

The Home Page of Wade Frazier

Welcome to this web page. If you are interested in free energy, cancer cures that are harmless, cheap and effective, or how this planet might be healed and what some of the obstacles seem to be, you might find these pages of interest. To readers from the past, welcome back. To those new to my work, I hope you find something worthwhile on these pages.

The information on this web site is freely given. Several pieces of it, and other writings of mine, have been published elsewhere. If you want to reproduce some of these writings, I ask that you also provide a link to this site, and tell your readers that what you have reproduced is a small excerpt of it. Also, since this information is freely given, I do not want anybody to charge for it. Please reproduce it in the spirit in which it has been given to the world. Thank you.

This work defies neat categorization, and the political-economic-historical-scientific-spiritual aspects of this work pervade all of it, and are all interrelated. Nevertheless, an attempt has been made to organize this site's essays into something resembling order.

New Additions to this Website in 2006 and 2005

December 2006

By Wade Frazier

I resumed my career in 2003, and have been very busy ever since. I also [briefly came out of retirement](#) on the free energy activism front. I was originally planning on spending my free time in 2006 and 2007 re-editing my site, adding some new material, and rewriting some essays. However, I was persuaded to set that task aside for a few years, and perhaps forever. I have not stopped writing and editing altogether, and this page is designed to make it easy for my readers to find the significant changes since 2004.

Additions include:

In 2006:

- A [five-page summary of my life's journey](#); it is the most succinct introduction to my writings so far;
- A new essay on this [website's purpose](#) - I am beginning public dialogue again;
- A new essay on what an [abundance paradigm looks like](#) – once in awhile, I get to write a fun one;
- A new essay on the [journeys of free energy activists](#) – it is my most ambitious essay of 2006;
- An open letter to the [Free Software Movement](#); I hoped they would be receptive to free energy and abundance, but so far, I have found them to be trapped by their [rationalist-materialist paradigm](#);
- A [small addition](#) on the heart disease treatment racket in America;
- A slightly expanded description of the [pre-Columbian Western Hemisphere](#).
- A small addition on my partially successful [2006 UFO-hunt](#).

- A slight update to the [Enron scandal and what scandal might be next](#).

In 2005

- A new essay on the [free energy conundrum](#).
- A [brief epilogue](#) to the My Adventures essay, with some footnotes in that section that deal with recent events in some detail;
- A revised “[Make Them an Offer They Can't Refuse](#)” section of the My Adventures essay. It packs more punch now, and presents some new material.
- Some [new links](#) to information that I have not previously revealed, some [relating](#) to my free energy journey.
- A little more new material about the [Founding Fathers](#) of the United States and a short [Iraq epilogue](#) to the American Empire essay, with an accompanying [incendiary photo collage](#);
- A little [9/11 section](#) added to the cover-up essay;
- A page related to my [successful UFO hunt](#) in June 2005;

I have kept busy on the reading front. While there have been many notable efforts on dissecting the abysmal state of the U.S. media and its [complicity regarding the invasion of Iraq](#), it is difficult to single one out. Many are Internet-based efforts, but *War Made Easy* by Norman Solomon is a good antidote to the propaganda barrage in book form.

Two recent books are particularly germane to my site, and I have incorporated their findings into my site. In 1998, when I first read an article by Joel Griffiths and Christopher Bryson on the [Manhattan Project's connection to America's fluoridation effort](#), I hoped they would publish a book-length treatment of the issue. I was rewarded in 2004 by Bryson's magnum opus, *The Fluoride Deception*, whose findings have been sprinkled throughout my [fluoride essay](#).

The second pertinent book is making history, and is already being compared to [Smedley Butler's War is a Racket](#). As with [Ralph McGehee](#), John Perkins was a recruiting error. Perkins was recruited into a professional group that literally call themselves “economic

hit men.” As with McGehee, Perkins’ conscience eventually overcame him and he spoke out. His *Confessions of an Economic Hit Man* should be required reading for everybody who kneels at the capitalist altar. It [validated from the inside](#) many things that I have written about on my site.

I may put my entire site in one easy downloadable file one day. I may engage in [public dialogue](#) on the free energy conundrum and related issues, if I can find the right audience and forum.

I sympathize with readers of my work. It is not easy reading, and can hit the reader like a sledgehammer. In 2005 performed a slight re-edit of my [introductory essay](#), and was dazed when I finished. I think my work is best digested in small doses, even for me.

The next section: [An Introduction to This Web Site](#) (122K)

Introduction

December 2005

This web site is part [personal odyssey](#), part [scholarly research](#) and part [visionary speculation](#). I have had the benefit of many friends in cyberspace and elsewhere who have contributed mightily by providing learned criticism, new information, editorial observations and shoulders to lean on. Without their help, this site would not appear as it has, and may not have been completed. They know who they are.

This essay is designed to introduce this site, summarize its central thesis - the situation humanity faces today, and how it got here - as well as summarizing solutions that await use today. It also discusses the [paradigms](#) that dominate our thinking in the West. It links to the site's other essays, which explore the topics in greater depth. I hope you find the reading experience worthwhile.

This Site's Thesis

Here is this site's thesis, stated as plainly and succinctly as I can.

- In the name of "progress," we are destroying our home planet. The United States leads in destroying our environment and our fellow humans.
- In the United States there is a strange combination of [denial](#) and complacency regarding this situation. While relatively few are conscious of it, we all (wittingly or unwittingly) participate in it.
- The twin ideologies blinding United States citizens are [nationalism](#) and [capitalism](#), with a substrate of [materialism](#). America's current versions of nationalism and capitalism are largely founded upon and sustained by myths, secrecy and lies, and ultimately by [massive violence](#).
- People adopt and [irrationally defend](#) these systems of thought largely because they bring short-term material benefits, but the costs are largely borne by the earth and the people who live in the "[undeveloped](#)" world (as well as this nation's poor). The "undeveloped" world's poverty is directly related to having been [violently conquered](#) by Europeans and being kept in various [forms of bondage](#) ever since.
- The system also devours the "winners." Americans ingest [brain-numbing poison](#) every day, and are [brainwashed by our media](#) and [indoctrination systems](#). Americans also develop a wide array of diseases that are directly related to our "advanced" lifestyles; the cures for such diseases [are suppressed in the name of power and profit](#). In addition, many technologies that would eliminate the damage that our industrialized methods wreak on the environment are also [suppressed in the service of power and profit](#), such as [free, non-polluting energy](#).
- The slavish devotion that Americans have for their ideological systems is more pronounced in the educated classes, just as George Orwell wrote about in [his prescient 1984](#). They seemingly think they are the system's biggest winners, but in significant ways they are the most enslaved. The most effective prison is one in which the prisoners do not realize that they are *in* prison.
- There are [deep spiritual dimensions](#) to this situation. The current paradigm is like a broken record played continually. The solution is not to get a new record, but to stop playing old records to death. [George Orwell](#) called it the "gramophone mind." It is time to put the records away.
- We will either wake up or destroy ourselves. [Love is probably the only answer](#). Our tired games can be easily given up, and we can readily heal the planet and ourselves. The nuts-and-bolts of

how to do it [are already here](#). Desiring to do it is the essential ingredient. Heaven on earth instead of hell on earth is quite possible, and soon. We are facing a divine paradox: only by caring for each other will we save ourselves. As [Buckminster Fuller](#) observed, humanity is on the brink of Utopia or oblivion.

Right or wrong, that is this site's thesis. Criticisms of this site are dealt with at this [link](#).

How It Stands, and How We Got Here

Today, the human species stands poised on the brink of two divergent near-term futures. Several trends may spell humanity's doom. One or all of them may become vehicles of our destruction, which may take most of the planet's ecosphere with it. Some can be immediately catastrophic, while others are millennia-old trends that might have chaotic confluences, resulting in or contributing to disasters of unprecedented magnitude for the human species.

First, here are looming catastrophes that could spell immediate doom for billions of humans.

- The current "[War on Terror](#)" has hidden objectives (as with all "wars"). Its long-term objectives are securing unfettered U.S. access to the oil and gas resources of [Central Asia](#) and the Middle East, and destroying anybody or anything that hampers that objective, as well as further securing [U.S. global hegemony](#). Ironically, the industrialized nations *do not even need fossil fuels*, as there are alternative and free energy solutions, but they have been [actively suppressed for generations](#). The War on Terror has destabilized Central Asia and the Middle East, with Pakistan and India, two nuclear powers, rattling sabers during 2002, and nuclear power [Israel](#) further enraging the Arab world by its unceasing and escalating wars against the Palestinian people; a nuclear conflagration is far more likely today than it was a year ago. Other weapons of mass destruction may also make their appearance, from [secret programs](#) that would curl most people's hair to hear the [smallest fraction of them](#); with America's recent invasion of Iraq, Armageddon might be just around the corner.
- Earth's human population of more than six billion people is twice what it was in 1960, and three times what it was in 1930. Earth is currently experiencing the [greatest mass extinction episode](#) since the [dinosaurs' demise](#), and this one is manmade. In addition, the world is quickly hitting the wall of food production on several fronts. The so-called [Green Revolution](#) may be nearing its end, and billions of people may soon be at risk of starvation. If that happens, it may well trigger a global food war.
- Related to the Green Revolution is the trend of mega-corporations trying to patent life itself. [Monsanto](#) and other corporations are [genetically engineering](#) plants to be dependent on artificial fertilizers and pesticides and making crops whose seeds are sterile, so farmers are forced to buy

more seeds for the next season's planting. A [global food monopoly](#) is taking shape; already, two companies control about 80% of the global grain market, and Asia is quickly becoming [dependent on imported grain](#). The most ominous aspect of that trend is genetic engineering. It is not confined to making "Frankenfoods." Perhaps the biggest risk is an inadvertent creation of a super-disease that kills off most of humanity. Those fears are [not outlandish](#). Even if a designer disease does not get loose, humanity may be about due for a global epidemic of a magnitude not seen [since the 1340s](#).

Those are three *manmade* catastrophes that loom today; the Four Horsemen of the Apocalypse might be ready to ride. Another possible looming catastrophe is a comet or asteroid hitting earth. That has become a popular speculation, as [catastrophic theory](#) has come back into vogue during the past generation. During the past couple of years, astronomers and NASA have made announcements that asteroids seemed to be on a collision course with earth, and then recanted their findings, while "near misses" occurred that were not even seen coming, where an asteroid came within a cosmic hair-width of hitting earth. With NASA's track record of [obfuscation and cover-up](#), they probably would not tell the public the true story anyway.

Humanity's "progress" has been damaging earth's ecosphere for the past 10,000 years. According to today's anthropological findings, humans had a "[great leap forward](#)" about 40,000 years ago as they improved their hunting and related technologies and became super-predators. That initiated the golden age of the hunter-gatherer phase of human existence. Humans were too successful, as they hunted all the planet's [large, easily killed mammals to extinction](#), a speculation supported by what happened when humans [migrated to uninhabited islands during historical times](#). When hunter-gathers exterminated their primary energy source, the [Domestication Revolution](#) began about 10,000 years ago in [Malthusian](#) fashion. All economic systems ride atop ecological systems, and all ecological systems operate on the principle of the [acquisition, preservation and consumption of energy](#); all political systems are about controlling economic systems or serving them. When the Domestication Revolution began, earth's ecosystems also began undergoing dramatic change and destruction, and several man-made trends have reached ominous levels today. Some are summarized below, with the energy issue figuring prominently.

- The Domestication Revolution led to "[civilization](#)." Plants and animals were domesticated, and humans were no longer nomadic hunter-gatherers. The alteration of the earth's ecology by exterminating all the big, easily killed animals was minimal compared to what the Domestication Revolution did. [Forests have created most of earth's topsoil](#). Because humans cannot digest cellulose, which comprises most of plant matter, they domesticated and ate [animals that could](#). They also razed forests to use the wood for structure and fuel, and used the exposed soils for growing plants that humans could digest. Deforestation, plow agriculture and irrigation eventually destroy soils, through wind and rain loss, salination and mineral depletion. Without forests to create new soils, that trend is a one-way ticket to desertification; most of earth's agricultural land has experienced serious soil loss and depletion, and huge tracts of land have [already turned to](#)

[desert](#).

- With the [Industrial Revolution](#), humanity's ability to manipulate the environment grew by another order of magnitude. Mining, deforestation, city building, road building and other ecosystem-damaging activities accelerated enormously. [Species exterminations accordingly increased](#), as well as soil losses.
- Earth's surface would average about 0° F if not for what are called "greenhouse gases," water vapor and carbon dioxide being the two main components, the lack of which would have made life on earth's surface a questionable possibility. Between [10% and 25%](#) of the warming currently attributed to greenhouse gases is attributed to carbon dioxide (and it would be more pronounced in colder climates, as carbon dioxide has a much lower boiling point than water, but estimating that carbon dioxide makes earth about 10-15° F warmer than it would otherwise be is probably not far from the mark, with all the uncertainty of climate science). Burning fossil fuels has increased the atmosphere's carbon dioxide content by a third during the Industrial Revolution. That dynamic is undoubtedly contributing to today's [global warming](#), which is rapidly melting the Northern Hemisphere's glaciers, the arctic icepack, and the Antarctic ice shelves are beginning to [break up](#). I might see dramatic sea level rises in my lifetime; the climactic changes from such rapid warming will be nothing less than catastrophic for humanity, with record droughts, floods, crop failures and other disasters. They are already happening. Among the "minor" effects of such a change, it could [kill the Gulf Stream](#), and Western Europe will be about 20° F colder in the winter, while other regions parch and bake. "Natural" catastrophes have been increasing at a rate of 6% per year during the past generation. The long-prophesied earth changes are already upon us.
- Humanity is quickly running out of oil and gas, but even if more oil and gas are discovered, it is estimated that earth's oceans have absorbed half of the carbon the Industrial Revolution has vented to the atmosphere, and the oceans [have become more acidic](#), which threatens all ocean life, which is also where most oxygen is generated. A cascading feedback effect could drastically affect the ocean's ability to absorb carbon and produce oxygen.
- [World War II](#) was a global watershed event in many ways. One outcome was [U.S. global hegemony](#), a new era of [neocolonialism](#) and the resultant [war against the world's poor](#). Another outcome was the rise of the chemical industry. [Modern chemotherapy](#) came out of World War II chemical warfare experiments, [DDT](#), [napalm](#) and other chemicals were first used in World War II, and deadly substances such as [fluorine](#) and [uranium](#) were transformed by an alliance of industry and the military into seemingly beneficial substances. The flooding of the environment with toxic substances has created many environmental and health disasters. Government and industry [have gone to great lengths](#) to buy up scientists such as [Harold Hodge](#), [Elizabeth Whelan](#), [Steven Milloy](#) and others to make those deadly substances appear harmless. The cost that humanity and the environment are bearing due to this situation is reaching surreal levels.
- Related to the chemicals issue are numerous toxic waste issues, such as pollution from [chemical farming](#) and nuclear waste. The [U.S. Department of Energy admitted to my face](#) that the "management" of nuclear waste is a racket, and none of the proposals put forth to make it harmless will be pursued, unless it makes the [waste management racketeers](#) a pile of money. There are more situations like that - where [greed](#) triumphs over issues of common sense and even survival - than this or any other web site can possibly chronicle.

- The world's most diverse ecosystems, the coral reefs, are in danger of becoming extinct during the next century, as well as the most diverse land-based ecosystems, the tropical rain forests. If that happens, humans may also face extinction.

Those are simply *some* of the more prominent issues facing humanity today, and their magnitudes are barely debatable, except for scientists and academics who have [sold their souls](#) to the moneyed interests. What is being done about this looming catastrophe, especially in the nation that leads the parade to oblivion? Virtually nothing. [Julian Simon](#)'s possibly fraudulent scholarship, or the opinions of about six scientists, who are all in the oil industry's hip pocket, are given a respectable hearing in the [corporate-owned mainstream media](#), as if their interest-conflicted opinions matter as much as the [scientific findings of the world's most qualified climate scientists](#). Earth is dying, and the rich and ruthless are raping and plundering as never before, determined to wring every last cent out of earth and humanity...for what? [Noam Chomsky](#) says that the West's current institutional ideology [ranks hegemony above survival](#); that is another way of saying those who run the show would rather rule in hell (or even kill themselves off) than be regular members of heaven. Those who want to rule in hell rather than be one of heaven's regular members [will get to live there](#), but they probably will not be in charge.

Because states in the West currently have limited ability to inflict violence onto their domestic populations, they have developed the world's most sophisticated and subtle mind control systems, although much of the brainwashing has been accomplished by the corporate order, not the government. Americans are consequently earth's [most brainwashed people](#). One of [America's finest teachers](#) has stated for years that the American "educational" system's primary goal is turning Americans into stupid, childish, easily manipulated consumers. It is not a new phenomenon, but a trend [since the nation's founding](#). It accelerated when America's robber barons began diversifying, particularly [John Rockefeller](#) and Andrew Carnegie. Rockefeller built the [University of Chicago](#), which dominates mainstream, largely [capitalistic](#), economic theory. Carnegie and Rockefeller's "philanthropy" also [took over modern medicine](#) early in the 20th century, and Americans have been paying in awesome ways ever since.

During my [traumatic adventures](#) while trying to [bring alternative energy to the American marketplace](#), my biggest surprise was not that people are brainwashed, or that corporate and governmental interests can be [more sophisticated gangsters](#) than the Mafia. It was not a pleasant realization, and came after [several years of gradual and brutal disillusionment](#), but is why humanity stands on the abyss' brink today, and few want to hear it:

The world is like it is because not enough people care enough.

That is not to say that *nobody* cares, but not enough care enough, to counterweigh those proudly on the [dark spiritual path](#), and the inertia of the masses that go whichever way the wind blows. I would love to be wrong about this, but my experiences told me otherwise. My Pantheon of modern-day saints is not

large. [Dennis Lee](#) and [Mr. Professor](#) are in it, along with some other free energy comrades, but as a group, I have found more people of high integrity in America's radical left than anyplace else, populated by [Edward Herman](#), [Noam Chomsky](#), [Howard Zinn](#), [Michael Parenti](#) and others like them. Some overgrown Boy Scouts, such as [Ralph McGehee](#), discovered from the inside, the hard way, about the dark reality of the system they worked for. About one in two thousand American doctors possess the necessary integrity to declare that [orthodox cancer therapy](#) is a racket, and dare to provide actual *cures*. In choosing their cancer treatment, Americans are among earth's [least free](#) people. Most of the high-integrity saints in my Pantheon have come under intense attack from America's establishment defenders. America's cultural managers do not want people waking up, and keeping those of integrity from being heard, or vilifying them if they are, is one of the [mainstream media's tasks](#), even to the extent of [wiping out their own publishing companies](#) to prevent the modern secular saints' works from being published.

However, America's [whistleblowers](#) have often reported that the worst abuse they received did not come from those who ruined their careers and lives – they were “[just doing their jobs](#)” – [but from their colleagues, friends and family](#), with ostracism and attacks that were shocking. Those saints all-too-often are crucified while the mob cheers, something [I witnessed happen to Dennis](#) more than once. Dostoyevsky's [parable of the grand inquisitor](#) is not all that fictional.

There is auspicious news to report, which is the [motivation behind creating this web site](#). The answers to all of our problems [are here](#) today, or nearly so. Free, non-polluting energy technology has been around for generations, but the people calling the shots on earth [do their best to hide that fact](#), and the vast majority of humanity are their easy-manipulated accomplices.

The situation is not hopeless; there is good news to report:

We can have heaven on earth instead of hell on earth, but enough of us have to care enough.

If one percent of the population simply began waking up to possibilities of healing that most are completely (and partly willfully) blind to, it might help catalyze enough awareness and action to bring a healed humanity and planet into being. The two groups I have encountered that are at the [stage of their spiritual evolution](#) where they are closest to “getting it” are the [radical left](#) and the [mystical left](#). I have seen more human caring and more ability to see the bigger picture in those groups than any others. There may not be enough collective integrity in those groups to put humanity over the top, but I know of no better candidates.

This site was not designed to exclusively cater to those groups, but anybody who can read English can probably get something from it. It is especially designed for Americans because I am one, and there are many things [we can begin doing today](#) to assist a planetary healing. I ask nothing of any reader except to honestly consider this site's thesis and information.

Who is Paying the Price of our Progress?

A Sampling of our System's Losers,

And What Can be Done About It

A common response to this site, mainly by white men, is that life here (in the West, the United States in particular) is good, so what am I complaining about? Life is "good" for the winners, and white, educated American men are history's biggest winners. The point is not about how good the winners have it, but how the losers are suffering. Below is a sampling of the losers that [this site's critics](#) usually ignore or minimize.

- A middle-aged Vietnamese man lost his parents and siblings in an American napalm attack on their village in 1967. He was burned also, but survived. As [Ralph McGehee](#) and [others have made quite clear](#), the Vietnamese people's crime was wanting to be free of the white man's yoke, and America killed off several million Southeast Asians to keep them [enslaved to the capitalistic order](#).
- An elderly Japanese man lives in [Nagasaki](#) today, and lived there as a child in 1945. Although Japan had been trying to surrender for months, the U.S. stonewalled Japanese surrender attempts so they could demonstrate their secret weapon, [the atom bomb](#). The 1945 bombings were vengeance on the Japanese for Pearl Harbor and a demonstration of power to the Soviet Union. Although the justification for the Hiroshima bomb was weak, and in light of current scholarship (Gar Alperovitz's, among others), difficult to take seriously, Nagasaki was a great crime against humanity. That elderly man lost his parents and entire family in the Nagasaki bombing, a bombing that intentionally targeted a city, to demonstrate the bomb's devastating impact. He still suffers from the wounds he received in the bombing, including radiation poisoning. Ironically, the man was raised as a Christian, and Nagasaki had [Japan's largest Christian community](#). The United States [has never apologized](#) and still justifies the bombings.
- A mother of five works in an American shoe factory today in Indonesia. The factory was moved there in the 1990s, throwing thousands of Americans out of work. Indonesian labor was cheaper, and the shoe company did not have to adhere to American standards of worker safety and treatment. Wages were low largely because the United States actively supported a military coup in Indonesia in 1965. When [Suharto](#) came to power with U.S. help, the first thing he did was murder about a million Indonesian citizens. They formed the political opposition to his dictatorial rule, and mainly belonged to the Communist Party. The CIA drew up lists of people, and the Indonesian army rounded them up and murdered them all. Thus, with the Indonesian people put into virtual bondage, the "investors" from the West flocked to Indonesia, moving factories there and drilling for oil, knowing that their pawn would keep the masses in line. That woman's parents were murdered in Suharto's political "cleansing" in 1965, and she was eventually reduced to working in the new American shoe factory, making a few cents per hour. When the workers in her factory recently

went on strike because of their inhumane working conditions, the shoe company asked the Indonesian government to send their brutal soldiers to bludgeon those striking workers. [Suharto and his cronies](#) stole about \$60 billion from the Indonesian people, thereby bankrupting the economy. The United States and the International Monetary Fund (IMF) rode to the rescue and "loaned" Indonesia about forty billion dollars to stay solvent. Part of such a "rescue package" is the imposition of "[Structural Adjustment Programs](#)" that essentially cut out such "frills" as affordable food and heat for the Indonesian masses, so they can pay back the "loan." The loan, like Suharto's looting, never makes it into the hands of the citizenry. Starvation and other austerity measures are imposed on them to pay off the "loan." The U.S. and IMF have provided that kind of "help" to scores of [Third World nations](#), and they starve while they export food and other commodities to the United States in order to earn "foreign exchange," to pay off the loan. It is merely shell-game slavery, and America gets cheap imports out of the deal.

- A thirty-year-old man picks bananas for United Fruit Company in Guatemala, the company that brings us Chiquita bananas. His parents were murdered in the 1980s by the Guatemalan government. The United States, at the behest of United Fruit Company (and the Secretary of State and CIA director were investors), overthrew the democratically elected government of Guatemala in 1954.^[1] The president of Guatemala, Jacobo Arbenz, was a fan of Franklin Roosevelt, and embarked on building a New Deal-style economy, and providing everybody a minimum standard of living. United Fruit thought that it owned Guatemala, and the American government conspired with United Fruit to overthrow Arbenz in a coup. The American Secretary of State and his brother, the CIA's director, [literally had a financial stake in the coup](#). For about the next forty years, [Guatemala](#) was ruled by a series of U.S.-backed dictators that eventually began slaughtering the political opposition in their nation. The carnage became the worst in the 1980s, when the Guatemalan army murdered that banana picker's parents as they tried to organize the banana workers. That banana picker today cannot properly feed his son, who at the age of four still cannot walk on his own, but American consumers get cheap bananas.
- An [Iraqi mother](#) recently lost her teenage son, as the trigger-happy American occupiers gunned him down as they "lit up" a street where the boy was walking. A decade earlier, she lost her three-year-old daughter to an intestinal ailment caused by contaminated water. The water was contaminated because the United States specifically targeted the infrastructure of Iraq during the so-called Gulf War, and then imposed an economic embargo that denied the Iraqi people supplies such as chlorine to purify their water, because it could have been "diverted" to military uses. Iraq used to have the best medical care in the Middle East, but the United States reduced Iraq to Third World status as we denied them food, medicine and other necessities. The woman's husband was conscripted into the Iraqi army during the 1980s and was killed by the United States in the [first Gulf War](#). Well more than one million Iraqi citizens have prematurely died since 1991 because of U.S. actions that continue to this day. Several hundred thousand of the dead are children under the age of five. It is all part of a U.S. effort to control the region's oil supplies and bludgeon anybody who steps out of line.
- Although they cannot articulately tell us their suffering, all across America, pigs, cows and chickens live hellish lives in factory farms in order to provide [McDonald's](#) and other firms the cheapest possible meat, milk and eggs. In addition, tens of millions of animals in America die each year from experiments performed on them. They die so that companies can test drugs, shampoo, and other consumer products.

- In [Bangladesh](#), a woman works in a clothing factory for an American corporation, making pennies an hour, barely able to feed her family. Where she works used to be called Bengal, which was perhaps the richest region on earth when the British conquered it (which was why they set about conquering it). Under the banner of the British East India Company the British raped Bengal, just as the colonial masters raped the inhabitants of every colony they established. Today, Bangladesh is one of earth's most miserable places, a direct result of centuries of British exploitation.
- Today in Chile, an American logging firm is clear-cutting the timber there, and the logs are being shipped to a mill in Oregon for processing. America no longer chops down its forests with its former abandon, but forests abroad are now being decimated to supply America with wood.
- A Filipino man works as a cabin boy on a luxury cruise ship that sails across the world's seas. He and his ancestors have lived under the white man's brutal rule for nearly five hundred years. The Spanish first colonized the Philippines, then the [United States stole the islands in the Spanish-American War](#), for the U.S.' first colony near Asia. Filipinos originally fought alongside the United States against their hated Spanish oppressors, but after the revolution ended it became obvious that the Americans had merely supplanted the Spanish as the new imperial overlords. The Filipinos revolted, and the U.S. killed about 200,000 Filipinos to keep their new colony in shackles. It was not until World War II that the Japanese overthrew the U.S. overlords, but the Japanese were just as bad as the Americans and probably worse. After World War II, the Americans reinstalled themselves as the imperial overlords and kept the Filipino people in bondage. They set the stage for the fascist system that has existed there. One side effect is [women ending up being prostitutes for American soldiers](#), and men end up working as cabin boys on cruise ships, rarely seeing their families but sending money back home so their children can eat. It is a miserable life, but Americans and other Westerners get cheap luxury cruises and sex.
- There are more than two million [Americans living behind bars today](#). Most of them are not in there for what a rational person would call a crime, but for "crimes" related to drug use. They are almost exclusively America's poor, and doing drugs was an attempt to escape, however briefly, the pain of their miserable lives. Ironically the [CIA is probably the world's biggest drug runner](#), so it not only [helps kill millions of foreign people](#), while making millions more miserable, but it pays for their oppression by selling drugs to America's poor. The prison industry is booming in America, and instead of shipping American jobs abroad, some American companies are closing down factories in the free sector and rebuilding them in prisons, where the labor is cheap and in the strongest sense, captive. Microsoft, run by some of the world's richest men, has used that prison labor to keep its labor costs down, as have many other American firms. This dynamic has created a powerful incentive to keep building prisons (prisons are also becoming privatized) and filling them up with prisoners (disproportionably people of color), ushering in a new era of slave labor.
- A few miles from where Bill Gates and Paul Allen live (with an aggregate net worth of many billions of dollars), thousands of people are homeless and sleep on the streets each night. Allen even bought an election in 1997 and ran an ad campaign to convince the public to pay hundreds of millions of dollars for a stadium they did not need, so Allen could rake in more money. Where the stadium was built, homeless people slept, so they had to find new alleys to sleep in (there are some silver linings in this litany, one of which was Bill Gates donating \$40 million to help homeless women and children in July 2000, although charity is a poor substitute for justice).
- A black man in Michigan today works the fry machine and cash register at [McDonald's](#), making about eight dollars an hour. He used to work at an auto company, making nearly twenty dollars an

hour. His job was eliminated when it was shipped to Mexico, where the auto company only has to pay two dollars an hour and does not have to adhere to American safety and environmental laws.

- A Native American man lives on the Sioux reservation on [Pine Ridge](#) in the nation's poorest county. [Deceptive and dishonest treaties](#) forced on his ancestors by the Americans stole their lands, and many Native Americans were [slaughtered outright](#). To this day, the reservation natives live dire lives, with a life expectancy nearly thirty years less than the average American's. The injustices continue, and the policies against the natives are [subtler than they used to be](#), but are still exploitative.
- In the Pacific Northwest lives a man who lost his wife to cancer. In the early 1990s, she was diagnosed with advanced ovarian cancer and was given little chance of survival. The couple heard about a clinic in Mexico that cured people of cancer like hers. [She went there and the treatment miraculously reversed her cancer](#). During her treatment, armed bounty hunters for the U.S. Justice Department kidnapped the man treating the woman's cancer, at gunpoint. They delivered him to the United States, where the man spent years behind bars for the crime of curing cancer. The man worked in Mexico precisely to stay out of an American prison, and kidnapping him was a gross violation of international law, but that is how [American "justice" works](#). The woman grappled with the bounty hunters as they kidnapped the man, and without his treatment, she died. Her story is common in America, where [all the cancer treatments that work have been outlawed](#), and the ones that do not work (and even kill off the patients) are the only legal "treatments," and make big money for the medical establishment. A half million Americans die needlessly every year from cancer, while the medical establishment rakes in the money. A similar situation exists with [artery diseases](#), which kills a million Americans a year.

That is a sampling of our system's losers. For the few winners in such a system, life is good, as they enjoy cheap oil, land, bananas, software, running shoes, luxury cruises, tin, sex, wood, cars, hamburgers and the like. Most of the system's participants are losers, however, and not all that willing. The situations listed above are only a sampling of the immense cost that humanity and the planet is paying in order for those white, educated Americans to live the good life. The United States is the [world's stingiest industrialized nation](#).

This site discusses [things that can be done, today](#), to completely eliminate not only the situations listed above, but create heaven on earth, [step-by-step](#).

Some problems are easily remedied. Some will take longer to fix, but all can be readily resolved. Edmund Burke's famous quote comes to mind:

"The only thing necessary for the triumph of evil is for good men to do nothing."

It has been said in different ways over the centuries, but it is quite true.

True spirituality (one's relationship with one's maker) has little to do with religion, and religion has often been [spirituality's greatest enemy](#). For people with love in their hearts, and who act on it with minds engaged, they need not study any teachings or join any religion or have the "right" beliefs. They will never advocate violence, will be willing to see the deeper truth of matters, and will play an important role in the upcoming healing of humanity and earth. According to [Neale Donald Walsch's](#) god, humanity is a primitive species that regards regression as progress (such as destroying the planet). In [societies of highly evolved beings](#), there are no lawyers, accountants, soldiers, policemen, surgeons, etc. There are three basic principles that they orient themselves around:

1. We are all one
2. There is enough for everybody
3. There is nothing that we have to do[\[2\]](#)

Humanity and the planet will not be healed by using ideologies based on greed and fear (such as [capitalism](#), or *any* ideology dogmatically adhered to), through theft (such as [starving out nations so we can steal their oil](#)), through exploitation (such as wage slavery and [neocolonialism](#)), through coercion (such as [prisons](#) and punitive laws), or through violence (police, armies, etc.). Love is the essential ingredient. With it comes truth and joy.

There are those who believe that the head needs to wake up first, and the heart will follow. Some are head people, and some are heart people, and I think the head, heart and enlightenment issue is like the chicken and egg conundrum. While I respect trying to get at the heart through the head, I have also seen many stuck in their heads, unable to connect with their hearts. Those with whole hearts have a kind of wisdom, and can see things that others cannot. Jesus was perhaps the wisest person to ever walk the earth, and [it was his heart](#), not his head, that led to his attainment. Nobody with a whole heart [goes to "hell,"](#) but many ingenious people, whose hearts are dead, do. If people want to try waking up their minds first, and then their hearts, they are welcome to try.

The thesis and information on this site just might be wrong. Noam Chomsky said that in order to truly *learn*, we must do the work. Nobody is going to open our skulls and pour in knowledge and truth. When somebody says that they will, what is delivered is often the opposite. It is up to each of us to find our own truths.

We are all in this together, and we can make great progress in healing humanity and the planet, *if we care to*.

Blinded by the Paradigm

This site is iconoclastic, and challenges the system and the beliefs of Americans in particular. The same dynamics seemingly play out in all intellectual disciplines, whether it is [science](#), religion, politics, economics, philosophy, etc. They all fall prey to dogmatism. The dogmas appear related. Holding rigidly to a point of view, no matter what evidence flies in one's face to contradict or temper it, is dogmatic. Dogma is [based on denial](#), which is rooted in fear. It can be called blind faith, or a faith that blinds, but it short-circuits the thinking process.

In religion, the set of beliefs adhered to can be called a faith. In science, it can be seen as a set of beliefs (theories) called a paradigm. In politics and other disciplines, it can be called a worldview. What it amounts to is how people view "reality." Do we each have our own reality? Do we co-create it? How much does mine have to do with yours? Those are timeless questions. Below are presented several examples of "paradigmatic thinking." Paradigms always seem to be built from the bottom up. Children are inculcated into the prevailing paradigms of the society they grow up in.

Scientific Paradigms

The modern meaning of the term [paradigm](#) was coined by Thomas Kuhn in *The Structure of Scientific Revolutions*. A bedrock presumption of the scientific worldview is that of objectivity. There is a world out there, as related to our senses, and we can "objectively" observe what it is. Some of the greatest physicists of all time [have challenged that notion](#). Is there *really* anything out there, and if there is, is there an *objective* perspective of it? Science has no answers to that question, but operates from that *presumption*. That presumption can be right or wrong, but if I do not share that presumption, the direction that science pursues may well be meaningless to me. That does not mean that I am right, but I can hardly have a meaningful dialogue with a system of thought in which we differ on our most basic premises. Lines of thought follow from their presumptions.

The most influential work of physics ever written was Isaac Newton's *Principia*. In the beginning it makes three *presumptions*. Two of those are the notion of time and space being absolute. For more than two hundred years, Newton's *Principia* was the guiding light of physics. In the 1880s two scientists, Michelson and Morley, performed the most delicate experiment in history to that point and determined, much to their surprise, that the speed of light did not vary, no matter the velocity of the light's source. A generation later, Albert Einstein theorized that time and space were not absolute, but relative. It appears that Einstein was right. His theories led to today's physics, with black holes, lasers, atomic bombs and a new paradigm from which to view the universe. Its foundation was built on challenging the presumptions of the previous paradigm, and challenging the presumptions is how paradigms and belief systems are changed.

People have tried minimizing the paradigm shattering that Einstein did by saying that Newton's work was good enough, until our instruments were able to prove his presumptions wrong. Wrong is wrong. Ptolemy's theory that the earth was the center of universe also worked for its time, until it was eventually proven wrong by scientific observation that led to new theories. Although Ptolemy's astronomy "worked" for the day, it did not make it right. Nearly identically, Newton's derivation of accurate calculation systems regarding the effect of gravity did not make his presumptions about time and space right. In addition, Newton did not even say what he thought gravity was, but merely described its effect, an effect that

relativity modified. Einstein will eventually be proven wrong, and Einstein expected it. If Einstein had a professional descendent, it may have been David Bohm, and Bohm's theory of the implicate and explicate order makes the seemingly dualistic nature of light - appearing as a particle and times and a wave at others - partly an interaction with the observers' point of view. That can be seen as a direct challenge to objectivity, as well as bringing human consciousness into physics.

Einstein said that every theory is eventually killed by a fact. That did not make Newton any less of a towering scientific figure, but his presumptions were eventually shown to be incorrect, which radically altered today's physics.

[James Watt](#) invented the steam engine that powered the Industrial Revolution. A couple of generations later, [Sadi Carnot](#) created a theoretical framework for technology that already existed. Victor Fischer challenged the foundation of thermodynamics, stating that [Carnot presumed an ideal gas](#) as the working fluid in his ideal engine. He then *extrapolated* from his logic with gas engines to all working fluids. Wilhelm Reich and Eugene Mallove adduced experimental data that [directly challenged the Second Law of Thermodynamics](#). Fischer and others maintain that Carnot's presumptions and extrapolation were his crucial errors. Fischer maintains that beginning with the steam engine and extrapolating that logic to all engines marched thermodynamics off in the wrong direction, a misdirection from which it has not yet recovered. Because of that faulty presumption (at least in the eyes of Fischer and others whose scientific opinion I respect) regarding heat engines, the notion of liquid heat engines has been ignored ever since. Fischer and others like him explain that thermodynamics textbooks are gloriously wrong as they teach students about thermodynamics, building on Carnot's presumptive foundation. The first prototype of Fischer's engine came closer to Carnot's ideal efficiency than any other heat engine ever had before. Among others, [Tom Bearden](#) is challenging the theories of electricity at their root, once again questioning the *presumptions*.

In the realm of microbiology, the same phenomenon can be seen. [Antoine Béchamp](#) was one of the nineteenth century's great scientific minds, and disproved the notion of the spontaneous generation of life at the microscopic level with one of his Beacon Experiments in 1857. [Louis Pasteur](#) was an opportunistic chemist who quite possibly plagiarized Béchamp's work. Many years after he seemingly stole credit for Béchamp's work, he still did not understand the process of fermentation or why the spontaneous generation theory of life was inaccurate. Pasteur may have marched microbiology off in the wrong direction more than one hundred years ago.

Today's [microbiology textbooks](#) present expedient fairy tales regarding Pasteur's disproof of spontaneous generation theory. At best, the fairy tales are misleading, and at worst, it leads students gravely astray in their first day of class, a misdirection they never recover from.

[Royal Rife](#), [Gaston Naessens](#) and others have shown that pleomorphic theory is more persuasive in describing disease dynamics than Pasteur's germ theory. The findings of the revolutionary microscopes of Rife and Naessens not only support Béchamp's pleomorphic theories, but also overturn today's optical theories, which is also part of Newton's legacy. Einstein proposed radical ideas of space, time and gravity, and the microscopes of Rife and Naessens produced radical *data* about optics, enabling them to see life processes never seen before. It does not mean that Newton's work was worthless, but it was something that others improved on, which should be standard scientific practice.

Unlike the relatively gracious reception that Einstein's theories received, the work of Rife and Naessens, the proof of which was evident by looking through the lens of their microscopes, was met with jailing and other vile behavior by the scientific and medical establishments. Why? In a pattern that repeats throughout this web site, it appears to be because their work led to cancer cures that were harmless, cheap and effective, and [threatened the cancer racket](#). Today's paradigm of "attack the tumor" is thorough insanity, but it guides orthodox cancer therapy and research today, and Pasteur's seeming plagiarism of Béchamp helped create the paradigm that serves up an attack-the-tumor philosophy. This site's medical essay presents [more than twenty examples](#) of how cancer cure pioneers were wiped out in the West, mainly in the United States. The treatments were mainly harmless, cheap and effective. Most medical professionals, especially in the realm of cancer research and treatment, appear to have been blinded by their paradigm.

Science goes far beyond optics and microbiology. A math wizard I know told me that today's geometry is merely one of an infinite number of "valid" math systems, and with different *presumptions* (such as Einstein's presumption that parallel lines meet at infinity), each is "valid."

Today the respected astronomer Halton Arp is questioning one of the foundations of astronomy and cosmology: the universe is expanding from a primordial "Big Bang." The universe may not be expanding at all. Naturally, his work is marginalized, although he has not gone to jail. Theorizing whether the universe is expanding or not generally will not land people in jail, because no economic empires are built on it...yet. Einstein enjoyed that grace. The work of [Nikola Tesla](#), however, had a more practical impact on the lives of average people, so he has been severely marginalized by history, although he invented the electricity that powers our homes today, and was pursuing free energy before the robber baron J.P. Morgan pulled the rug out from under him nearly a century ago.

Those are issues in the "hard" sciences. The disciplines of optics, thermodynamics, astronomy, microbiology, mathematics, etc., are all subject to radical revision. Supposedly, those are no-nonsense studies, but their very foundations are being seriously questioned today. What do we *know*? There has probably been a major [cover-up of extraterrestrial life](#) by those who think they run the world. I sought and [watched a UFO myself in 2005](#). People I know and trust have received [secretive free energy and anti-gravity demonstrations](#), whose revelations would wipe out many "laws" of physics today as well as radically transform the world economy. Numerous areas of "hard science" are apparently faulty in their theories and data, often because vested political and economic interests actively thwart any progress. The paradigms are shaky at best.

Try engaging a scientist on these issues and [watch what happens](#). Only scientists as internally secure as Einstein can gleefully admit that we barely know anything, or that they were taught lies (or "expedient rubbish"). I have interacted with scientific giants, and they have all acknowledged that we barely know anything. That is regarding "hard science." It becomes more problematic regarding the "softer" issues such as history, the media, politics, religion, economics, etc.

Other Paradigms

As a child in California, [Christopher Columbus](#), [George Washington](#), [Junípero Serra](#), [Thomas Jefferson](#),

[George Custer](#) and others were held up to me as American heroes. My adult investigations have not supported any of those notions.

The lies that American schoolchildren have been taught for centuries about Columbus and his heroic feat is the *very beginning* of their American history studies. In his important *Lies my Teacher Told Me*, James Loewen clearly demonstrated how vapid American high school history textbooks are. Loewen observed that high school children hate learning American history, partly because they know on some level that they are being sold a lie. Loewen devotes a chapter of *Lies my Teacher Told Me* to the Columbus Myth that children are taught. Virtually no facts about [Columbus](#) and his voyages as taught to American schoolchildren are undebatably true, except that he sailed in 1492 on the Santa Maria.

Loewen, a college history professor himself, made the case that college history, on the other hand, is partly about disabusing those students of the fairy tales they were raised with. I still have the history book I studied during my first year in college.^[3] Just as high school history books do, the text began American history with the voyage of Columbus.

