...Former AMA employees say that telephones at headquarters were tapped." - **"Turmoil at the AMA", Medical World News, 1974.**

"...purely for pleasure...In this perspective, there is no such thing as a junk food." - **AMA Secretary, Council of Foods and Nutrition, Philip White, 1979.**

(It is)"inappropriate at this time to adopt the proposed national Dietary Goals (of the Select Committee on Nutrition and Human Needs, US Senate, Feb 1977)...There is the potential for harmful effects (from it)." - **AMA Exec. V. Pres. James Sammons to the Senate Committee.**

"...how frequently...(is) the patient's suffering made worse by...frank mismanagement, if not downright neglect, of the patients' nutritional health in our hospitals."

...one of the largest pockets of unrecognized malnutrition in America...(is) in the ...hospitals." - **Charles E. Butterworth, Jr. MD, Chairman, Council on Foods and Nutrition, AMA.**

(In)"1916...that grand old pioneer of advancement in dentistry, G.V. Black...presented his epoch making studies on the role of fluorine in producing mottled enamel....The studies...by...the US Public Health Service (USPHS) led to a nationwide effort to eliminate...excessive fluorine in the drinking water (by) the USPHS..."

"...our knowledge of the subject certainly does not warrant the introduction of fluorine in community water supplies generally."

"Sodium Fluoride is a highly toxic substance..., it may be definitely harmful."

"...the potentialities for harm far outweigh those for good. - **Editorial Dept., Journal of American Dental Association. L.P. Anthony, DDS, Editor, Oct. 1, 1944.**

"Don't drink fluoridated water...Fluoride is a corrosive poison which will produce harm on a long term basis." - **AMA President, Dr. Charles Heyd.**

"I am a former state health director...It is disturbing to me when the men in the Public Health Service (PHS), who, as late as 1950, were not ready to endorse the universal use of fluorine, have now (1952), almost to a man, come out for the endorsement."

"It is difficult for me to understand how high officials in the PHS could change their mind, over a

three-month period, and completely reverse the field. Where once they advocated the go-slow sign on the use of fluorides, they now apparently have gone overboard, and put out large amounts of propaganda favoring the fluoridation of water. I am certain that the dental profession merely echoes and endorses the opinions of the PHS."

"...I cannot find any public evidence...that the AMA, the ADA (Dental), or several other health agencies, now recommending the fluoridation of water, had done any original ("experimental") work of their own. These groups were simply endorsing each other's opinions."

"You will note that all of the experts grounded in the science of bio-chemistry have advocated the go-slow sign on the use of fluorides in drinking water. I believe that the dental profession and other public-minded individuals, like myself, have been misled by the PHS, because all of the facts have not been made available upon this subject."...

"I sometimes wonder if (a major aluminum company) might not have a deep interest in getting rid of the waste products from the manufacture of aluminum, because these products contain a large amount of fluoride. In this connection it is interesting to know that (a bureaucrat), who now heads up the Federal Security Administration (precursor to the US Public Health Service), and the firm of attorneys he was with...represents (that aluminum company)." - **US Congressman, Dr. A.L. Miller, Chairman, Special Committee on Chemicals in Foods, "Fluoridation of Water, Extension of Remarks., Congressional Record, 1952.**

(As of 1983)"Belgium, West Germany, and Sweden have abandoned their pilot fluoridation experiments on human populations, and are not fluoridating any public water supplies. Sweden, Denmark, and Holland have banned it completely. Many other countries, such as France, Italy, and Norway have never fluoridated their drinking water. Only about 2% of the population of Europe is living in a fluoridated area;" - **John Yiamouyiannis, PhD, bio-chemistry, BS, U of Chicago; President, Safe Water Foundation, Fluoride: The Aging Factor.**

"Within weeks after Dr. Yiamouyiannis next spoke out against fluoridation, he was put on probation, was told he would never receive a raise again, and was advised to find another job. Dr. Yiamouyiannis was ultimately forced to resign." - **John Yiamouyiannis, PhD, editor, Chemical Abstracts Service, American Chemical Society, Fluoride: The Aging Factor.**

"The fluoride ion exerts its toxic effect by inhibiting the action of many enzyme systems." - **Dr.**

L.P. Sumner, Cornell U. and Dr. H. Theorell; Uppsala U., Sweden, both Nobel Laureates, enzyme chemistry. (Sumner 1946, Chemistry, Theorell 1955, Medicine).

"Thus some some of the serious charges that are being laid at fluoride's door - genetic damage, cancer, birth defects, and allergy response - may arise from fluoride interference after all." - **Journal of American Chemical Society, and New Scientist, both January 1981.**

"It took almost six months to persuade the public library in ...to include the book, The American Fluoridation Experiment, by F.B. Exner, MD, and G.L. Walbott, MD. Then, one year later it was found in the waste disposal container stamped 'Discarded...'" - **Eden Ranch, Organic Consumer Report, 1978.**

"Thus, under careful examination of original data, cross-examination under oath of scientific proponents, and critical follow up assessments of effects, neither the efficacy nor the safety of fluoridation has been demonstrated. Nevertheless, it seems impossible to engage the scientific community or the public health authorities in any effort to examine the subject."

"The reexamination of subjects on which strong recommendations have been made challenge one's commitment to integrity. If, as scientists and public health advisors, we can't muster the courage to meet those challenges, perhaps we should all take up a more honest profession such as used car sales or TV repair where at least the results of our services are unequivocal." - **Frederick I. Scott, Editor(ial), American Laboratory, September 1980.**

"The legislation...of...fluoridation..is unreasonable and a violation of the due process clause of the Illinois Constitution..."

"This record is barren of any credible and reputable, scientific epidemiological studies and/or analysis of statistical data, which would support the Illinois Legislature's determination that fluoridation of the public water supplies is both a safe and effective means of promoting public health.

"..(Fluoridation) is unconstitutional....(and)..an unreasonable exercise of police power..." - **Judge Ronald Niemann, Circuit Court, Ill. Decree, Illinois Pure Water and Ruby Hale vs. Director of Public Health and Director of EPA, State of Illinois., Health Action, Feb, 1982.**

"...The evidence that fluoridation of the public water supply at the rate of one part per million is carcinogenic is irrefutable."

"...Say somebody shot somebody....We...are so concerned about whether this evidence was admitted properly...(and) not recognize the intrusion into our sacred individuality that is being caused every time people turn on the faucet? ...I am astounded by how much untruth has been officially promulgated (pro fluoridation)." - **Justice John Flaherty, Supreme Court of Pennsylvania, address, June 7, 1981.**

"Dr. Miller: 'The USDA made some examination...(and) recommended to the farmers that fluorine not be added to the water...of (pregnant) sows because it did something to the pigs that were unborn...Do you think it might be wise for the (US)PHS...to inquire what might happen to pregnant women and the unborn child...?'"

"Dr. Porterfield: 'No, sir; I think there is a difference....There is more money available for matters that have economic value than there is for health.'" - **Chemicals in Foods and Cosmetics, Hearings, Select Committee, US House, 1952.**

Section 3

"In the feeding of hospital patients, more attention should be given to providing tasty and attractive meals, and less to the nutritive quality of the food."

"People say that all you get out of sugar is calories, no nutrients...There is no perfect food, not even mother's milk."

"Have confidence in America's food industry, it deserves it." - **Harvard U. School of Public Health, Nutrition Dept. Head, Dr. Frederick Stare.**

"...attempts to make further reports were blocked by requests of the Journal of the AMA, made the (other) official journals, to refuse me the right to report my findings further."

"...so when the Cancer Quack conventions of the AMA annually proclaim that the sign of a

quack is his refusal to report his work in official journals, they are putting on a gigantic fraud. It was so in my case." - **William Frederick Koch, MD, Prof. Chemistry and Histology, U Michigan Medical School, nephew of Nobel Laureate in Medicine, Robert Koch, and other credentials.**

"I see in him (Dr. Max Gerson) one of the most eminent medical geniuses in the history of medicine...he was greatly impeded by adverse political conditions."

"...try to tell the people of America about Dr. Gerson's merits and ...results...I wish you the best in your difficult task." - **Dr. Albert Schweitzer.**

"Dr. Ferdinand Sauerbruch, MD, arranged a grand test for using Gerson's diet therapy (against cancer, etc.) on 450 'incurable' lupus patients. 446 recovered."

"Gerson was invited...on...a...talk show by...host Long John Nebel...Nebel was fired....the very next day and the radio network was threatened by the AMA."

"Even when a very rare Jew...escaped from a concentration camp and sneaked back to his people to warn them...they could not believe the escapee."

"On two occasions Gerson became violently ill...Lab tests showed...arsenic in his urine...Some of Gerson's best case histories mysteriously disappeared from his files. The manuscript and all of his copies for Gerson's almost completed book were stolen and never recovered....They spread the lie that Dr. Gerson died of cancer." - **Norman Fritz, space shuttle engineer, Healing, Journal of the Gerson Institute.**

"Gerson was treating nine out of ten (cancer) patients without cost."

"The AMA, of which Gerson was a member, promptly saw to it that he was no longer allowed to use the facilities of any New York hospital." - **Health Research, Is Cancer Curable?, 1954.**

"In 1946 Dr. Gerson became the first physician to demonstrate recovered cancer patients before a US (Legislative) committee. This Senate committee was holding hearings on a bill to

find means of curing and preventing cancer. Unfortunately the lobby supporting surgery, radiation, and chemotherapy lobbies caused the defeat by four votes of the Senate bill which could have supported extensive research into the Gerson therapy." - **Max Gerson, MD, A Cancer Therapy: Results of 50 cases, (not quote from Dr. Gerson, but on book jacket).**

"She reported that 'Dusty' Rhoads, head of Sloan-Kettering, told her he would use the Gerson Therapy if he had cancer, and explained the reasons he was blocked from using it at the hospital" - **Norman Fritz.**

"...An editorial of the Journal AMA, Jan 8, 1949, discussed the Gerson Therapy under the heading 'Frauds and Fables'. At that time, Dr. Gerson's lawyer wrote a letter to the JAMA, threatening a suit for libel...The editorial was withdrawn...(leaving) columns which were blank." - **Charlotte Gerson, both above from Healing, Journal of the Gerson Institute and... Therapy.**

"Sometimes there is little regard for people's lives....A hospital tested a new NCI drug ...on children. Their kidneys were lost within days. This was no big deal, because new drugs are routinely given out with literally no safeguards for people..." - **FDA drug review section's Robert Young.**

"...It's been like swatting flies with a sledgehammer....I suppose as far as end products are concerned it's been a bust, but then so is the over-all treatment of cancer." - **Dr. Charles Moertel, Director, NCI Comprehensive Cancer Center, Mayo Clinic.**

"A one year study by the Washington Post has documented 620 cases in which experimental drugs have been implicated in the deaths of cancer patients....And they amount to merely a fraction of the thousands of people who in recent years have died or suffered terribly from cancer experiments..."

"...In the vast majority of drug experiments, it is not uncommon for none or one or two of hundreds of patients to benefit from the drug."

"These human experiments have gone largely unchallenged and unquestioned by Congress, the medical profession, and the scientific community at large." - **Last five paragraphs above in Ted Gup and Jonathan Neumann, "Cancer Cures Often a Curse", Washington Post, Reprinted in Chicago Sun Times, Oct 25, 1981.**

"The new medical-industrial complex is now a fact of American life...with broad and potentially troubling implications..." - **Dr. Arnold Relman, Editor, New England Journal of Medicine.**

"Corruption has permeated virtually every area of the Medicare-Medicaid health-care industry." - **FBI Assistant Director, Francis Mullen, JR. to Congress.**

"Nearly 90% of more than 10,000 publications about phenothiazines have been financially sponsored by the drug industry. Independent research studies conducted without drug company backing have failed to indicate overall usefulness of phenothiazines." - **D. Springer, "Thorazine; Chemical for Social Control", Issues in Radical Therapy, Spring '76.**

"The dilemma of the (AMA) Board of Trustees (is that it) ...had no choice but to appease the pharmaceutical industry...or forego income from advertising (in its journals)...The (AMA) Council on Drugs...(made up of 'independent thinking scientists and practitioners...was dissolved' and replaced) by the staff of the (AMA's) Dept of Drugs ('obligated to do the bidding of their superiors,...emasculated and worthless')...Thus the AMA has abrogated its responsibility of providing factual information on drugs to the physician in the public's behalf." - **AMA Council on Drugs Chairman, Dr. John Adriani, Professor of Surgery, Tulane U. Med. School, to US Senator Gaylord Nelson's Subcommittee on Monopoly.**

"In the first five years of his television 'practice', Marcus Welby, MD, received 250,000 letters from viewers seeking medical advice." - **ACS solicitation letter."**

"Each spring there is a media blitz in conjunction with ACS's fund raising campaign. The vast

majority of advertising space and time is contributed free of charge as a 'public service'." - **"Overview Needed of Cancer Cabal", Spotlight, 1981.**

"...the US Postal Service...issued an order to stop my ...mail....I have had to report to the local ...Postal Service...and open my mail in front of a local postal inspector. If any person... orders the herbal Cancer preventative formula...the letter...is confiscated..., stamped 'Fraudulent', and returned to the sender. The FDA recommended to the US Postal Service... that this...formula was not beneficially effective towards the treatment of cancer. (The FDA) did not even know what the ingredients of the formula were."

"(Active chemicals and) alkaloids are only harmful when extracted from the crude herb or botanical(;) becom(ing) imbalanced, causing contra-indications and side effects....Jurisdiction of the FDA is restricted to those new drugs manufactured after 1938." - **F. Joseph Montagna, Alternative Medical Association.**

"In 1971, the (US) Postal Service attempted to ban (Arlin Brown's) book, March of Truth on Cancer, from the mail." - **Arlin Brown (In Spotlight, 1981).**

"...The Cancer Biopathy...was...forced out of print by an injunction that caused Reich's books to be withheld or destroyed by an agency of the US Government." - **C.M. Raphael, MD, in froward to The Cancer Biopathy, by Wilhelm Reich, MD, U. Vienna, associate of Sigmund Freud.**

"In...1954, a permanent injunction was issued by the Federal District Court...enjoining Dr. Wilhelm Reich, his wife, ...from distributing 'orgone energy' devices, on complaint of the USFDA, ...for treatment of cancer...The decree was won by default, since Dr. Reich contended that the court had no jurisdiction (in)...'Basic Natural Law' and he failed to appear or answer the complaint...The decree (was) for destruction...of...all misleading labeling which included 10 (different) books by Dr. Reich...His followers...charg(ed) interference of freedom of the press.... Dr. Reich was sentenced to two years, and Dr. (Michael) Silvert to one year...in jail. After appeals were appeals were carried to the Supreme Court and denied...Dr. Reich died in prison; Dr. Silvert died shortly after he was released. (Their) foundation was...fined \$10,000." - **ACS, Unproven Methods of Cancer Management.**

"That the percentage of efficient and beneficial treatments by respondent (Hoxsey-herbs) is reasonably comparable to the efficiency and success of surgery and radium, without the physical suffering and dire consequences (of the last two)" - **Judge William H. Atwell, US District Court for Northern Texas, Dec. 20, 1950., Decision.**

"I am of the firm opinion and belief that Hoxsey has cured these people of cancer (with herbs). Hoxsey has been done a great injustice and articles and utterances by defendant Morris Fishbein (AMA chief and Managing Editor) were false, slanderous, and libelous." - **Judge W.L. Thornton, Decision, Hoxsey vs. Fishbein.**

"Warning against the Hoxsey (herbal) Cancer Treatment...Cancer can only be cured through surgery or radiation." - **FDA poster 1955, sent to 46,000 post offices for display.**

""...an investigator for the State Medical Board appeared...with warrants for (our) arrest...(for)...practicing medicine without a license. (Our) Dr....protested that he was the only man in the clinic who treated patients, and produced his license...But...it had been cancelled the day before...I pleaded with them not to arrest my wife who (did paperwork, and) told (them) that we had a 6 month old infant at home who had to be nursed regularly...(My wife was) locked up with degenerate females...They ganged up on her, slapped her, knocked her down and kicked her." - **Harry Hoxsey, You Don't Have to Die.**

"..Our paper's ...article...(:) The research on which it is based has taken us no less than four years. Two of our chief writers have followed the treatments and checked up on patients' records for months on end. We have made journeys to America..Our firm, at our request, has spent thousands of pounds on investigations...Certain kinds of cancer have been...treated with success by a man (Harry Hoxsey) who is not a qualified medical practitioner, and who has in the past been bitterly attacked in public for the treatment he has given." - **Man's Magazine, 1953.**

(This issue)"for some strange reason disappeared from the news stands." - **Health Research, Is Cancer Curable, for two paragraphs**

"New methods of health care have been discouraged, restricted, and in some cases eliminated (by the AMA)."

"...the AMA has prevented dissemination of truthful, objective information that could provide substantial benefits to the public."

"Competition...potentially poses a threat to the income of physicians in private practice. The costs to the public in terms of less expensive or even, perhaps, more improved forms of medical service are great."

""...a conspiracy between the AMA and its constituent and component medical societies...The record evidence contains more than sufficient quantity of independently admissible evidence to establish the existence of the conspiracy."

"The means (of) restraints..include...the "Principles of Medical Ethics",...and communication with medical societies and individual physicians to promote compliance with these...

(AMA's)"Judicial Council issues interpretations (on 'Ethics', and) is empowered to institute disciplinary proceedings...against physicians...and has appellate jurisdiction..."

"...when a physician disregards 'local custom',...he has acted unethically."

"In 1976, (AMA's) AMPAC reported campaign fund transfers of more than \$1 million, making it the second largest political action committee in the US." - **Federal Trade Commission, Docket n.9064, Initial Decision, Finding, Upheld by 2nd US Court of Appeals.**

"...Dr. McQueen-Williams, Mr. Sarkisian,...filed suit in the US District Court...for \$5 million against the ACS (American Cancer Society) for allegedly libelous statements...in Cancer - A Cancer Journal for Clinicians..."

"...the FDA seized (their herbs)..Court action was based on charges that the product was shipped..as a drug without prior showing of safety..."

"Dr. McQueen-Williams said no (NDA) new drug application had been filed since they do not

believe the law covers botanical compounds." - **ACS Unproven Methods**.

(The FDA)"is seeking, under the guise of (other) charges, to prohibit the sale of a food in the marketplace simply because it is not in sympathy with its use." - **Judge's finding, in US vs. Dextra..., (In, The Dictocrats, Our unelected Rulers).**

"Every human being of adult years and sound mind has a legal right to determine what shall be done with his own body." - **US Supreme Court Justice B.N. Cardoza, decision.**

"It may be conceded that the legislature has no constitutional right to compel any person to submit to vaccination." - **Judge Woodward, New York State Appellate Court, 1903, Viemester case.**

"I would like to maximize the level of human choice in the medical field...The choice of a treatment in many ways is like the exercise of religion."

"Everyone's heard about the military-industrial complex, but they know very little about the medical-industrial complex...(in) a medical arms race..." - **California Governor Jerry Brown, June 1980.**

"Following the Koch trial, a number of physical attacks were made upon me...I was robbed and beaten in my office and on the street...Similar attentions were paid other physicians who agreed with Dr. Koch.'" - **Anonymous MD.**"

"...one death from poisoning, and one from being run down by an automobile, both victims being physicians of distinction and prominent in the advocacy of the Koch treatment. Mail has often been opened, and cartons of certain chemicals often arrive empty..."

"(Dr. Koch himself was the target of at least 13 unsuccessful attempts on his life' - Riley H.

Crabb.)" - **M. Layne, The Koch Remedy for Cancer..., Borderland Sciences Research Foundation.**

"One doctor...J.W. Kannel, saved a young girl...She had hopeless cancer of the spleen...One shot of Glyoxylide, and she became well (in 1943; still alive in 1983)...For (this), Kannel was barred from all hospitals in Fort Wayne...The FDA had (Glyoxylide inventor, Dr. William Frederick) Koch arrested and thrown into an incredibly filthy jail cell in Florida in 1942."

"In 1926...The AMA...attempt(ed) to send a doctor using Koch shots to prison...(in) Massachusetts...Justice Pierce...berated the District Attorney, calling the opposition to Koch 'a moral crime of the very worst kind'." - **Wayne Martin BS, Purdue Univ. (Author, Medical Heroes and Heretics); We Can Do Without Heart Attacks. c. 1983.**

"...They forced (Chauncey Smith) to leave Loma Linda (U.)....So he went east...and resumed his research (on germs causing cancer). (then) mysteriously, he had died..."

"It was in 1936 that I copyrighted...Cancer, Its Cause and Control.....They forced me to serve a whole year in jail,...where I was so fed and treated that I had to cure myself of cancer...But when I had everything ready to put out a third edition...they notified in no uncertain terms 'Unless you stop...we will snatch you...and do a lobotomy on you...'" - **Emerson Hartman, International Association of Cancer Friends and Victims, Cancer News Journal.**

"...Dr. Thomas J. Roberts...one of the leading holistic physicians in the metropolitan Washington DC area...had his hospital privileges suspended because he doesn't believe in the Establishment 'cut-burn-poison' (Surgery-Radiation-Chemotherapy) cancer 'treatments'." - **Carol M. Dunn and William Carmichael., Spotlight, 1979.**

"The board of directors...decided (to end) Chelation Therapy in the very hospital that I owned!...I donated (my) 109-bed..hospital and 50-bed nursing home to the church."

"...The State Medical Board of Examiners of Louisiana...ruled that a doctor practicing Chelation Therapy or using...natural minerals and vitamins was 'incompetent',...defrauding the public'."

"The US Patent Office (, for my) chelating agents...granted a patent."

"...In a period of thirty days, three lawsuits were filed against me for malpractice for a million dollars each....I lost my malpractice insurance."

"I have declared bankruptcy. My home and furniture have been auctioned off." - **H. Ray Evers, MD, Vanderbilt U.; BS Biochemistry and Biology, Auburn U. Knight, Order of Malta; in Voice of Medical Freedom, Americans for Medical Freedom.**

"Our present state law has a 100% conviction record before the board (of medical examiners). There's not a D.A. in the country that would not love that record..." - **Dan and Beverly Dotson, MD's, in Voice of Medical Freedom.**

"Several hundred (ex-) patients...of the Shute Clinic...treated successfully with Vitamin E therapy for cardiovascular conditions, formed...'The Cardiac Society'....The AMA...enlisted...the US Post Office. Letters addressed to the society were returned to the sender marked 'Fraudulent.'" - **Herbert Bailey, Vitamin E .**

(Dr. Nathan) Pritikin...maintains that patients with atherosclerosis, heart disease, ...can be 'returned to normal function' by ...diet...low in fat, cholesterol, protein, and high in complex carbohydrates..."

"Loma Linda ...reported...that of the first 111 patients..with blood cholesterol between 260 and 279..., the average patient left... with...190...Of 218 patients (on) anti-hypertension drugs, 186 left with normal blood pressure..."

(Pritikin's diet is) "bizarre...fad." - **AMA public relations official, F. Chapel.**

"Until he shows us more than anecdotal evidence, there is nothing to evaluate his work on." - **American Heart Association's Mary Winston.**

"We've seen atherosclerosis turned on and off in monkeys (by nutrition, etc.). The problem is you've got to be a monkey to get proper treatment for heart disease in the country." - **Dr. William Castellini, Director, Framingham Project.** - **Last five paragraphs in Nutrition Action, April 1980.**

"Blood from coronary thrombosis patients....(:) on about 60...patients... hemoglobin was in all cases up (high)...Fort three years...examining blood of...several hundred people a day...testing out various diets...I came to the conclusion that (a vegetable-fruit diet and) one-third natural fruit juice, two-thirds water are the most suitable liquid foods to drop hemoglobin number as quickly as possible to a normal level...The Medical Society of New York accepted...my article and published it in New York Medicine for May 20, 1949. On May 21, 1949, I was fired from my position at the hospital. My daughter who also worked there, was fired, too." - **Ernest Klein, MD, "A New Theory for Diet and Coronary Thrombosis.", Prevention; J.I. Rodale, Ed. 1954.**

(Coronary artery bypass surgery:)"5 to 40% of patients...experience a heart attack during or soon after surgery...(:) typical rate...15-25%...20-30% of vein grafts become occluded (blocked) within one year of surgery....Grafts increase the likelihood that new occlusions will develop in the arteries at points both before and after the graft (parallel bypass) insertion site. ...six months after surgery...; New total occlusion developed in only 16% of arteries not bypassed, in 29% of arteries with a patient (open bypass) graft, and in 62% of arteries with an occluded graft."

"The US has a ratio (of thoracic surgeons to population)...many times greater than any other nation."

"Questionable medical practice is not just the result of mistake, occasional incompetence, and faulty regulation, but is the outcome of vested interests." - **Marcia Millman, The Unkindest Cut.**

"Although I found that the booklet (Stale Food vs. Fresh Food) contained some helpful suggestions and its author, Mr. Robert Ford, is a knowledgeable and sincere person (i.e. no intent to defraud), I found the representations in the Respondent's booklet to be unproven and contrary to the weight of informed medical and scientific opinion. As indicated by Dr.____, (the only US Post Office medical witness) a danger of this publication is that it will deceive people who have arterio-sclerotic problems into believing that they can cure these problems by diet

alone instead of seeking medical (AMA) help. Because the ads and this booklet contain materially false representations, they violate the provisions of 39 US Code Section 3005. Therefore...a mail stop order...should be issued..." - **E.S. Bernstein, Administrative Law Judge, (1982).**

"...Many physicians who agree with...safe alternatives will not participate in them for fear... ... Doing so would be tantamount to...professional suicide."

"Nearly 25% of all childbearing women in this country (US) are now having Cesarian sections!" - **David Stewart, PhD, Executive Director, NAPSAC (International Assoc. of Parents and Professionals for Safe Alternatives to Childbirth), The Five Standards for Safe Childbearing.**

"...Nial Ettinghausen, DP...Calif., has attended over 7,000 home births over the past 40 years. His Cesarian rate is 1.1% and his perinatal mortality rate for the past five years (2,508 births) is 4.2 per 1,000 - a rate less than one-quarter of the national average. Dr. Ettinghausen lost his license to practice in January of 1981..."

"Hai Abdul, MD, ...(is) offering natural childbirth...Since 1978, the California (BMQA) Bureau of Medical Quality Assurance has sent investigators to his clinic...On Christmas Eve, 1980, the investigator visited Dr. Abdul and his wife, who were in the midst of wrapping Christmas gifts, to inform them that the BMQA planned to level charges...'in two months'....Dr. Abdul lost his hospital privileges...Said Dr. Abdul...'It is an attack against every family who wants to choose the place and manner of their births.'..."

"It has been estimated that of the physicians in support of home birth and other safe alternatives, at least 90% are in trouble today. Either their licenses have been suspended or in threat..., their hospital privileges are in jeopardy, their insurance coverage has been cancelled, or all..."

"Do medical licensing boards, insurance companies and hospital boards judge all physicians by the same standards, or are there two sets - one strict, the other lenient - depending on whether the doctor supports alternatives or not?" - **NASPAC, NASPAC News, Spring 1981.**

"Doctors who have been doing home births, in many instances have lost hospital privileges, been threatened with loss of insurance, and threatened with criminal prosecution. ...There certainly isn't criminal prosecution when something goes wrong in the hospital. ...I know horrendous stories of women...just really being abused within the hospital because they tried

to have their babies at home...Practitioners are threatened with loss of license..." - **Michelle Harrison, MD, (author, A Woman in Residence) in "Behind the Mask of Women's Medicine", East-West Journal, Oct 1982.**

"I concluded that mongolism was a genetic defect resulting in metabolic accumulations. I treated it as such by removing the accumulations."

"Even the NIH (National Institute of Health) (has) written (my) medicines are safe."

"Why...was my office robbed and vandalized while I met with the FDA in Washington...a thief who only stole and destroyed patients' records...? Why was my telephone tapped...? Why were mail checks put on parents of my patients, friends, and relatives?"

"...The Japanese National Health Institute of Mental Health came to Detroit to extend me their gratitude for the 'U' series (used)...in 60 universities and national hospitals...(where) 3,000 children had been treated...one-third...improved both mentally and physically; an additional third improved physically only."

(My patient)"so impressed the (Michigan) legislatures...that both Houses passed...(a) Resolution...signed by the Governor, to treat institutional mongoloids with (my) 'U' series (of 'vitamins, minerals, enzymes, and prescription drugs...in...small dosages'). The Michigan Department of Health turned down this Resolution..."

"(US) Senator McGovern wrote...he had seen improvements in...his constituent, my patient..."

"...South African doctors...were told by the US State Department that our FDA would no longer allow them to treat..."

"...the National Association for Retarded Children, The National Institute of Mental Health (of NIH), and the March of Dimes had declined to investigate (my treatment)." - **Henry Turkel, MD, New Hope for the Mentally Retarded.**

"The Health...Department of the State of New Mexico 'took my children away....One of the charges leveled against me was that I had been raising my children on a vegetarian diet. I try to show my children respect for animals...I was outraged when I found out they fed my children meat.'" - **Vegetarian Times.**

"Dr. (William D.) Kelly has become harassed by agents from the IRS, FDA, HEW, CIA, CDC, Texas medical and dental boards, controllers, US Postal authorities, US Chamber of Commerce, Consumer Protection Agency...local and county ..police...Dr. Kelly was told by the Texas State Board of Dental Examiners that if he would stop distributing his book to cancer patients, they would drop all charges. ...Blue Cross will pay for cancer surgery, for chemotherapy, for cobalt (radiation..." for a terminal cancer patient...of \$30,000") but...refuses to pay for unorthodox treatments. My (five) visit(s) to Dr. Kelly cost...\$150 per visit." - **Foundation for Alternative Cancer Therapies, Cancer Forum.**

"The Rev. Edward Stone, an..English Clergyman...sought new drugs according to a rule: God (is) placing the cures for diseases in close proximity to their causes ...In 1763 ...Stone..learned that the countryfolk...treated fevers with...bark of the willow, a tree common in marshy locations. Willow bark...had the same 'extra-ordinary bitterness' as quinine...Stone treated some 50 fever-stricken patients (and)...it reduced the fever and relieved pain in every case... Chemists later (were) isolating the bark's active principle and synthesizing...salicylates...acetyl-salicylic acid...aspirin....Stone's re-discovery...of salicylate-containing plants had been known in antiquity..."

"...Dr. Bruce W. Halstead, Director World Life Research Institute, recalls...Indian Snakeroot... was 'laughed out of the office' of one important drug company official. Another company, with fewer prejudices, took the trouble to investigate it - and ultimately marketed millions of dollars worth of reserpine (toxic)." - **Dr. W. Modell. Professor of Pharmacy, Cornell U., Board member, US Pharmacopoeia, and many other credentials including consultant to US Surgeon General.**

"A contributory factor to the increase in cancer might be the widespread use of antibiotics since 1940. 'The antibiotics may absolve the body of the need to bring the normal immunological mechanisms into use..."

"In Japan, the daily use of the hot full bath may destroy incipient cancers..."

"Thousands more cancer patients were not given the benefit of such (fever/immuno-/(heat)) therapy since it was first initiated by (Dr. William Bradley) Coley 90 years ago...The incredible barriers created by the FDA since 1963. (:) To rule Coley's MBV (mixed bacteria vaccine) as a 'new drug' when it had been used for 70 years in nearly 900 patients was incredible. The red tape involved in securing (IND) Investigational New Drug Licenses....Progress will now have to

come from clinical trials in...countries which do not have such paralyzing restrictions." - **Helen Coley Nauts, Executive Director, Cancer Research Institute., "Bacterial Products in the Treatment of Cancer: Past, Present, and Future", read at International Colloquim on Bacteria and Cancer, Cologne, 1982) in Bacteria and Cancer, Jeljaszewicz, et. al., eds, 1982.**

"Mrs. Joseph (Kitty) Schumacher..fought against the government's ruling which bans Krebiozen (another famous alternative method snuff job) from the State of Illinois...As a result of her efforts, she was indicted in federal court in Chicago. She criticized the judge..., government,...and the prosecuting attorney. Yet, a jury found her not guilty." - **Butcher Workman. Sept., 1968.**

"Adolph Hohensee...operated a health farm for many years, hoping to find a violation, etc. Well, they did. They found he had mislabeled a vitamin, and they took him out at 2:00 AM in his pajamas and imprisoned him..."

"..The Durovics (of Krebiozen:)...how costly (their) nine month trial was, and no government paid their legal fees as was done for the FDA." - **Kitty Schumacher, Cancer Information Crusade, in letter to MDAC author, 1982.**

"There is a strong possibility..that selenium may prevent and/or cure cancer. ...As a scientist, you have to consider the possibility that (Dr. Revici) has something to offer." - **NCI selenium committee, Dr. Marc Micozzi.**

"After a (NBC TV) Today Show report...on Revici and his unorthodox treatment using...selenium,...officials suspended his license." - **Miami Herald for 2 quotes above.**

"Dr. Emanuel Revici...directs the Institute of Applied Biology....(and) is a veteran of over fifty years of research in biochemistry and holds over 100 patents. The New York State Health Department charged Dr. Revici with fraudulent practice, gross incompetence, and gross negligence." - **National Health Federation, Health Freedom News, April 1984.**

"There is not one, but many cures for cancer available. But they are all being systematically suppressed by the ACS, the NCI, and the major oncology centers. They have too much of a vested interest in the status quo." - **Robert C. Atkins, MD, Cornell University Medical College; Bach university of Medicine; (author Dr. Atkins Diet Revolution and Dr. Atkins' Nutrition Breakthrough).**

"...The plaintiff's lawyers have already filed and won a case allegedly proving that I have abandoned my homestead....My beautiful homestead will be sold at auction by the Sheriff..." - **V.V. Vetrano, Natural Hygienest, (by fasting).**

"The suit charged Dr. (Herbert) Shelton (author of 12 books on fasting) and Dr. Vetrano with starving with starving to death a guest (suffering from side effects from 'ethical pharmaceuticals') to death. Despite ample evidence produced to show that the guest did not die from starvation..." - **T.C. Fry, College of Life Science, Healthful Living, 1983.**

(regarding above case)"...For appeal purposes were several hostile rulings by the presiding Federal Judge on questions of admissible evidence..." - **American Natural Hygiene Society, Health Science, 1982.**

"The Chicago Women's Health Center was struck by arsonists on the evening of (1983). ... Damage is estimated at \$10,000. The damages are not covered by insurance....Clinic health workers take time to explain procedures and options to each patient they see..."- **Heartland, '83**

"...Mark Baum...MD...(adopted) living healthfully...(and) started advising healthful regimens for his clients. Dr. Baum's local medical society objected to his practices and invoked powers of state to close him down." - **Healthful Living, May 1983.**

"Our attorney...then filed a running complaint with the Hearing Officer that the panel of doctors on this District Review Committee...could not possibly give Dr. (Alan H.) Nittler (MD, author, A New Breed of Doctor) a fair hearing, in that they were totally unaware of nutritional metabolic therapy...and prejudiced against him....The District Court of Appeals also denied Dr. Nittler's request for a stay...The hearing...had to totally disregard all of the evidence presented by Dr. Nittler, and his witnesses....to revoke his license, the maximum penalty allowed." - **Foundation for Alternative Cancer Therapies Journal**.

"A person is a quack if:...He claims he is being persecuted by the 'medical establishment'. (and/or) He uses letters of testimonials...from patients in support of his treatment." - **New York State Education Dept., Curriculum Development Center, Bureau of School Health Services, 1977.**

"Their (hospital's) annual application for renewal of their license to operate would not be granted unless the ortho-molecular (nutrition) program was closed." - **M. Artery, attorney for Forest Hospital, in (Nutrition for Optimal Health Association) NOMA News, 1981.**

"...Incarceration and deprivation of the rights of mental patients, as if they were criminals rather than sick people(:)...In less the one-fourth of the states is a patient's right to communicate with the outside world protected by law; in less than one-half is his right to receive visitors protected by law; in less than one-tenth is he guaranteed the right to correspond with his attorney; the use of physical restraints is restricted in less than one-fourth of the states; and less than one-fourth of the states assure that he will receive a periodic examination for consideration for discharge." - **Arthur Frank, MD, and Stuart Frank, MD, The People's Handbook of Medical Care.**

"In my legal practice, I have seen certain Federal judges controlled or influenced by large corporations..., by large law firms...on more than one occasion(, and) ...by special interests... (some) ought to be thrown right off the bench because they are breaking every code of conduct..." - **US Senator Orrin Hatch.**

"Dr. James D. Rogers, a general surgeon...after being the victim of a frivolous malpractice suit,...countersued a former patient and the attorneys involved for making 'reckless, slanderous, ...charges' against him...He acted as his own attorney (,) when he couldn't find a lawyer who would help him..." - **last two paragraphs above in HALT (Help Abolish Legal Tyranny), Americans for Legal Reform., Winter 1980.**

"I usually accept bribes from both sides so that tainted money can never influence my decision." - **Sir Francis Bacon, Lord Chancellor of England, (in Charles Ashman, The Finest Judges Money Can Buy).**

"Victimless crimes account for half of all arrests..The National Council on Crime and Delinquency declares, '(This) so preoccupies the criminal justice system that it prevents it from dealing effectively with real crime.'" - **Anne Strick, Injustice for All.**

Section 4

"Employing...nutrition and vitamin therapy...one of the nation's largest alcoholism treatment programs reports a 71% success rate. This contrasts with...(a) national...rate (of) 25% as reported by NIAAA."

"...All patients reported a loss of craving for drugs while taking large doses of Vitamin C, during detoxification. Of the first 30 carefully monitored heroin addicts, 30 successfully withdrew from their addiction with no more than minor discomfort. None of the 30 were reported to have relapsed...Similar results have been reported by other doctors...:Archie Kalokerinos..." - **Irwin Stone, Journal of Orthomolecular Psychiatry, 1977.**

"Tobacco pesticides had no tolerance and no instructions for waiting periods between use and harvest. ...In 1964...organic phosphates...parathion, have replaced the chlorinated hydrocarbons aldrin, chlordane, dieldren, and heptachlor...; however, residue of all...including arsenic... would remain...Can it be, then, that the cancer-producing quality of cigarettes is related to the pesticides used? ...I received no reply. ...embarrassed silence." - **Laura Tallian, The Pesticide Jungle.**

"While millions of dollars were being projected for research on radiation and other cancer 'cures', there was an almost complete blackout on research that might have pointed to needed alterations in our environment, our industrial organization, and our food." - **Carol Lopate, in Health Policy Advisory Center, Health PAC Bulletin.**

"...The asbestos industry...has for decades successfully suppressed and manipulated information on the carcinogenicity and other hazards of asbestos. Involved in this conspiracy network were senior industry executives, their medical staff, attorneys, insurance companies, trade associations, scientific consultants, and commercial labs." - **Samuel S. Epstein, MD, Harvard Medical School.; President, Rachel Carson Trust; The Politics of Cancer.**

"...In the preceding chapters...are hypothesis linking scattered observations. ...Relevant research on the system as a whole has not been done..."