After half a page of dubious information on the natives who lived here for most of what we call history, and [many thousands of years before that](#), the authors quickly go across the Atlantic Ocean and describe the European dynamics that led to the voyage of Columbus. They briefly sketched Columbus' career as "discoverer" and concluded that he "deserved the fame that ultimately came to him."^[4] The big news of Columbus' career was initiating the world's first and [only complete extermination of millions of people](#), the Taino of the Caribbean. Regarding that truly historic event there is barely any mention, and it is only mentioned after the section regarding Columbus is concluded. The text states,

"The first experiments with forced labor, as in the island of Hispaniola, resulted in the near extermination of the natives, but Indians continued to work in the mines or on the ranches of the mainland for centuries...The whites exploited the colored peoples, yet the Spanish conquerors were not particularly cruel and predatory, no more so than the later English colonists. The millions of Indians who died in Spanish America were mostly victims of the white man's diseases."^[5]

My college textbook was not exactly an exercise in iconoclasm. I am not the only student who finished college thinking that Columbus was a hero. [Howard Zinn](#), with a Ph.D. in history, earned at *Columbia*, [never found out any differently about Columbus](#), until he began researching his *A People's History of the United States*.

There it is again; the paradigm's foundation is formed with the subject's introduction, and the disinformation deludes students from that moment forward. As Loewen stated, the purpose of the [lies in history textbooks](#) is partly to inculcate a sense of nationalism in American children, to lead them to believe their nation is a great one, forever unstained, marching off to endless feats of "progress." It is a story of state as hero. As Loewen demonstrated, the more "educated" Americans were, the more they supported the [rape of Vietnam](#). In 1971, 80% of those with a grade school education were against the war, 75% of

those with high school education, and only 60% of those with a college education.[\[6\]](#)

In 1925, the American Legion listed the ideal American history textbook's features:

"must inspire the children with patriotism

"must be careful to tell the truth optimistically

"must dwell on failure only for its value as a moral lesson, must speak chiefly of success..."[\[7\]](#)

To this day, that largely remains the philosophy of American history textbook publishers. The "dumbing us down" thesis of [John Taylor Gatto](#) is elucidated by William Griffin and John Marciano, who wrote:

"Textbooks offer an obvious means of realizing hegemony in education. By hegemony we refer specifically to the influence that dominant classes or groups exercise by virtue of their control of the ideological institutions, such as schools, that shape perception on such vital issues as the Vietnam War... Within history texts, for example, the omission of crucial facts and viewpoints limits profoundly the ways in which students come to view history events. Further, through their one-dimensionality textbooks shield students from intellectual encounters with their world that would sharpen their critical abilities."[\[8\]](#)

"There is no other country in the world where there is such a large gap between the sophisticated understanding of some professional historians and the basic education given by teachers." - Marc Ferro[\[9\]](#)

I was raised in Ventura, California, a mission town founded by [Junípero Serra](#). The grade school I attended, down the street from where I grew up, was named after Serra. I was taught three years of California history, and as with Columbus and American history, Serra is the first significant figure of California history (if the pirate [Drake](#), who briefly visited it, is not counted), while the many thousands of years of native habitation merit a brief footnote.

As with the Columbus Myth, I looked into the Serra Myth. Serra is up for [sainthood](#) today. It turns out that Junípero Serra was a fanatical and masochistic priest who initiated the [genocide](#) of California's natives, another fact that escaped the history I was taught. What was the difference between Serra, Columbus and Hitler? In the end, not a great deal besides the level of technology available to them. Hitler was not so much an aberration as the logical conclusion of the Western mentality.

Similarly, [George Washington](#) was America's richest man when he became president, building his fortune on his inheritance, marrying well, owning slaves to plant and harvest his tobacco (on stolen native land), and he was the [primary architect](#) of the strategy of forcing the natives to sign treaties that the new nation would never honor. Nearly every subsequent American politician [faithfully continued that strategy](#), until there was [no more land left to steal](#). "Heroes" such as [Custer](#) and [Jefferson](#) fared similarly under scrutiny, as well as [Andrew Jackson](#), Kit Carson and Wyatt Earp.

That kind of "teaching" creates a paradigm that guides thinking. In the case of the history I was taught, the paradigm was that my ancestors were great and noble heroes, "civilizing" the Western Hemisphere. Why? Apparently, so I will believe I live in a great nation, forever progressing to new vistas of wonder, leading the world to the light. It worked for a while. The paradigm blinded me to reality and put me in a fantasy world. Why? Apparently, it was to control me. With my brain carefully washed, I would gladly march off to distant lands to annihilate the natives, to "defend" my great nation, or [cheer as others do so](#). I would believe in the insanity of attacking the tumor as a way of "curing" cancer. That [cancer paradigm](#) has created an awesome amount of suffering and death, while "coincidentally" lining the pockets of the drug companies, doctors and others in the medical business. The nationalism paradigm has created even more suffering and death, but [generally for people of other nations](#), those we have attacked with the world's biggest killing machine, while "coincidentally" lining the pockets of military contractors and others.

In religion the same paradigm manufacturing can be seen, also at square one. The book of Genesis, in its first section, states:

“Then God said, ‘Let us make man in our image, after our likeness; and let them have dominion over the fish of the sea, and over the birds of the air, and over every creeping thing that creeps upon the earth.’ So God created man in his own image, in the image of God he created him; male and female he created them. And God blessed them, and God said to them, ‘Be fruitful and multiply, and fill the earth and subdue it; and have dominion over the fish of the sea and over the birds of the air and over every living thing that moves upon the earth.’”[\[10\]](#)

If Genesis is to be believed, God put humans in charge of earth. Westerners generally feel they have the right to treat animals and other "lesser" creatures however they wish, which has led to the [evils of factory farming](#) and the animal experiments of today. That is also why the [English saw Native Americans as subhuman](#). Europeans could be in charge of the natives, treating them however we saw fit, annihilating them when they got in the way. Although that first creation myth said nothing about the inferiority of women, a later passage in Genesis, during the Garden of Eden tale, has God making the first woman from Adam's rib. Then Eve ruined the paradise deal with the serpent and forbidden fruit, with Adam blaming Eve for his sin, which has justified [the treatment of women as inferior creatures](#), a paradigm that continues to the present day. Women did not get the right to vote in the United States, that revered democratic nation, until less than one hundred years ago. Slaves and [Jews](#) got the right to vote in America before women did. For a man, the paradigm as initiated by Genesis might sound like a good deal. For women and animals (or "inferior" races), the deal was not so benevolent.

In economics, a paradigm built on presumptions and myths prevails. The dogma of free markets dominates [capitalistic theory](#). There is no such thing as a free market or free trade. Free markets are as plentiful as unicorns. With capitalism, the game is giving consumers the right to buy whatever they want, but their menu must be limited to one or two items. Americans can choose any cancer treatment they want, [as long as it is surgery, radiation or chemotherapy](#). Americans can get their [energy](#) any way they want, as long as they pay the electric or oil companies for it. Americans can pay for their goods any way they want, as [long as it is in U.S. dollars](#). Americans can get around any way they want, as [long as it is by car](#). In practice, alternatives can be chosen through great effort and privation, such as going to Mexico for cancer treatment, if the U.S. medical gangsters do not burn down the Mexican clinic or [kidnap its director](#). Generally, it is far too much trouble, if Americans are even aware of the alternatives, so they [shuffle along with the herd](#).

In orthodox economic theory, there is the law of supply and demand, called a law, as if it were gravity. The law of supply and demand is founded upon a *presumption* of [human greed](#). There exist other societies where greed is not the "law." Donald Walsch's god said to him, when discussing the highly evolved societies around the universe (humanity's does not qualify today):

"In those cultures it would not be possible to fail to share. Nor would it be possible to think of 'charging' increasingly exorbitant 'prices' the more rare a necessity became. Only extremely primitive societies would do this. Only very primitive beings would see scarcity of that which is commonly needed as an opportunity for greater profits. 'Supply and demand' does not drive the HEB (Highly Evolved Being) system. That is part of a system that humans claim contributes to their quality of life and to the common good. Yet, from the vantage point of a highly evolved being, your system *violates* the common good, for it does not allow that which is good to be experienced *in common*.[\[11\]](#)

Greed was nearly an unknown vice in the "primitive" civilizations of the New World and Africa (the Aztecs being a rare exception), [before the white man came along](#).

Again, a paradigm is built on a *presumption*, and a primitive one at that. How does one enforce the paradigm? By attacking and marginalizing anybody not subscribing to it. Hence, the U.S. war against "communism" and its anti-capitalistic heresies of sharing. Ironically, Christians were the West's first communists, going back to its earliest days. The paradigm enforcers [harass, jail and murder doctors](#) who cure cancer patients without attacking the tumor. They throw free energy revolutionaries such as [Dennis Lee](#) into prison on fabricated charges. They write [Béchamp](#) and [Tesla](#) out of the history books. [Halton Arp](#) and [Noam Chomsky](#) are unheard of by most Americans, but [Carl Sagan](#) and Rush Limbaugh are household words. The paradigm creators/enforcers parade Columbus, Serra, Washington, Jefferson, Custer and the rest of that rogues' gallery as heroes that children are supposed to look up to.

In the world of politics, similar enforcement mechanisms are in place to keep the paradigm from being challenged. Much of it is "innocent" in that once people get the paradigm drilled into their heads, they are incapable of seeing beyond it. [Ralph McGehee](#) discovered the hard way what his employer, the CIA, was

really up to.

Ralph had to [run the gauntlet](#) in order to tell the American people what the CIA really did, and suffered greatly to live by his conscience. The CIA has nothing to do with defending freedom, and never did. The [CIA has always been about keeping the subject nations enslaved to capitalism](#), which is largely [colonialism](#) with [new rhetoric](#). Ralph wrote about how the CIA policymakers "culled" the data so it would conform to the prevailing ideology. Thus, most Americans and nearly everybody at the CIA did not realize that what happened in Vietnam and the whole Cold War were generally the U.S.' efforts to [keep the people of the post-colonial world enslaved to the West](#). The realization that the "communist menace" was only the attempt of the populations in Vietnam, Guatemala, Chile, Indonesia, etc., to free themselves from the white man's domination was fleetingly acknowledged by barely anybody in America, and America's mainstream media and its pundits have [never admitted it](#). In 2000, Ralph wrote,

"As I discovered in my 'Vietnam days' policy dictated intelligence with William Colby and others ensuring that no information challenging our policy saw the light of day. However, the rejection of reality started from the very first days from just after WWII and prior to the creation of the CIA.

"Later even Sam Adams, the number one analyst/protestor on Vietnam, had little knowledge about the Communists "People's War," written about ad nauseum by Vo Nguyen Giap, Ho Chi Minh and even Mao Tse-Tung.

"Agency analysts do not use open source data/datum - and herewith lies one major cause of its egregiously terrible intelligence. Another is the multi-leveled bureaucratic structure of the CIA that authorizes politicized bureaucrats at all levels to hack away at raw intelligence until it supports policy.

"In my last few years in the CIA as a skeptic I saw that distorting intelligence to support policy was a universal truism. This can be deduced particularly from Mel Goodwin's experience regarding CIA intelligence on the Soviet Union. William Casey was a total practitioner of this phenomenon.

"...For a successful career in the CIA one must accept that the Emperor wears gorgeous robes - stating the obvious kills the messenger."

Of the major ex-CIA authors who are critical of the Agency, four men make up nearly all of them: McGehee, Phil Agee, John Stockwell and Victor Marchetti. They all either endured huge legal battles to publish what they did, or endured many illegal intimidations. Agee essentially lost his citizenship for publishing *Inside the Company*, and lived under political asylum in Germany, after being hounded across Europe. The CIA tried cloak-and-dagger strategies to prevent him from publishing his book, bugging his typewriter to find his Paris hideout while he wrote his memoirs and trying to lure him to Spain to possibly murder him. Marchetti and McGehee engaged in huge legal battles with the CIA, as they tried publishing their books "legally." Stockwell was like Agee in that he did not let the CIA censor his book before publication, and had a running legal battle with them after he published his *In Search of Enemies*. Other ex-CIA authors write under pseudonyms to avoid those fates. Wiping out the messenger is how the false

paradigm can be sustained.

In their masterful [Manufacturing Consent](#), Edward Herman and Noam Chomsky clearly demonstrate the complete subservience of the media to government/corporate policy during the Vietnam days, during the bludgeoning of Central America in the 1980s and so on. The true motivation of our aggression in Southeast Asia was never hinted at. The media completely inverted reality, so the people we invaded and murdered by the millions were the aggressors, while our invading army was doing all the suffering. It would be as if the Nazi invasion of Poland were depicted as a Polish aggression against Germany. That [inversion of reality over Vietnam](#) lasts to this day in the U.S. [mainstream media](#). [Orwell](#) would have been impressed.

What *Manufacturing Consent* and other works clearly demonstrate is a total adherence to a paradigm (e. g., we are the good guys) that no amount of contradictory data is ever able to shake, no matter how bald and undeniable. No matter how many obvious lies America's politicians told, no matter how many dishonorable actions by its diplomats, the corporate media could be counted on to put the best possible spin on it, somehow transforming genocide into a noble affair. Somehow, the [United States killed several million people](#) and destroyed the lives of many millions more in Southeast Asia, but our motives were pure, through and through. The media as propagandists reached new heights during the [invasion and occupation of Iraq](#).

The American people themselves do not buy the Vietnam propaganda (most saw the war as immoral on America's part), but the media and other establishment mouthpieces have never admitted it, and it looks like they never will. They repeat the dogma that America's motivation was pure, but the strategy unfortunate or "unwinnable." Although most Americans believe our motivation regarding Vietnam was tainted and immoral, that notion has *never* entered the pages of the mainstream media. As astute scholars have stated, [the notion is simply "unthinkable" by mainstream media personnel](#).

It appears that the United States will never apologize to [Vietnam](#), Laos, Cambodia, [Iraq](#), Cuba, [El Salvador](#), [Indonesia](#), [Chile](#), the citizens of [Hiroshima](#) and [Nagasaki](#), the [Philippines](#), etc., etc. Being the world's most powerful nation, with the world's largest killing machine, means never having to say you are sorry.

[Fluoride](#) was magically transformed from a deadly industrial waste into a tooth's best friend. Most fluoridation pioneers had conflicts of interest or directly worked for fluoride polluters, as [Harold Hodge](#) did, although the nature of his employment by the fluoride-polluting military was kept secret. Industry-employed scientists fabricated and distorted data to make an industrial waste appear a safe cavity preventive, although there is no credible evidence that supports that notion, and all evidence shows that fluoride is a deadly poison that actually *destroys the teeth* and damages brains, among other health disasters.

The system can be sophisticated and subtle. It is not always easy to see through the many layers of deception. The reason all those false paradigms are held in place is because they provide comforting fictions for many people, and great wealth and power for a select few. If, like Nazi Germany and probably every other nation, Americans can see themselves as forever noble, virtuous and heroic, as a *presumption*, they can inflict their violence at will on anybody else with a clear conscience. In that regard, the [American history brainwashing](#), the [CIA's lies](#), the [media inversions of reality](#) and so on form an

interlock of self-interest. For those at the top of that food chain, life is "good." In addition, Americans get cheap bananas, oil, tin and other imports due to America's enforcement of the [international neocolonial order](#). White, educated American men are history's most privileged demographic group, and eagerly believe the lies because it justifies their privileged position. Virtually without exception, they are the people [who most take my work to task](#). As the [Ralph McGehees](#), [Rodney Stiches](#) and [Dennis Lees](#) of the world have discovered at great personal cost, the enforcers of those murderous paradigms do not deal gently with their heretics, and for the nearly 99% of humanity who are the losers in such a system, life is not pretty.

Although those at the food chain's apex think life is great, they are also sacrificed on the altar of power and profit, [dying agonizing deaths from cancer](#) and drinking fluoridated water, which helps give them cancer and [impairs their intelligence](#). Under the prevailing paradigm, [everybody is ultimately a loser](#). If today's [genetic engineering wizardry](#), in which there is a capitalistic rush to own life itself, ends up unleashing something like [Stephen King's Captain Trips](#) onto humanity, annihilating nearly all of us ([Walsch's](#) god says that humanity is facing *exactly* that, as do others), it will be a monument to the dangers of allegiance to a paradigm that elevates power and greed, while denigrating truth and love.

Not all paradigms blind their adherents. The problem is adhering rigidly to *any* paradigm and suspending our mental and emotional faculties. Many paradigms can illuminate, but in a world where power and greed rule, the [healthy paradigms are still waiting to be adopted](#). It is not yet too late, if enough people begin waking up *and caring*.

Forgetting the Basics, and Turning Vices into Virtues

Intimately related to the issue of founding paradigms on false assumptions is a phenomenon where people conveniently forget the lessons taught them as small children, thinking they have become too grown-up and smart for that. People often recall the self-serving assumptions, while forgetting the other-serving admonitions. That part of growing up is not exactly a triumph. One of the greatest American spiritual masterpieces to make it into mainstream awareness in my lifetime is Robert Fulghum's *All I Really Need to Know I Learned in Kindergarten*. For literate Americans, it has been virtually impossible to avoid seeing the list he developed. Fulghum made the case that all the truly important things worth knowing were taught to us by age five. The first seven items on his list were about being a "good citizen" and being considerate when interacting with others. I will present his first seven rules, and how the West, and the United States in particular, has learned those lessons.

Share. [Europe's conquest of the world](#) is history's greatest act of genocide and theft. Its effects over the centuries have resulted in the situation where the earth's richest one thousand people have more wealth than the poorest three billion, for a wealth ratio of millions-to-one. The U.S.-inflicted genocide in Iraq today has everything to do with controlling the Middle East's oil supplies, and the current "[War on Terror](#)" is more of the same. The United States has been [stealing Iraq's oil](#), while [millions of Iraqi citizens die](#). Today, the United States has only five percent of the world's population, but consumes a quarter of its energy, and the West consumes the vast majority of the world's resources, while the people in the subject nations live lives of dire poverty and oppression. Because of [neocolonial](#) institutions such as the [World](#)

Bank and International Monetary fund, nearly all the world's poorest nations export food to the United States, as they earn "foreign exchange" to pay off "loans" that those nations' people never received any benefit from. It is merely a new form of slavery. In the United States, the richest 1% owns more than the poorest 95%, and in 2000, the world's richest man, Bill Gates, had more wealth than the poorest 100 million Americans combined. These situations are not laws of nature, but due to [several hundred years of exploitation](#) of the world by white people, with the current incarnation of the rapacious system called "[global capitalism](#)."

Play Fair. The West has never come close to playing fair with those it exploited and murdered. From the very beginning of the world's conquest, Spanish legal tactics were used as a form of fraud [to steal land from the natives](#), as well as enslaving them. Priests, soldiers and lawyers formed the vanguard of the enslavement of Mesoamerica's natives. The natives of the Caribbean were [completely exterminated](#) during the early days of conquest, so today's Mexico is the first place that the Spanish truly "colonized" (if their rape of the [Canary Islands](#) is not counted). That colonization was anything but fair. When the other colonial powers got into the game, [the same patterns were repeated](#). [Christopher Columbus](#) and [George Washington](#) were anything but heroes, yet they have national holidays in their name. Washington first proposed the strategy of stealing native land by [forcing treaties on the Native American tribes that the United States would never honor](#), a strategy that was immediately adopted by the Continental Congress, and of more than 370 treaties forced on the native American tribes by the United States government, historians cannot find even one that the United States honored. That legalistic fraud is not merely something in America's history that has been covered up. In today's international arena, the United States is [the world's most lawless nation](#). As Noam Chomsky says, the United States' disregard for the restraints of international law is the worst the world has seen since the days of Nazi Germany.^[12] The [blatant vote fraud](#) (and subsequent Supreme Court fraud) that took place in Florida during the 2000 U.S. presidential election is one more example of how America "plays fair." During the 1990s the United States began [kidnapping people from Mexico](#) to bring them to America for "justice." Although it was a violation of international law that not even Hitler could get away with, the Supreme Court chief justice, the noted racist William Renquist, ruled that kidnapping people from Mexico was OK because the extradition treaty with Mexico did not explicitly say "no kidnapping allowed."^[13] I had [brutal experience regarding how our legal system plays fair](#) when I tried to help bring alternative energy to the marketplace.

Don't Hit. Internationally, the United States is history's most violent nation. Nobody comes close. The [genocide of Native Americans](#) during the nineteenth century was a mere warm-up to the violence that the United States has inflicted on humanity during the past fifty years. Usually, the United States merely finances and arms its pawns, as with [Indonesia](#), [Iran](#), [Afghanistan](#), the [Central American](#) banana republics and elsewhere. That record would be bad enough, and by itself is one of history's bloodiest records.^[14] Using its armed forces, the United States has also [killed several million people directly](#) during the past fifty years, in [Southeast Asia](#), Korea, [Iraq](#), [Panama](#) and elsewhere. More people have died as a direct result of the United States' efforts in Southeast Asia and Iraq than died in Hitler's death camps, but somehow, America is the good guy, defending the high principles of freedom. Rhetoric and reality regarding that situation are on nearly opposite ends of the spectrum, and the most fervent [believers of the propaganda are educated Americans](#).

Put Things Back Where You Found Them. This rule is related to not taking things that belong to others and cleaning up after ourselves. It relates directly to the "play fair" observations above and the "clean up

your mess” rule, dealt with below.

Clean up Your Mess. The United States is the world leader in creating environmental devastation. From fossil-fuel emissions to the environmental devastation of its subject nations, the United States (and the West in general) has created the greatest environmental devastation the world has known. As the environmental movement in the United States gained momentum during my lifetime, environmentally-disastrous activities such as mining, oil exploration and pumping, [deforestation](#) and the like have been exported to subject nations. America has also dumped its toxic waste onto subject nations. In America, waste has always been dumped in the poorest areas, including the land the remnants of Native American tribes live on. For a clear illustration of that principle in practice, a memorandum from the World’s Bank’s chief economist was leaked to the public during the early 1990s. In his memo, the chief economist, [Lawrence Summers](#), encouraged the bank to promote the migration of the “dirty industries” to the less developed nations. What kind of public disgrace and career scuttling did Summers experience when that memo became public? In 1999, Bill Clinton promoted him to be the U.S. Secretary of the Treasury.

Don’t Take Things That Aren’t Yours. All imperial cultures have been master thieves, and the United States is no different. From stealing the native land, using George Washington’s [criminal strategy](#), to stealing Iraq’s oil with the [oil-for-food swindle](#), the United States has always been a kleptocracy, and is now playing the game on a global scale.

Say You Are Sorry When You Hurt Somebody. After [America shot down a passenger plane taking off from Iran](#), killing hundreds of people, U.S. Vice President George Bush said, “I will never apologize for the United States of America. I don’t care what the facts are.”^[15] That is not an aberration, but standard United States foreign policy. Not long ago, lame duck Bill Clinton made a public relations trip to Vietnam. The United States indefensibly [murdered millions of Vietnamese citizens](#) during the 1960s and 1970s, while trying to recolonize the region, even though the Vietnamese people, led by Ho Chi Minh, were instrumental in thwarting Japan’s imperial ambition in the area during World War II, and were considered U.S. allies. While Clinton expressed a willingness to let the past be the past, and to move forward in bettering U.S.-Vietnamese relations, when asked if he would apologize for what the United States did to Vietnam, he declined to do so.

Declassified documents have now proven beyond any reasonable doubt that [dropping nuclear bombs on Japan](#), and especially [Nagasaki](#), had virtually nothing to do with saving American lives, saving Japanese lives, or any of that noble-sounding rhetoric. [Harry Truman proudly justified](#) the atom bombs dropped on Japan long after he had left office, even openly calling it an act of revenge. [Clinton also refused to apologize for the atom bombs](#), as every post-war president has done.

Those Seven Noble Rules. Regarding those seven noble rules, the United States regularly ignores them, usually conjuring impressive-sounding rhetoric to justify its behavior, and most Americans either cheer those actions or quietly acquiesce to them. Why is humanity heading toward that brick wall? Because people reject rules of consideration for others that they were taught as young children, thinking they no longer apply, or lying to themselves that what is so obvious is not really happening. People are either mindless, or [are knowingly doing these things](#). I think it is a little bit of both, which all begins with a hard heart, which is because people are afraid. It [does not have to be this way](#).

Turning Vices Into Virtues. Long before Robert Fulghum walked the earth, the West has been familiar with the seven deadly sins. They are: pride, greed, anger, envy, lust, gluttony and sloth. Americans have enshrined some of those deadly sins as not only benign, but worthy attributes of our societies, even making them the centerpieces of our ideologies. It is exactly the kind of inversion of reality that [George Orwell wrote about](#), where freedom is slavery, war is peace, and ignorance is strength.^[16] When 1984 rolled around, I read discussions of why Orwell's dark vision did not come to pass. It largely has. Here is how Americans have been turning deadly sins into either virtues or valuable attributes of our ideologies, or rendering them benign or invisible.

Pride. Nationalism is all about generating feelings of [national pride](#). Most of what I was taught regarding generating feelings of national pride was a [pack of lies](#). As we inflict endless violence and suffering onto the world's people, we do it with [great national pride](#), which is partly how we are blinded to the true nature of what we support. That dynamic was never more apparent than the [flag-waving aftermath](#) of the World Trade Center attacks of September 2001. Since September 2001 I have regularly sat in traffic behind cars that wear bumper stickers with a picture of the American flag and the words "Proud to be an American" or "The Power of Pride."

Greed. America's capitalist ideology has made greed a centerpiece of its theoretical framework. The so-called law of supply and demand *assumes* greed. The "law" states that people will raise the price of something if it becomes scarce or demand increases, as they seek profits at the expense of others. As Neale Walsch's god remarked in *Conversations with God*, it is a "law" that only applies to "primitive" societies, and the mark of a primitive society is that it regards regression as progress, and inverts reality. In Oliver Stone's *Wall Street*, the corporate raider played by Michael Douglas told an audience that "greed" makes our system work. Stone was being ironic, but I have heard such sentiments coming from the mouths of today's educated Americans. Douglas has even become a hero in Wall Street circles, because of his character's "greed is good" sentiments.^[17] In the minds found on Wall Street, greed is good, as it makes our system work. Instead of wondering about a system that runs on greed, or perhaps greed being something to try to reduce, it is cheered as a beneficial aspect of our system, the very engine that drives it. That same mentality has been adopted in corporate ideology, where [continually-increasing profits is the only reason for a corporation's existence](#). The complementing aspect of capitalistic theory is the "invisible hand of competition." That "invisible hand" is the fear that your competitor will erode your profits or put you out of business. In such theorizing, fear of the competition is what kept people honest. It makes fear a vital component of how our system works. Instead of working to reduce such dynamics in our society, it is worshipped as a centerpiece of our ideology, a vital piece of our system. Wiping out the competition is the [essence of capitalism](#), which I discovered the hard way during [my days with Dennis](#), which even [Smith remarked upon](#) in his work. Capitalistic ideology is based on greed and fear.

Anger. American men, especially older than sixty-five, are emotional cripples, and anger is about the only emotion acceptable for them to openly display. American men are getting a little better in that department, but anger has too often been enshrined as a virtue. For many years, I have read and heard Christians (and even supposedly enlightened mystics) laud Jesus' moment of anger in the temple, whipping the moneychangers out of the temple. What those people always ignored was that his moment of violent anger (the only one we see in the New Testament) led directly to his death, as the high priest Caiaphas, who was getting rich from the temple coffers, led the effort to put Jesus to death, sparked by

his performance in the temple, which impacted the temple's cash flow. Yet, so many people point to what was likely the lowest moment of Jesus' life as his greatest triumph. People have justified bombing [Yugoslavia](#) to me with Jesus' moment of anger. Jesus' temple tantrum more likely showed that even a Christ can have his bad days, while it has been used by Christians countless times to [justify violence](#). Christians are by far the most violent people of all time.

Envy. At this stage in America's journey, it does not envy anybody else much of anything, except perhaps Middle East oil. What it wanted, it took long ago. America is the [king of the global hill](#). The people who run America knew that a long time ago. Before World War II ended, the American government knew it would emerge with unprecedented global power. Declassified documents display the mindset of those who ran the American government back then. It was all about [hoarding the world's wealth and keeping the world enslaved to U.S. capitalism](#). [George Kennan](#) even used the word "envy" when describing how other peoples might look at the U.S.' unprecedented wealth, and he suggested abandoning all pretence of pursuing "unreal objectives such as human rights, the raising of living standards, and democratization", and begin dealing in "straight power concepts" to keep the world under the U.S.' boot, and Kennan was a foreign policy *dove*. The hawks had [even more ruthless plans](#). U.S. foreign policy is merely a modern variation of a very old dynamic. Also, there is a lie in that logic. Much of the so-called "envy" of the world's poor was not envy, per se, but the desire to be free from the West's shackles, so they can eat the food they grow, etc.

Lust. Among my psychologist friends, sexual abuse is the childhood abuse they see almost more than any other, at least for ones that can leave debilitating effects for the rest of the patient's life. The porn industry was the first one on the Internet to make money. On television, Americans are flooded with titillating ads and shows with endless sexual double-entendres. Even Shakespeare played to that passion in his plays. It is also part of what I call the "[War Against Women](#)."

Gluttony and Sloth. These are related vices; with gorging one's self complementing laziness. Americans are history's fattest and most sedentary people. In 2003, 65% of American adults were overweight. This is partly due to the high calorie, high fat, high sugar, high protein, junk food diet that Americans eat. It is also due to the cars, garage-door openers and other conveniences that Americans are history's fattest people. Since 1980, the percentage of American adults considered "obese" has climbed from 15% to 30%. Americans are particularly gluttonous when the starvation happening across the world is taken into consideration. In the West, about half of all adults are overweight. In India and elsewhere in the Third World, most adults are underweight. What the West is doing is called "overconsumption" in academia's parlance. It used to be called gluttony. The world's overweight and hungry people are of approximately equal number: more than a billion of each.[\[18\]](#) American gluttony and sloth is the greatest the world has ever known. Not to say that Americans consider that distinction a great virtue, and pathological reactions to that situation, such as anorexia, are understandable. In general however, most Americans do not think much about it, and the media bombards viewers with all manner of food ads, and most of that advertised "food" should not be touched with a ten-foot pole. The day I originally wrote this, my wife handed me the Sunday newspaper, where an article discussed the abysmal American diet, and how it directly leads to heart attacks and other degenerative diseases. It is worse in the "beef belt" of America's Midwest, where coronary surgeons have a booming business. Even as undeniable as the evidence is, most of the afflicted people, filling their plates with greasy food, do not really care. In the words of one customer at a Kansas City barbecue establishment, "We've grown up on meat and potatoes. There was always a meat and starch at every meal, and it just carries on to how we

eat today.” That customer drove 200 miles to eat that meal.^[19] I was recently in Hawaii, where gluttony is a virtue, with billboards advertising all-you-can-eat establishments with smiling local residents who have eaten themselves into gargantuan size. They are local heroes. My brother worked in Hawaiian hospitals where he regularly treated those trenchermen and trencherwomen, where they ended up after having heart attacks and other health failures, for those who survived long enough to get to a hospital.

Forgetting the basics because we think we are too smart for those old lessons, or inverting reality by turning vices into virtues, is an integral aspect of why humanity stands on the abyss’ edge today. It [can be different](#).

This Website's Purpose

By Wade Frazier

December 2006/April 2007

[This Website's Purpose](#)

[My Intended Audience and Those I am *Not* Trying to Reach](#)

[How to Use this Website](#)

[Pursuing Your Interests](#)

[If you want to build your own free energy machine](#)

[If you want to debate free energy physics](#)

[If you want to support free energy efforts](#)

[If you want to tell your own free energy tale](#)

[If you want to challenge my work](#)

[If you have your own “conspiracy theories” to propose](#)

[If you want to constructively discuss my work](#)

[Places where my work is being discussed](#)

This Website's Purpose

I wrote this essay because, after several years of seclusion, in 2006 I began interacting with the public again. I do not have the time, energy or inclination to publicly interact in the many ways that people wish me to.

I began writing about my adventures in alternative energy soon after I staggered out of Ventura, California in 1990, after [we had our lives shattered](#) by the people who run the

world. They wiped us out after my former partner, Dennis Lee, refused [about a billion-dollar offer](#) for us to cease our pursuit of free energy. I eventually learned that our treatment was only [slightly more extreme](#) than their typical efforts to keep their grip over humanity, because we were more of a “threat” to the world’s power structure than most alternative energy efforts. When I left Ventura, it culminated a ten-year process of gradual disillusionment and awakening. Free energy technology already exists, but [is controlled](#) by that world-dominating group, whom I call the “Big Boys” in my work.

The writing and research that I have performed since 1990 was far less stressful than the mayhem that I survived with Dennis, but my goal has always been the same: [averting global catastrophe](#), [healing the planet](#) and perhaps ushering in a new epoch of the human journey, one where we live in heaven-on-earth and relinquish the tired games of survival and exploitation that have largely defined the human journey until now.

When our ordeal in Ventura ended, I realized that whatever I had been taught about my world was probably incorrect, and I spent long years comparing my institutional indoctrination to my adult researches. I discovered that most of what I “learned” while young was a purposeful indoctrination; the goal seemed to be inculcating me with delusions so I could be easily manipulated. The [purveyed delusions](#) were rooted in various scarcity-based paradigms. If I participated in the system and became one of its “winners,” ample material and egocentric rewards would be mine. The system could be fairly subtle in its methods, while some manipulations seem ludicrously heavy-handed in retrospect, such as the idolatry of [pledging allegiance to a flag](#), which I was forced into doing as a schoolboy.

Because I realized that [personal integrity was earth’s scarcest commodity](#) and the key to healing the planet, I sought a group of sufficient collective integrity that would not only desire to heal the planet and rank their personal gain from the effort as a secondary concern, but one that could also lay aside their indoctrination and dare to envision a world based on abundance instead of scarcity. I came to realize how heavily most people lean on their “[mind crutches](#).” A practical, abundance-based way of viewing our world has never been embraced by any significant group that I know of. There have been some prophets of abundance, such as [R. Buckminster Fuller](#), but his legacy has been co-opted and diluted since his death, as it has for most genuine visionaries.

Even groups with a seemingly visionary agenda have been subtly thwarted by their scarcity-based indoctrination. For instance, I have great respect for certain political and economic groups, some being heavily populated by academics and others who have earned my esteem, but the rationalist-materialist paradigm that they typically adhere to

is a form of [scarcity-based religion](#). Most do not see their adoptive ideology as an *ideology, but as reality*. That is a peril of physical reality, and nobody seems immune to its seductions and limitations, although the [mystical masters](#) can often come close. Those groups of intellectuals and activists have largely embraced the materialist view of evolution, believe that there are “[laws of physics](#)” that our scientists ([the new priest class](#)) comprehend and have a visceral aversion to the idea that the world’s political-economic situation is [managed by super-elites in clandestine fashion](#), dismissing any and all evidence of that situation as a “[conspiracy theory](#).” My *experiences* are not *theories*, but I have had scientists, academics and technical professionals call me a “conspiracy theorist” when I have described my experiences and those of others around me. [Labeling me as a conspiracy theorist](#) is an irrational act and one of the ironies of dealing with scientists and academics. The thrust of my [medical writings](#), for instance, gives relatively little weight to the conspiratorial behavior of the medical racketeers, but that has not prevented some academics from [dismissing my writings](#) on the medical racket as a conspiracy theory.

For instance, the main reason that I present some of the clandestine methods that the Big Boys use to control the world economy is to help answer the [most common response](#) that I receive to the account of my energy-industry experiences, which is: “If free energy machines really existed, I should be able to buy one.” The Big Boys’ machinations are partly why we do not enjoy free energy today, but their [dark efforts are far from the only aspect](#), and are far from the most important factor, in my opinion. I have almost never encountered a productive response to today’s situation, which is a key aspect of the free energy conundrum. The vast majority of people simply deny the situation exists, and most who acknowledge the situation’s reality overemphasize its conspiratorial aspects and have other [unproductive responses](#).

This site’s purpose is connecting with people who can make a difference, which leads to this essay’s next section....

My Intended Audience and Those I am *Not* Trying to Reach

As my days with Dennis ended, I realized that if fifty people had banded around Dennis and his technical team in the late 1980s as [Mr. Professor](#) and I did, we had a fair chance to make free energy a public reality; if it had been a hundred, it would have been easy. However, Mr. Professor and I were about the only people who stood up to the

corruption; almost everybody else either ran and hid when the big sledgehammer came down, [tried stealing the business](#) or [anything in it not nailed down](#), or actively helped those bludgeoning us as a way to avoid the bludgeoners' wrath. I have searched for those [hundred heroes](#) since the 1980s, and no group I have yet encountered has come remotely close to being qualified. I strongly doubt that such a group exists or can be assembled.

After gaining that understanding, I tried a different strategy, which is the purpose behind this website. It may be as futile a plan as the others I have seen attempted, but I had to try it. As abundance has proven to be a virtually *unimaginable* concept to the vast majority of humanity, I thought that [helping people imagine it](#) would be a good start. However, imagining abundance, much less pursuing it, is not very likely when people are dependent on their scarcity-based [mind crutches](#). After many years of interacting with the public on these issues, it seems to me that less than one percent of Americans are currently willing and capable of throwing aside their mind crutches, and the integrity issue seems paramount. This site's material is targeted toward that tiny fraction that is ready to begin leaving scarcity behind. If thousands of the awake and awakening can come together and simply be willing to *imagine* abundance, discuss it and perhaps take a public stance on the issue, it might be enough to catalyze the reality of free energy and earthly abundance. I also only speak and write English, which further reduces my potential audience. Although I would like to interact on a broader scale, most of my audience is American, and I cannot entirely escape my culture. Non-American readers may find my work of little relevance, although free energy will obviously have a global impact.

Many well-intended people have made suggestions about where the group can be found that can help an abundance paradigm come to pass (which would be [based on free energy](#)). I am not on a hundred-hero search, but merely seeking people willing to consider and discuss the issue in a somewhat open-minded and enlightened manner, and [we would see where it went from there](#). The other [free energy activists](#) that I am aware of are generally not seeking the hundred heroes, but simply kindred spirits who can provide some support. My attempt to interest the [radical left](#) in free energy and abundance is my most recent effort to find that group. Perhaps humanity is not ready for abundance, either mentally or emotionally.

Experience may be the *only* teacher, and more than twenty years of trying to interest various groups in free energy and an abundance paradigm has told me what groups are *not* interested in my work. Also, some groups I believe should *not* pursue free energy, at least not actively in today's environment, because they would be a danger to themselves

and others. The free energy pursuit is perilous, and many [unproductive paths](#) await the unwary and inexperienced.

The following groups I will *not* be trying to interest in free energy and abundance in the near future. There are always exceptions to the rule, and people from all the below categories have become staunch allies, but I do not seek to engage those groups as a strategy, and here are my reasons why.

1. **My Peers.** I am a white, educated, corporately employed American man, and belong to history's most privileged demographic group. However, this site's material makes it clear that our political-social-economic status is not due to our unique virtue. Consequently, my most [irrational and vicious critics](#) have always been from my "peer group." My peers seem deeply invested in their (increasingly precarious) status, and lean heavily on their [mind crutches](#), both the [obvious](#) and [subtle](#) ones. The more people lean on their mind crutches, the less likely they will learn to cast them aside. I have always directed my efforts to where the most fruitful avenues appeared to be, and interactions with my peers demonstrated long ago that they would be among the most resistant people to free energy and an abundance paradigm, because all they can see is their seemingly reduced status, even when it means that *everybody* can live vastly better lives, including themselves. I finished banging my head against that wall many years ago, and have watched others do it recently, to sometimes career-ending effect.
2. **The Scientific Community.** Every era of human civilization has had its intellectuals who believe they fully understand how the universe operates. It is no different with today's scientifically trained, who sit at humanity's intellectual apex, or so they believe. I have engaged in many senseless, [circular arguments](#) with the scientifically trained. As a group, they are as fervent believers in the [fairy tales of their faith](#) as any fundamentalist Christian is in their Bible stories, and few in their ranks are interested in learning any differently, not interested enough to leave their comfortable armchairs. Free energy is a paradigm-buster, and few scientists will ever [question the paradigms they were raised with](#), as with [most people](#). Scientists are far from the only complacent group I have encountered, but their collective complacency is why they are of no help these days. Others are [trying to engage the scientific community](#) with credentials far more impressive than mine, and I have watched them run up against the [naïveté](#), [denial](#), complacency and groupthink of scientists for many years. The divine paradox is that only people who *care about others* will help us save ourselves. The complacent are being [self-centered](#) and are no help.

3. **The Idly Curious.** I designed this site so that the idly curious would probably not be interested. I have presented few names regarding my adventures in alternative energy, or patent numbers, federal studies and the like to keep the idly curious from stumbling onto terrain where angels fear to tread. For those with initiative, they can go deeply into the material, far deeper than is presented on this site. Many participants in Dennis' and my adventures do not want to be contacted by the idly curious or by anybody at all. Some are trying to live their remaining days in peace, a peace that the idly curious can intrude upon, while others are [dark path initiates](#), and encountering/exposing them is dangerous. People can easily bite off far more than they bargained for and have their lives wrecked if not prematurely ended. Free energy is currently not a safe issue for the idly curious to engage.
4. **The Naïve.** I began my real world journey naively, asking "[Easter Bunny](#)" questions that everybody laughed at. [Losing my naïveté](#) was an agonizing but necessary process, if making a difference was my goal. The naïve generally flee from my work's implications, and [naïve responses](#) to the free energy issue have been the most common ones I have encountered. I doubt that naïveté can be shed by anything other than experience. While the naïve and well-intended may make a difference one day, I doubt that this site is the place for them to start. Maybe after they have some real-world experience, this site's material will begin to make sense. I have been encouraged to "dumb down" the material on this site into cartoons, slogans and other presentations, but that generally attracts people easily seduced by slicker counter-presentations, and the "bad guys" have [PR](#) down to a science. I learned that the [hard way](#) during my days with Dennis. The naïve do not comprehend our world's reality, and pretending it is different seems to be no help. Imagining that it *can* be different, however, seems to be a key step in making it happen. Earth is currently not a fairy tale world, and believing that it is can lead to extremely painful experiences, and in the pursuit of free energy [can be a fatal delusion](#).
5. **The New Age Community.** I grew up in Southern California, worked in Los Angeles for five years and had my [mystical awakening at age sixteen](#). By age thirty, I had just about seen it all in the Southern California mystical scene. As with India and other places that supposedly have a high "spirituality quotient," there are extremely few in the mystical realm with high integrity, which is more important than all other qualities combined. [Love is always the answer](#). I found the New Age community to be plagued with naïveté, [self-centeredness](#) and many brands of the seemingly new wine being sold in ancient skins. With very few exceptions, [the men in that community](#) take advantage of the easy sex, money and other benefits

that accrue from preying on women who seek enlightened men. The recent popularity of *The Secret* epitomizes the New Age community. If I had to summarize that movie in one sentence, it would be something like, “Think positively and become rich!” Its defining scene was a preadolescent boy wishing for a bicycle and one being delivered to his doorstep seconds later, as if magicians conjure them from thin air. While such a perspective possesses a certain charm and contains *some* truth, it is not one suited to pursuing free energy and an abundance paradigm, not in today’s world. New Agers should not be confused with enlightened mystics. Enlightened mystics can think critically and are not as self-centered as New Agers have too often proven to be. An enlightened mystic seeks to integrate the light and the darkness, not to deny that the darkness even exists. Such people, however, are truly needles in haystacks and I have stopped searching for them. That they are not contacting me means that I may not have the right stuff, either, or that I need to be more patient (which I find difficult to be [these days](#)).