"It is remarkable that with the continuing health care 'crisis', so few studies of the consequences of alternative modes of delivering care have been done. Such a paucity of studies is no accident; such studies would challenge structural interests of both professional monopoly (MD's) and corporate rationalization in maintaining health institutions as they now exist or in directing their 'orderly' expansion." -**Robert R. Alford, Professor, UC Santa Cruz, Health Care Politics.**

"A minimum of 30,000 Japanese (were) paralyzed and blinded, many permanently, after taking Quineform,...manufactured and marketed by...., under various trade names, still being sold throughout the world....In 1964, British...ban(ned) (it even) for the treatment of dogs and cats. In 1965...circulated an alert across the European continent...In 1970, Japan's Health and Welfare Ministry...banned (it) while they assured their Pharmaceutical Assoc. that 'withdrawal.. was not mandatory'...The 7th revised Japanese Pharmacopoeia...(insert) reads 'This drug is non-absorbable, side effects rarely seen.'...In 1969....'s confidential memo...enumerated 56 reports on (its) side effects....In 1973....released a report which stated the drug was harmless. - **IDA Honorof, "The 'SMON' Tragedy...", The Provoker, 1978.**

"Dr. (Henry K.) Wachtel...after escaping the Hitler regime resumed work in New York City, aided by Columbia U. He served (9 years) as professor of physiology, and director of the Cancer Research Council at Fordham U. But when he began to test his pituitary substance, he

was removed from both posts, (and) no other funds could be secured. Dr. Wachtel (is) outspoken in identifying...an international drug cartel....of controlling every phase of cancer research and therapy, including the allocation of grants from private foundations and government....to maintain its monopoly, strangl(ing) every independent approach to cancer." - **Nat Morris, The Cancer Blackout Amended.**

"The information that follows is taken primarily...from government hearings and reports published from various Senate and House committees."

"By...WWII, I.G. Farben had become...part of the most gigantic and powerful cartel of all history...interlocking agreements...over 2,000 of them...In the US, the cartel had established important agreements with" (very many major drug, oil, and chemical companies)

"In 1938, I. G. Farben sent a letter to (a major drug firm), one of its American subsidiaries, (that)..all advertising contracts must contain '...a legal clause whereby the contract is immediately cancelled if overnight the attitude of the paper toward Germany should be changed."

"During the Nuremberg trials, Oswald Pohl, an SS Lieutenant General,...is shown here explaining how Farben operated such concentration camps as Auschwitz and Buchenwald." (Photo by) "US Army". (picture section of book.) - **G. Edward Griffin, World Without Cancer.**

"...a surgeon told John D. (Rockefeller) that everyone should have an appendectomy before the age of 16 as a preventative. The oil wizard saw the point at once. 'Why, you've got a better thing than Standard Oil!', he exclaimed." - **In Nat Morris, The Cancer Blackout.**

"Bankers regard research as most dangerous and a thing that makes banking hazardous due to the rapid changes it brings about in industry." - **Charles Kettering, of Memorial Sloan Kettering Cancer Center, and Vice President of General Motors, (in Ralph Moss, Cancer Syndrome).**

"We have a tremendous investment in facilities for (internal combustion engines, transmissions, and axles) and I can't see throwing them away just because the electric car

doesn't emit fumes." - **Henry Ford II, in Look, May 28, 1964.**

"In 1899 an electric vehicle captured the world land speed record (at) 66 MPH..." - **Peter Barry Chowka, East West, May 1981.**

"Fundamental scientific breakthroughs seldom happen in giant company labs. They take place in bedrooms, garages, and makeshift labs.: for example, Moulton's bicycle, Carlson's Xerox, DeForest's vacuum tube, Wankel's rotary engine, Von Neumann's computer, etc. The dial telephone was invented by an undertaker, and the ball point pen by a sculptor. A French monk invented the principle of hermetically sealed refrigeration. Two concert pianists invented Kodachrome in their kitchens."

"It is possible...to produce a vehicle for \$150, a radio receiver for 9 cents, and a \$9 one-channel TV set...need(ed) in underdeveloped countries...." - **Richard Barnett and Ronald Müller, Global Reach, The Power of the Multinational Corporations.**

"...President Truman's chief of staff, Admiral W.D. Leahy, told his boss about the atom bomb: 'This is the biggest fool thing we have ever done. The bomb will never go off, and I speak as an expert in explosives.'"

"...The press as a whole refused to believe the Wright Brothers for nearly five years (after their first flight). ...Editors discarded invitations to witness numerous flights...."

"...Dr. Thomas H. Moray...used a simple antennae, (etc. per Nicola Tesla)...to generate large amounts of....electricity....During the 1930's he demonstrated (this)...even under the water....(It) weighed about 55 lbs. and was capable of obtaining 50,000 watts of power on a steady basis. (It) utilized a transistor more than 20 years before anyone (else; of) germanium. The (REA) Rural Electrification Administration...was ordered (by President FDR) to work with Dr. Moray on his invention, which took twenty years and \$200,000 of his own money to develop. An REA engineer...smashed the Moray Device with an Axe. ...Dr. Moray was shot in a gun battle that took place in his lab...In 1973 Lt. Colonel Thomas Bearden, a nuclear engineer with the Army Missile Command, wrote of the Moray experiment which he had witnessed: 'It was ...a legitimate, widely recognized demonstration that got electricity out of the thin air.'" - **Tom Valentine, Editor, Newsreal, "Suppressed Inventions" issue, June 1977.**

"...William Bolton('s) Rialto, Calif., (auto) steam engine weighed less than 50 pounds and eliminated the usual transmission and drive train...Detroit (asked) the inventor ...to sign forms releasing....his claims to the design before they would even look at it. After a Sun-Telegraph article..his factory was fire bombed to the tune of \$600,000

(Eric Cottle's)"ultra sonic fuel system...'vibrate(s) existing fuels to much smaller particles'.. (winning) congratulations from...(June 17, 1974 Newsweek, etc.). Later ...silence. Cottle... explained that Detroit was so myopic that they would probably turn down even the wheel if it were a newly offered invention."

"In his Suppressed Inventions, Mike Brown...tells of Gulley (who) could supposedly get 115 MPG out of his big 8 cylinder Buick, using his (fuel) vaporizing" (carburetor). - **John Freeman, Suppressed and Incredible Inventions.**

"An investigation was initiated by the FDA, EPA, NCI, and the Inspector General of HEW, and evidence revealed that IBT (Industrial Bio-Test Labs, Inc.) deliberately falsified data submitted on potential carcinogens, and four major pesticide manufacturers were aware...but...silent. 1,781 (tests) required auditing. ...94% of tests...for cancer caus(ation) were invalid....The Wall Street Journal reported that EPA is asking 235 chemical companies to reexamine 4,363 IBT tests that were crucial in obtaining federal clearance to market 483 different pesticides.' (Feb. 21, 1978) ...The average (%) invalid, (of 1,781) tests...studied was 75%." - **Ida Honorof, Report to the Consumer., Aug 1981.**

"...we are on a collision course with disaster. Our poor farming practices are laying the groundwork for a severe disaster in American agriculture...By destroying farmland and water resources...the erosion of American Farmland today is probably at a record high....this simply cannot go on." - **Secretary of Agriculture, Bob Bergland, Oct. 1979.**

"Using spinach, we had two rows of bugs, then (rows of) no bugs, two rows of bugs then no bugs. Not because we sprayed (pesticides), but because we got a different condition (natural fertilizer) in the soil under, (the rows of no pests)." - **Dr. William A. Albrecht, U. Missouri, to US Congressman James J. Delany, Hearings, Chemicals in Food Products.**

"Despite a tenfold increase in the use of pesticides between 1947 and 1974 (in the US), crop losses due to pests have...remained at an estimated 33%. Losses due to insects alone have

nearly doubled, ...from 7% in the 1942-1951 period to about 13% in 1974."

"During the drought years 1970-1974, the total value of agricultural exports from Sahel(Africa) was three times that of all cereal imported...The governments have pressured farmers and skewed every conceivable program to favor export production..(over) food crops (for native nutrition)...(Exports) earn foreign exchange...used to enable government bureaucrats and better-off urban workers, to live an imported life style....In its need to extract wealth from the colony,...the increasing landlessness of the many...In Bangladesh...a landlord (will) sabotage irrigation, (etc.)...because he does not wish his tenants to prosper and become less dependent. (I think that's called deciding to rule in hell.) - **Frances Moore Lappé and Joseph Collins, Food First, Beyond the Myth of Scarcity.**

"...I took a pen name for sending the leaflets (protesting pesticides)...Discovery...had...result (that): Planes had come and dropped their pesticides upon (my) apiaries."

"Hugh McDonald, an organic farmer...stated on television in LA that he did not use insecticide because of the relationship of cancer...Within days, banks demanded payment of his loans, and packing house officials...(took) control of his grove prior to picking. ...They placed guards upon his ranch and threatened to spray all his trees." - **Laura Tallian, The Pesticide Jungle.**

"Kenneth Little, San Diego County Agricultural Commissioner: (In)'some of the Japanese beetle traps (used to assess need of pest control)..people are placing (on purpose)...Japanese beetles..."

"Floyd Morrow, Councilman: 'And how did they know it was a Japanese beetle (they were putting in the trap)..."

"K. Little: '...they are pretty expert at it."

"F. Morrow: ' You mean they...to sell a lot of insecticide?"

"K. Little: 'I think it's (like) ...a false fire alarm.'" -**Laura Tallian, People's Lobby, Politics and Pesticides.**

"Four distinct groups of bacteria survive pasteurization....the strep of pasteurized milk are the most frequent cause of rheumatic fever --the most deadly disease of childhood." - **USDA**

"...Cartels...(drove) independent (milk) distributors out of business....The small (milk) producer couldn't afford the excessive cost of pasteurization machinery,...manufactured by the (cartel)."
- **American Capsule News, Jan. 19 & Feb. 9, 1957.**

(For)"Deaths of children under 15 years attributed to scarlet fever, diphtheria, whooping cough, and measles...90% of the improvement in death rate had already occurred prior to the introduction of immunization and the use of antibiotics." - **Alan Kass, BA, MD, Fellow Royal College of Surgeons, Edinburgh and many other credentials, There's Gold in them Thar Pills.**

"I see little hope for a nation that values the health of its livestock more than that of its people.... Farmers are not criticized for routinely giving their (live)stock nutritional supplements....superior to any sold for humans...Millions of families could plant home gardens if they truly wanted health. Refined food are practically unknown in Russia. The life expectancy of the 40-year-old American is near the lowest in the world." - **Adelle Davis, MS, Biology, USC Med. School., Let's Get Well.**

"...People who would not think of feeding a dog (junk)...eat such foods with abandon...There has never been a successful feeding of a synthetic diet to several successive generations of animals." - **Roger J. Williams PhD, discoverer, Vitamin B-5; pioneer, folic acid; President, American Chemical Society, etc, .etc., Nutrition Against Disease.**

"Artificial vitamins...are not balanced by...associated factors...and lead...to compensatory deficiency of other vitamins..."

"Crystalline vitamins are made...by the treatment of...natural source material with...chemical solvents: Ether..., Benzene..., Toluene...then precipitant(:) barium..., lead..., aluminum..."

"Synthetic vitamins ...(are) made from cheap materials." - **Raymond Bernard, PhD, "Natural vs. Synthetic Vitamins", Health Research.**

"The degree to which patients desire to control their own fate is continually underestimated by physicians. For the most people, diet is the easiest health measure to manipulate." - **Jan van Eys, MD, PhD, in ACS, Nutrition and Cancer, 1978.**

"...the NCI...Annual planning Project Requirements (says that) by July 1, 1975, it is estimated that 670,000 people in the US will be working on cancer." - **June Goodfield, The Siege of Cancer.**

"...Modern biomedical science clings to the Inquisition...Censorship by the reviewers for a journal...is anonymous...Most biomedical scientists cannot keep up with the volume of even specialized articles. ...In times of limited funding...A lottery could equally well...distinguish the 'worthy' from the 'unworthy' grant proposals. ...The anonymity of the closed peer review (is a) dire threat(:) ...signing reviews will dispel this threat....No true censor can tolerate public exposure." - **T.J. Sernka, PhD, "Biomedical Free Speech." Physiology, Chemistry, and Physics.**

"We are aware of many cases in industry, government laboratories, and even universities where scientists have been retaliated against when their professional standards interfered with the interests of their employers or funders. This retaliation has taken many forms, ranging from loss of employment and industry-wide blacklisting to transfers and withholding of salary increases and promotions. We are convinced that the visible problem is only the tip of the iceberg." - **American Chemical Society President, Alan C. Nixon, (in Science, 1973).**

"...Lag...occurred between an initial discovery and its effective clinical application. We analyzed 111 such lags: 8% amounted to 0.1 to 1 year; another 18% were 1 to 10 years; 17% (lagged) 11-20 years;...39% (lagged) 21-50 years; only 18% required more than 50 years for application." - **NIH; Julius Comroe, Jr. MD, and Robert Dripps,MD, The Top Ten Clinical Advances in Cardiovascular-Pulmonary Medicine and Surgery 1945-1975. Jan 1977.**

"Several nutrition experts...believe that nutritional activities in general..are not adequately supported at the (NIH Clinical) Center."

"Harvard School of Public Health officials reported in the Oct. 1973...Journal, American Dietetic Assoc., ...that half of the nation's medical schools did not mention nutrition in any course description, and only 4% ...showed an independent course on nutrition as a requirement for all medical students." - **US General Accounting Office, 1979.**

"Many research...activities have been subject to the phenomenon called problem displacement, i.e. the substitution in organizational concern, of trivia for significant problems, since the latter appear to be unsolvable. Furthermore, in some organizations, goal displacement is evident: turning away from original goals and substituting means for ends." - **NCI, Planning Biomedical Research Programs, Feb 1974.**

"It is not possible to make a certain evaluation...that cancer may be arrested if 'caught early'." - **Hardin B. Jones, "Demographic Consideration of the Cancer Problem." 1956.**

"...No studies have established the much talked about relationship between early detection and favorable survival after treatment (by surgery, radiation, etc.)...Neither the timing nor the extent of the treatment of true malignancies has appreciably altered the average course of the disease." (e.g.: Cancer treated early shows a better 5-year survival rate, by merely observing the earlier, optimistic, part of an unswerving (?) cancer course. - Ed.) - **Hardin B. Jones, (Professor Donner Lab of Medical Physics, University of California Berkeley and Davis, etc.) in Cancer Control Journal.**

"My studies (show) untreated cancer victims actually live up to four times longer than treated individuals." - **Dr. Hardin B. Jones, (in Spotlight, 1981).**

"Complete Expectation of Life in Years (Remaining) for each sex at selected ages, Massachusetts, 1789-1929:

1789: Expectation of life in years, at ...age ...60: Male: 14.8 years; Female 16.1 years

1929: Expectation of life in years, at ...age ...60: Male: 14.0 years; Female 15.4 years

- **E. Sydenstricker, Health and Environment.**

"In 1972 the (WHO) World Health Organization issued its statistical report...for 34 countries...the life expectancy for persons who had already reached 65. ...23 of the 34 nations reported showed a drop in the life expectancy of their 65-year-olds from the previously recorded 1958 figures. Except Japan, all the highly industrialized nations were in this group of 23. - **Ivan Popov, MD, Stay Young.**

"United Nations...Population and Vital statistics (said that:) 88 nations of the world have a lower death rate, (fewer deaths per 1,000 people), than we (in US) have!"

"Although in America today life expectancy at birth is near the best of any civilized country in the world...at age 40, life expectancy is near the bottom..." - **New York State Medical Journal, Sept. 15, 1955.**

"...the incidence of cancer in children under 14 has almost doubled in little more than a decade, and that of leukemia has increased almost six-fold in the 50-year period ending in 1951." - **Emanuel Cheraskin, MD, DMD, All sorts of University credentials, Diet and Disease.**

"Beginning in 1940,...questionable grades of (low) malignancy were classed as cancer. ...the proportion of 'cancer' cures...increased rapidly..."

"If persons in the untreated...group die at any time in the study interval, they are reported...In the treated group, however, deaths which occur before completion of the treatment are rejected from the data, since these patients do not then meet the criteria...of the term 'treated'. The longer it takes for completion of the treatment,...the worse the error...."

"...The likelihood of treatment (of any one patient) increases with the length of time since the origin of the disease. ...Those cases in which the neoplastic process progresses slowly...are more likely to be transferred to the 'treated' category than to remain in the 'untreated'...." - **Hardin B. Jones, PhD, ACS 11th Annual Science Writers Conference.**

"...One of the side effects of (surgery, anesthesia,) X-ray..., and chemotherapy, is the suppression...of the patient's immunological defenses...A simple cold often leads to the death from pneumonia - and ('pneumonia') is what appears on the death certificate, not cancer." - **G. Edward Griffin. "The Hoax of the Proven Cancer Cure; A Second Look at Orthodox Therapy", Cancer Control Journal, 1977/1979.**

What is being left out here are the statistical tables that list dozens of alternative cancer treatment methods and their impressive success rates, also in MDAC are some unpleasant stats in the tables regarding orthodox treatment, such as: at the NCI a study was done on 35 patients getting chemotherapy; radiation and chemotherapy caused a 2900% increase in secondary cancers, another study of 200 child patients showed a 17,100% (!) increase in secondary cancers related to orthodox therapy.

"In the only two categories of cancer where good results from chemotherapy are generally acknowledged...(i.e.) in acute lymphocytic leukemia in children and in choriocarcinoma, the validity of (chemotherapy) is ...challenged. In leukemia the real benefit (is from)...concomitant use of corticosteroids and antibiotics; and in choriocarcinoma, the (differential) diagnosis between this and benign precursor, hydatid mole, is unreliable." - **Miles H. Robinson, MD, "who has taught and done research in physiology and pharmacology at the U. of Pennsylvania and Vanderbilt medical schools"; in Congressional Record, 1966.**

"...Every alternative cancer therapy would be judged in comparison to the so-called 'treatment of choice', not only in ...survival, but in...costs of treatment, freedom from pain, necessity of hospitalization, (etc.)...Statistics...should be available from the Cancer Establishment; (but) they have no reliable statistics, (or) records (are)...unobtainable and every effort to obtain them would be evaded...Once reliable figures are obtained, the bitter controversies over therapies can be resolved once and for all." - **Nat Morris (Morris Natenberg) International Association of Cancer Friends and Victims, Cancer News Journal, 1979.**

"The best estimates are that the medical system...affects about 10% of the usual indices for measuring health." - **AMA President, Dr. Richard Palmer.**

"(Reply on what constitutes scientific proof:)"The question is much too difficult for me." - **Albert Einstein (quoted by Dr. Carl O. Simonton, famous cancer researcher, author, Getting**

Well Again.

"It has been found that...changes in age, sex, hormonal status, diet and nutritional status, genetic factors, individual variation in the metabolic handling of chemicals, or the combined effect of different chemicals, all can alter the response of an individual to a chemical carcinogen; .differences in responses as high as 100 fold or 1,000 fold can be obtained by changing only one factor at a time." - **NCI Associate Director from Carcinogenesis, Dr. Umberto Saffiotti.**

".Humans were 60 times more sensitive to thalidomide than mice, 100 times...more than rats, 200 times more than dogs, and 700 times more sensitive than hamsters." - **Dr. Jacqueline Verrett, FDA, first to alert on cyclamates, top FDA chick-embryo tester; and Jean Carpenter, Eating May be Hazardous to Your Health.**

"The literature has become too vast to comprehend...It is...difficult to grasp even for workers in closely neighboring fields. ...There is much more reliance on word of mouth for the transmission of scientific data...gossip."

"Some of the shrewdest insight into natural processes have been greeted at the outset by the exclamation 'But that's ridiculous'."

"The most solid...piece of scientific truth that I know of,...is that we are profoundly ignorant about nature. Indeed, I regard this as the major discovery of the past 100 years of biology." - **Memorial Sloan-Kettering Cancer President, Dr. Lewis Thomas, "Hubris in Science?", American Assoc. for the Advancement of Science, June 30, 1978.**

"First a new theory is attacked as absurd. Then it is admitted to be true but insignificant. Finally it is seen to be so important that its adversaries claim that they themselves discovered it." - **William James (1842-1910) American psychologist and philosopher.**

...one-fourth to one-half of medical and paramedical terminology consists of synonyms, some...

obsolete...The micro-organism *Candida Albicans* has...more than 170 different names. ... Terms...have multiple, sometimes opposite, definitions. 'Nyctalopia' means night blindness in English, but in French it means day blindness. Some assign the designation 'petit mal' to 3% of all forms of epilepsy; others classify 80% of all seizures (thusly)." - **Jean Kennedy, and C.E. Kossman, M.D., "Nomenclature in Medicine", Bulletin of Medical Library Science, 1973.**

""...a random examination of 18 recent reports in the English literature on therapy and survival in lung cancer showed that eight different systems of histo-patho-logical nomenclature were used. Evidently, valuable data is being wasted due to poor comparability." - **L.H. Sobin, "The WHO's Programme for the Histo-patho-logical Definition and Classification of Tumors, 1971.**

"If too much salt is used in food, the pulse hardens." - **Ch'i Po, 2600 BC.**

"It is changes that are chiefly responsible for diseases, especially the greatest changes, the violent alterations both in the seasons and in other things. (:)...regimen and temperature, and one period of life to another." - **Hippocrates.**

"Men of learning began to set experiments aside...to form theories...and to substitute these in the place of experiments."

"As theories increased, simple medicines..were forgotten, at least in the politer nations. ... Medical books, were immensely multiplied,...(towards) an abstruse science, quite out of reach of ordinary men."

"Physicians now began to be..more than human. And profit attended employ...(for) keeping the bulk of mankind at a distance...They filled their writings with abundance of technical terms, utterly unintelligible to plain men...Those who understood only how to restore the sick to health, they branded with the name of Empirics. They introduced...compound medicines consisting of so many ingredients, that it was scarce possible for common people to know which it was that wrought the cure; ..., of chemicals, such as they neither had skill, nor fortune, nor time to prepare, yea, and of dangerous ones, such as they could not use..., but by the advice of a physician." - **John Wesley, Founder of the Methodist Church, MA, Oxford; (1703-1791) Primitive Remedies.**

"Medicine is a social science and politics is a medicine on a large scale...The very words 'Public Health' show those who are of the opinion that medicine has nothing to do with politics the magnitude of their error.: - **Rudolf Virchow, (1821-1902) founder of cellular pathology.**

"I spent a part of ...1923 with...Dr. W.W. Keen...In the ..Civil War....he was a surgeon...and had seen many men die from suppuration of wounds after he had operated. ...He would hold the sutures in his teeth and sharpen his knife on the sole of his boot, after he had raised up his boot from the muddy ground. That was the accepted practice at the time."

"...He went to Scotland and studied under Lister...("Lister was persecuted by the British Medical Association. He was threatened with having his license revoked.") Yet in Lister's hospital virtually no one died as a result of operations because Lister had developed a carbolic acid wash and disinfectant. Dr. Keen came back from Scotland...He was referred to as a crazy Listerite.....He was denied an opportunity to practice in every hospital in Philadelphia."

"Finally there was one open-minded surgeon in the great Pennsylvania General Hospital. He said, 'Let us give this young fellow a chance.' So they let him operate."

"...No one died from infection under Keen. ...He (Keen) began to chronicle the results in statistical articles. He was threatened with expulsion from the Pennsylvania Medical Association.....This was in the 1890's....Finally was accepted as the greatest surgeon in the US. The old man told me - and he started to cry...'I nearly went under. I was nearly shut off.' - **US Senator Paul Douglas, Congressional Record, 1963.**

"(...The Congress had exhibited) unequaled liberality in protecting our domestic animals against every sort of disease and pest." - **US Senator Matthew Neely, 1928.**

"Federal aid was extended...to the studies on the health of farm animals, while almost no funds were available for direct work on the disease of man...This was...prior to 1885...partly because human welfare brought no direct financial return. Hogs did." - **Richard Shyrock, American Medical Research, (1947).**

"Food additives are far safer in actual use than the basic natural food themselves." - **Dr. Frederick Stare, Dept. Nutrition, School of Public Health, Harvard.**

"It is wholly unscientific to state that a well-fed body is more able to resist disease than a less well-fed body." - **FDA's Nutrition Dept head, Dr. Elmer M. Nelson. in Gene Marin and Judith Van Allen, Food Pollution: The Violation of Our Inner Ecology.**

"...Next to tobacco and alcohol, meat is the greatest single cause of mortality in the US." - **John Scharffenberg, MD, Associate Professor, Applied Nutrition, Loma Linda U. Problems With Meat.**

"As any trauma in a cancer area tends to dislocate and disseminate cancer cells....No doubt many curable cases of external cancer have been made incurable by biopsy."

"...J. Ellis Barker's book, Cancer, Surgeon, and Researcher,...shows the cancer mortality rate of (:) Physicians and Surgeons - 70, as compared to Coal Miners - 61, Agricultural Labourers - 54, Clergymen and priests - 45." - (i.e. MD's have less survival, if they have cancer) - **John Tobe, Provoker Press, Cancer: How to Prevent and Gain Remission from Cancer.**

"That's the trouble with the conventional doctors. They always say, 'How does it work?' but often there isn't any neat little answer...Something simply works...We don't really know how it works. We say we do. We know one or two things we can see and measure..."

"There are plenty of quacks in the field. Fewer than you'd expect, though still plenty (in alternative medicine)." - **John Bradshaw, MD, Doctors on Trial.**

"The profession to which we belong, once venerated...-has become corrupt and degenerate to the forfeiture of its social position..." - **Dr. Nathaniel Chapman, first president, AMA, 1848.**

"Any system of medicine that offers complete coverage and relieves the recipient of making any direct contribution for his own medical care will lower his own health...Such a system is inherently wasteful....It offers endless opportunities for 'chiseling' on the part of both dispenser and recipient, and tends to the corruption of both." - **AMA House of Delegates, June 1952. in Richard Carter, The Doctor Business.**

"The individual who violates the rules in a zealous search for an answer to the problem may overstep the bounds and thereby suffer the loss of his relationships to the organized medical profession." - **Journal AMA editorial under Morris Fishbein.**

"Today, expulsion is again mustered into service in a war of ideology. ...Modern society makes its heresies out of political economy...Ethics has always been a flexible, developing notion of medicine, with a strong flavor of economics from the start." - **Oliver Garceau, Dept. of Government, Harvard U., The Political Life of the AMA (1941).**

"I invite your attention to the latest piratical development commonly known as the 'radio trust'. It would seem that human cupidity could not reach so far, or human insolence become so gross as to attempt...to withhold from the public use the instrumentalities of communication through the air; and yet that is exactly what a group of great capitalists are attempting through the organization of a huge monopoly." - **US Senator James A. Reed, (first term 1911-) this speech cut off air.**

"The American consumer has about one billion dollars invested in radio sets,...ten times greater than the inflated capital of commercial broadcasting companies. Yet the consumer... has delegated -by default- to the broadcasting companies and the program sponsors a power that he should have retained: that of regulating the traffic through his own receiving set. ...an unending stream of..false statements on the supposed merits of a long list of advertised foods, dentifrices, medicines, cosmetics..."

"Radio frequencies are recognized as public property by the Congress of the US." - **Peter Morell, Poisons, Potions, and Profits, c. 1937.**

"Most patent medicines depend for their success upon utterly false curative claims. ...Many people automatically believe anything they see in print - doubtless a holdover from early childhood, when the textbook was regarded as the acme of truthfulness..."

"...A prize of \$50,000 was offered for a successful treatment of cancer....Before the prize offered had expired almost 4,000 cures had been submitted....Not one was judged worthy of being tested in a cancer lab." (by ACS predecessor, ASCC) - **August A, Thomen, MD, Doctors Don't Believe it - Why Should You? c. 1941.**

(An)" incident (was) reported in Journal, AMA ...after more than 20 physicians failed to find the cause, the woman finally made the diagnosis herself. An investigation of the medical literature convinced her that she was suffering from lead poisoning. Subsequent testing revealed that she was right." - **Consumers Union, Health Quackery.**

"...Your company...will send drugs to all the underdeveloped countries of the world, and since they do not have any standards, we will fool them all and can make a great big profit and never tell the doctors that there is a risk.....You will meet the standards of the country in which you are advertising, not the...proper standard...I would think that you would not sleep at night....I do not think this country will not stand for it." - **US Senator Gaylord Nelson.**

"100,000,000 Guinea Pigs sparked a rising wave of consumer indignation. But...it takes a major catastrophe to carry legal and enforcement action over the hump of lethargy and inaction....Today, nearly forty years later, the situation is worse, not better." - **John Fuller, (Emmy Award producer of The Great American Dream Machine, 1970-71), 200,000,000 Guinea Pigs, c. 1972.**

"...The governments in the first world countries (should) stop their own companies from exporting drugs that are already banned or withdrawn in their own countries..." - **Consumer Association of Penang (Malaysia).**

"...The company...(:) ...they omit 'contra indications', they omit 'side effects' indications, they enlarge the spectrum of 'indications' ...in order to make of each drug ...a best selling..." - **a famous health activist writer**.

"The pharmacist says it's the doctor's responsibility, the doctor says it's government's or its manufacturer's responsibility, now the manufacturer is saying it's the government's (or local distributor's) responsibility. Everybody is passing the buck to somebody else."

"The International Organization of Consumer Unions has recently helped establish a global health information network." - **Robert Richter, Producer, "Pesticides and Pills: For Export Only", Non Fiction on Television, WNET, Ch. 13, NY 1981.**

"The association between cigarette smoking and wrinkling was striking in both sexes... Smokers in the 40-49 year age group were as likely to be prominently wrinkled as non-smokers who were 20 years older...Encourage young women (against smoking...(It is) ironic how much of the successful cigarette ads use youth and sexiness." - **Dr. H. Daniell**.

"Dr. Herlich found that 75% of the (balding) men between 21 and 22 years of age were heavy smokers." - **Don C. Matchan, We Mind If You Smoke**.

Section 5

"Health experts working on a union backed screening program to detect bladder cancer in a Georgia chemical plant were stunned when the local (ACS) cancer society not only didn't support the program, but tried to discourage participation in it." - **Jack Anderson, "Big Charitable Funds Bully Their Smaller 'Competitors'"**.

"A recent EPA action (:) ..that agency (EPA) is not only not publishing booklets, but they are destroying 86 of the 104 publications they have on hand. Most are objectionable to the chemical industry because they emphasize the danger of pesticides and chemicals." - **Caveat Emptor, Feb, 1982**.

"On Dec. 1, 1977...NBC Nightly News presented to the nation...that the possibility for a universal preventive does exist...NBC News spent several months checking out the data before airing the presentation. What was the result...? Three years of silence (to date) from the cancer establishment."

"...The AP and the UPI did not report upon the NBC News telecast, so nothing further appeared in the newspapers across the nation."

"...20 research institutions receive 50% of all NCI funding for cancer research annually!" - **Dr. Robert Netterberg and Robert Taylor, The Cancer Conspiracy.**

"The health establishment is a blood brotherhood known by the company it keeps, and these moguls need no oath or ritual as they work hand in glove with and for each other - if medicine benefits in the process, all to the good."

"...They are wise to the ways of Wall Street - and...getting their fair share of the loot.(;)...from who will be the head of NIH, to which honorary degree will go to whom, which congressman gets the campaign funds from AMPAC (the political arm of the AMA), and whether Medicare fees can be hiked a bit for the suffering specialist. ...(or) to nominate their favorite for a Nobel Laureate..."

"Cancer has pizzazz, box office and glamour, and in actual dollars and prestige, even heart and mental can't hold a candle to it. It's a health dodge with a future and everybody who's anybody is jumping in..."

"But cancer can also be fun with its luncheons, theatre parties, and fund raising luaus. ...What will they all do if a cure comes out of it? Considering how easily the March of Dimes conglomerate shifted gears after the polio vaccine, it should pose no problem." - **Edgar Berman, MD, teacher, John Hopkins Medical School. President, MEDICO, surgeon with Dr. Albert Schweitzer, 1st plastic transplant on human, 1st successful heart transplant on animal (dog); medical consultant to V. President Hubert Humphrey, medical school fellowships in nine countries), The Solid Gold Stethoscope.**

"...Physicians who are members of medical societies flock to the defense of their fellow member charged with malpractice, and the plaintiff is relegated...to the occasional lone wolf or

heroic soul who,...has the courage to run the risk of ostracism by his fellow practitioners and the cancellation of public liability insurance policy..." - **Justice Jesse Carter, Calif. Supreme Court, 1951.**

"...Loss of medical society membership...(:) Ethical condemnation can result in professional embarrassment and disgrace, loss of referrals and other patronage, deprivation of malpractice insurance, the withholding of claims reimbursement by health insurance carriers, possible loss of hospital staff privileges, and denial of speaker and exhibitor status at professional society meetings. ..."

"The most notorious application of AMA contract practice restrictions resulted in the criminal conviction of AMA...for violating the Sherman Act by attempting to restrain the development of...(an HMO) through the use of boycotts...AMA vs. US. This conviction did not deter AMA and its affiliates from continuing to implement the same underlying contract practice restrictions against similar proposed arrangements..."

"In fact, petitioners' (AMA's) long history of illegal behavior strongly supports the need for remedy to reverse the effects of restraints of trade they have imposed. And although petitioners (AMA) are now quick to admit their past conduct was unlawful, they have not been so quick to mitigate the effects of their past violations." - **US Dept. of Justice, brief filed in US Supreme Court (in Caveat Emptor, 1982.).**

"I shudder to think what a Martian astronaut...would think of our courts and what goes on, or does not go on, in them. As to the judges, what would he think of certain of them, in theory elected by the public but in fact hand-picked by political leaders for purely political purposes irrelevant to merit?" - **Francis Plimpton, President, New York City Bar Association (in Richard Ney, The Wall Street Gang).**

"....The International Association of Cancer Victims and Friends...tells of a (recent) raid against one of their public meetings by the Nassau County New York D.A. during which several people were arrested, handcuffed, and dragged away...Their homes were searched..." - **March 1975 - Institute of Nutritional Research, Nutritional Therapy.**

"...The AMA, National Health Council, FDA, American Pharmaceutical Association, Federal

Trade Commission, Arthritis Foundation, Council of Better Business Bureaus, and the US Post Office (were together) operating under the name 'Coordinating Conference on Health Information'....Minutes of these meetings (were) ("obtained through the Freedom of Information Act"). ...The prime mover of the gathering was (the) head of the AMA's Department of Investigation...(who) also was overseeing...AMA's Committee on Quackery..."

"...The FDA...against chiropractic....not only intended to 'take the products off the market, but it would initiate criminal actions involving advertising agencies...promoters, and also the people doing the research."

(In contrast)"...although the Federation of State Medical Boards estimates that 16,000 doctors are unfit to practice medicine, an average of only 66 licenses a year are revoked, nationwide. - **"The Great Conspiracy to Stamp out Quackery", Freedom, 1978.**

"...Galen...was...forced to flee Rome to escape the frenzy of the mob....Vesalius was denounced as an imposter and heretic...William Harvey was disgraced as a physician...William Roentgen...was called a quack and then condemned..."

"In...1535, when...Jacques Cartier found his ships...in...the St. Lawrence River, scurvy began...and then a friendly Indian showed them (that) tree bark and needles from the white pine - both rich in...Vitamin C - were stirred into a drink (for) swift recovery. Upon returning to Europe, Cartier reported this incident to the medical authorities. But they were amused by such 'witch-doctor cures of ignorant savages' and did nothing to follow it up..."

"It took over 200 years and cost hundreds of thousands of lives before the medical experts began to accept...Finally, in 1747, John Lind..discovered that oranges and lemons produced relief from scurvy...and yet it took 48 more years before his recommendation was put into effect....'Limeys' would soon become rulers of the 'Seven Seas'..."

"In 1593, Sir Richard Hawkins noted and later published, in observations on his voyage into the South Seas, references that natives of the area used sour oranges and lemons as a cure for scurvy, and a similar result was noted among his crew. ...In 1804, regulations were introduced into the British Navy requiring use of lime juice....(and) into law by the British Board of Trade in 1865....It took two centuries to translate empirical observations into action..." - **Maureen Salaman, MSc, Nutrition, the Cancer Answer.**

"The Indians had no scurvy and neither did the few daring (Pilgrim) Colonists who followed the Indian custom of drinking hemlock tea. (They) were accused of being protected by the devil

from the illness. ...Those free of (scurvy) were put under surveillance and suspected of hemlock tea drinking. Amazingly, most people chose to have scurvy, rather than be ridiculed or burned at the stake as witches." - **Thelma Arthur, MD, Journal of American Pathology and Bacteriology, 1975.**

"Societies that eat unrefined foods produce large stools and build small hospitals; societies that eat fiber-depleted foods produce small stools and build large hospitals." - **Denis Burkitt, MD, in Nutrition for Optimal Health News, Fall 1981.**

"...One health study comparing poor to non-poor areas of Chicago found that the poor areas had a 60% higher infant mortality rate, a 200% higher incidence of premature births, 200% more new cases of tuberculosis, and a 100% higher death rate from cancer of the cervix. In the country as a whole, the maternal death rate for non-whites is four times that of whites. In the city slums there is three times as much heart disease, five times as much mental disease, four times as much high blood pressure, and four times as many deaths before age 35 as compared to the national averages. ...In 1969, at least 400,000 children were found to be suffering from lead poisoning - most of them in the older ghetto(s)..." - **R. Feldberg, in "Science for the People", Issues of Health Care.**

"...The (giant cereal) company had published in 1942 (that:) The rats who got nothing but water and vitamins lived for about eight weeks....But the (company's) own laboratory study showed that rats given vitamins, water and all the Puffed Wheat they wanted died in two weeks. ... Putting the grain under 1500 PSI (pounds per square inch) of pressure....may..produce...a poison...The president of the company (said:) 'I know people should throw it (puffed cereals) on brides and grooms at weddings, but if they insist on sticking it in their mouths, can I help it? Besides we made \$9 million on the stuff last year (early 1970's).'" - **Paul Stitt, Fighting the Food Giants.**

(In) Leicester....Clean Streets, clean markets and dairies, efficient garbage removal, sanitary housing and a pure water supply, took the place of vaccination scars, with the notable result that...in the much vaccinated and revaccinated British Army and Navy, the death rate (from smallpox) was three times as high (as Leicester's)."

"..The population of England and Wales is more than four times as high that of the Philippines, and the number of vaccinations per 100 persons in the (Philippines) Islands was over 26 times that in England. Yet the total of smallpox fatalities in England and Wales for ...1911-1920 was

only...14 for each year, as against a yearly average of 7,533 fatalities in the Philippines." - **Anne Riley Hale, The Medical Voodoo. (c. 1935).**

"Nearly half of the world's rain forests have been destroyed...Every year we are losing some 6 million hectares (over 2 million acres) of arable land, going out of agriculture to... desertification. ...29 million acres of agricultural lands were converted to non-agricultural uses (urban sprawl - ed.) in the US in the past ten years. ...Coastal land and breeding grounds for over two-thirds of the world's fisheries are being degraded or destroyed...Over 1,000 animal and some 25,000 plant species are today threatened with extinction." - **from the United Nations Environmental Programme.**

"The practice of laying birthing mothers flat on their backs was initiated to satisfy...Louis XIV! (who) got his kicks by peering from behind a curtain while his mistresses ...gave birth. ...His vision was obscured when the women were seated on birthing stools. ...The law of gravity had been repealed. ..Intra-abdominal pressure...during labor.(;) the greatest pressure was exerted in the sitting position. ...Squatting alters the pelvic shape (and) makes it advantageous for delivery." - **Robert Mendelsohn, MD, Male Practice: How Doctors Manipulate Woman.**

"Though it is hard to believe, it is conservatively estimated that 25 to 50 million Americans carry trichinae larvae in their muscles and internal organs. ...If the (trichinosis) worms affect the heart, respiratory systems, or the nerves, severe symptoms or even death may result.