6. **Environmentalists.** Of all the groups that have rejected the idea of free energy, none have dismayed me more than environmental organizations. My efforts may have been spurred by a desire to heal the earth more than any other reason (with humanity’s healing being right up there – I find it difficult to rank one over the other), and the knee-jerk rejection of free energy has been more pronounced among environmentalists than any other group I have encountered. Quite arguably, *nothing* could help heal the planet more effectively than free energy. There are potential downsides to free energy (weaponized, irresponsible use), but the rejections I have seen go far beyond such objections. Many environmental organizations have been corrupted by fundraising considerations, co-opted by their benefactors or [were fraudulent to begin with](#). The organizations fortunate enough to avoid those fates have, virtually without exception, proposed austerity solutions to humanity’s predicament. Saying that [abundance](#) is unimaginable to them is understating the case; it has become an *enemy* in many environmental circles. Their solutions are “let’s ride bikes” and other austerity measures (the kind that [Fuller said were doomed](#)), similar to Richard Heinberg’s solution of [ridding earth of more than five billion excess humans](#). The environmentalists and Heinberg believe that humans would quickly destroy the planet with free energy, not heal it (while enjoying unprecedented abundance in the process). Holding such a dim view of humanity may be understandable, but does not seem to lead to positive solutions, unless ridding the planet of five billion excess humans can be deemed constructive. Whether such attitudes are a residue of Calvinist Christianity, humanity’s [addiction to scarcity](#) or something else, environmentalists are perhaps the group most impervious to the idea of free energy, even if their

motives were pure (and I have seen [where they were not](#)). Long ago and with great sorrow, I stopped trying to interest environmentalists in free energy and abundance. They could be free energy's greatest allies, and I hope to one day see them awaken to the possibility of a healed planet where everybody wins, but for now I do not actively pursue that dream. They will not be the first to get aboard the free energy train, and might be among the last.

Perhaps my approach is misguided and unworkable, and one or all of those above groups will end up saving the day. Maybe some obscure group, or one that finds new inspiration (and recent and coming world events may provide that inspiration), will make free energy and abundance happen. I have just not yet met or heard of them yet. If enough people with the right stuff exist, they may indeed be scattered across the planet. If they exist, can or will they combine their efforts for something like this? I am attempting to find out.

There are many ways to make the world a better place, but the biggest leverage point is the energy paradigm, which is why free energy is so important and why it is so [ruthlessly suppressed](#). I believe that enough people need to come together and devote their collective effort to the issue, particularly with humanity's inertia and the Big Boys' vigilance. I seek to engage *people who care*. That is by far the most important quality necessary for pursuing free energy, an [abundance paradigm](#) and a healed planet, and those people can be found in almost any walk of life, however rare they may be. If a person's heart is in the right place, then they will almost certainly have the second most important necessary quality: the *desire to make an effort*. The third required quality is intelligence. It is not nearly as important as the first two qualities, but we need to exercise our sentience in order to make the change, and not just the [rational](#) aspect of intelligence. If people care and make an effort, that is most of what is needed, but intelligence is also required, at least enough to understand what the opportunities and risks are, what works, what does not, and how to make things happen.

The train needs to be built and get moving before everybody can jump aboard. Trying to coax people to help who may *not even want* to get on that train, before it is even built, seems a great waste of time and effort. When progress has been made in building a strong, committed nucleus, then other groups may jump aboard, but getting them aboard too early does not work, as far as I have seen, and in the free energy pursuit is often the path to disaster.

How to Use this Website

This website's material is largely comprised of several book-length essays, such as the [American Empire](#), [medical racket](#), [cover-up](#) and [war](#) essays. The cover-up essay is the shortest of those four, and weighs-in at 113 pages of material. The others are considerably longer, with the American Empire essay being 226 pages in length (which has also been this site's most popular essay). My days with Dennis Lee and our pursuit of alternative energy are contained in two essays ([1](#), [2](#)) that total more than 100 pages, with essays on the [energy racket](#), [Dennis' critics](#), and a [corporate hit man](#) who was sicced on Dennis adding another 140 pages of material. The larger essays are works of scholarship, although not intensely so. I have tried supporting the facts I use with easily verified references. This site's writings were not intended for academic consumption. The scholarly essays on this site total about 1,000 pages with 1,500 footnotes, which is not very dense, from a scholarly perspective.

While I tried making the reading experience relatively easy on my readers, the material can be challenging, both intellectually and emotionally. The essay that may be the most difficult to read, both intellectually and emotionally, is this site's [medical racket](#) essay. I have encountered people who spent intense days reading it, and were dazed when finished. Once in awhile, this site's essays have their intended effect – when people have personal paradigm shifts after reading an essay. However, I also hear from readers that this site can be difficult to digest and that it is easy to get “lost in the woods.” One common complaint has been that there is “too much meat” and this site needs to be simplified. My writings are sometimes called “rambling.” They rambled far more before I hired an editor, and such an observation partly stems from the comprehensive, multidisciplinary nature of this site – it covers vast territory.

To honor those complaints and make it easier on my readers, since I completed this site in 2002 I have periodically added essays that were “doorways” to this site's material. In general, those “doorway” essays were not scholarly and were relatively brief, but linked to the “meat” of this site throughout those essays. Those essays are mainly found in the “[comprehensive](#)” section of this site's home page, and include the [Free Energy Conundrum](#), [World Based on Abundance](#) and [Journeys of Free Energy Activists](#) essays, the open letters to the [Free Software Movement](#) and [Radical Left](#), and the site's [introductory essay](#). One essay also presents my [journey and life's work in five pages](#). Those essays are not heavily footnoted. However, they *are* peppered with links to the website's meat. Since I have been publishing those essays, I now receive the opposite complaint: “Hey, where is the meat?!” I have been dismissed as a lightweight writer because those essays did not contain much meat. Those making that complaint

obviously never took the links to the meat, and some of those complaints were probably disingenuous – they could justifiably dismiss this site's writings and their [illusions](#) would remain safe from challenge.

In summary, if this is your first encounter with this site, I suggest reading one of those meatless, comprehensive essays first, as it will present my work's gist and you can see the new paradigms I am attempting to sketch. If you find the ideas interesting, then you can follow the links to the site's meat. It is difficult to read this site on paper because of its interlinking. This site is designed for the Internet, not for reading in paper form.

Pursuing Your Interests

What follows is intended to send readers to where their interest lies.

- If you want to build a free energy machine, many prototypes have been built and you can try building some for yourself. However, the day when you can build a free energy machine in your garage with parts you can get at your hardware store is not yet here. The free energy machines I am aware of generally have some highly specialized and precision-made components, and some inventors have taken their secrets to their graves, as [Sparky Sweet](#) did. There are also many perils to that path, not the least of which is that the Big Boys can apparently tell when anybody on earth [taps into the field](#) which powers most free energy devices. The [New Energy Congress](#) has assessed many free energy approaches, and they may help steer you in the direction you are looking to go. [Brian O'Leary](#) has recently estimated that it would take about \$200 million to make a production-ready free energy prototype, which is in the range of other estimates that I have seen. For monetary reasons if no other, the opportunity for a lone inventor to make free energy happen is very slim. If your effort gets very far along, you will probably be [made the offer you cannot refuse](#).
- If you want to debate the physics of free energy or the viability of new energy technologies that have some public visibility, the [New Energy Congress](#) is where you may find fruitful dialogue. There are a number of technical forums on the Internet where free energy physics and technology are discussed. I specialized in the political-economic aspects of the free energy conundrum many years ago, and

can only discuss somewhat knowledgably the technologies that [we were pursuing](#) when we were wiped out. I am familiar with many free energy theories and the related technologies, but must direct you to the specialists. I *know* that [free energy technologies exist](#), but technology is not the problem, in my opinion.

- If you want to be one of the [hundred heroes](#) of free energy or actively support them, the activists whom I currently have the most respect for are [Dennis Lee](#), [Brian O'Leary](#) and [Steven Greer](#). Their respective approaches may not have much of a chance, either, but they have demonstrated their sincerity and commitment while surviving great hardships, including financial devastation, stints behind bars and murder attempts. If you truly want to help, they may be willing to hear from you.
- If you want to tell the tale of how your alternative energy efforts were wiped out by the Big Boys (or by your “friends”), you can post something to whatever forums I will be posting discussions of my work, which may spark some worthwhile discussion. Steven Greer may one day interview those who were put under the Big Boys’ “buzz saw” (I call it their “meat grinder”), similar to how he has interviewed the ET witnesses for his [Disclosure Project](#). Also, the [New Energy Movement](#) and [New Energy Congress](#) might be receptive to your tale. A significant aspect of the free energy conundrum is the general public’s [denial](#), partly because your experiences are far beyond what people can view from their cubicles, social circles, televisions and computer screens. Not only are your experiences deeply traumatic, but you also suffer from the secondary trauma of having everybody you know believe you are [crazy](#), because to acknowledge the validity of your experiences would shatter their comforting fantasies of how our world works. When you finally meet somebody who can comprehend your journey, you nearly explode during the catharsis of your tale’s telling. You may also seek solace and commiseration. I sympathize with your journey, and I have dealt with [how the Big Boys operate in my work](#), but I do not plan to significantly expand my writings in that area. Unfortunately, [you are one of many](#), and I wish you the best in your efforts and healing.
- If you want to challenge the validity of [my work and experiences](#), particularly [my days with Dennis](#), and do it *credibly*, you have to first do your homework. Surfing the Internet and forming hasty opinions will not suffice. For the record, I have never seen an attempt to deny the validity of my work and experiences that was intelligent, informed and honest, which also applies to attacks on Dennis’

experience and integrity. At best, those critics engage in numerous [logical fallacies](#), and the worst of them are dishonest, as [Mr. Skeptic and friends](#) have too often proven to be. Sterling Allan [wrote the best public critique of Dennis' efforts](#) that I have yet seen (parts of which I tended to agree with), and seeing it led me [to contribute to his site](#). If you want to discuss what Dennis has been doing since 1990, I have not followed his efforts much since then, and you need to look elsewhere to have that discussion. Sorry.

- If you want to propose you own theories of [9/11](#), the [JFK assassination](#), the [moon landings](#) or other possibly “conspiratorial” events, there are appropriate Internet forums where you can do that. I do not have the time or energy to perform investigations of your theories. I have recently been approached with some doozies, such as JFK faked his own assassination, holographic planes “hit” the World Trade Center, etc. I will offer one observation, however: the more “off the beaten path” your theory is, the more rigorously the evidence needs to be adduced and assessed. Some have approached me with the opposite methodology: their strained theories have little supporting evidence, significant and persuasive evidence conflicts with their theories (which they therefore ignore), and what little supporting evidence they have is interpreted in a fanciful manner.
- If you truly wish to constructively discuss my work, this website was written with you in mind. This website is comprised of 1,200 pages of inter-disciplinary material that took 12,000 hours to produce. It would be helpful to carefully digest the writings before entering the discussion. You do not need to read all of it before you respond, and to make it easier on my readers I have broken this site into dozens of essays. Reading an entire essay is suggested before responding to it. Also, I have provided more than one thousand footnotes to this site, and have tried referencing readily accessible material that people can find if they want to pursue the subject further. My interest is greatest regarding how to [change this planet for the better](#), although if you wish to discuss the “[discovery](#)” and [conquest](#) of the Western Hemisphere by Europe, America’s [imperial behavior](#), the state of [Western medicine](#), how [poisons are marketed to us as medicine](#), how America’s [media](#) and [indoctrination systems](#) work, [spirituality](#), [warfare](#) and the other topics that this site explores, I am also willing to discuss those topics in a constructive manner.

Whatever your interest might be, I wish you the best while pursuing it.

Places Where My Work is Being Discussed

February 2007 – I am not aware of any public discussions of my work (at least discussions that seem constructive) that are very active. The most active currently are on the Above Top Secret (“ATS”) site. These threads began by discussing my work:

<http://www.abovetopsecret.com/forum/thread125227/pg1>

(on suppressed technologies)

<http://www.abovetopsecret.com/forum/thread52232/pg1>

(on the dangers of investigating conspiracies and cover-ups)

and have grown over time. Because of those threads, I began a thread specifically designed to discuss my work:

<http://www.abovetopsecret.com/forum/thread206843/pg1>

I suggest initiating discussion of my work on that thread, as it seems the most appropriate one, although the others may be topics on which you wish to contribute your views. As a warning, [Mr. Skeptic](#) has been stalking me on the Internet for the past ten years, and will spread his [disinformation](#) wherever he is able, as he recently did here:

<http://portland.indymedia.org/en/2007/02/353778.shtml#251272>

If he tries joining any discussions of my work (in order to lead the gullible and uninformed astray), I will not reply to him, and my replies to posts like this:

<http://www.abovetopsecret.com/forum/thread125227/pg6#pid2862592>

are very terse if I reply at all, and in the ATS forum I use the “ignore” feature so I do not have to waste my time and energy reading the posts of such people (and therefore will never respond again to them). Again, people who [challenge my work](#) need to first do their homework if they expect to do so credibly.

My work on the Audie Murphy/John Tower/Gary Wean connection to the [JFK assassination](#) was the subject of one of the best discussions I have seen on the issue, here:

<http://educationforum.ipbhost.com/lofiversion/index.php/t2861.html>

That discussion is inactive today, but could be revived if there was interest.

My work has been discussed in many other forums, but generally have not been ones where I have actively joined the conversation. I seek places to have good, constructive exchanges on [how to make this world a better place](#). If you know of any, you only have to link to this site from whatever forum you are discussing my work, and if people take that link to this site, I can see it in this site's statistics. If the discussion seems like it is heading in the right direction, I might join it. There are some forums where I may initiate discussion, and if it is a public one, I will link to it from this page.

Thank you for your interest.

The Next Section: [A World Based on Abundance - What it Looks Like; What it Does Not Look Like](#) (40K)

A World Based on Abundance

What it Looks Like; What it Does Not Look Like

By Wade Frazier

May 2006

[Introduction](#)

[Economics and Energy](#)

[Exuberance Is Not Abundance](#)

[“Sustainable” Does Not Mean Abundant](#)

[What Does Abundance Look Like?](#)

[Footnotes](#)

Introduction

My [thirty-year-plus journey](#) in the free energy and other milieus might be called, “the pursuit of abundance.” While some popular concepts allude to an abundance [paradigm](#), such as “win-win,” the scarcity principle is so deeply ingrained in humanity that even *imagining* abundance can seem impossible. For instance, an impressive scholar such as [Richard Heinberg](#) cannot seem to conceive of abundance, but frames the world situation in an “endless growth/overshoot-and-collapse” dichotomy. R. Buckminster Fuller believed that humanity’s seemingly intractable resistance to the *idea* of abundance is because [scarcity has been the human reality for so long](#) that the [zero-sum-game](#) is virtually cemented into human consciousness. The fact that scarcity is currently being [artificially forced onto humanity for reasons of earthly power](#) makes the pursuit of abundance even more difficult. Even those who truly *try* to comprehend abundance have a difficult task, and this essay is intended to make the abundance principle clearer.

Economics and Energy

Life on earth has always been powered by sunlight; the [energy captured via photosynthesis](#) has been the basis for virtually all ecosystems. Without energy, there is no life. Scientists think that trees are adaptations by plants to get their leaves closer to the light, so they can absorb more than the shorter plants that stand in their shadows. Flowering plants [produce fruit to attract animals](#), which spread the seeds while eating the fruit. A class of mammal [evolved opposable thumbs and toes](#) to better navigate tree limbs while seeking fruit and other tree-borne foods. Eventually some primates left the trees, most likely for food-related reasons. Some of those primates learned to walk erect and lost their opposable toes, which freed their hands for other uses. Those primates developed larger brains, and after millions of years of adaptation to changed environments and circumstances, [anatomically modern humans](#) appeared somewhat more than 100,000 years ago. Humanity's early [migrations](#), adaptations and tool making were always primarily concerned with [acquiring, preserving and consuming energy](#).

About [40,000 years ago](#), humans improved their hunting technology and tactics to the point where they became super-predators, and thereby conquered most of the world's land-based ecosystems, eventually inhabiting all continents except Antarctica. They also contributed to the extinction of nearly all the planet's large, easily killed animals, [particularly large mammals](#). When the easy meat was gone the [Domestication Revolution](#) occurred, apparently independently, in Mesoamerica (today's Mexico), China, and the Fertile Crescent (Iraq, Egypt and vicinity). Domesticating plants and animals allowed humans to become sedentary, because more energy per acre was extractable. Populations thereby became denser, and [civilization](#) developed. Economics is the study of humanity's material wellbeing, and the bedrock economic reality has always been the human stomach. From the beginnings of the Domestication Revolution, about ten thousand years ago, to the Industrial Revolution, about two hundred years ago, the primary preoccupation of most humans was obtaining enough food to eat.

The [Industrial Revolution](#) was dependent on harnessing amounts of energy not previously exploitable, and today's Americans consume about eighty times the energy provided by their diets. Americans are also history's [fattest and most sedentary humans](#), with most of the industrialized world not far behind. Energy consumption is by far the most important measure of a society's economic production and standard of living. Great Britain has one of earth's most educated and affluent societies, while Ethiopia has one of earth's least educated and poorest societies, but their economic production divided by their energy consumption is [almost exactly the same ratio](#). The

same is true for all the world's societies, from the richest to poorest. Modern economic theory, however, has largely obscured that relationship, and the main reasons, I think, follow.

When humans became sedentary and civilizations appeared, human health declined. Early agriculture did not produce healthy diets, particularly the [dead food](#) between harvest seasons, and [early civilizations](#) were not clean. There also was not enough to go around, so the beginning of civilization has been called the transition “from [egalitarianism to kleptocracy](#).” Economic, political and social stratification accompanied civilization's development. All political systems for all time have been primarily concerned with who received the benefit of the scarce and energy-dependent economic production and, as Fuller stated, all political actors are “[stooges](#)” of the [economic interests](#). Professions appeared and “elites” ascended the hierarchies. Economic elitism has always been the hallmark of all elites, with the elites of all civilizations [engaging in conspicuous economic consumption](#) as a mark of their status. Those at the hierarchical bottoms, such as slaves, barely eked out existences while elites lived in opulence. That situation was due to economic scarcity.

Economics is generally separated into three parts in modern study:

1. The production of wealth;
2. The distribution (or exchange) of wealth;
3. The consumption of wealth.

As [noted above](#), economic production is almost entirely dependent on energy usage. Consumption is the use of that economic production. The distribution/exchange aspect of economics is about who gets to consume the production. Money, banking, accountants, laws – in short, what passes for economics today – are primarily concerned with the exchange aspect of economics. In a world of scarcity, who owns what becomes the overriding concern, which is why economics is so focused on the exchange aspect, particularly in daily life. In ancient civilizations, slaves gathered/produced the wealth while the elites consumed it. The exchange aspect was largely concerned with separating the slaves from the fruit of their labor, for elite benefit. That basic dynamic has been repeated in all civilizations to the present day. Socialism and communism have been conscious attempts to ameliorate that dynamic, but are still rooted in the *assumption* of economic scarcity. The main difference between capitalist and communist theory was who should receive the benefit of the scarce resources. Capitalism averred that the capitalists, who cleverly organized the system for their benefit, should get the lion's share of economic production. Communism stated that

those doing the hard work should receive a fair share of their production. In the industrialized world, machines perform all the truly heavy lifting. While capitalism has been [reliant on violence and coercive exploitation](#), communism was forced egalitarianism. In practice, both systems have violated people's free will.

It is no coincidence that slavery first appeared in early civilization and disappeared in early industrialization. Energy was the reason. That American consumption of [eighty times their dietary calories](#) has been called the equivalent of having [eighty slaves](#). That is the Industrial Revolution's central dynamic. With energy slaves performing work, human slaves became impractical, although [economic exploitation for elite benefit](#) is still a primary aspect of how economic systems function. Economic, political and social systems are still steeply hierarchical, with America's richest individual (Bill Gates) possessing as much wealth as about half of America's poorest citizens combined, for a wealth ratio of around one-hundred-million-to-one, a disparity greater than any in history. In order to accept or [defend](#) such an obviously unfair situation, people have had to cultivate [many egocentric delusions](#) that are based on the scarcity principle. The human ego is our collective Achilles' heel.

Every civilization has ridden atop its energy consumption, which is a fact that most of civilization's inhabitants never learn, conveniently forget or minimize. All collapsed civilizations disappeared largely due to [depleting their energy sources](#), and [knowledgeable observers of today's world](#) realize that industrialized civilization will collapse unless [non-fossil-fuel energy sources are discovered and used](#). The motivations behind all wars for all time have been [primarily economic](#), although the elites have always conjured and sold the masses superficially-noble motivations (self-defense, religion, nationalism, [humanitarian](#), spreading freedom and democracy), as naked self-interest rarely sells well. Regarding the economic motivation behind wars, no current example could be more obvious than America's invasion of the Middle East (and its current saber rattling with Iran and Venezuela), as the U.S. seizes control over the world's fossil fuel deposits, which power the world economy. Predictably, the [American media](#) has dutifully [parroted the Bush administration propaganda](#) nearly verbatim, and virtually never even *mentioned* the motivation that is obvious to everybody on earth, except [brainwashed Americans](#). The sitting president, vice president and secretary of state are all former oil industry executives.

Today's Westerners would benefit from thinking about how energy consumption makes their modern lives possible. More energy goes into building an automobile than will ever be consumed in its engine. Everything material in our lives, be it wood, food, water,

metals, glass, plastics and so on, has been made available by harnessing energy. All of our transportation, electronic communication, human-friendly environments, appliances and other modern amenities rely on energy for their existence and performance. Without energy, it all comes to a sudden halt.

Exuberance Is Not Abundance

Many years ago, Carl Sauer, one of the greatest academics that America has yet produced, stated that modern ideology extolled ever-increasing economic production and a fresh planet begging to be filled with people, but that such ideology ignored the fact that the West's "progress" came at the cost of the ["permanent impoverishment of the world."](#) Sauer stated that such recklessly optimistic ideas were the result of an [attitude born from Europe's conquest of the world.](#) [Julian Simon](#) was a modern apostle of that attitude. I call it "rape-and-plunder economics (AKA Vulture Capitalism)." Europe's global conquest was an economic undertaking before all else. Everywhere Europeans appeared, the native peoples were devastated because Europeans put the natives under the yoke ([Spain in the New World](#), [Britain in India](#), several imperial players in [Africa](#)), exterminated them in order to seize their land ([England/Britain](#) and [America in the New World](#), Britain in [Tasmania](#)/Australia), or destroyed the native environments via economic exploitation ([America](#) and [Spain](#) in the New World).

William Catton echoes Sauer's theme in his [Overshoot](#). Catton's work is called neo-Malthusian, as it repeats the "dismal science" observation of Thomas Malthus, which essentially states that people will always outstrip their energy supply. In Malthus' pre-industrial world, the energy came largely in the form of food. There is little intrinsic difference between a calorie of food delivered to the human stomach and a calorie of gasoline delivered to an automobile's fuel tank. Both sun-based energy sources are used to power human activities; gasoline calories are simply substituted for food calories in moving people across our planet.

Catton called that reckless optimism "emotional exuberance," and defined it as an "almost euphoric mood" that, in the context of his work, meant the emotional high that comes from burning through one's resources before they are all used up ("environmental exuberance") and the inevitable collapse ensues.[\[1\]](#) That exuberance was due to people's being unable or unwilling to see that using something up far faster than it could be replenished would end in a grim "morning after" when the resources were depleted. That "exuberance" is another variation of the [zero-sum-game](#), and the losers in the

exuberant pillage of resources (mainly energy, but also [people](#)) are simply ignored.

Catton's concept of "exuberance" is virtually unassailable, and aptly describes the European/settler-state mentality for the past several centuries. However, such egocentric exuberance has nothing to do with an abundance mentality. The exuberant mentality states that "there is always more where that came from," even if there was not (also called the "cornucopian" paradigm).

"Sustainable" Does Not Mean Abundant

With the understandable horror that accompanies comprehension of the West's amazingly shortsighted and rapacious economic systems, the concept of "sustainability" is being promoted in many places. No industrialized society has come close to being sustainable, not when its primary resource is being used up about a [million times faster than it was created](#). Environmentalists have adopted the "let's ride bikes" philosophy, and are ideologically opposed to the *idea* of abundance, preferring austerity (the opposite of abundance) solutions, the kind that [Fuller said were doomed](#).^[2] Also, many Westerners have looked to the pre-industrialized world for examples of "sustainable" societies. The concept of sustainability being promoted is this: humans can "sustainably" harvest ecosystems. In pre-industrial cultures this has often been the case, such as the [Pacific Northwest culture](#), the [Great Plains culture](#), the [Eastern Woodlands culture](#), the New Guinea Highlands culture, perhaps the [Amazon culture](#) and some others. Those cultures did not engage in deforestation *and* plow agriculture, which eventually turns fertile land into desert, as it has in the [Fertile Crescent](#) and elsewhere. However, those kinds of sustainable solutions are not based on the abundance principle either. It is still a zero-sum-game, and in those instances our fellow creatures paid the price. Humans caused the [displacement/extinction](#) of the native flora and fauna wherever they showed up over the past 50,000 years or so. In addition, most if not all pre-industrial sedentary cultures had some form of forced servitude. There may be no "golden age" of the human past, and definitely not an abundance-based one.^[3] When Europeans conquered the world all those years ago, they unleashed another wave of displacements/extinctions, but that time the [pre-industrialized peoples largely went extinct](#). Today's popular concept of "sustainable" is still scarcity-based.

What Does Abundance Look Like?

As [stated earlier](#), a “win-win” concept is based on abundance and might be what everybody would prefer, although [younger souls](#) may rather play the “I win, you lose” game. What is true abundance, and what does it look like? Many people are envisioning an abundance-based world today, but very few have addressed economic abundance and how it would be almost entirely dependent on energy abundance. Unless there is economic abundance, the rest of the abundance ideas probably *cannot happen*.

Free energy is the key to making an [abundance-based world](#) feasible. People living in abundance not only would [never engage in warfare](#), they would harm no living thing, or as close to that ideal as is possible. In an abundance-based world:

- Our [energy-production methods](#) would not be destructive to humans or the planet;
- Our [water needs](#) would be met with zero environmental impact;
- There would be no exploitation of [forests](#), either to use the forest products or [raze the forests to make farmland](#);
- All of our [food](#) would be produced with nearly zero environmental impact; we would not dominate/exploit ecosystems to serve human needs;
- People would almost exclusively be [vegetarian](#) (eating nothing with a brain);
- We would not need to [ravage the earth](#) to obtain metal, glass and other materials;
- The exchange aspect of economics would either disappear or become of minimal importance, as nobody needed or wanted to keep score anymore; money, accountants, lawyers and other exchange-related professions would largely disappear; if there was still scorekeeping taking place, it would account for the well-being of *every living being*, not just human welfare;
- Concepts of right and wrong would largely disappear, because the cost of being “wrong” would not threaten anybody’s survival;
- Because our material needs could be met without exploiting other life forms (even plants), the “cornucopian” paradigm would become reality, because there would always be more where that came from, and nothing would be harmed to get it;
- Because people would be eating their [ideal diet of live food](#) and living in a clean world, almost all of today’s diseases would disappear, and what disease might [manifest would truly be cured](#), not subject to the [greed-based medical “treatments”](#) that exist today;
- Very little human effort would be required to provide life’s necessities, and that effort would be freely given for the benefit of all.

With an abundance-based reality, human intelligence and manipulative ability could be directed toward making the world a better place and having fun instead of exploiting and violating each other. There are other visions of an abundance-based world that might make the concept clearer, and some follow.

The television show *Star Trek*, especially *The Next Generation* series, depicts a world partly based on abundance. Onboard the starships are replicators that provide any kind of food, clothing or other material that people need. In that reality, money became an obsolete concept. No *Star Trek* episode I know of portrayed the situation, but imagine if a man from today's world was planted in a room with a replicator and he spent a day replicating food, piling it in a corner. Then he replicated a huge wardrobe of clothing. He then began replicating gold and diamonds, piling it in another corner. In a few days, he filled the entire room with replicated goods; both the necessities and what we today call "luxuries." He then went to the holodeck and created a virtual paradise, replete with a harem. He would gorge himself and sleep on piles of gold with his virtual women, but he might eventually realize how silly his behavior was. If he did not realize his folly in a reasonable length of time, Captain Picard or Counselor Troi would gently ask what he was doing. He would eventually realize that in a world of abundance, his behavior was crazy.

[Michael Roads](#) recounts many incredible mystical experiences in his books, but the most amazing was his first, which propelled him into his journey. In his *Into a Timeless Realm*, he described his visit to two future earth civilizations, about three hundred years into our future. Those two civilizations explored the two "extremes" of the love principle: [those who chose love and those who did not](#). He first [visited a hellish and steeply-hierarchical world](#) that made *Blade Runner*'s Los Angeles pale by comparison. In a world where all people were primarily serving themselves, everybody lost. Then Roads [visited the world](#) where people chose love, and had a joyous experience almost beyond imagining. As a species, we are today facing a divine paradox: only by caring for each other can we save ourselves.

Neale Donald Walsch's "God" would call the loving world Roads visited one populated with ["highly evolved beings"](#). In societies of highly evolved beings, the abundance principle reigns and the time spent at their "jobs" is called "joy time," and such efforts are how they fulfill their souls. Nobody performs a "job" that they hate in those societies.

[Fuller](#) said that when economic abundance came to pass (if we did not destroy ourselves first), humanity would still have plenty of issues to deal with, such as two men falling in love with the same woman, but humanity's efforts would be directed more

toward self-realization than survival.

What if instead of [eighty times](#) the calories available from our diets, a level which only some industrialized peoples enjoy today, *all* humans had access to energy a thousand times greater than our dietary calories? If every human had a thousand “energy slaves,” (or ten thousand) and their use harmed nobody, would there ever be want again on this planet? The [technology exists today](#) to make that a daily reality for all humans.

Abundance can become humanity’s reality, but we first have to imagine what it would look like. Do we want to pursue abundance? The choice is ours.

Footnotes

[1] See William Catton’s *Overshoot*, pp. 275-276.

[2] My opinion that environmentalists are hooked on austerity and are ideologically opposed to an abundance concept has been formed from many years of interacting with them and watching others attempt to interest environmentalists in free energy. [Richard Heinberg](#) is merely one example of many.

Orthodoxy Versus Alternatives: The Layman's Quandary

By Wade Frazier

June 2007

[A Note to My Readers](#)

[Introduction](#)

[The Virtues and Limitations of Orthodoxy](#)

[The Virtues and Limitations of Alternatives](#)

[What Can a Layman Do?](#)

A Note to My Readers: This is an introductory essay that links to parts of my website that contain the detailed support for my contentions. If anything in this essay seems unfounded or superficial, I suggest taking the related link to the more detailed discussion. This is one of several “doorway” essays to my 1,200-page site, and is [not intended to be a stand-alone essay](#), at least stand-alone enough to convince readers new to the ideas presented in this essay. I also am [limited by my American heritage](#). Non-Americans may find that this essay has limited relevance and usefulness, particularly those from nations where English is not the official language.

Introduction

My introduction to the contrast between orthodoxy and practical alternatives occurred nearly forty years ago, when my father [reversed the hardening of his arteries](#) by adopting a live food diet, something that orthodox medicine [still maintains is impossible](#). The booklet that saved his life was [banned in the United States](#) a generation ago.

When I was fourteen, my first professional mentor invented what a major federal study hailed as the [world's best engine for powering an automobile](#). His invention [came to him in an instant](#), fully realized.

When I was sixteen, I had my [mystical awakening](#) after forty hours of meditation training. While my mystical awakening was a vivid and valid experience, that meditation class' teacher committed many abuses of his position of trust, including hypnotizing female clients and then seducing them. I eventually learned that what came to my professional mentor in a [flash](#) was an instance of mystical insight. Nearly all of physics' giants were [mystics](#), and [similar instants of insight](#) gave birth to relativity and parts of quantum mechanics, which are the two pillars of today's physics. Science's giants [did not subscribe to the rationalist-materialist paradigm](#) that dominates scientific thinking today. For practitioners of today's orthodox science, that fact is often deeply uncomfortable. The "[skeptics](#)," whose motivation seems to be defending the tenets of the rationalist-materialist paradigm, often attack scientists with a mystical orientation.

At age seventeen, [I was introduced to Paul Bragg's work](#) and have tried following his prescription for health, to one degree or another, ever since. I recently discovered that Bragg betrayed his readers by [lying about his age](#) and events critical to his public image. [His teachings' validity](#) is open to question.

Those events highlight the promise and pitfalls of orthodoxy and the pursuit of alternatives.

A decade after those seminal events, I became involved with [the most sustained effort yet made](#) to bring alternative energy to the American marketplace, and I [learned the hard way](#) how the world really works. I am a [semi-retired activist](#) and seek the quiet life. However, humanity is on the brink of [committing species suicide over the energy issue](#), so I am not as retired as I would like to be.

I discovered long ago that [personal integrity is the world's scarcest commodity](#), yet it is the *key* for averting global catastrophe. For the layman, distinguishing the bogus from the genuine, be it regarding either orthodox practice and theories or those hailing from alternative practitioners, can be a daunting task. What follows is what I have learned on my journey regarding orthodoxy versus alternatives, in many disciplines.

The Virtues and Limitations of Orthodoxy

The term *orthodox* is often associated with religion, but can relate to other disciplines such as science, medicine, economics, history, news and politics. Various synonyms for orthodox are *mainstream*, *conventional*, *approved*, *traditional*, *conservative*, *accepted* and *established*. In its positive sense, orthodoxy means the tried-and-true. In its negative sense, it means blind allegiance to dogma or the herd logic of "everybody else is doing it, so it must be right."

The environments the various disciplines were developed within have impacted all of them, and those disciplines usually have stated ideals. Science has the scientific method, history has objectivity, politics has freedom and justice (with democracy as its ideal implementation), the press strives for objectivity through its freedom, modern economic theory has the ideal of free markets. Those are not universally held ideals, however. [Howard Zinn](#) has openly questioned whether [history should be objective](#), as have others. The free market is a cornerstone of *capitalist* theory, not Marxist theory. In totalitarian societies, the ideal of politics is control. Is there an objective reality that science can truly explore with its method? History's greatest physicists [doubted it](#). Also, those ideals have never been seen in the real world. There has never been a free market, a free press, an objective history or a democracy. There may not be one instance of the scientific method fully prevailing over the influence of vested interests, scientific dogma, the human ego and other limitations. Pure science does not exist.

Orthodoxy's primary virtue should be that it is tried, tested, and validated - in short, proven to work. Our modern industrialized world runs on the basis of orthodox physics, and we [sent men to the moon](#) based on it. Benefits have certainly derived from the practice of orthodox science, as well as the means to destroy humanity. However, Albert Einstein openly acknowledged that [humanity knew virtually nothing about how the universe operated](#); his peers acknowledged that science's tools may be unsuitable for fully investigating it, and physics is considered the hardest and purest science. The life sciences and applied science are even less hard and pure. The [Wright brothers](#) flew for five years before the scientific establishment even acknowledged that man-powered flight was possible. Thomas Edison lit up Menlo Park with his [light bulb](#) while scientists in his neighborhood and around the world derided his invention as impossible and "idiotic," and could not be bothered to go see it for themselves, and Edison was the world's most famous scientist at the time. The man who [discovered the virtues of antiseptic medicine](#) died from the beatings he received in the insane asylum where he was involuntarily committed. His demise was partly due to the vicious attacks that he received from his *peers*. Antiseptic medicine was not adopted in the West until after his

death. Similar ignoring of the evidence is happening today, in [many areas of science](#).

How many orthodox practices come close to achieving their ideals? The American mainstream news' distortions of reality, particularly the television news, are easy to see. Only those living in the "reality bubble" provided by [TV news](#) believe that it depicts *reality*. The [print news](#) is nearly as biased, particularly in these [post-Orwellian days](#). The history I was taught in school was a [series of lies](#), with pernicious mythmaking concocted about fake heroes such as [Christopher Columbus](#), [Junípero Serra](#) and [George Washington](#). Few would argue that *any* orthodox religion has a monopoly on the truth. The more orthodox *any* religion is, the more likely its practitioners will be intolerant of other religions, seeing their path as the *only* one to enlightenment and salvation. Love is arguably the [primary message of all spiritual masters](#), but it can be a rare sentiment among religion's practitioners.

Western medicine can be highly effective for treating trauma. Many lives have been saved in emergency rooms. But Western medicine is usually worse than worthless for treating chronic degenerative diseases, which kills two-thirds of Americans today. The immensely expensive, agonizing and worthless treatments for degenerative disease are the only legal ones, as with [heart disease](#) and [cancer](#), while the harmless, effective and inexpensive treatments for [heart disease](#) and [cancer](#) are outlawed. Vaccines may also be [worse than worthless](#). Antibiotics are a mixed bag, with the [antibiotic age nearing its end](#). [Compulsory fluoridation](#) was a ploy by fluorine polluters to dispose of their industrial waste, and one of earth's deadlier substances has been foisted on an unsuspecting public as *medicine*. At least three-quarters of what is spent in Western medicine is probably a complete waste of money, if improving people's health was the goal. But that is the problem: improving health is a low priority. Western medicine is one of earth's most lucrative industries, with medical doctors being earth's highest-paid professionals. Western medicine is a gold rush. About the only tools in a Western doctor's medical kit are knives and drugs. When the only tool available is a hammer, every problem looks like a nail. Improvements in sanitation, nutrition and hygiene are almost solely responsible for humanity's increasing life expectancy over the past two centuries, not the interventions of Western medicine.

Capitalistic theory is based on assumptions of [greed and fear](#). When those are a discipline's root assumptions, the resultant theories and real world outcomes will be of dubious worth. [Global capitalism is a racket](#), increasingly [admitted by insiders](#), and bloody [European colonialism was its parent](#). As I write this, the primary outcome of the U.S./British invasions of [Iraq](#) and Afghanistan, other than millions of deaths and a world

on the brink of Armageddon, is the [Western energy companies gaining control over the world's energy supplies](#), stealing it from the nations that sat on those energy deposits. [Energy runs the world economy and always has](#). [The world is also running out of oil](#), which is the black gold of the industrialized economies.

The American republic may well be in its last days, and is being infamously compared to the Roman republic as it became an empire (the other pertinent comparison is to late Weimar or early Nazi Germany, with [America's invasion of the Afghanistan and Iraq](#) similar to [Germany's invasion of its neighbors](#) at the beginning of World War II).

As [R. Buckminster Fuller](#) stated long ago, all politicians are [stooges of the economic interests](#), and until scarcity is resolved on a global basis, [there will always be wars](#). Fuller also observed that political systems competition will not resolve the scarcity issue, because all current political systems are based on [who receives the benefit of the scarce economic production](#). It is time to rescue Fuller's vital work from its neglect.

The scarcity concept underlies all of today's orthodox ideologies, be they in [economics, politics, religion or science](#). Under an [abundance paradigm](#), all such ideologies will become obsolete.

While the tried-and-true aspect of orthodoxy is its ideal, all too often orthodoxy prevails not because it is tried-and-true, but because vested political-economic interests profit from the situation.

Conflict of interest is probably orthodoxy's greatest corrupting influence, and below are some examples.

- [Scientists working for fluoride polluters](#), often secretly, performed the makeover of fluoride from a deadly industrial waste to a tooth's best friend, and the actions of [Harold Hodge](#) and friends comprise an instance of the wolves looking after the sheep's interests. When [Phyllis Mullenix](#) published data demonstrating that fluoride caused brain damage, her career was quickly terminated. She is [one of many](#) who had their careers derailed for challenging pro-fluoridation dogma.
- The conflict-of-interest dynamic seen in [fluoridation](#) can be seen in [orthodox cancer treatment](#) and many other areas of Western medicine, such as [Louis Pasteur's career](#) and the paradigm that his work erected in the life sciences and medicine.

- MIT, which is a major recipient of hot fusion research funding, presented [fraudulently manipulated data in order to dismiss cold fusion](#), and [Arthur C. Clark](#) said that cold fusion's dismissal might be one of the greatest scandals in science's history.
- The "[skeptics](#)" attack scientific fact and theory that challenges orthodoxy, particularly that which threatens to invalidate the [rationalist-materialist paradigm](#) that mainstream science operates under and the economic empires built on that foundation. The "skeptic" that has attacked me has [dishonesty as his work's primary characteristic](#). Is he being paid to purvey his disinformation, as a [corporate hit man](#) who we encountered certainly was?
- The conflicts of interest in the [American media](#) are deep and pervasive.
- The winners write history, and [objectivity quickly flies out the door](#) when fabricating the fiction known as [mainstream American history](#).
- The Catholic Church's [Albigensian Crusade](#) is an example of wiping out the religious competition in the name of saving souls. Today, the Bush administration is attempting to reunite the church and state.
- It is difficult to find a more blatant conflict of interest in today's politics than that exemplified by the Bush administration, which may well be U.S. history's most corrupt. The Bush administration is filled with oil executives, with Dick Cheney's Halliburton given lucrative no-bid contracts in the wake of the [U.S. invasion of the world's most oil-rich region](#), while the Bush administration hands over the spoils of war to American oil companies. The [privatization of Iraq's oil deposits](#) is well underway.

Orthodoxy, by its very definition, is not where new ideas or directions originate. However, not every departure from orthodoxy is necessarily a valid direction (in fact, relatively few are), and that is the root of the layman's quandary. Part of the problem is that few pursue alternatives, so less effort is expended in those directions, as well as few funding possibilities.

While the perils of orthodoxy are many, the alternatives also have their problems.

The Virtues and Limitations of Alternatives

For all of the orthodox practices described above, there are alternative theories and

practices. The validity of any alternatives or orthodoxies is a matter of debate. Rarely is an alternative considered to be of equal validity to orthodoxy. They are often compared and contested. Eclectic practices can take the best of both, but such approaches are rarely seen in our winner-take-all world. [Capitalism is an offspring of colonialism](#), and capitalism's excesses gave birth to Marxist theory. The most visible ideological "battle" of the twentieth century was between the capitalist and communist camps. Today, [Parecon](#) is a challenge to capitalism by America's radical left.