"Amebic dysentery is endemic throughout the world, affecting 17.6% of the population. In the US, it affects 13.6%. ...No one..really knows the extent of the parasites and the diseases they cause." - **Ruth Winter, Poisons in Your Food.**

"...Keep in mind the comparative effects of different altitudes, latitudes, temperatures and races, and...note the similarity of reactions of these (14) primitive groups when (dietary) contact is made with our modern civilization(;) ...Susceptibility to dental caries (tooth decay)... data reveal an average increase in susceptibility of 35 fold (3500%)." - **Weston A. Price, MS, DDS, on Research Committee of American Dental Association, Nutrition and Physical Degeneration.**

"...Pets are found to suffer from all the ailments known to the human..."

"...Humans were the only creatures in the world that ate their food cooked. You'd never find a Gorilla frying up some bananas for dinner or a lion charcoal-broiling a zebra steak. Cats don't often run to the oven with a mouse or bird they've captured, and a dog wouldn't naturally prepare its rabbit dinner in a stew." -**Dick Gregory, comedian, and Alvenia Fulton, Dick Gregory's Natural Diet for Folks Who Eat.**

"... I had to depend on Braille for my reading and guide for my walking...I am now wearing no glasses, reading and all without strain...by taking lessons in seeing...optometrists hate the method..."

"Every guild and trade has its own...private patriotism, which makes it resent all rebellion from within and all competition or criticism from without. ...Vested Interests. The manufacture of optical glass..." - **Aldous Huxley (author 45 books: Brave New World, The Art of Seeing (c. 1942, 1975).**

"...Pesticides manufactured by...Oil Companies are....why such a high percentage of farmers are sick with cancer. The medical people..blame the sun for their cancer. Is the sun any different today than it was in the past?" - **Anonymous, Cancer: American Holocaust.**

"...around 1972 or '73, we stopped including in our calculations all skin cancers except melanoma, the only one that's fatal, and also in situ cervical cancers, because many experts don't consider these to be cancers at all. Since together they account for a large number of cases, that could be why the incidence has gone down." - **ACS vice president of Public Information, I. Rimer.**

"I never even heard from the ACS - in five years no one from there has even called me." - **Benno Schmidt, Chairman, President's Cancer Panel (including ACS president Dr. Lee Clark, for five years) in US hearings, House.**

"When 253 of the professionals on the NCI staff were asked in a 1974 survey to indicate

problems adversely affecting their job performance at the Institute (NCI), half cited 'widespread lack of confidence in the scientific acumen of the decision-making hierarchy, and a third complained of the 'shortage of qualified and technical personnel'." - **Ruth Rosenbaum, "Why America is Losing the War on Cancer", New Times (1978).**

"In the year following the 1979 NIH Consensus Conference which deemed the radical mastectomy obsolete, 11,000 woman received this treatment." - **Maryann Napoli, (Editor, Health Facts) Breast Cancer: A Critical Look at Early Detection." - National Women's Health Network Newsletter, May 1982.**

"Analysis of survival curves of women with breast cancer suggests that two or more populations exist, with about 40% suffering fatal outcome unaffected by treatment. The remaining 60% exhibit a relative mortality only modestly different from that of women of similar ages without evidence of disease. Increasing detection of an entity that is histologically defined as malignant but biologically benign (exists)." - **Maurice S. Fox, PhD, Biology Dept., MIT, Journal AMA, 1979.**

"Six of the ten leading causes of death in the US have been linked to poor nutrition. ..Various nonfatal conditions have also...(e.g. dental decay)."

"The AMA and the Nutritional Foundation sponsored a 1962 conference...after an AMA survey found that 'Medical education and medical practice have not kept abreast of the tremendous advances in nutrition knowledge.' ...The situation has not changed, according to an August 1978 Senate Committee Report..."

"(A) review (of) the 1978 National Board Exam for..nutrition questions (shows) 3 to 4 percent of the questions were on clinical nutrition..."

"...Social, ethnic, economic, and cultural factors..affect food selection."

"...We suggest that interested groups outside of the federal government initiate action..." - **US General Accounting Office, Greater Efforts Are Needed to Improve Nutrition Education in US Medical Schools, Jan 1980.**

"...Rodale Press (publisher of Prevention)...in 1965, ...brought out a ...book ...Health Finder... on..April 3, 1964, the FTC served the publisher with a show cause order in an administrative cease-and-desist proceeding...Rodale...spent nearly five years fighting for a right guaranteed every American..."

(for)"instance(s) of a federal agency,,,censor(ing) publications...a long list of books could be cited, including those of Gaylord Hauser, Dale Alexander, LeLord Kordel, Dr. Royal Lee, Dr. Herman Taller,...Paul C. Bragg,...Joseph Boardman, MD,...H. Curtis Wood, Jr, MD,..." - **Omar Garrison, The Dictocrats, Our Unelected Rulers.**

"An Athenian citizen does not neglect his state because he takes care of his own household; even those of us who are engaged in business have a very fair idea of politics. We do not regard a man who takes no interest in public affairs as harmless. We do not say that such a man 'minds his own business'. Rather we say he has no business here at all." - **Pericles, (495-429 BC).**

"..A democracy always collapses over loose fiscal policy...The average age of the world's greatest civilizations has been 200 years. These nations have progressed through this sequence: from bondage to spiritual faith; (next) to great courage;...to liberty;...to abundance;...to selfishness;...to complacency;...to apathy;...to dependence;...back again into bondage." - **Alexander Tyler, Cycle of Democracy, 1770 AD.**

"..The press has become the greatest power within the Western countries; more powerful than the legislative, the executive, the judiciary." - **Alexander Solzhenitsyn, Nobel Literature Laureate, Soviet emigré. 1982.**

"...In ancient times the people lived to be over a 100 years, and yet they remained active...But nowadays people reach only half of that age and yet become decrepit and failing...There was temperance in eating and drinking. Their hours of rising and retiring were regular and not disorderly and wild. ...Nowadays, people..adopt recklessness as usual behavior...They devote all their attention to amusement(s)..." - **The Yellow Emperor's Classic on Internal Medicine. (c. 479-300 BC).**

"In ancient India, organ transplants, involving bone, earlobe, nose and other tissues, were pretty much 'a matter of routine' some 5,000 years ago." - **John Heinerman, Understanding Herbal Medicine.**

"He who would eat much must eat little, for by eating less he will live longer, and so be able to eat more." - **Luigi Cornaro, 1538 AD.**

"Only by understanding the wisdom of natural foods and their effects on the body, shall we attain mastery of disease and pain, which shall enable us to relieve the burden of mankind." - **William Harvey, (1578-1657 AD).**

"Every one should be his own physician. We ought to assist, and not to force nature. Eat with moderation...Nothing is good for the body but what we can digest. What medicine can procure digestion? Exercise. What will recruit strength? Sleep." - **Voltaire, (1694-1778 AD).**

"The famous physician Dumoulin said when dying, 'I leave two great physicians behind me, simple food and pure water.'" - **Voltaire.**

"The best doctors are Dr. Diet, Dr. Quiet, and Dr. Merryman." - **Jonathan Swift, (1667-1745).**

"The mischievous effects from lead have been known to scientists for at least 60 years. You will observe how long a useful truth may be known to exist before it is generally received and practiced on." - **Benjamin Franklin (1706-1790), 1786.**

(Save) "opium, which the Creator himself seems to prescribe, for...pain to be soothed;...and

wine...; and I firmly believe that if the whole (remaining medicine of) materia medica, as now used could be sunk to the bottom of the sea, it would be all the better for mankind - and all the worse for the fishes." - **Oliver Wendell Holmes, Sr., MD, (1809-1894).**

"It is not as if our homeopathic brothers are asleep: far from it, they are awake - many of them at any rate - to the importance of the scientific study of disease." - **Sir William Osler, (1849-1919); "Father of Modern Medicine".**

"We labor under the fatal delusion that no disease can be cured without medicine. This has been responsible for more mischief to mankind than any other evil. ...Disease increases in proportion to the increase to the number of doctors in a place."

"Illness or disease is only Nature's warning that filth has accumulated in some portion or other of the body; and it would surely be the part of wisdom to allow Nature to remove the filth, instead of covering it up with the help of medicines." - **Mohandus K. Gandhi.**

"I think doctors care very deeply about their patients, but when they organize into the AMA, their responsibility is to the welfare of doctors, and quite often, these lobbying groups are the only ones that are heard in the state capitols and in the capitol of our country." - **Jimmy Carter, 1978.**

(My chemotherapy is) "death in a bottle." **Hubert H. Humphrey.**

"...It seems that public officials are afraid that if they make any move, or say anything antagonistic to the wishes of the medical organization, they will be pounced upon and destroyed. ..Public officials seem to be afraid of their jobs and even of their lives." - **US Senator Elmer Thomas, In Morris A. Bealle, The Drug Story. c. 1949 and 1976.**

"It is our understanding that the NIH with FDA approval, clinically test at least 100 products a year on cancer patients. We feel Krebiozen deserves a similar test. Why should either side be afraid of the truth? - **US Senator Paul Douglas and ten other senators (in Chicago's American, 1966).**

"I think every doctor should know the shocking state of affairs...We discovered they (the FDA) failed to effectively regulate the large manufacturers and powerful interests while recklessly persecuting the small manufacturers. ...(The FDA is) harassing (small) manufacturers and doctors...(and) betrays the public trust." - **Senator Edward V. Long. 1967.**

"I could not move them. They would not even agree to a modification, of the ruling (banning the Rand vaccine), which would at least allow the 100 (cancer) patients at Richmond Heights (Ohio) to complete their injections. The Justice Department was prepared to go along, but the FDA commissioner, Dr. James Goddard, was adamant, even belligerent. It's wrong of the government to snatch away this hope when there is no evidence against its use offered in court. It's damnably wrong." - **US Senator Stephen Young, (in Len Gutridge, "How the US Government is Blocking a Cancer Cure", Saga, 1968.**

"Dr. Lawrence Burton....in fighting cancer.(:) Many of his patients are now living normal lives after being told there was nothing more the conventional treatments could do for them, and that death was imminent....Why are Americans being forced to go off shore for treatment for cancer from an American doctor and for a program that was developed in America?" - **US Congressman Larry P. McDonald.**

"In 1962, the FDA tried to prohibit the sales of vitamins and minerals in all but very limited potencies and combinations, by first classifying, and then regulating them as prescription drugs. Congress blocked it at that time, unanimously adopting a resolution offered by Senators Bill Proxmire and Dick Schweiker..."

"However, FDA attempted to reverse this clear congressional intent in March, 1979, by proposing to regulate vitamins and minerals as 'Over-The-Counter' drugs.."

"As was noted in the Wall Street Journal, last March 21st, FDA approval of drug labelling, '...

requires seven to ten years, and costs each applicant an average of \$70 million." - **US Senator Orrin Hatch, Chairman, Commission on Labor and Human Resources, Oct 1981.**

"Indeed, after the testimony...I was convinced that the NCI does not adequately protect patient safety. ...Every hearing we have held on this subject this year is evidence to the world that there is critical need for better management at NCI....When the NCI did learn of this drug's life-threatening effects on humans, the NCI did not promptly inform the FDA and all of its clinical investigators."

"Your assurances to me...that the adverse reaction controversy was resolved have left significant question of credibility. Each time we meet, you tell me you have solved the problems that we are now pointing to." - **US Senator Paula Hawkins, Oversight of the National Cancer Institute, 1984, Hearings, US Senate 1981.**

"The AMA puts the lives and well being of the American citizens well below it's own special interest...It deserves to be ignored, rejected, and forgotten. No amount of historical gymnastics can hide the public record of AMA opposition to virtually every major health reform in the past 50 years....The AMA has turned into a propaganda organ purveying 'medical politics' for deceiving the Congress, the people, and the doctors of America themselves." - **Senator Edward Kennedy, in UPI National Chronicle, 1971.**

"...you can extend your life tremendously by eating the right things. By eating right you can combat almost everything: disease, fatigue, over-work..."

"Holland gets by on a total of four food additives; we have over 1,400."

"...Other countries are way ahead of ours in nutrition." - **US Congressman Fred Richmond, Chairperson, Subcommittee on Domestic Marketing, Consumer Relations and Nutrition.**

"This is a blatant attempt (by OSHA supervisors) to rid the government of a competent scientist who happened not to agree with an industry whose profits are at stake. (Government scientists) may be forced by political hatchetmen to abandon widely held views, in favor of the line currently advocated by industry." - **US Congressman, Albert Gore, Jr., in**

subcommittee, 1981.

"...Prevent postal investigators from aggressively interfering with, or closing, a commercial enterprise merely because it has been deemed not to adhere to the prevailing body of scientific opinion - whatever they have determined that to be."

"After examining some of the recent cases which the Postal Service has pursued, vigorous prosecution of, for example, a health food advocate." - **US Congressman Vin Weber, Congressional Record, 1982.**

"If the administration is really serious about free-market energy policies, then I suggest we join together to root out the billions of dollars of subsidies we now give each year to petroleum, gas, coal, and nuclear industries. But if this administration will not or cannot do this, then they should at least stop trying to kill the emerging new technologies that are arising to compete with those older sources of energy." - **US Congressman Berkley Bedell, in Sun Times, 1983** (Amen!)

"I can't be bought, but I can be rented." - **US Congressman J. Breaux. 1982.**

"The basis of sound science is solid difference of opinion. When I was Director of NCI, I found myself rescuing people who incurred the displeasure of certain groups or their superiors. I did it three or four times. And I did it because they were good scientists." - **Dr. Arthur Upton , Director, NCI. 1982.**

"I have had some very interesting work with Dr. (Andrew C.) Ivy, and have had what I think, unusually good results with Krebiozen. Due to the controversy which was stimulated by adverse quarters, it was Army policy not to allow me to continue with this particular type of research project. I feel that Krebiozen, or perhaps a similar substance, is certainly on the threshold of finding an answer to some of our malignant (cancer) problems." - **Wallace H.**

Graham, Major General, US Air Force; physician to US President, letter in 1952.

"Variety is not only the spice of life, it may be the staff of life."...

"Unfortunately, in a terrible blow to natural-products chemistry in the US, the Board of Scientific Counsellors, Division of Cancer Treatment, NCI, voted on Oct. 2, 1981 to abolish the NCI research program concerned with the development of anti-tumor agents from plants. On the other hand, the synthetic drug development program was left intact, though reduced. ... Pharmaceutical firms...have clearly signaled their relative disinterest in natural products. ...The search for natural drugs, the safest and economically and/or ecologically most desirable types, has been abandoned in the US." - **James Duke, PhD; Chief, Germplasm Resources Lab., and Economic Botany Lab, "The Spices of Life", (Unedited discussion draft, neither approved nor expected to be approved by NIH of the USDA").**

"I have never and will never approve a 'new drug' to an individual, but only to a large pharmaceutical firm with unlimited finances." - **FDA, Bureau of Drugs Director, Dr. J. Richard Crout, 1982.**

"In 1950, the NCI of the US Public Health Service established a program for study of environmental chemical factors in cancer. Within a few years, a Dr. ..., then director of the Institute of Industrial Medicine at NYU, told me that he had been retained by a group of chemical industries to call upon the Surgeon General and object to studies conducted under this program. He stated that his objection had been successful, and that all field studies by the NCI in this program would be stopped. They were."

"A few years later, I showed this same gentleman data indicating a cancer hazard for man employed in another industry that had retained him as a consultant. He advised me to keep out of this problem, and shortly thereafter, notified me that my appointment as associate professor of industrial medicine at NYU would not be renewed. It was not renewed." - **Dr. William E. Smith; Hearings subcommittee on health and science, US House of Representatives, 1957. in Pulitzer Prize winning journalist William Longwood, Poisons in Your Food. (c. 1960).**

"In 1981, the AFL-CIO and..the Teamsters, urged (Thorne) Auchter (Director of OSHA) to act immediately...three authoritative governmental studies had projected 999 cancer deaths out of 1,000 workers exposed to EDB (Ethylene Di-bromide, a pesticide) at the existing OSHA limit. ...

Instead Auchter embarked on a time-consuming rule-making process that ignored the urgency..." - **Ida Honoroff, Report to the Consumer, 1984.**

"...A charge of conflict of interest against former OSHA Director Thorne Auchter (is) being examined by the FBI. ...Auchter resigned as head of OSHA to become president of (a company). Earlier, he had dismissed a series of twelve OSHA violations against the same company." - **Health Policy Advisory Center, Health PAC Bulletin, 1984.**

"In my practice as surgeon, I am impressed by the alarming increase of cancer cases brought to my notice; an increase, which in the light of the general hygienic and sanitary improvements of our time, can point to no other cause than the indulgence in certain foodstuffs detrimental to normal life of the body." - **Dr. Charles Mayo, Mayo Clinic (in Richard Welch, New Hope for Cancer Victims).**

"...the opinion has frequently been advanced by ancient and modern writers that there is a direct relationship between diet and cancer frequency, and particularly...in regard to the excessive consumption of salt and meat. The per capita rise in the meat consumption of the principal civilized countries has often been referred to as a causative factor in the corresponding rise in the cancer death rate." - **Dr. Frederick L. Hoffman, chief statistician, Prudential Life Insurance Company (author, Cancer and Diet); The Mortality of Cancer Throughout the World. c. 1914.**

"Food is infinitely the most important problem of the present day and, if properly dealt with, must result in the disappearance of the vast bulk of disease, misery, and death. - **Sir Arbuthnot Lane, MD, famous surgeon, England.**

"The relationship of nutrition to cancer has received much attention in the past ten years...Diet and nutrition must be considered by all investigators in the cancer field, and not only by those who happen to be specifically interested in nutrition...It is now well established that a diet restricted to approximately two-thirds of ...ad libitum (maximum desired) effects a significant reduction in...tumors...; in the mouse (; and) the incidence of spontaneous breast tumors is significantly increased...by a high fat diet; (as are)...skin tumors..."

"At the present time, there is a widespread interest in the relationship of nutrition to tumors...A natural diet contains a more adequate quality, quantity, and balance of essential components than our present day synthetic diets." - **Albert Tannenbaum, MD, Director, Department of Cancer Research, Michael Reese Hospital, Chicago, 1944 and 1945. in Peter Barry Chowka, "The NCI and the Fifty Year Cover-up", East West Journal, 1978.**

"Dietary deficiencies lead to malfunctions of the body that cause cancer." - **Dr. Ernst L. Wynder, President, American Health Foundation.**

"...the self-satisfied dogmatism with which mankind at each period of its history cherishes the delusion of the finality of existing modes of knowledge." - **Alfred North Whitehead, in Netterberg/Taylor, The Cancer Conspiracy. c. 1981.**

"Now and then, in all ages and at all levels, exceptional individuals appear who rise above current concepts, who seem to be actuated by higher principles and greater humanity. Perhaps such individuals are outstanding in that they refuse to accept commonly held basic assumptions." - **Karl Menninger, MD, Founder, Menninger Clinic.**

"In 1946, Oxford University in England was offered large funds to create a new Institute of Human Nutrition. The University refused the funds on the ground that the knowledge of human nutrition was essentially complete, and that the proposed institution would soon run out of meaningful research projects." - **Rene Dubos, Professor Emeritus, Rockefeller University.**

"...These healers...my intellect has been unable to assimilate their theories....But their facts are patent and startling; and anything that interferes with the multiplication of such facts, and with our freest opportunity of observing and studying them, will, I believe, be a public calamity." - **William James, in Boston Transcript, 1894.**

"...The inertia of the human mind, and its resistance to innovation are most clearly demonstrated..by professionals with a vested interest in tradition and in the monopoly of learning. Innovation is a two-fold threat to academic mediocrities; it endangers their oracular authority, and it evokes their deeper fear that their whole laboriously constructed intellectual edifices may collapse." - **Arthur Koestler, The Sleepwalkers. both above in Brian Inglis, The Case for Unorthodox Medicine.**

"...As Thomas Kuhn pointed out in The Structure of Scientific Revolutions, new scientific theories in any field are regarded with skepticism because scientists become attached to the old perspective earlier in their careers." ...

"Whatever the rationale, the suppression of unorthodox cancer therapies and the sustained persecution of their proponents by government and colleagues runs counter to freedom of thought, much less freedom of choice." - **Marilyn Ferguson (author The Aquarian Conspiracy) "Are Promising Treatments Being Blacked Out?", Leading Edge Bulletin, 1980.**

"..Innovation is necessarily alternative...The advance is early branded as heresy ("quackery, charlatanry, fraud, hoax") to be condemned and proscribed without serious testing by all respected, responsible members of the virtuous elite."..

"In the past century over 100 methods have been offered by independent researchers as aiding in recovery from cancer. ...contrary to the nihilistic litany of cancer bureaucrats that there is 'no evidence.'" - **Robert Houston, "The War on Answers", Our Town, 1978.**

"A frequent criticism of wholistic medical practices is that they have not been scientifically validated by research studies, published in peer-review journals. Individuals making this criticism imply that they, the established conformists, are peers of the innovative, unorthodox, and truly creative individuals who are bringing about the next step in the evolution of medicine. The fact is that such innovators have no peers. They stand alone on the leading edge of science." - **Elmer M. Cranton, MD, President, American Holistic Medical Association, in Holistic Dental Assoc., The Communicator, 1981.**

(The system is)"fostering...a climate of conformity, not by the total suppression of dissent, but by the presentation of views falling outside the consensus as curious heresies, or, even more effectively, by treating them as irrelevant eccentricities, which serious and reasonable people may dismiss as of no consequence." - **R. Miliband, The State in Capitalist Society. c. 1969.**

"...The system of influence and control..is highly skewed in favor of the corporate and financial system. And this dominant influence is felt not only in universities, foundations, and institutions of higher learning, but also...from media to all other instruments of communication." - **Vincente Navarro, (Professor of Health and Social Policy, John Hopkins U., and other credentials).**

"It's not what you know, but who knows what....At the heart of the matter is society's tendency to insist on credentials before listening seriously to a claim of new discoveries or ideas. ...Only rarely...does the public acknowledge that an unknown and unanointed person may have noteworthy capacities." - **Fred Hechinger, of and in New York Times, 1981.**

"...That genius is a rare exception (:) It's not true. Talent and genius have been wasted on enormous scale throughout our history; this is all I know for sure." - **Eric Hoffer. (author, The True Believer, and Thinking and Working on the Waterfront.,...).**

"We live in a society that penalizes highly creative individuals for their non-conformist autonomy. This makes the teaching of problem solving in design both discouraging and difficult. A...student (has) massive blocks against new ways of thinking, engendered by some 16 years of mis-education..." - **Professor Victor Papanek (Dean, School of Design, Calif. Institute of Arts). on Design for the Real World, c. 1971.**

"The Catch-22 in any funding system is the inability of those not funded to complain - by definition, they are the unchosen, and hence their testimony is suspect." - **Federation of American Scientists, Public Interest Report, 1980.**

"Scientists and technologists are ordinary human beings. ...susceptible to...herd instinct, following the leader, and falling for fashions. ...Fashions rage among scientists. ...Big instruments make us force-fit our problems to the solution....As our instruments push us toward picoseconds, and one angstrom, and parts per billion, we get ultimately reductionist in a sense, while the real problems go far beyond our data and papers, to the survival of local industry, and international trade, and nuclear annihilation." - **Rustum Roy, Director Materials Research Lab., Penn State U., (in American Lab, 1982.)**

Section 6

"...The Chinese in the 9th century AD utilized a book entitled The Thousand Golden Prescriptions, which described how rice polish could be used to cure beri-beri, as well as other nutritional approaches to the prevention and treatment of disease. It was not until twelve centuries later that the cure for beri-beri was discovered in the West, and it acknowledged to be a vitamin B-1 deficiency disease." - **Jeffrey Bland, PhD, Your Health Under Siege: Using Nutrition to Fight Back.**

"...In 1540..Ambroise Paré...persuaded doctors to stop the horrid practice of pouring boiling oil on wounds and required all doctors to wash thoroughly before delivering babies or performing surgery....(in) 1844...Ignaz Semmelweis in Vienna proved...that clean, well-scrubbed doctors would not infect and kill mothers at childbirth. For his efforts Semmelweis was dismissed from his hospital...(and) despite publication, his work was totally ignored. As a result he became insane and died in an asylum, and his son committed suicide."

"As a chemist working for the US Government in 1916 on the island of Luzon (Philippines), (R. R.) Williams, over the opposition of orthodox medicine, had managed to eradicate beri-beri...by persuading the population to drink rice bran tea. In 1917, Williams was recalled to the US, and thereafter orthodox medicine discouraged anyone from drinking rice bran tea, so by 1920 there were more beri-beri deaths on Luzon than in 1915. ..In 1934, R.R. Williams (now) at Bell Telephone Labs., discovered thiamine (vitamin B-1), and that thiamine in rice bran both prevented and cured beri-beri."

"Christian Eikman in Holland...shared the Nobel prize for Medicine in 1929 for Proving in 1892

that beri-beri was not an infectious disease..." - **Wayne Martin, BS, Purdue U.; (author, Medical Heroes and Heretics, and "The Beri-beri analogy to myocardial infarction.", Medical Hypothesis.**

"(in)"1914...Dr. Joseph Goldberger had proven that (pellagra) was related to diet, and later showed that it could be prevented by simply eating liver or yeast. But it wasn't until the 1940's... that the 'modern' medical world fully accepted pellagra as a vitamin B deficiency." - **G. Edward Griffin, World Without Cancer.**

"In the 1850's, Ignaz P. Semmelweis, a Hungarian doctor, discovered that childbed fever, which then killed about 12 mothers out of every 100, was contagious...and that doctors themselves were spreading the disease by not cleaning their hands. He was ridiculed... Opponents of his idea attacked him fiercely....(and) brought on (his) mental illness....(he) died a broken man." - **Salem Kirban, Health Guide for Survival.**

"Vesalius, a...layman, was born in 1514 (AD) ...He ...found things different from Galen's ideas. He found also that a man has just as many ribs as a woman, despite the fact that God used one of Adam's ribs to create Eve. He..prepar(ed) a new book on anatomy. It was not from the Church that he suffered persecution...His fiercest opposition came from his colleagues, and he had to abandon his position as an anatomy instructor. In disgust, he burned his books and gave up the study of anatomy altogether. Later he was made court physician. It is fortunate that he was not able to burn all his books and many remained in other hands. In due time, these books proved that Vesalius was far ahead of his day." - **Carl J. Scherzer, The Church and Healing., c. 1950.**

"Cotton Mather..asked (his slave) if he had ever had the pox. The slave...answered, 'Yes and no,' ...(and) explained that his tribe in Africa had the custom of (inoculation). Mather seized the idea as his own and today is credited with...introducing inoculation to the New World." - **Hugh Drummond, MD, (in Mother Jones, Foundation for National Progress, A Sourcebook on Health and Survival.)**

"Marshall Hall...was rejected, reviled, and ridiculed, but his work concerning the reflex action of the spinal cord was finally recognized....Bodington...taught that tubercular patients needed fresh, clean air as part of their cure. His medical colleagues execrated him and called him a

charlatan, but were later forced to admit that his work was logical and correct." - **Donald Law, PhD, DBM, Psy.D., A Guide to Alternative Medicine.**

"In Boston, somewhat later (than 1842), medics ask for - and get - a law permitting bathtubbing only on possession of a prized medical prescription."

(In)"1844...Dr. William T. G. Morton, two years out of...dental college...runs into sulphuric ether. ...the birth of anesthesia. ...Physicians and surgeons labeled him a 'quack', even while they hurry to capitalize on (it). (Morton) died a pauper."

"Sister Elizabeth Kenny, an Australian nurse...showed...how to cure...infantile paralysis....(by) apply(ing) hot packs to the paralyzed limbs...(She was) ordered to leave the country." - **Morris A. Bealle, The Drug Story, 1949.**

"Dr. Carlos Finlay knew the cause of yellow fever, but because he had not carried out experiments to 'prove' it, he was laughed off the rostrum at a medical meeting. Twenty years later, Dr. Reed found that Findlay had been right all along. How many died in the interim while the establishment waited for what they would accept as 'proof'?" - **Herald of Health, 1977.**

"What if Major Walter Reed had not listened and learned from an old Scotch-Cuban physician, Carlos Finlay, that yellow fever was due to a mosquito and not from the dank marsh air? Or contaminated feces? The great medicoes in Washington and elsewhere thought Reed was crazy and had done everything in their power to discourage him and his human-volunteer experiment - which finally scientifically proved the cause of the fatal 'Yellow Jacket'."

"What of the mob howling and throwing stones outside the house of Dr. Crawford W. Long, the discoverer of ether anesthesia?"...

"What of Frederic Gibbs, the brain researcher, who demonstrated one of the first electro-encephalographs in America? At an AMA meeting in 1934, the machine was publicly called a 'fake'. By...'eminent physicians'..." - **Herbert Bailey, A Matter of Life or Death, the Incredible Story of Krebiozen.**

"...Until 1954, great and wonderful discoveries were based on what is now called (disparagingly) 'anecdotal evidence'....In 1921, 29 year-old Frederick Banting in Canada, on no one's payroll and with \$500, discovered insulin. ...A controlled study on insulin for diabetics would have been a legal form of murder....(:)...50 patients in one group...would have been given no insulin. They would have died....In 1923....Banting shared the Nobel prize in medicine for his anecdotal discovery of insulin."

"It took orthodox medicine 57 years to understand and accept Sir William Osler's teaching that a heart attack involved a blood clot in a coronary artery, followed by a myocardial infarction." - **Wayne Martin, We Can Do Without Heart Attacks.**

"Penicillin sat on a shelf for ten years while I was called a quack." - **Sir Alexander Fleming.**

"The intolerance and fanaticism of official science toward Eijkman's observations (that refined rice caused beri-beri) brought about the death of some half million people on the American continent in our own century alone between 1900 and 1910." - **Josue Castro, The Geography of Hunger.**

"From about 1850 until the late 1930's, one of the standing jokes in the medical profession, was about a few idiots who called themselves doctors, who claimed they could cure pneumonia by feeding their patients moldy bread. ...Until...they discovered penicillin...in moldy bread!" - **P.E. Binzel, MD, in Thomas Mansell, Cancer Simplified, 1977.**

"The proponents of new or unproven methods of cancer management(:)...A few hold PhD or MD degrees....They may have multiple unusual degrees....from correspondence school." - **American Cancer Society (ACS), Unproven Methods, 1971.**

"...60 advocates of unorthodox therapies whose credentials are given in the ACS book (above). (:) Of these 60, thirty-nine or almost two-thirds, hold...medical degrees from such universities as Harvard, Illinois, Northwestern, Yale, Dublin, Oxford, or Toronto. Two are osteopaths. 3... also hold...(PhD's)....scientific....reputable....8 others received PhD's in such fields as chemistry, physiology, bacteriology, parasitology, or medical physics, from...Yale, Johns

Hopkins, UC Berkeley, Columbia, and NYU. Thus over 75%...are medical doctors or doctors of philosophy in scientific areas." - **Ralph Moss, The Cancer Syndrome. c. 1980.**

"Radium will not cure cancer. It only destroys cancer tissue within a certain radius, but does not drive the disease from the blood." - **Dr. Francis Carter Wood; V. President, ASCC (American Society for Control of Cancer, which changed to ACS in 1944); Professor Emeritus, St. Luke's Hospital, NY.**

"...Doctors' investment in radium...the price of radium increased 1,000% when they began to use it on cancer victims..." - **E. Josephson, MD. both above in Emanuel M. Josephson, MD, Your Life is Their Toy. before 1949.**

"Research in the US has been seriously affected by restrictions imposed by foreign cartel members. ...It has attempted to suppress the publication of scientific research data which were at variance with its monopoly interest. ...The hostility of cartel members toward a new product which endangers their control of the market(:)...In the field of synthetic hormones, the cartel control has been ...detrimental to our national interest." - **US Assistant Attorney General, Wendell Berge, Cartels, Challenge to the Free World. - in Eleanor McBean, The Poisoned Needle.**

"Indeed, dietary regimens are among the cruel and deceptive practices used by 'quacks' in attracting healthy people as well as cancer patients to follow their approaches and dangerous philosophy." - **Dr. Vernon R. Young, Dept of Nutrition and Food Science, MIT and Dr. Paul M. Newberne, "Vitamins...." ACS, Proceedings of the National Conference on Cancer Prevention and Detection. - 1980.**

"Questions arise with respect to ACS's accumulation of assets beyond the amount required for next year's budget."...

"...For many years, the primary focus of the (ACS's) promotional and fund-raising materials has been the need for funds for research, for which (research) the percentile allocation (by ACS) has actually declined over this ten year period."...

"...The percentage of...research to total expense has ranged from a high of 36.8% in fiscal 1967, to a low of 27.1% in fiscal 1975. During the same ten year period, total assets have increased about \$110,300,000, from about \$76,500,000 to \$186,800,000; and total expenses have increased...to about \$113,900,000." - **NIB (National Information Bureau), "ACS" 1978.**

"...The ACS raised over \$180 million last year through its network of 58 Divisions and 3,000 local Chapters. The Society's major public campaign is aimed at reducing smoking and cancers related to it. Yet...the ACS has but a single (lobbyist) in Washington DC. The industry-supported Tobacco Institute, on the other hand, has a ten million dollar budget which supports dozens of Washington staff." - **Michael Jacobson, Director, Center for Science in the Public Interest, in Heartland, 1982.**

"We are guilty of pussyfooting in a number of areas like this (diet and prevention)." - **American Heart Association (AHA) Deputy Executive Vice President, John T. Connolly.**

"Question arises whether if AHA received more in contributions, the additional money would go to research. ...AHA's assertion that it was 'forced to decline many (research) applicants deserving of funding because the money was not available to them' is misleading to contributors." - **NIB Report, 1979.**

"...The NIB (is) an independent charity watchdog organization..."

"...The AHA (is) the second largest private charity in the US. (First is the ACS - Ed.) - **Peter Barry Chowka, "Laying Bare the Heart Disease Industry: the 25 Billion-Dollar-a-Year Dead End." East West Journal, 1980.**

"Last year American's gave over \$6 billion to public health charities. But where are those charities when the Congress moves to dismantle OSHA or to weaken standards over substances linked to birth defects?" - **Belita Cowan, Exec. Director, NWHN (National Women's Health Network), NWHN Newsletter, 1982.**

"'Reach for a (cigarette) instead of a sweet' - ...advertising slogan..(of) Albert Lasker, (with) Mary Lasker, health philanthropist, and originator of the Lasker Awards, an American version of the Nobel Prize. ...and Memorial Sloan Kettering trustees." - **Ralph Moss, Cancer Syndrome.**

"...Before the introduction of paramedics, less than 1% of the patients that suffered a cardiac arrest...lived through...With paramedics...23% (of same) go back to productive work in society. We think that's pretty amazing. ...However, relating that to the medical community is sometimes very difficult." - **J. Dolphin, paramedic.**

"...Only physicians are likely to be regarded as competent to judge the qualifications of potential physicians, so licensing boards in the various states...are typically composed..of physicians,...members of the AMA. The boards, or the state legislatures...give the AMA the power to influence the number of persons admitted to practice (by) lengthy training,...(and) the list of 'approved' schools and hospitals (which) is generally identical with the list issued by the Council on Medical Education and Hospitals of the AMA." - **(Nobel Laureate) Milton and Rose Friedman, Free to Choose.**

"...The physician may continue to enjoy his title and pursue his practice, although he may have violated every rule of professional honor and every principle of morality. It is surely time that this anomaly were rectified." - **AMA President, Alfred Stille, Transactions of the AMA, 1871.**

"...To mix yourselves up with an organization (e.g. homeopathy) for which every member of the regular profession has a sovereign and immitigable contempt(:) the AMA and all our colleges would unquestionably place the medical department of your university under the ban, and cease to recognize your pupils." - **AMA President Samuel Gross; Proceedings of the Michigan Institute of Homeopathy, 1867.**

"...Any such unnatural union as the mingling of an exclusive system, such as homeopathy, with scientific medicine in a school,...(will) render every school adopting such a policy unworthy of support of the profession." - **AMA, Transactions AMA, 1855. - All three above in Harris L. Coulter, PhD, The Conflict Between Homeopathy and the AMA.**

"Our reasons for being in political action are exactly the same as the AFL-CIO's. Exactly." - **AMA Vice President James Sammons, on Phil Donahue Show, TV, November 22, 1982.**

"..The House of Representatives...voted...to exempt the business practices of state-licensed professionals ("including doctors and dentists") from (FTC) Federal Trade Commission jurisdiction. ..The 208 Representatives who voted for the AMA/ADA backed position received more than twice as much (on average) from those (AMA/ADA political action committees) PACs as the 195 Members who voted for the compromise." - **Common Cause, "\$3.3 million in PAC money Pays Off in Key Legislative Victory for AMA and ADA, Common Cause Study Shows", 1982.**

"Even Hitler could not control his physicians, as seen from the report of Dr. Karl Beghart, who was called in to treat R. Heydrich, the Chief of the Security Service..., who had been shot:

"..By daily personal telephone calls from Hitler and Himmler in person, asking for information, very many suggestions were naturally made...I did not hesitate to take personal responsibility and state my own view....I refused, in reply to direct demands, to call in any other doctor, not even Morell (Hitler's personal physician) or (Ferdinand) Sauerbruch. Heydrich died in 14 days"

- **Thomas Preston, MD, Professor, The Clay Pedestal: a Re-examination of the Doctor-Patient Relationship, c. 1981.**

"....An incongruity exists between the training of the dental health team and the influence of diet and nutrition upon oral health. Little or no time has been allocated in the dental curriculum on this subject. - **Herman Corn, President, American Society of Preventive Dentistry.**

"Though few dentists let it out that dentin is continuously growing inside the tooth throughout our lives, the dental research literature leaves no doubt about this fact. ...It is the body's repair response..." - **Soaring Bear, Natural Dental Wellness.**

"Although the stated purpose of licensure is to benefit the public...Consumers...have learned that licensing may add to the cost of services, while not assuring quality....Charges...the legal sector that licensure restricts competition, and therefore unnecessarily increases costs to consumers....Like other professionals, dietiticians can justify the enactment of licensure laws because licensing affords the opportunity to protect dietiticians from interference in their field by other practitioners...This protection provides a competitive advantage, and therefore is economically beneficial for dietiticians" - **ADA President, Marilyn Haschske, JADA, 1984.**

"The chief of the Department of Agriculture's Bureau of Chemistry (FDA now), Dr. Harvey W. Wiley...wrote a book telling...how those ("Pure Food and Drug Laws") had been scuttled from within the government. Wiley...turned his precious manuscript over to a printer. That manuscript mysteriously 'disappeared'...Dr. Wiley valiantly returned to work, rewriting his book from scratch. This chore occupied him totally for ten years. ...His volume, The History of a Crime Against the Food Law was a primer on government corruption...When distribution began in 1929,...books disappeared rapidly from bookstore shelves. Yet no letters were received from readers,...and virtually no reviews. ...Copies could not be found anywhere. In desperation Dr. Wiley put the few remaining books in libraries around the country - they disappeared from libraries as quickly as they had from the stores." - **William Duffy, Sugar Blues, c. 1975.**

"..In 1963...I had the audacity...to publish a list of beneficial cancer treatments, where to obtain them, and what doctors were using them. Not long after (this was) published by my friend, an arsonist set fire to (his building's) first floor and completely gutted it. Firemen (stopped) the fire just (before) his apartment. ...After the firemen told my friend that he could return to his apartment, the police stepped in and said no he couldn't, whereupon the police ransacked the apartment and even took the man's money which they never returned to him." - **Arlin Brown, Health Victory Bulletin, 1982.**

"...My first book K - Krebiozen - Key to Cancer? (:)...An ad for the book placed in the Times ... the freest of the large circulation newspapers...The Times categorically refused a second ad... The Time's medical counselors had advised against accepting an ad..."