A great deal of "revisionist" history has been published lately, but the "revisionism" is often [simply seeing what the primary documents tell us](#), something that the mainstream historians [failed to honestly do](#). The alternative media, particularly the leftist media, hews far closer to the facts than the mainstream media does, as [the mainstream media was long ago corrupted by its influences](#). Alternative movements that challenge the orthodox perspective accompany all political establishments. Nationalism is largely an exercise in [herd management](#), but nation-states dominate the planet, with no practical alternatives currently tolerated.

In science, alternative theory and data is often called "fringe" science. Most of history's radical breakthroughs in science and technology have come from the fringes, the [Wright brothers'](#) airplane and Einstein's relativity being classic examples.

The practical applications of those disciplines impact our daily lives, at times quite profoundly. The "black ops" world is [privy to technologies](#) which demonstrate that orthodox physics textbooks are woefully inadequate. I have seen some of those technologies [with my own eyes](#). The implications of *existing* technologies that demonstrate the validity of free energy, anti-gravity and probably time travel, reduce today's physics textbooks to a primitive era's quaint notions of reality, something that [today's professors uneasily realize](#). The implementation of those "deep black" technologies *can* bring about an unprecedented transition from a world based on scarcity to [one based on abundance](#).

Today, two-thirds of Americans die of easily preventable degenerative disease. The [treatments that actually work are suppressed](#), largely because of the economic empires built on providing the worthless treatments.

Every orthodox religion has splinter sects that teach very different lessons than orthodoxy presents. The Rosicrucians, Cabbalists and Sufis are the mystical branches of Christianity, Judaism and Islam, and those mystical sects all embrace reincarnation,

which is generally considered a fact in Eastern religions. All Eastern religions have their orthodox and splinter sects too, although religious toleration is more prevalent among them than in the Western religions. Is [love](#) more predominant in the splinter sects than the orthodox ones? Both [Jesus](#) and Buddha challenged the religious orthodoxies of their day.

Charlatanry is easily found in the alternatives, such as [Paul Bragg](#) lying about his age in order to amass “life extension” credentials, or [my first mystical teacher abusing his position](#). There is [plenty of chaff](#) among the free energy field's wheat, and [plenty of revisionist history serves unsavory agendas](#), not a pursuit of the truth.

What Can a Layman Do?

Although alternatives at the margins are where genuine “progress” usually originates, how is the layman to know what alternatives are genuine and what orthodox methods are not? Personal experience is usually the best indicator, but it takes time, effort and intelligence to compare orthodoxy to the alternatives. Most people do not have the time or inclination to successfully weigh the evidence and make informed decisions, particularly those of a technical nature, much less pursuing the alternative practice. That is largely why orthodoxy prevails – it is the path of least resistance. Unfortunately, the price of making the wrong choice regarding medical treatment can be one's life. As Noam Chomsky once said, if people want to learn something new, they have to do the work. Nobody is going to open up people's heads and pour in knowledge. If somebody says they can, they will almost certainly deliver its opposite: mind-controlling dogma.

If people do not have the time and energy to investigate and pursue alternatives, to whom can they delegate such responsibility? That is part of the layman's quandary. Orthodoxy, in all the important disciplines, is increasingly corrupt and out-of-touch with reality, but the ranks of alternative practitioners are also riddled with charlatans, the deluded and the incompetent.

While orthodoxy supposedly has a large body of experience to support its positions, its assertions are often baseless, particularly when they are used to persecute the alternatives. As an example, most alternative cancer treatments abandon the attack-the-tumor [paradigm](#) and pursue other paths, such as rehabilitating the immune system. There *is not one instance* of the orthodox medical establishment [subjecting an alternative cancer treatment to a fair test](#). When one cancer researcher developed a

treatment that helped rehabilitate the immune system, at his trial, where the prosecution was trying for life imprisonment, a witness introduced evidence to demonstrate [that the alternative treatment failed to kill cancer cells](#), as evidence of its worthlessness! Is such blindness intentional, or is it an example of such rigid adherence to dogma that the witness could not *imagine* any tool other than a hammer?

The public usually [acquiesces to the population management](#) that orthodoxy performs. Orthodoxy is *designed* to suppress dissent, keep the cash registers singing and maintain its control. Machiavelli [made an astute observation](#) on the hazards of pursuing alternatives, which is as relevant today as it was five hundred years ago.

There are criminals in both the orthodox and alternative camps. However, [Paul Bragg's](#) charlatantry probably hurt few people and his work may have helped many, while [Harold Hodge](#) and [Morris Fishbein](#) arguably harmed millions with their interest-conflicted efforts. Since orthodoxy is the establishment by definition, only [alternative practitioners find themselves prosecuted](#), while orthodox criminals can [have immensely successful](#) and [lucrative](#) careers. Orthodoxy deserves the greatest wariness, not the alternatives. To understand why harmless cancer treatments are outlawed while the violent and deadly treatments are the only legal ones, reading [George Orwell's work](#) might be helpful. Protecting the public is the greatest protection racket of all.

In summary, the rut of orthodox practice is taking humanity to the brink of self-annihilation. If there ever was a time for pursuing alternatives, it is now. However, the alternative pursuits are filled with pitfalls, dead-ends and unproductive paths, something I learned firsthand in my [alternative energy days](#). I wish I had a better answer, but experience may be the *only* teacher, and effort must be expended to pursue alternatives. What people derive from the effort is usually directly proportional to what they invest, although some issues, [such as energy](#), can be critical leverage points, where the reward to humanity and the planet can far exceed the investment.

The Strange, Harrowing Journeys of Free Energy Activists

By Wade Frazier

December 2006

[Introduction](#)

[Steven Greer's Odyssey](#)

[The Adventures of Other Free Energy Activists](#)

[Footnotes](#)

Introduction

The human journey hangs in the balance today. Humanity is very capable of [destroying modern civilization and even most of life on earth](#). We are also quite capable of turning earth into a heavenly place [where we all live in beauty, peace and plenty](#). The crux of the situation relies in great measure on *real* economics, and energy has always been the [underlying basis for all economies for all time](#). During my pursuit of alternative energy and healing the planet, I came to understand that free energy technologies have existed on earth since before I was born. Those technologies have been [demonstrated](#) to those close to me. The general public has not been invited to those demonstrations because of some [impressive forces at work](#).

My alternative energy efforts largely ended in 1988 when the people who run the world [wiped out my life's work](#) and ruined many lives in the process. The Big Boys play for keeps. While my alternative energy efforts largely ended in 1988, I have sporadically rejoined the effort.

There may be nothing on earth today with more potential impact to humanity than free energy, and I will present the journeys of some of the field's activists. Critics have pointed to the idiosyncrasies and personal foibles of the activists discussed in this essay, but this essay's primary focus is the *reality* that those activists have experienced,

not their virtues or failings. Learning the lessons of that field the hard way is not recommended, as the hard way usually means having your life shattered if not prematurely terminated.

Steven Greer's Odyssey

The catalyst for writing this essay was reading Steven Greer's *Hidden Truth – Forbidden Knowledge*, which is the book version of a recently rendered oral history of his life. I have been following Greer's efforts since the early 1990s, and helped stage the [New Energy Movement](#) conference where he spoke in 2004. Greer's journey saw him mount an impressive and dangerous attempt to make the reality of extraterrestrial (ET) civilizations visiting earth, today, officially acknowledged. The logical extension of his [ET efforts](#) was the [pursuit of free energy](#), because they are conjoined.

Most free energy activists I know of began their journeys at a young age. They may not have pursued alternative energy while young, but they all had personal qualities and youthful experiences that led them down paths that few travel, and such paths regularly lead to the energy issue, which is humanity's [root issue](#) and always has been. Those who have pursued free energy the longest and most successfully have had high personal integrity in common, largely because the perils and temptations are so great that personal integrity is probably the most important quality for continued pursuit. [Personal integrity is the world's scarcest commodity](#), which makes those activists quite unusual.

Nearly all of modern physics' giants were, to one degree or another, [mystics](#), which is true of most free energy activists and inventors that I have encountered. [Ken Wilber](#) posited that the giants of physics became mystics due to science's failure to explain the universe. I am not so sure. I have known minds that were [arguably on par](#) with Einstein's and Tesla's, and their mystical orientation seemed significantly *responsible* for their scientific and inventive insights, not a result of watching science fail to explain the universe in a satisfactory manner.

As with [Dennis Lee](#), Steven Greer had a challenging childhood. Greer thinks that his troubled family life helped make him stronger.^[1] Greer also had a keen appreciation of nature from a young age, which is common among those devoting their lives to healing the planet. Greer had mystical experiences from a young age, partly due to being

spared religious indoctrination, because religion is often spirituality's worst enemy. Greer's mystical initiation began with a near-death experience at age seventeen.[2] Dennis was in his early twenties [when he had his mystical breakthrough](#). My awakening happened was [when I was sixteen](#). Brian O'Leary's [mystical awakening](#) came much later, when he was almost forty years old.[3] [My first professional mentor](#) began his mystical journey as a child, but had no framework for his experiences. His startling mystical abilities were largely responsible for his ingenious inventions, similar to [Nikola Tesla](#). Others whose free energy efforts I respect had similar awakening experiences, usually in their late teens or early twenties. Those experiences often led to radicalizing experiences, which usually meant leaving behind the conventional beliefs that [the masses subscribe to](#).

Greer articulated an important concept quite well, writing:

“Most of the problems that we face in our world today, whether they be spiritual and religious or scientific, political and economic, are all because people are holding onto some perspective that has nothing to do with the truth but has to do with their own belief system and addiction to something that is outdated, and they can't let go of it.”[4]

That is another way of stating the [integrity](#) issue. We humans tend to abandon the pursuit of truth and settle for self-serving beliefs, particularly [in a world of scarcity](#), as those self-serving beliefs usually help justify our political-economic status. Jesus described a similar phenomenon when he spoke about a rich man's entering heaven and a camel's passing through a needle's eye. That phenomenon is also [alive and well in science](#). It is possible that those self-serving delusions would largely disappear in a [world based on abundance](#). Greer wrote about receiving an angry, personal attack from a prominent scientist at one of his public talks. After the talk, some of the scientist's associates approached Greer and said that his public outburst was not due to his believing that Greer's ET/UFO discussion was wrong, but because, “he thought that maybe it really was true, and it meant that everything he knew and has been teaching for sixty years of his career was rubbish!”[5]

Although witnessing ET craft in flight is [easy to accomplish](#), denial is a common response from the public to UFO, ET and free energy talk, and Greer noted how

“normal” such behavior was. Greer related an incident when a U.S. military general invited Greer to brief him on the ET/UFO situation. During the briefing the general noted that he himself had been stonewalled and ridiculed by the military establishment in his attempts to find out more. He then related a poignant anecdote. The general's father had discovered ET/UFO cover-up activities within the U.S. government and had run into the usual wall of silence and denial. He told his son about the situation, but the future general thought his father was crazy. His father eventually killed himself (or, quite likely, was murdered and his death made to appear a suicide). The general told Greer, “It wasn’t until I got into *this* position at the Pentagon that I realized that the old man was right!”[\[6\]](#) If an ET/UFO whistleblower was thought a “kook” by his own son, what chance does somebody like Greer have with the general population?

Greer has briefed officials from the White House, Capitol Hill, CIA, Pentagon, United Nations, Vatican and other institutions, and has yet to receive a scoffing reaction. Instead, the briefing’s recipients show deep concern and are troubled by the implications. The most common reaction to his briefing again hinges on the integrity issue: virtually none of the briefing’s recipients has ever done much with the information. They fear the people behind the cover-up, feel the job is too big for them, and leave the task of uncovering the situation to somebody else. Greer was regularly told by insiders that because he was an outside agent (Greer was a hospital emergency room doctor by profession) that he had the freedom to make noise on the ET/UFO issue. Those insiders always wanted to stay inside and quiet. Once Greer briefed a U. S. Senator, and they discussed why the sitting U.S. President (Bill Clinton) and others would not make the subject public, and the Senator said, “Well, I’m just a Senator,” and Greer retorted, “Well, I’m just a doctor!”[\[7\]](#) Not long after Greer briefed the CIA’s Director, one of Clinton’s friends told him that they were afraid that if Clinton tried revealing the ET/UFO situation to the public, he would end up like [JFK](#).[\[8\]](#) That responsibility-refusing dynamic is typical of all humans, not just the elites.

Sitting American presidents are out of the loop regarding the ET/UFO situation. Clinton read Greer’s briefing materials at the White House and exclaimed: “I know this is all true, but God damn it, they won’t tell me a thing. Not a God damned thing!”[\[9\]](#) Jimmy Carter tried getting UFO information from George Bush the First, who was then the CIA’s Director. Bush refused to give Carter the CIA's information, and told Carter to get it from someplace else. Carter persisted, and was eventually threatened with an abrupt end to his presidency if he did not immediately cease his investigative efforts.[\[10\]](#) JFK was also stonewalled as he tried investigating the ET/UFO situation. Dwight Eisenhower was the last sitting president in the loop.[\[11\]](#) During Greer’s journey, he was given a classified CIA report on the wiretap they had on Marilyn Monroe’s phone. Monroe told a

friend that JFK had seen recovered ET craft, and Monroe was going to call a press conference to publicly disclose it. Monroe “committed suicide” the next day.[\[12\]](#) An FBI agent told Greer that he could be locked up almost indefinitely for publishing that Monroe document, but Greer does so to this day. People such as Laurence Rockefeller, Barry Goldwater and even secretary generals of the United Nations have tried making the ET/UFO issue a public matter, but were thwarted.[\[13\]](#)

Not long after Greer briefed the sitting Director of the CIA (James Woolsey), he was invited to meet with the people behind the ET/UFO cover-up and much more. That group essentially runs the world. They told him that the U.S. president and CIA director, “don’t know anything, and they are never going to know anything.”[\[14\]](#) Much of what Greer was told at that meeting seemed incredible, but Greer was able to later confirm virtually everything he was told. At that meeting, they told Greer that they had paid out [\\$100 billion in quiet money](#) over the years to prevent free energy, anti-gravity and related technologies from becoming publicly used. When I heard Greer say that in 2004, it made perfect sense, as I [encountered those stories many times](#) during my adventures. I am sure that members of the same group [offered Dennis a billion dollars](#) to stop our pursuit of free energy. As [Tom Bearden says](#), those offers are their “benign” tactics. Only when the “benign” and subtle methods fail do they begin playing rough, [as they did with us](#).

The global control cabal is divided, and factions of the more “benevolent” half have demonstrated those technologies to a [select few](#). About half of the cabal realizes that the power plays by the darker half threaten to turn earth into a cinder, and they favor bringing those technologies to the public.[\[15\]](#) The darker half also has a plan to wipe out about six billion people and turn the surviving humans into pliant slaves, but part of their motivation is also to reduce humanity’s burden to earth’s ecosystems. Ironically, with free energy, there does not need to be *any* [burden to earth’s ecosystems](#). That global controlling organization is not one that many conspiracy researchers/theorists are familiar with. That organization is the offspring of secret societies and elite manipulators going back thousands of years. The favored grist for the conspiracy theorist mills - the Bilderbergers, the Freemasons, Bohemian Grove, Skull and Bones, the Trilateral Commission, the CIA/NSA and other alphabet soup federal agencies, defense contractors, European royalty and so on - are not in charge of that global cabal. The cabal has penetrated and influences those organizations, thereby limiting what those organizations are capable of. The rank-and-file members of those compromised organizations have little idea what is really happening or who is calling the global shots. CEOs of *Fortune 500* corporations that are involved in the global control paradigm and that have helped developed those exotic technologies are not in the loop either (here is

a [video](#) of him talking about the situation).[\[16\]](#)

While I do not believe that names are important, Greer has mentioned some of the organizations involved with maintaining global control. The Mormon financial empire is the most powerful member of the present group.[\[17\]](#) Interestingly, [Mormons stole Dennis' company in Seattle](#), and the person [who led the effort to destroy Dennis' company in Ventura](#) was a Mormon who was later arrested in a [Mormon scam](#). The Jesuit order is also a major player. For the people who play at those levels, wealth is largely a means, not an end. The end is power. Controlling the [world's financial systems](#) and keeping free energy and related technologies out of the public's hands are simply the means to keep control over humanity. People [living in scarcity](#) are easy to control. People [living in abundance](#) are not. Consequently, people motivated primarily by greed are not the most ruthless members of the global cabal. Religious fanatics and Armageddonists are the most vicious foot soldiers of that global controlling group.[\[18\]](#) They want to bring the world to an end so they can all float off to heaven together. They have some strange bedfellows, and studying the spiritual path is important to understanding the situation. The brethren of those religious fanatics are variously called negative masters, Satanists, the Dark Brotherhood and other names. They [have made self-service a science](#) and enjoy all the death and suffering that their efforts cause. They help the religious fanatics and greedy hyper-capitalists keep control over humanity, but do it for very different ends. Instead of destroying the planet and everybody ascending to heaven, they want to drag as many as possible into [hell](#).

The global cartel's goals and means often align with the milieu's smaller players. Greed and a lust for power are not the sole province of that global cabal; they are simply its most accomplished players. For instance, I doubt that the global cabal was deeply involved in our [Seattle events](#). [Bill the BPA Hit Man](#) may have worked for the cabal, but perhaps not. The BPA and local electric companies may have simply been protecting their local markets. Likewise, the [Boston events](#) may have had little Big Boy involvement, but [that first offer to buy us out](#) was most likely a Big Boy overture. Most of what I saw with Dennis was probably just average people in the thrall of greed, fear and a lust for power. The Big Boys usually need not expend much effort to derail efforts such as ours, as our "allies" and the local energy gangsters unwittingly do their work for them. We will probably never know who [stole our technical material during the raid](#); it was undoubtedly for somebody in the energy racket food chain, but might have been a relatively local effort. Likewise, I am only about half convinced that [Mr. Skeptic's efforts](#) regarding Dennis are being done of the behalf of some covert interest. The human ego may explain the [libelous "skepticism"](#) that I have seen Mr. Skeptic engage in.[\[19\]](#)

Brian O'Leary is, along with Ed Mitchell, the most outspoken ex-astronaut on the ET/UFO issue, and has had bizarre and perilous encounters with high-ranking officials. The U.S. military brass knows full well the reality of the ET/UFO issue, but their cover-up and disinformation efforts are probably more along the lines of their misguided "national security" ideals than it is consciously working on the Big Boys' behalf. In fact, the Big Boys have faked and/or inflated an aspect of the ET/UFO issue to further their power goals. Most of the free energy, anti-gravity and other exotic technologies that I am aware of were at least partly developed by reverse-engineering captured ET craft. Our reproductions of those technologies are relatively primitive. If the ETs that visit earth had primarily malevolent intent, humanity might not exist today. The ETs have technology that could exterminate humanity in short order. Just one of their tiny scout ships could easily defeat's earth's combined military might. However, an acknowledgement of the ET reality would immediately [threaten earth's power structure](#), particularly the Big Boys' grip over humanity.

For many years the Big Boys have planned a fake ET event whereby ETs are portrayed as the ultimate terrorist, and humanity will be duped into huddling under the Big Boys' "protection." It will be a global protection racket. The ET "abduction" phenomenon is at least partly a Big Boy operation to manipulate people into fearing ETs. The good news is that the ET situation is largely under the control of the benevolently-intended ETs, but they operate under the Prime Directive (*Star Trek* is not all that fictional), and they cannot directly and openly intervene in human affairs unless enough humans ask for it or we are truly in danger of destroying this planet (something that humanity will not be allowed to do). Because humanity *is* toying with its [self-destruction these days](#), our ET pals may reveal themselves in undeniable fashion in the next few years, which would end the dark ones' megalomaniacal dreams. The Big Boys may try to preempt the situation with a manufactured event that vilifies ETs. If the ET card is played, the Big Boys plan to play it first. They also know that if they play that card, they will ultimately lose their game. We therefore are currently suffering under the [biggest cover-up of all time](#). Most of the Star Wars technology has been developed so the controllers can threaten violence against a benevolent public ET landing. Among spirituality initiates, such [malevolent motivation](#) and activity is not difficult to comprehend.

Steven Greer, Dennis Lee and Brian O'Leary have all been subjected to life-threatening, cloak-and-dagger harassment by the Big Boys, Greer perhaps the most visibly. I had begun full-time research on the subject matter that became my website when Greer held his famous 1997 secret U.S. Congressional hearings on the ET/UFO issue. Greer had [about a dozen witnesses testify](#), and his co-chair for the hearings was Apollo 14's Ed Mitchell. Greer was trying to enter by the establishment's front door, something I had

seen Dennis attempt numerous times. I watched from a distance, and it was no big surprise when Greer and members of his team came down with unusual forms of cancer soon after the hearings. I sent information to Greer's assistant, Shari Adamiak, on alternative cancer treatments. Adamiak died in early 1998, as did others in Greer's circle. Greer was the only survivor of those unusual cancer cases. In his book, Greer described the diabolical technologies used to induce their cancers. Greer used his mystical abilities to fend off their attacks, even shaming his assailants into ceasing their efforts (by asking his god to forgive them).[\[20\]](#) Not only do the Big Boys induce deadly diseases with their methods, but they also attack people's minds. Many inventors are [paranoid](#), but Greer wrote that the electromagnetic technology the Big Boys use on inventors and others trying to bring free energy to the world induces or exacerbates paranoid tendencies. I was part of at least one effort that may have come under similar attack, and I am revealing it for the first time on my site at [this footnote](#).[\[21\]](#)

Greer is still at it. What may impress me more than anything else about people such as Greer is their persistence. There are very few like them.

The Adventures of Other Free Energy Activists

Dennis Lee's alternative energy journey is obviously the one most familiar to me, and I present [his journey](#) and [my role in it](#) elsewhere. Dennis is the Indiana Jones of alternative energy, as well as its P.T. Barnum. I have never met or heard of another like him.

Brian O'Leary's journey has also been traumatic and wondrous. He joined NASA just as my [father was leaving it](#). Brian was one of the first civilian astronauts and is still the only human being officially and publicly slated to visit another planet. His PhD was in astronomy, and he was a Mars specialist. He was going to be the science specialist on NASA's first manned voyage to Mars. He is also the first astronaut to resign. Brian writes about those days in his *The Making of an Ex-Astronaut*.

When Brian resigned from the astronaut corps in 1968, [Carl Sagan](#) recruited him to join the Cornell faculty. Brian and Sagan were the world's two most prominent experts on Mars back then. In Brian's *The Making of an Ex-Astronaut*, there is ample evidence of the personality that eventually led him on his journey. Brian still worked with NASA on its planetary probe missions and taught science in the heart of academia. He was a political radical, at least as radical as an Ivy League professor could be, such as leading

an academic protest to the Oval Office's door during the Watergate days, and he has been the science and/or energy advisor for several Democratic presidential candidates (Brian eventually realized what a dead-end electoral politics was). Dramatic events would lead Brian from the establishment's fold. A paranormal experience during an automobile accident put cracks in his orthodox outlook, but it was not until he performed psychically at a [Lifespring class in 1979](#) that his awakening really began. That experience opened new vistas of reality for him, and the dead, mechanistic science that he taught at his day job became increasingly meaningless. Brian eventually left his comfortable academic life behind. Brian later admitted that if he knew what he was in for, he would not have done it. I have similar feelings about [my journey](#). Brian traded an easy life for a difficult one.

Brian began exploring the frontiers of science, and those explorations are chronicled in his *Exploring Inner and Outer Space* and *The Second Coming of Science*, among other later works. Brian became involved in the energy issue many years ago, and his mystical awakening led him on paths rarely traveled. He has visited holy men, free energy inventors, fringe scientists and others across the planet. Brian also kept at least one foot in the orthodox world for quite some time. Brian once helped get Buzz Aldrin a job and shared an office with him during his gradual turn toward the unorthodox, and Brian's last job for the establishment ended when he refused to work on Ronald Reagan's Star Wars program.

Brian has also been involved in controversies unrelated to free energy, such as the [moon landings](#). As with Dennis, I was Brian's spear-carrier for some time. Although I no longer have active involvement with either of them, they are great humanitarians, and being associated with them are among my life's highlights.

Sparky Sweet was a famous free energy inventor who had the goods. He believed that the world would welcome his free energy technology, and instead [came to a lonely and sad end](#).

One of our fellow travelers is Adam Trombly. Here is [an interview](#) that he gave in 2002. When he said that his life turned into a "bad spy novel" when he began his free energy efforts in 1980, he is being modest. He survived several murder attempts and was subjected to numerous cloak-and-dagger activities. Trombly's tale has several confluences with this essay and my work. One is that his father's work in reverse engineering captured [ET](#) craft introduced Trombly to free energy as a [teenager](#). Trombly is well known to several of my associates. I have heard some of his journey's details, and they are mind-blowing. Another connection is that Trombly was Bucky

Fuller's colleague. Fuller was one of the West's first "comprehensivists." Fuller saw the big picture and proposed big solutions. Fuller is also perhaps the first to propose a practical abundance paradigm for the human journey, but his legacy has been co-opted and diluted. I [discovered Fuller's work](#) after I completed my site in 2002, and his work was revelatory. Trombly is reluctant to engage the public, partly because few can comprehend his journey. I have had similar problems, and sympathize when those such as Trombly choose a low profile. Americans have proven particularly obtuse, and American scientists and academics often prove to be the most [naïve and irrational](#) of all, something [Fuller also mentioned](#).

Another fellow traveler is [Tom Bearden](#), whose old eyes have seen some amazing sights. He helped me better understand how free energy suppression works. Not everybody mentioned in this essay belongs to the same drinking club. I have seen and heard people, some close to me, wondering if Steven Greer, Tom Bearden and Dennis Lee were not who they appeared to be, but were perhaps "honeypots" to misdirect free energy inventors and activists onto [unproductive paths](#). Discernment is crucial, especially in the free energy pursuit. I am not endorsing *any* of the activists in this essay. They all have their personal foibles, as do we all, but I *know* that Dennis is not a covert operative. I cannot speak with certainty about Greer and Bearden, but I doubt they are covert operatives, particularly Greer. To one degree or another, we are *all* deluded, which is a hazard of living on the [dualistic physical plane of existence](#). One heartbreaking aspect of the free energy field is watching those who should be allies maligning and attacking each other. I have seen dozens of dishonest attacks on Dennis over the years, and [from within the free energy ranks](#) all too often.

Virtually every activist mentioned in this essay has survived attacks that could have easily ended their lives. Most have tried populist approaches to the free energy issue, Dennis being its ringmaster. They all know that bona fide free energy technology exists, but the Big Boys keep it under wraps. They therefore have tried developing those technologies along independent paths, but that is an incredibly difficult undertaking, even if the Big Boys were not guarding the gate. Dennis has probably been hurt more by his "allies" than by the "bad guys." Greer has written about the innumerable betrayals that he has endured on his journey.

I wrestled with making this next disclosure, but it is important information for those planning to take the free energy journey: virtually every free activist that I know of has become disgusted with humanity at some point on their journeys. If you play at the high levels, it is [almost certain](#). I have watched people enthusiastically embark on a mission to tell the world about free energy, and I have seen them engage the public, scientists,

politicians and others who they hoped would be interested. Every earthly human will be profoundly affected by free energy. I have also watched those activists openly wonder, several sobering years later, if humans are really a sentient species, as almost all they encountered were [mental, spiritual and ethical cripples](#). Finding people with the qualities needed to help overturn the current scarcity paradigm is like hunting for needles in haystacks. Discovering that [personal integrity was the world's scarcest commodity](#) was the primary lesson of my journey, and the lesson I resisted the longest. That is not a fun realization, and that reality makes it unlikely that humanity will thrive as a species without some kind of "divine intervention." When I have watched saintly people come to that same conclusion after years of gradual disillusionment, it has hurt to watch it. That reaction has also been privately expressed to me by some of the greatest "radicals" that I know of, people of international stature whom I greatly admire. A memorable quote regarding that doleful understanding is: "So, who are we doing this for?"

Those activists still effective have escaped the potential trap of that sobering realization. Sometimes their disgust lasted only moments, sometimes it lasted years, but the condition is debilitating and must be healed before an activist can progress further. For those that conquered their despair, they seemingly responded by burrowing deeper into the human condition and peering into people's souls, instead of our frightened personalities that live in a world of scarcity. Those who have successfully delved deeper into the human condition have seen the spark of divinity in us all, and they have continued their efforts to uplift humanity, so that divine spark might be fanned into a flame. That might be the most difficult task on earth today.

The [dark path initiates](#) also have an uncharitable view of those whose primary motivations are survival and [cultivating their vices](#), but want to keep the great herd of humanity readily exploitable, not uplifted from their condition. Their attitudes and methods remind me of [Hitler's henchmen](#). When places such as the Warsaw Ghetto and the concentration camps went into operation, Goebbels and friends filmed Jews in those settings for propaganda purposes. By reducing Jews to seemingly subhuman states, the Nazis sought to retroactively justify how they treated them, and to justify treating them even worse. Both the saintly and the vile see where humanity is today. One wants to uplift humanity, and the other wants to keep us down and drive us even further into the muck.

Critics of the free energy milieu point to free energy activists who may well be frauds, who are deluded, who are strange and "unbalanced," and so on. There is plenty of [chaff](#) amongst the free energy field's wheat. That is simply [one aspect of the dynamic](#), but people such as [Mr. Skeptic](#) try convincing the world that it is the *only* dynamic in the

“free energy” milieu, and the [mainstream media](#) eagerly feeds at their trough.[\[22\]](#)

Who knows? Maybe *you* will try your hand at making free energy a public reality and [transforming the human journey](#), and your timing will be impeccable and bringing free energy to humanity will be laughably easy. I pray that you have such success. As Isaac Newton said about his discoveries, if you reach those lofty heights one day, you will be standing on the shoulders of giants, some of whom are discussed in this essay.

[19] At one of Dennis' public events in the 1990s, Mr. Skeptic attended and handed out his "skeptical" pamphlets. He wanted a meeting with Dennis and considered himself one of Dennis' worthy adversaries. Dennis quickly disabused Mr. Skeptic of that notion and refused to meet with him. Dennis considered Mr. Skeptic to be merely one the many zero-integrity critics that he has encountered over the years, some on the energy interest payroll somehow, but many just free-lancing. That slight may be partly responsible for Mr. Skeptic's efforts in attacking Dennis ever since.

[20] See Greer's *Hidden Truth – Forbidden Knowledge*, pp. 156-176.

[21] In early 2003, soon after [America's invasion of Iraq](#), Brian O'Leary asked me to join the board of the [New Energy Movement](#) (NEM). In retrospect, I should not have joined, partly due to the fact that I was in [poor emotional shape](#) to assist such an effort. I was invited into other efforts at about the same time, and I joined some before I realized that I was stretched too thin and quit all of them. I helped found and fund NEM until I resigned the day after NEM's September 2004 conference. In late 2003, on NEM's original website I read an article by [Eugene Mallove](#) on promising free energy approaches, and one of them was the [exact technology](#) we were pursuing when the Big Boys [dropped the hammer on us in 1988](#). Brian introduced me to Mallove and we had some email exchanges about Dennis, our efforts and the heat engine/heat pump combination we were pursuing. Mallove was a former academic (at MIT) who had yet to really sail the rough waters of free energy activism. Mallove quit MIT in protest after he discovered that MIT scientists had fraudulently manipulated their data in order to dismiss cold fusion. MIT is one of the world's largest research institutions that researched hot fusion, so their data manipulation was a case of conflict of interest. I tried telling Mallove about the big carrots and sticks that were used on us, and he was skeptical about the [billion-dollar bribe](#) offer that Dennis received (it was the largest he had heard about). To Mallove's credit, however, he was at least willing to listen (which is unusual in of itself). I sent him technical information on what we were pursuing, and he promised to reply in the coming spring.

In early May 2004, we had an NEM board meeting at Brian's house and began planning our September 2004 conference. Mallove agreed to be a conference speaker, partly because several board members knew him. The week after our board meeting, I began to pay for professional assistance for NEM. I resumed my career a month after I joined NEM, I was working twelve-hour days at my stressful day job, and there were some hiccups in getting the professional help aligned with NEM's needs. An NEM board member had a tantrum during that week over the hiccups. The outburst seemed disproportional to the problems, and I had a very stressful week trying to calm the waters and getting us back on track. By Friday of that week, May 14th, all was well and that board member sent me a conciliatory email, and further stated that we might be under psychic attack, the kind that Greer later [wrote about](#) in his book. As that board member was sending me that email, Mallove was dying from being bludgeoned. We heard about his murder the next morning. Because of that bizarre "coincidence," I will always be skeptical that Mallove's death was a random murder. It was frustrating to try educating Mallove on the methods the Big Boys used on activists like us, to instead receive his skepticism. Mallove may have learned of their more extreme methods in fatal fashion. Mallove was engaging in activism in Washington D.C., and Greer, [Paul](#)

[Wilcher](#), [Danny Casolaro](#) and others discovered the hard way how dangerous radical activism and investigation can be around America's capital city. At the NEM conference, Greer said that Mallove's death might well have been due to what the Big Boys sometimes do to their more nettlesome gadflies. We may have also been subjected to those technologies [during my days with Dennis](#).

[22] Dennis has been the subject of numerous media reports since 1996, on national and local television and radio and in the print and Internet media. Virtually all have been hatchet jobs, and Mr. Skeptic is often featured. Other than [Dennis' site](#), there is not a more in-depth account on the Internet of Dennis' efforts than my writings, and few people on earth know Dennis better than I do, but none of those media organizations has ever attempted to contact me to provide any insight or information on the issue. Instead, [Mr. Skeptic](#) has become a media and "skeptical" darling, with his [dishonest](#) "research" on Dennis receiving prominent coverage. That situation is simply more evidence of what a propaganda machine the [mainstream media](#) is.

The Free Energy Conundrum

Is Humanity Ready for Abundance?

Wade Frazier

December 2005

[A Summary of the Free Energy Conundrum](#)

[My Journey and Primary Lesson](#)

[Laying aside the Mind Crutches](#)

[Pitfalls and Unproductive Paths](#)

[What Can Be Done about the Conundrum?](#)

[Footnotes](#)

A Summary of the Free Energy Conundrum

1. There are two prominent motivations for making free, forever renewable, non-polluting energy a daily reality for humanity:
 - On the upside - an unprecedented human journey [based on abundance](#) instead of scarcity can be catalyzed by a transition to free energy, while healing the environment at the same time;
 - On the downside - today's energy production methods are [destroying the biosphere](#); energy scarcity is the primary reason for global poverty, and the Middle East is increasingly becoming the site of energy wars, which may ignite World War III.
2. Such free energy sources exist and have been extensively developed in the United States and elsewhere, however:

- The technologies that use those energy sources have been subjected to deep secrecy ([Black Budget, Above Top Secret](#), privatized);
 - Those attempting to independently develop technology to use those energy sources have been [bought out or wiped out](#), although such efforts usually self-destruct before attaining the stage where they need derailing;
 - Those leading the suppression of the independent efforts also control the extensively developed free energy technologies, and their influence is wielded in subtle yet powerful fashion; they are forcing artificial scarcity onto humanity for reasons of earthly power (I call them the Big Boys in my work).
3. Far less than 1% of the U.S. population has constructively engaged that situation, the proportions falling somewhat along these lines:
- Most people are unaware that the situation exists, largely due to the clandestine methods used to keep the situation unknown and a compliant media system, but also because most people *do not want to know*;
 - Those exposed to this situation usually deny it, often by dismissing it as a “conspiracy theory;”
 - Those acknowledging the situation’s reality usually have unproductive reactions, such as:
 - o paranoia;
 - o apathy;
 - o hopelessness;
 - o trying to expose or punish the suppressors;
 - o beating the suppressors at their own game;
 - o trying to get a piece of the suppression action for themselves;

- o thwarting those attempting to overcome the suppression, as they try stealing the technology/market for themselves;
 - Those acknowledging the situation and attempting a constructive response, such as mounting an effort to develop such technologies and bring them to the public, or educating the public about the situation, seem to number fewer than one thousand people; and of those, the number possessing the integrity sufficient to mount a potentially successful effort is probably fewer than one hundred people.
4. If an effort to overcome the suppression and public inertia is going to have a realistic chance of succeeding, that final group needs to grow to thousands of people, to form a critical mass. The effort needs to reach far beyond the small and insular alternative energy community. Simply becoming aware of the issue and engaging in constructive dialogue may be all that is needed. The primary qualification for a member of that critical mass group is nearly incorruptible integrity. The task is formidable, because people of that level of integrity are [less than one-per-thousand in the U.S. general population](#), but that approach appears to have the best chance of success with the least risk to the participants.

The bold contentions in this summary are explored at depth in the following essay. Perhaps the above summary is incorrect, but nobody I trust with significant *experience* in that milieu denies its basic thrust.

My Journey and Primary Lesson

[My journey into alternative energy](#) began more than thirty years ago, when my first professional mentor invented what was considered the [world's best engine for powering an automobile](#). Today's "cutting edge" cars are using innovations my mentor invented long ago, such as hybrid cars recycling the energy absorbed from applying a car's brakes. I dreamed long ago about changing the way humanity produces and uses its energy. I eventually [chased my dream](#), only to have it [become a nightmare](#). My journey was filled with numerous lessons, and many were reluctantly learned. I know of no effort in world history of higher profile or of more persistence or closer to success in bringing significant alternative energy to humanity than [Dennis Lee's](#) efforts, and I was with him during some of his adventures' darkest chapters. I think he did his most interesting work before I met him. There is no teacher like experience, and I am writing

this essay with the hope that it will assist those few who try bringing alternative energy to humanity, and perhaps help [heaven on earth](#) come into being.

My primary lesson was one I resisted for many years, until I finally had it [beaten into my head](#): personal integrity is earth's scarcest commodity, and applying a sufficient pool of it to the free energy conundrum is *the key* to making it happen. If an alternative energy effort does not begin with people of the highest integrity, it will not get very far. Almost without exception, when I have mentioned that harsh lesson and its ramifications, people have responded by ignoring it or presenting irrelevant counter-examples or dismissing it as of minor consequence. It is not an enjoyable realization, but it is today's reality. While [denial](#) may seem a valid defense mechanism, it is ultimately self-defeating, particularly in this context. True skepticism is a virtue (which means getting out of one's armchair and honestly investigating before launching opinions), but I have rarely experienced a genuinely skeptical reaction, which reinforces my primary lesson. I *expect* my work to be greeted with skepticism, because it is so alien to the average American's experience, so this essay is peppered with footnotes and links that lead to evidence that illustrate my points.

First of all, what follows is why a lack of integrity dooms alternative energy efforts. [All economies for all time](#) have been primarily dependent on energy. Today's energy industry is the world's most powerful, and a new energy source, particularly one that could easily replace conventional energy sources, has long been the subject of novels, motion pictures and other mass media. The economic value of such an energy source is beyond the dreams of avarice. Several trillion dollars of revenue are generated annually by the energy and related industries, such as transportation. Even that vast sum misleadingly minimizes the importance of energy, because without energy to run the show, [industrialized civilization would quickly grind to a halt](#).

When people begin pursuing alternative energy, whether it is in pure or applied research, prototype development or the more advanced stages of entrepreneurialism, manufacturing and marketing, greed nearly always rears its head and defeats most attempts before they even get started. Dennis has likened the situation to the movie *The Treasure of the Sierra Madre*, where everybody wanted to wipe out everybody else so they would not have to share their plunder. The stakes are higher in the free energy pursuit than any other on earth, and bringing a genuine alternative energy to market, one that can impact the global marketplace, is not something that a lone inventor or entrepreneur can accomplish. It will take a major effort by many players to make alternative/free energy happen, and stealing a prototype or start-up company is futile, if developing a genuine alternative energy for the public is the goal. I have watched

numerous attempts to steal Dennis' companies, and the two successful attempts I witnessed in the 1980s were performed when the Big Boys had Dennis in a headlock.[\[1\]](#) Before I met Dennis, his companies were stolen several times by his business associates and once by organized crime, which then pulled off a genuine scam of the public. I saw some particularly incompetent attempts to steal Dennis' companies that [I witnessed after our days in Ventura](#). Steven Greer calls the Big Boys "[Godzilla](#)," but the economic jungle is also filled with T-Rexes, velociraptors and other predators. The jungle is not filled with gentle, herbivorous beasts and one super-predator.

After Dennis' company was stolen in Seattle, I watched [several groups fight](#) over the company's *carcass*, and none of them did anything productive with it. Also, if any of them became productive, they would have quickly discovered the hard way why Dennis' company was defunct when they stole it, but they were blinded by their greed. Also, the employees not involved in stealing the companies often stole anything they could on their way out, a phenomenon [vividly evident in Ventura](#). For those people, the Big Boys' suppression efforts gave them theft opportunities. [Greed](#) is one of the [seven deadly sins](#) and is the fear of never having enough. It is an irrational fear that can never be extinguished by hoarding wealth. After obscene amounts of wealth are stolen from others, the fear then becomes focused on amassing as much control over others as possible, trying to play God.

When the Big Boys' hammer came down, those not actively stealing were mainly motivated by self-preservation, and those running and hiding or crawling before agents of the Big Boys, begging for mercy (or actively helping the Big Boys, as a way to avoid their wrath), may have provided a more disheartening spectacle than the thievery did. A third category of ignoble behavior was provided by many of those who did not fall into the first two categories: blaming and attacking Dennis became a favored activity, probably because he was an easy target, particularly when the Big Boys had him in a headlock. Many people fell into all three categories.

All those actions evidenced low personal integrity, and when the dust had settled in Ventura, human behavior could never surprise me again. There were heartening exceptions to that low-integrity rule, however, with [Mr. Professor](#) shining the brightest. People like him were needles in haystacks. I have sought people like him ever since, and have encountered very few who *may* have had the right stuff. Just as nearly everybody thinks they are an adequate housekeeper or a competent driver, nearly everybody thinks they possess high integrity. Passing an integrity test of the magnitude that Mr. Professor took often costs one their [career/net worth/health/life](#), so those who have proven their integrity at those levels can rarely join together to make something

important happen, because their lives have usually been destroyed.

Laying aside the Mind Crutches

When I staggered out of Ventura in 1990, I realized that whatever I had been taught about the world was probably not true, and for the next twelve years I read around two hundred thousand pages of material. A primary thrust was researching what I had been taught, comparing it to my adult researches and seeing if it held up. It rarely did. Although my ride with Dennis radicalized me, I also had some early experiences that aided my receptivity to the lessons, such as my [family changing its diet when I was twelve](#) and being introduced to [paranormal phenomena at age sixteen](#).