"...I went to the Main Branch of the New York Public Library, the largest in the world. The librarian-in-charge advised me that...the author 'went against' the AMA (and) it was decided that this book (K-Krebiozen..) was to be 'taboo'." - **Dr. Ivy.**

"Dr. Ivy (co-author of 1500 articles)...sent his article (on Krebiozen) to one medical journal after another. The journals accepted his article for publication, only to return it with apologies. ...Dr. Ivy was informed that the publi(shers) were told by the AMA Headquarters they would lose all their revenues from pharmaceutical advertising if they published Ivy's article. ...Finally, in desperation, Dr. Ivy turned to a small general publisher ("Henry Regnery, Chicago") and arranged for publication of his medical work." - **Herbert Bailey. A Matter of Life or Death: The Incredible Story of Krebiozen.**

"In cancer, the fertilization of the cell-nucleus is produced by the virus phase of the microbe - of a streptothrix in sarcoma - of commonly a staphylococcus in carcinoma(:)..the cell invaded... and the nature of the microbe..determines the particular form of tumor." - **William M. Crofton, MD, Lecturer in Special Pathology, U. College, Dublin, Ireland, The True Nature of Viruses. c. 1936.**

"Crofton's work was bitterly attacked, and he found it impossible to publish articles, although others confirmed his techniques and results."

"A quick survey of the cancer papers in many medical journals will convince any reader who can plow through them that much research is trivial or of no consequence." - **Dr. Robert Netterberg, and Prof Robert Taylor, The Cancer Conspiracy. c. 1981.**

"...George Crile, Jr. a Cleveland (Clinic) surgeon, was rebuked by the Ethics Committee of the Cleveland Academy of Medicine for expressing in a newspaper interview his opinion that radical mastectomy was archaic and no longer necessary." - **Thomas Preston, MD, Professor of Medicine, University of Washington; Director of Cardiology US Public Health Hospital, Seattle. etc., The Clay Pedestal, c. 1981.**

"..The incidence of cancer among the ...nurse-anesthetists was three times the expected rate. .. When I presented the data at the annual meeting of the Anesthesiologists....Several of the anesthesiologists present even went so far as to call the Editor of the IARS Journal....., and ask him to withhold publication of the paper. ...I was dropped without explanation from the ASA

Committee of Effects of Trace Anesthetics on Health." - **Thomas H. Corbett, MD, U, Michigan Medical School, Professorship, awards, etc.**

"When a person is found innocent of a crime...He can never be tried on the same charge again. But in these cancer cases...a given doctor can be yanked into (administrative) court again and again on any charge. It's a crime that a professional doctor is not given the same privileges as a criminal." - **Howard H. Beard, ScD, PhD, Yale U., The Anthrone Test.**

"...One of the few growth industries in contemporary Britain is...alternative medicine. ...A survey of the attitude of 100 young trainees in family practice revealed the 86 had a positive attitude toward alternative medicine. Of these, ...12 made referrals to non-medically qualified practitioners - a step that only a few years ago would have led to disciplinary action by the General Medical Council..."

"...The debate has gathered momentum since the British Holistic Medical Association was formed and since the Times published three major articles on various aspects of alternative medicine by Ruth West and Brian Inglis..."

"The president of the Royal College of Physicians of London, Professor Raymond Hoffenberg ...could understand why patients with cancer seek alternative methods of treatment, and why any physician would welcome an unequivocal demonstration that a malignant tumor could be cured by any form of alternative medicine."...

"..The Prince of Wales is immediate past-president of the British Medical Association...The British Royal Family has long had a high regard for homeo-pathic medicine, and....the Prince made a plea to doctors to remember old-fashioned, traditional methods of healing." - **John Lister, MD, "Current Controversy on Alternative Medicine", New England Journal of Medicine, 1983.**

"...Paul Crowther...herbalist in the British Isles...could recall at least six old cancer remedies which were withdrawn from service about 100 years ago because they were also powerful abortifacients (induced abortion), the then medico-legal set up made it inadvisable to be caught with them on your shelf." ...

"British herbalists have for centuries used complex infusions which include Periwinkle against cancer. The Periwinkle is also the source of the Vinca Alkaloids used in orthodox treatment.

Why are the isolated alkaloids so poisonous in marginally effective doses, whereas the herbal infusions are effective without giving any signs of toxicity?"

"Some of the most valuable information has come by private information." - **Frank Hourigan, author, Shape of the Elephant, in letter to MDAC author, 1984.**

"The (modern, orthodox) medical care system does some things very well - principally emergency and acute care. Accident victims...need...mechanistic medicine - and fast." - **R.J. Carlson, JD, in Wholistic Dimensions in Healing, A Resource Guide.**

""...In most of the affluent populations I have considered, the prevalence of coronary disease is associated with the consumption of sugar. Since sugar consumption is only one of a number of indices of wealth, the same sort of association (to coronary disease) exists with fat consumption, cigarette smoking, cars..."

"Professor Ian McDonald of Guy's hospital in London...has found that, in young men, sugar raises the level of cholesterol in the blood, and especially...tri-glycerides."

"I did not agree..to having my article censored. ...The published report of the conference gives my name as a participant, but you will not find in it the paper I read. ...Scientists as a group are no more, and no less, influenced by emotional and irrational reactions than other people are."

"...Directors of a large food-manufacturing firm (:)...At one extreme (: one) said it was not his job to protect people from themselves; he was not forcing people to eat his products, and if they chose to do so at the risk of harming themselves, it was of their own free choice." - **John Yudkin, MD, Professor of Physiology and Nutrition and Dietetics, Queen Elizabeth College, London. Sweet and Dangerous.**

"What is the explanation for the blind eye that has been turned on the flood of medical reports on the causative role of carbohydrates in overweight, ever since the publication in 1864 of William Banting's famous "Letter on Corpulence"? Could it be related, in part, to the vast financial endowments poured into the various departments of nutritional education by the manufacturers of our refined carbohydrate foodstuff?" - **Robert C. Atkins, MD, Dr. Atkins Diet**

Revolution, c. 1972.

"Freedom of the press is reserved for those who own one." - **A. J. Liebling.**

"Business spends annually \$500 million to \$1 billion (in 1970's dollars) to promote its editorial and institutional point of view." - **Mark Green, "How Business is Misusing the Media." The New York Times, 1977.**

"My estimate is that about 94,000 cancer fatalities for the future are being induced with each year of medical diagnostic X-rays (in US)." - **John Goffman, MD, PhD, co-discoveror of four isotopes and four nuclear processes, Physics Professor Emeritus, UC Berkeley, and about five lines of other credentials, awards, inventions, books, etc**

"..Radiation...the biggest lobby ...in the world. It's involved in university research. ...industries... the whole medical profession..., the whole military establishment, and the economic and military policy of the country depends on people being willing to handle radio-active materials."

"The NCI sent (,)...to review our funding(,)...people connected with the nuclear establishment... It was a pretty much foregone conclusion, that if you send people in to review the funding, who stand most to be hurt by this research, the funding will be denied." - **Dr. Rosalie Bertell, Bio-statistician - Non Fiction Television, WNET, PBS, The Cancer War by Ralph Moss, PhD and others, 1983.**

"...The connection between TV and real life violence....NCTV has found 15 reviews of the scientific literature since 1976 and every one concludes that a causal connection exists. (i.e.. TV influences behavior, as advertisers well know - Ed.)...NCTV has now found 700 scientific studies and reports from the US and 15 other nations...The overwhelming consensus of this research is that a significant and important connection exists...All age levels, social classes, ethnic backgrounds, and IQ levels are negatively affected in a variety of ways."

(Other)"Clean up TV' (groups) make no mention of trying to decrease violence, only sex." -

NCTV (National Coalition on Television Violence), NCTV News, 1981.

"...Based on (1400) energy crisis stories seen on...CBS, NBC, and ABC (,) correspondents relied on government sources more than 55% of the time. ...Outside sources - independent experts... - were consulted less than 3% of the time. (On) possible solutions to the crisis, the government was consulted a whopping 77% of the time." - **"A New Study of Network Coverage Reveals Disturbing Omissions", TV Guide, 1982.**

"Day and night the telescreens bruised your ears with statistics proving that people today had more food...lived longer, worked shorter hours, were bigger, healthier, stronger, happier, more intelligent, better educated, than the people of 50 years ago. Not a word of it could ever be proved or disproved. ..The past was erased, the erasure was forgotten, the lie became truth. .. A party member is required to have...the right instincts. ...Attitudes demanded of him are never plainly stated...He is a person naturally orthodox...In Newspeak, the expression of unorthodox opinions, above a very low level, was well nigh impossible." - **George Orwell, 1984. c.1948.**

"...Poetic injustice...having made over Japan in our own image. The Japanese, ...are now, next to us, the greatest consumers of meat in the world." - **Mother Jones, A Sourcebook On Health and Survival.**

"The role and weight to be accorded medical testimony in Administrative hearings before the Post Office Department was established....These decisions enunciate a rule that informed medical consensus and the 'universality of scientific belief' may be established through the testimony of a (one, single - Ed.) medical doctor."

"If the fraud charges are proven, fraud order...is issued, a promoter can receive no funds through the mail..., shut off. All mail sent to him is returned to the sender marked 'Fraudulent'." - **J. Edward Day, Postmaster General, US Post Office.**

"The US Postal Service has prosecuted a disproportionate number of health book authors and publishers and chiropractors. The Post Office has refused to respond to our Freedom of Information Request for a copy of its policy manual which sets out the basis by which cases

are selected for prosecution. The (Post Office) will not open their consumer complaint files to the public or to the Congress so you can see if it is going after the real criminals. ...or...if anyone complained...except the AMA." - **Clinton Miller, Executive and Legislative Advocate, National Health Federation. - Last four paragraphs above in "Statement of Clinton Ray Miller...before the Subcommittee of Postal Personnel and Modernization", US House, 1982.**

"The Postal Service may require...that any officer or employee designated by the Postal Service be given access at reasonable times, to inspect or copy any books, records, documents, or other objects that the Postal Service has reason to believe relate to any matter under investigation..."

"Any person ...who fails to comply...or..engages in conduct which assists any such person to... fail to comply...shall be liable to the US for a civil penalty in an amount not to exceed \$10,000 for each day...Separate penalties may be assessed (\$20,000/day)...The resumption through the use of any instrumentality of interstate commerce of any activity with respect to which a cease and desist order has been issued... shall...be a failure to comply..." - **A Bill, S. 1407, with amendments, US Senate, 1981. (300 Co-sponsors in House).**

"Welcome to the new Dark Ages. Get ready for 1984....The (bill)would:...Authorize...600,000 post office employees to 'demand' 'access' without search warrant to any home, business, private library...'to inspect'...(; and) Forbid the shipment..not only by mail, but by any other 'instrumentality of interstate commerce' including airlines, parcel service, trucks or your own auto."...

"The history of medicine and health care shows that nearly all progress has started with unorthodox ideas which were opposed to the 'weight of informed medical and scientific opinion'." - **Maureen Salaman. President, National Health Federation in "Statement ... before the subcommittee on Postal Personnel and Modernization", on H.R. 3973 and S. 1407., 1982.**

"It is especially imperative for Congress to exercise careful judgment in this area, because of the difficulty under existing laws, in obtaining judicial review of Postal Service abuses. ...We strongly oppose the legislation's infringement of rights guaranteed under the First, Fourth, and Fifth Amendments to the Constitution." - **John Shattuck, Director, ACLU, Washington Office.**

"...The charges concern medical practices in fields where knowledge has not yet been crystallized in the crucible of experience. For in the science of medicine, as in other sciences, experimentation is the spur of progress. It would amount to condemnation of new ideas without a trial, to give the Postmaster General power to condemn new ideas as fraudulent, solely because some cling to traditional opinions with unquestioning tenacity." - **US Supreme Court, Reilly vs. Pinkus, 339 U.S. 269 (1949). Last two paragraphs from US House subcommittee, 1982.**

"Individuals for whom no orthodox cure is available surely are entitled to select a health care approach.....This right (is) specifically within,,,the 1st, 4th, 5th, 9th, and 14th amendments to the (US) Constitution....To be insensitive to the very fundamental civil liberties....(:) the choice... of the person whose body is being ravaged (by disease), is to display slight understanding of the essence of our free society and its constitutional underpinnings." - **Judge Luther Bohanon, US District Court, Oklahoma City, Dec 5, 1977, Rutherford v. US.**

"The freedom of the individual to select his preferred system of medical care and free competition among physicians and alternative systems of medical care are prerequisites of ethical practice and optimal medical care."

"A physician should expose, without fear or favor, incompetent or corrupt, dishonest or unethical conduct on the part of members of the profession." - **AMA, Current Opinions of the Judicial Council of the AMA, 1981.**

"Where medically significant alternatives for care or treatment exist, or when the patient requests information concerning medical alternatives, the patient has the right to such information." - **AHA, A Patient's Bill of Rights, 1972.**

"Congress did not intend to empower the FDA to interfere with medical practice by limiting the ability of physicians to prescribe according to their best judgment." - **US District Court Judge Robert E. Varner, decision, June 28, 1978.**

"...The 4th Amendment (:) the governing principle...is that 'except in certain carefully defined classes of cases, a search of private property without proper consent is unreasonable unless it has been authorized by a valid search warrant...' ...The manufacture and distribution of food and drugs has not yet been specifically held to be among these exceptionally regulated industries....The inspection of any place thought by FDA agents to contain the regulated articles....(is) ...an unconstitutional authorization of unlimited exploratory searches...." - **US District Court Judge Robert M. Duncan, July 14, 1977, FDA Search and Seizure.**

"At least one member of the (Medical Grievance Committee, Board of Regents, University, State of New York) which conducted the hearing evidenced a wholly unfair and partial attitude. ..This doctor effected a cure (of cancer) when the so-called orthodox methods of treatment had failed, and now he has been punished for it. It is not fraud or deceit for one already skilled in the medical art, with the consent of the patient, to attempt new methods, when all other known methods of treatment had proved futile, and least of all when a patient's very life had been despaired of. Initiative and originality should not be thus effectively stifled..." - **Appellate Division, NY State Supreme Court, Stammer vs. Board of Regents of University of State of New York, 262 App. Div. 372, 29 N.Y.S.**

"Utopians have no lawyers among them, for they consider them as a sort of people whose profession it is to disguise matters." - **Sir Thomas More (1478-1535).**

"When this country was originally formed...the first rule that was passed by every single body in the 13 original states said (that) two people shall be banned from this colony: felons and lawyers." - **Rosemary Furman (on Phil Donahue Show, Donahue transcript #12161.).**

"...If the American bureaucracy turns its attention on you (:) ...The men who sit in judgement on you will be the men who originally complained against you. ..You may...be ordered to stop doing something which is right. Perhaps you will be saved the burden of defending yourself by being tried in absentia. ..At a trial where all the witnesses testified in your favor,...the courts will nevertheless uphold your conviction...Final arguments were made in front of Commissioners, but the decisions were written in a secret back room by an entirely separate group of men." - **Lowell B. Mason, Commissioner, Federal Trade Commission, The Language of Dissent.**

(in Suzanne Caum, Cancer Cures Crucified).

"...Whole plants differ in their effects from refined drugs (:)...Plants are dilute preparations (of) the active principles...Plants usually go into the body through the mouth and stomach, whereas purified chemicals can be put...by snorting or injecting...directly into...bloodstreams without giving...bodies a chance to process them. Other compounds in drug plants...may modify the active principles, making them safer..."

"...Society's blunders in trying to control the abuse of drugs (:)...Prohibition of opiates (and other drugs and plants) has directly spawned an ugly criminal underworld...Addicts with habits costing \$100's a day...resort to daily criminal activity...to avoid unpleasant symptoms of withdrawal. ...Heroin maintenance...supplying addicts with pure (un-contaminated) legal heroin in (a) supervised setting (no: driving, firearms, health insurance - ed.) has been proposed...,but our society (is) unwilling to abandon its prohibitionist mentality. ...Major drug traffickers...are powerful enough to stay in business. Instead, drug law enforcement falls disproportionately on small-scale dealers and users. ...In some states, people convicted for small-scale dealings of drugs...are treated more harshly than rapists, armed robbers, and even murderers." - **Andrew Weil, MD, Harvard Medical School, Professor of Addiction Studies, University of Arizona and other credentials, and Winifred Rosen (author Cruisin for a Bruisin, etc.), Newberry Award nominee; Chocolate to morphine: Understanding Mind Active Drugs.**

"...A juvenile detention home (:)...Neither the boys nor the staff of the home were told that the aim of the menu changes was to reduce sugar intake, or that the boys behavior was being studied. ...The 24 boys on the sugar-reduced diet showed a 45% lower incidence of formal disciplinary actions than the boys on the earlier diet."

"With the repeated successes of nutritional methods, one would think that ortho-molecular treatment would be revolutionizing our criminal justice system. Unfortunately, it is not. Ignoring scientific evidence and thousands of clinical reports, many in psychiatric, law enforcement, and rehabilitation communities, still dismiss dietary treatment as quackery. The ortho-molecular approach isn't 'high-tech' enough; it isn't complicated and expensive, it doesn't require powerful drugs and armies of MD's - how could it possibly be effective?" - **Barbara Reed, Chief Probation Officer, Cuyahoga Falls Municipal Probation Department (testifier at US Senate select Committee on Nutrition and Human Needs); Nutritional Guidelines for the Counselor.**

Section 7

In 1979 US government appropriation to fight smoking: \$29 million;

In 1979, amount US government spent in price subsidies, farm loans, and other direct support for the tobacco industry: over \$1 billion. - **sheet found in ACS distribution shelf.**

"Since I have been associated with the NCI Advisory Committee for the Diet, Nutrition, and Cancer Program, I feel very strongly that nutrition research has been consciously ignored...by the NCI. The Advisory Committee's final resolution, before it was abolished, was that a minimum of \$15 million should be spent on new research programs. ...No such action was ever taken, even though Congress subsequently recommended that the NCI spend a minimum of \$7.5 million...At the time our committee was terminated, there was a backlog of 119 projects needing a total of \$26 million....I think people who have training in clinical human nutrition are oftentimes not individuals who are medical doctors, but people who have a training in nutrition by another, different route."

"...The juice of the lemon (:) consider the tremendous beneficial effects that this single dietary modification has had upon the seafaring nations...Uncomplicated solutions to seeming complex problems of the past are often ignored..." - **Peggy C. Fry, PhD, Assistant Professor and Chief Nutrition Service, Children and Youth Project, University of Texas Health Science Center, (In Nutrition and Cancer Research Hearings, Subcommittee on Nutrition US Senate 1978).**

"The AMA protects the image of the food processors by its constant propaganda that the American food supply is the finest in the world, and that (those) who question this are simply practicing quackery. The food processors, in turn, protect the image of the AMA and of the drug manufacturers by arranging for the USDA and its dietetic cronies to blacklist throughout the country and in every public library, all nutrition books written for the layman, which (:) preach simple, wholesome nutrition and attack ...both the emasculation of natural foods and orthodox American medical care, which ignores subtle malnutrition and stresses drug therapy, ("as distinct from vitamin therapy") for innumerable conditions. The drug manufacturers vigorously support the AMA since only MD's can prescribe their products." - **Miles H. Robinson, MD; Professor, University of Pennsylvania and Vanderbilt Medical Schools,**

exhibit in Vitamin, Mineral, and Diet Supplements, Hearings, US House of Representatives, 1973.

"During the early years of Hitler's regime, the government's medical program was looked upon by many observers as one of the greatest props in the totalitarian state." - **Canadian House of Commons committee report, March 16, 1943.**

"..The German government health insurance plan is obligated by law to pay for a special four week treatment with nutritional therapy in post-intensive care hospitals every year for up to five years after the intensive care of every cancer patient..." - **International Association of Cancer Victims and Friends, Dade County Chapter, Holy Cancer.**

" We found that medical expenses for people who had been paying at least \$10,000 a year decreased approximately 80% over the two years spent in our (holistic) program. ..Blue (Cross and) Shield is not likely to pay for what we do." - **C. Norman Shealy, MD, PhD, President American Holistic Medical Association; Self Help for Patients.**

"Dr. Nathaniel W. Boyd...was an invited guest speaker at the recent annual national convention of the American Osteopathic Association....He has treated more than 8,000 patients..Boyd's method (:) ..injection of sclerosing agents to promote fibrous tissue growth in weakened areas that cause hernias and hemorrhoids. ...His success rate with hernias is an incredible 95%. ...In 1974 Boyd's license was suspended for six months because he had advertised...As the Medicare program edges toward bankruptcy, it refuses ...to pay \$600 for non-surgical treatment of hernias, preferring instead to pay for the surgical methods, which today cost a minimum of \$3,000." - **Liberty Lobby, Spotlight, Feb 11, 1985.**

"Between 16 and 20% of every dollar paid in malpractice insurance went to compensate the victim; the rest was paid to lawyers and medical experts. In (malpractice) cases, doctors are vulnerable only to the charge of having acted against the medical code, or the incompetent performance of prescribed treatment, or of dereliction out of greed or laziness. The problem, however, is that most of the damage inflicted by the modern doctor does not fall into any of these categories. It occurs in the ordinary practice of well trained men and women who have

learned to bow to prevailing judgement and procedure, even though they know ("or could or should know") what damage they do."

"The USDHEW calculates that 7% of all patients suffer compensable injuries while hospitalized One out of every five patients admitted to a typical research hospital acquires an iatrogenic (Caused by the treatment process) disease, one case in thirty leading to death. Half of these episodes result from complications of drug therapy; amazingly, one in ten come from diagnostic procedures." - **Ivan Illich, Medical Nemesis, c. 1975.**

"...Patients in cancer wards being fed a hospital diet of syrup-stewed fruits, custard, ice-cream, pastries, pies, and adulterated, preserved vegetables, is demonstration of the most infamous professional negligence."

"The doctor (treating cancer:) No one expects more of him than he goes through the standard rigmarole. ...If he tried an unorthodox method and, even after a period of success, it failed, he could find himself the object of litigation. As long as he sticks to orthodox methods of certain failure, he is totally safe."

"...Alternative medicine has grown from (:) 'old wives tales'...common sense...experience and observations..."

"If a researcher, working in a well recognized field, makes a small discovery, it is likely to be published in a learned journal. ...a tiny step into the still unknown. ...However, let someone take an unexpected leap forward, ... and his action will tend to engender surprise, criticism, perhaps ostracism, and ...lack of acceptance." - **Dick Richards, MD, The Topic of Cancer: When the Killing Has to Stop, c. 1982.**

"..The Senate Aging Committee termed pacemaker fraud and abuse a billion dollar scandal, alleging that 30-50% of all pacemakers prescribed were not medically necessary." - **American Association of Retired Persons, 1983 Federal and State Legislative Policy.**

"..31% of all hospitalized patients on the medical wards suffered adverse affects that were probably or definitely drug related. ...At least 1% of all admitted patients...died of an apparent drug reaction. ...2 to 8% of all drug doses given in hospitals are in error: wrong drug, wrong dose, wrong route of administration, wrong patient, or failure to give the prescribed drug. ... (Calculate) this....%...applied to all patients admitted to all hospitals in the US: ...32 million

admissions per year..." - **Milton Silverman, PhD, biochemistry and pharmacology, Stanford U and U of California Medical School; President, National Association of Science Writers and many credentials, and Philip R. Lee, MD, Stanford U, Assistant Secretary for Health, USDHEW and other credentials; Pills, Profits, and Politics.**

"...The willingness of the representatives of both international and local capital to allow malaria to spread in some areas of the world is part of the repressive underdevelopment of those areas.....Only mosquito and parasite resistance (to pesticides) appears to be a 'purely technical' problem. ...Bureaucratic ineptitude could explain only the initial period (before)... widespread publicity and criticism of the programs..."

"...Capital tries to undercut...through shortages, especially in energy and food. ...Education in the US ...(:)...the campus upheavals of the late 60's have now been replaced by underdevelopment in the form of fiscal crisis, budget cuts, accountability, and restructuring." - **Harry Cleaver, Dept of Economics, U of Texas, Austin, "Malaria, the Politics of Public Health and the International Crisis", The Review of Radical Political Economics, Spring 1977.**

"...Americans...automatically equate dissension with disloyalty. They view any criticism of our existing social, economic, and political forms, as sedition and subversion. ...(" The growing reluctance of Americans to criticize, and their increasing tendency to condemn those who, in ever dwindling numbers, will still voice dissent") is disturbing, deplorable, and truly dangerous."

"Today's dissenters mainly focus their attention and expend their energies on the most inconsequential of trivia. ...Allegedly serious intellectuals quibble endlessly over such ridiculous trivialities...In the meantime, the public is lulled into a perilous somnolence, spoon-fed pap, and palpable untruths, many of which are turned out by special-interest and pressure groups and well organized propaganda machines."

"Some of our newspapers and magazines are more concerned with the welfare of their advertisers than they are with the dissemination of news and the discussion of matters of lasting importance. ...Radio, television, motion pictures, popular books - all contribute...to...the stifling of dissent on all but the most banal levels. ...a renunciation of the most basic and precious of democratic principles." - **J. Paul Getty, ("the richest man in the world" - Fortune, Oct. 1957), How to be Rich.**

"Xerography and Polaroid film were developed by small innovator-entrepreneurs only after larger firms turned down the ideas."

"The 1969 increase in capital gains taxes from 25% to 49% dried up venture money, especially for small companies. From 1969 to 1975, the amount of new capital acquired annually by small firms sank from \$1.5 billion to \$15 million (1% of previous level)." - **"The Sad State of Innovation", Time, Oct 22, 1979.**

"Styling cars sells cars and safety does not." - **Lee Iacocca.**

"...Francis W. Davis...developed power steering for autos...during the early 1920's...Major auto manufacturers...figured their engineering staffs could come up with something similar that could get around his patent. After all, their available engineering talent and resources went far beyond those of a lone inventor. ...The manufacturers tried to invent their way around Davis but without success. 26 years later, in 1952, Chrysler introduced power steering..using Davis' early, expired patents." - **D. Dial, "The Creative Spark vs. The Status Quo; or, Why Big Companies aren't interested in New Ideas", (In Michael Brown, Suppressed Inventions and How They Work).**

"Only about 40 years ago, Professor Herman Oberth, the teacher of Dr. Werner von Braun, offered his book, By Rocket to Interplanetary Space to about 10 different publishers. Each sent it back to him."...

"In his day, Professor Goddard was called 'moon-mad Goddard'. But...the (US) House passed a bill to establish...(a) National Goddard Day."

"Franklin was the subject of laughter at the English Academy of Science when he reported his discovery of the lightning rod. They refused to print his report."...

"Finsen, discoverer of the curative powers of ultra-violet rays, was persecuted too...yet after his death, a monument was erected in his honor." - **Rho Sigma Ether - Technology: a Rational Approach to Gravity-Control, c. 1977.**

"..I did have on occasion in 1951 to have two days of observation of many flights of them (UFO's)...They were at a higher altitude than we could reach with our jet fighters of that time. ... Those few astronauts who have continued...in the UFO field...do so very cautiously. There are several of us who do believe in UFO's and who have had occasion to see a UFO on the ground or from an airplane." - **US Astronaut Gordon Cooper, UN Conference on Flying Saucers, Nov 28, 1978, (in UFO Review).**

"Our president Jimmy Carter has stated that he believes in UFO's because he has seen one. .. in 1973 (at) the Thomaston, Georgia Lions Club. About 20 other people also...watched it for ten minutes. President Carter was quoted as saying it was the darndest thing he had ever seen, and that he would never again make fun of people who say they have seen UFO's" - **Winfield S. Brown, UFO's Key to Earth's Destiny.**

"People in the long run are going to do more to promote peace than our government. ...One of these days government had better get out of their way and let them have it." - **Dwight D. Eisenhower.**

"Every gun that is made, every warship launched, every rocket fired, signifies in the final sense a theft from those who hunger and are not fed, those who are cold and are not clothed." - **Dwight Eisenhower.**

"...Senate Doc. # 259. The 65th congress(:)...The coal companies made between 100% and 7,856% on their capital stock during the war (to end all wars, WWI). ...The leather people sold your Uncle Sam hundreds of thousands of saddles for the calvary. But there wasn't any calvary overseas!"

"...The war (WWI) cost your Uncle Sam \$52 billion. \$39 billion was expended in the actual war period. This expenditure yielded \$16 billion in profits.

"No one told these American soldiers they might be shot down by bullets made by their own brothers here. No one told them that the ships on which they were going to cross might be torpedoed by submarines built with US patents."

"It is dressed into speeches about patriotism, love of country...but the profits...skyrocket..."

...We can all make more money out of peace than we can out of war..." - **US Marine Corps Major General (Retired) Smedley Butler, Distinguished Service Medal, ...4th officer to receive two Congressional Medals of Honor before WWI, War is a Racket, c. 1935.**

"Since the end of WWII, 25 million people have died in war somewhere in the world. War has been fought in as many as 12 countries at one time. ...In 1981 the world spent about \$22 for military purposes for every \$1 it spent on development aid to poor countries." - **War vs. Development, Oxfam America News, Winter 1983.**

"The idea of constructing shields of any material at all, for protection against uranium and plutonium is only a temporary expedient. The time will come when the shields will be as dangerous as the cores. - **Walter Russell PhD, American Academy of Sciences; (lauded by Nicola Tesla as 1,000 years ahead of his time) and Lao Russell, Atomic Suicide? c. 1957.**

"Peace is our Profession" - **Strategic Air Command and US air Force letterhead, motto.**

"If the Air Force is truly sincere about their commitment to peace, they would develop peace corps, peace academies, and dialogues with the peace movement."...Deployment of even 1% of the nuclear weapons would disrupt the planet for human habitation. If your 'best' weapons are unusable, they are obsolete. ...It is time for a new philosophy. Mankind could never reached the moon by an aircraft with propellers. Peace tactics are the only alternative. Peacefare..." - **Kim C. Gates, AC1, USAF, "Rebuttal to Letter of Reprimand" (followed by honorable discharge).**

"One of the signs (you) displayed (said): QUESTION AUTHORITY. Comments or slogans of this nature cannot and will not be condoned." - **C.L. Wilson, 1st Lieutenant, USAF, Commander, Hq. Sq. Section; 93 CSG/CCQ; "Letter of Reprimand", Jan 5, 1984.**

"...Over 100 million animals will die this year in our nation's hospitals, universities and government and commercial labs...most of them for no scientific or medical reason. ...scalded, suffocated, frozen, electrocuted, mutilated, or starved....Last year,...American taxpayers spent \$4 billion on government-funded animal torment. ...encourag(ed by) the powerful animal supply industry...pushing many species ("primates") to the brink of extinction." - **leaflet, People for the Ethical Treatment of Animals.**

"...Chemicals(:)...We not only don't know what's going on out there is dangerous - we don't even know what is going on out there. It's what we don't know that can really hurt us - kill us. ... It is time we started putting chemicals to the test - not people. It is time we gave people of this country some reason to believe that every time they take a breath, or eat, or drink, or touch, they are not taking their life into their hands. It is time that, down here on earth, we took a couple of small sensible steps on behalf of human health and life..." - **EPA Administrator Russell Train, speech at National Press Club, February 1976.**

"Mechanical and chemical technology can exact a high price in terms of erosion and human health. ...I have become increasingly uneasy about the state of agriculture and what it portends for the future of rural America. - **Secretary of Agriculture, Bob Bergland, in Heartland, Summer, 1981.**

"The chief fault of many American diets is that they provide too little of the essential minerals and vitamins. This fault is due in large measure to the fact that refined foods are consumed in such amounts that the intake of mineral and vitamin-rich natural foods is lower than it should be." -**Food and Life, USDA Yearbook for 1939.**

"Today, despite the tremendous amounts of pesticides being used, approximately one-third of the drops planted in the US fail to reach harvest due to pest damage. ...Ironically, these problems are caused by the very chemicals formulated to control pests. (:) increasing... resistant insects(,) loss of...beneficial insects..."

"An estimated 40,000 people were treated for pesticide poisoning in 1978. (US?). The actual number of poisonings may be even larger since many cases are not reported or are misdiagnosed. ...The symptoms of pesticide poisoning often mimic those of common illnesses

(flu -ed.)."

"Integrated Pest Management is an inter-disciplinary approach(:) ...Crop-Pest Eco-Systems.... In...single plant communities, natural ecological balances are altered, leaving crops highly susceptible...Biological Controls...(:) Preservation of natural enemies (and their) habitats... Predators...introduced from other countries. ...Disease causing micro-organisms (attacking pests) ...Phero-mones...Pest resistant plant (varieties) ...Cultural Controls...(:) crop rotation, and removal of crop residues which shelter pests after harvest. ...Proper timing of crop....life-cycle...'Trap Crops'...Urban(:) ...Pesticide treatments were reduced 99%..." - **USEPA, Integrated Pest Management, EPA 600/8-80-044, Sept. 1980.**

"A decade ago the World Health Organization estimated every year at least 500,000 people were poisoned - and 10,000 killed - by pesticides in the third world. ...Since then...Dr. P. Deemar, toxicology director of Thailand's Ministry of Agriculture, estimates that 500,000 people are poisoned by pesticides in Thailand alone. ...Citizens of the industrialized countries are also victims when we eat pesticides in the food we import." - **Food First, Institute for Food and Development Policy, Food First News, Fall 1982.**

"...The export of banned pesticides (in, made by, and) from the industrial countries (US) to the third world. ..(is) later returning to us in the food we import (from) the third world." - **David Weir and Mark Shapiro; Center for Investigative Reporting; and Food First, Circle of Poison.**

"Anyone who speaks up against food adulteration in any of the many forms, is subject to 'name calling'. The most common epithets are 'food faddist' or 'food fakir'. If...you are offending... some of our largest and most influential corporations...We can be certain that the public relations counselors will go to work...-even if that requires a bit of character assassination...." - **Dr. Edward J. Ryan, Editor, Dental Digest.**

"Our agricultural colleges continue to graduate specialists who become vocational agricultural teachers in the schools, and county agents, who go forth to extol the virtues of poison insecticides, herbicides, and commercial fertilizers." - **Joe Nichols, MD, President, Natural Food Association; Please, Doctor, Do Something!.**

"My position is that radical mastectomy is archaic. For some strange reason, in the US, surgeons continue to mutilate women by removing muscles and excessive tissue even though modern knowledge and cancer therapies have outmoded this form of crippling surgery." - **George Crile, Jr., Emeritus Consultant in Surgery, Cleveland Clinic, Ivy Cancer News, Nov. 1974.**

"Though it is a great frustration to realize that less than 10% of all cancer patients are willing to make necessary lifestyle changes (My experience can certainly vouch for that, and the number comes from hard research.), required by most alternative cancer therapies, all we can really do is inform the patient as thoroughly as possible and then let him or her make the final decision. ...(:) To undergo the Orwellian nightmare of conventional cancer treatments or ..(the) non-toxic alternative, the Utopia choice of Earth as a beautiful place...Pro-Life Freedom of Choice..." - **Hellfried Sartori, MD, MPH, MS, U. of Graz Medical School, Austria, President, Life Sciences Universal (1200 Medical Centers Worldwide) Cancer 1984.**

"That cactus went right through my eye. It left my eye flat. They took me to a doctor, and he said, 'We'll have to take the eye out.' ...I fought like a tiger. I said, 'No! Leave the eye alone. I am sure it will grow back.' The doctor said, 'You're too young to know.' ...But in a year's time that fluid came back, and that eye is just as good as the other one today." - **Bernard Jensen, DC, ND (Author, The Science and Practice of Iridology), FACT Journal.**

"Some doctors blame the patients for demanding treatment. ..(which is too) powerful and dangerous...for mild (illness)...Patients demand more considerate care, more natural healing techniques, and discussion of alternatives - and doctors rarely give in on these issues." - **Robert Mendelsohn, MD, (lecturer on "who are the Real Cancer Quacks?"; Chairman Medical Licensing Committee, State of Illinois, etc.) Confessions of a Medical Heretic.**

"We are not at all sure that the state is serving the public interest by enforcing a professional monopoly." - **Florence Stroud, RN, Member Calif. Board of Medical Quality Assurance, in American Medical News, 1983.**

"The FDA was ordered by Congress ("Agricultural Act of 1938") to stop two years of experiments designed to learn the dangers of poisoning from lead and arsenic, commonly used as insecticides until largely replaced by DDT, and the test animals were ordered killed - a procedure Consumer's Research compared to the Nazi book burnings."

"Many 'health stores' sell naturally grown products. ..but they also have much junk. There are quacks and frauds in their ranks, just as there are among chemical growers and processors who enjoy favors of the Government." - **William Longwood, Pulitzer Prize winner in Journalism, The Poisons in Your Food, c. 1960.**

"Many of the plants familiar to the 'wise woman' or the 'witch doctor' really do have the healing powers that tradition attaches to them! There is no doubt that the judicious use of such herbs, flowers, and other plants for palliative purposes in primary health care can make a major contribution towards reducing a developing country's drug bill. - **Dr. Halfdan Mahler, Director General, WHO, "The Staff of Aesculapius", World Health, Nov. 1977.**

"...The empirical application of plants to the ailing human body over thousands of years has... culminated in the development of many useful drugs It is easy to make fun of medieval recipes; it is more difficult and may be wiser to investigate them." - **Dr. Jonathan Hartwell, NCI, "Plant Remedies for Cancer" Cancer Chemotherapy Reports, May 1960.**

"In a noted 1943 Harvard study, there were no cases of toxemia, congenital anomalies, or neonatal deaths among a group of well-fed woman. In contrast two-thirds of the children born to women who were on poor prenatal diets had congenital abnormalities, dies, or (had) neurological dysfunction. and 44% of the mothers had developed toxemia..." - **Tom Brewer, MD, Tulane Medical School, The Pregnant Issue: Medicate or Educate?, 1982.**

"Animals fed on raw milk and raw meat reproduce homogeneous litters and the usual causes of death are old age and injuries....The cats fed pasteurized milk...show skeletal changes, lessened reproductive efficiency, and their kittens present progressive constitutional and respiratory problems. ...Cooked meat (fed) cats commonly (have) heart problems,...infections of the (organs), inflammation ...parasites...abortions..." - **Francis M. Pottenger, Jr, MD, author of 55 articles, Pottenger's Cats: a Study in Nutrition, c. 1983.**

"...During the summer of 1978 in Rhode Island, 300 advanced...members of TM (Transcendental Meditation) split up into small groups to meditate...The entire state of Rhode Island benefitted. Statistics revealed: the state murder rate dropped 50%, traffic deaths decreased 48%, suicides dropped 45%, total deaths decreased 11%. Statisticians, state officials, psychiatrists...attested to the ...success of the experiment. Dr Charles Hill, President, Rhode Island Medical Society, admitted we can..." - **Linda Clark, MA, editor, Linda Clark's Good Health Keeping Newsletter.**

"...In the history of medicine and science, no chronic or metabolic disease has been cured by factors foreign to the diet, (or) to biological experience."