As I performed my adult research on what I was taught while young, I realized that most of my “learning” that failed under scrutiny was not simply a haphazard assortment of misinformation. The misinformation was apparently designed to indoctrinate me into certain ways of “thinking.” Here are some examples of what I discovered during my adult researches.

- I read the newspaper everyday for twenty years, thinking I was getting the news. Now I realize that I was [receiving a form of brainwashing](#).
- [Christopher Columbus](#) has a national holiday in his name, and is the first shining hero in American history books, but his greed-inspired efforts directly led to history's only *complete genocide* of millions of people, a fact that my teachers failed to mention.
- I was taught that [George Washington](#) was the first American president, the “father of our country” and a [man who could not lie](#). In reality, he was an avaricious, slave-owning aristocrat and America's richest man when he became president, getting rich partly from stolen Native American land. He was also the primary architect of the American government's policy of stealing Native American land through fraudulent treaties in what may be [history's greatest swindle](#).
- I attended [Junípero Serra](#) elementary school in grades four through six. Serra established the California mission system and the padre is up for [sainthood](#) today. What my teachers failed to tell me, as I watched a movie of his holy life and viewed his statue in our town square and visited his missions, was that he was a

masochistic religious fanatic who ran colonial Mexico's Inquisition and that the primary outcome of his missionizing efforts was the *complete extermination* of the coastal California tribes that greeted him. The only tribes that survived were tribal remnants that fled to California's interior.

- The United States is simply a [successor empire](#) to the European empires that were weakened or destroyed during the World Wars of the 20th century. The words "America" and "empire" were never used in the same sentence during my [American history education](#), a rule followed by American history books and today's media organizations, at least until the recent invasion of Iraq, as the nakedly imperial aspect of our international behavior is increasingly difficult to deny. As with all empires, we tell ourselves that we are a different kind of empire, as in a benevolent one. Our victims do not believe it, nor does the rest of the world.
- America's [fight against communism](#) had nothing to do with protecting the world's people from the evil communists, but was an effort to keep the world's people enslaved to the political-economic system that the United States dominated, a system known today as global capitalism. That easily-verified situation somehow escaped the educational process I was subjected to while growing up.
- In my economics classes in college, I learned that Adam Smith was the father of capitalism and that he extolled the magic of free markets and the invisible hand of competition. However, Smith also remarked that capitalists were relentless in making sure there *were no free markets*, accomplished by buying out, [wiping out](#) or colluding with the competition, which is the most apt description of [today's capitalists](#) that I can think of.
- My chosen profession of public accounting turned out to have a fatal conflict of interest that became evident during the [Savings and Loan Scandal](#) of the 1980s and the [Enron/WorldCom/etc. scandals](#) of the early 21st century. I was never taught about that conflict in school, and the conflict exists to this day.
- I now realize that a great deal of the "science" I was taught did not come from carefully produced research but was propaganda that served certain economic and political interests. The [real world of science](#) is a vastly different one than the one I was taught about in school.
- The "War on Cancer" has been waged for many years. It turns out that cheap, harmless and effective [cancer cures](#) have existed for generations and the "War on

Cancer” [is a fraud](#). A great deal of the “warfare” has been directed toward [wiping out those genuine cancer cures](#) in the name of protecting the consumer, but is really done to protect the immensely lucrative [cancer racket](#) from the threat of genuine cures being used.

- Fluoride was in my toothpaste while I grew up, to promote healthy teeth. It was also added to the water I drank every day. I now know fluoride is an [industrial waste](#), added to my water so fluoride polluters could dispose of their waste. Fluoride was originally identified as a pollutant that [destroyed teeth](#) and, in an incredible inversion of reality, scientists working for fluoride polluters magically transformed a tooth-crumbing pollutant into a tooth’s best friend. The fluorine ion also causes [brain damage](#), among other harmful effects.

I was fortunate to be raised relatively free of religious indoctrination, but I received its secular equivalent in my “education.” Was I taught anything that was true? I am not sure. My indoctrination gave me various “mind crutches.” Crutches can help people walk until they no longer need them, but they can also produce cripples who cannot imagine living without them. The mind crutches I was given are seemingly of the latter variety. Why do our educational and media systems produce people with an inverted sense of reality? Apparently, so people can be manipulated via their mind crutches. How do mind crutches work to cripple people’s minds? To a significant degree, they work because they appeal to people’s self-interest and egos, particularly their [vices](#).

If Americans believe they belong to the greatest, most benevolent society of all time, then they can rape and plunder the world’s people (particularly the poor ones) with a clear conscience or only passing awareness, because our international acts are obviously designed to help the world’s downtrodden, right? To question the *assumption* of American benevolence can lead to [cognitive dissonance](#), and few Americans have proven themselves capable of resolving the dissonance by discarding the false beliefs they were indoctrinated with. The truth then becomes *unthinkable*, and that delusional state provides fertile ground for more delusions to take root, the deluded paying an immense price in lost sentience. The human ego explains a great deal of that dynamic, but there are also rewards for playing the game and penalties for failing to. For instance, I do not walk down the halls of my corporate employer and contradict capitalistic dogma. If I did, I would not be there long. The result is that Americans are largely a semi-sentient people who mindlessly repeat the catechisms they were indoctrinated with. A monkey can be trained to wave a flag on cue. Most people never break free and learn to think for themselves on those subjects. I recently encountered the observation that America’s official bird should be changed from the bald eagle to the

parrot, an observation with keen significance since September 11, 2001.

Here are the mind crutches that Americans need to discard (or stop leaning on so heavily) if they want to help a world of abundance appear:

- **Nationalism;**
- **Capitalism;**
- **Organized Religion**, particularly its literalist forms;
- **Scientism** - the worship of the methods of science as the only valid path to knowledge, also related to worshipping the scientific establishment;
- **Materialism** - the worship of the material world as the only reality, also related to hoarding material wealth;
- **Rationalism** - the worship of the rational aspect of intelligence as the only important attribute of intelligence, also related to the denigration of intuition.

The above doctrines are all based on the scarcity principle, as they exalt one group at the expense of others. The first three do it quite obviously, the other three more subtly.

People cannot help an abundance principle take root when their minds are mired in scarcity consciousness.

The first three doctrines have been prominently used to justify violating others and have fostered egocentric delusions that provided the justifications, such as the Chosen People, wealth elitism, the [Promised Land](#), [Manifest Destiny](#) or its successor [Lebensraumpolitik](#). Those first three mind crutches form the triune faith of most Americans. Scarcely an American can be found who does not regularly kneel at one of those altars. In nationalism, we are elevated above other nations by virtue of our being born here. My [American Empire](#) essay was partly intended as an antidote to American nationalism. The essays in [this section of my website](#) are intended as an antidote to capitalism, which might be the most *inefficient* economic system yet devised, as it is quickly destroying the planet and provides the rationale for doing so. Every organized religion is to some extent a corruption of the vision the religion in whose name was erected. In Christianity in particular, kneeling at the right altar is the ticket to heaven,

and those kneeling at the wrong altars (or those not kneeling at all) are condemned by the Almighty. People having [near-death experiences](#) or those who have learned to [explore other planes of existence](#) do not describe anything like a [gatekeeper to “heaven,”](#) and those in “[hell](#)” are there because they *want to be*, and leave when they are no longer *attracted to it*. The scarcity principle is ingrained into our societies in ways that can seem invisible, such as our sports and games, where there is almost always one ultimate winner and many losers.

Those last three doctrines are interrelated and subtler than the first three. Those holding to Enlightenment ideals (I will call them Enlightenment doctrines in this essay) often subscribe to those three. People can easily pursue experiences that show how false and limiting those doctrines are. All three doctrines have the denigration of consciousness in common. Consciousness, in those doctrines, is seen as dependent on biochemistry, and the rational aspect of consciousness is the only one considered important, and phenomena such as intuition, emotion or love are minimized. History’s greatest physicists [did not subscribe to those doctrines](#), and anybody can easily be trained to experience [paranormal phenomena](#), clearly demonstrating that chemistry-based consciousness models are woefully deficient. Those subscribing to Enlightenment doctrines often ignore or dismiss evidence that we are not alone in the universe and are regularly visited by [extra-terrestrial civilizations](#). For instance, over the past generation more than three thousand people have witnessed UFOs appearing on request at a Washington ranch. I went to see for myself this year, and [I was not disappointed](#).^[2] Those subscribing to Enlightenment doctrines also tend to dismiss the notion that the world’s political-economic system is managed by surreptitious means, usually dismissing the notion as a “[conspiracy theory](#),” and almost always deny that the [Above Top Secret](#) world even exists, preferring to focus on the [bureaucratic aspect](#) of covert action. I discovered that many who are great at describing our immense problems *do not want to hear* about solutions that topple their [scarcity-based paradigm](#).

As [R. Buckminster Fuller](#) observed, economics has always been the name of the elite game, with politics a mere byproduct; all political actors are “stooges” of the economic interests. Today’s most radical political and economic ideologies are still based upon the scarcity principle, and all political systems have been primarily concerned with [who gets the scarce resources](#). Pursuing free energy (or significant alternative energy) is the most radical economic act on earth today, and only when an effort becomes “threatening” do activists encounter the Big Boy gatekeepers. The [billion-dollar bribe](#) we were offered to stop pursuing free energy is not a “conspiracy theory” but the reporting of our *experiences*. Also, those pursuing that path at a level where they threatened to

make an *economic impact* all report [similar experiences](#). There is no theory about it, but that situation has never been constructively engaged by any political faction that I have encountered, and I have encountered just about all of them.

Pitfalls and Unproductive Paths

Experience may be the *only* teacher, and the pitfalls and unproductive paths presented here are those I have experienced myself or heard of from first-hand participants. Just as teenagers often think their parents do not know anything, many in the free energy community whom I have tried cautioning with tales of pitfalls have denied their relevance as they blithely headed for those very same pitfalls. It has not been easy to watch. For a teenage boy, learning some of life's lessons the hard way is part of growing up. When pursuing free energy, learning those lessons the hard way often means having one's life destroyed, if not prematurely ended. Only those with the crazed persistence of a [Dennis Lee](#) get to make the attempt more than once. I learned many of my lessons the hard way, and seek to help others avoid learning them the hard way.

Here are some of the more important pitfalls and unproductive activities that I have seen.

Denial - This pitfall kills most free energy efforts before they get very far. The denial relates to many facets of the free energy conundrum (such as that the Big Boys even exist or are vigilant). Because the free energy arena is like no other, denial of how it operates is common and can be fatal for its participants. For instance, except for my years with Dennis, I have spent my entire career in corporate America. The free energy scene only vaguely resembles how corporate America operates. Thinking it does is one of the many pitfalls that free energy activists encounter. Believing in the fairy tales of capitalism and nationalism is particularly dangerous for somebody pursuing free energy. The most harmful denial often relates to denying that the pitfalls listed below even exist, or can be leapt over or run past too quickly for them to matter.

Delusions of grandeur - I have yet to meet a human without an ego. When pondering the implications of free energy, the situation's immensity can seduce the ego. Delusions of grandeur can take root, and one must always be vigilant of them. I had fleeting delusions of grandeur during my days with Dennis, and I have seen the bug bite others fiercely.[\[3\]](#)

Seeking “humanitarian assistance” and rich benefactors - All free energy efforts

have always operated on a shoestring, and all have tried raising money somehow. Each fundraising method has its pitfalls, and the most futile one I have seen is seeking a rich benefactor. If a rich person genuinely tries helping out, they [quickly get a horse's head in their bed](#), get their [money seized](#), and so on. More often, the “benefactor” tries controlling the effort from the outset or stealing the technology/company or [waits like a vulture](#) for the opportunity to take over when they smell easy profits. Dennis has interacted with numerous billionaires and has never seen one part with a dollar relating to helping free energy happen. They all seem to heed Bill Gates' dictum, “You don't get rich by cutting checks.” “Humanitarian” groups often hamper efforts like developing free energy, in a bizarre situation where the biggest obstacles to realizing the solutions are the people who say they seek solutions.

Needing a paycheck - This is related to the above pitfall, and is the primary reason I have pursued my Website work as I have. If people in a free energy venture must immediately be paid for their efforts, they are already defeated. Economic need kills most free energy efforts, and when I saw all the [employee theft in Ventura](#), it was because the company owed them *one week* of wages. I have seen that need come in many guises, and if a significant free energy effort ever becomes viable, it will be due to people who are giving, not getting. That is *why* there is a free energy conundrum - there have not been enough people involved who are more interested in giving than getting. If the people involved are starving or need regular, corporate-sized paychecks to be involved, the effort is doomed before it begins.

Greed - Dealt with at length [above](#).

Naïveté - I fell into that pitfall regularly during my journey with Dennis. It took some time to wake up to the free energy milieu's reality. Most people will have to negotiate that pitfall to get very far along the path. The most common reaction I have heard to the free energy conundrum is also the [most naïve](#), which goes like this, “If this was possible, I would be able to buy it.” That statement reflects a belief in the magic of capitalism, where the best, brightest and most benevolent always triumph. Not even [Adam Smith](#) believed it. It also reflects a belief in the [fairy tale of American nationalism](#). Disbelief is the most common reaction to the [billion-dollar bribe](#) that we received, and engineers and technical professionals often prove to be the [most naïve of all](#), as [Bucky Fuller](#) observed. Mailing off [working free energy prototypes to the Big Boys](#), hoping for a tickertape parade, gets the wrong kind of attention. Naïveté can be a fatal pitfall in the free energy pursuit.

Seeking specialist opinions - One on hand, seeking specialist opinions may seem

prudent, but on the other hand, most scientists, engineers and technical professionals undergo heavy indoctrination disguised as learning and can rarely think past their [textbooks](#). For instance, there have been credible experimental results that call into question the [Second Law of Thermodynamics](#). That “laws” of physics even exist shows how much like a religion physics is. There are no “laws” of physics, only theories. The first person to perform those law-defying experiments [died in a U.S. prison](#), with the U.S. government destroying his equipment. A scientist who related to me his own experimental results [was murdered not long ago](#). While what Thomas Kuhn called “[normal](#)” science is an honorable and necessary part of scientific endeavor, and those performing normal science are firmly wrapped in their paradigm and rarely glimpse beyond it or comprehend evidence that [challenges their paradigm](#). Less than 1% of scientists and engineers have the creative insight and discrimination needed to successfully evaluate novel experimental data or technology, and the best of them are always cautious about saying that something is “impossible,” which my [first professional mentor](#) taught me. Thinking that a physicist or engineer is qualified by their orthodox training/experience to evaluate free energy technology or theory is the height of folly. Some of the most irrational responses to my work have been by engineers, scientists and academics, and some of their most illogical responses have been regarding areas where they claim *expertise*.[\[4\]](#)

Failure to separate the wheat from the chaff - Because few with scientific or technical training can properly evaluate novel theory, data or technology, it does not mean that nobody can. Finding those people is difficult, however, and there are many garage mechanics and electronics tinkerers who think they invented a free energy machine. As [Adam Trombly once noted](#), there are many in the new energy field who have never done anything productive and often say that nobody has [made them an offer they cannot refuse](#). Those producing pedestrian results are not made those offers; the Big Boys are not stupid. Navigating between the bogus and the genuine is a perilous endeavor for free energy activists. There is far more chaff than wheat out there, and some is even fraudulent chaff, although not nearly as much as [Mr. Skeptic](#) would have people believe.

Thinking that low integrity people can be “managed” - When the [BPA Hit Man](#) approached Dennis’ company in 1985, Dennis suspected that he was not who he presented himself as. Dennis thought he could “manage” him, and actively misdirected him. When the hit man’s actions [cost one of Dennis’ employees her life](#), Dennis became radicalized in his pursuit of alternative energy. I became a pile of frayed nerves a few months after [the raid on our facilities](#) in 1988, and a business associate asked Dennis if

he could become his new protégé. Dennis knew that the man did not have the required integrity for the job but took him on anyway, while cautioning him that he would probably betray Dennis one day. Dennis says that only nice guys have betrayed him, as the cutthroats never get close enough to stick their daggers in his ribs. Instead, his “friends” always shove the daggers into his back. That opportunity for betrayal came a few months later, and that protégé [gleefully helped destroy Dennis’ company](#) while he was in jail. A major problem with people of less-than-high integrity in a free energy effort is that any success attracts the predators. The predators are not only agents of the Big Boys, but also the standard predators that populate America’s entrepreneurial waters.^[5] The magnified temptations and dangers of the free energy environment easily corrupt people of less-than-high integrity. Managing people of low integrity in a free energy effort is like holding a faulty bomb with the fuse lit - you cannot throw it far enough away, and it might still blow up in your hand. The [latest instances](#) I encountered of low integrity people and people’s refusal to recognize the danger they presented helped drive me back into seclusion.

Overlooking low integrity because the person has something to offer - This is related to the preceding point. I have yet to meet an altruistic inventor. Discovering that inventors have no more integrity than the general population was the second most important lesson of my journey. *Creativity does not confer integrity*, something I learned the hard way. It took me many years of disillusionment to finally accept the reality. My [first professional mentor](#) is the closest thing to an altruistic inventor that I have met, and my early experience misled me about the real world of inventors. Whether it is an inventor with an intriguing energy prototype or somebody who offers funding or a business associate who offers an alliance, at the first inkling that their integrity is not the highest, severing the relationship immediately and honorably is the best remedy, because when times get trying, those people will betray the effort for personal gain or self-preservation. Many times I have watched people overlook low integrity because the person had something else that might contribute to the effort. It has always backfired when the going got tough, and it *always* gets tough when pursuing free energy.

Thinking that one can run below the suppressors’ radar - A number of free energy inventors and entrepreneurs have tried to [invent in secret](#), distribute in secret, finance in secret and so on. The Big Boys have an impressive [global surveillance infrastructure](#). I have yet to see that strategy work. In fact, secrecy plays right into the Big Boys’ hands, partly because they are masters of clandestine operations (they prefer operating in dark alleys), and secrecy often leads to paranoia and other delusions, helping the projects self-destruct before the Big Boys need to lift a finger. Maybe somebody will run below the radar one day, but so far, it looks like the high road offers much more promise and

aligns with the ideals of openness and honesty. A related notion is thinking that the free energy effort can migrate to some free-energy-friendly nation. I have received that suggestion dozens of times since 1986. I have yet to see or hear of what nation that might be. All national governments are corrupt, and the Big Boys have a truly global reach. There is no place to run and hide. There are also many practical limitations to consider in taking it someplace “safe.” I strongly doubt whether a free energy effort can be launched from a nation that is not already industrialized.

Trying to expose and/or punish the suppressors - The Big Boys are masters of their game, and trying to beat them at it is a doomed strategy. Secrecy, deception, violence, arrogance, avarice - these are their hallmarks. While there have been courageous efforts by [whistleblowers](#) and investigators to expose “bad guys” and/or punish them, the [danger is great](#), and ultimately, they cannot be beaten at their game. Exposing, punishing, beating them at their own game - these are all scarcity-consciousness efforts and are rooted in the victim mentality. Bringing free energy to the world will take an abundance-oriented effort and must transcend the victim mentality to become successful. Of course, that is easier said than done, but changing the prevailing paradigm for the past ten thousand years is not an easy task. If we want love and forgiveness to prevail on earth, we need to live it.

Forming a mass movement around a small and/or weak nucleus - I have burned too much of my life’s energy on building alternative/free energy efforts, to only watch them quickly disintegrate when faced with challenges. If a large nucleus of high integrity people cannot be amassed, then humanity is not ready for free energy and all that can come with it. It would probably be better to make quilts instead of launch onto the path of disaster and martyrdom that efforts of insufficient collective integrity invariably chart.

Forming a movement around ideologies - Trying to form a movement around an ideology, whether it is economic, religious, political, scientific or social is a tacit admission that the movement’s members cannot be trusted to think for themselves, and herding them along under an ideology’s banner will not work, not for bringing free energy to the world. All of today’s earthly ideologies are based on scarcity and most are subtly egocentric, and will not help an abundance paradigm take root. [\[6\]](#)

Telling your family and friends about free energy and the toppling of scarcity-based ideologies - Many readers of my work thought they would introduce their “hip” family members or friends to my work, only to be shocked as they watched their friends and family members go into [irrational](#) tirades against my work. The vast majority of my “peers” - white, educated American men - can only read a few pages of my work before

blowing a fuse. Very few people can currently examine the mass *assumptions* about reality, as the exercise threatens the “stories” we tell ourselves. People addicted to their [mind crutches](#) do not want to confront naked reality, and cannot currently pursue free energy. Again, [less than one-in-a-thousand](#) are fit for it. If that is true, then what is the point of this essay?

What Can Be Done about the Conundrum?

If all those paths of action listed above are fraught with peril or even counterproductive, then what? A family friend was fond of saying, “Let’s do something, even if it is wrong.” The free energy situation *is* a conundrum. The scarcity principle is being artificially enforced on humanity, and the vast majority of humanity will resist the removal of the chains from their brains. I learned important lessons along the way, and some relate directly to the free energy conundrum:

- **Love is *always* the answer**
- **The means *become* the ends**
- **Violating *anybody’s* free will is ultimately self-defeating**
- **If you can, do it with gentle humor**

As [Seth once said](#), actions inconsistent with the ideal will always fail to achieve that ideal. Bringing an abundance paradigm to humanity is as idealistic a project as was ever conceived. However, humanity is apparently not ready for it. Not yet. If we were, we would have it, because there are enough people trying to bring free energy and abundance to the world to make it happen, if humanity was ready for it. But the Big Boys’ shenanigans and the masses’ inertia and easy manipulability are formidable obstacles, the inertia/manipulability being the biggest factors by far.

When the dust settled in [Ventura](#), I realized that if fifty people had banded around Dennis and his technical experts the way that Mr. Professor and I did, we had a realistic chance of making free energy a daily reality for humanity. If it were a hundred, it would have been easy (what I call the [hundred heroes strategy](#)). But there may not be a hundred people to find at that level of commitment. Also, the price it extracts from those few people can be awesome.

We humans are largely locked into our false personalities, which is the herd mentality.

[7] Being a herd member can seem comforting, until the herd stampedes off the cliff. The question I have pondered for many years is this:

Does humanity have to attain enlightenment before it can have free energy and abundance, or can its daily reality help catalyze it?

Can a group of people begin the movement toward abundance by simply becoming aware that it is *feasible*? Such a strategy asks nothing of anybody but that they *think* about it, and perhaps engage in dialogue (and maybe even do some research). If the hundred heroes model is ever tried, those heroes/heroines will need thousands of the awake to provide support. In addition, the Scarcity Enforcement Team will find that strategy more challenging to derail. In some ways, that might seem as futile as the other strategies, but almost nobody can currently even *think* about these issues in an enlightened manner. Until a sizeable group begins *thinking* about the issue, the rest seems futile. Can such a group carry the ball for humanity until they are ready to carry it themselves? This essay seeks to initiate dialogue on that issue, and find more of those needles in haystacks.

Other strategies may succeed, and while some pitfalls are more fatal than others, an effort of direct action by the masses may limp to the finish line while *only* stumbling into the lesser pitfalls, but no effort so far has really had a chance. Are we ready to begin pursuing abundance?

Footnotes

[1] The two successful attempts were the theft of the company, [engineered by my boss](#), in Seattle in 1986, and theft of the company when Dennis was in jail in 1988, [engineered by a business associate](#).

[2] Why only three thousand? Why not three million? The answer says a lot about where America is these days.

[3] For instance, when I was briefly with Dennis in 1996-1997, one of his volunteers previously volunteered for another prominent free energy inventor. One day, the volunteer took a nature walk with that inventor and that inventor confided that he thought he was the Second Coming of Christ. That admission spooked the volunteer, who came to Dennis' organization soon thereafter.

[4] Recent examples have been various forums where my work has been discussed, particularly in the energy realm. I present examples of intriguing technologies in my work, such as [here](#) and [here](#), and I have watched engineers and scientists, who *claim expertise in the energy field*, dismiss them as of no consequence, although one was called the world's most effective engine design by a major federal study, and the other is the best heating system the world market has yet seen. Such reactions by scientists and engineers used to amaze me, but now I accept them as normal. Some of my colleagues have had access to academics that run world-renowned science institutions and to others in the scientific establishment's inner sanctum. My colleagues' reports have not been encouraging, as they encounter dogma, arrogance, complacency and a host of vices avidly cultivated by the scientific establishment's authorities.

[5] This quote has been attributed to Howard Scott and others: "A criminal is a person with predatory instincts who has not sufficient capital to form a corporation." Dennis has encountered thousands of them over the years in America's entrepreneurial waters.

[6] Even the scientific worldviews are often subtly egocentric, such as the current Creation Story as portrayed by the Big Bang and Evolution. Humans are the crowning flower of evolution in that scientific worldview, and religious ideology, such as the Judeo-Christian religions, present humans as the apple of God's eye. Whether coming from scientists or religionists, the basic message is the same - humans are the best the universe has to offer, and all inferior beings can be treated accordingly.

[7] The [Michael Material](#) deals at length with the [false personality](#) and human ensoulment.

[Footnotes](#)

A Note to My Readers: This is an introductory essay that links to parts of my website that contain the detailed support for my contentions. If anything in this essay seems unfounded or superficial, I suggest taking the related link to the more detailed discussion. This is one of several “doorway” essays to my 1,200-page site, and is [not intended to be a stand-alone essay](#), at least stand-alone enough to convince readers new to the ideas presented in this essay. I also am [limited by my American heritage](#). Non-Americans may find that this essay has limited relevance and usefulness, particularly those from nations where English is not the official language. For non-Americans, I define *radical left*, particularly as compared to *liberal left*, at this footnote.^{[\[1\]](#)}

Introduction

This open letter has been gestating for seventeen years, ever since I began reading [Ralph McGehee's memoirs](#) and [Lies of Our Times](#), which [Ed Herman](#) edited. Before long, I was reading everything I could by Noam Chomsky, including [Manufacturing Consent](#), subscribing to [Z Magazine](#), [Covert Action Quarterly](#) and other progressive periodicals. I began enlarging my home library, which today includes several hundred volumes devoted to political writings – largely radical left texts. Due to my adventures while pursuing alternative energy, I became radicalized *before* I encountered the radical left, so their work was relatively easy to digest, although it took me about two years to really understand what Chomsky was saying. I have received more political education from Chomsky and Herman's writings than from any other body of work.

My alternative energy experiences began more than thirty years ago, when my first professional mentor invented the [world's best engine for powering an automobile](#), and continued when two paranormal events ([1](#), [2](#)) radically changed my life's direction and landed me in what is arguably the [most significant attempt yet made](#) to bring alternative energy to the American marketplace. I became partners with the Indiana Jones of alternative energy, and was in for a wild ride. I bounced [back-and-forth](#) across the United States, ending up in my hometown of Ventura, California. My adventure culminated with our company being offered about a [billion dollars to cease](#) our pursuit of alternative energy, and then being wiped out after we refused it. Being bludgeoned was a nightmare, with my partner [spending two years behind bars on fabricated charges](#) and many lives being [shattered in the process](#), including mine. It was my radicalizing experience.

No alternative energy of significance is publicly available today, and that situation is not due to a lack of viable technologies. During my adventures, I came to understand that free energy – virtually limitless, non-polluting, forever renewable, no-operating-cost energy – [has existed for generations](#), but has been suppressed by the same interests that wiped us out. Those people essentially run the world. Steven Greer, who is a leading free energy activist and has had a similarly [arduous journey](#), met with factions of that global-controlling group about fifteen years ago, and they informed him that they had paid out [\\$100 billion in quiet money](#) over the past few generations to ensure that technologies such as free energy and anti-gravity do not become publicly available.

Those payouts are part of their [“benign” tactics](#). That controlling group begins playing rough only after fools like us refuse their buyout offers and/or survive their subtle methods of sabotage. I realized long ago that the technological aspect of free energy is not the most important one. The political-economic dynamics seem most important, by far, and many in the radical left are in a position to comprehend them.

After my radicalizing experience, I spent 12,000 hours of unpaid labor performing the research, writing and editing (some professionally hired) that resulted in my 1,200-page [web site](#). However, no matter how thoroughly and conservatively I have documented my journey and the reality I witnessed, the public’s reaction has been one of denial and indifference about 99% of the time, with [personal attacks](#) fairly common. People cannot experience the alternative energy milieu’s reality from their armchairs, TVs, computer screens and cubicles, so those in denial pretend it does not exist if they are aware of the situation at all, even though it affects their lives, humanity and the planet profoundly. After years and years of largely futile interaction with the general public, I became selective about whom I interact with. A disinformation specialist [has also been stalking me on the Internet since 1997](#).

Some prominent rad lefties have taken my work seriously when I have written about American mythmaking, such as turning [Christopher Columbus](#), [George Washington](#) and [Junípero Serra](#) into national heroes, but their interest has been mild when I have tried to engage them on alternative energy realities. The radical left is one of the few groups I know of that *might* constructively engage the alternative energy field’s reality. I have [never seen any group](#) beyond the [small specialist community](#) constructively engage that situation. A healed humanity and planet can be [just around the corner](#), if enough people can only *imagine* it.

Economics, Energy, Scarcity and Abundance

One reason for this open letter is that the radical left regularly engages economic issues, and the human journey rides atop our economic reality. Scientists often have a [better understanding of economic reality than economists](#), who tend to homogenize everything with money, perform their abstract analyses and produce misleading results. Energy runs the world economy and always has, and the recent Peak Oil controversy has brought the issue into sharper focus. Richard Heinberg has been the leading Peak Oil spokesman in progressive circles, and an interview with him appearing in *Z Magazine* inspired two essays ([1](#), [2](#)) on Peak Oil, scarcity and Heinberg’s work.[\[2\]](#)

Heinberg wrote in a [semi-ridiculing and dismissive manner](#) about free energy, and [then refused to learn more](#) about the very situations he dismissed. Heinberg's solution to the current energy crisis is [eliminating nearly six billion people](#) (any volunteers?). For all of Heinberg's failures to investigate what he semi-ridiculed/dismissed, he and his colleagues understand one issue very well: the industrialized world is entirely dependent on energy consumption, as have [all civilizations for all time](#). From the richest and most educated nations to the poorest and least educated, energy consumption is by far the most important [determinant of their standard of living](#). Americans currently live off the backs of eighty "energy slaves," and they are almost entirely responsible for our status as history's richest nation. Noam Chomsky says that anybody with a functioning brain understands that America's invasions of the Middle East and Central Asia are about controlling the world's fossil fuel supplies. All other factors are of minor importance.

After I finished my web site in 2002, I was introduced to R. Buckminster Fuller's work. Fuller was one of the West's first "comprehensivists," and developed a multidisciplinary approach for viewing the human journey and its potential. Although his work has often been neglected, misappropriated and misrepresented since his death, his comprehensivist approach to humanity's problems and potential is evident in [his written work](#). Only those who see the big picture can envision and pursue the big solutions, and Fuller noted that specialization in science and other pursuits tended to blind those specialists to the bigger picture. Fuller said that such over-specialization was intentionally encouraged and made the [scientists slaves to the ruling class](#). It is another variation of the divide-and-conquer game.

Fuller stated that humanity had reached the technological level a few generations ago whereby we could make an unprecedented transition from a world based on scarcity to one based on abundance. A world based on abundance is necessarily based on energy abundance. Fuller understood the political-economic dynamics that Chomsky has been writing about for many years, but [waited until late in his life](#) to begin writing about them, probably to avoid marginalization. Fuller was also familiar with the global energy racket, and one [of his pupils, Adam Trombly, pursued free energy](#) and barely survived the experience. Trombly is one of many who have tried bringing free energy to humanity, and all have [been prevented from doing so](#).

Not only is there active suppression of anything that can upset the energy racket and the greatest lever for controlling humanity, humanity readily plays into the racketeers' hands. Fuller provided a plausible explanation why people such as Heinberg *refuse to imagine* abundance and instead propose hyper-austerity "solutions" to humanity's

problems. Fuller wrote that for almost the entirety of human history, only one-in-a-thousand people lived to a ripe old age, and only one-in-a-hundred-thousand became an economic success, so [scarcity and failure](#) have been deeply embedded into human consciousness. All the previously proposed Utopias and solutions such as Heinberg's have been based on shared austerity, and [Fuller noted that they have always been doomed strategies](#). The only Utopia with a realistic chance of success is based on abundance, and an abundance-based economic system is perhaps the only chance we have of averting global catastrophe. Fuller said that if humanity's scarcity paradigm was not overturned by the 1980s, our chances of survival [might be less than 50%](#). His estimate might be accurate, which is partly why I am writing this essay. It would not take much effort to topple the scarcity paradigm, but first people must *imagine* it.

If all humans had access to a thousand "energy slaves" and their use caused nobody any harm, including the environment, that abundance-based reality will beckon. I have [spent more than thirty years pondering it](#), and I know that I can barely imagine what it would look like. However, I discovered during my journey that humanity is currently addicted to scarcity and most people are truly [afraid of abundance](#). The radical left may be in position to begin making the change, and what follows is why.

Why the Radical Left is in Position to Make a Difference

It took a gradual awakening, culminating with my radicalizing experience at the hands of the energy gangsters, to understand that the reason why we do not have free energy today is because [personal integrity is the world's scarcest resource](#). It was the primary lesson of my journey, and a sobering one. If humanity cannot muster sufficient collective integrity, we may be doomed. A world civilization with people such as [George W. Bush](#) on center stage will not survive much longer. People's level of caring also seemed directly related to how much awareness they displayed.

After my radicalizing experience, I researched, wrote and edited my web site. The process was often spent comparing my "education" while young to my adult investigations. Much of what I was taught as a child and young adult was a compendium of lies, whether it was the "[news](#)," [history](#), or my [professional training as an accountant](#) and its related economic "[education](#)." I began seeing a common thread, but not until I read Fuller's work could I fully articulate my perception: my indoctrination was designed to imbue me with egocentric, scarcity-based ideologies. I was white, male, intelligent, educated, scientifically trained, American, human and a capitalist, and each

designation elevated me above my fellow creatures, in order to justify exploiting them, usually economically. If I was a Christian, that could be added that to the list, because only Christians go to heaven.

Those scarcity-based ideologies undermine a person's ability to comprehend an abundance paradigm. The people I encountered had invested their economic survival strategies and egos into their ideologies, and anything that challenged their position was to be avoided at best and attacked-and-destroyed at worst. Very few could or would comprehend that they were ignoring/attacking the keys to healing the planet because they would make their survival-oriented ideologies obsolete. I came to call those scarcity-based ideologies "[mind crutches](#)." Greer recently made [almost exactly the same observation](#).

Laying aside those scarcity-based ideologies is necessary for imagining a world of abundance. Some ideologies are [blatantly obvious](#) in their scarcity-based nature, while others are [subtler](#). I eventually learned that only those with sufficient integrity can question their indoctrination and eventually lay those mind crutches aside. What immediately struck me when encountering the work of [McGehee](#), [Chomsky](#), [Herman](#), [Howard Zinn](#) and friends was the high personal integrity evident in their work. In their analyses, they always pointed the finger toward themselves, which is a basic ethical principle that few actively practice. My initial impression of their integrity was reinforced when I eventually contacted them: they have all been among my most gracious correspondents.

Until abundance can be imagined, it cannot be pursued, and the global controllers realize this. Perhaps their greatest triumph in preventing free energy and abundance from becoming a reality has been making the ideas *unimaginable* to the vast majority of humanity. The radical left is in an auspicious position to begin imagining abundance, because they have already cast aside the [most crippling mind crutches](#), such as nationalism, capitalism and organized religion. Other ideologies must also be cast aside, which can be difficult, because ideologies do not seem like ideologies to those adhering to them, but *reality*. *Beliefs* come from being *told* something is true. *Knowledge* comes from the *experience* of something being true.

Overcoming Ideological Barriers to Comprehension

The American ideologies which are obviously scarcity-based – [nationalism, capitalism](#)

[and organized religion](#) – comprise the triune “faith” of most Americans, and are seemingly impossible for people to relinquish these days. In times of fear, politics shifts to the right, not the left, as people become more [self-centered](#) for survival reasons. If most Americans are currently [addicted](#) to their scarcity-based ideologies, then what? Even in these days of expensive energy, [energy wars](#) and [Al Gore](#) playing spokesman for the idea of human-induced global warming, nobody on the global stage is even *hinting* that there may be solutions that dwarf all others. For somebody who has [survived](#) the suppression efforts of those who manage the global energy paradigm, it is surreal that virtually nobody is mentioning practical *solutions* to our civilization-threatening problems.

What follows is a discussion of the subtler, scarcity-based ideologies that have trapped most scientists, intellectuals and the educated. Those subtle ideologies are more insidious than the obvious ones, as they seem to have solid logical and empirical bases. However, my experiences and research have shown me that they sit on foundations nearly as flimsy as those that support nationalism, capitalism and organized religion. Some of those subtler ideologies can be summarized under the categories of [scientism](#), [materialism](#) and [rationalism](#).

The Myths of Science

An august MIT academic recently stated that he never saw a scientist say how science should be done – they just do it. I doubt that professor ever encountered [Carl Sagan](#), Isaac Asimov and the “[skeptics](#),” because he would have heard plenty about how science is *supposed* to be done, and the difference between “real” science and “pseudoscience.” Sagan devoted a great deal of his professional life to attacking “[pseudoscience](#)” and its practitioners. With disturbing frequency, Sagan’s attacks were dishonestly performed. [My Internet stalker](#) is a prominent member of the “skeptical” community, and his work’s [dishonesty](#) is its most salient characteristic.

Sagan’s “skeptical” work is a prime example of *scientism*, which is the belief that the methods of science comprise the only valid path to knowledge. In scientism, science itself is made an object of worship. The so-called scientific method is like democracy and free markets – ideals that have never been seen in the real world, similar to unicorns.[\[3\]](#) In the West, the official creation story used to be in the book of Genesis, with God saying “let there be light,” and Adam being created from mud, and Eve from

Adam's rib. To a significant degree, the Big Bang and evolution is Western science's answer to Genesis. The Big Bang is as fantastic as anything in the Bible, with everything coming from nothing in an instant. Astronomers have [challenged the notion of a Big Bang and expanding universe](#), and the most prominent Big Bang heretic had to leave the U.S. to pursue his theories. Darwinian evolution [also has its problems](#).

The idea of understanding the universe through one's physical senses and logic has existed at least since the ancient Greeks. The Catholic Church eradicated the Greek teachings in the West as pagan, but when the "[Reconquest](#)" of the Iberian Peninsula began almost a thousand years ago, the great Islamic libraries of Moorish Spain became available to Christian scholars, beginning with the Christian conquest of Toledo in 1085. [\[4\]](#) The ancient Greek teachings were then gradually reintroduced to the West. Those Greek teachings helped lead to the Renaissance, Protestant Reformation and diminution of the Church's power. From Roger Bacon in the 1200s to [Francis Bacon](#) in the 1600s, logic and empirical investigation gradually rose to prominence. During the Enlightenment of the 1700s, science and reason largely supplanted religion as the interpreter of how the universe functioned, and by the late 1800s, scientific inquiry had fully triumphed over religious dogma. The rise of science was integral to the [Industrial Revolution](#).

However, science began acting like a religion from the early days, and its terminology reflects it. Today, we have "laws of physics." There are no laws of physics, only theories, but to call a theory a law invests it with a quasi-religious certitude, and today's scientific establishment punishes its heretics with the same zeal as medieval inquisitors did, if not with the same inquisitorial equipment. For instance, the so-called [Second Law of Thermodynamics](#) has significant experimental data that calls it into question.

However, the initial discovering scientist of a possible second-law-defying phenomenon (who had Einstein's interest) had his equipment destroyed, his books *burned*, and [died in a U.S. prison](#). Ironically, he was a Jew who escaped Hitler's Germany, and as he watched his books burn in a U.S. government bonfire, he expressed his dismay that after escaping Hitler's Germany, he never suspected that he would see his books burned again. I encountered another scientist (from MIT) who produced experimental data that contradicted the hallowed Second Law of Thermodynamics, and he was [murdered](#) in 2004.[\[5\]](#) I believe that the dire fates of those scientists who challenge the entrenched dogma may be best understood by comprehending the political-economic dynamics surrounding those "laws" of physics.

An informative example of how theories become prominent, dogmatized and the

foundation of economic rackets is Louis Pasteur's career. He was a chemist whose life's ambition [was becoming rich and famous](#). His initial discovery that led to fame – [discovering chiral molecules](#) – may have been his discovery, although [Pasteur's published account of his discovery](#) was self-serving. Pasteur's forays into biology and medicine, however, are haunted by the suspicion that he may have plagiarized others in his quest for fame and wealth, [Antoine Béchamp](#) most notably. A Harvard professor wrote a book in the 1970s that demonstrated how the story taught to college students about Pasteur's first triumph in the life sciences – his disproval of spontaneous generation theory – was a deplorable example of “[Whig history](#)” in science, where students are taught expedient fairy tales. A [review of microbiology textbooks](#) written a generation after that formidable work demonstrates that Whig history is still practiced regarding Pasteur's triumph. Howard Zinn [capably wrote](#) about how damaging such “history” is to those who believe it.

Such mythmaking about Pasteur is not innocent, and economic empires have been [built on the Pasteurian paradigm](#). The fairy tales about Pasteur may be far more damaging than those told American schoolchildren about [George Washington](#) and [Christopher Columbus](#) because Pasteur apparently had a poor understanding of what he may have plagiarized, and his work arguably placed modern medicine on a false foundation. His [germ theory of disease](#) may be [critically flawed](#), vaccines [probably do far more harm than good](#) (if any good at all), the short-lived antibiotic age [may soon come to and end](#), and harmless, cheap and effective [cancer and other disease treatments](#) have been developed by those pursuing biology and medicine beyond the Pasteurian paradigm. The doctors and scientists who pioneered and used those treatments have been subjected to breathtaking [suppression efforts](#) by organized medicine.

The life sciences and medicine are rife with that kind of mythmaking and outright lying in the service of economic empires. For instance, today's orthodox cancer treatments do not [extend the lives of those they are used on](#), but make many billions of dollars each year for the medical establishment. Similarly, the most lucrative surgery in America, coronary bypass surgery, also [does not appreciably extend the lives](#) of those it is used on. If those immensely lucrative treatments do not extend the patients' lives, can we call them complete failures, particularly since they are also agonizing treatments? Also, can we suspect that those worse-than-worthless treatments are also part of a racket, especially when treatments that *do* extend the lives of the patients, and do so cheaply and harmlessly, are mercilessly suppressed? Does it really [stretch the imagination](#) that far to suspect that the right and left hands are aware of each other and may be directed by the same brain?