"The agent which cures prevents, and the agent that prevents cures." - **Dr. Ernst T. Krebs, Jr. in Spotlight, 1978.**

"According to recent ACS reports, the discovery of the anti-tumor properties of beta-carotene (nutrient "from which the body makes vitamin A") is one of the most important developments in cancer research of the past ten years, i.e., since the passage of the National Cancer Act. ... The NCI and the NIH...did not participate in the initial development or funding of the beta-carotene studies!...The NCI has promoted...retinoic acid and retinoids, chemically related peripherally to vitamin A...The chemicals were known by the NCI to be dangerous to...animals even before the NCI tests with the retinoids were initiated; however, these chemicals (retinoids and acid) were inaccurately represented as being less toxic or more efficacious than (Vitamin A and beta-carotene).....We have been applying to the NIH for grant support on (beta-carotene) since 1974. However, the NCI had consistently rejected both (the) grant requests and the concept of using beta-carotene, until the collapse of the retinoic acid studies. ...We found that beta-carotene increased the effectiveness of tumor therapeutic agents, whereas retinoic acid only served to increase the toxicity of the chemotherapeutic agents. ...When novel studies were proposed, the NCI seemed determined to stamp them out. They were so restrictive as to discourage the development of even one concept that did not conform to their dogma. ...The NCI and the NIH are...creating unnecessary confusion among scientific workers who were misdirected by the distortions...I fear that some members of important sections of the NCI may have been more concerned with service to themselves and their associates than to the public or the extramural scientific community, and repeatedly have made grievous errors. ...Your (legislative) committee might determine if these errors can be rectified, and procedures altered to prevent repetitions of grievous errors by the NCI and NIH." - **Eli Seifter, MD, Professor of Surgery and Biochemistry, Albert Einstein College of Medicine, (in**

letters to US Senators Orrin Hatch and Harrison Schmitt, 1982).

"Cancer politics: To suggest people eat less meat infuriates the cattlemen's association. To suggest people eat less candy angers the confectioner's association. To suggest people eat more fresh vegetables throws the canners association into fits." - **Ross Hume Hall, PhD, principal cancer researcher, Roswell Park Memorial Institute and other credentials, "Cancer and Nutrition", En-Trophy Review.**

"The hospital that feeds you refined sugar, white bread, canned soup, bouillon cubes, and frozen vegetables should be closed by the health department as a menace to the public health." - **Dr. David Reuben, Everything You Always to Know About Nutrition, c. 1978.**

"...The introduction of trans-trans-linoleic acid in the 1920's in margarines and refined vegetable oils was a main cause of the pandemic of myocardial infarction (coronary heart disease), and ...since 1960, orthodox medicine has been fostering (promoting) a cause of this disease as the cure." - **Wayne Martin, "Margarine ("Not Butter") the Culprit?", Lancet, 1983.**

"Avoid foods that don't interest you (:) ..cauliflower, corn, broccoli, beans..."

"Hints(:) ...add milk powder...Choose from: ...Angel food cake, Popsicles,...Hard and jelly candies...Use mixes, frozen ready to eat main dishes, and take out foods whenever possible. ...fry....Microwave oven..."

coffee, coffee substitute, carbonated beverages...bread (,) enriched white...pureed, baby, or whole cooked (..canned or frozen)...sweets as desired, hard candy,...jellies, jams..." - **ACS, Nutrition, for Patients Receiving Chemotherapy and Radiation Treatment, c. 1974.**

"Allowed foods: Carbonated beverages...fruit flavored drinks...sugar candy...salt...ice cream...chocolate...cereals...refined...oils..pork...fudge...lollipops...crisp bacon..." - **Diet, Nutrition and Cancer Program, NCI, Diet and Nutrition: a Resource for Parents of Children with Cancer., NIH Publication 82-2038, May, 1982.**

"In..categories which make up about...eight % of the incidence, 5-year survival rates have actually fallen - those are cancers of the lip, penis, esophagus, vulva, and bone, and invasive cancer of the cervix (all where the prognosis is worse now than in the 1950's)." - **Newsday, Jan 10, 1977, article submitted by Senator Robert Dole, into Nutrition and Cancer Research, Hearings, Subcommittee on Nutrition, US Senate, 1978.**

"After approximately two decades and several billion dollars....Among the various types of cancer that account for 78% of the incidence..the upward trend in survival rates has not exceeded a few %....a far gloomier picture than has been generally conveyed to a hopeful public by our leading cancer research institutions...A generally passive lay press has been the means of transmission."

"Papanicolaou published for 15 years before anyone would listen to him, but now you find (the) ACS extolling the virtue of the Pap test." - **Daniel S. Greenberg, (Editor, Science and Government report; columnist New England Journal of Medicine), "Cancer: Bad News", Washington Post, January 19, 1975.**

"In many quarters, the superiority of combination therapy ("surgery and radio-therapy) is accepted as established dogma, and re-examination of treatment policies as heretical. Despite the confident air of this position, a life-sparing effect, specifically attributable to the radio-therapeutic component of combination regimens has not been proved." - **Morrow and Di Sala, "The Role of Post-Operative Irradiation...", American Journal of Roentgen-ology, Aug, 1976.**

"..This issue will explore..all forms of cancer therapies, even those frowned upon, and, in some cases, actively thwarted, by organized medicine."...

"The medical establishment would have us believe that before all treatment procedures become acceptable for general use, they are subjected to exhaustive studies which have proven both safety and effectiveness. This belief is reinforced by ('medics') criticism of the non-medical cancer treatments, the most damning is: 'They are unscientific.'..."

"...Surgical and radiation treatments...do not lend themselves to double-blinding or use of placebo." ...

"According to JAMA, over 30 different surgical procedures have been introduced over the years for the relief of angina and myocardial blood supply, yet only two were subjected to the appropriate controlled studies." - **Maryann Napoli, Editor, and Arthur Levin, Master of Public Health, Director, Center for Medical Consumers, and Health Care Information, Inc., Health Facts, "Cancer....", January 1979.**

"It is often necessary to make a decision on the basis of knowledge sufficient for action but insufficient to satisfy the intellect." - **Immanuel Kant (1724-1804).**

"(The) percent distribution of persons with...limit in major activity...due to chronic conditions, under 17 (years old, in:) 1967 (was) 1.1%, in 1976 (was) 1.9%. - **National Center for Health Statistics, Vital and Health Statistics.**

"...Pathological states are the consequence of several determinate factors acting simultaneously...The manifestations of any given agent differ profoundly from one person to another. ...Each noxious agent can express itself by a great variety of different pathological states. ...Different agents can elicit similar reactions. ...The total environment and the (interior medium) constitute a multifactorial system..." - **Rene Dubos, MD, Professor, Rockefeller Institute; Professor, Harvard Medical School (Mary) Lasker Award; Ways of Health.**

"Most diseases can be detected only after symptoms appear....Repetitious annual exams of

healthy individuals seem to be profitable only for the physician." - **Dr. Richard Spark, Harvard Medical School, in George Berkley, PhD, Cancer....**

"...One third of cancers found in Health Insurance Plan study were not felt by the clinician. .. Two-fifths of the cancers were noted by the surgeon, but not detected by the radiologist. In only one-fifth of the cases were the cancers found by both physicians." - **Philip Strax, MD, Early Detection.**

"The fact that a patient survives for five years after an operation does not imply that he is cured. ...The number of recurrences drops after five years only because the total number of survivors has dropped...In reality, the curves show that between one month and ten years, the rate of death remains constant." - **Lucien Israel, MD, NCI consultant, French Hospital Director, Conquering Cancer**, last four paragraphs in **Cameron Stauth (many credentials), The New Approach to Cancer.**

"There isn't one shred of evidence that early diagnosis does any good, except perhaps in the cancer of breast, cervix, and bladder." - **Dr. James Peters, NCI Division of Cancer Cause and Prevention Director.**

"Doctors...from the Office of Info. Tech. at Harvard U.(:)...Their appraisal of 46 surgical or anesthesia breakthroughs...suggested...only 13% were highly preferred (and)...in nearly half the cases the new therapy was no better than the therapy it replaced. ...About 12% of the innovations increased complications..."

"In 1971, the Joint Task Force of the USDA, in..An Evaluation of Research in the US on Human Nutrition...(concluded) that (in the US) a more fundamental (less "convenience food") diet...would result in 1.2 million fewer cases of heart and vascular disease each year, 64,000 fewer cancer deaths and 120,000 fewer cases of cancer each year, 49 million fewer cases of respiratory infections, 3 million fewer cases of birth defects, 8 million fewer cases of arthritis, 2 million cases of diabetes either avoided or improved, 3 million fewer cases of osteo-porosis, 16,200 fewer cases of blindness, 3 million fewer cases of allergies, and 2 and one-half million fewer mental health problems necessitating hospitalization." - **Jeffrey Bland, PhD, Biochem, and a bunch of credentials, Your Health Under Siege.**

"...Cancer patients are constantly being urged to go to their doctors as soon as the 'danger signals' appear...The implication is always that patients...with the shortest possible duration of symptoms, will have the best prognosis. The results of this study certainly do not support this."
- **G.H. Green, Associate Professor, School of Obstetrics and Gynecology, U. Auckland, New Zealand, "Duration of Symptoms and Survival Rates for Invasive Cervical Cancer." Australian and New Zealand OB/Gyn, Nov. 1970.**

"Taking a biopsy often aggravates and stimulates growth - and does not indicate how many secondary tumors have developed." - **Dr. Charles Mayo, (in Dr. Lynn Dallin, Cancer Causes and Natural Controls).**

"...The resort to a biopsy is a confession of failure, due to clinical inexperience or lack of data from other methods of diagnosis." - **Dr. Ewing, Beaumont Foundation Lecture, (in Boyd, Textbook of Pathology, (in Health Research, Is Cancer Curable? c. 1954.)).**

"There seems to be little doubt that cancer can be spread from the primary site to distant tissues through..the numerous ways that surgical manipulations (e.g. biopsy, therapy) could be responsible for this phenomenon." - **Vincent Vita, Director, NCI, and Steven Rosenberg, MD, PhD, Chief Surgeon, NCI, and S. Hellman, MD, Director of Radiation, Harvard Medical School.; Editors, Cancer: Principles and Practice of Oncology.**

"...Establishing a diagnosis....'benign' or 'malignant' is not an exact science. In spite of the aura of infallibility..pathologists are human...(;) the super specialist (with) 'tunnel vision'...Histo-techs...make grievous errors...(;) proper patient...sample...injuries to the tissues...Pathologists are not omniscient...(;) some) afflicted with such delusions. ...Trapped by semantics. ...A 'guessing game' when patients' lives are at stake." - **Roger Terry, MD, "Pathology of Cancer", Clinical Oncology: A Multi-disciplinary Approach, ACS.**

"...All too many...scientists...have forgotten that not everything that counts can be counted, and

not everything counted, counts." - **Denis Burkitt, MD, (of Burkitt's Lymphoma), in Judith Glassman, The Cancer Survivors.**

"...Half or more of the numerical data published by scientists in their journal articles is unusable because there is no evidence that the researcher accurately measured what he thought he was measuring, or no evidence that possible sources of error were eliminated or accounted for." - **Dr. Richard W. Roberts, Director, National Bureau of Standards), in Robert Mendelsohn, MD, Confessions of a Medical Heretic.**

"It is not enough to show that drug A is better than drug B on the average. One is invited to ask, 'For which people ("& why") is drug A better than drug B, and vice versa? If drug A cures 40% and drug B cures 60%, perhaps the right choice of drug for each person would result in 100% cures." - **Lancelot Hogben, MA, with five lines of medical credentials, Annual Review of Medicine, 1958.**

"...To test new materials..., it was reasoned that the primary mouse cancer used should... respond the best to the then existing anti-cancer drugs. Accordingly, ...leukemia has become the standard for testing....This has resulted in the development of several drugs that are highly effective clinically against (A.L.L.) leukemia, chorio-carcinoma..., but of only limited effectiveness against the commoner (solid) cancers. ...There are anti-cancer agents with a high degree of effectiveness against a solid tumor ("melanoma") although totally ineffective against the leukemias. ...We suggest...each material...be tested on...solid tumor regardless of its effectiveness...against the leukemias ("during initial primary screen")." - **Dr. Roy Asplund, "Isolation of Anti-Tumor Poly Saccharide Fractions from Yucca..." Growth, 1978. (in John Hinerman, The Treatment of Cancer with Herbs, c. 1980).**

"...I am told that I cannot discover anything more because I had discovered other concepts in the past and those are now regulations. ...I am the senior author of the randomized clinical trial. Now, I am told by the FDA that, if I don't do a randomized clinical trial, I can't do research. ...When I ask them where they got that dumb idea, they cite my publications." - **Dr. Emil Freirich, head Developmental Therapeutics, MD Anderson Hospital and Tumor Institute (in Pat McGrady, Jr., "The Cancer Patient's Quandry", Newsday, Sept 30, 1982.**

"If a useful (therapy) became available...it would be difficult to find an adequate number of experienced investigators to test it. The great danger might not be that a useless material was judged useful, but rather that a worthwhile one was rejected by inexperienced investigators." - **Ernest Herrman, PhD (in Postgraduate Medicine, May 1964) (in Independent Citizens Research Foundation for Study of Degenerative Diseases), Is the Answer to Cancer Just Around the Corner?, c. 1964.**

"In the early 1700's, two physicians...learned about pinkroot's efficacy from the Indians. The word soon spread to the general public, who praised this worm treatment, particularly against roundworms, for the next 200 years. Pinkroot fell into disuse in the early 1900's, simply because greedy herb dealers adulterated or even substituted shipments of true pinkroot with quantities of other plants..." - **Michael A. Weiner, PhD, nutritional ethno-medicine, U of Calif, Berkeley, Earth Medicine - Earth Food,: Plant Remedies, Drugs, and Natural Foods of the North American Indians, c. 1972.**

Extra material

There are some sections of my original medical essay that are not appropriate for my essay today, but are very good reading. I refer to and link to these sections from my medical essay. The first section has to do with Dr. Bruce Halstead. The second has to do with Jimmy Keller.

First, some *Medical Dark Ages* quotes about Halstead.

"...Adequate dosage by the most effective and least toxic route. ...('Laetrile') is about 44 times more toxic when given by mouth than by intra-muscular injection, and 21 times more toxic than intravenous injection. ...When the patient is on high doses of vitamin A, alcoholic beverages are absolutely prohibited."

"An excellent example of what not to eat is the nutritional program as recommended in the booklet published in 1974 by the American Cancer Society, Inc. under the misnomer of 'Nutrition.'" - **Bruce W. Halstead, MD, author of several books.**

"A little after 7 am...25 officers...and California FDA, raided Halstead's residence...The LA county DA's office charged Halstead (consultant to World Health Organization; commander,

US Navy; director, World Life Resources Institute) with some 24 counts including 'conspiracy, 'grand theft', unlawfully selling drugs for cancer treatment, and 'fraudulently providing a treatment to arrest cancer.'...The DA took all of his cancer patients' records and refused to give him either a list or receipt for them." - **Choice, 1984.**

"The Committee for Freedom of Choice in Medicine...has filed a complaint with the United Nations Center for Human Rights, charg(ing)...'medical genocide' and accus(ing) the AMA and ... FDA...(this) complaint was spurred by the recent raid on the home and office of Bruce Halstead, MD..." - **Medical Freedom Group takes Complaint to UN.**, **Spotlight, 1984.**

Halstead may be one of America's most brilliant physicians. His battles with the medical gangsters continue to this very day. On *The Winds* web site is a recent interview with Halstead. From their web site:

"A decades-long dispute between a highly respected physician/scientist and the State of California ended with the elderly doctor, Bruce Halstead, on criminal probation and stripped of his license to practice medicine.

"In light of this and other recent actions taken by state governmental authorities in cooperation with such U. S. institutions as the Food and Drug Administration (FDA) and the FTC (Federal Trade Commission), the government appears to be engaged in a concerted war against a domain of the healing arts known as alternative medicine. This war, ostensibly for the protection of American citizens from unscrupulous "quacks," has apparently moved into a new phase. The FDA's pursuit of medical "public enemies" is no longer restricted primarily to non-MD practitioners not trained at established medical schools--those the general public largely considers the unorthodox fringe of the medical world. These federal agencies are now engaging the force of the government's legal machinery in the prosecution of physicians practicing "conventional medicine"--those who have dared to recognize and even incorporate into their practices the efficacy of holistic natural remedies.

"Dr. Halstead is a graduate of Loma Linda University, a medical school which, to those in the field of the human physiological sciences, ranks as one of the more prestigious schools of medicine and scientific research in the world.

"The 77-year-old physician is currently on probation under the State of California, Los Angeles County, for his activities involving the prescribing of alternative medication, specifically for his

cancer patients. Dr. Halstead has been suspended from any form of medical practice. "In fact," he told The WINDS, "I can't even talk to a patient about nutrition."

"When his home and clinic in San Bernardino County were raided by the Los Angeles District Attorney, "I challenged their legal jurisdiction," Halstead informed The WINDS, "since I had never lived or worked in Los Angeles County, but that did not matter. I was a legal novice and had not yet learned that jurisdiction and venue were merely legal fantasies which have no meaning in actual fact for the alternative health physician." (Nor, apparently, does the constitutional doctrine of habeas corpus).

"Dr. Halstead was charged with twenty-eight counts of conspiracy, grand theft and violations of the Health and Safety Code, along with twenty felony and misdemeanor counts.

"The prosecutor wanted me to go to prison for eight years," he told The WINDS, "but the court ultimately reduced the sentence to 32 months. I was offered, on at least ten different occasions, the 'opportunity' of plea bargaining for a crime which I did not commit," Halstead explained. "My reply was 'not until hell freezes over.'"

"The assault upon alternative medicine "is not just against me," he said. "They're after everybody and everything" connected with the field.

"Perhaps something else Dr. Halstead revealed to The WINDS has played a part in the FDA's zeal to relegate him to the medical "scrap heap". "We have been monitoring the illicit regulatory activities of the FDA and the cancer establishment, " Halstead claims, "and are in constant contact with a network of organizations and attorneys dealing with their illegal health activities in this country which are steadily driving up our national health costs."

"Is it not interesting how money keeps introducing itself into the mix? Halstead concurs making the ominous assertion that, "Cancer is the sacred cow of the medical industry. More people make money by treating cancer than there are victims dying from the disease."

"Dr. Halstead, acclaimed as a genius even among his peers, has authored hundreds of books and research publications. Among them are benchmark works such as Poisonous and Venomous Marine Animals of the World which the U.S. Navy considers of such importance as to fund a project to put the entire three-volume tome on CD-ROM.

The WINDS obtained a copy of Dr. Halstead's Curriculum Vitae, the academician's equivalent of a resume. The following qualifications belong to a man whom the government deems dangerous to his patients, incompetent to practice medicine and academically inadequate to determine what is harmful or beneficial to human physiology:

- Eleven years teaching on the medical faculty of Loma Linda University.

- Specializes in global preventive medicine, tropical diseases and biotoxicology.
- Assistant Director on the School of Tropical and Preventive Medicine, Loma - Linda University, Loma Linda, California.
- Assisted in developing a global preventive military medical program at the U.S. - Naval Medical School, Bethesda, Maryland.
- Lectured on biotoxicology at the School of Aerospace Medicine, U.S. Air Force, San Antonio, Texas.
- Conducted Arctic expeditions for the U.S. Army, Navy, Air Force and National Institutes of Health, studying poisonous and venomous marine animals, and potential drugs from the sea.
- Contributor to Dorland's Medical Dictionary and the Encyclopedia Britannica, 15th Ed.
- Engaged in marine scientific research with the Jacques Cousteau Society, traveling extensively with the Cousteaus for eighteen years.

Additionally, Dr. Halstead has been deeply involved in the study of the use of oriental herbal therapy on immune deficiency disorders.

After a 25-year effort into medical/biological research, "I was shocked," Dr. Halstead exclaimed, "to find upon my Rip Van Winkle return to clinical medicine that dangerous toxic drugs, all FDA approved, had proliferated to a frightening extent--over 1.54 billion prescriptions written in the U.S. per year.

"I found," Halstead continues, "that many of these drugs destroy your immune system and are carcinogenic. New and awesome medical technologies were also being spawned, mind-blowing in both their diagnostic capability and staggering costs to the consumer.

"However, in evaluating this new drug and health technology, I did not find a commensurate improvement in either morbidity or mortality statistics in chronic degenerative afflictions such as cardiovascular disease and cancer. Costs had increased, but not the overall health index. We had dropped to about 23rd position among the nations of the world in health care."

"This data, presented by an eminent physician/scientist, raises the logical question as to whether this may be a reasonable explanation as to why the strike by New York doctors several years ago resulted in a decline in the city's overall death rate. "At this point in time," Halstead concludes, "I have the profound conviction that America is on a disaster course in health care both economically and therapeutically...A dangerous therapeutic mind set exists in

this country that it is better to die in an orthodox fashion than to survive in an unorthodox manner."

"In reference to his implication that the government would rather allow an individual to die than to condone the application of "unorthodox" treatment, Dr. Halstead relates the following event he presented in his court trial:

"During my final oral argument I recounted the incident when defendant Alfred Dix and his wife had their home raided by the Los Angeles District Attorney. Mr. Dix had been using and selling the herbal drink." [The doctor is here speaking of a specific compound of Japanese herbs (ADS) from which a tea is made that many clinical trials, according to Halstead, have proven very effective in the treatment of cancer].

"Mrs. Dix had been diagnosed as having terminal abdominal cancer. She had had surgery, nine different types of chemotherapy, and over ninety different treatments of radiation, all of which had failed. Her doctors told her that she had only 30 to 45 days to live. She was bedridden, had given up hope, and was preparing to die. She and her husband had even contacted a mortician to make funeral arrangements.

"Mr. Dix then came in contact with ADS [the herbal compound]. After taking ADS for about ten days, Mrs. Dix began to feel better, started doing housework, shopping, traveling, and started entertaining again. I met Mr. and Mrs. Dix one day in the lobby of a hotel in Pasadena. She was walking, mentally alert, happy and laughing, and stated emphatically that she was feeling great. No aches or pains - thanks to ADS.

"At the time of the raid at the Dix home, the D.A. confiscated all of her ADS. Her husband begged and tearfully pleaded with the D.A. to release enough of the ADS for his wife's use. The D.A. refused to release any of the tea to her.

"The next time I saw Mrs. Dix was in the courtroom. She looked pale, in a weakened condition, unable to walk, crestfallen and anguished. A few days later she died - a broken woman, a victim of the land of the free and the home of the brave.

"What has happened to our national ideal of life, liberty and pursuit of happiness? Why has the prosecution denied Mrs. Dix the right to retain a cup of harmless adaptogenic tea which she purchased for her own cancerous condition? What has happened to her civil liberties?

"I could not think of a single tyrannical country in which this scenario could have taken place."

And here is a first-person account about [Jimmy Keller](#), his treatment, and how they took care

of him.

"My wife Kathy had fully-metastasized ovarian cancer which had spread throughout her abdomen. She had large and growing tumor masses basically everywhere below the diaphragm when we brought her to Jimmy Keller's clinic in March of 1991. She was unable to walk fully erect, had hard masses in her stomach area, was very weak and suffering abdominal pains and digestive distress because of the growths.

"She had been earlier mis-diagnosed (rather reprehensibly so in my opinion) with fibroid tumors of the uterus. Her cancer was discovered in a surgery (intended to remove her uterus and ovaries) on 5 February 1991, immediately upon opening her abdomen with a huge T-shaped incision. A biopsy was taken and she was stapled-up immediately. The surgeon returned his fee within hours, and we were left with a dismal prognosis.

"A longtime acquaintance who had experienced a near-miraculous and seemingly permanent recovery from an apparent brain tumor, recommended us to the Keller clinic. We spoke to Jimmy and several others by phone and decided to attempt his treatment.

"Mr. Keller interviewed us upon our arrival at the Tijuana clinic, and detailed what we could expect. He was guardedly optimistic, explaining that the surgery would have caused the cancer to spread aggressively (it had, in spades). He said the fact Kathy had not undergone chemotherapy, and that she was young and basically healthy meant her chances were good of making dramatic progress. He said the daily treatments would make her very tired and she must sleep long hours. He said she would almost certainly experience "pulling" sensations in the areas of the tumors as the masses shrank. He told us the process of recovery would involve a stringent diet which must be maintained indefinitely, as well as the treatments, and would require many months and repeated visits to the clinic.

"The daily therapy consisted of a grab-bag of alternative approaches; Mr. Keller seemed to use every therapy he knew which had any chance of success. Kathy was given everything from pancreatic enzymes to Laetrile, in a constantly-varying daily routine.

"But it consisted of two very essential items which were never omitted: an IV drip of saline solution containing a very large dose of Vitamin C; and an intravenous serum, normally added to the same saline solution, which we were told consisted of amino acids and polypeptides.

"This last serum was the one totally unique aspect of their treatment, and it was to that which they attributed the lion's share of their success. And success it was.

"I will not detail their stories here, but we were surrounded with people whose tales of recovery were consistently heartening, and sometimes bordered on the incredible.

"A typical day at the clinic consisted of arrival at 9AM; an interview with Mr. Keller in which he

used a technique (which I had never before seen) of body-response to his questions which led him to prescribe the day's mix of therapies. Items and proportions changed daily. Laetrile some days, not others. More serum one day, less another. All based, apparently, in a method of physical feedback where he pressed downwards upon the patient's extended arm as he asked questions or named medicines. The arm's resistance to pressure seemed to vary and provided Keller his response. Keller also seemed to examine his patients' outward appearance very closely, and asked searching questions about diet, sleep, how they felt, and so forth. An assistant noted his comments on the day's therapy for each patient.

"We then sat upon chairs, arranged throughout the several rooms and hallways of the small clinic, and with about 40 to 60 other patients, were provided with the IVs, injections and tablets. I assisted with some aspects of my wife's treatment, including needle "sticks" and IV "pushes." Usually we were done by noon or so, then went "home," Kathy usually to bed-rest.

"As to cost, the various medicines involved specific charges for each; generally, as I recall, a day's treatment would cost anywhere from \$150 to \$250.

"I remained there with my wife for about a week, and attended all her visits to the clinic. We set her up in a kitchenette -equipped motel room near the border.

"We bought her all the elements of the very strictly organic and vegetable-laden diet Keller had prescribed.

"I then returned to my work in Seattle, but stayed in constant contact with Kathy by phone. As she had done from the beginning, she reported the "pulling" sensations predicted by Mr. Keller, and slept a large proportion of every day. She was not very descriptive of her progress during this time; I later learned it was because she wanted to surprise me.

"The initial surprise, though, was not a happy one, when Kathy called to report the incident of Jimmy's abduction. She had been there for about three weeks. She was slated for just a few more days' treatment, then to be sent home for about a month before another stint at the clinic. Mr. Keller had no more told her this than he was assaulted and taken by force from the clinic by three armed men. My wife physically fought one of them, and was threatened with a gun for her trouble.

"Upon her return, I was flabbergasted at what I saw. She was utterly transformed to a state of emphatic *health*. It was nothing less than amazing. Kathy walked fully upright. Except for a few small hard masses in the lower abdomen, all evidence of her tumors was gone. She was more energetic and alert than I had *ever* seen her. She had the complexion of a robust child, peaches and cream, rosy cheeks! Never before had she had such an appearance.

"Though this triumph was overshadowed by the knowledge that the clinic was closed and no more treatment would be available, Kathy's wonderful condition persisted for months. She

woke early and slept light. She practically bounced out of bed, something she'd never done before.

"Her energy was remarkable. It required about four months before she began to experience the symptoms of digestive distress again, and several more before the growths became as strongly evident as before.

"Our tale from there is much like those of many another sufferer of that cancer. Other efforts to duplicate Keller's treatment, on which we spent thousands, were unsuccessful. We were finally left with nothing but surgery (a colostomy, finally necessary to keep Kathy alive) and the usual spiral of chemotherapy.

"Kathy died, a remarkable three years after her diagnosis, on 16 March 1994, of liver failure. But for an almost-successful attempt at killing her with Taxol (which weakened her terribly and after which her doctor recommended euthanasia to our horror), Kathy would probably have lived many months longer. I am convinced Kathy would have lived a fraction of that time without Jimmy Keller's amazing treatment.

[Fluoridation: A Chemistry Prelude, Now an Addendum](#)

Introduction

Earlier drafts of this essay had a several page chemistry narrative at its beginning, which presented some germane aspects of chemistry, to make this essay more understandable. Early readers felt it was too much technical information for those in the lay audience, particularly as they begin their reading experience.

The original chemistry prelude was designed to help the reader understand the nature of fluoride, why it is used in industry how it is, why it is a waste product of certain industrial processes, and lays the groundwork for understanding why it was so important in the nuclear industry. To make it easier on readers, that prelude is now an [addendum to this essay](#). Reading the prelude is not imperative to understanding this essay, but might make some things clearer.

In short, fluorine is the most reactive element known to science ("reactive" means its affinity to bonding with other elements).^[1] In nature, fluorine is found bonded to other elements, never floating around by itself, and is rarely found in its ionic state. The industrial processes of the nineteenth century created the most toxic pollutants that humanity had seen to that time. Taking ore from the earth and removing the metal, especially in aluminum refining, created hazardous waste.

In its ionic state, fluorine is highly toxic. Fluorine bonded to metallic ore in the earth was liberated during the refining process and is difficult-to-impossible to safely dispose. The aluminum refining industry was the biggest and most influential fluoride polluter around 1930, and in America only one company was in the aluminum business: ALCOA.

Fluorine is also useful in producing artificial chemicals such as Teflon and Freon, because of its unique properties. Those unique properties also made fluorine indispensable in refining uranium to extract its most radioactive isotope, which made the nuclear age possible.

Compulsory Fluoridation: An Industrial Tale

The increasing industrialization of the late nineteenth and twentieth centuries saw an explosion in aluminum use. Aluminum is a ubiquitous substance in industrialized societies. It is everywhere, from electrical wiring to food and beverage cans to cookware to automobiles to airplanes. As the [Industrial Revolution](#) was hitting its stride a century ago, the aluminum refiners had a major problem with the fluorides attending aluminum production: they are deadly poisons. Fluorine once safely bound with aluminum, copper and iron in the earth's crust was reintroduced into the environment in its ionic state. The fluorides were not only being buried in the ground and put into the water, they were also being released into the air by industrial processes. Fluoride pollution was a major industrial problem.

John Yiamouyiannis, in his influential *Fluoride and the Aging Factor*, described how the fluorine ion disrupts enzyme activity and attacks DNA and protein. In his theories, backed up by research, the fluorine ion particularly disrupts hydrogen bonds. When chemicals are dumped together, the elements that have a higher bonding affinity will "steal" the bonds from other elements. Fluorine forms the smallest negatively charged ions of all the elements, and that small size allows them to go where larger ions cannot. Those fluorine ions can get into the nooks and crannies of larger molecules, such as enzymes and DNA, and wreak biological havoc. Those fluorine ions disrupt weaker bonds in those larger molecules, damaging or destroying the original substance, disabling its biochemical usefulness. The fluorine ion acts similarly to "free radicals" in the body, with its net electrical charge interfering with biochemical reactions. That is how the fluorine ion harms or kills people.

Another common industrial element, chlorine, behaves similarly, and the chlorine issue is another one where chlorine is undoubtedly carcinogenic, among other health hazards, but industrial propaganda and criminal activity keeps the heat off chlorine.[\[2\]](#) Chlorine is the other element compulsorily added to the water supply, to kill microorganisms.

There is no arguing that fluorides are deadly poisons. No scientist will argue the point, as it is universally accepted. Among the hazards of fluoride are dental fluorosis, skeletal fluorosis, sterility, birth defects, cancer and brain damage.

Dental fluorosis progresses with an increase in the fluorine ion concentration that teeth are subject to. Dental fluorosis progresses as follows. First, the teeth develop a mottled look. Flecks can be seen on the enamel. Tooth mottling can begin at less than one part per million (PPM), which is the concentration added to the water supply in communities that fluoridate their water. As the concentration rises to two PPM, the teeth discolor, gradually turning brown. Accompanying this process, the teeth become hard and brittle. The teeth then begin chipping and disintegrating. In Frank McClure's *Water Fluoridation, The Search and the Victory*, there is a color photo section showing the disease's progress. In advanced cases, the teeth are reduced to blackened stumps (images of this process are easily available on the Internet). With skeletal fluorosis, the skeleton disintegrates.

In 1916, G.V. Black and F.S. McKay presented the first study of tooth mottling. Tooth mottling was common in children in Colorado, Texas and other western states, and an effort was launched to determine its cause. In Colorado the condition was known as "Colorado Brown Stain," and in Texas it was "Texas Teeth." In 1931, three independent studies concluded that tooth mottling was caused by fluorine ions in the water supply, and it has been generally accepted ever since.[\[3\]](#) Usually the fluorine ions were naturally occurring.

Because humankind is the only animal to drill wells, we are often exposed to water that has a high natural fluorine ion content, generally in areas where there is little rainfall and the groundwater's dissolved mineral content is naturally high, and also in areas of volcanism. There are places where well water has a naturally high fluoride content, where the people die at an early age from fluoride poisoning and have other fluoride-related ailments. In *Fluoride and the Aging Factor*, John Yiamouyiannis devotes chapters of his book to presenting cases where that has happened. McClure's *Water Fluoridation, The Search and the Victory* and Waldbott's *Fluoridation, The Great Dilemma* extensively document the hazards of environmental fluorides.

By the turn of the 20th century, industrially created airborne and waterborne fluorides were becoming a major health hazard. In 1901, one study found that fluorides "are much more toxic than the other compounds that are of significance in the industrial smoke problem."[\[4\]](#) As early as 1850, people and livestock were being poisoned by fluoride emissions from the iron and copper industries.[\[5\]](#) In 1930, the world's first major air pollution disaster happened in

Belgium's Meuse Valley, where thousands of people became violently ill, and sixty people died. The world's foremost authority on the issue, Kaj Roholm, concluded that airborne fluorides were responsible.^[6] The fertilizer industry was mainly responsible in that instance. As late as 1970, the U.S. Department of Agriculture stated that airborne fluorides "caused more worldwide damage to domestic animals than any other air pollutant."^[7]

In America, with its industrialized economy, there was only one aluminum company in the 1930s, in the [standard monopoly situation](#). The Aluminum Company of America, ALCOA, was probably the world's biggest fluoride polluter at the time.

On the heels of the discovery that fluoride caused tooth mottling, Public Health Service (PHS) scientist Trendley Dean, the first director of the National Institute of Dental Research, was sent west. As Secretary of the Treasury, Andrew Mellon had authority over the PHS, and Mellon founded and was the controlling shareholder of ALCOA. Dean's mission was to research communities where naturally occurring fluoride was high in the water supply, to see how much fluoride children's teeth could absorb before disintegrating. There was an obvious conflict of interest in Dean's research. Dean announced his results and made the statement that fluoride in the water supply decreased tooth decay in children. Below is some of the pertinent data Dean created.^[8]

City	Fluoride PPM	% of cavity-free children	% with fluorosis
Pueblo, CO	0.6	37	2.4
Junction City, CO	0.7	26	1.7
East Moline, IL	1.5	11	24.5
Monmouth, IL	1.7	55	42.1
Galesburg, IL	1.8	56	35.1
Colorado Springs	2.5	41	67.6

The only unmistakable trend is the one showing dental fluorosis increasing with fluoride concentration, which was expressly what Dean went west to determine. Black and McKay noted that mottled teeth did not seem to have a higher incidence of tooth decay, and Dean extended those findings, although that was not his job. A man was specifically assigned to investigate the damage a particular chemical did to teeth, but somehow concluded that the chemical was actually good for teeth. To paraphrase Dean's findings: "As children's teeth disintegrate, they may have fewer cavities." Dean is known today as the "father of

fluoridation.” It has now been admitted by virtually everybody involved in the fluoridation issue, even by Dean himself (given under oath on a witness stand), that his early data gave zero evidence that increasing fluoride concentration in the water supply reduced tooth decay.

Dean later became one of fluoridation’s propagandists, but was initially cautious with his suggestion. Dean’s questionable suggestion regarding the potential dental benefits of fluoride was all that ALCOA-related scientist Gerald Cox (he worked for the Mellon Institute in Pittsburgh) needed to begin proposing that the nation’s water supplies be fluoridated. In 1937 Cox announced, “It is possible that fluorine is specifically required for the formation of teeth.”[\[9\]](#) Cox was the first to suggest the compulsory fluoridation of entire communities. Ironically, the PHS spent the ten years after 1931 trying to *eliminate* fluorine ions from the water supply, given the tooth mottling findings. Cox partly based his fluoridation suggestion on the work of Gerald Armstrong, who in 1938 published findings that decayed teeth seemed to have lower fluorine content than healthy teeth. In 1963, Armstrong published a reinvestigation of his 1938 findings, and concluded that his earlier findings were wrong, and that there was no detectable difference in the fluoride content of healthy and decayed teeth.[\[10\]](#) The discovering scientists themselves admitted that the two major scientific findings of the 1930s that showed that fluoride might be good for the teeth, and were the basis of later campaigns to compulsorily fluoridate water supplies, were worthless.