Life sciences are not as “hard” as the physical sciences, so maybe we really *know* something in the physical sciences. By the late 1800s, the rationalist-materialist paradigm was firmly entrenched as the West’s new “religion.” Scientists believed that they were [dealing with the real world](#) with their methods. Then something strange happened. An obscure, 26-year-old Swiss patent clerk proposed the *special theory of relativity*, and twentieth-century physics was born. Everything became relative, with no absolutes, except perhaps change. A generation later, a number of young scientists proposed a theory to describe how atoms behaved. Quantum physics was thus born, and one of its cornerstones was the *uncertainty principle*, authored by a 23-year-old scientist whose theory became clear to him during a fevered weekend. Relativity and quantum theory are the two primary pillars of today’s physics. Einstein and Heisenberg had to thank [flashes of creative insight](#) for their theories, not cold reason. I have known some of the [greatest inventive minds of the 20th century](#), and they also had instants of creative insight to thank for their breakthroughs, not reason.

The most influential study of the scientific milieu in the past fifty years is Thomas Kuhn’s *The Structure of Scientific Revolutions*. Kuhn was *another* MIT academic, and he coined the modern definition of the term *paradigm*. Kuhn argued that scientists did not adopt new paradigms because of the persuasiveness of the scientific evidence, but because scientists [chose to believe the new paradigm](#). The dominant theories of today’s physics arrived through moments of intuitive insight and state that everything is relative, that little, if anything, is certain, everything changes, and that scientific paradigms prevail because scientist have *chosen to believe in them*. Of all of today’s theories of physics, Einstein had perhaps the most confidence in the [Second Law of Thermodynamics](#). If that one falls, which ones might not? The so-called Second Law helps define the scarcity-based paradigm that prevails today among the scientifically trained.

Einstein and Heisenberg were, to one degree or another, [mystics](#), as have been almost all of physics’ giants. Einstein believed that the universe was [intelligently designed](#), and he cheerfully admitted that modern science knew almost nothing about how the universe worked. Einstein and friends largely rejected the West’s rationalist-materialist paradigm. Isaac Newton is considered history’s most influential scientist, but devoted most of his life to alchemy and [likened his work to a boy playing on the beach](#), being diverted with pebbles and shells, while the vast ocean of the universe had yet to be explored. James Jeans wrote that the twentieth century’s breakthroughs in physics demonstrated to scientists that they were still imprisoned in [Plato’s Cave](#), still [watching shadows on the wall](#). If the leading figures of the hardest of sciences did not believe that

the picture that science tells us depicts *reality*, why should anybody else? A mystical/[spiritual](#) perspective has nothing whatsoever to do with organized religion, and organized religion is often the mystic's greatest assailant. [Ken Wilber](#) argued that the giants of physics became mystics because they had seen how science failed to explain the universe. It may be the other way around, and their mystical orientation produced their breakthroughs. Nearly everybody whom I respect in the free energy field is also, to one degree or another, a [mystic](#).

There are many related dogmas that accompany the rationalist-materialist paradigm. Two common reactions among the scientifically trained to the idea of intelligent life existing elsewhere in the universe are that it would not or could not come here. That first reaction is a projection of human motivation onto extraterrestrial intelligent life, in a vacuum of knowing just what may influence such extra-terrestrial thinking, and the second projects our primitive understanding of the "laws of physics" onto what technologies are "possible." Both objections beg the question. [Two years ago](#), I stood in a field with aerospace and military personnel and watched intelligently piloted, almost certainly extraterrestrial (ET), craft reveal themselves in the sky on request. [I went again the next year](#), and received a similar show. There is still [debate and controversy](#) on an issue that is easily settled for those who simply go see for themselves.

Greer is also a leading ET activist, because ETs and free energy are conjoined. Greer staged U.S. Congressional hearings on the ET issue in 1997 (co-chaired by Apollo 14's Ed Mitchell, and they had several hundred witnesses willing to testify, mostly military personnel) and he nearly died soon thereafter of artificially induced cancer, while other members of his team [did not survive the experience](#). In the early 1990s, he briefed the [sitting director of the CIA](#), and the sitting [U.S. president](#) avidly read his briefing materials. He was then invited to meet members of the group that runs the world, and they told him that sitting U.S. presidents and CIA directors were [completely ignorant](#) about how the world is really run. They also told him about the [\\$100 billion in quiet money](#) they have paid out to prevent free energy and related technologies from becoming publicly available.

That [recently murdered free energy scientist](#) resigned from MIT in protest when he discovered that MIT had fraudulently manipulated its experimental data in order to dismiss cold fusion. [Arthur C. Clarke](#) called the dismissal of cold fusion possibly one of greatest scandals in the history of science.

The ideologies of [scientism, rationalism and materialism](#) are all scarcity-based and have

served to straightjacket the minds of scientists and others into believing what is possible and what is not, and those blinded scientists have almost completely abandoned a principal tenet of scientific investigation, that of *observation*. The scientific establishment ridiculed reports of [Edison's light bulb](#) and the [Wright brothers' airplane](#), claiming that both were “impossible,” and could not be bothered to go see it for themselves. Such mindlessness is [alive and well today](#) in the halls of science and technology, and may well be worse today than it was in the days of Edison and the Wright brothers. I have had numerous interactions with physicists and scientists regarding free energy realities, and I can never get them dislodged from their armchairs long enough to look into it. Instead, they engage me in circular arguments that run like this:

1. Free energy is contrary to the laws of physics and therefore impossible;
2. The suppression of free energy is an unbelievable conspiracy theory, and you can't suppress something that does not exist;
3. If you can give me a working free energy device that I can study, then I might believe that free energy is possible;
4. If you cannot give me a free energy device, it means that free energy's impossibility is the most likely reality, not its suppression, because I cannot imagine anybody wanting to suppress something like free energy, even if it was possible;
5. Thank you for your time, but my armchair is very comfortable; I'll sit here and wait for you to deliver me a free energy machine, but I doubt you will deliver one to me, because such a device is impossible.

I had a similar exchange with a famous person in the high-tech field in 2006. After more interaction with various people in 2006, something I had seen Herman and Chomsky write about finally became clear: most people are [incapable of being rational](#) when their survival-based ideologies are challenged, *especially* those who fancy themselves to be intelligent and educated; their defense mechanisms are just slightly more sophisticated than most. That situation leads to the question of whether humanity is really a sentient species, and if so, if sentience really means much.

The reasons for such responses from the scientifically trained, I believe, are several. One is that many scientists have mental and physical attributes that have been described by many terms over the years, including “nerd.” As psychology has been “advancing,” they have found that the qualities that make people “nerds” are partly a reflection of their particular talents. There seems to be a range of these qualities, with autism on the far end, Asperger's Syndrome next to it, with hyperlexia and other “disorders” nearer to “normal.” People in the *autism spectrum* often have unusual

mental and creative abilities, but also tend to have poor social skills and other problems (such as clumsiness or poor dexterity). Today, it is surmised that Newton, Einstein and Bill Gates had/have symptoms that place them in the autism spectrum, possibly with Asperger's Syndrome. Those scientists in the autism spectrum relatively easily understand the abstract concepts common to math and science, but can be oblivious to body language and other cues required to socially navigate. They consequently tend to have poor social lives and a stunted understanding of the human condition. That dynamic is probably related to the [naiveté of scientists](#) that Fuller observed.

Another reason is their political indoctrination. About half of all American scientists work for the military-industrial complex. If we add the medical-industrial complex and civilian high technology, that group probably includes more than 80% of America's scientifically trained. I work in the civilian high-technology field myself, and right wing political views predominate. The military-industrial complex is also heavily right wing in its political orientation. I have many friends and relatives who work in those environments. For instance, one relative works for a military contractor and recently said that the only show that played on the lunchroom television was [Fox News](#), and nobody really seemed to mind. One day, he changed the channel and fled the room when nobody was around. It was turned back to *Fox News* almost immediately. Most people will never overcome their indoctrination, and when their bread is buttered by a highly slanted political culture, there are few incentives to ever learn any differently – except a love of the truth. The likelihood of a scientist waking up to political reality in that environment is almost zero. I have subscribed to *Z Magazine* since the early 1990s, and have read all manner of progressive periodical and book. I cannot recall ever seeing an article in any of those publications that was authored by a scientist in the physical sciences. As Noam Chomsky has discussed for many years, the U.S. military establishment heavily funded American universities during the Cold War, and his fellow MIT faculty are mostly right-wingers.

Ironically, Chomsky's peers at MIT find his political views strange but non-threatening, but a few miles away at Harvard, the seat of the liberal establishment, Chomsky is regarded as the devil incarnate. That is because Chomsky is a true leftist, and his positions expose the [liberal left's](#) fraudulent stances, which are every bit as imperialist as right-wingers' are, but they concoct more humane rhetoric. That Chomsky's work even exists demonstrates that the liberal left's work is not very left at all, and is just more apologetics for empire.

Related to the political indoctrination of the scientifically trained is their economic indoctrination. I work near Microsoft, almost in sight of Bill Gates' house, and the prevailing economic viewpoint of Microsoft employees is a belief in the unbridled "free

market” as they try to get rich by working for a monopoly. They also have strongly “libertarian” views.

In summary, scientists and technical professionals receive ample rewards from their membership in America’s more lucrative establishments, and rarely have the motivation, ability or opportunity to successfully study evidence that contradicts the paradigms they have been indoctrinated into. In addition, there is often a genuine fear of straying from the herd, and great rewards reaped for quietly serving in their soft berths. That is not a pointed indictment of scientists, as this dynamic has long been observed to be [common to all Americans](#), if not all people. Few have [ever had a productive reaction](#) to the evidence of how the energy racket really works. The danger is thinking that scientists are *less* susceptible to such irrationalities, when sometimes they are *more* susceptible. Very few of them [have what it takes](#) to effectively investigate/evaluate/pursue free energy.

Conscious Control of the World Economy

My baptism-by-fire in the alternative energy field taught me many lessons. That the [global controllers existed and were vigilant](#) was not my journey’s big surprise, although they inflicted great suffering onto us. My big surprise was how easily humanity plays into their hands, and my primary delusion took me [the longest to shed](#) because I did not want to believe what I was seeing. I finally had to admit it, after having my face rubbed in it for years. To revisit the [high ethical ground](#) that Chomsky and friends regularly stand on, the most ethical position regarding the situation is not to focus on what *they* do, but on what *we* can do. The global controllers cannot be beaten at their game, and [exposing them is a perilous and probably futile task](#). The best we can do is making them obsolete.

When numerous family members and friends attacked and/or abandoned me and/or my partner, as he sat in jail and I was going bankrupt, I was in shock and dismay for a long time. I thought they knew what motivated *me*, if not my partner. In their worldview, only criminals go to jail and greedy get-rich-quick artists usually get what they deserve, and they chose to believe the blatant lies spewed by the [prosecution](#) and [local media](#) over my testimony. Some never even asked for my side of the story, because the newspaper and TV news are obviously paragons of truth. Greer cited a similar situation [with an ET whistleblower and his son](#). The son thought his father was crazy, until he encountered the identical situation during his career. If sons think their fathers are crazy for telling the

truth about what is really happening, what chance does somebody like me have of convincing the general public about the stark realities behind the world economy?

When I began engaging the public via the Internet after publishing my original website in 1996, people's reactions were educational. They either completely denied that the kinds of suppression efforts we were subjected to even exist, or they believed the global controllers were *the reason* why we do not have free energy today. In my experience, neither perception is accurate. I estimate that the global controllers and [their antics](#) only account for about 5-10% of why humanity does not benefit today from free energy, anti-gravity and an abundance paradigm.

Putting golden handcuffs on ten thousand people is an impressive effort, and [\\$100 billion dollars](#) is a tidy sum. The global controllers have probably also spent hundreds of billions of dollars on their surveillance efforts and bludgeoning people like my former partner and me. They have a lot of blood on their hands. Half a trillion dollars, however, is a pittance to pay for ensuring that humanity is mired in economic scarcity and easily manipulated. Far more important is how humanity plays along. In 1984, George Orwell wrote that the masses could throw off the elite manipulators like a horse shakes off flies, if they woke up only a little.[\[6\]](#) After the ordeal in Ventura was over, I realized that a [hundred people of high commitment and integrity](#) could easily bring free energy to the public. I also slowly realized that those hundred people might not exist. Therefore, I have [tried a strategy](#) that is less risky to its participants – it only asks that people become *aware*. If enough collective sentience and integrity can be applied to merely attempting to understand and discuss the free energy milieu's reality, it may catalyze enough awareness so humanity can go over the top. However, I have yet to find a group willing to lay aside its scarcity-based ideologies in pursuit of a healed humanity and planet.

As I began reading Chomsky's work and digesting the radical left's perspective, it quickly became evident that structural analysis was preferred over "conspiracy theories" to explain how the world works. I noticed a visceral, almost violent, aversion amongst the radical left to the notion that aspects of the global political-economic system are consciously managed through surreptitious means. I also noticed that, with rare exceptions such as [David Edwards](#), there were no religious people among the radical left's members, and the rationalist-materialist paradigm seemed firmly entrenched, as it is with most scientists.

In early 1989, before I mortgaged my life to help free my partner from jail, [I met a policeman](#) who helped prevent me from wasting my time begging the federal

government to intervene. His advice directly led to my partner's release from jail. That policeman also [wrote a book](#) about his adventures in Southern California, adventures that he [almost did not survive](#). In his book, he recounted an extraordinary event that transpired in late 1963. The policeman was Audie Murphy's friend. Murphy was [America's most decorated war hero](#) and a friend of Bill Decker, who was Dallas County's sheriff. Jack Ruby shot Lee Harvey Oswald as he was being transferred to Decker's custody. In December 1963, Murphy, Decker, my policeman friend and his partner met with a frightened John Tower, who revealed Oswald's true involvement in the John F. Kennedy assassination: Oswald was a military intelligence operative involved in a covert operation led by E. Howard Hunt that [planned to stage a fake assassination attempt](#) on JFK and pin it on Cuba, to justify invading it. The operation somehow backfired, and a fake assassination attempt turned into a real one.

When I read that story in 1989, it spurred my interest in the JFK assassination. Since then, I have read about ten thousand pages of JFK material and analyzed a great deal of the JFK assassination evidence. The center-of-gravity of my research was comparing how the evidence fit with my friend's story. I never found any piece of credible evidence that contradicted his story and, over the years, new evidence has sometimes provided stunning validation of it. For instance, Hunt's brainchild seemed like an offspring or parallel effort to [Operation Northwoods](#). After I wrote the first draft of this essay, Hunt's "deathbed confession" was [published in Rolling Stone Magazine](#). While his confession's veracity is suspect, even doubted by his son, it is another strand of evidence that makes it increasingly difficult to swallow the "lone nut" story of the JFK hit. In 2006, I became aware of serious investigation into the Tower/Oswald story, and I briefly joined the [best discussion I have encountered on the issue](#). One impressive investigator informed me that he also knew of no reason why the Tower/Oswald story would not be true.

Because of my proximity to the situation, I was about 99.9% certain that Oswald was not JFK's "lone nut" assassin. The goal of my JFK research was never to "solve the crime" and unmask the conspirators, but to challenge the legitimacy of a system that produced the fiction known as *The Warren Commission Report*. It has been educational to see how various factions have dealt with the issue. Chomsky wrote a book that debunked any possible CIA motive for involvement in the JFK hit.^[7] Parts of his thesis I tend to agree with, because the CIA's leadership *may* not have been behind the *real* assassination. However, the JFK hit created a small firestorm amongst the radical left, with Michael Parenti criticizing not only Chomsky's analysis of the power structure's motives regarding JFK, but Parenti also wrote that the left had a "[conspiracy-phobia](#)."

I immersed myself in the JFK assassination evidence and interacted with the

independent researcher community. There are undoubtedly disinformation specialists in the JFK researcher community, both free-lance and on somebody's payroll, and many varieties of establishment defenders. However, as with free energy, the collective behavior of the sincere JFK researchers may be the biggest reason why they have not gained much traction on the issue. I became involved with other "conspiratorial" milieus, such as the [controversy surrounding the moon landings](#), and I have interacted with independent researchers of the [events of September 11, 2001](#). I had seen enough similarities to [generalize about what I saw](#). With striking similarity to people's reactions to free energy, few have had balanced reactions to the idea that Oswald was not a lone nut or that the attacks on America on 9/11 may have been at least partly an inside job.

On JFK, the radical left has largely dismissed any relevance of JFK's death to U.S. foreign or domestic policy or world events, so they do not really care if JFK was murdered by Oswald or not. The liberal left is less dismissive of an American president's significance, but generally cannot bring itself to believe that our government has covered-up the evidence that shows that Oswald did not act alone. The right wing has its factions too, and one of their predominant themes is that JFK's presidency was some kind of Golden Age, and the American nation has been going straight down the toilet since his murder. Those perspectives can be endlessly debated, but what interested me was the radical left's aversion to the idea that such events might be consciously orchestrated. I have now seen it many times in leftist writings. [An astute, longtime observer](#) of Chomsky's work and the fervor surrounding it believes that Chomsky accepts the official stories of JFK, 9/11 and [Pearl Harbor](#) partly due to his "need to ensure a minimum level of personal security in his professional life, in other words plain survival for one who is consistently challenging conventional assumptions." If true, it is understandable and something that Chomsky may not even be consciously aware of.

Not long after 9/11, *Z Magazine* [made its editorial position clear](#): it preferred structural analysis largely *to the exclusion* of the consideration that power structure members consciously orchestrated events towards a desired end. In [their article](#), Stephen R. Shalom and Michael Albert provided some common critiques of the conspiratorial mindset and how it can go astray. However, they also use labels such as "conspiracy buff" and "right wing crazies" as they dismiss the evidence that 9/11 might have partly been an inside job. Other leftists have produced startling, Limbaugh/Coulter-style invective regarding those who consider the "inside job" angle of 9/11. George Monbiot, who seems more [liberal left more than radical left](#), [wrote in The Guardian in February 2007](#) that to even consider the "inside job" aspect of 9/11 was to become a "gibbering idiot" ([here is a rebuttal](#)). Alexander Cockburn, one of Chomsky's colleagues and an

editor of *Counterpunch*, [which I consider one of America's best political publications](#), has launched vitriol at the “[9/11 Conspiracy Nuts](#)” and other “conspiracy buffs” for a long time. Ironically, *Counterpunch* has recently advocated the “[Israel knew about 9/11 in advance](#)” theory. The Israel-involvement theory is no more or less tenable than many other 9/11 angles, but it appeals to Cockburn's political sensibilities ([here is a competent response](#) to those articles).

My point here is not to debate the [facts of 9/11](#) or the [JFK hit](#), but to demonstrate how the radical left's position on those issues is *ideological*. In [their article](#), Shalom/Albert explicitly state that “religious beliefs are not rational or scientific,” as they observe that “conspiracy theorists” tend to behave like religious zealots when confronting contrary evidence, and that such theories “lead us to counterproductive and wrong priorities,” and they state near the end of their article that “If everything is under the control of powerful and incredibly evil forces, there is no point in fighting injustice.” They seem to be saying that even acknowledging those “evil” people and their deeds is to land on the slippery slope that leads to hopelessness and paranoia. As anybody knows who has actually *played at the high levels*, those “evil” people indeed exist, but their control is far less than total, and is really not that much control at all. For the herd's size, the shepherds' task is surprisingly easy.

Greer has encountered those who clandestinely run the world and became aware of activities that he will not disclose publicly, except in passing, [because they are so horrific](#). [\[8\]](#) Again, very few have a healthy and balanced reaction to that situation. Most deny that such people and activities exist. Those that suspect or *know* they exist try to expose and/or punish the perpetrators. Both reactions operate from the victim principle, not from a position of responsibility. A [spiritual perspective](#) may be necessary to both acknowledge the situation and put it in its proper context, but those operating within the rationalist-materialist paradigm seemingly cannot accomplish it. Those “bad guys” are an integral and arguably necessary part of the human family, and cannot be beaten at their game. Making them obsolete and becoming immune to their manipulations seems to be the only productive strategy (and one that can eventually redeem them too), a strategy that few have attempted.

There is a vast and crucial difference between placing appropriate emphasis on a phenomenon and downplaying/denying its very existence. “Conspiracies” exist, on a scale that can be difficult to comprehend for those who have not been on the receiving end of such efforts. Pretending they do not exist misses the bigger picture. For instance, about the only reason I mention the global controllers' efforts to suppress free energy, anti-gravity and related technologies is to answer the [most common response](#)

that I receive to my tale: “If free energy devices were possible, I should be able to buy one.” Most scientists [respond with something similar](#). Such responses reflect a belief in the [magic of capitalism and the greatness of America](#), two pillars of America’s triune faith. If people can move beyond their denial (and few do), then most of them have other [unproductive reactions](#).

Some of the more thoughtful rebuttals to the analyses of Cockburn, [Shalom/Albert](#) and friends move beyond the [false dichotomy](#) of structural analysis or conspiracy theories. Peter Dale Scott has been integrating the two perspectives with his “deep politics” analytics, as have others. Here is an [excellent rebuttal](#) to Cockburn and friends’ analysis of the 9/11 evidence. Various commentators have noted that the radical left’s increasingly caustic attacks on the 9/11 researcher community are partly due to the growing irrelevance of political-economic analysis that denies the “deep political” aspect of today’s reality. The good news is that not *all* rad lefties are disparaging efforts that challenge the official version of 9/11. A few years ago, [Howard Zinn](#) signed a [petition](#) that questions the official 9/11 story, as did [Michael Parenti](#). Bill Christison, a former CIA officer and regular contributor to *Counterpunch*, [wrote that attacking the 9/11 researchers was counterproductive](#), and the issue was well worth being made the subject of intense investigation, as 9/11 has been the *casus belli* for all U.S. wars and international aggressions ever since, as well the ongoing shredding of the Bill of Rights.

It took me several years of studying a vast array of material, as well as interactions with many activists from both sides of the divide, to arrive at my current understanding of the conflict between the “conspiracy theorists” and the “structural analysts.” The “conspiracy theorists” are often active members of an organized religion, and Shalom/Albert [compared them to religious fanatics](#). The notion of conscious manipulation of the global situation by the elites is consistent with the cosmology of those religious “conspiracy theorists.” They believe that the universe was consciously created. On the other hand, those subscribing to the rationalist-materialist paradigm almost invariably subscribe to the Big Bang and evolution as *their* creation myth. Even though Einstein [believed the universe was intelligently designed](#), leading radical leftists have dismissed the notion. With the Big Bang and evolution, the universe is one big accident, with nobody planning anything. Consciousness is merely some poorly understood byproduct of chemistry. The competing notions of the universe being created consciously or randomly go a long way toward understanding the mutual antagonism between the “conspiracy theorists” and the “structural analysts.” My worldview has room for evolution *and* creation. The greatest science is the science of consciousness, and until scientists begin factoring consciousness into their equations, they will be playing a small game.

On the energy issue, *Z Magazine* published an article a few years ago that lauded a work of TV *fiction* that depicted the Rockefeller Empire suppressing alternative energy a century ago.[\[9\] Such activities](#) are *happening today*, and are critical to the human journey and our near-term prospects.

The people controlling humanity do not need to micromanage the situation. Only a few leverage points really matter. The primary one, energy, [has run all economies for all time](#). *That* is something that [Heinberg](#) and friends understand. They also know that [human civilization is doomed](#) if we run out of energy. Just as most of the [giants of physics](#) and [those I respect in the free energy field](#) were/are mystics, the global controllers do not operate within the rationalist-materialist paradigm. They have a fairly sophisticated understanding of consciousness and the human condition, and they sometimes use incredible and often [diabolical technologies](#) to keep their stranglehold on humanity. For the initiated, it is obvious that if humanity burned up all the fossil fuels and did not find another energy source to replace it, today's global civilization has several billion "excess" people in it. That is why Heinberg and friends are called neo-Malthusians, and their solution is for humanity to immediately [shed more than five billion people](#).

As people are currently [addicted to scarcity and failure](#), most truly *do not want to hear* about [free energy](#) and the [abundance paradigm](#), and abundance remains an *unimaginable* concept to them. If I had not observed that reaction countless times, I would not have believed it. Under an abundance paradigm, all [scarcity-based ideologies](#) evaporate. If free energy became publicly available, it would be "game over" for the global controllers. They understand that situation, which is why they [offered us about a billion dollars](#) to cease our efforts.

The problem with paradigms is that they rest on *assumptions*, and once *assumed*, principles are rarely examined afterward. That is how scientists tend to be [blinded by the paradigms](#) they were raised with, as [Max Planck observed](#). The rationalist-materialist assumptions can be very seductive, and I have seen irrational dismissals of spirituality by prominent rad lefties, calling it "irrational." Spirituality is not *materialistic*, but can be the [pinnacle of rationality](#), yet the spiritual masters also realize rationality's limits. Again, the [giants of physics](#) did not subscribe to the rationalist-materialist paradigm and their breakthroughs did not rely on rational thought processes. When my mentor [invented the world's best engine in an instant](#), he knew that something other than his intellect was responsible. Scientists tend to call the phenomenon "creativity." I had a [more mundane flash of creative insight long ago](#), and knew it did not come from

my intellect. Einstein was fond of calling that inspiration “God” (as have others I have known), but he did not mean a man in a white beard. Einstein reveled in his “cosmic religious feeling.”

For the American masses, their checks clear the bank, they punch the clock, [watch the tube](#), eat at [McDonald's](#) and are [history's fattest humans](#), but they are also all a few missed paychecks from being homeless. They are Orwell's *proles*. Only when people try to *do something* that might alter the paradigm do the global controllers venture out of the shadows and intervene, such as when they [froze \\$20 billion](#) that some radical activists had in the bank.

In summary, the global controllers exist and they are vigilant, but you will never encounter them unless you begin getting close to the levers of power, and those levers do not reside in governments. Their organization is a deeply private one and does not have a name that you would recognize. They [stand far above](#) the alphabet soup U.S. government agencies, transnational corporations and even international elite groups such as the Bilderbergers and Trilateral Commission. The sitting U.S. president is just another pretty face.

As Fuller said, a new political system is not an answer to our problems. All political actors are “[stooges](#)” of the economic interests. All of history's [political-economic systems](#) have been based on scarcity and will fade away in the light of an abundance paradigm. Becoming radical in economics means solving the energy issue and making humanity's economic pie a hundred times larger than it is today, instead of fighting to preserve/enlarge the small slice that the economic “losers” currently receive. All other economic issues are of secondary importance, and I am asking the radical left to truly get radical. The left's current radical economic manifesto is Michael Albert's *Parecon*, which *does not even mention* energy. There is an economic reality beyond capitalism that is also beyond scarcity.

When Greer's ET witnesses are asked why there is a cover-up, [the most common answer](#) is so that free energy, anti-gravity and other technologies do not make it into the public's hands, and not due to benevolent intent – keeping potentially-dangerous technologies from an irresponsible public – although that argument can be cogently made and is worth considering (here is a [video](#) of him talking about the situation). I have seen leading leftists disparage the entire ET/UFO situation as one of “little green men.” I doubt that such disparagers have actually *tried to see a UFO for themselves*, [which is easy to do](#). Their [ideological objections](#) to the notion that we are not alone in the universe, and that such beings are here, *now*, serve to blind them to the significance of

free energy and its suppression. There is nothing inherently unscientific about those situations and, in fact, those realities shatter the worldview and professional egos of most scientists, just as [The Brookings Institute warned NASA about many years ago](#). People need their feet firmly anchored on the ground in order to pursue these issues. I have watched people unravel when simply pondering these issues, and there is plenty of [chaff amongst the free energy field's wheat](#).

Healing Humanity and the Planet

If you are a radical leftist and made it this far, you may be asking yourself, “Why us? Why would this guy try to interest us in free energy, abundance and conscious control of the world economy, which are all such strange ideas?” I do so because every group I have encountered so far has proven addicted to their scarcity-based ideologies, and they leave the job to somebody else to pursue the truth and bring free energy and abundance to the world. *Not enough people care enough*. Explaining the predicament that humanity finds itself in today is as simple as that, something I [learned at great personal cost](#). There seems to be a greater proportion of people with high integrity in the radical left than in any other group I have encountered. I hope the radical left has what it takes to develop a discussion of such novel concepts as [abundance](#) and a realistic Utopia. I *know* it is feasible, but one person or ten cannot make it happen, not with the global controllers’ vigilance and the masses’ inertia. [A hundred heroes could](#), but I do not advocate that approach either. How about if thousands of the awake and awakening simply discuss it? That may be enough. I do not ask that anybody accept anything on faith. If a worthy discussion is started, I will invite some *highly* qualified people to it.

I was once a board member of the [New Energy Movement](#), founded by a former astronaut. They are currently [beseeching the American government for help](#). While I honor their motivation, in today’s environment that approach, like all others I have seen, has a faint chance of success. This open letter can be seen as a complementary attempt in pursuit of a healed humanity and planet. I have not seen *any* approach that seems likely to succeed in today’s world, but we keep trying. [Sometimes the miracle happens](#), but it generally manifests for the persistent.

The ideas presented in my work are easily explored. People come from earth’s four corners to a [ranch in Washington State](#) to watch UFOs reveal themselves on request. Discovering your mystical abilities is easily done [with a little training](#). I do not need to

convince rad lefties that such ideologies as [nationalism, capitalism and organized religion](#) can be very limiting and damaging. The radical left has an advantage over those still worshipping at those altars. Can anybody think of anything with more potential than bringing free energy to humanity? Is there anything close?

Using the world's scarcest commodity, personal integrity, to bring about an abundance-based reality is a paradox, which is not necessarily a bad thing; Niels Bohr said that [wrestling with paradoxes](#) is where scientific progress is made.

I also must present a concept that is at odds with the attitudes of many radical activists. It relates to realizing ideals. Bringing an abundance paradigm to humanity would dwarf everything that came before it. It can be [difficult to imagine](#) what a world based on abundance would look like. It is as idealistic a project as was ever conceived, and [the means become the ends](#). I have seen too many in the radical left, all men, [advocate violence as a solution](#). Humanity has a deep-seated belief in violently redressing grievances, and I have seen prominent rad lefties advocate coercing the elites (AKA "enemies") into relinquishing their power. What they have yet to understand is that the elites' power has been *given to them* by a humanity that refuses to accept responsibility for the world they live in. The relationship is symbiotic, if dysfunctional. Coercion and violence [only lead to more](#). As a great master once said, the way to [utterly destroy one's enemies is by loving them](#).

If enough people simply became aware and made sufficient noise about free energy and abundance, the global controllers would probably disappear. They live in the shadows and cannot abide the light of day. With enlightenment, there does not need to be any "struggle."

The human condition these days is not pretty, and virtually every activist I know of, who has played at the high levels, has become [disgusted with humanity](#) at some point on their journeys. To one degree or another, they all recovered from their dismay and disgust, and I believe that their larger, usually mystical, perspective was instrumental in their recovery. An enlightened mystic sees the divine spark in us all, and fanning that spark into flame has been the goal of all spiritual masters.

Free energy, abundance and a healed planet [can be just around the corner](#) if enough of us can only *imagine* it. Is anybody interested in discussing these ideas and pursuing the evidence supporting them? It does not take very many of us to [help humanity over the hump](#) and heal the planet in the process, and I hope that some of them may hail from

the radical left.[\[10\]](#)

Peace and well being.

Footnotes

[\[1\]](#) The United States was founded during the era of classic liberalism, as exemplified by Adam Smith's writings and those of other Enlightenment philosophers. Classic liberalism immediately became a dominant American ideology, with considerable and enduring influence. Classical liberalism is notable for its focus on rationality, personal freedom and its deep intertwining with economic theory. What we today call radicalism was born in the same era as classical liberalism, and it took the ideas of liberalism further and tended to challenge the legitimacy of all governments and economic institutions. Radical means "going to the root."

In these neo-Orwellian days, the terms "liberal" and "conservative" have been often stripped of their original meaning and even inverted at times. Radicals tend to operate from a cleaner slate than liberals do, by rejecting more mass assumptions. An informative recent contrast between liberals and radicals, both in the United States and Britain, has been their stance regarding the American-British invasion of Iraq. Liberals have tended to align with the mainstream in defending the American/British right of unilateral invasion in defiance of the entire world (while [none of the official rationales have withstood scrutiny](#)), while radicals reject the notion on principle. Recent liberal (and "conservative" and mainstream) revulsion with the Iraq invasion is that it is "not successful" in achieving its stated goals, not that the entire enterprise suffered from corrupt motivation at the outset. Mounting aggressive wars of invasion was the primary crime that the Nazi officials were convicted of at Nuremburg after World War II. Ed Herman has described those "liberal" invasion defenders as the [Cruise Missile Left](#). Today's liberals also tend to defend the corporate order and capitalism, while sometimes proposing mild reform; radicals tend to challenge capitalism *in toto*. [Parecon](#) is the latest challenge from the radical left to capitalism. Regarding the invasion of Iraq, liberals tend to completely ignore the economic motive for invading Iraq – i.e., capturing the world's most accessible and lucrative energy deposits – while radicals say that the economic motive, as with all wars, [was paramount](#), and extremely so. History often vindicates the radical perspective, and is already doing so regarding America and the West's multiple manipulations and invasions of the Middle East.

American radical leftists have a relatively unfettered view of world events and have discarded the ideological crutches that cripple comprehension in America, such as [nationalism, capitalism and organized religion](#). The liberal left tends to embrace nationalism and capitalism, although usually with less fervor than the mainstream and those subscribing to right wing political-economic ideologies. Right wing philosophies are generally self-serving, while left wing philosophies tend to consider everybody's welfare. I see the contrast as a measure of their [spiritual maturity](#).

[3] Henry Bauer wrote *Scientific Literacy and the Myth of the Scientific Method* to address that issue.

[4] See an easy-to-read presentation of how Greek teachings were reintroduced to Christian Europe in James Burke’s *The Day the Universe Changed*.

[5] This is a subject of immense, if marginalized, controversy. There have been [many theoretical challenges to the second law](#) in recent years (see also [here](#); a more accessible argument is [here](#)).

The data surrounding [Reich’s discovery](#) is controversial, accompanied by the typical acrimonious exchanges at the margins (the conflict between Paulo and Alexandra Correa and James DeMeo being a recent example). However, others have adduced data that brings the second law into question (for instance, [here](#) and [here](#)). Most of the free energy technologies that I am aware of (see, for instance, [1](#), [2](#), [3](#)) of do not violate the Second Law, but are tapping into an energy source that science does not currently recognize, which is called the vacuum and other terms.

[10] I have been asked what would happen if enough people imagined abundance in an enlightened manner. What would the outcome look like? There are many ways it could look. The simplest would be somebody mounting a free energy effort (there are [plenty of potential technologies](#)) and having the support of those who can imagine an [abundance paradigm](#) and realize that free energy would be its cornerstone. It would not even have to be financial help, just the light of their sentience (and they would not stay quiet about it). They would not be easily dissuaded/deluded by the power structure’s suppression efforts. The biggest and most painful lesson I learned was how [low the integrity level of the average American was](#), and how easily an effort like ours was derailed, largely with the help of our “allies.” If a hundred people had supported the effort the way that [Mr. Professor](#) and I did when the gangsters in Ventura lowered the boom (almost certainly at the [global controllers’](#) behest), the effort would not have been smashed, but would have been successful. It could be that simple. Again, a [hundred heroes](#) could do it, but the cost extracted from them [can be rather high](#). I doubt that the hundred heroes exist, but maybe thousands of the awake and awakening [could simply hold the vision](#). The [disinformation](#) and [outright lying](#) about Dennis Lee’s journey has been a significant reason why he has not been able to successfully rebuild his effort. [Sterling Allan’s critique](#) of Dennis’ efforts is the only honest, intelligent and somewhat informed one that I have ever seen, and I have seen a hundred of them. Again, if enough people simply loved the truth enough to pursue it, it might be enough. When the disinformation and attacks come, they hold their vision, because their understanding is rooted in a love of the truth and the desire to make the world a better place. Those who readily believed all the lies and/or helped the “bad guys” bury us do not have the integrity and discernment to help. If enough people came together with sufficient integrity and sentience, taking action will be the easy part, because it will be obvious. The hard part is finding those people.

An Open Letter to the Free Software Movement

Wade Frazier

July 2006

This open letter is written in an attempt to interest some members of the free software movement in an abundance paradigm, and simply be willing to discuss it. If enough people can be found who can simply *think* about an abundance paradigm, it could create sufficient awareness to make it happen. Not only would humanity's current sled-ride-to-oblivion halt, but heaven-on-earth can also manifest. The nuts-and-bolts of making an abundance paradigm a daily reality already exist but unfortunately are suppressed to keep humanity enslaved to a paradigm based on scarcity, something that I learned first-hand long ago.

Many members of the free software movement may be closer to comprehending an abundance paradigm than about any people that I have yet encountered. A member of your community believes that some in the free software movement already comprehend the abundance paradigm, so my task may be easier than I think.

I recently wrote an essay on what an [abundance paradigm](#) looks like and what it does not look like. Economic abundance will be the root of an abundance paradigm. Without economic abundance, almost all other abundance ideas are wishful thinking. I discovered the hard way that [personal integrity is earth's scarcest commodity](#), and have been searching for a high integrity group for nearly twenty years. I believe that personal integrity is *the key* to making an abundance paradigm appear. Personal integrity has obviously fueled the efforts of many in the free software movement's ranks, which is why I am writing this essay.

I am not writing as a theorist, but as an activist. I was involved in the most significant effort that I am aware of to bring alternative energy to the American marketplace. During that bizarre odyssey, I discovered that free energy already exists. By free energy, I mean virtually limitless, non-polluting, zero-operating-cost energy. I recently wrote a [five-page essay](#) that outlines my journey. While some of that essay may seem unbelievable, every significant fact is linked to the pertinent part of my 1,200-page website. I provide support for every assertion that I make, and limit my discussions to facts and ideas that people can prove to themselves.

I am an American and my work is directed largely to Americans, but the dynamics I will relate in this essay have global relevance. The nationalistic fables that the Chinese and Israeli people are raised with will necessarily be different than the nationalistic fables that [Americans are raised with](#), but the goal is the same: controlling what people think. Contrary to the myths of American nationalism, [America's Founding Fathers](#) did not invent freedom. However, ever since the [English civil war in the 1600s](#), the ruling classes of English-speaking lands have had limited ability to control their subjects through violence. Therefore, the ruling classes had to try to control what people thought. Ideological indoctrination [is as old as civilization](#), but controlling what people think has become a science in America, because what they think *does* matter to their ruling class.

The [ideologies that Americans are raised with](#) are based on the scarcity paradigm and are egocentric because they elevate one group of people at the expense of others, and finding one's self on the "winning team" is the primary reason those ideologies find fertile ground. Also, those ideologies are fed to people when they are young and vulnerable, and most people never again question their indoctrination. If those ideologies are challenged, most believers resort to highly irrational defenses of them, a phenomenon [vividly evident in America since September 1, 2001](#). My "peers" - white educated American men - have always been the [most irrational and vicious critics of my work](#), and not many can read more than a few pages without blowing a fuse. That reaction seems to be because I show how our status as history's most privileged demographic group is not due to our unique virtue.

After several years of effort, I realized that attempting to interest the general public in my work was futile for now. I have focused my efforts toward potentially receptive groups for years, but have yet to find that group. Again, personal integrity has been the most important quality to assist comprehension, and those with the highest integrity also have lain aside more of the egocentric ideologies. I have referred those ideologies as "[mind-crutches](#)."

In addition to laying aside the mind-crutches, a critical realization helps a world of abundance appear. Scarcity is the bedrock assumption of virtually every earthly ideology, and scarcity and failure are nearly hardwired into human consciousness, something that [R. Buckminster Fuller clearly saw](#). The scarcity assumption is so deeply baked into human awareness that it is invisible to most people, like the air we breathe. In real terms, all civilizations and all economies for all time have [ridden atop their ability to extract, conserve and consume energy](#), and [civilizations have collapsed](#) when they ran out of energy. Everything else in economics is of secondary importance, and there

are [telling statistics](#) that spell it out very clearly. However, in a world of scarcity, most of what passes for economics today focuses on who enjoys the benefit of the scarce economic production, [not how the production is attained](#).

Today's Americans consume about eighty times the energy that is provided by our diets. That energy consumption is almost entirely responsible for our standard of living. Money, banking, accounting and laws deal with the exchange aspect of economics, and are largely meaningless in a world of economic abundance. Many "radical" ideas in economics focus almost exclusively on its exchange aspect. For instance, Michael Albert's radical economic manifesto, *Parecon*, does not even discuss the energy issue. If everybody on earth had access to a thousand (or hundred thousand) times the energy that their diets provided, the exchange aspect of economics would no longer be the focus of attention that it is today. The economic "radicals" are focused on slicing up humanity's scarce economic pie more equitably, and ignore making the pie bigger. If the pie were a hundred times bigger than it is today, people would not be fighting to enlarge or preserve their slice. With free energy, that quantum leap in the human standard of living could be made with no environmental impact. A [world of abundance](#) can look a lot like heaven-on-earth.

However, the people that rule the world understand the issue of energy and economics and are addicted to "power." Consequently, they have been vigilant to ensure that free energy, anti-gravity and other technologies do not make it into the public's hands. They offered my partner [perhaps as much as a billion dollars](#) to stop pursuing free energy in the 1980s. I call those people the "Big Boys" in my work, and they informed a leading figure in the free energy effort that they have paid out [\\$100 billion in quiet money](#) over the past few generations to prevent people from bringing those advanced technologies to the public. That quiet money is one of their "benign" tactics. When the big carrot did not work on my partner, the Big Boys used the [big stick](#), and they used our corrupt legal system to wipe us out, and I watched many lives get destroyed, including my own. I have since discovered that our treatment was a [fairly standard tactic](#), although more extreme in our case, because we were probably closer to delivering significant alternative energy to the American marketplace than anybody else has ever come.

I do not tell the tale of [our adventures](#) to elicit a piteous response, but largely to address the [most naïve and common response to the free energy issue](#): "If free energy devices really existed, I should be able to buy one." Denial is by far the most common response to our experiences, but almost nobody has ever had a constructive response to the issue. If people can get past denial (by looking into the situation for themselves), they usually have other unproductive reactions.

A key to solving the free energy conundrum is walking the razor's edge of acknowledging the suppression but not succumbing to paranoia, revenge, hopelessness and other [unproductive, fear-based reactions](#). I know of only a handful of people who may possess the qualities needed to lead a free energy effort over the finish line. The "[hundred heroes](#)" model of making free energy happen seems unviable, because those hundred heroes may not exist. I have therefore attempted a seemingly less perilous strategy: educating people on the [free energy conundrum](#) and helping a [vision of abundance](#) take root. However, at this time, free energy and a world of abundance has proven itself *unthinkable* to the vast majority of humanity, a situation that the Big Boys have carefully managed.

My experience is that those who cannot comprehend abundance are leaning heavily on their mind-crutches. Perhaps the most crippling mind-crutch among the technically trained are the "laws of physics." NASA was advised long ago that scientists may be the group most threatened by the [fact of extraterrestrial visitors](#), as their worldview may crumble when confronted by intelligence and technology orders of magnitude beyond our own. Today, anybody can go to a ranch in Washington State and [watch extraterrestrial craft fly by every night](#). If they fly low, our military will attack them. The attacks are not to protect humans from ETs, but to protect the world's power structure from people having access to free energy and related technologies. In fact, the Big Boys have long possessed free energy, anti-gravity and other exotic technologies - largely due to reverse engineering captured ET craft. I know people who have [had such technologies demonstrated for their benefit](#). Experienced people in the field realize that the revelations of free energy, anti-gravity and related technologies [invalidate almost everything we "know" about physics](#). Albert Einstein [cheerfully realized that we know almost nothing about how the universe operates](#), but the scientific establishment's defenders aver [that we have it all figured out](#), which has been a persistent notion for the entirety of science's history. I have known some [world-class scientific and inventive minds](#), and they all had Einstein's attitude about how much we really "know." History's greatest physicists were almost all, to one degree or another, [mystics](#). However, a rationalist-materialist paradigm has dominated the scientific establishment's worldview for centuries. The rationalist-materialist paradigm is a form of religion. It is a subtler religion than what is called organized religion, but it has its priests, popes and [Inquisition](#).

Will the lust for power disappear with free energy's appearance? I doubt it will entirely vanish, but those hooked on their power trip will no longer be able to keep humanity mired in misery so they can play god (also called ruling in hell). Lust for power will not

completely die out, but it would no longer *run the show* in a world of abundance.

There are [many pitfalls on the path of pursuing free energy](#), but the most formidable may be the *unwillingness to even imagine it*. Here are some recent examples of this phenomenon. Richard Heinberg may be earth's most prominent "Peak Oil" advocate. He [writes dismissively about free energy](#), but [declined a friendly invitation](#) to be educated from the inside about the very situations that he dismissed. He frames the world energy situation in a neo-Malthusian paradigm of endless-growth/overshoot-and-collapse. He does not seem *capable* of comprehending an abundance paradigm, and instead [preaches austerity](#) as the only viable solution to humanity's energy situation. After years of interacting with "environmentalists," I realized that they *do not want to hear about free energy*, which could heal the environment like nothing else. Their solution is "let's ride bikes" and other austerity measures (tactics that [Fuller made clear were doomed](#)), and Heinberg has been adopted as one of their prophets. I have largely been in seclusion on the free energy issue for several years, but have lately been entering some public discussions. Not long ago, I was introduced to an anarchist discussion of Peak Oil and the energy issue. Anarchists have largely laid aside the nationalist and capitalist mind-crutches, but [did not present even one thoughtful response to my posts](#). I was quickly dismissed, then ignored. Unfortunately, those have been the standard reactions to my offers to get educated on what may be the most important issue on earth today, by people who say they are seeking solutions. I rarely even hear back from the people I make the offer to.

I have greater hopes for the free software movement, as the ideas put forth by Richard Stallman, Eben Moglen and others neatly align with the abundance paradigm, and in my work I make it clear what three factors led to [humanity's rise on earth](#): energy, manipulative ability and intelligence. The reproduction of intelligence is in its infancy. I consider the free software movement's members to be fellow travelers and possibly much more. I have designed information systems professionally, and have given away a way to use software to immediately and dramatically [raise the standard of living of millions of Americans](#), turning a miserable profession into something much more pleasant. I have yet to find a receptive audience to the idea, but the free software movement can help make it happen. Technically, making my idea come to fruition would be easy. Is there any interest in dialogue?

Peak Oil, New Energy and the End of Scarcity – Making New Energy Thinkable

By Wade Frazier

December 2004

[Summary](#)

[Fossil Fuels, Economics and Peak Oil](#)

[Catton, Heinberg and Malthusian Philosophy](#)

[Can New Energy Help Topple the Scarcity Paradigm?](#)

[Making New Energy Thinkable](#)

[Footnotes](#)

The following essay is designed to give a broad overview of the issues. Far more detail is readily available at the links in the footnotes, or in the companion essay at this [link](#).

Summary

SCARCITY OR ABUNDANCE

Energy Paradigms

The end of oil as a primary source of energy (perhaps forty more years of remaining production) to run the world's industries and provide us with the necessities of life is a foreseeable reality. The quest for new energy sources and applications should be the responsibility of corporations and governments everywhere on the planet. An examination of the problems and possibilities in the development of "new energy" and the benefits of its reality is a worthy and vital endeavor in answering the question "What do we do when the oil runs out?"

Historically, efforts by “new energy” pioneers have been met with “resistance” (to put it mildly) from global oligopolistic energy (mainly oil) interests. Furthermore, many new energy pioneers and alternative energy advocates have tended to focus narrowly on pet theories or projects to the exclusion of valid sources promoting a comprehensive and real solution to the energy problem. Indeed, these efforts have combined to make obvious truths, alternative viewpoints, and possible solutions *unthinkable*. The reality is that new energy exists, is unlimited, forever renewable, non-polluting and can free the world from a paradigm of scarcity and introduce it to one of *abundance*.

A FEW EXAMPLES OF NEW ENERGY ABUNDANCE APPLICATIONS

Polluting energy could be replaced by clean energy for all of humanity’s current applications of it, such as for providing transportation and running homes and businesses. In addition, new applications that are currently not pursued due to energy scarcity would become feasible, such as:

- Unlimited amounts of ocean water could be desalinated and pumped overland to provide for all of humanity’s water needs and turn deserts into gardens, and have about zero impact on the oceans. All water can be purified before being sent back into the environment (or being infinitely recycled), for about zero environmental impact.
- Mining waste in the procurement of industrial minerals can be eliminated. Almost any patch of earth could be turned directly into glass, steel, and aluminum, with virtually no waste. Further, the mined elements could be infinitely recyclable, ultimately eliminating the need for future mining.
- New energy, combined with the efforts of synthetic sciences and infinite recycling of organic molecules (or synthesized) can eliminate the need for harvesting resources from the earth, such as wood and fiber.
- With new energy, indoor farms can be made that can have as much water, light, heat and nutrients that crops need to grow, 24/7, with no farmland pollution vented to the environment. Live food (the healthiest kind) would be available to all earthly humans, no matter where they live.

MAKING NEW ENERGY ABUNDANCE APPLICATIONS A REALITY

There are numerous problems to making new energy a reality, including organized suppression, but the issue seems to hinge on integrity, which is earth’s scarcest and most precious commodity. The hope for making new energy a daily reality may entail gathering people of high integrity, from all sectors, increasing their awareness of new energy viability and

possibilities. If enough of us just think about new energy and its implications, it might create sufficient awareness. Awareness can be the catalyst to *action*.

Fossil Fuels, Economics and Peak Oil

The hydrocarbons known as “fossil fuels” probably began forming when plants captured sunlight via photosynthesis. Geological processes then distilled decaying organisms into what are called oil, natural gas and coal.^[1] Fossil fuels currently provide about 86% of global energy industry production, with nuclear and hydroelectric energy comprising about half of the remainder each, with traditional “alternative” energy (wind, solar, geothermal, biomass, tidal energy, etc.) contributing about one percent.^[2] For people who have delved into the matter deeply, particularly when they have tried impacting the marketplace, it becomes obvious that alternative energy is such a small proportion of global energy production partly due to the workings of real-world capitalism. The global oligopolistic energy interests have ensured that nothing can threaten their marketplace supremacy. In addition, most potential challengers to the oligopolies have largely failed due to their own frailties, with their “allies” often inflicting more harm than the energy oligopolists.^[3] The energy oligopolists rarely have to actively derail threats to their market positions.

Economics is the study of how humanity produces, exchanges and consumes the wealth we create/acquire. Without production, there is nothing to exchange or consume, and production has little to do with money, financial institutions and other modern economic concepts. Today’s popular conception of economics is generally focused on determining who owns what, which is the exchange (accounting) aspect of economics. In a world of scarcity, accounting becomes the primary economic focus. In a world of abundance, accountants are not needed. Today’s economists typically homogenize all economic activity by using money and market prices, and regularly achieve results with a tenuous relationship to reality.^[4] The *real* economy is based upon matter and energy, not money. No single measure of a nation’s economic output is more predictive or descriptive than how much energy it consumes.^[5]

With oil providing nearly 40% of global energy production, it is no mystery why the United States has repeatedly invaded the world’s greatest oil-producing region, just as Great Britain did when they were the world’s imperial overlords (and it is no mystery why Great Britain was America’s junior partner for the recent invasion of Iraq; invading its former colony and America’s new one). The United States, with less than 5% of the world’s population, consumes a quarter of the world’s oil production (and a quarter of all energy industry production), and imports more than half of the oil it consumes. America’s thirst for oil is enough to explain its Middle East policy for the past sixty years, but recent trends put America’s motivation in an even starker light: the world is running out of oil. If oil is the result of life and geological processes, humanity is consuming oil around a million times faster than it

was created.[\[6\]](#) Such a production/consumption ratio falls a bit short of “sustainable,” and the concept of “Peak Oil” has been appropriately gaining notoriety during the past few years.

In 1956, Shell Oil geologist M. King Hubbert predicted that U.S. oil production would peak in the early 1970s. His prediction was widely criticized and dismissed when he made it, but it was accurate: 1970 was the peak year for U.S. oil production, when it stood at nearly ten million barrels per day. The peak year for extraction was forty years after the peak year for oilfield discoveries, which was 1930.[\[7\]](#) American oil production has steadily declined by about 40% since 1970 to less than six million barrels per day today. Hubbert’s methodology has been assailed on many grounds and his estimate denigrated in some corners as “lucky.” However, Hubbert’s professional descendants have used his methodology to estimate when global production would peak, and the answer has consistently been that it would peak in this decade.[\[8\]](#) Global natural gas production may peak in the next decade, and it already has for the United States.

The numbers for global oil production and remaining deposits are not very controversial in the big picture. Competent estimates of the world’s recoverable oil deposits that existed in 1859, when the first oil well was drilled, have long been in the neighborhood of two trillion barrels. Humanity has consumed one trillion barrels so far, and is currently burning nearly thirty billion barrels per year. Oil company geologists and exploratory wells have scoured the planet. The peak decade for oil field discoveries was the 1950s, when nearly 500 billion barrels were discovered.[\[9\]](#) The last giant oil field, Shaybah in Saudi Arabia (a sixteen billion barrel field), was discovered in the 1970s. There have been no major discoveries since 1980, and global oilfield discoveries peaked in 1964. Once discovered, oil fields cycle through a well-established pattern of extraction, with production peaking when about half of the recoverable oil has been removed.

Those issuing optimistic estimates for remaining oil deposits often are subject to oil industry influence, which gives them conflicts of interest.[\[10\]](#) The optimists usually cite marginal sources such as “shale oil,” “sand oil” and other costly and difficult-to-extract hydrocarbons (and environmentally disastrous to produce). While optimistic estimates reach up to eighteen trillion barrels of globally recoverable hydrocarbons, the kind of oil extracted and burned today amounts to perhaps three trillion barrels on the high side, with the two trillion barrel estimate more likely. Promoting marginal sources of hydrocarbons reflects a typical pattern of resource depletion. When the cream has been skimmed, inferior sources are exploited until exhausted.[\[11\]](#) Iraq’s high quality oil is also about the world’s easiest to produce, with an extraction cost of about a dollar per barrel. American oil interests have coveted Middle East oil for a long time and have now wrapped their arms around Iraq, at prodigious cost to Iraq’s people.[\[12\]](#)

Even if the optimistic estimates of three trillion barrels of recoverable oil are accepted, it would extend the global production peak by a mere twenty years, and nations such as China are

industrializing, which is spurring demand. At current production rates and the probable estimate of two trillion barrels, the world will run out of oil in forty years. However, the global oil crisis will not begin when the last drop is extracted. Resource depletion crises begin when production begins dropping, and the supply and demand curve causes prices to spike. In 2004, the United States gasoline prices have risen to well more than \$2.00 per gallon, and oil prices rose to more than \$50 per barrel.[\[13\]](#)

Catton, Heinberg and Malthusian Philosophy

One of today's most visible Peak Oil spokespersons, at least among progressives, may be Richard Heinberg, and an interview published in *Z Magazine* was the incentive to produce this essay.[\[14\]](#) I first became aware of Professor Heinberg's work in early 2003 when I read his brilliant article on the trajectory of the industrialized world and its dependence on fossil fuels.[\[15\]](#) I eagerly purchased his *The Party's Over: Oil, War and the Fate of Industrial Societies*. It is a formidable work. The phrase "the party's over" refers to the coming end of the oil era. In his book, Heinberg explored how the exploitation of fossil fuels made the Industrial Revolution possible and how their exhaustion will signal its demise. He explored various energy alternatives, and his preferred energy solution is wind power.

Heinberg largely dismissed an entire class of potential energy solutions. That class of solutions I have been intimately involved with, and is sometimes called "new energy." My interactions with Heinberg in the summer of 2003 bore no fruit in interesting him in a deeper investigation of new energy, and a related essay deals more fully with his treatment of new energy.[\[16\]](#)

I have experienced Heinberg's style of dismissal many times in various venues. Most dismissals were irrational and fearful, which is a strange reaction to the notion of true abundance. Heinberg, however, logically articulated his position, both privately and publicly. *The Party's Over* prominently featured the thesis found in William Catton's *Overshoot: The Ecological Basis of Revolutionary Change*. The *Overshoot* hypothesis is partly based on the idea that humanity came to dominate earth's ecosystems at the expense of other species. That phenomenon is also known as earth's Sixth Mass Extinction, as human activities have been rendering other species extinct on a scale only experienced before during global catastrophes such as asteroids or comets hitting earth. There have been five prior mass extinction episodes identified by scientists so far, the fifth being the extinction of the dinosaurs sixty-five million years ago.[\[17\]](#) Humanity has been causing the sixth one for the past 50,000 years or so, and the pace of extinctions is accelerating as ecosystems are disrupted to support human activities. Earth's climate has been undergoing a recent shift, which may become far more dramatic in the near future.[\[18\]](#)

In nature, animals typically breed to the limits of their food supply, and there are numerous recorded instances, both in the laboratory and in the wild, of animals expanding their populations due to windfall increases in available food. They breed to the limits of their resources, eventually use them up, and then the population collapses as the resources disappear (or they drown in their waste).[\[19\]](#) Thomas Malthus was a British economist who worked for the British East India Company. In 1798, he published an essay which stated that human populations tend to grow faster than the food supply, leaving humanity constantly on the brink of starvation. That observation has been the foundation for what is called “Malthusian” philosophy.

Today’s Americans consume about eighty times more energy than the calories provided by their diets. American agriculture has been estimated to burn around ten calories of fossil fuel for every calorie of food produced. Heinberg and others attribute the dramatic increase in earth’s human population to the exploitation of fossil fuels.

What happens when the oil runs out?[\[20\]](#) Do we use coal to fuel the world (for awhile, at prodigious environmental cost), find other energy sources, or do we experience the overshoot phenomenon and humanity suffers a global population collapse? According to Heinberg, collapse is virtually inevitable and the last chapter of *The Party’s Over* is devoted to managing the collapse. Heinberg’s projected global population collapse is his central theme these days. Estimates of earth’s carrying capacity for humans are around two billion in the absence of the energy provided by fossil fuels. Heinberg estimates it to be less than one billion today, partly because earth’s long term carry capacity has been degraded by human activities, and the choice Heinberg gives his audience is losing humanity’s “excess” five billion people wisely or ignorantly. Heinberg seems to have little optimism that it will happen wisely, with America’s invasion of Iraq simply one of the first wars that will be fought over the world’s dwindling fossil fuel deposits; a situation he calls “plan war.” With such a grim scenario, I was surprised when he stated that he did not want to discuss new energy until it was understood that drastically reducing earth’s human population was the first priority. In William Catton’s *Overshoot*, his prescription for humanity was to “expect the worst.”[\[21\]](#) Catton called “neo-Malthusian” an unfair label to pin on his work, but it seems apt.[\[22\]](#)

Can New Energy Help Topple the Scarcity Paradigm?

Overshoot dwelled on the term “paradigm,” which was invented in its modern sense by Thomas Kuhn in *The Structure of Scientific Revolutions*. Catton made the case for his “ecological” paradigm throughout *Overshoot*, but as Kuhn made clear, no paradigm is necessarily more “accurate” than another. Paradigms are adopted because people believe in them.[\[23\]](#) All paradigms are built on assumptions, so any paradigm must first be evaluated by

examining its assumptions. While trying to preempt the “neo-Malthusian” label being attached to his work, Catton labeled anything not conforming to his paradigm with terms such as “cornucopian paradigm,” “cargoism,” “neo-exuberance,” “cosmeticism,” “Ostrichism,” while calling his perspective “realism.”[\[24\]](#) Analyzing Catton’s assumptions can illuminate the basis of his paradigm, and those his work has influenced.

Catton firmly placed humanity in earth’s ecological systems and noted that through intelligence and tool making humankind was able to populate many previously unsuitable ecological niches. The primary assumption of Catton’s ecological paradigm was that humans have always been and always will be dependent on earth’s environmental “carrying capacity,” which means the amount of “resources” that can be extracted from it on a continual basis. There are numerous assumptions implicit in such a paradigm. Some are that earth’s surface is where life’s primary processes will always take place, with all land-based life dependent on water delivered by the solar-energy-driven hydrological cycle, and all life dependent on the energy delivered by sunlight. New energy can invalidate all of those assumptions, as well as topple assumptions that gird terms such as “carrying capacity” and “resource.”

New energy exists and its reality has been suppressed by a concerted, global clandestine effort, the kind most educated Americans immediately dismiss as a “conspiracy theory.”[\[25\]](#) When one lives through it, however, it is no longer a theory.[\[26\]](#) The primary assumption that Catton, Heinberg and economists operate from is scarcity. They can hardly be faulted for it, as humanity has operated under the scarcity assumption for the past 10,000 years. None of the paradigms Catton portrayed is based on *abundance*, a paradigm where everybody wins. What often passes for abundance is really greed-based, rape and plunder economics. The notion of true *abundance* can be the foundation for a completely new paradigm, and can usher in an era never glimpsed by historic humans.

R. Buckminster Fuller observed that all Utopias that have been envisioned and tried have been based on shared austerity, which is why they never worked and never will.[\[27\]](#) A Utopia based on abundance has never been tried and was not really possible until relatively recent technological advances. New energy can be the foundation of a global society based on abundance.

Nearly every “resource” that humanity relies on today is primarily made available by energy or *is* energy. For a discussion of which “resources” humanity most relies on today, Michael Klare’s *Resource Wars* is appropriate. The “resources” Klare discusses are: oil, water, minerals and timber. *Resource Wars* is dominated by the scramble for the world’s remaining fossil fuel deposits.

Fresh water is currently made available to humans by the solar-energy-driven hydrological cycle. With new energy (unlimited, forever renewable, non-polluting energy), unlimited amounts of ocean water could be desalinated and pumped overland to provide all of

humanity's water needs, and turn deserts into gardens (if we want to do that), and have about zero impact on the oceans. With new energy, all water can be purified before being sent back into the environment (or being infinitely recycled), for about zero environmental impact.

The term “minerals” almost exclusively refers to metals found in earth's crust, which are usually mined and refined today by environmentally devastating practices. Mining waste is largely created because of energy scarcity. Oxygen, silicon, aluminum and iron comprise about 87% of the Earth's crust, with the remainder almost entirely other metals. With new energy, almost any patch of earth could be turned directly into glass, steel and aluminum, with virtually no mining “waste” created.[\[28\]](#) With new energy, those mined elements would also be infinitely recyclable, so mining as an industry would end before long anyway.

Wood, as far as its utility to humans goes, is little more than carbon, hydrogen and oxygen atoms that photosynthesis-driven processes combined into cellulose, which forms the cell walls in plants. Humanity uses wood for structure, its fibers, and the energy released from burning it. There exist methods to infinitely recycle organic molecules.[\[29\]](#) Synthetic molecules are superior to natural ones in many ways, and the science of creating synthetic molecules is still in its infancy. New energy, combined with synthetic sciences and the infinite recycling of organic molecules, would largely eliminate the need for harvesting living “resources” from the earth, such as wood and fiber.[\[30\]](#) Also, many synthetic molecules are toxic, but are made because they perform tasks by using less energy than other methods. With new energy, the reasons for making those toxic synthetic molecules (such as chlorine gas, pesticides, and so on) could also disappear.[\[31\]](#)

Food is humankind's most essential energy source, with caloric energy comprising about eighty percent of what constitutes nutrition. Also, humans, as with all animals, are designed to eat living food. Most degenerative diseases (which cause most deaths in Westerners) are caused by eating food that humans are not equipped to eat.[\[32\]](#) With new energy and the burgeoning materials science, indoor farms are easily made that can have as much water, heat, light and nutrients that crops need to grow, with 24/7 growing seasons (and no farmland pollution vented to the environment), and live food could be readily available to all earthly humans, no matter where they live.[\[33\]](#)

Making New Energy Thinkable

The implementation of new energy can help eliminate all the reasons that Heinberg and friends cite in their arguments for reducing earth's human population by five billion or more in the near future. New energy can also make possible what looks a lot like heaven on earth. In that light, the misleading dismissals of new energy by Heinberg and company require proper rebuttal,

which this essay attempts to initiate. As Noam Chomsky and others make clear, one of the greatest successes of our indoctrination and propaganda systems is to make obvious truths, alternative viewpoints and possible solutions *unthinkable*.^[34] As long as new energy is *unthinkable*, it will never be pursued at a level sufficient to overcome the organized suppression. A primary goal of this essay and its related writings is to help make new energy *thinkable*.

The scarcest and most precious earthly commodity is human integrity.^[35] A recent summation of the American spirit is not pleasant reading, but nobody has convincingly rebutted it and the evidence strongly supports it.^[36] Ignoring or denying that reality is perilous for anybody trying to make a difference in today's world, particularly regarding something as paradigm shattering as new energy. One of the few hopes for making new energy a daily reality may be gathering those rare people of high integrity who can be educated about new energy, its implications, and the multifaceted situation surrounding it. Simply increasing awareness of new energy's viability and possibilities may be all that it takes to generate enough "critical mass" to make it a daily reality for humanity. Where is that high integrity group? I have been looking for it since the 1980s. Some groups seem promising, but what may happen is that people comprising that "critical mass" will come together from all walks of life, with most belonging to no "group" at all

One of the greatest obstacles to seeing the bigger picture regarding new energy appears to be ideological indoctrination. Those received ideologies can seem comforting, but they can prevent comprehension. Among the ideologies people probably need to set aside, if they want to comprehend an abundance paradigm, are capitalism, organized religion, nationalism and any other ideology that exalts one group at the expense of others. Those ideologies are all based on the scarcity paradigm and are all largely self-serving. They are also used by the elites to manipulate and control the masses. Controlling ideologies also extend to areas that most do not immediately associate with ideology. The rationalistic/materialistic paradigm that dominates modern science is an example.^[37]

If enough of us just *think* about new energy and its implications, it might create sufficient awareness to bring it about. Awareness can catalyze action.

Footnotes

^[1] A popular book on oil's origins and how it is "discovered" and extracted is Kenneth Deffeyes *Hubbert's Peak, The Impending World Oil Shortage*, which is also representative of recent works concerned with the looming end of the fossil fuel age. The recently deceased Thomas Gold of Cornell theorized that oil is not produced by organic decay, but was created when earth was, meaning that oil is a non-renewable resource in its strongest sense. Very few in the oil geology field take Gold's theorizing seriously, but Gold may still be right (although I personally doubt it). Gold theorized that

there are hundreds of times more oil in the ground than has been extracted so far. There is some evidence that weighs in Gold's favor, such as very deep wells drilled in Russia, in theoretically unpromising places as far as oil of biological origin is concerned, that have produced oil (and Russian scientists have accused Gold of plagiarizing their work). But even if Gold is correct, the climactic and pollution problems caused by burning hydrocarbons may become even more dramatic in the near future, rendering burning "fossil" fuels disastrous on a global basis. I have yet to see anybody who promotes his theories seriously address that issue.

[2] For 2001, from U.S. Energy Information Agency data. Humanity uses about 400 quadrillion British Thermal Units of energy-industry-produced energy each year. Oil supplies about 39%, coal 24%, natural gas 23%, hydroelectric and nuclear about 6.5% each, with traditional alternative energy providing the remaining 1%.

[3] I was involved in an attempt to bring alternative energy to the American marketplace. The story is told for the first time on the Internet at this link, <http://www.ahealedplanet.net/energy1.htm> and my role is partially told here, <http://www.ahealedplanet.net/advent.htm>. I am not aware of a more significant attempt made in American history. With this first footnote that refers to my work, an issued needs addressing for clarification purposes. This article is not a scholarly exercise, but my 1200-page web site is for the most part scholarly, and the material and discussion that this article's footnotes refer to are where readers can go to find out more, so they can take *those* footnotes and see where they lead. I have attempted to create a body of work that is easily researched for validation and further consideration.

[4] In Deffeyes *Hubbert's Peak*, the disconnect between economists and reality is regularly remarked upon, and is summed up with one anecdote on page 186, where a young economist stated in his lecture that because agriculture and mining comprised only three percent of the U.S. economy, they were matters of little concern. An elderly voice in the lecture hall then mumbled, "What does that genius think we are going to eat?" The Die Off site (<http://dieoff.org/>) discusses the logical fallacies that plague economic theory.

[5] See *Joseph Tainter's The Collapse of Complex Societies*, p. 91. See also data and discussion at this link: <http://www.ahealedplanet.net/energy.htm - economics>

[6] Decaying land plants probably created earth's coal deposits during the Carboniferous era, which ran for 70 million years, ending perhaps 290 million years ago. Oil, however, is probably developed from marine life forms, and has likely had a much longer window of creation. William Catton, in his *Overshoot*, estimated that humanity was burning fossil fuel deposits at least 10,000 times faster than they were created (*Overshoot*, pp. 51-52), but oil deposits may have begun forming 500 million years ago, when abundant marine life appeared. A "mere" 200 million year formation window for most oil deposits is not an unreasonable estimate, and by "oil" I mean what we consider true oil today, not the organic material trapped in shale, sand and other difficult to extract "oil." The two trillion barrel estimate of global oil deposits in 1859 may not be far from reality, and will be completely consumed at current rates of extraction in forty years. So, 200 million years of formation is burned up in 200 years of extraction, for a burn rate of one million times greater than the creation rate.

[7] See Deffeyes *Hubbert's Peak*, p. 138.

[8] See this website devoted to Hubbert's work: <http://www.hubbertpeak.com/>. Hubbert predicted that global production would peak in 1995, which did not quite come to pass, but may be within a decade of being correct.

[9] See Richard Heinberg's *The Party's Over: Oil, War and the Fate of Industrial Societies*, p. 108.

[10] Heinberg's *The Party's Over*, pp. 102-121, ably covers the wildly optimistic estimates issued by the U.S. Geological Survey and the Department of Energy.

[11] For instance, that resource depletion pattern is readily discernable in the short-lived whaling industry, which experienced the world's first oil depletion crisis. See discussion here: <http://www.ahealedplanet.net/simon.htm>.

[12] See discussion here: <http://www.ahealedplanet.net/america.htm> - attacking.

[13] In real dollars, those are the highest prices since the all time high was achieved during the oil crisis of 1980-1981, when the last protracted war was fought in the Middle East, which was the U.S.-encouraged Iraq-Iran war.

[14] See "Plan War and the Hubbert Oil Curve, An interview with Richard Heinberg," by Dave Ross, *Z Magazine*, May 2004, pp. 47-50. His work has become rather ubiquitous, and has been dominating the mindset of many alternative energy advocates.

[15] See Richard Heinberg's "The US and Eurasia: Endgame for the Industrial Era?" at this link: <http://www.museletter.com/archive/132.html>.

[16] See the essay at this link: <http://www.ahealedplanet.net/hooked.htm>.

[17] See a list of those episodes here: <http://www.ahealedplanet.net/timeline.htm> - extinction.

[18] Global climate change is the looming phenomenon that may create havoc not only for earth's other species, but also humanity. Increasing atmospheric carbon dioxide by a third during the fossil-fuel-burning age is the most likely determining variable.

[19] An example that Heinberg and Catton use is that of yeast in wine vats, which experience explosive growth as they digest the rich environment they are introduced to, and eventually die off as they succumb to their own waste products. See *Overshoot*, p. 96, 169. Heinberg used that example in private correspondence, and makes similar observations about humanity in *The Party's Over*. They also describe "detritus" ecosystems that use up decaying organic material until the material is gone. See *Overshoot*, p. 168. Catton calls humanity's use of fossil fuels an immense detritus ecosystem,

which is a novel and accurate way of viewing the situation.

[20] Thomas Hartmann's *The Last Hours of Ancient Sunlight* is a highly readable and holistic, if somewhat mystical, summary of what the coming end of the fossil fuel age may portend.

[21] See Catton's *Overshoot*, p. 262.

[22] See Catton's *Overshoot*, p. 199.

[23] See discussion at: <http://www.ahealedplanet.net/medicine.htm> - introduction

[24] See Catton's *Overshoot*, p. 70.

[25] See this link, for instance: <http://www.ahealedplanet.net/letter.htm> - sweet.

[26] See this link: <http://www.ahealedplanet.net/advent.htm> - hitting

[27] See discussion here: <http://www.ahealedplanet.net/roots.htm> - austerity.

[28] The “waste” materials could be further refined, or combined into relatively inert “rocks.” Also, earth’s surface would not need to be where those buildings reside, but can be on “stilts,” underground, floating on water (or even air, when suppressed anti-gravity technology is made available), so earth’s ecosystems do not have to “make way” for humanity’s artificial environments. With new energy and anti-gravity, possibilities barely dreamed of become viable.

[29] The process was written about the May 2003 issue of *Discover* magazine. The process has been promoted as an energy solution, but it really is not. It is, however, a startling solution to the waste problem. See this link: http://en.wikipedia.org/wiki/Thermal_depolymerization

[30] See discussion here: <http://www.ahealedplanet.net/visions.htm> - forest1.

[31] For a different chemistry paradigm that new energy could help usher in, see discussion here: <http://www.ahealedplanet.net/visions.htm> - chemistry.

[32] See discussion here: <http://www.ahealedplanet.net/medicine.htm> - lessons.

[33] See discussion here: <http://www.ahealedplanet.net/visions.htm> - farms. Also, creating a healthy vegetarian diet that all humans could enjoy (if they wanted to), would be easy with new energy.

[34] An example of Ed Herman and Chomsky’s work in that regard can be found here: <http://www.ahealedplanet.net/america.htm> - vietnam1.

[35] See discussion here: <http://www.ahealedplanet.net/energy1.htm> - burn.

[36] See this link: <http://www.counterpunch.org/publius07152003.html>. They have help, however, from the establishment, in honing their mentality; for a recent summary of the mentality of those who voted for George Bush in the 2004 elections, see this link: <http://www.buzzflash.com/contributors/04/11/con04503.html>.

[Replacing Scarcity Consciousness with Abundance Consciousness](#)

[Footnotes](#)

Introduction

This essay is intended as a companion essay to [this one](#). This essay explores the issues in more depth. In early 2003 I became aware of Richard Heinberg's work and had a brief exchange with him after I read his magnum opus, *The Party's Over: Oil, War and the Fate of Industrial Societies*. His treatment of energy sources not currently recognized by mainstream science (also called new energy) seemed inadequate and misleading, and I tried educating him on the subject. My attempt was not successful. I was not planning to write publicly about Heinberg's treatment of new energy, but he has become a prominent voice in alternative energy circles since our brief exchange. Similar to how the [New York Times](#) is America's agenda setting media, Heinberg's work has come to dominate the mindset of many alternative energy advocates.

Humanity's long journey has [always been primarily defined by its energy usage](#). Our immediate and long-term future is critically dependent on the energy situation, and facile dismissals of promising alternatives such as new energy require rebuttal. New energy can dwarf all other potential solutions, and even catalyze [heaven on earth](#). Mainstream science, politics and media cannot be relied upon to investigate, much less promote, the paradigm shattering solutions that new energy promises. Institutional science has been controlled by vested economic interests in a well-known phenomenon of long standing,

something that [R. Buckminster Fuller](#) remarked upon.

[Thomas Kuhn](#) was the first to use the term “paradigm” to describe how scientists see the universe. Kuhn wrote about “normal” and “revolutionary” science. Normal science is what 99.9% of all scientists do everyday, which is pursuing issues bounded by the paradigm they operate within. Kuhn compared such activity to puzzle solving. Paradigms are essentially worldviews that rest upon assumptions. Kuhn described paradigm shifts in science, which he called “scientific revolutions,” which were based on challenging the prevailing paradigm’s assumptions. The most famous paradigm shift was Einstein’s challenge of Newton’s assumptions of absolute time and absolute space. Relativity theory will one day fall to another paradigm shift, and Einstein expected it, stating that, “every theory is killed by a fact.” Paradigm-shifting work can encounter fierce resistance from institutional science, with [the scientific establishment pursuing its heretics](#) with the zeal of medieval inquisitors. That inquisitorial behavior is an aspect of what is sometimes called [close-minded science](#).

More than 99% of all scientists are presently incapable of the insights required to initiate paradigm shifts, because questioning our *assumptions* about reality is among humanity’s most unusual behaviors. Solitary scientists and inventors have initiated many if not most of the greatest innovations of science and technology, while the scientific establishment fought/ignored them the entire way, often [stealing credit](#) when the innovation became too prominent to be ignored, with the pioneer [dying in obscurity](#) (or worse). Fuller stated that only one in every 100,000 scientifically trained people would make the breakthroughs that will keep humanity advancing technologically, but that one would be sufficient. Institutional science has usually done far more to hinder than assist radical scientific and technological breakthroughs. Two examples are how scientists greeted the [light bulb](#) and the [airplane](#). Those are not irrelevant examples of a bygone era, but the resistance of institutional scientists to novel data and technological breakthroughs is arguably far more pronounced today than it was a century ago.

Today, microbiology students are taught a [utilitarian fairy tale](#) about how spontaneous generation theory was overturned during the 1800s, with the textbooks ignoring relatively recent work that demonstrates how flawed such a presentation is. Such misinformation is not benign, but probably marches students off in the wrong direction on their first day of class. Much of modern disease theory and treatment is based on that questionable foundation. A few days before I began writing this essay, mainstream science once again [stumbled upon evidence](#) that has [long been suppressed](#). Will scientists begin seeing the forest that those trees may belong to?

A materialistic paradigm dominates the scientific establishment, which is ironic given that the giants of twentieth century physics were mostly, to one degree or another, [mystics](#). All too often, scientists and philosophers equate materialism with rationalism, and even rationalism is overrated. Cool rationalism is considered the hallmark of science, but many of science and technology's greatest breakthroughs were initiated through intuitive flashes of insight. For instance, one of my mentors invented what was considered the world's best engine for powering an automobile. The engine's design appeared to him in an instant at a [stoplight](#). The pillars of twentieth century physics, relativity and quantum theory, both came to their authors in [flashes of insight](#).

Because of complacency, corruption and groupthink, institutional science is presently *incapable* of assessing the merits of new energy. The scientific establishment, in interlocking and subservient self-interest with the global corporate/energy interests, which also own America's politicians and [mainstream media](#), is about the last place to look to for an honest and competent assessment of new energy's potential. The Massachusetts Institute of Technology ("MIT") fraudulently manipulated its data in order to dismiss cold fusion. MIT "coincidentally" has been a major recipient of funding for hot fusion research. Arthur C. Clarke called the dismissal of cold fusion "perhaps one of the greatest scandals in the history of science."[\[1\]](#) Most people think that cold fusion was disproven soon after it was announced, although it has been reproduced in hundreds of laboratories across the planet.

With the mainstream being a virtually worthless forum for exploring an issue that may dictate humanity's immediate future, "alternative" venues, particularly those existing on the Internet, assume potentially great significance.

Richard Heinberg's Exclamation Points

Deep in Heinberg's *The Party's Over* he discussed the range of possible alternative energy solutions that is sometimes called new energy.[\[2\]](#) I believe that the only place in his book where he used exclamation points was when putting words in the mouths of new energy advocates. His summation of the milieu was largely confined to noting that Internet discussions of new energy seemed "pervaded" by "paranoia and extravagant claims..." Heinberg's exclamation points came when he "quoted" those making "paranoid and extravagant claims." Paranoia and extravagance are often in the eye of the beholder. I have encountered many paranoid inventors, and they often had good reasons for their paranoia. Paranoia can be an extreme reaction to real events. If an

inventor gets blindsided once, he never knows when he will get hit again (making the term “paranoia” a dubious one to describe their fear), and many inventive minds are also susceptible to Paranoid Personality Disorder. It is an occupational hazard, as genius is often a close cousin to insanity.

Heinberg’s first exclamation-point statement was that the oil companies were buying up “patents and suppressing the evidence!” I know that phenomenon, and there is little paranoid or extravagant about it. A fellow corporate executive told me of investigating that *exact* situation during his [Department of Justice days](#), where the automobile and oil companies conspired to suppress high-mile-per-gallon carburetors. Another friend of mine, an accomplished engineer, began building his own high-mile-per-gallon carburetor, to only discover that the oil and automobile companies indeed [owned all the patents](#). That situation is no “urban legend.” What I have seen in that realm is probably only the tip of the iceberg, and undoubtedly encompasses the suppression of new energy.[\[3\]](#)

Heinberg’s second exclamation-point statement was that the military had created free energy devices using “technology stolen from space aliens!” Perhaps the most promising, global paradigm shifting project I am aware of is Steven Greer’s Disclosure Project. Since 1991, Greer has been rounding up astronauts, military personnel (including generals), politicians, NASA employees, corporate executives and the like to [publicly testify regarding what they know about extraterrestrials](#). Nearly five hundred witnesses have come forward, including the recently deceased Mercury Seven astronaut Gordon Cooper. Many have already delivered highly compelling, first hand testimony under oath to Congress in secret hearings, as well as publicly. Others [have also spoken out](#), often at great risk. In 1993, R. James Woolsey, the Director of the CIA, invited Greer to brief him. Bill Clinton was ultimately a beneficiary of the briefing. Clinton and Woolsey had tried finding out about the secret ET-related projects, and were told that their security clearance was not high enough.[\[4\]](#) Greer has given a fair number of briefings to high-ranking U.S. officials, including many in the military.

Greer has also briefed high-ranking officials from many foreign governments and international bodies, and has yet to receive a scoffing reaction to his briefings from *any* official, either domestic or foreign. The typical reactions are deep concern and often despair as they realize that they can seemingly do little about the situation (they could, if they mustered some courage; but that is a discussion for another time). When Greer briefed the Vatican, a cardinal observed that dismissing the testimony of the Disclosure Project witnesses and the related evidence would be a highly irrational act.

Two main lines of evidence require consideration when assessing the situation. The first line is the direct evidence of contact with intelligent extra-terrestrial (“ET”) life. Greer’s witnesses have testified to recovering downed alien craft and alien bodies, seeing photographs of artificial structures on the moon and elsewhere, and witnessing alien technology shutting down nuclear missiles in their silos and shooting them out of the sky. Some of that testimony [is readily available today](#). The second line of evidence is that virtually all witnesses have reported that their testimony was given in direct defiance of national security laws that they are subject to, or to direct threats to never reveal what they witnessed. The first line of evidence needs to be considered in tandem with the second line of evidence. Most of Greer’s witnesses want a waiver of U.S. national security laws before they will publicly testify. I believe the most compelling testimony has yet to be made public because the witnesses fear imprisonment and other reprisals, including murder.

I have watched people ignore the second line of evidence while trying to dismiss the first. The more charitable dismissals go something like this, “They did not see what they thought they saw.” Such an analysis can only aspire to credibility if the second line of evidence is ignored. If they did not see what they thought they saw, then why were they threatened into silence (a silence that some have already paid a great price for breaking)? The logic that the silence is enforced to protect national security [is not compelling](#). I have encountered the same logic when people have denied/ignored my experiences gained while pursuing new energy.

In 1988, we were pursuing [rather mundane technology](#) to try creating zero-operating cost energy. The technical heavyweights involved with us believed that “free energy” was possible with what we were attempting. It has been satisfying to find scientists saying today that what we attempted is possible.^[5] We were [offered about a billion dollars](#) to cease our efforts, and then [wiped out](#) after we refused it. When critics have told me they were not sure our technology was viable, I responded with, “Whoever offered us a billion dollars to cease our efforts had less doubt about our technology’s potential.” I have yet to receive a response of any kind from those critics to that statement. They act as if I never mentioned the billion-dollar bribe. People are free to dismiss our “claims” of the offer we received, but I have never seen a credible dismissal, partly because they never considered the fact that my former partner mounted what is probably the [biggest run ever made](#) at bringing alternative energy the American marketplace, and we had acquired technology with extraordinary potential immediately before we were wiped out. According to Greer’s sources, the offer we received was simply a day at the office for those who make sure free energy never comes to market.^[6] The larger context must be considered when giving weight to our “claims,” but is

something our critics have *never* competently and honestly done. They have invariably [resorted to lying about it](#) and/or played dishonest rhetorical games. Also, the main purpose of the Disclosure Project or work like mine is not to have our “claims” believed; it is making the case that the situation is *worth investigating*. The Disclosure Project primarily wants a safe venue where its witnesses can publicly testify. The armchair critics (many on the energy interest and “national security” payroll) have also avoided that issue.

I also know a little about the ET technology situation from the inside. When people begin banging on the White House front door and other places of power, trying to bring new energy to the world, they can enter a reality that resembles the *X-Files*. After years of sailing in that strange environment, one of my close associates was given an [underground demonstration of free energy and anti-gravity technology](#). My friend does not even believe in ETs, but he described almost exactly what Greer’s UFO witnesses have testified to, which is the Disclosure Project’s primary upshot. When asked why there is such a [massive cover-up of the ET presence](#), the most common answer from Greer’s witnesses is that it is to prevent free energy and anti-gravity technology from becoming public knowledge, as the “secret government” types and super elites would quickly [lose their economic stranglehold](#) over humanity. I do not know what is paranoid or extravagant about Gordon Cooper, military generals and corporate executives who say they have witnessed such events. There is nothing inherently unscientific about the ET issue. Competent scientists and investigators go where the evidence takes them, leaving their ideological objections and belief barriers at home.

In Heinberg’s discussion of the ET situation and the “paranoid and extravagant claims” made about it, he seemed to cede all power over humanity’s future to the American government. He wrote that because “black projects” and related government activities are surrounded by secrecy and disinformation, it is “impossible” to know what was happening, so it was better to stop speculating about free energy being developed from captured ET technology.