Naturally occurring fluoride in the water supply is usually composed of fluorine and *calcium* atoms. What component of dissolved calcium fluoride might have a positive effect on bones and teeth? The calcium aspect was ignored, while the fluorine component was obsessively pursued. The fluoride compounds artificially added to the water supply are sodium fluoride and fluosilicic acid, which are *industrial waste byproducts*. By the 1950s, the National Institute of Dental Research (NIDR) became a corrupt organization that produced “research” that fluoride polluters used to protect themselves from liability lawsuits.[\[11\]](#)

If the data supporting fluoridation is analyzed, it quickly becomes evident that all the pro-fluoridation people have in their favor are highly uncertain statistics. The theories are conflicting, as is the data.[\[12\]](#) While fluorine is found in bones and teeth, so are other elements that nobody says are essential for health (and even toxic), and more than 80% of fluorine given to humans and animals in experiments is immediately excreted.[\[13\]](#) The same mechanisms that supposedly protect teeth also cause tooth mottling. It is quite the double-edged sword. Even giving the pro-fluoridation forces the benefit of the doubt regarding their statistics, their data on the benefit of fluoride amounts to one tooth per mouth, not an exciting benefit.[\[14\]](#) It is an alarmingly small benefit when the undeniable harm caused by fluoride is considered. Benjamin Disraeli said, “There are three kinds of lies: lies, damned lies and statistics.” Fluoridation data is a classic case of statistical gamesmanship. Even if the motivation of most pro-fluoridation researchers were not suspect, their empirical and statistical methods are. Many astute criticisms have been leveled at the methods of fluoridation researchers regarding uncontrolled variables, omission of pertinent data, mathematical errors,

and outright bogus science.[\[15\]](#)

Among the giants of the early days of fluoridation research were Trendley Dean, Frank McClure, Harold Hodge, Edward Largent, Wallace Armstrong, David Ast, and Gerald Cox. Dean worked for ALCOA owner Mellon at the PHS. Gerald Cox worked for the Mellon Institute. Largent was the most visible member of the research teams at Kettering Laboratories at the University of Cincinnati, funded by ALCOA and several other fluoride-polluting companies. Largent was a consultant for Reynolds Aluminum. McClure was one of fluoridation's greatest cheerleaders, working for the industry-influenced National Institute of Dental Research. Armstrong was a comrade-in-arms with Dean and McClure, promoting fluoridation. Hodge had a [sinister relationship](#) to the fluoridation issue, recently discovered through declassified U.S. documents, also tainting Ast.

Dean was not the first person to suggest that fluoride might be good for teeth. It was suggested as early as 1892, as it was detected in bones and teeth, although experiments in the 1920s disproved the notion.[\[16\]](#) It had not yet been established that fluoride caused "tooth mottling," but already scientists were trying to see if fluoride might be good for teeth. There were health disasters happening throughout the industrialized world due to fluoride, but a handful of ALCOA-influenced/funded scientists tried seeing how fluoride might be good for health. They and their corporate sponsors eventually prevailed, as money talks loudly in America.

Although the industrial scientists' well-paid efforts were important, it was up to a lawyer to literally ram fluoridation down the American public's throat. In 1947, ALCOA's lead counsel, Oscar Ewing, was named to head the Federal Security Agency (FSA), which later became the U.S. Health, Education and Welfare Department (today it is called the Department of Health and Human Services, or HHS). Ewing went on the ALCOA payroll in 1944 at the astounding salary of \$750,000 per year. The FSA oversaw the PHS, and the same year Ewing began at the FSA, he initiated a national fluoridation project through the PHS, helping to build a bandwagon for fluoridation in the absence of any credible scientific data. At that time, there were two cities undergoing water-supply fluoridation tests: Grand Rapids, Michigan and Newburgh, New York. The tests were to run for ten to fifteen years to collect data. Ewing began campaigning for a national fluoridation program when those tests were only two years old, and no significant data was available or even possible. None other than [Edward Bernays](#), the "father of public relations" and one of the greatest propagandists of all time, designed Ewing's public relations campaign for fluoridation. Bernays also designed the campaign by the American Tobacco Company [to addict American women to tobacco](#), and Joseph Goebbels adopted Bernays' work in his Nazi propaganda campaigns against the Jews.[\[17\]](#)

By 1950, 89 cities were fluoridated, despite no credible evidence ever submitted demonstrating that it reduced tooth decay, or doing anything other than causing disease, misery and death. By 1950, ALCOA was in a new line of business, selling sodium fluoride to cities to put into their

water supply. ALCOA was advertising the blessed purity of its sodium fluoride. Reality had been inverted, with a deadly industrial waste being forced down the American public's throat as "medicine." That reality remains inverted to this day. Eventually, the fluoridation results for Newburgh and Grand Rapids were partially published and have largely been ignored ever since. Although there was no measurable decrease in tooth decay, Newburgh boys had twice the incidence of skeletal deformities and a higher tooth-mottling rate as compared to the unfluoridated control group in nearby Kingston. Seeing how Newburgh fared, Kingston has successfully resisted having its water supply fluoridated for nearly sixty years. Other Newburgh data was noteworthy, although largely suppressed: Newburgh developed one of the highest heart disease rates in the United States, and girls came to puberty earlier than the control group. The heart disease rate in Grand Rapids doubled after the first five years of the fluoridation experiment.[\[18\]](#)

Such an [anti-scientific rush](#) gathers its own momentum, similar to a stampeding herd. The PHS and other bureaucracies would never back down from their position, no matter what. Fluoridation's proponents have even admitted that.[\[19\]](#) It has taken several centuries for the Catholic Church to admit that [the Inquisition](#) was probably not such a great institution. The Index of banned books was not discontinued until the 1960s, and the Holy Office has merely been renamed "The Congregation for the Doctrine of the Faith," and it acts as a more genteel version of the heretic-burning office it once was, but its goal is the same: defending the Church's power.[\[20\]](#) The cost of admitting that one was wrong, especially on something so potentially damning as adding a poison to the water supply, is too high for most people and virtually all bureaucrats to contemplate. The rash and possibly dishonest decisions made fifty years ago will be enforced as long as there is the power to do so.

There was plenty of public uproar over fluoridation fifty years ago, but money not only talks in America, it dictates. Today, the average American has no familiarity with fluoridation's history or the fact that there still is no credible data that demonstrates that fluoridation reduces tooth decay, and overwhelming, indisputable evidence that fluoride is a deadly poison. The logic is that fluoride is good for the teeth at one part per million, but begins causing health problems at concentrations of less than two parts per million. [Harold Hodge](#), one of fluoridation's pioneers and a toxicology expert, whose epidemiological research was influential in giving fluoridation the green light, himself stated that there should be at least a 100-fold margin in the dietary use of a potentially toxic agent.[\[21\]](#) The PHS adopted a two-to-one margin, although plenty of credible evidence shows that fluoride at one part per million (what most Americans drink) causes many health ailments, including cancer.

Reading the books for and against fluoridation can be illuminating. Two books that highlight the conflict are *Water Fluoridation, The Search and the Victory*, by Frank McClure, and *Fluoridation, The Great Dilemma*, by George Waldbott and two other scientists. McClure devotes the first quarter of his book to outlining some of fluoride's health hazards, including dental and skeletal fluorosis. If people read his book only to page 74, they might think that

fluoride would be one of the modern world's greatest health hazards. The first words on page 75 are “By 1930 the time had arrived when epidemiological research was on the verge of demonstrating with unequivocal certainty the alliance between dental caries prevention and an optimum quantity of fluoride in public drinking waters.” The rest of the book is a paean to the virtues of compulsory fluoridation. The book was published in 1970. What made McClure’s statement bizarre was that it was not until 1931 that fluoride was considered the cause of tooth mottling. Before the dangers of fluoride to teeth were discovered, there was almost “unequivocal certainty” that fluoride was good for teeth.

With his statement of “certainty” about fluoride's benefits, McClure’s book was silent regarding some truly unequivocal issues of tooth decay. One unequivocal issue is that the civilized diet is almost solely responsible for tooth decay. Fossil evidence demonstrates that tooth decay began when civilization did, the [Sumerians](#) being one early example of significant tooth decay. In ancient Egypt, the upper classes had significant tooth decay, while the lower classes, eating simpler food, had very little.[\[22\]](#) In Silesia, located in present-day Europe (Germany, Poland, and Czechoslovakia), tooth decay was found in 1.75% of the population at the end of the Stone Age, versus eighty percent (up to 95% in some populations) in recent years.[\[23\]](#)

There is dramatic evidence regarding the civilized diet's pernicious influence on teeth, and especially refined sugar. Wherever Western civilization has made its appearance over the past several centuries, tooth decay and other health problems have followed in its wake. In the 1930s, Weston Price journeyed to earth’s last remaining “primitive” civilizations. Price studied primitive civilizations and what happened to them when introduced to the “civilized” diet. On average, the “primitive” peoples exposed to civilized diets experienced a 3500% (thirty-five times) increase in tooth decay, of the fourteen cultures he studied. Their dental arches also degenerated, leading to crowded teeth.[\[24\]](#) Western dentistry and orthodontics owe nearly their entire existence to processed food.

In keeping with the time-honored, [male-dominated](#), capitalistic style of Western medicine, true prevention is not a concept. Instead of McClure advocating eliminating sugar and processed food from the diet to prevent tooth decay, a highly toxic waste byproduct of the aluminum processing and fertilizer industries, among others, becomes a miracle substance, compulsorily added to the water supply to “prevent” tooth decay. McClure and his friends not only kept the food processors in business, but they also helped create a new market for toxic waste.

That was not the only blind spot in McClure’s work. The possible economic incentive of the fluoride polluters, and those they bankrolled, was largely invisible. In light of recently declassified documents, and the now known corporate affiliations of McClure’s pantheon of fluoridation’s pioneers, McClure’s work today resembles a primer on the corruption of science.

The final chapter of *Water Fluoridation, The Search and the Victory*, deals with the opposition to fluoridation and how the pro-fluoridation forces triumphed. Particularly enlightening is

McClure's summary of a great fluoridation victory: the compulsory fluoridation of Ireland. McClure reprinted part of the judgment rendered by Justice Kenny. Kenny rejected the testimony of Waldbott and three other expert witnesses. The judge accepted wholly the testimony of Hodge, Yngve Ericsson, Armstrong and others. Armstrong would soon publicly admit the worthlessness of his early research. Ericsson was from Sweden, and was one of Europe's biggest fluoridation proponents. Ericsson received money from the corrupt U.S. PHS, and even received royalties from Sweden's toothpaste industry on fluoridation patents that he held.[\[25\]](#) Justice Kenny gave his reasons for rejecting Waldbott's and the others' testimony. He said that their views were fanatical, "passionate" and not supported by credible science. Kenny concluded that Hodge, Armstrong, Ericsson and the others from the fluoridation establishment were models of objectivity and learned reason, with the weight of science behind them. Knowing the now public but then secret bias of [Hodge](#), the payola of Ericsson, and all their affiliations to the PHS, which was dominated by ALCOA for many years, the judge's comments make for astonishing reading.

The hard science aspects surrounding the issue render water-fluoridation research highly suspect, if nothing else. The standard unit of tooth decay, known as DMF (decayed, missing, and filled), used by all fluoridation researchers, is far from bulletproof. In chapter 12 of *Fluoridation, The Great Dilemma*, the authors poke many and gaping holes in the research that supposedly supports compulsory fluoridation. One study showed that there was up to an 89% variation in cavities reported in a mouth, depending on which dentist performed the examination.[\[26\]](#) In the case of pro-fluoridation research, as with many others in the annals of science, it appears that the error rate may have been larger than the effect being studied, making the research worthless.

There is a mountain of contradictory data to the "unequivocal," undebatable data that McClure lauded.[\[27\]](#) In looking at the data, it was interesting that just as death rates went down in the Western nations during World War II (and WW I, due to natural causes) as they were reduced to being [vegetarians](#) and growing their own food, their dental health also improved. Their general and dental health also unraveled after the war years, as they went back to their normal diets and abandoned their Victory Gardens.[\[28\]](#) It is odd that in America's trial fluoridation experiments, the data at times showed an alarming increase in tooth decay after the war years, even though they were the new beneficiaries of artificial fluoridation. Even if it is accepted that fluoridation fights tooth decay, there are many results that show that "safely" fluoridated water still causes dental fluorosis. In Massachusetts, a 1974 study showed a 63% incidence of dental fluorosis in children in a fluoridated community.[\[29\]](#) In India, a study showed that 81% of the children had dental fluorosis with water at 0.73 PPM fluoride, less than that artificially added to fluoridated water supplies.[\[30\]](#)

There are many cases of people having toxic reactions to fluoridated water and even dying, but the fluoridation establishment has covered it up by intimidation and marginalization of scientists who speak out, including getting them fired, such as in John Yiamouyiannis' case.

[31] Doctors and dentists who spoke out against fluoridation risked losing their licenses and other unpleasant fates. Smear campaigns, book-bannings, secret police tactics, official censure and a wide assortment of bedevilments awaited any doctor, dentist, or scientist who spoke out against fluoridation, not to mention an ever-shrinking funding pool for studying fluoride's harmful effects. In the 1950's, about half of all U.S. dentists did not believe in fluoridation, but dared not speak out.[32] If they did, a McCarthy-like witch hunt could be visited upon them.

There was controversy in the early days as Ewing and his pals were campaigning to get water fluoridated. Below is one of the few brave statements made by a medical doctor in standing up to the propaganda barrage, made in 1952 by a U.S. Congressman.

"Mr. Speaker, despite my best efforts, and from the evidence before my committee, I cannot find any public evidence that gave me the impression that the AMA, the Dental Association [ADA - Ed.], or several other health agencies, now recommending the fluoridation of water, had done any original work of their own. These groups were simply endorsing each other's opinions.

"You will note that all of the experts grounded in the science of bio-chemistry have advocated the go-slow sign on the use of fluorides in drinking water. I believe that the dental profession and other public-minded individuals, like myself, have been misled by the PHS, because all of the facts have not been made available upon this subject."

"...I sometimes wonder if the Aluminum Company of America and its many subsidiary companies might not have a deep interest in getting rid of the waste products from the manufacture of aluminum, because these products contain a large amount of fluoride. In this connection it is interesting to know that Oscar Ewing, who now heads up the Federal Security Administration, and the firm of attorneys he was with - Hubbard, Hill and Ewing - represents the Aluminum Company of America." [33]

In the fluoridation issue, the same conflicts of interest and corruption that pervade [organized medicine](#) are clearly seen. The [AMA](#) has never had much to do with promoting the public's well being, instead [promoting cigarettes](#) and helping to cover up health disasters. That dynamic can also be found in the American Dental Association (ADA), where its financial relationship with candy companies is similar to the relationship the AMA had for generations with the tobacco interests. In 1995, the ADA received 15% of its money from trade groups such as the Sugar Association, Coca-Cola, and M & M. The ADA actively promotes

compulsory fluoridation. The ADA was also guilty of stating that the ACLU endorsed fluoridation when it in fact did not.[\[34\]](#) Since 1993, the ADA has had to drop many organizations from its list of fluoridation supporters, including the EPA.[\[35\]](#)

In David Kennedy's *How to Save Your Teeth* he devoted chapter seven to the fluoride issue. Kennedy is a dentist and so was his father. Kennedy grew up believing the fluoridation propaganda. His eyes were opened when he read of a three-year-old child dying from a fluoride treatment in 1974. A typical dentist's treatment is to apply topical stannous (tin) fluoride gel to the child's teeth, then have the child drink water, swish it around in his/her mouth, then spit it out. That is similar to the "swish" fluoride program that was popular in fluoridation's early days.

The three-year-old boy, on his first trip to the dentist, was handed the water by the dental hygienist, who did not tell him what to do. The child swallowed the water. The fluoride gel on his teeth went into his stomach, three times the dose necessary to kill him. The child immediately began vomiting and complaining of dizziness and headaches. The dentist downplayed the child's reaction, saying that his fluoride treatment was normal. The mother was not comforted by the dentist's assurances, and was sent to a pediatric care unit in the same building. The care unit ignored the mother's frantic pleas to attend to her son. For more than two hours she waited for somebody to attend to her son as he lapsed into a coma. When the medical staff finally got around to seeing the son, they injected adrenaline into his heart and he was rushed to a hospital, where they waited for another hour. The boy again lapsed into a coma, then the doctors attempted to pump his stomach and he died of cardiac arrest. The boy's parents were eventually awarded \$750,000.[\[36\]](#)

The only mistake was the boy swallowing the water instead of spitting it out. Dental industry apologists have said that the procedure was not quite orthodox, and the boy was told to spit out the water, which is a weak defense.[\[37\]](#) Kennedy began looking into fluoridation, and found no credible data supporting fluoridation. Today he is one of fluoridation's leading opponents.

Something really happens to teeth when exposed to fluoridation. Artificial fluoridation at 1 PPM appears to induce the early stages of dental fluorosis. Fluoridation's proponents tout the effect of hardening the enamel. That hardening appears to take place. What does that hardening represent? In metallurgy and the forging of metals it is well known that when metals are made harder, that often makes them more brittle. That may be exactly what is happening to teeth that are exposed to fluoride. Yes, the enamel gets harder, but it also becomes more brittle. The hardening is only the first stage of fluorosis. The next stage is that the brittle teeth begin mottling, chipping and disintegrating. The process does not prevent cavities from forming, and makes cavities more catastrophic to the teeth than they would otherwise be.

For argument's sake I will accept that fluoridation is indeed a boon to the teeth, and cavities decrease when fluorine is introduced to the body, and there is a health benefit to ingesting fluorine, although fluoridation's proponents say that those benefits mainly apply to children. Let me be even more optimistic and say that *everybody* benefits from fluorine. Let me be the greatest believer in fluoride's benefits and state that *every tooth* benefits from fluoride. Even if I was fluoride's biggest cheerleader, I still have to admit that dental and skeletal fluorosis exists. People's teeth and skeletons disintegrate when exposed to too much fluoride, denied by nobody. The other documented health hazards I will ignore for the moment as unsubstantiated.

Numerous studies show that dental fluorosis occurs in people exposed to only one part per million fluoride in the water supply. Yet, let me call fluoride a medicine. Let me consider fluoride similar to penicillin, as far as how universally wonderful it is for us. Some people should not take penicillin because they have adverse reactions. Similarly, some people are far more sensitive to fluoride and have reactions to it at levels that most endure with no obvious harm. Millions of Americans today have that problem. That situation is typical of most drugs. How can I measure how much fluoride is in the rest of my ingestion, such as from my food, my toothpaste, and my dentist's fluoride treatments? If I were a doctor, prescribing penicillin to my patients (similar to a dentist and fluoride treatments), how would I feel if they also had penicillin in their food, water and toothpaste? Could I effectively control their overall dose of penicillin? There is not a sane doctor who would prescribe a medicine to the entire population, and in such a way that he/she could not tailor the dose for each patient. Nevertheless, that is what compulsory fluoridation does.

Using even better logic than fluoridation's proponents, people theoretically cannot overdose on vitamin C. Why not compulsorily add vitamin C to America's water supply? It could only help our health, could it not? One problem is there is no cheap source of vitamin C, whereas fluoride has the marvelous distinction of being a toxic waste byproduct of several industries. Today, the fertilizer industry has beaten out the aluminum refining industry as the source of fluoride in America's water supplies, as they provided the fluoride ion more cheaply. Today, 90% of fluoride added to America's water is in the form of fluosilicic acid, mainly provided by the phosphate fertilizer industry. In 1983, Rebecca Hammer of the Environmental Protection Agency (EPA) endorsed adding fluosilicic acid to the water supply, because it killed two birds with one stone. In Hammer's words,

"In regard to the use of fluosilicic acid as a source of fluorides for fluoridation, this Agency regards such as an ideal environmental solution to a long-standing problem. By recovering by-product fluosilicic acid from fertilizer manufacturing, water and air pollution are minimized, and water utilities have a low-cost source of fluoride available to them."

Instead of having to undertake costly measures to dispose of the hazardous waste, adding it to the water supply reduced both the costs of hazardous waste disposal and our medical bills. If only all industrial waste problems could find themselves in such a win-win situation.

Today, well more than half of American children have dental fluorosis, to some degree, and the rate is greater than 80% in some fluoridated areas. Millions of Americans have already had their teeth ruined by dental fluorosis, leading to dental work, up to and including dentures. Fluoridation promoters have continually minimized dental fluorosis as a mere cosmetic problem, but the facts are something else. When cancer patients have chemotherapy and their hair falls out, it is indicative of far more widespread tissue damage, hair falling out being the least of it. Similarly, dental fluorosis is merely the visible evidence of systemic fluoride poisoning. Ironically, research (even mainstream research, by the National Institute of Dental Research) has shown that dental fluorosis *increases* tooth decay, and does not decrease it.

[\[38\]](#)

Although reverse osmosis removes about 90% of the fluoride, and steam distillation removes well over 99%, people can still absorb it through their skin while in the shower and through other contact. I have consumed purified water for more than twenty years, avoiding not only fluorine, but also chlorine and other pollutants. Actively putting fluoride into the water supply has helped create an industry that removes it.

The long-term effect of fluoridation is increasing a dentist's business. The teeth still get their cavities, but when a dentist attempts to repair a tooth that has been fluoridated, the tooth has disintegrated to the point where a simple filling will not suffice. The tooth begins coming apart as the dentist works on it. Instead, the tooth gets a crown or other more extensive repair. Dentists have remarked on that phenomenon for many years.

Harold Hodge, the Nuclear Connection, and Our Brains

Harold Hodge's career is worth investigating. He was the leading scientist who created the data showing fluoride's harmlessness in the doses they planned to administer to the nation's water supplies. In the late 1990s, Joel Griffiths and Christopher Bryson unearthed documents regarding Hodge's involvement in acts that are crimes against humanity. To better understand the situation, this essay will need to revisit chemistry, fluorine and the atom bomb.

Du Pont invented Freon early in the 20th century. During World War II and America's secret pursuit of the atom bomb, there were many technical hurdles to overcome. A major problem was obtaining the material to do the job. In nature, uranium exists in two basic isotopes. An [isotope](#) is a version of an element. What makes one isotope different from another is its

number of neutrons. In nature, Uranium is found as Uranium 238 (U-238) and U -235. U-238 is by far the most abundant isotope, comprising more than 99% of all uranium. U-235 is less than one percent of naturally occurring uranium, but it is the isotope needed to make a bomb. The difference between U-235 and U-238 is three neutrons. Those three fewer neutrons make U-235 less stable (undergoing radioactive decay into more stable elements) than U-238. U-235's half-life (the time it takes for half of it to decay) is 700 million years, but that is short compared to U-238's 4.5 billion years. It is short enough to lump it together and create a nuclear chain reaction. That chain reaction is the required event for making nuclear weapons and nuclear energy possible.

How does one separate U-235 from U-238? The answer was simple and the key to making nuclear weapons. Du Pont was the acknowledged master of [refrigeration](#), and using fluorine to make a refrigerant was their specialty. The secret to separating the uranium isotopes was somehow turning uranium into a gas, and uranium hexafluoride was born, which is one uranium atom bonded to six fluorine atoms. It is the only known uranium compound that is a gas at near environmental temperatures (its boiling point is 134° F). It is called "Hex" in the industry. From this essay's [chemistry lesson addendum](#), it should be obvious why that compound had such a low boiling point. Hex is uranium gas, or one could call it radioactive Freon.

Here is how they separated it. The Hex of U-235 is slightly lighter than Hex of U-238 because of those three neutrons. What Manhattan Project personnel did was send Hex through a mile-long tunnel filled with screens. As the Hex made its way to the end of the tunnel, the Hex, U-235 rose in comparison to the Hex, U-238, because it was slightly lighter. A membrane then filtered it out. It was an ingenious solution. They accumulated the U-235 an atom at a time. The work of tens of thousands of people was directed at getting a lump of U-235 that I could hold in my hand. That was the active ingredient in the atom bomb [dropped on Hiroshima](#).

Du Pont produced the fluorine for the Hex. They were making vast amounts of it. During 1944 there was an accident at du Pont, and a cloud of deadly hydrogen fluoride was released into the air. When added to water, hydrogen fluoride becomes hydrofluoric acid, one of the most dangerous acids known.^[39] There were probably numerous releases.^[40] The fluoride clouds sailed away to farms downwind. Crops withered, and people and animals became violently ill. The affected farmers in Gloucester and Salem counties, famous for their high quality produce, sued the federal government after the war. They were stifled in their lawsuits against du Pont and the Manhattan Project, largely because all the data regarding the damage done was kept secret in the interest of "national security." The farmers eventually gave up and settled their suits for a few hundred dollars per farm. Recently declassified documents show Harold Hodge's active role in the government's damage control effort. In a secret Manhattan Project memo dated March 1, 1946, Hodge, who was the Manhattan Project's chief toxicologist for fluorine studies, wrote to the Manhattan Project's medical division chief, Colonel Stafford

Warren. Hodge expressed his concern regarding the toxicity of fluorine and the New Jersey incident. Hodge outlined four major areas of concern:

- "1. A question of injury of the peach crop in 1944.
- "2. A report of extraordinary fluoride content of vegetables grown in this area.
- "3. A report of abnormally high fluoride content in the blood of human individuals residing in this area.
- "4. A report raising the question of serious poisoning of horses and cattle in this area."

Shortly after the farmers sued, the federal government mobilized tremendous resources to counteract the farmers' efforts. Secret meetings were held in Washington DC, attended by everybody from the FDA to the Bureau of Standards to the Justice Department. Why were they meeting? In a recently declassified memo from Colonel Cooper Rhodes of the Manhattan Project, those government agencies were "making scientific investigations to obtain evidence which may be used to protect the interest of the Government at the trial of the suits brought by owners of peach orchards in ... New Jersey." If the farmers prevailed in court, America's entire nuclear program could have been threatened.

Hodge also wrote to his boss, "Would there be any use in making attempts to counteract the local fear of fluoride on the part of residents of Salem and Gloucester counties through lectures on F toxicology and perhaps the usefulness of F in tooth health?" "F" stood for fluoride, and was the name of the top-secret program begun during those days to study the harmful effects of fluoride. "Project F" was performed at the University of Rochester. The University of Rochester is already infamous for other "research" it was performing at the same time for the Manhattan Project: they secretly injected people with plutonium without their knowledge, in the first of many guinea pig experiments performed on U.S. citizens to test chemicals and radiation. Over a thirty-year period, the U.S. government administered everything from plutonium to LSD to unwitting "subjects." Those are only the experiments that have been made public.[\[41\]](#) God only knows what other experiments will remain hidden.

Studying the decision-making process that led to [dropping the atom bombs](#), the [CIA's hiring of Nazis](#), the [U.S. military shenanigans](#), and the activities of the alphabet soup U.S. "security" organizations regularly elicits amazement at how much information is still being kept secret, documents that are more than fifty years old. A researcher discovering a newly declassified document can discover other classified documents. The first document seen can be revealing,

but what can be more intriguing are other documents referred to by the original document. When the researcher tries finding the referred document, he/she can find it still classified.

Apologists for the secrecy, such as UFO debunker [Phil Klass](#), say that there are legitimate national security reasons for keeping 100% of the information secret that the National Security Agency has on UFOs, for instance.^[42] Ex-CIA agent [Ralph McGehee](#), whose bitter experience makes it clear that the government nearly never has a legitimate “[security](#)” reason for keeping anything classified, refutes the opinions of establishment apologists. McGehee is far from alone. In a recent interview, ex-CIA operative Mark Phillips stated that the 1947 National Security Act had nothing to do with protecting national security. Phillips stated that everybody who worked under it knew that its true purpose was to “cover crimes. It was not to cover secrets.”^[43] Secrecy and deception (lies of omission and commission) are the handmaidens of [self-serving activities](#), as a cover for dark deeds or in keeping the grip on power and wealth for a select few.

Griffiths and Bryson’s work regarding the fifty-year-old fluoridation research ran into the “national security” obstacle.^[44] Hodge was involved with promoting fluoride *before* the New Jersey accident in 1944. In 1943, Hodge chaired the committee that decided the feasibility of fluoridating the water supply of Newburgh, New York, one of two American cities first targeted for artificial fluoridation. The committee was eventually composed of other Manhattan Project people, such as Henry Barnett and John Fertig. The Manhattan Project affiliations of Hodge, Barnett, and Fertig were kept secret. The wolves were looking after the interests of the sheep. Trendley Dean himself was opposed to the Newburgh test, fearing fluoride’s toxicity. Manhattan Project personnel, led by Hodge, covered up Dean’s opposition.^[45] The man in charge of the Newburgh fluoridation project was David Ast; another fluoridation legend who attended the secret Manhattan Project meetings regarding the New Jersey accident, according to recently declassified documents.

The situation was so skewed that the Program F scientists published a 1948 paper that ran in the *Journal of the American Dental Association*, describing the health effects on humans. Griffiths and Bryson obtained the original report, now declassified, and found that the Atomic Energy Commission censored the harmful health effects that were documented. The censorship was so severe it was funny, in a sick way. Griffiths and Bryson wrote:

“This was a study of the dental and physical health of workers in a factory producing fluoride for the A-bomb program, conducted by a team of dentists from the Manhattan Project. The secret version reports that most of the men had no teeth left. The published version reports only that the men had fewer cavities. The secret version says the men had to wear rubber boots because the fluoride fumes disintegrated the nails in their shoes. The published version

does not mention this. The secret version says the fluoride may have acted similarly on the men's teeth, contributing to their toothlessness. The published version omits this statement. The published version concludes that 'the men were unusually healthy, judged from both a medical and dental point of view.'"

Animals avoided the facility where the hydrogen fluoride was used. All microorganisms were killed, so food left in the facility would never decay. The hydrogen fluoride etched the facility's windows and the workers' glasses, so they needed to be continually replaced. The workers also developed lesions and a type of "sunburn" from working there. Nearby elementary schools had their windows etched from hydrogen fluoride releases.

Hodge was dead when Griffiths and Bryson discovered the damning declassified documents, but Ast was still alive and was named in the documents as active in the nuclear establishment's damage-control efforts. Ast oversaw the Newburgh New York fluoridation experiment. Griffiths and Bryson confronted Ast with the declassified documents' revelations. Ast pulled a [Ronald Reagan](#), claiming no recollection of those activities.

There were major studies performed by the government on fluorine during those World War II days and shortly thereafter. With the exception of the recently declassified version of the report published in *JADA* in 1948, the others are still classified, despite significant efforts by Griffiths and Bryson to get them declassified using the Freedom of Information Act. One entire area of study still classified is that regarding the effects of fluorine on the central nervous system. Recently declassified memos show that on April 29, 1944, Colonel Warren approved a Central Nervous System (CNS) research proposal. Hodge wrote the proposal. The memo accompanying the proposal said:

"Clinical evidence suggests that (uranium hexafluoride) may have a rather marked central nervous system effect with mental confusion, drowsiness and lassitude as the conspicuous features. It seems most likely that the F [code for fluoride] component rather than the T [code for uranium] is the causative factor."[\[46\]](#)

The proposal remains classified, as do the research results. Another declassified document dated six months after the proposal orders the research stopped. That sent my head spinning. Right-wingers have been saying for more than fifty years that fluoridation was a plot to numb American brains so they could be easily herded. I had heard for years that fluoride administered to a bull made it docile and easy to handle. I have read repeatedly that both the

Nazis and Soviets used it in their prison camps to keep the prisoners' brains numbed, to make them docile. In his right wing classic *Murder by Injection*, Eustace Mullins made the case that Alzheimer's disease is largely caused by the ubiquity of aluminum and fluorine in the nation's food and water supply. There is increasing evidence for that opinion.[\[47\]](#) Mullins mentioned the Soviet studies from 1940 showing how fluorine in the water supply was helpful in running their Gulag system, with brain-numbed prisoners, attested to by others.[\[48\]](#)

In the appendix of *Murder by Injection* Mullins presents a frightening fluoridation story. At the end of World War II, as the United States was scrambling to snatch up as many Nazi scientists as possible and keep them from the Soviet Union's clutches, American industrialists were sent to Europe to perform many duties, including mopping up German Industries. One prominent scientist sent over was Charles Eliot Perkins. His job was to help take over the I.G. Farben chemical plants. I.G. Farben was the most infamous and largest of the German cartels. Farben ran the rubber factory at Auschwitz that was staffed by concentration camp labor. Farben also made the Zyklon-B gas used in the gas chambers.

In a letter Perkins wrote on October 2, 1954 to the Lee Foundation for Nutritional Research, Perkins made the startling statement that a German chemist, who was a prominent Nazi, told him that the German General Staff had approved a comprehensive population control plan to use on subject populations. It amounted to mind control, and an essential plan element was to "medicate" the water supplies, mainly with sodium fluoride. Perkins wrote,

"However, I want to make this very definite and very positive - the real reason behind water fluoridation is not to benefit children's teeth...The real purpose behind water fluoridation is to reduce the resistance of the masses to domination and control and loss of liberty." Perkins said that putting fluoride in the water supply eventually numbs the brain, making people easily manipulated. Perkins stated "...any person who drinks fluoridated water for a period of one year or more will never again be the same person, mentally or physically."[\[49\]](#)

One friend remarked, when he heard the history of fluoridation, that at least the Soviet Union and Nazis used it or intended to use it on prisoners. In the United States it is used on the general population.

The above revelations open a Pandora's box regarding the mental effects of fluorinated drugs and chemicals. Freons have psychoactive effects, and is the tip of the iceberg regarding fluorinated drugs and chemicals. The Germans were leaders in such research. During World War II the Germans invented the first nerve gas, Soman. It is a fluorinated chemical. In 1939, the scientists at Farben invented Sarin, the most deadly nerve gas next to VX. Sarin is an

acronym of the initials of the Farben scientists who developed it. Sarin was going to replace Zyklon B in the gas chambers, but the war ended before mass production could begin. Sarin is also a fluorinated chemical, a close cousin of Soman, and the EPA recently published a chemical profile on Sarin, after Gulf War Syndrome veterans (who think that Sarin may be responsible for their disease) pressured the government, showing that the fluorine atom was its active ingredient.[\[50\]](#)

Rohypnol, the notorious drug used in date rapes, is fluorinated Valium, making it more than twenty times as potent as normal Valium. Prozac is another fluorinated drug. In all, there are hundreds of fluorinated drugs, and many have profound mental effects, including memory loss. The primary effect of psychoactive drugs is inhibiting enzyme production, which the fluorine ion is well known to do. In light of other facts surrounding fluoridation, this begins treading frightening territory. Fluoridation promoters and others often laugh off such situations as the workings of hopelessly paranoid minds. In light of declassified memos regarding U.S. CNS experiments of fifty years ago (at nearly the same time the Nazis and Soviets were doing similar kinds of experiments), *and* the studies that are performed across the world on fluoridation and intelligence, I am not laughing. Recently two studies in China showed a drop in IQ of children exposed to fluoride in the water supply of between 5 and 19 points.[\[51\]](#)

In other unsettling revelations, documents have surfaced which revealed that when the Newburgh New York fluoridation trials were run, testing fluoride's mental effects on the subject children was planned, and tissue samples were secretly tested at the University of Rochester. The results of those tests have yet to be made public.

In Mullins' book he chalks up the fluoridation push as a mind-control ploy by the "Rockefeller Syndicate." Mullins says that the Rockefellers paid Ewing's astronomical salary at ALCOA in order to set up his tenure at the Federal Security Agency. The Rockefeller name has come up repeatedly in the area of social control in my studies. [John Taylor Gatto](#) is a two-time New York City Teacher of the Year. Gatto taught for twenty-six years in inner city New York. Gatto is an anomaly in teaching. He is widely recognized as one of the best teachers America has to offer, but he is [highly critical of our educational system](#). In 1992, he wrote *Dumbing us Down*, a monograph he published after retiring from the New York City school system. *Dumbing us Down* is a devastating critique of America's compulsory school system, and how it beats the humanity out of children and "dumbs us down."

Gatto has become an education activist since he retired from the New York City school system. In *Dumbing us Down* is the speech he gave when he accepted the 1990 Teacher of the Year award, winning the award for the second consecutive year. Gatto identified two men, Sears and Harper, as primary designers of our modern schools, which he states are "instruments of scientific management of a mass population."[\[52\]](#) Sears and Harper were from the [University of Chicago](#), an institution that John Rockefeller rebuilt at the turn of the century. Rockefeller and Andrew Carnegie also [took over American medicine a century ago](#), leading to

the knives and drugs paradigm that dominates Western medicine today.

It is easy to become lost in bureaucratic and statistical tangles, losing sight of the bigger picture. Our nation was pursuing the most destructive technology of all time, and the first practical application of it was [dropping bombs on women and children](#), then publicly lie about who it was dropped on and why.[\[53\]](#)

Dr. Phyllis Mullenix, a toxicologist at Children's Hospital in Boston, who also worked in neuropathology at Harvard Medical School, recently performed research into fluoride and the intelligence of rats. In 1982 she was asked to perform the research as part of her studies on the toxicity of therapeutic agents used in treating leukemia and other diseases. Mullenix was invited to work at the Forsyth Dental Center, arguably the world's leading dental research institute. Five years later, her research was underway.

Mullenix found a significant diminishment of rat intelligence when they were subjected to fluoride in their water supply. During Mullenix's research, she was surprised that there were virtually no published studies regarding fluorine and its effects on the human brain.

Some interesting news was the help she had. Brought in as a consultant on Mullenix's research was Harold Hodge. He was quite old in the early 1990's. During Hodge's consulting of Mullenix's work, he never mentioned the CNS studies that he proposed fifty years earlier. He almost certainly oversaw the 1940s research himself. When shown the newly declassified memos that clearly spell out Hodge's active role in CNS research on fluorine, Mullenix said she was "flabbergasted." Mullenix eventually came to see Hodge as a "monster" who actually steered her research toward studying fluoride effects on the central nervous system, probably to see what the results would really be, as the CNS experiments from the 1940s apparently were prematurely terminated. Mullenix today feels that Hodge and one of his University of Rochester pals used her "like a little puppet."[\[54\]](#) When Mullenix tried interesting the NIDR in the declassified memos, she was rudely treated like a "crackpot." The NIDR is evidently part of the U.S. government's damage control effort on fluoride's harmful effects.

When Mullenix read the declassified study on fluorine and the dental health of Manhattan Project workers and compared it to the originally published version, she said, "This makes me ashamed to be a scientist." Mullenix wonders if all other studies done on fluoridation safety were done like that one. Only the federal government knows for sure, in its secret archives.[\[55\]](#)

Mullenix is one more casualty of the fluoride wars. She had nothing to do with the fluoride issue originally, but became involved as part of her work, when steered into it by Hodge. All she "knew" about fluoride when she started was that it was supposedly good for teeth. She did not initiate her research, but was doing it because she was asked. Her research results were published in *Neurotoxicology and Teratology* (Vol.17, No. 2, pp.169-177, 1995), the leading

scientific journal in the field. Before that paper was published she presented her findings at the NIDR in Maryland, a division of the National Institute of Health (NIH). When she arrived at the NIDR, in her words, "I had no idea what I was getting into. I walked into the main corridors there and all over the walls was 'The Miracle of Fluoride'. That was my first real kick-in-the-pants as to what was actually going on." She said the display ridiculed people who were against fluoridation. "I thought, 'Oh great!' Here's the main NIH hospital talking about the 'Miracle of Fluoride' and I'm giving a seminar to the NIDR telling them that fluoride is neurotoxic!"[\[56\]](#) After her presentation she met with toothpaste representatives who asked her if she was saying that their products lowered the IQs of children, and Mullenix responded with, "Basically, yes." That marked the end of her career.

When she excitedly announced to her employers that her paper on the intelligence of rats was being published, three days later she was fired. Her employers asked her which journal was going to publish her work. By that time, she realized that they wanted to block its publication, so she did not tell them. Subsequently, funding has dried up for that kind of research, although immediately after Mullenix was fired, Colgate gave a \$250,000 grant to Forsyth (for a job well done?). The unique equipment Mullenix developed to test rat intelligence was mysteriously destroyed before she could recover it.

Dr. Mullenix was then given an unfunded research position at Children's Hospital in Boston, but with no equipment or money. Mullenix said, "The people at Children's Hospital, for heaven's sake, came right out and said they were scared because they knew how important the fluoride issue was...Even at Forsyth they told me I was endangering funds for the institution if I published that information."[\[57\]](#)

Mullenix has since applied to the NIH for a research grant to further her research, and was turned down. The NIH told her that fluoride had no central nervous system effects, period. How the NIH concluded that, when virtually the only published research shows deleterious effects, is curious indeed. The work Mullenix did, as well as other recent studies, has shown that the fluoride ion is particularly damaging to the brain's hippocampal region, which is its learning center.[\[58\]](#)

Mullenix's fate is common, and this web site documents many instances of scientists and others arriving at the "wrong" answers, and having their careers destroyed. Other scientists who had their careers ruined for coming up with the "wrong" answer regarding fluoridation include Dr. Allan S. Gray of British Columbia and Dr. John Colquhoun of Auckland, New Zealand.

In light of Hodge's secret work for the Manhattan Project, and the secret memos and secret studies that are the tip of the iceberg, every pro-fluoridation effort that uses Hodge's name is tainted. It was with interest that I read *Fluoride and Dental Caries*. It is a relatively recent book on the subject, published in 1986. The book is a compendium on fluoridation, drawing on

various experts in the field. Hodge co-wrote a chapter on fluoride toxicity, and also wrote a chapter dealing with objections to fluoridation. Reading that book was another enlightening process, when I recovered from my anger. The book gives the appearance of looking at fluoridation from many aspects, but *appearance* is the operative word. Hodge's work is suspect, to put it mildly, and I looked there first.

Hodge's co-author on the toxicology chapter was another fluoridation luminary: Frank Smith from the University of Rochester. Smith co-authored many works with Hodge and was active in producing/massaging data to protect industry and government from liability claims.^[59] It is instructive to see the blind spots in their work, and what they were obviously hiding. When Smith and Hodge stated that "No substantive evidence of ill health has ever been offered in children or adults as a result of consuming drinking water containing optimal concentrations of fluoride,"^[60] they were voicing the nuclear establishment's damage control opinion, because there is substantial evidence of harm, but they chose to ignore it. When they wrote, "Since the Danish experience (in the 1930s) crippling fluorosis in an industrial setting has never been seen in the United States or Europe,"^[61] a grain of salt needs to be taken with that statement. With just one declassified study, out of many that exist and are still secret, definite harm occurred, although by playing semantics games they were not "crippled," merely toothless, although the long-term effects are unknown, which may be in another classified study. People becoming violently ill from du Pont's fluoride cloud are invisible victims, at least to the public, when Hodge and Smith wrote their masterpiece of disinformation. The worst air pollution disaster in U.S. history happened in October 1948 in Donora, Pennsylvania, when an air inversion layer formed over the town for four days, and fluoride emissions from U.S. Steel's zinc and steel facilities killed twenty people and seriously injured hundreds more. If the inversion layer had lasted one more day, a thousand people may have died. U.S. Steel and the PHS conspired to cover-up the disaster, with records missing to this day.^[62]

Throughout *Fluoride and Dental Caries* there were instances of "looking" at objections to fluoridation, and the *appearance* of carefully considering them was undertaken. The close relationship between ALCOA, the other fluoride polluters and the early fluoridation researchers is nowhere mentioned, although it is well documented and is consistently one of the biggest issues raised by fluoridation's opponents. A table on the "anti-science" arguments against fluoridation was produced on page 130, in a chapter titled "Legal, Social and Economics Aspects of Fluoridation," that even mentioned the "Communist conspiracy" aspect of fluoridation. Nowhere was mentioned the obvious economic incentives of fluoride polluters to manage the fluoridation issue, and the well-documented instances of them funding and influencing the fluoridation research, even when it is merely the smoking gun of conflict of interest. The authors of that chapter, including the book's editor, used the words "pseudoscientist" and "quack" to describe fluoridation opponents and their "anti-science." In the chapter purporting to look at the broad spectrum of issues regarding fluoridation, the ALCOA and fluoride polluter issue was spectacularly absent.

In *Fluoride and Dental Caries*, one area caught my interest. In Hodge's chapter on fluoridation objections, he presented experimental evidence by chemists that showed the fluorine ion benign to human chemistry. The research was used to discredit John Yiamouyiannis, who uses the very same research to show how the fluorine ion wreaks havoc in the body. Hodge interpreted the original research, qualifying and minimizing the conclusions, and then he presented the experimental work of pro-fluoridation pal Armstrong. Hodge concluded that the research showed that the fluorine ion was relatively harmless by itself. It was the first time that I had seen Yiamouyiannis' science challenged, beyond his cancer statistic analyses with Dean Burk. With knowing Hodge's extreme and formerly secret bias, I cannot trust his writing, particularly regarding the fluoride ion and human harm, but it was interesting reading. When anybody is proven a systematic liar, how can anything they say be believed? How can fact and fiction be separated? The only way I know is to entirely reject their work and become my own expert.

Here are some quotes regarding the biological damage the fluorine ion does to human health, the kind not found in pro-fluoridation propaganda such as *Fluoride and Dental Caries*.

"Fluorides are general protoplasmic poisons, probably because of their capacity to modify the metabolism of cells by changing the permeability of the cell membrane and by inhibiting certain enzyme systems. The exact mechanism of such actions is obscure." - ***Journal of the American Medical Association*, Sept 18, 1943. (before the propaganda steamroller really got going in 1947)**

"The fluoride ion exerts its toxic effect by inhibiting the action of many enzyme systems." - **Hugo Theorell, M.D., Nobel Prize winner for his research in the field of enzyme chemistry.**

"We ought to go slowly. Everybody knows that fluorine and fluorides are very poisonous substances and we use them in enzyme chemistry to poison enzymes, those vital agents in the body. That is the reason things are poisoned; because enzymes are poisoned, and that is why animals and plants die." - **James B. Sumner, Director of Enzyme Chemistry, Department of Biochemistry and Nutrition, Cornell University, and a Nobel Prize winner for his work in the field of enzyme chemistry.**

"The data indicated that drinking water with as little as 1 PPM shortened the life span of mice an average of nine per cent. This was true whether death was due to cancer or non-cancerous diseases. The only notice proponents of fluoridation gave to this work was to discredit it as much as possible. ... In experiments where the drug was added directly to suspensions of cancer tissue before inoculation into eggs or mice, sodium fluoride stimulated the growth of cancer tissue in concentrations of one part in more than 20 million. Scientists at

Cambridge University (*British Medical Journal*, Oct 26, 1963) discovered that concentrations of sodium fluoride as low as one part in ten million inhibited the growth of a culture of human tissue. ... the growing weight of scientific evidence that water-borne fluorides, even at 1 PPM, have toxic possibilities must finally be recognized." - **Alfred Taylor, Ph.D., Clayton Foundation, Biochemical Institute, University of Texas, Austin Texas, 1965.**

"The terrifying conclusion of the studies was that fluorine greatly induced a cancer tumor's growth. If doctors and the public can be made aware of this catastrophe, fluoridation shall end quickly. It will someday be recognized as the most lethal and stupid "Health Program" ever conceived by the mind of man, witch doctors and blood-letters not excepted."

"In 1969 the country of Sweden intended to fluoridate their water supply due to the strong advice of Professor Yngve Ericsson, a Swedish dentist who was also the senior representative on the World Health Organization's Expert Committee on Fluoridation. However, it was then found that Professor Ericsson coincidentally was the holder of two highly-profitable patents on fluoride toothpaste!" - **Alfred Taylor, June 13, 1970 the *Gothenburg Post* (Sweden); August 5, 1970 the *News Register* (Sweden); and May 1, 1970 *Norsk Folkehelselag* (Norway).**

"In 1978, the West German Association of Water and Gas Experts rejected fluoridation for legal reasons, and because 'the so-called optimal fluoride concentration of 1mg/liter is close to the dose at which long-term damage to the human body is to be expected.'" - ***Chemical and Engineering News*, August 1, 1988.**

The tremendous blind spots regarding fluoride polluters, diet and caries, the severe biases regarding the harm done by fluorides, and Hodge's secret mission on behalf of the nuclear establishment rendered *Fluoride and Dental Caries* virtually worthless, except as an instructive exercise in propaganda. With the now-known nuclear industry's active though secret management of the fluoridation issue, books such as *Fluoride and Dental Caries* are examples of "pseudoscience" in the strongest sense.

The situation of industry and government corrupting science is far from confined to the fluoridation issue. Today, ethyl alcohol, the substance that every drunkard knows well, is added to American gasoline to increase its octane rating. It works great. It was also used eighty years ago. In the 1920s, ethyl alcohol was replaced by tetraethyl lead as an octane booster. Why? As it turns out, nobody could patent ethyl alcohol and make monopoly profits from putting it into gasoline. Therefore, General Motors, Standard Oil and du Pont conspired to make a new, patentable chemical, and tetraethyl lead was introduced into American gas tanks. Although [Ben Franklin](#) remarked on lead's well-known toxic qualities hundreds of years ago, and even ancient Romans and Greeks wrote of its toxic properties, industrially-funded scientists in the 20th century labored mightily to make lead appear safe to ingest, even though

they knew how deadly tetraethyl lead really was. It is unknown just how many people became sick and died from the effects of lead being spewed into the air during the era of tetraethyl lead, but it is not inconsiderable. In 1985, the EPA estimated 5,000 lead-related heart disease deaths per year, prior to the tetraethyl lead phase out. The lead content of American bloodstreams has fallen precipitously since tetraethyl lead was outlawed.

The most notorious of the industrial laboratories that produced the lead “research” was Kettering Laboratories.[\[63\]](#) For generations, Kettering and its industrial sponsors controlled all lead research. The “Kettering” of Kettering Laboratories was Charles Kettering, the inventor and General Motors executive. Kettering Laboratories is not the only “medical” foundation that he helped bankroll. [The Memorial Sloan-Kettering Cancer Center](#), the world’s leading cancer research institute, is named after Kettering and his buddy, General Motors CEO Alfred Sloan, another noted “philanthropist.” Kettering Laboratories was also instrumental in making aluminum appear benign. McClure had high praise for Edward Largent and Kettering Laboratories in his *Water Fluoridation: The Search and the Victory*. Largent and Kettering were involved in covering-up the harmful effects of fluoride, and Largent secretly worked for the federal government, possibly on the Manhattan Project.[\[64\]](#) Christopher Bryson unearthed original research that Kettering performed in the 1950s, which showed that inhaling airborne fluorides caused an emphysema-like condition, something that countless Americans downwind from fluoride facilities have suffered from. Kettering buried the research results because they came up with the “wrong” answer, but did not have “national security” to cover their tracks, so Bryson discovered it in his research.[\[65\]](#)

On a lighter note, here is a cartoon that sums up fluoridation, although it was a general-purpose cartoon dealing with similar corporate malfeasance. Replace the words “toxic sludge” with fluoride, and this cartoon sums up the story of fluoridation. [Tom Tomorrow](#) is the funniest political cartoonist I have ever seen, and might be the best. The below cartoon was so inspired that a book was named after it.[\[66\]](#)

Click on image to enlarge

Anne-Lise Gotzsche’s *The Fluoride Question, Panacea or Poison?* is an excellent survey of fluoridation. She was a medical journalist in London who investigated fluoridation for years. She has a sensible attitude, taking both the pro and anti-fluoridation people to task when needed. The book is an easy read and covers the main issues surrounding fluoridation, although written before the more pernicious conflicts of interest of fluoridation’s proponents were discovered. As with anybody who looks into fluoridation and is not on the payroll of a bureaucracy or corporation that promotes fluoride, Gotzsche demonstrated how shamelessly

political the fluoridation effort was. Science was trampled in the rush to fluoridate. Many scientists went so far overboard that they became evangelists instead of scientists. Some began making up the science as they went along, such as the infamous [Frederick Stare](#). Stare made up a new concept that he called “mineral nutrient fluoride,” a pro-fluoridation idea so unfounded that even the PHS shot it down.[\[67\]](#) Fluoridation pioneer Basil Bibby even recommended adding *lead* fluoride to the water supplies in 1945. Gotzsche discussed that whatever the propaganda about helping teeth, dentists’ business goes up in fluoridated areas, not down. By 1970, Newburgh, New York and Grand Rapids, Michigan, the recipients of the first trial fluoridation experiments, had twice the dentists per capita as the national average.[\[68\]](#)

Gotsche said that calling groups engaged in the huge international push to fluoridate water the “dental mafia” was “naïve,” but felt that those thinking that way could perhaps be forgiven, given the facts. Her book was published in 1975. In light of Harold Hodge’s connections, “mafia” may not be far from the mark.

Conclusion

After looking into the fluoridation issue long and hard, here are my conclusions.

- Preventing tooth decay in children is the only rationale ever put forth by fluoridation’s proponents. Tooth decay is unequivocally caused by processed food, and particularly by refined sugar. I have never seen anybody refute that who did not work for the sugar and food processing industries, and fluoridation’s supporters always seem to ignore that issue.
- Instead of proposing that we eliminate most processed food from our diet as a way to eliminate tooth decay and the vast majority of American health problems, an industrial waste was added to the water supply as a “preventive.”
- All data regarding the benefit of fluoridating the water supply is suspect. Many important variables were not accounted for, such as increasing dental hygiene in the West, other elements present in the water, the fluoride content that is already in food, the extreme variability as to what constitutes a cavity and so forth. Most of fluoridation’s proponents worked for or were affiliated with the Public Health Service, which was dominated by agents of fluoride-polluter ALCOA during the years that the seminal research and political action was carried out. Other private foundations that performed original and influential fluoride research, such as the Kettering Laboratory at the University of Cincinnati, also turn out to have been bankrolled by fluoride polluters. No doubt, many conflicts of interest are still hidden. The recent revelations of Harold Hodge’s relationship with the nuclear establishment, and their motivation to prove fluoride safe, cast grave doubts on the reliability of *all* pro-fluoridation research results published after

1942, which includes *all* studies regarding the results of artificial fluoridation. The ALCOA/Mellon-connection casts a shadow across much of the pro-fluoridation research performed before 1942. Water fluoridation induces dental fluorosis in many, if not most, people subject to it. The first stage hardens the enamel, coinciding with making it more brittle. Then the slow disintegration of the teeth ensues.

- The data regarding the harm fluorine does to teeth and human biology is unequivocal, denied by nobody in the debate. What the proponents argue is that a substance well known to cause adverse health effects at two PPM, is not only safe but good for people at one PPM. In health science history there may be no instance with such a small window of health promotion/health destruction for a "health" additive. Even one of fluoridation's greatest proponents, Harold Hodge, stated that a margin of 100-fold should be the minimum-sized window for beneficial/toxic food additives when he was not being a fluoridation propagandist. There is a great deal of suppressed evidence of the harm that 1 PPM fluoridated water causes, and even harm at concentrations of far less than 1 PPM.
- Scientists and doctors who have either witnessed the adverse health effects of artificial fluoridation or campaigned against it have been silenced. Often they are simply ignored or denied access to the mainstream media to make their cases, which is common for anybody who challenges mainstream dogma. There is also a clear pattern of active attack, such as what happened to John Yiamouyiannis, Phyllis Mullenix, William Marcus and many others. Scientific and medical inquisitions are standard behavior where wealth and power are affected.
- In light of recent studies on fluoridation and intelligence, nobody can easily dismiss the opinion of right wing activists that fluoridation is part of a mind control program. With recently declassified documents showing the United States performing extensive research on fluoride and the central nervous system, research that is still classified fifty years later, anybody who drinks fluoridated water or uses fluoridated toothpaste has every reason to be alarmed. In finishing this summary, and seeing how the nuclear establishment and large industries have managed the "science" of fluorine, we may not be able to trust *any* radiation research that the nuclear establishment has produced on its effect on humans, something that John Gofman has written extensively about. In disturbing instances, the same organizations that managed the "fluoride problem" also managed the "radiation problem."
- The good news is that there have been some significant victories. For one thing, the vast majority (95%) of humanity does not drink artificially fluoridated water. The largest populations subject to compulsory fluoridation are England and its former colonies, such as Ireland, Canada, Australia, New Zealand, and the United States. U.S. citizens consume nearly half of the world's fluoridated water. Europe's population is less than two percent fluoridated, and many places have stopped fluoridating their water supplies,

while others have successfully resisted having fluoride added to their water, including American and Canadian cities. EPA scientists spoke out against fluoridation in the late 1990s. There are many sources of fluoridation information on the Internet. I am one of many people writing about fluoridation. There are many scientists and others waging political action today to end the insanity of fluoridation, and they need all the help they can get. We all will determine whether we keep drinking poison every day. It is up to all of us.

In ending this essay, it comes down to common sense. Tooth decay is primarily caused by our diet, and changing our diet is the only effective solution. Adding a well-known poison to the water supply to “prevent” tooth decay is not only insane, but also suicidal. It also has “coincidentally” been a windfall for fluorine polluters, both corporate and governmental. Instead of having to bear the huge costs of disposing of their highly toxic fluoride waste, large corporations now can sell it to water suppliers and toothpaste manufacturers! Fluoridation may also be part of a mind control program. The history of fluoridation is a horror story. Most people subject to fluoridation have no idea of its dark history, demonstrating how effective our propaganda and indoctrination systems are. Walk into an average grocery store and try finding toothpaste that does not have fluoride in it (I have been queried repeatedly on this issue; Americans can find non-fluoridated toothpaste in health food stores...for now).

Many people discussed why Orwell’s dark prophecies were wrong, and why *1984* did not happen. The irony is that it appears as if we *are* living in [Orwell’s world today](#). The fluoride situation is just one of many that this web site presents. Evidence of Orwell’s prescience is that people do not think they live in that kind of world. The most effective propaganda and indoctrination system is one where its victims do not think they are being propagandized and indoctrinated. The United States has the [most effective and subtle propaganda systems](#) that the world has ever seen, by far.

Footnotes

[1] Professional chemists will be more precise and say that fluorine is the most “electronegative” element, meaning that it is the most aggressive electron “thief,” because the alkali metals are the most “electropositive” elements, meaning their affinity to “give away” an electron, and electronegativity and electropositivity are not easy to compare, as far as “reactivity” goes. However, francium, probably the most electropositive element, is very rare, while fluorine is ubiquitous, and fluorine is far more “coercive,” such as [when it ended the “inert” status of the “noble” gases](#). So most “electronegative” is a more technically accurate term, while I consider most “reactive” the more practical term.

caries in populations with and without fluoride in their drinking water" J Public Health Dent 56(2):76-80 (1996). Cited in "Fluoride - What's Wrong With This Picture?" Andreas Schuld, posted to the Internet in 2000.

[39] Hydrofluoric acid eats glass containers, so it is usually stored in containers without glass. I remember seeing a bottle of hydrofluoric acid in my first chemistry lab. The bottle was corroded and looked dangerous to touch. It is highly dangerous to handle, eating the flesh it touches with gusto. What makes hydrofluoric acid doubly dangerous is that as it eats flesh it also produces anesthetic effects (those nervous system effects are discussed later in this essay), which deadens the pain as it eats the flesh, so people do not notice the damage done until too late. People can die from a mere whiff of hydrogen fluoride. In my years in chemistry labs I used hydrochloric, sulfuric, nitric, phosphoric and other acids, but I never, ever saw hydrofluoric acid used, even as a demonstration. It was simply too dangerous. If a fluorine truck wrecks and spills its contents, throwing water on it is useless, because the fluorine gas will actually *burn* the water.

[40] See Christopher Bryson's *The Fluoride Deception*, pp. 69-77.

[41] Regarding this matter, see the recently published *Undue Risk* by Jonathan Moreno, which documents the undeniable human experiments that the United States performed on often unwitting and unwilling people. Although Moreno is takes it far too easy on our government's crimes, it is a good introduction. A better effort is Andrew Goliszek's chilling *In the Name of Science*, published in 2003.

[42] Klass, Philip. "The 'Top Secret UFO Papers' NSA Won't Release." *The Skeptical Inquirer*. Fall, 1989, pp. 65-68.

[43] It used to be posted on the [Guerilla News Network](#), but is not there anymore. Interviews with Phillips can be found elsewhere on the Internet, and that theme can be found.

[44] See also Christopher Bryson's *The Fluoride Deception*, p. 50.

[45] See Christopher Bryson's *The Fluoride Deception*, chapter 9, pp. 78-90.

[46] That document can be seen in Christopher Bryson's *The Fluoride Deception*, in the pictures section. It can also be found on the Internet.

[47] High aluminum concentrations have been found in the brains of Alzheimer's victims, and the appearance of Alzheimer's has coincided with the introduction of aluminum cookware. Also, "In January 1987, experiments performed at the Medical Research Endocrinology Dept., Newcastle upon Tyne, England, and the Physics Dept of the Univ. of Ruhana, Sri Lanka, showed that fluoridated water at 1 PPM, when used in cooking in aluminum cookware, concentrated the aluminum up to 600 PPM, whereas water without fluoride did not." (*Science News* (131:73)). That research was also confirmed in America when the research results in England and Sri Lanka were investigated. A test was performed on Antigo Wisconsin water. Antigo had been fluoridated for 33 years. The water was

examined by a certified Wisconsin laboratory, and showed that when used in cooking with aluminum cookware, it concentrated the aluminum by 833 times, and increased the fluoride content by 100%. That made that water's aluminum content 75 times higher than the maximum allowed by the WHO. That information is taken from a paper by Isabel Jansen, R.N. (Journal of the National Academy of Research Biochemists - Jan/Feb '90). To pursue the Alzheimer's-aluminum connection further, one place to start is the letter and references of Dr. William Grant's letter to the *Townsend Letter for Doctors and Patients*, p. 92, in the June 1999 issue.

[48] For instance, during the Un-American hearings during the McCarthy days, USAF Major George R. Jordan testified to his duties of securing vast quantities of sodium fluoride and shipping it to Siberia during World War II. The Russian fluoride recipients openly told Jordan that they were "... using the fluoride in the water supplies in their concentration camps, to make the prisoners stupid, docile, and subservient."

[49] Cited in Mullins, Eustace, *Murder by Injection*, pp. 353-354.

[50] This quote is from Section VII of the EPA Chemical Profile on Sarin of October 31, 1987, regarding the neutralization of Sarin: "Rapidly hydrolyzed by dilute aqueous sodium hydroxide or sodium carbonate forming relatively non-toxic products. Water alone removes the fluorine atom, producing a non-toxic acid (Merck 1983, p. 1204)"

[51] Studies cited in *San Diego Business Wire*, Nov. 29, 1996. Cited by Citizens for Safe Drinking Water, at AOLNewsProfiles@aol.net. Several Chinese studies have reported from places of naturally high fluoride concentration, and in coal mining areas. The news is not good. The Leading Edge Research Group has published those paper abstracts on the Internet.

[52] Gatto, John. *Dumbing us Down*. p. 26.

[53] Recently declassified documents have shed much light on other World War II-era events, such as [hiring the Nazis to staff the CIA's intelligence network in Europe](#), which took humanity to the brink of World War III, as the Nazis lied to America about Soviet military capability and intentions. There are cases of Nazi doctors [performing human experiments](#) in the death camps, and going on the U.S. payroll weeks later. Regarding the atomic bomb, it is now clear that dropping the bombs on Japan had [little or nothing to do with saving American lives](#). For a hint of what it was like to be a Japanese school child, playing near Ground Zero in Hiroshima while that lone plane flew overhead, read *Day One* by Peter Wyden. Microsoft's *Encarta* encyclopedia presents the audio clip of the announcement Truman made after we dropped the bomb on Hiroshima. He lied to the American people by calling Hiroshima a "military base." That is similar to calling Salt Lake City a military base. At Ground Zero was a hospital, two hundred yards away from an elementary school.

[54] See Christopher Bryson's *The Fluoride Deception*, p 28.

[55] Mullenix's experiences with Hodge, the NIH, and her reactions to the newly declassified

documents were originally published in Griffiths and Bryson, "Fluoride, Teeth and the Atom Bomb", July 1997. The *Christian Science Monitor* commissioned the article, but did not publish it. It is published on the Internet, as well as other articles regarding Mullenix's findings and advocacy work she was doing. For those interested in more depth on the Mullenix/Hodge issue, I can recommend no recent work more highly than Christopher Bryson's masterpiece, *The Fluoride Deception*, published in 2004. It was the book I had been waiting for since 1998.

[56] Those Mullenix quotes are from The Winds' web site, which conducted an interview of her while researching their article.

[57] Those Mullenix quotes are from The Winds' web site.

[58] Dr. Robert Isaacson of Binghamton University, New York conducted two studies using low levels of aluminum fluoride and sodium fluoride. The results were published in 1992 and 1994, predating Mullenix's publication, and the results were similar. Isaacson's study was spurred by data that showed Alzheimer's disease having a higher incidence in fluoridated areas.

[59] See Christopher Bryson's *The Fluoride Deception*, p. 62.

[60] Newbrun, Ernest, ed. *Fluorides and Caries Prevention*. p. 212.

[61] Newbrun, Ernest, ed. *Fluorides and Caries Prevention*. p. 206.

[62] See Christopher Bryson's "The Donora Fluoride Fog: A Secret History of America's Worst Air Pollution Disaster" in the fall 1998 issue of *Earth Island Journal*. He also devoted chapter 9 of *The Fluoride Deception* to that event.

[63] See the excellent investigative report on that situation regarding tetraethyl lead in Jamie Lincoln Kitman's special report to *The Nation*, titled "The Secret History of Lead," in its March 20, 2000 issue.

[64] See Christopher Bryson's *The Fluoride Deception*, pp. 105-113.

[65] See Christopher Bryson's *The Fluoride Deception*, chapter 15, pp. 184-201.

[66] See [John Stauber and Sheldon Rampton's](#) *Toxic Sludge is Good for You!* In that book is the incredible story of how a woman tried getting the authors to change the name of the book from "toxic sludge" to something such as "cigarettes." Why? It turned out that the woman was a PR flack for... toxic sludge! In American sewage treatment, the planners short-sightedly commingled human with industrial sewage. Human waste is recyclable, industrial waste is not, at least not for fertilizing one's garden. When the two are mixed, it is truly a toxic sludge, not fit for much except being buried along with the [nuclear waste](#). The sewage managers, though, have sought to turn the toxic sludge into fertilizer, to be used on gardens and farms. There are municipal sewage districts that sell their sewer

sludge today for that purpose. It is full of deadly industrial toxins, though. Truth is stranger than fiction, and the authors could hardly believe it when the PR flack tried getting them to rename their book, because it might create a bad name for...toxic sludge!

[67] Gotzsche, Anne-Lise. *The Fluoride Question, Panacea or Poison?* p. 79-80, 96, 168. Incredibly, such an irresponsible idea that fluoride is an essential nutrient is alive and well today, with the National Academy of Sciences publishing a report in 1997 titled "Dietary Reference Intakes" that lists fluoride right up there with calcium and Vitamin D. Many responsible scientists have protested it.

[68] See Gotzsche, Anne-Lise, *The Fluoride Question, Panacea or Poison?*, p. 8. In a 1972 report by the ADA, it is stated that dentists make 17% more profit in fluoridated areas as opposed to non-fluoridated areas (Douglas et al., "Impact of water fluoridation on dental practices and dental manpower", *Journal of the American Dental Association*; 84:355-67, 1972).

Fluoridation: A Chemistry Prelude, Now an Addendum

The next few pages will present a brief chemistry narrative on fluorine, and why it is such an important industrial chemical. Chemistry is one of the most empirical sciences. Much of chemistry is not theoretical, but the empirical result of what happens to substances under certain conditions. Chemicals are put together, and chemists see what happens. Those observations over the years, summarized within the profession, make up a great deal of chemistry textbooks. Chemists measure how much energy is given off or absorbed by reactions, what the byproducts are, and so forth.

Many theories have been developed to account for experimental results, and many have stood the test of time, while others have fallen by the wayside. That is the normal progress of any science, but chemistry has more empiricism and less theory than almost any other "hard" science, and is one of the more nascent. We have many theories, and they are useful, until a new discovery happens. Einstein said that every theory is eventually killed by a fact.

Chemistry is generally concerned with the ways that elements combine. An aspect of chemistry called nuclear chemistry is new to the twentieth century. Most chemistry, however, is not concerned with an atom's nucleus, but with its electrons.

In "classic" chemistry, an atom's basic components are the nucleus and the electrons orbiting it. The nucleus is composed of two primary "particles": protons and neutrons. In classical chemistry, a neutron is considered pure mass, and has no net electrical charge, which is why it is called a neutron, meaning neutral. It is now known that the neutron is further divisible, composed of other "particles." That begins venturing into nuclear chemistry, which is not this essay's concern.

As of 2002, science had discovered 114 elements. A little more than ninety are naturally occurring, and scientists have artificially created the rest. All artificial elements are unstable, and thus are called radioactive, as they give off energy and particles when they decay into simpler, more stable elements. Hydrogen has one proton in its nucleus, while oxygen has eight, gold has seventy-nine, and so on. Each element has a unique number of protons. All of the elements have neutrons in their nuclei, except the most common form of hydrogen. The neutron adds to an atom's mass, but has no net electrical charge.

Orbiting the nucleus are electrons. Electrons, according to current theory, have little mass but an electric charge equal to a proton, but the opposite (I have seen at least one theory that argues that electrons have no mass, but that is not generally accepted today). In a "normal" atom, the protons' positive charges and electrons' negative charges balance each other, and the atom's net electrical charge is zero.

Electrons orbit the nucleus in strange ways. The science of electrons and how they orbit is perhaps the weirdest mainstream science, called quantum mechanics. Electrons do not orbit the nucleus as the earth orbits the sun, in an orderly ellipse - they jump all around, appearing and disappearing. Because atoms are so tiny, and electrons move at a significant fraction of light speed, observing exactly what electrons do is currently impossible, and quantum physics is one of the oddest and most difficult studies in science. Richard Feynman said that *nobody* really understood quantum theory. Einstein took great exception to some of quantum theory's cornerstones, and many observers believe that quantum theory will be radically altered when more is known. However, quantum theory has spawned rules and equations that agree well with what science has observed so far.

Electrons orbit the nucleus in "shells." Each shell has distinct properties. The shells are the same for every element. As an atom gets larger, the shells closest to the nucleus are filled first, the more distant ones filled later. The shells have been calculated to contain 2, 8, 18, 32, 50, 72 and 98 electrons, respectively, the last shells being more theoretical than actual, as those shells could accommodate 280 electrons, but the largest element yet observed is element 116 (even though its life is measured in milliseconds, before it decays into simpler elements). There are also subshells within electron shells, which form further patterns in how shells are filled. Hydrogen, the simplest element, has one electron. That electron inhabits the first shell, so that shell is "half full." Helium has two electrons, filling the first shell. Oxygen has eight electrons, which fill the first shell and six of eight positions in the second shell. So goes the periodic table, each element having one more proton and electron than the previous one, each successive electron shell getting filled. It is also slightly more complicated. As the third shell gets filled, the first eight electrons fill the third, then the next go to the fourth shell, then the third and fourth shells are filled together. For instance, potassium has 19 electrons, the 19th residing as the first electron in the fourth shell, but the third is not yet filled (the first shell has 2, electrons, 8 in the second, and only 8 in the third, not the 18 it takes to fill it, so the

electron layout for potassium is: $2 + 8 + 8 + 1 = 19$). As the shells are filled, eight and eighteen become breaking points to begin filling subsequent shells. It is an orderly progression.

Those shells, and how full or empty they are, represent the essence of chemistry. An atom with a shell mostly filled “wants” another electron to help fill its shell. An atom with a shell mostly empty will give away those electrons in its outer shell easily. Oxygen, for instance, “wants” two more electrons to fill its shell. Sodium, element number 11, with one electron in its third shell ($2 + 8 + 1 = 11$), readily “gives away” that outermost electron. The closer an atom is to having its shells filled or empty, the more reactive it is. The periodic table of elements is designed along the electron shell layout. Elements with the same number of open positions in its shell, or excess electrons, behave similarly. Lithium, sodium, potassium and a few other elements have one “extra” electron, and belong to the “family” known as alkali metals. They are highly reactive, and react violently when put into water, forming caustic solutions. Sodium and water produces what is commonly called lye.

The elements having their electron shells perfectly filled, meaning 2, 10, 18, 36, 54 and 86 electrons, are in a family. Those elements “like” having their number of electrons, and do not want any more, nor do they want to give any away. Those elements are all gases. They are called “noble” gases. Those gases are helium, neon, argon, krypton, xenon and radon. Chemists thought for a long time that nothing would react with them, and they were called “inert.” To “react” means to either give electrons to, or take them from, other atoms. It also means sharing electrons, forming a “bond” between the atoms.

There is another prominent family of elements: those that need but one electron to fill their shells. Hydrogen is the only element that belongs in two families. Because hydrogen has one electron in a two-electron shell, it is either half empty or half full, depending on what it reacts with. Hydrogen can either take an electron or give one away. Hydrogen is therefore in the family that wants one more electron, and it also belongs to the alkali metal family, eager to give away one electron. The other elements that want one more electron are fluorine, chlorine, bromine, iodine, and astatine. The family goes by the name “halogen,” which means “salt formers.”

In this short chemistry narrative, it may become obvious that the ideal match is putting an alkali metal with a halogen, as one wants to give away an electron, and the other wants to take one. That is precisely the most reactive situation that chemists know of. If potassium were put into fluorine gas, the reaction would happen so fast it would be explosive. Halogens and alkali metals are the most reactive elemental families. Fluorine is the most reactive element known to science (although that can be disputed by chemists, who prefer saying that fluorine is the most “electronegative.” See [footnote 1](#).) The “inert” gases proved less inert than chemists originally thought. In 1962, chemists were able to combine xenon with fluorine, forming xenon tetrafluoride, made of one xenon and four fluorine atoms. Many “inert” gas compounds were subsequently made, and were usually unstable compounds. Chemists stopped calling those

gases inert, and the term “noble” came into use.

The most abundant wedding of alkali metals and halogens on earth is sodium chloride, more commonly called salt. With salt, as with the other alkali/halogen compounds, the electron is barely shared between the atoms; it is nearly seized from the metal by the halogen. Thus the chlorine atom has an extra electron, and the sodium atom has one less. The chlorine atom then takes on a net negative electrical charge, and the sodium atom a positive one. Those charged atoms easily become “ions.” An ion is a free atom or molecule with a net electric charge. If salt is put into water, it dissolves, where the electron is cleanly taken from the sodium atom by the chlorine atom, and both atoms become ions, forming an “ionic” solution. Because of the electrically charged ions, salt water is a fairly reactive solution, which is why cars parked next to the ocean rust as they do.

Most reactions between the elements are not as “perfect” as salt is. Usually the elements share electrons. Water is a standard case of that electron sharing. An oxygen atom wants two electrons, and hydrogen will give its electron away under the right conditions. Hydrogen and oxygen will form water, or H₂O. The oxygen atom does not seize the hydrogen’s electrons; instead, they are shared. If a water molecule could be seen, it would look similar to Mickey Mouse’s head, where the ears are hydrogen atoms and the oxygen atom is Mickey’s skull. Although the hydrogen atoms are not ionized, the oxygen hogs the electrons. In a water molecule, the oxygen atom takes on a negative charge, while the hydrogen atoms gain a positive charge. Because of that atomic relationship, water is known as a polarized molecule, with electrical poles. Water is an unusual compound because of that polarity.

Because of that polarity, water molecules attract each other more than similar compounds. Water has a boiling point far higher than its constituent elements oxygen or hydrogen have, and water’s boiling point is also higher than methyl and ethyl alcohol, both of which have larger and heavier molecules. That is because the alcohol molecules are not as polarized. In water, the positively charged hydrogen atoms are attracted to the negatively charged oxygen atoms of neighboring molecules, forming a weak bond. That bond is known as a hydrogen bond. Hydrogen bonding makes water the unusual and miraculous substance that it is.

Every element and compound has “states.” Every substance has its solid, liquid or gaseous “state.” Oxygen is found as O₂ in nature. Atmospheric hydrogen and nitrogen are also found in their “diatomic” state. Oxygen melts at about -360° F and boils at about -300° F. The melting and boiling points of elements and compounds relate to the substance's “weight.” In chemistry, the weights are called atomic and molecular weights. Electron shells determine an element's chemical properties, and make an atom such as lithium, with an atomic weight of 7, a metal at room temperature, while radon, with an atomic weight of 222, is a gas. Yet, similar families and elements have boiling point differences largely determined by their molecular weights. Within the elemental families and molecular families, such as alcohols, the greater the molecular weight, the higher the melting and boiling point.

A molecule of water has a molecular weight of 18, oxygen weighing 16 (8 protons and 8 neutrons), and the hydrogen 2 (two atoms of one proton each). Atmospheric oxygen, O_2 , has a molecular weight of 32. We see that oxygen boils at $-300^\circ F$, but the much lighter water boils at $212^\circ F$, at sea level. The reason for that huge difference is that water molecules have much more attraction to each other than oxygen molecules do, because of that hydrogen bonding. Ammonia is another compound with relatively high polarity because of hydrogen bonding. Ammonia is composed of one nitrogen atom (the element next to oxygen on the periodic table, which needs three electrons to complete its shell) and three hydrogen atoms. Ammonia has a molecular weight of 17, less than water. The ammonia molecule's boiling point is $-28^\circ F$, far higher than atmospheric nitrogen, with a molecular weight of 28, which boils at $-320^\circ F$.

Adding enough heat energy so the molecules vibrate enough to overcome their mutual attraction produces melting and boiling. If the molecules are highly attracted to each other, their boiling point is high. If the molecules are not attracted to each other, their boiling point is low.

Because of ammonia's low boiling point relative to the environment, and its high latent heat of vaporization, ammonia is the ideal refrigerant...well, not completely ideal. Ammonia is highly poisonous. Early [refrigerators](#) used ammonia as the refrigerant, but if the refrigeration lines sprang a leak at night, the entire family could die in their beds.

Early in the 20th century, an old money empire that supplied virtually all American gunpowder and explosives, almost since the nation was founded, arming America for all of its wars, got into the fast-rising chemicals industry. Du Pont Corporation developed alternatives to ammonia as a refrigerant. The refrigerants went by the trade name Freon, and the most popular, R-12, was made of one carbon atom bonded to two chlorine and two fluorine atoms. Carbon has its eight-electron shell half full, so carbon ideally makes four bonds to other elements. Carbon makes complicated bonds with other atoms. There is an entire branch of chemistry solely devoted to carbon. It is called organic chemistry, because carbon is the basis for life on earth.

R-12 has a boiling point of $-22^\circ F$, low for a molecular weight of 121. Diatomic chlorine has a molecular weight of 71, but a boiling point of $-30^\circ F$. The reason for Freon's low boiling point is the molecule's symmetry in shape as well as electric charge. The molecule is not polarized, the inter-molecular attraction is minimal, and therefore relatively less vibration needs to be introduced to cause the molecules to separate.

The other attraction of R-12 and the other Freons was their relative inertness, which ventures into chlorine and fluorine's great reactivity. Chlorine or fluorine gas never float around in the atmosphere. They are so highly reactive, because of that unfilled electron shell, that they react to almost anything they touch, in search of that electron to fill their shells. Once they get that

electron, they never let go, unless a chemist subjects them to tremendous energies not found in nature. Most halogens have bonded to metals in the environment, which is where they are found. Sea salt is the classic example of a halogen bonding with a metal, particularly an alkali metal, eager to give up its spare electron. In those halide salts, the compounds are highly polarized because of the highly unequal electron sharing. When such a salt is put into water, the highly polarized water reacts with the highly polarized salt, and the salt dissolves, creating salt ions in the water.

Carbon is not much of an ionizing element, as it would want to give up half its electron shell to ionize, or take on four more electrons. Carbon usually makes bonds where the electrons are shared, called a covalent bond. The electron bonds in Freon are stable: no atom wants to change the arrangement and react with something else. Because of that inert, stable nature, Freon is generally considered safe for human contact. It will not react with human flesh much, and even when inhaled produces little effect, although some of the less stable Freons can produce anesthetic and psychoactive effects, and can be corrosive.

Those tight bonds and molecular symmetry make Freon useful. Teflon is another fluorocarbon. The stability and “safety” of fluorocarbons ironically are potentially a threat to life on earth. There is theory and evidence that the heavy Freon molecule can float up to the atmosphere's ozone layer, where the sun's radiation destroys the molecule. The resulting chlorine ions (the fluorine ions do also, although they do not get as much press and are less damaging than chlorine) catalyze the ozone, which is O_3 , back to O_2 , destroying the ozone layer, which shields the earth's surface from ultraviolet solar radiation. That is what made the Freon/ozone controversy, which continues today. There are other theories regarding the [observed ozone depletion](#), but the artificial chloro-fluorocarbon issue (of which Freon is only one of many chemicals) has significant evidence in its favor. Even if it is not the entire reason for ozone layer depletion, it is difficult to argue to continue using it.

There are existing conspiracy theories that Freon was banned to make way for more expensive refrigerants, making even more money for chemical companies, which is the case today. That theory may be wrong, but is worth pondering. Many natural substances can be used as refrigerants, such as water and carbon dioxide, but chemical companies would not make much money off them, as was the case when [lead replaced alcohol to boost gasoline's octane rating](#). The issue's [capitalistic \(greed\)](#) component could be major.

Fluorine is among the Industrial Revolution's most important chemicals. Aluminum is the most abundant metal in the earth's crust, making up about 8% of it. Iron is second at 5%. Oxygen and silicon are the most abundant crust elements, comprising 47% and 28% respectively. Aluminum was not used in civilization until the late 19th century, because it was difficult to effectively extract and refine. Even today, most aluminum is not commercially obtainable because it is usually bound up in silicon compounds called silicates. Bauxite, a class of aluminum oxides, is the primary source of aluminum ore. It was not until 1886 that a method

was discovered to economically refine aluminum. The process was to dissolve bauxite in cryolite, a ten-atom molecule composed of one aluminum, three sodium, and six fluorine atoms. The mix was then charged with electricity in an electrolysis process, which separated the aluminum. That process is still the main one used today. The process needs electricity, cryolite, and bauxite. When the aluminum is removed, sodium fluoride is the main byproduct, and it is a deadly poison.

This site's [main fluoridation narrative](#) deals with fluoride waste and the real world. It is a terrifying tale of power and greed that continues today, with hundred of millions of victims, including most of the people reading this.

Introduction

This essay will probably be the last essay on this site to be finished, and I do not know when that will be - probably not for years, if ever. The first draft was written in 1999, and was about the most emotionally draining part of all my writing work.

This site needs some war material, so snippets of my earlier work are herein presented. This site's [American Empire](#) essay is the closest thing to this essay. This introduction will summarize this essay's intent, and will point interested readers in directions where they can find out more.

In short, warfare is organized murder, although heavy layers of ideology, deception and other tricks have tried raising violence and murder to noble levels. Humanity's violent ways are directly related to how humanity expanded its range across the planet, leaving its fruit-eating home in the tropical forests millions of years ago. The weaponry used to [become super-predators](#) came in handy to prey upon fellow humans. Humanity's carnivorous ways are directly related to its murderous ways.

Soldiers are nearly always young men whose testosterone overrides their brains and hearts, and societies manipulate their vulnerable condition to turn them into murderers, but murderers for the right team. Probably no war in world history was really fought for the publicly stated reasons, unless somebody was honest enough to state that it was simply murder for gain. Although "defensive" violence might seem "justified," it is always the least enlightened response to any "threat," and virtually every murderer plays mind games to transform the crime into no crime at all, but something self-righteously justified.

People seem to need justifications for violence, so all military-oriented societies have huge cultural engines that labor to create seemingly noble rationales. One rule seems to be that the more ornate the pageantry that accompanies militaristic displays (Nuremberg rallies, military parades, air shows, flag-waving holidays and attractive uniforms covered with medals), the less "justified" the violence it ultimately inflicts. Violence is always a violation of somebody's free will, and until people can develop [spiritual perspectives](#), humanity will probably always conjure rationales to justify violence. Long ago, [George Orwell](#) wrote in his *Politics and the*

English Language, “In our time, political speech and writing are largely the defense of the indefensible.”[\[1\]](#) If anything, the situation has become worse since then.

A major goal of this essay was to challenge the innumerable myths that Americans subscribe to regarding the wars it fights. So, it took aim at America’s “best” war, World War II. This essay was designed to:

1. Illuminate the entire West’s complicity with the [Jewish Holocaust](#), how few really cared much if the Jews were being wiped out, even in the United States, and no scholar has ever [made a convincing case to rebut that notion](#);
2. The [Holocaust denier camp is delusional](#), and some in its ranks have dirty agendas, which are largely about rehabilitating fascism and Hitler’s image; however, many [Jewish scholars have also abused the Jewish Holocaust](#) by arguing for its historical exclusivity, even denying [comparable and larger holocausts](#), and have turned the Jewish Holocaust into a lucrative industry.
3. There was precious little justification for [dropping atom bombs on Japan](#), as even admitted by nearly all American military leaders of the day. It was largely a successful tactic to limit Soviet influence in Eastern Asia, with a bit of racist vengeance thrown in.
4. [Wall Street warmly embraced Hitler and his regime](#), and even when the United States was at war with Germany, prominent American industrial empires, such as [Ford’s](#), [Rockefeller’s](#) and even one that [George Bush the First’s father worked for](#), heartily supported the Third Reich.
5. World War II was a battle of empires, with Germany and [Japan](#) coming to the imperial table, as Germany also had before World War I, but the other Great Powers already “owned” the world; the [Pacific Theater](#) was nothing more than an intensely racist battle for empire.
6. The United States is history’s most racist nation, and much of the evil that Hitler wrought was simply copying what the United States did when [it built its “great nation.”](#) Hitler is a scapegoat. He was not so much an aberration of the Western mind, but its epitome. The United States hired many of the most of useful Nazis in [Operation Paperclip](#) (even if they performed human experiments in the death camps), quickly rehabilitated the most ardent Nazi supporters in Germany to run Germany, and quickly rebuilt the political-economic framework that led to the Third Reich’s rise.
7. The United States war planners [had no illusions](#); World War II was a battle for global dominance, and the United States largely joined the fray so it could come out on top, which it did. The subsequent Cold War was only because there was a hitch to Western Europe and its political descendants owning the entire planet; World War II was a huge financial windfall for numerous industrialists, and those same interests largely hold the world captive today, while hiding behind the [American flag](#).

8. The Nazis were beaten by the Soviet Union, not the United States. The Eastern Front was where history's greatest battles were fought. The Normandy invasion was more of a sideshow and a U.S. attempt to limit Soviet influence in Europe.

This essay will deal with some of those issues, but not nearly in the breadth and depth that they deserve, because I do not have enough time, energy and money to do so. Quite a few works have echoed my themes. On the complicity of the United States in the Jewish holocaust, try David Wyman's *The Abandonment of the Jews*. On dropping the atom bomb and the American aftermath, see Gar Alperovitz' *The Decision to Use the Atomic Bomb*, and Robert Jay Lifton's *Hiroshima in America: Fifty Years of Denial*. On the intensely racist and take-no-prisoners approach in the Pacific Theater, see Eugene Sledge's *With the Old Breed* and John Dower's *War Without Mercy*. On the many myths, fabrications and Disney-fication of World War II, see Paul Fussell's *Wartime*, Michael Adams' *The Best War Ever*, and Howard Zinn's *The Politics of History and Declarations of Independence*. For a recent book that resembles the theme of my war essay regarding World War II, see Michael Zezima's *Saving Private Power*, which is an admittedly sarcastically titled attempt to counterbalance the flag-draped cheerleading that Steven Spielberg's [Saving Private Ryan](#) and related works have recently been doing. On the burgeoning holocaust industry and how Jewish scholars have muddied the issue, see Ward Churchill's *A Little Matter of Genocide* and Norman Finkelstein's *The Holocaust Industry* (which even the redoubtable holocaust scholar Raul Hilberg supports). On the continuity of the [Native American](#) and Jewish holocausts, see David Stannard's *American Holocaust*. For the U.S. [hiring death camp Nazis](#) and quickly "rehabilitating" the most ardent Nazi-supporters in Germany, putting them right back into the positions of power that they had before World War II, see Christopher Simpson's *Blowback* and *The Splendid Blond Beast*.

The Business of War

[Smedley Butler](#), one of America's greatest war heroes, wrote a slim book titled [War is a Racket](#). Many years ago, I heard a man describe the mentality of 18-year-old men when faced with battle. He said that if a commander spoke to a gathering of one thousand 18-year-old soldiers, telling them that tomorrow they would be in a battle, and only three would survive, those soldiers would all look at each other, thinking to themselves, "Gee, I'm going to miss these guys."

One of the war racket's pillars is exploiting the immortal feeling that 18-year-old men feel. Those immortal feelings are engendered by the fact those men are nearly children, have not quite seen the world's brutal realities, and they are brimming with the power of their 18-year-

old bodies. One's physical fitness does not get any better than between eighteen to twenty years old. When that man described how the 18-year-old soldiers would take their commander's news, he also said that if that commander addressed one thousand 40-year-old men with the same speech, nobody would show up for battle the next day. By age forty, men are acquainted with their mortality and have no desire to throw their lives away while attempting to take the life of somebody they never met.

My life is a case in point. [America](#) has always been a warrior nation. I do not know about my family tree during the 1800s, but during the 20th century one of my grandfathers [fought in World War I and was crippled by his participation](#). My other grandfather was in [World War II in the South Pacific](#). My father was a Marine in the Korean War, and eventually was a boot camp drill sergeant. My uncles and brothers were all in the military. Going up my family tree, I am the first man in my family I know of that did not serve in the American military, and I nearly did.

My father spent his entire career working for the federal government, usually for the Department of Defense. My father helped instill the notion in me that I would not quite be a man unless I served in the military. He would talk about how one could tell if somebody had been in the military. According to my father, men with military backgrounds were somehow manlier, had few pretensions and had been through the humbling experience of being a soldier. At age 17, I had little idea of my own mortality, and did not really question that I would go through my rite of passage, becoming a soldier. As I look back, I have a difficult time believing that mature men would encourage that perspective, but they did. I was even told by a relative a few weeks ago (summer of 2002) that I should have served in the military,

During my senior year in high school, I applied and was quickly nominated by my Congressman for a slot at the Air Force Academy. The next step was athletics testing.^[2] Thinking about who I might be killing, or being killed myself, was the furthest thing from my mind. Part of my motivation was free college. War's realities are never emphasized in the indoctrination process, and immortal youth rarely thinks about it. I was an indoctrinated cog in the machine.

Thankfully, somebody was looking out for me, and in that instance it was my mother. She realized that her gentle child would not enjoy the military experience, and probably shuddered to think of what it would do to me. People do not come back from war "normal." The experienced traumatized all of my soldier-ancestors

My mother prevailed on my father to talk me out of further pursuit of an Air Force Academy position. One day my father sat me down and took me to task for my motivation in applying to the Air Force Academy. My answers were not convincing, even to myself, and I notified my Congressman that I would no longer pursue a position at the Air Force Academy.

My spiritual studies began in earnest that same year, and by age 19 I was a committed

pacifist, but I nearly became an Air Force pilot. It is quite possible that I would have been [dropping bombs on Iraq in 1991](#) if I had gone that route. The clever war planners know what they are doing, and part of their brainwashing strategy is evident in actions such as renaming the War Department the "Defense" Department right after World War II. They lifted a page out of [Orwell's 1984](#).

The "Good War"

Paul Fussell is a great iconoclast of the American military and warfare in general. Fussell was a World War II soldier, and was wounded in France. He recounts his experience in *Doing Battle: The Making of a Skeptic*. His *Wartime* is considered by many to be the best book ever written about World War II.

This essay cannot do justice to *Wartime*. *Wartime* does not question the need to fight wars, but explores the psychology of warfare, both on the front and at home. Fussell finishes *Wartime* with his most biting chapter, titled "The Real War Will Never Get in the Books." In *Wartime*, Fussell described the evolving psychological condition of soldiers. There are three stages. The first is that immortal perspective that all young soldiers have when joining the military. None of the soldiers think that *they* will die. It could not happen to them. As they go through training, talk to experienced soldiers and see some of war's realities, it sobers them up a little, but their attitude is still that they are too smart, too fast, too good looking or too lucky to get killed. They don their psychic armor, believing themselves impervious to bullets.

Native Americans often had such delusions. They would go through involved rituals to magically protect themselves in battle, making them impervious to bullets or invisible. European and American soldiers were charmed by the native fantasies as they unceremoniously mowed them down.

When a young soldier finally gets on the battlefield, seeing what really happens when men are committed to killing each other, it is a shock. If they survive battle for long (a few minutes is usually enough), they quickly attain the next stage of their psychological awareness. They think, "Hey, it is dangerous out here! I should be more careful." They think that if they are careful and clever, they will survive. If they survive long enough, they arrive at their final psychological state. They know that they are alive by sheer luck. Those bullets whizzing by and exploding bombs have somebody's name written on them, and it is only a matter of time until their turn comes.

During World War II, and particularly in the Vietnam War, with soldiers engaged in heated battle for months on end, with the industrialized horror that wars of previous centuries did not see, war psychologists saw a new phenomenon. It was discovered that *no* human being's

psyche could survive long in that situation. No matter how brave or heroic, if a human being survives modern battle situations for a long (with intense battle, the time they can hold their sanity together is measured in days), they will begin mentally falling apart. Even America's most heroic soldier, [Audie Murphy](#), whose exploits on the battlefield may never be equaled, suffered from "shell shock" for the rest of his life. "Real men" did not admit to such frailty, but that did not make the condition disappear. War planners devised a concept called a "tour of duty," whereby if a soldier survived a year in the theater of combat, they were relieved of duty. The human wreckage of Vietnam War veterans is a testament to the hazards of extended periods of battlefield conditions. Instead of "shell shock," the medical term is now Post-Traumatic Stress Disorder (PTSD).

In *Wartime's* final chapter, Fussell discussed war's reality. He made the case that the true horror of war is never depicted in the popular media. In today's high-tech wars, where pilots drop bombs and never see the enemy, America's *soldiers* do not usually see war's reality. Fussell wrote extensively on the "Disneyfication" of war that the popular media presents. He was writing about World War II. The situation is arguably worse today, even in the world of electronic media, supposedly bringing the world to America's living room in an instant. With careful management by the Pentagon and complicity by the media, Americans were not treated to the reality of the devastation of [Panama](#) and [Iraq](#) a decade ago.

In World War II, it was not quite as Orwellian, but Fussell wrote about how soldiers felt as they came back from the battlefield, with cheery Red Cross girls handing them candy and comic books. The soldiers realized that the folks back home knew nothing about war's reality, and frankly, they did not want to recall it, and nobody at home really wanted to hear it. It made many soldiers cynical and bitter, but they resigned themselves to the fact that the battlefield reality will never be shown to the folks at home.

In a society that brainwashes young men into thinking that glory will be had by killing people in a [flag's name](#), the grim realities are never revealed. The same mentality carefully hides slaughterhouses, [factory farms](#), environmental devastation, and the immense human suffering that our system produces in Latin America, Africa, Asia and America's inner cities. The cultural machine quietly covers up the ugly realities, presenting shrink-wrapped meat in butcher shops, leaving a strip of trees to conceal a clear cut, American reporters refusing to report the "secret war" that America waged against Cambodia and Laos for years, covering up the [mass murder at Jonestown](#), and so on.

Saving Private Ryan, released in 1998, came the closest that any American movie ever had to depicting the carnage of modern warfare. I thought that maybe young American men would understand if they saw it. I was in for a surprise. A friend took his fifteen-year-old son to see *Saving Private Ryan*. I asked him what his son's reaction was. His son is a computer gaming wizard, playing war games with friends on computers.

While my friend watched the landing at Omaha Beach in *Saving Private Ryan*, his son reacted to the movie as if it was another computer game. As he watched the carnage, he told his father that those soldiers were doing it wrong, that their attack strategy was flawed, and that he could design a better attack. The lad was playing general, and had no conception that he would have been getting *his* head blown off, not some general in a strategy room, looking at a map and moving toy soldiers and boats around with a stick.

My friend also had a younger brother in the Marines. His brother's commanding officer gave the whole platoon the afternoon off to go watch *Saving Private Ryan*. I wondered why a commanding officer would do something like that, showing those soldiers a glimpse of war's reality. My friend's response surprised me again. The commanding officer sent those soldiers to watch *Saving Private Ryan* to get them "pumped up." I should have known better. When my friends were in the military, they usually talked about "seeing action" as if it would be the crowning moment of their lives. The Marines came storming out of watching *Saving Private Ryan*, nearly beating their chests, eagerly looking forward to the day that they would see "action."

[Howard Zinn](#) was a World War II soldier himself, and made many ironic observations about his military years. Zinn was highly critical of *Saving Private Ryan* (the review is available on the Internet). Sure, the carnage of war was depicted as never before, but as Zinn observed, the thrust of the movie was that those men were making a noble sacrifice, and that although war may be bloody, it is ultimately a noble undertaking. I thought about the movie again, and realized that Zinn was right. Almost all war movies are antiwar movies, but Spielberg's masterpiece depicted the affair as noble, although he showed many of its warts. *Saving Private Ryan* is a pro-war movie, and it barely lost the Academy Award for best picture. Thank you Howard, for helping me see. That theme of *Saving Private Ryan* is one reason those movie-going Marines came out pumped up.

World War II is always depicted as the last "good war," where the line between good and evil was easily seen, with those depraved Nazis and their death camps. Fussell, as he recounted his experiences in *Doing Battle*, and as he dissected the entire war experience in *Wartime*, made the case that the first casualty of war is the truth, as usual. Fussell made it clear that there were very few "heroes" in Europe in World War II. All soldiers were just like him: when they finally saw the battlefield and experienced its reality, they were all afraid of dying, and nobody wanted to be a hero. Military indoctrination is designed to overcome a man's instincts for self-preservation.

Following orders, being manly, demonizing the enemy, conscription, and only putting young, naïve, immortal-feeling men into battle, along with severe regimentation, with rewards and punishments dangled before them, are all tools to overcome a man's instinct for self-

preservation, and his disinclination to kill somebody he has never met, and who has done him no harm.

Audie Murphy took on hundreds of German soldiers and six tanks single-handedly near Holtzwihr France, while he was firing a machine gun from atop a burning vehicle filled with explosives. It stands as one of the most heroic feats from any war. [Gary Wean](#) can vouch for Murphy's respect for the common man. Yet, for every Audie Murphy, there were thousands of soldiers who quickly decided that their only goal was staying alive, and they did not stick their nose out where it would be shot off. As Fussell related in his own battlefield experiences, there were no Murphy-esque heroes in his platoon, including himself. Fussell wrote,

"Although many in my platoon were killed and wounded, not one was ever captured or ever ran away, and that was true of F Company as a whole. What did we think we were doing, and why would we never flee or give up? Some few may have been following the higher morality and offering their lives and limbs for the Allied cause and the Four Freedoms, but 90 percent of us were engaged in something much less romantic and heroic. We were maintaining our self-respect, protecting our manly image from the contempt of our fellows. By persisting without complaint, we were saving our families from disgrace. We were maintaining our honor by fulfilling an implied contract. We were not letting others down. All of us desperately wanted to be removed from danger, but we now sensed that the war would not end in a few days and that only death or wounds would be likely to grant us our respite."[\[3\]](#)

Audie Murphy's heroic feats were seldom seen in any battle. Mostly there were two armies facing each other, each terrified of the other, and while their official goal was killing each other, the primary goal of nearly every soldier was staying alive. Only the most fanatical (or heroic) soldier thought any differently. The indoctrination infrastructure and societal systems that put cannon fodder on the front lines were invisible hands pushing each soldier in the back. Few, if any, soldiers rushed into battle willingly. Once they got there, they would rather have been anywhere else. A study of American soldiers during World War II concluded that what kept the men in combat, once they got there, were two factors: not letting down their buddies and the risk of their families losing their pay and benefits if they refused to fight.[\[4\]](#)

In the United States, ever since the Revolutionary War, the sons of the elite never served in the infantry unless they wanted to, which was rarely. In the Revolutionary War, draftees could [buy their way out of serving in the military](#). In all wars, the rich nearly always found a way out, while the poor were coaxed or forced into the military. The rich man's exemptions have always

existed in the American military in one form or another, until the present day. During the Vietnam War, middle and upper class boys got college deferments, as their parents paid to keep their sons from battle. Poor boys who could not afford college or were not inclined (college was still a middle to upper class place to be), found themselves going to Vietnam. There is no valid rationale for sending an uneducated boy off to war while the college boy stayed in school. The argument of needing educated soldiers, as if college would magically transform an 18-year-old boy into a battlefield wizard, is ludicrous, but is the only rationale possible to justify the college deferment. The real rationale was that the upper classes could protect their sons that way, while the lower class boys marched off to battle.

Today it is a "voluntary" military in America. Today's voluntary U.S. military works for a few reasons. One is that American soldiers rarely risk their lives anymore. For the past generation, the United States has only fought weak enemies that cannot fight back. That has been a conscious decision by the war planners, as the Vietnam War protests demonstrated that Americans would no longer support having their boys killed in foreign wars of dubious benefit. Although young boys feel they are immortal, it is harder to get them to willingly sign up when the odds of being killed are high. They are not *that* naïve and ignorant. I probably would have rethought my 1975 application to the Air Force Academy if I had come of age in 1966.

The military recruiters still play on the "be all that you can be," "be a man" mentality. They make appeals to manly and patriotic motives, but the reality is that today's American military, particularly in the army and the infantry, are largely staffed by America's underclass, and the main reason they have joined are the economic incentives waved under their noses. With America's real wages declining since 1973, the military is a viable option for the lower classes, which is why a disproportionate number of American soldiers are black. The American black man was ironically transformed from being not good enough to enjoy the honor of combat, to becoming the preferred infantryman. The underclasses fighting in the infantry is not something unique to America, but in probably every military of every people for all of history.

Fussell was an infantry officer in World War II. Officers usually came from the well-to-do and educated classes. The infantry cannon fodder was mostly populated by America's lower classes. Fussell openly speculated that the strategy of staffing the infantry with the underclass was thinning out their ranks.[\[5\]](#) When men are forced into battlefield situations, the most fiendish behavior comes out. Fussell witnessed his men slaughtering surrendering German soldiers with glee, [laughing as they wiped them out](#). Fussell saw German soldiers being killed by the score, and when he saw them up close, many appeared about 14 years old.

Fussell was injured during a bombing attack in France. While no hero, huddling beneath a hail of bombs going off overhead, shrapnel from a bomb hit him. A sergeant lying next to him was also hit. Fussell was lucky, and was only hit in the back and leg. The sergeant and lieutenant lying next to him died immediately.[\[6\]](#) Fussell went behind the lines to a military hospital while recovering, and developed the standard crush on his nurse. Fussell recovered and returned to

his unit after the fighting in Europe was over. His unit was surprised to see him, and surprisingly, his welcome was hostile. Fussell could not understand why he warranted such a reception from his fellow soldiers. It puzzled him for many years. In the 1990s, he obtained a document that made the unfriendly treatment by his fellow soldiers understandable. The sergeant that died next to him, huddled on top of the German bunker as the bombs exploded overhead, was given a posthumous award of the Silver Star. The citation stated that the sergeant nearly pulled an Audie Murphy, heroically taking over command when the platoon's leader was wounded, led his men against heavy enemy fire, engaged the enemy single-handedly, and while mortally wounded sent his commander a message regarding the enemy's location.[\[7\]](#)

The only true parts of that citation were the sergeant's death and that his platoon leader (Fussell) was wounded. Fussell's platoon concocted a fairy tale of heroism. Fussell had been lying next to the sergeant when he died, and his platoon knew that if he discovered their fiction, it might not be pretty. The first casualty of war is the truth, and even "heroic deeds" may seldom truly be. Fussell wrote about when the fighting finally ended in Europe. The folks at home in America cheered wildly, but the feeling on the front was numbness. Eisenhower's mistress summed up the European attitude when Berlin was finally destroyed:

"No one laughed. No one smiled. It was all over. We had won, but victory was not anything like what I had thought it would be. There was a dull bitterness about it. So many deaths. So much destruction. And everybody was very, very tired."[\[8\]](#)

In Europe, there was no euphoria regarding winning the "good war." The American soldiers in Europe were not done. It appeared that the Japanese were going to suicidally fight to the last man. American soldiers in Europe were praying that Japan would surrender before they were shipped across the world to fight another war. A few months later, their prayers were granted when America [dropped two atom bombs](#) on Japanese civilians, ending the war.

When Germany fell, the concentration camps were opened. Mountains of bodies were accompanied by mountains of clothing, shoes, glasses, hair, gold fillings, tattooed skin and other items taken from the Jews and other "subhumans" in the death camps. It made for stark realizations.

History's most intense and bloody warfare was fought between Germany and the Soviet Union during World War II. The Communist Revolution in Russia quickly degenerated from an attempt to create an egalitarian society into another power play. There are many conspiracy theories and controversies regarding that era. One thing is certain: the "Communists" of the

Soviet Union did not govern very wisely. The reign of Stalin was as bloody as there has ever been. Between his Siberian labor camps, starvation policies, purges and outright executions, about twenty million Soviet citizens lost their lives.[\[9\]](#) Some think that number is too conservative. The Soviet system was evil, but was hardly the egalitarian system envisioned by Marx. It became another system where the few benefited at the expense of the majority. Most of those people died *before* the Germans showed up.

As Noam Chomsky and others have made clear, Western Europe and the U.S. did not hate the Communist regime because of how it treated its citizens, or because the Soviet Union posed a military threat.[\[10\]](#) *The real threat of the Soviet Union was its rejection of capitalism*, where a few rich capitalists got all the chips. Communism was a major threat to capitalism, especially if it inspired other nations to drop out of the capitalist system. Adam Smith did not invent capitalism; he was the first to systematically describe it. He would not have been rapturous about today's corporate capitalism. Smith and Marx agreed that the workers should control the capital. Smith would have probably spoken out strongly against the global capitalist system that exists today, which is another form of colonialism. Unfortunately, the Soviet experiment failed in significant ways, and relatively few Communists got the chips while millions were murdered.

Fascism was no better. One of the many minimized chapters in American history was an attempted Fascist coup in 1933.

Brown Shirts in America

Newspaper baron [William Randolph Hearst](#), who manipulated the Spanish-American War into being with his yellow journalism, was quite taken with Hitler. Hearst spent a month in Germany in 1934 and met with Hitler, and was apparently "charmed" by Der Führer. Hearst's newspapers began running favorable press coverage of the Third Reich in 1934, when Hearst returned from his delightful meetings with the Nazis. One of Hearst's guest columnists wrote an article justifying German rearmament. That guest columnist's name was [Hermann Goering](#). There is evidence that the Nazis were greasing Hearst's palms for his sympathetic coverage.[\[11\]](#)

Henry Ford, a notorious anti-Semite, thought the Third Reich was great. Beginning in 1933 when Hitler came to power, Germany initiated the Aryanization program. The program was a financial plundering of Jews, foreshadowing what happened during World War II. Jewish businessmen wanted out of Germany when Hitler came to power, and the Aryanization program forced Jews into selling out for bottom dollar. Ford Motor Company eagerly sidled up to the Aryanization trough if there was a buck to be made from it.[\[12\]](#) German banks,

industrialists and major U.S. trading partners jumped into the Aryanization program. U.S. investment in Germany increased by 48.5% between 1929 and 1940, while it declined sharply everywhere else in mainland Europe. Even in Britain, American investment only increased by 2.6% during the 1930s.[\[13\]](#)

One major financier of the Third Reich's rise was Union Banking Corporation, of which Prescott Bush, George Bush the First's father, was a director and shareholder. The Bush family rose to power by being Eastern Establishment sycophants, with Prescott and his father being little more than errand boys for the Harriman and [Rockefeller](#) interests. The U.S. government, under the Trading with the Enemy Act, seized Union Banking Corporation in 1942. The company's board was composed of Prescott Bush, Roland Harriman and some outright Nazis.[\[14\]](#) Prescott Bush joined Yale's notorious [Skull and Bones Society](#), due to Rockefeller and Harriman patronage, and both George Bushes and Jeb also belong to the club. Prescott's contribution to the Skull and Bones Society apparently was raiding Geronimo's grave, with Geronimo's bones now gracing the club's meeting room (called "The Tomb"), where they sit among the remains of other obstacles to the American Empire, such as Pancho Villa's and probably Omar Torrijos' (secured by George Bush the First after he invaded Panama). George Bush the First's other grandfather was a wheeler-dealer named George Herbert Walker, who was infamous for his corrupt dealings, being a front man for [Morgan](#) interests, among others. The Rockefeller Empire got in [the same Nazi hot water that Union Banking Corporation did](#), although it escaped asset seizure.

Aryanization companies were formed in Germany, and bonds of those firms were even sold on the American securities markets, although not advertised as such. The Germans kept a tight grip on repatriation of profits, so the American firms investing in Germany had to keep plowing their profits back into the German economy. One of the most lucrative investments was the Aryanization program, which was where much of the profits were reinvested. Until 1938, the Aryanization program was "voluntary" for the Jews. The Third Reich was not closely involved in the Aryanization programs at first.[\[15\]](#) The people making the early killing in the Aryanization programs were German bankers, industrialists and other elites, with their rich buddies from America and elsewhere also feasting.

The German corporations, clamoring for more cheap slave labor for their factories, encouraged the slave labor situation in the World War II death camps. The corporations made a killing with the cheap subhuman slave labor. The German corporations that eagerly used the slave labor were household names such as Daimler Benz and Siemens. Germany's industrial giants were using concentration camp labor in hundreds of factories.[\[16\]](#)

In the United States, Hitler's rise was not ominous. It was bad news for the more than four million Jews living in America, the world's largest concentration of Jews, but the United States government, the best friend that Jews had in the West, was silent in the face of what Germany did to its Jews. In 1934 a resolution was introduced in the United States Senate, asking that

august body, along with the president, to officially express "surprise and pain" at Germany's treatment of the Jews, and ask for restoration of Jewish rights. The State Department, well stocked with anti-Semites, "caused this resolution to be buried in committee."[\[17\]](#)

When Italy invaded Ethiopia in 1935, the United States said it would not sell any more arms to Italy, but allowed U.S. oil companies to continue their sales of oil to Italy, which ran its war machine. When the Fascists overthrew the elected and popular Spanish socialist government, the Roosevelt administration hastily declared itself neutral. Soon after that act, Hitler and Mussolini's governments gave Franco massive assistance in enslaving the Spanish population. That situation of America's active or passive support of Fascist governments in overthrowing egalitarian social movements, as happened in Spain, was something that America had been doing to [Latin America for generations](#). It was also a prelude to the postwar years, where the United States instigated, installed and propped up some of the 20th century's bloodiest dictatorships.[\[18\]](#)

Smedley Butler was one of the most beloved military leaders in American history. Teddy Roosevelt called him, "The finest fighting man in America." Butler was known as "the fighting Quaker." Butler was only one of four Americans ever awarded the Congressional Medal of Honor twice. He tried returning one of them because he did not feel it was earned, but was instead ordered to wear it. Rank-and-file American soldiers loved him. Butler helped run the Marines for a generation, carried a pack and was in the trenches with his troops. Butler was known for his honesty and appreciation for the common man. In Butler's case, it was genuine.

Born in 1881, his father and grandfather were U.S. Congressmen, and Butler was born into the upper class of Pennsylvania. His family was Quaker, and traced back its Pennsylvania lineage to the days of William Penn. Although he could have pursued the life of an aristocrat, Butler evidenced a martial spirit from a young age, and in 1898 enlisted in the Marines, swept up into the "Remember the Maine" fervor that began [the Spanish-American war](#). He saw action in Cuba, and his career continued to the Boxer "Rebellion" in China in 1900, where he was twice wounded with bullets. His father was influential in the military establishment, as he chaired the House Naval Affairs Committee and served in Congress for thirty-two years. Butler then saw action in Nicaragua and Haiti, with a spying interlude in Mexico. Some of his most celebrated feats were nonviolent, such as when he disarmed one revolutionary leader and unhorsed another, while he was unarmed.

Butler was a curious mixture; a Quaker pacifistic background combined with the steely-eyed visage of a crusading knight. The élan and esprit de corps of the Marines was his surrogate religion for many years. Partly due to his father's stature, and partly due to his battlefield heroism, Butler rose through the ranks rapidly. Butler was outspoken, unrefined, and had a distaste for the "intellectual" aspect of the military hierarchy. He became a brigadier general before he was forty, and became a major general about ten years younger than was typical. He got into hot water regularly with the "brass." He made many enemies, yet he was an

unparalleled leader of the rank-and-file soldier, and regularly broke regulations in order to get the job done.

He was "loaned out" from the Marines to Philadelphia in the mid-1920s as he ran the police and tried enforcing Prohibition. Although Butler drank heavily, as most Marines did, when he took up the Prohibition cause he never drank again. He had his fair store of racist sentiments, which were muted for the times, and he was no pacifist, but he honestly lived by his beliefs.

Near the end of his career, he began questioning the issue of foreign wars. He began calling war a racket, and became adamant about the imperialist aspect of the U.S.' foreign interventions. He was not a pacifist, and came from a long line of republicans. When he had an opinion, however, he made it known. In 1935, after he retired, he published a slim book titled [*War is a Racket*](#). Butler campaigned on that theme for the rest of his life.

Butler believed that all U.S. foreign interventions were self-serving acts, which lined the pockets of the rich at the expense of the nations it victimized, sending young boys to do the dirty work, wearing American uniforms. People such as Franklin Roosevelt sidled up to the trough, to "invest" in Haiti after it had been secured for American interests.[\[19\]](#) [Roosevelt drafted the Haitian constitution](#) that overturned more than a century of [Haitian strategy](#) of not allowing foreign land ownership to gain a foothold in Haiti, which would begin undermining its sovereignty. FDR was an integral part of the neocolonial strategy of pillaging Haiti. Butler provided the muscle to pull it off.

Butler's opinions did not come from reading radical literature, but from his experiences. His correspondence early in his career complained loud and long when commercial interests and Machiavellian plotting by his superiors would force him to go back on his word with those he negotiated with, as in Nicaragua, which he helped plunder, another situation that continues to this day.[\[20\]](#) Back then, brute force was yielding to a [neocolonial](#) strategy of the Taft administration known as Dollar Diplomacy, where the U.S. sought to control its subject nations through economic manipulation rather than marching in the armed forces, as with [Teddy Roosevelt's Big Stick Diplomacy](#). Butler carried out part of its early implementation. The famous Butler quote, where he admitted to being an unwitting "[gangster for Capitalism](#)" is vintage Butler.

Although Butler ran for a Senate seat in Pennsylvania as a Republican, when he began his anti-imperialist campaign, he did not care to whom he spoke. He ended up speaking at Communist rallies and at other organizations, which would have given him problems if he had done it during the Joe McCarthy witch-hunt days. He did not care about ideology. He believed in telling the truth as he saw it. Whether his audience was made of communists, veterans groups or the U.S. Congress, his line was the same, with the honest, outspoken style that made him an American icon, and made him many powerful enemies.

In 1931, Butler talked informally after a speech, and discussed how European conquerors became drunk with power and became "mad dogs." He related an apparently true story told him by Cornelius Vanderbilt Jr. Vanderbilt spent time with Italian dictator Benito Mussolini, and they were driving in an armored car through the Italian countryside, with Mussolini driving. During their drive, Mussolini hit and killed a child. Mussolini did not even stop the car, telling Vanderbilt as he grabbed his knee, "Never look back, Mr. Vanderbilt, never look back in life." [21] Mussolini passed off his hit and run incident with the observation that one life was insignificant when compared to the affairs of state.

Butler's comments caused an international outcry, and Butler was arrested and court-martialed and ordered to publicly recant. He never apologized to Mussolini, and instead retired. Today, Butler looks like a prophet. The incident was the first time that Mussolini's image was tarnished in America. Back in 1931, Fascism was the up-and-coming form of government.

Stimson court-martialed Butler because he and other high-ranking American officials openly admired Fascism's "great experiment" in Italy. By 1934, the American ambassador to Italy, Breckenridge Long, President Roosevelt, and famous State Department negotiator Norman Davis were gushing over what was happening in Italy, with Roosevelt calling Mussolini an "admirable Italian gentleman" and the State department praising the sham 1934 Italian election where the Fascists took 99% of the vote, stating that the election "demonstrate(d) incontestably the popularity of the Fascist regime." [22]

The July 1934 issue of *Fortune* magazine praised Fascism and its quick achievements, accomplishing in mere years what Christendom could not achieve in millennia. The article further stated, "The good journalist must recognize in Fascism certain ancient virtues of the race, whether or not they happen to be momentarily fashionable in his own country. Among these are Discipline, Duty, Courage, Glory, Sacrifice." [23]

A 1937 State Department report stated that "Fascism is becoming the soul of Italy." The Fascist experiment was praised because it "brought order out of chaos, discipline out of license, and solvency out of bankruptcy." The report stated that in order to "accomplish so much in a short time severe measures have been necessary." [24] The State Department in 1937 saw Fascism as compatible with the United States' interests. Just as after World War II, the United States would embrace anybody as long as they were anticommunist. [25] While the Fascists were merely raping their own people and making the country safe for American investment, the U.S. government minimized the suffering of that nation's people, and eagerly participated. With Japan, Germany and Italy, it was only when they began stepping on imperial toes that it became a matter of war.

When Butler retired amid the Mussolini furor, he became an even bigger national hero than before. Although many politicians and industrialists were avid fans of Fascism, not everybody in America was. The veterans groups lionized Butler, and he was a big hit on the talk circuit,

giving speeches to veterans groups almost daily. Butler was a paragon to the veterans groups and a populist hero, which made what happened in 1933 seem strange. A Wall Street bond salesman and former commander of the Connecticut American Legion approached Butler. Gerald MacGuire had a proposal. MacGuire said he was acting as a front man for wealthy industrialists and bankers, and J.P. Morgan, du Pont and other names came up in the conversations. The proposal was this: Butler would get elected as the American Legion's national commander. With that office, Butler would have the loyalty of 500,000 veterans. With that private "army" (du Pont would arm them through their controlling interest in Remington Arms Company) and up to \$300 million of funding made available by the bankers and industrialists, they would take over the White House.