At least in theory, the U.S. government works for the American people. Heinberg avidly proposes that [humanity quickly shed more than five billion people from its population](#), and apparently believes it will not be done wisely.^[7] Heinberg’s “realistic” scenario means that humanity is very likely facing an unprecedented catastrophe, one that will make all previous wars, famines and epidemics seem like tame warm-ups. Greer has nearly five hundred people waiting for enough public awareness to protect them, and they will blow the lid off the subject of the big, permanent solution to humanity’s most critical issue. Those could be history’s most important public hearings. However, those

supposedly serving the common good may have hidden the potential preventive to such a catastrophe behind a veil of secrecy and disinformation. I would rather try getting behind that curtain than encourage five billion people to die off.

Heinberg's third and final exclamation point was that the potential for free energy rode on the shoulders of some "maverick" inventor whose prototype generated a "million times more than it consumes!" There is only one free energy prototype I have heard of that has been measured to produce one million times more energy than it consumed, and that was Floyd ("Sparky") Sweet's. I write about our encounters with Sparky and his spectacular technology [at this link](#). Although scientific paradigm shifters [usually work alone](#) on the leading edge of science and technology, and have few true "peers," Sparky was anything but a "maverick," particularly in the sense that Heinberg seemed to use it. One popular fallacy is that those challenging the system are naturally rebellious. The "heretics" I know and respect the most were the opposite of "mavericks." [Ralph McGehee](#), [Dennis Lee](#), [Brian O'Leary](#) and [I](#) all began our journeys as successful true believers in the system. The CIA recruited Ralph McGehee because he was literally the all-American boy: a clean cut All-American football player from Notre Dame. Dennis was once "soldier of the month" on his base, and engaged in fistfights in the U.S. Army when fellow soldiers voiced unflattering observations about the United States. Brian was an astronaut, which was about as all-American as it gets. We all swallowed our indoctrination and excelled in our pursuits, to later wake up to the big lies we had been sold. Most like us also possess a little righteous indignation, because we *needed* to honestly believe in what we were doing, and discovering how thoroughly we [had been lied to](#) was not fun.

Sparky was cut from similar cloth and bought his American indoctrination hook, line and sinker. He had a successful corporate career as a research scientist and retired to pursue more research in his specialization of magnetism. After Sparky invented his amazing prototypes, he naively mailed them off to the big institutions of government, science and industry, which was when his troubles began. He called in the FBI to investigate his harassment. He continually tried working with large corporations and other institutions to develop his technology. He tried bringing his device to market responsibly, fearing that the short term economic dislocations it could create might collapse the economy. That is not what "mavericks" do. While beseeching the establishment all the way, the death threats escalated to where Sparky finally fled into hiding. One of my close associates met with him in his hiding place in an American desert, the week before Sparky died.

When I saw that the three areas of new energy that Heinberg specifically exclamation-

pointed were areas where I knew the inside story, I had hoped that he would be willing to be educated. It was a vain hope. He quickly clarified his motivation. He considered new energy an ancillary issue, as his primary mission is reducing earth's human population by at least five billion in the near future because there is not enough energy to go around. Only he knows his motivation for using exclamation points when discussing new energy, but I doubt it is because he is an enthusiastic supporter of new energy's potential.

After the first draft of this essay was written, Heinberg published a follow-up book entitled *Powerdown: Options and Actions for a Post-Carbon World*. In that book he emphasized themes found in his private correspondence and in *The Party's Over*. Once again, he virtually ignored new energy, and again, about the only exclamation points in his book were used to put words in other people's mouths. He again used those exclamation points tellingly: "those wretched oil companies are polluting the air and commandeering our foreign policy – while suppressing new technologies that could save the world!"^[8] To his credit, he admitted that he knows very little about his exclamation-pointed situations.^[9]

Powerdown was liberally sprinkled with Heinberg's austerity aphorisms, such as "Earth cannot afford rich people..."^[10] The scarcity paradigm informs all of Heinberg's work that I have seen, and I have seen no evidence that Heinberg has ever comprehended what an abundance paradigm might look like. In Heinberg's view, our only sane and rational choice is reducing our global population by around 90% in the near future. The closest Heinberg came to addressing an abundance paradigm was framing the idea as an "endless growth" paradigm, which he called "so self-servingly blind as to be morally reprehensible."^[11] Another option awaits, one that moves far beyond self-serving mentalities and the endless-growth/overshoot [false dichotomy](#), where humanity can [shift to an environmentally harmless, economically abundant global civilization](#).

This essay will deal with another visible member in the progressive ranks whose work Heinberg has heavily influenced.

Michael Ruppert's Alternative Energy Advice

Michael Ruppert was a Los Angeles Police Department narcotics investigator. During the 1970s he discovered evidence that the CIA was involved in Middle East drug trafficking. He encountered the usual [whistleblower problems](#) (also see [this link](#)) when

he tried making the evidence known. Bucking the system while following one's conscience is extremely unusual and courageous behavior. Ruppert received heated criticism from America's political left after the September 11, 2001 terror attacks. The Left's criticisms of Ruppert's work seemed ideologically motivated, which likely reflects its "[conspiracy phobia](#)." Ruppert and friends appeared to overreact, and currently promote a rather weak "[Left Gatekeeper](#)" concept.[\[12\]](#) The true "Left" has almost zero "power" in the United States. It is tragic that Ruppert and the Left are mutually antagonistic, as both perform vital work and need allies. There is plenty about the official version of the 9/11 terror attacks that does not add up. For years, Ruppert had been reluctant to credit the notion that 9/11 was as at least partly an "inside job" by elements of the U.S. political/military/intelligence establishment, but credible evidence points toward it. Ruppert finally began to consider that it may partly be an inside job, and even campaigns on that theme today.[\[13\]](#) The [JFK assassination](#) was at least partly an inside job, and many acts that initiated American wars were [either "allowed" to happen or covertly instigated by the United States](#).

Ruppert's work has grown over the years. His website publishes many timely and formidable works and has increasingly emphasized the global energy situation. Heinberg's work has heavily influenced Ruppert, and they have each other's blurbs in their most recent books. While I was reading Heinberg's *The Party's Over* in the spring of 2003, Ruppert's site published an essay titled, "[Nine Critical Questions to Ask About Alternative Energy](#)." Long before Ruppert published that essay, I tried interesting him in new energy, to receive a terse, non-committal response and then silence. Others I know have had similar experiences when trying to get Ruppert to examine the situation more deeply.

Ruppert is not a scientist and appears to have no experience in the alternative energy field, so his essay is somewhat dependent on guidance from the scientific types around him. This response is therefore directed more at his advisers than at Ruppert. Ruppert finished the essay's introduction with its conclusion, "there is no effective replacement for what hydrocarbon energy provides today."[\[14\]](#) In correspondence published on the Internet, Ruppert promotes [Heinberg's prescription](#) of working to immediately reduce earth's human population by about five billion people.

The first point in Ruppert's article is a good one, which is that the viability of energy sources can only be assessed by considering the energy captured divided by the energy invested (or subtracted from the energy captured). Ruppert correctly noted that many have called hydrogen a new energy source when it is nothing of the sort, but merely a means of storing energy, at least in the mundane applications for which the mainstream

envisions its use.

In his second question, Ruppert equated “independent testing” of novel technologies with something being “peer reviewed” by the scientific establishment, and implied that until an alternative energy technology had been “peer-reviewed,” claims for it were not to be taken seriously. The scientific establishment not only ignored the [Wright brothers](#) for five years after they first flew, [Scientific American](#) ridiculed the persistent reports of their flights, more than a year after they first flew. The public, however, had only to open their eyes and watch the planes flying through the air. New energy is far too important to leave in the hands of the scientific establishment, which has demonstrated its [inability to honestly and competently assess paradigm-breaking advances](#) many times. Inventors also contribute to their own demise by their behavior. I doubt I have met an altruistic inventor (their true motivation will often not become clear until money enters the equation), and the climate of avarice, fear and delusions of grandeur that invariably haunts new energy efforts has helped derail every effort I have witnessed.

Ruppert’s third question stated that seeing an energy device working was not proof of its viability. His prudent caution was linked to his next question, which has been the acid test that I have always used in evaluating new energy claims: where does the energy come from? Ruppert cites energy sources currently recognized by the scientific establishment, and says to treat with skepticism claims made of tapping other sources, although he admits such sources may exist. For people who become deeply active in the field, it becomes evident that the problem is not a lack of potential technology, but the prodigious inertia found in almost all corners of society (particularly American, although no earthly society has sufficiently escaped that condition), combined with [concerted suppression](#) when anybody gets close to delivering *any* kind of alternative energy that might significantly impact the marketplace.

Ruppert’s fifth question was that if an energy device seems to defy the laws of thermodynamics, then “something is wrong.” I agree, but it could be that the “laws” of thermodynamics are wrong or incorrectly interpreted, which is a possibility Ruppert does not consider. According to classical thermodynamics, hooking up a [hydraulic heat engine](#) to a [flat plate evaporator](#) cannot produce “free energy,” although both inventors that we worked with, with considerable accomplishments and credentials, thought it was possible. Not long before his recent murder, [Dr. Eugene Mallove](#) informed me that by using a Faraday Cage he reproduced the effect first [measured by Wilhelm Reich](#) with his “orgone accumulator.” Creating a “spontaneous” increase in temperature is contrary to the second law of thermodynamics. So, what is wrong: the “impossible” results measured by Reich and others, or the second law of thermodynamics? I can

understand former police detective Ruppert not wanting to challenge such hallowed theories (that have attained the lofty stature of “laws”), but highly credible scientists and inventors have adduced data that challenges them. Reich died in prison for his troubles, with the FDA destroying his orgone accumulators. Mallove recently came to a violent end, and I know of no happy endings for those who challenged the citadel of science regarding the new energy issue.

In Ruppert’s sixth question, he advised “great skepticism” toward those making “extravagant” claims. What is an extravagant claim? What is a “reasonable” claim? [Sparky Sweet’s](#) device was measured to produce a million times more energy than went into it. It was also measured to produce anti-gravity effects. How is reporting its performance an “extravagant claim”? When the [Wright brothers flew through the air](#), the American scientific and media establishment ignored their “extravagant” claims for five years. When [Edison perfected the light bulb](#), science also derided his “extravagant claims,” even while his light bulbs were lighting up Menlo Park, and Edison was the world’s most famous scientist at the time. The inventors of the heat pump subsequently developed and sold by Dennis Lee were laughed out of engineering offices as they reported their heat pump’s data. They then [cut their published performance data in half](#) so engineers would stop laughing at their “extravagant claims.” Ruppert’s caution against “extravagant claims” seems similar to [Carl Sagan’s](#) skeptical canard, “extraordinary claims require extraordinary evidence.” Ruppert appeared to take [Heinberg’s misleading treatment of ET technology](#) a step further, writing, “Did ‘extra-terrestrials’ give the promoter the plan for this invention?” The most credible allegation on ET technology that I am aware of comes from Greer’s 450-plus witnesses, and Ruppert’s comment bears no relationship to that situation.[\[15\]](#)

Ruppert’s seventh question was concerned with an inventor claiming that his invention created zero pollution. Ruppert then asserted such a claim is impossible, but then gave examples from traditional energy sources, completely ignoring new energy, which may well produce zero pollution, or perhaps slight thermal pollution (the most benign type) at most.

Ruppert’s eighth question related to obtaining designs and blueprints for an inventor’s device, and finished with the caveat that such designs may be part of a scam. It could be but, my experience is that even when designs are in the public domain, such as my [mentor’s engine is](#), it does not mean much. I have rarely seen a soul beyond the lone inventor who vigorously pursues such technologies, even when it is all laid out before them. Inertia, apathy and lazy, armchair denial are the typical responses, with people such as [Mr. Skeptic](#) actively promoting disinformation.

Ruppert's ninth and last question related to some of the technical, economic and social aspects of an energy solution. It was the best part of his essay, but was still framed within the prevailing scarcity paradigm. Ruppert said that the shift towards a sustainable civilization cannot be done alone, but only from within a community. I will add a big amen, and finish by saying that I believe Ruppert means well, but is still mired in conventionality and what I call the [zero-sum-game paradigm](#). One Peak Oil advocate told me that the Industrial Revolution might be the worst thing that ever happened to humanity.^[16] There is another way to view the situation, and an escape from the prescription purveyed by [Heinberg](#), [Ruppert](#) and friends, which is that earth shed five billion people or more in the coming decades.

Why all the Misinformation and Disinformation? – Are We Hooked on Scarcity?

Ever since 1986, when I began my alternative energy journey in earnest, I have received many reactions from people who hear about the possibility of free, non-polluting, forever renewable energy. The most common reaction is fear, and those fearful reactions have had a wide spectrum of expression.

I recently had a conversation with a learned man who recited the many potential disasters that humanity is poised on the brink of, largely due to our energy practices. I [agree with that assessment](#). When I mentioned that free energy could eliminate all those problems, and quickly, he dismissed it in an instant, saying that we could not predict how free energy's implementation might develop. He preferred certain doom rather than potential salvation, because he could not predict the final outcome, even though the potential upside was something that looked like [heaven on earth](#). I have witnessed that kind of response dozens and dozens of times. That reaction is not confined to the energy issue. In 1990, when having AIDS was a death sentence, I tried interesting two AIDS patients in a treatment that reversed AIDS. Those patients could have tried the treatment for little cost, effort or inconvenience. [They chose certain death instead](#).

Why did [Heinberg](#) and [Ruppert](#) dismiss new energy as they did, particularly regarding the ET/black ops situation? When given the opportunity to see a vision of true abundance and the possibility of heaven on earth, people usually avert their eyes as quickly as possible. [Heinberg](#) and [Ruppert](#) are *preaching* scarcity and austerity, and

have a large and growing audience.

Many doomsayers seem sincere. There *are* possible downsides to new energy's implementation, but the reactions I have seen are knee jerk dismissals, where new energy is instantly banished from the range of possibilities, not subject to discussion or given the [exclamation point treatment](#) before dismissal. R. Buckminster Fuller provided a possible explanation for such behavior. Fuller wrote that for nearly the entirety of human history, only one in a thousand humans lived to a ripe old age, and only one in a hundred thousand became an economic success, so failure was [deeply ingrained into human consciousness](#). Fuller wrote that scarcity has always been the [primary motivation of all soldiers](#) as they battled over scarce resources, and until the scarcity problem had been resolved globally, there would always be wars. Fuller also wrote that political systems competition will not resolve the scarcity issue, because all political-economic ideologies are founded upon the principle of scarcity and are primarily concerned with who gets the scarce resources. Marxism and capitalism's main difference was deciding who received the benefit of the scarce resources: the workers or those who exploit them (known as capitalists).

The fearful reaction to the concept of abundance can be a puzzling one, and a mystical explanation may suffice, although it is doubtful that anybody on earth can really "prove" it. Earth may well be a school of hard knocks, where [souls come to learn difficult lessons](#), and having heaven on earth would make the kill-or-be-killed game obsolete. Those denying free energy's potential may be protecting their soul's game of scarcity, severe limitation and hardship.

Do people who embrace doom and reject possible salvation feel unworthy? After many years of repeatedly witnessing the same reaction, I came to believe I was witnessing an emotional phenomenon in the doomsayers and deniers. It may be emotionally safer to expect failure. Whether it is Fuller's idea of a deeply ingrained belief in scarcity or a mystical notion that the physical plane experience is *supposed* to be full of hardship, humanity may be hooked on scarcity. How can we break that addiction, and do we *want* to?

Replacing Scarcity Consciousness with Abundance Consciousness

Because Heinberg articulated his scarcity argument better than most, I researched his influences and came to understand M. King Hubbert's "Peak Oil" theory better (and

realized it may well be accurate and humanity is near or at its highest oil extraction rate). The title for Heinberg's book can be found in Kenneth Deffeyes' *Hubbert's Peak: The Impending World Oil Shortage*. I did some more reading on the collapse of civilizations, including Joseph Tainter's *The Collapse of Complex Societies*.[\[17\]](#)

Carl Sauer is a seminal figure in the modern environmental movement and one of the greatest scholars that America has yet produced. In 1938, long before it became fashionable, he remarked that much of Western ideology rested on the notion of forever increasing productivity and new lands ready to be filled by "settlers," but such expansion [permanently impoverished the planet](#). Sauer noted that that optimistic notion was born when [Europe learned how to conquer the planet](#). William Catton in *Overshoot*, published in 1982, repeats Sauer's theme.[\[18\]](#) Since Catton's work deeply influences Heinberg's thesis, addressing the *Overshoot* hypothesis is vital to understanding the [paradigm](#) that Heinberg and friends operate from. Catton also deals extensively with Kuhn's paradigm concept and notes that when people operate from within a paradigm it is difficult to see beyond it, which [I agree with](#). Paradigms are built on assumptions, and examining its assumptions is essential to understanding any paradigm.

The primary thrust of *Overshoot* was that the West, particularly the United States (which is about the only nation Catton examines in *Overshoot*), had been in an era of "exuberance" for hundreds of years due to two factors: discovering a "new" hemisphere and the exploitation of fossil fuels. As the New World filled up with people and fossil fuels became depleted, the exuberant era waned, and Catton's marker was the oil crisis of 1973.[\[19\]](#) Indeed, the American standard of living [began declining with the 1973 crisis](#). People began competing more fiercely over scarce resources, yet exuberant ideologies remained, although with patchwork modifications that Catton described. Catton's description of the modifications to the exuberance paradigm is similar to Kuhn's account of how paradigms are modified to account for "anomalies," until the anomalies mount to such a degree that a new paradigm is proposed that explains the anomalies and the old paradigm is discarded. Catton makes the case for a paradigm shift from a philosophy of limitlessness to one of limits that humanity has already exceeded (which is what "overshoot" means). Kuhn remarked that scientists did not accept one paradigm over another because it was "better," more predictive and so on, but because scientists *believed in it*. That notion further fueled raging debates on the nature of reality and if there is such a thing as objectivity.

What is a "resource?" Catton's discussion of "resources" was appropriately confined almost entirely to energy, and may be the primary virtue of the work of Heinberg and friends. *The Party's Over*, *The Collapse of Complex Societies*, *Hubbert's Peak* and

Overshoot all are based on the understanding that *real* economies are best described in terms of energy, and that financial concepts are simply accounting games subject to manipulation, and can obscure reality instead of accurately depicting it.

Catton's book contained so much specialized terminology that it included a glossary. Along with terms such as "resource" and "carrying capacity," Heinberg and/or Catton stressed: limitlessness, self-limiting, sustainable, and exhaustible. Some of Catton's assumptions are discussed [in the related essay](#), assumptions that new energy can readily invalidate.

Catton made much of the assumption of limitlessness in modern ideology, but largely quoted American politicians to make his case. If we accept the vacuous speeches of politicians for what they are and look instead to the actual planners of governmental policy, a different picture emerges, where the scarcity underlying the world economy [is frankly acknowledged](#). There are many [dishonest and sold out scholars and scientists](#) who purvey the propaganda of the rich and powerful, but such work is designed to delude the masses and is rarely taken seriously in the halls of power. Modern economics does not rest on assumptions of limitlessness, but instead relies on scarcity-based concepts such as the invisible hand of competition and the law of supply and demand, and is dominated by a [greed-based ideology](#) known as capitalism.

Earth's surface is obviously finite, but it is also far more than adequate to support today's six billion people at a very high standard of living, with no harm done to earth's ecosystems, if new energy was wisely implemented. Does self-limiting have to mean self-eliminating? The austerity advocates seem to think so. If self-limiting means living harmlessly, the enlightened adoption of new energy is far more "self-limiting" than the "sustainable" prescriptions of Heinberg and friends. If new energy was implemented, there might be no "exhaustible resources."

Much of Catton's marshaled evidence can readily fit into another paradigm, one that may describe today's reality more accurately. The "exuberant" ideologies Catton described have only been "limitless" from an egocentric, self-serving perspective. Ever since Europeans began conquering the world, there were no illusions in high places about the true nature of their imperial efforts. Their "unlimited" perspective was the notion that there were ["unlimited" lands and people to rape and plunder](#), but [even Columbus realized](#) the people were not unlimited. Far from being an "unlimited" perspective, it was the same old [zero-sum-game](#) perspective that had dominated human awareness for millennia. The "unlimited" perspective of the conqueror was dependent on the conquered losing everything. The main difference with the European experience

was that ecologically wealthy lands were discovered where its inhabitants were easily conquered and enslaved ([Spanish](#) and [Portuguese](#)) or exterminated ([English](#), [Dutch](#), [American](#) ...the [French](#) were underachievers in both, although contenders). Catton almost exclusively used America as his example nation, but a nation that has waged almost continuous war against other peoples since its inception, as it grew to become history's largest power, is not one that regards the world as limitless. *People living in true abundance do not wage war.*

In history's wealthiest and most powerful nation, the vast majority of the population lives only a few missed paychecks from becoming homeless, with bankruptcy a rampant condition. A life of quiet desperation is the rule of the day, and the "exuberant" perspective that Catton stressed is not much in evidence, except for establishment ideologues such as [Julian Simon](#) and the relatively few others who benefit from serving the elite. [Orwell's 1984](#) may describe American reality better than anything else, where establishment mouthpieces broadcast the party line of everything being better than ever, which only the deeply brainwashed political class believes (largely because there are material benefits to being brainwashed). The working class can believe whatever they want as long as they keep working. My American ancestors, where every man fought in wars and many lived through the Great Depression, did not live by exuberant ideology, although my father's parents thought that anything less than a 3,000 calorie meal was starvation rations, while my grandmother saved string and displayed other behaviors that reflected her austere past.

Imperial societies have always played elaborate games to make murder, theft and exploitation appear to be noble undertakings. Two astute commentators from long ago might as well have been writing about today's America:

"Next the statesmen will invent cheap lies, putting the blame upon the nation that is attacked, and every man will be glad of those conscience-soothing falsities, and will diligently study them, and refuse to examine any refutations of them; and thus he will by and by convince himself that the war is just, and will thank God for the better sleep he enjoys after this process of grotesque self-deception." - **Mark Twain, *The Mysterious Stranger*, 1916.**

"The enemy aggressor is always pursuing a course of larceny, murder, rapine and

barbarism. We are always moving forward with high mission, a destiny imposed by the Deity to regenerate our victims while incidentally capturing their markets, to civilise savage and senile and paranoid peoples while blundering accidentally into their oil wells or metal mines." - **John T. Flynn, *As We Go Marching*, 1944.**

A common argument against the idea of new energy is that with it, humanity would quickly deplete the world's remaining resources and suffer an even more catastrophic environmental collapse than we are already on the brink of. Can we avert that envisioned catastrophe if energy was free, non-polluting and forever renewable?

Homo sapiens is a bipedal ape that left its tropical home long ago. Humans survived beyond their natural habitat by using intelligence and manipulative ability to [extract energy from their environment](#). The human journey has always been based on energy extraction, preservation and consumption, and early civilization seems to have appeared due to Malthusian factors, when the hunter-gatherer's basic energy supply ([megafauna](#) and other easily hunted animals) was used up and the human population was then sustained by [domesticating plants and animals](#). With civilization came social and economic stratification, with the beginning of ideological indoctrination to justify the stratification, because there obviously was not enough to go around. The root assumption of scarcity has informed all ideologies ever since. Organized violence to commandeer land, resources and labor has been such an integral part of the human experience over so many bloody centuries that many call it an inescapable fact of *human nature*. Is it? Might it instead be a dimension of the human *condition*, not human *nature*?

When people have more than enough of something, they are often willing to share it (except those in [greed's thrall](#)). Even though the land was won by the [removal and extermination of its inhabitants](#), the United States encouraged foreign immigration to its soil to fill up the continent with desirable people. In the aftermath of World War II, the American people seemed to genuinely desire to help war-torn nations (at least those with white skin), although such sentiment was [cynically manipulated](#) by their leaders. Why were Americans being generous? Was it because America was riding history's largest economic bubble? In the aftermath of World War II, Americans [owned half of the world's wealth](#) and could afford to be generous. However, that aid began declining soon after World War II, and America has been the world's [stingiest industrialized nation](#) for many years.

One question has dominated my alternative energy quest: “Do we have to have enlightenment before we can have new energy, or can its reality help catalyze it?” If scarcity was eliminated as a concept, how would people react? Would we all get fatter and lazier and greedier, or might we see a new dawn of the human potential? Many believe that humanity has to experience Armageddon before we collectively “get it.” I hope that is not the case.

According to the worldview the austerity crowd has espoused, humanity cannot be trusted with new energy because of our unenlightened, egocentric despoliation of the earth and each other, which would only accelerate with new energy. However, in almost the next breath they say that humans are capable of an unprecedented act of sentience, voluntarily eliminating nearly 90% of our species in respect for itself and other life forms (but really because we are forced to by austerity). Heinberg seems to have little faith that his austere prescription will be followed, and that humanity is embarking on “[plan war](#),” with America’s invasion of the Middle East being the latest in a series of escalating conflicts where the world fights over dwindling fossil fuel supplies.[\[20\]](#)

A different viewpoint predicts something other than an accelerated, egocentric ruination of the planet in the service of our lifestyles, and the Peak Oil crowd presents part of that evidence. Americans presently consume about eighty times as much energy as the calories consumed in their diets. That has been described as the equivalent of having eighty “slaves” doing work for us. There are some problems with that equivalence, such as most energy is used for [heating and cooling](#), not what is thought of as work, and human energy can run brains and hands, which are more capable than today’s machines in many ways. Yet it is also true that a slave-borne palanquin never hit sixty miles per hour. Today’s average American lives better than the richest king of two hundred years ago. That is mainly due to those eighty “energy slaves.” When the Industrial Revolution began and great amounts of energy began being harnessed, two related phenomena occurred. One was that family sizes gradually declined. People did not need to exploit children as farmhands and pension plans anymore. Also, with energy slaves coming onto the scene, human slaves became obsolete, and the Industrial Revolution largely coincided with the end of chattel slavery in the West.

[Tainter’s thesis](#) on the collapse of civilizations is likely accurate, insofar as explanations that stray from economic factors begin losing their punch. All wars for all of history have been primarily fought due to economic factors, although those waging the wars will rarely admit it openly, because such crass, self-serving motivation rarely sells well to the masses, who usually need seemingly-noble delusions to motivate them, even though they too realize that economic factors are most important. There is no more salient example today than America and Britain’s invasion of the Middle East, while everybody

in the Bush and Blair administrations publicly deny that oil motivated them, even though the Bush administration is dominated by oil interests, and oil was why the British originally colonized the Middle East nearly a century ago.[\[21\]](#) All the official reasons for invading have been proven bald faced lies, but most Americans still believe them, at least publicly.[\[22\]](#)

When the fact is mentioned that nations with the highest birth rates have the lowest energy consumption, Peak Oil/austerity advocates have tried explaining that fact away with “complex” reasons that relied on cultural dynamics. Any explanation that strays from economic factors, particularly when we have the clear example of the Industrial Revolution to draw upon, is going to be dubious. If everybody had “energy slaves,” and a thousand instead of eighty, the exploitative reasons for having children will largely disappear world-wide and there may not be another population explosion that Heinberg and friends fear, especially one that further degrades the environment. Women are also less exploited in the West, with more options than becoming baby machines in a paternalistic system of exploitation. There are important factors that strongly support arguments for a global population decline or stability than another explosion, if new energy appeared.

With new energy, intelligently, compassionately and wisely implemented, an [environmentally harmless global society can emerge](#), where six or even ten billion people could live at a standard of living that is orders of magnitude above today’s average American, with no harm done to earth’s ecosystems (or even the “sustained” exploitation of them). It is also possible that such a humanity would decide that a population of one billion people is better for all involved, and we voluntarily reduce earth’s population.[\[23\]](#) Which scenario seems more desirable, one where we might decide to reduce earth’s human population, operating from a place of true abundance, or one where we “wisely” eliminate nearly 90% of ourselves because we are forced to by a lack of energy? Which requires more wisdom? Which plan has the more realistic outcome?

What if people realized they could live a harmless life on earth, and live it abundantly? Who would sign up? The technology to make it possible already exists. Do we have enough collective integrity and will to make it a daily reality?

[3] See Jonathan Eisen's *Suppressed Inventions and Other Discoveries*, for instance.

[4] Greer spent nearly three hours debriefing Woolsey. It was an intense briefing. According to Greer, Clinton wanted to make the information public, but was afraid of ending up like JFK. Carter and JFK had similar experiences when trying to find out about the issue. It was all "privatized" during the Eisenhower years. See Greer's *Extraterrestrial Contact*, pp. xvii-xviii. This link presents a fairly comprehensive account of that briefing and its aftermath: <http://www.presidentialufo.com/part2-.htm>.

[5] The third category of technological possibility listed in Dr. Eugene Mallove's energy appeal (see <http://www.pureenergysystems.com/obituaries/2004/EugeneMallove/LastMessage040513/>) was exactly what we were pursuing in 1988 when they lowered the boom on us. I tried educating Mallove on what we were pursuing in the winter of 2003-2004, and on the situation that he would encounter if he tried making an impact in the marketplace. His 2004 murder ended our dialogue. There were some [bizarre coincidences](#) relating to his death that will make me always doubt the "random murder" explanation of his death's circumstances. I also have grave doubts about how his legacy is being handled. In the January/February 2006 issue of *Infinite Energy*, the lead editorial was written by William Cantrell, and it seemed just like something [Julian Simon](#) would write. That issue of the magazine was devoted to assailing the science that suggests that the dramatically-increasing carbon dioxide content of the atmosphere was contributing to global warming. One article ended with the observation that ultimate effects of carbon dioxide pollution would be a "wonderful and unexpected gift from the Industrial Revolution." (see p. 17).

[6] I heard Greer speak at the New Energy Movement conference in September 2004. He has had significant interaction with [factions of the global cabal that essentially controls the world economy](#). They told him that they have paid off about ten thousand people to the tune of \$10 million each over the past fifty years or so to stop pursuing free energy and related technologies. That is congruent to what I heard [Tom Bearden say](#), and other experiences I have had.

The situation at the top is apparently very much like the *X-Files*. Greer says that a few hundred people control the world economy and call the shots. They are probably the same people who froze [\\$20 billion that our pals had in the bank](#).

Greer's summation of the situation is similar to what I have received from other sources I respect. Those three hundred or so are divided. Nearly half want to have "disclosure" about the ET reality and what comes with it, like free energy. The majority, however, are so hooked on their global power trip that they will never let go, and they are the ruthless, tyrannical majority, who have people such as Eugene Mallove murdered (Greer thinks Mallove's recent death was probably not a random murder). Greer almost [died himself in the 1990s of induced cancer](#), while three members of his team did not survive.

Greer has since been contacted by that more "benevolent" half, and asked what he wanted. He replied that he wanted them to stop killing those who tried making the ET reality known, or pursuing technologies such as free energy and anti-gravity. Greer apparently has the goods on the darker half, and has

threatened to expose them if they try to murder him or his team members again.

[11] See Heinberg’s *Powerdown*, p. 165.

[12] In the “Left Gatekeeper” site’s chart of controlling influence of aristocratic money connected to covert action and secret societies, the total funding from the Rockefeller and Carnegie foundations to the “Left” media amounted to about \$100,000. Most of the “Left” that the “gatekeeper” site refers to is the establishment left, which is not what I call the real “Left.” The real “Left” is not what most Americans think of as the “Left.” The so-called “Left” who enthusiastically endorsed the American-led invasions of Yugoslavia and Iraq are what Ed Herman calls the “Cruise Missile Left.” See this link <http://www.zmag.org/ZMagSite/Nov2002/Herman1102.htm>. Herman has written extensively on the Cruise Missile Left since 2002. There is another “Left” that did not support the invasion of Iraq, but largely because George Bush did not bring enough opportunistic allies with him to create a plausible façade of global unity against the dire threat that Saddam Hussein presented to the world, and the ultimate success of our imperial undertaking was uncertain. Such a position is largely bereft of principle. John Kerry has personified that kind of “Left” in 2004. What I call the real Left is often called the “radical left.”

[13] See this link: <http://www.fromthewilderness.com/PDF/Commonwealth.pdf>. His new book, *Crossing the Rubicon*, greatly emphasizes that theme.

[14] The article does not name the author, but Ruppert is the site’s author, so I will credit him.

[15] After a couple drafts of this article were written, Ruppert published an article on his site in October 2004. Its description demonstrated that I gave Ruppert too much benefit of the doubt. The description read, in part, “And he throws down a gauntlet to the economists and abiotic oil/alien technology worshippers they will be hard pressed to pick up.”

[16] In his October 2004 essay, “The ‘Abiotic Oil’ Controversy,” Heinberg wrote, “It is my opinion that the discovery of oil was the greatest tragedy (in terms of its long-term consequences) in human history.” Heinberg repeats that theme in his *Powerdown*, p. 51, “Hydrocarbons have been both the greatest blessing and the greatest curse our species has ever encountered.”

[17] Heinberg is understandably an admirer of Joseph Tainter's *The Collapse of Complex Societies*, first published in 1988. What follows is a brief analysis of Tainter's work. In a sense, Tainter's formidable work is paradigmatic. Tainter analyzed the many explanations posited for the collapse of complex societies, which include resource depletion, intruders, natural disasters, inability to adapt and mystical explanations. The agricultural surplus that early civilizations provided allowed for greater human specialization, which increased a society's aggregate skills, and professions developed. Tainter called that process the "investment in complexity," although it is doubtful that many ancient elites (or even modern elites) saw it that way. For increases in complexity, societies have to invest more energy, which is the coin of *real* economics and always has been. The primary energy source of all early civilizations was food. As civilizations became more complex, energy was used for more than satiating hunger. Human and animal energy was then used to create goods and services that allowed civilizations to "advance."

Tainter compared the two main theories of why civilizations evolved, which were so elites could exploit the masses (conflict theory, as exemplified by Marx), or so the masses could attain higher standards by living inside civilization than they could outside it (integrationist theory, from the "progressive" view of the human journey). Tainter concluded that neither school of thought could fully explain the phenomenon (p. 28-38), and tension between the two theories existed clear back to the classic Greeks and Confucius, and may be as old as civilization itself.

As an aside, elites in all societies for all time have engaged in conspicuous consumption as a way of demonstrating their hierarchical status. It was corpulence, harems, palaces and self-aggrandizing monuments in older times. In "pre-discovery" Hawaii it was wearing a cape made of hundreds of thousands of colorful bird feathers (which drove the birds to extinction). Today, rocket rides into space for \$20 million a trip is about the ultimate in conspicuous consumption.

Tainter stated that all civilizations, like all living creatures, are maintained by a continuous flow of energy (p. 91), and his book's conclusion was that unless today's global society developed a new source of energy it was doomed to collapse, as have all other civilizations that ran out of energy (p. 215). Tainter analyzed the many reasons given by scholars and theorists regarding why civilizations collapse, and concluded that economic explanations are superior to any other explanation yet proposed (p. 90), and that when economic theorists began straying from economic dynamics and tried incorporating other factors into their collapse theories, their arguments lost their strength. I agree, and add that while most people live on the brink of economic disaster (even in the [world's richest and most powerful nation](#)), economic factors will dominate the dynamics of the human journey, which have always primarily relied on energy.

Tainter developed an economic theory for why civilizations decline and collapse, and framed it in terms of marginal return on investment in complexity. I believe his conclusion (p. 197-203) adequately explains the moment of collapse, although the other theories he criticized seemed to deal more with the decline than simply the collapse. In brief, human specialization increases the collective skill level of a society so it can function at more complex levels (which Tainter called the investment in complexity). Before civilizations developed, people were primarily concerned with getting enough to eat and finding shelter from the weather. There were not professions as such, but a handful of tasks that a village, for instance, would undertake, such as men doing the hunting and infrastructure construction/maintenance (largely concerned with making and maintaining dwellings), and women doing the gathering/growing/harvesting, food preparation and child rearing. When civilizations rose due to the energy surplus that agriculture produced, people not involved with food production could learn new skills, and professions developed. As more energy was consumed by a society (particularly in its urban areas), higher levels of specialization were

attained. A civilization's collapse was defined by the moment when suffering urban specialists realized that they could make better livings by returning to the farm. A hungry woodworker left the city and became a farmer because he was likely to be better fed that way. Tainter showed that primarily hunter-gatherer civilizations collapsed via the same dynamics. As specialists left the urban environment to pursue less "complex" behavior that better met their immediate economic needs, the cities lost their collective skills, became unsustainable, and the civilization collapsed. That explanation of collapse may seem a little too obvious, but is the primary conclusion of Tainter's work. That dynamic is also found in the [most interesting explanation of degenerative disease](#) that I have seen.

In 2005, Jared Diamond published *Collapse*, which dealt with the collapse of civilizations. Diamond's effort was less systematic than Tainter's, although Diamond was correct in criticizing Tainter's minimization of environmental factors. On [Heinberg's site](#), he capably reviews Diamond's book. Diamond minimizes the energy issue and civilizations, even describing the U.S. invasion of Iraq as due to the West needing to intervene where environmental problems overwhelmed the nation (p. 516), and does not mention one word about the oil issue perhaps having something to do with our invasion. While Diamond downplayed the energy issue, Heinberg downplayed new energy.

[18] See William Catton's *Overshoot*, pp. 24-30.

[19] See William Catton's *Overshoot*, pp. 58-74.

[20] Heinberg further discusses that idea in *Powerdown*, pp. 165-166, where he writes that fossil fuel depletion, competition for the dwindling supplies by the world's nations, denial of reality by the masses and attempts at building survival enclaves by small communities is so highly probable "as to approach certainty."

[21] For a mainstream treatment of that dynamic, see Daniel Yergin's *The Prize*.

[22] As late as September 2004, according to opinion polls, more than half of all Americans still believed that Saddam Hussein's Iraq was involved in the 9/11 terror attacks or was closely allied with Osama bin Laden's "terrorists" or possessed "weapons of mass destruction," even though zero evidence has come to light to support any of those official reasons for invading Iraq, which has even been admitted by the Bush and Blair administrations. Bush and Blair's "war on terror" is an obvious fraud. That the invasion was undertaken to "liberate" Iraq from Saddam Hussein was only invoked by Bush and Blair on the eve of the invasion, when all their other rationales were proven to be lies. There has not been a ["humanitarian" invasion in world history](#), and there is zero evidence to support the idea that it was the U.S.'s motivation for invading Iraq, particularly as the [U.S. had already killed more than a million Iraqis](#) by using history's most draconian economic warfare. "Liberated" Iraq currently suffers under an occupation noted for its brutality, sieges of cities, indiscriminate murder of civilians, torture centers and other behaviors that describe barbarian invasions, not the actions of the world's leading "democracy." As a relative told me recently, if you could get frank answers from Americans who were not concerned about maintaining imperial appearances, 90% of them would readily admit that invading Iraq was all about getting our hands on their oil.

[23] However, with a free energy-based economy, concepts such as "earth's carrying capacity" become

virtually obsolete, and having ten billion humans living in an environmentally harmless, abundant global civilization becomes readily feasible. Is it desirable? If we make the paradigm shift, we can decide that issue.

Roots, Branches and Paradigms

By Wade Frazier

January 27, 2003 (slightly revised in 2005)

Energy has always been the root of the human journey, and that will never change. In addition, the defining parameter of human civilization has *always* been energy *scarcity*. Civilized thought is founded upon the assumption of energy scarcity, in ways that can seem invisible, because *assumptions* can become imperceptible to those holding them. The root of politics has always been economics. The environment has always been the root of economics, and energy has always been the root of all life. This essay will outline the development of that situation, and link to more complete renderings of the issues.

The attempts made to interest various activists in my work have inspired this essay. It largely has not been a successful effort. This [site's thesis](#) and [proposed solutions](#) has received very little feedback from those activists. Perhaps everybody, including me, thinks they see the problem's root as they hack at its branches, as Thoreau observed. I am not alone in my understanding that energy is the root issue regarding today's world, and the long-term (or even short term) survivability of the human species. [Buckminster Fuller](#) had energy as a central theme of his work.^[1] [Brian O'Leary](#) also sees energy as humanity's root issue. The United States is about to initiate what could be World War III in order to seize the [world's most lucrative energy reserve](#). There are many other factors in the human journey, but as with life itself, it all rides on top of the energy issue, similar to Maslow's Hierarchy of Needs.

Whether this universe came into existence from a Big Bang, a Creator in a white beard waving his hands and saying, "Let there be light," or other ways, nobody is disputing the idea that this universe's energy centers are its stars. According to today's scientific theories, stars are huge fusion reactors, mainly comprised of hydrogen and subatomic particles under tremendous gravitational pressure. The larger atoms are supposedly created in star cores, as the pressures forced nuclei together to form larger elements

(the pressures in stars, especially while dying, are theorized as sufficient to make this happen, and the resultant supernovae seed the surrounding galactic vicinity with heavier elements, which form planets, etc.). According to today's prevailing theory, earth was once part of a star core, and it is composed mainly of iron, which is the most stable element created in a star.

Earth is not *all* iron, but is largely composed of metal. Lighter elements "rose" and [settled on the earth's surface](#). The [Second Law of Thermodynamics](#) states that energy is always seeking its most stable state, with hot things giving their heat to cold things. Entropy is always happening, with all energy systems going through their stages and eventually winding down. The work of Ilya Prigogine and others has challenged the notion of entropy, and chaos theory is in vogue in certain corners.^[2] However, nobody is challenging the notion that all life on earth depends on the [capture of sunlight by photosynthesis](#) (or chemical synthesis for some classes of microscopic organisms^[3]). If the sun disappeared tomorrow, earth's surface life would almost immediately vanish.

The fossil record tells a story of life evolving in earth's primeval oceans, and eventually migrations to land happened. Biology became more efficient and sophisticated, whether it was fish, plants or reptiles. Earth's biosphere has also experienced several major extinction episodes, the first happening [more than 400 million years ago](#). For [reasons still uncertain](#), [ice ages](#) and hot ages have punctuated earth's past. The level of solar energy reaching the lower atmosphere and earth's surface largely determines the global climate. Today, earth is experiencing a [rapid warming](#) trend most likely due to the great increase of greenhouse gases that the industrial age has created.

Carbon makes life on earth possible, and carbon's ability to form double and triple bonds with other carbon atoms can store great amounts of energy. Today's [coal deposits](#) were probably laid down during one of earth's hot periods by fern forests, while earth's oil deposits are thought to have been [created by earth's oceans](#), from the cumulative effect of dying sea organisms. There are [alternative theories](#) about how the oil and coal deposits were created, but about everybody in the oil business, who studies the deposits, concurs that life processes created the "fossil fuels," and there is a finite supply of it, a supply that is being used by civilized humans about a million times as fast as it was created.

Life is an anti-entropic process. It takes energy from the environment and creates order where there previously was none. Cells are marvelously organized entities. The photosynthetic process in a tree captures sunlight energy. It then uses that energy to take water from the ground (and metals – they comprise most of the ash after wood is

burned), carbon dioxide from the air and combine them into cellulose (among other carbohydrates created), which makes the cell walls, and hence the tree's fiber. Energy is stored in the bonds making the cellulose, energy that is released when the cellulose is digested or burned.

About 240 million years ago, the great reptiles known as dinosaurs appeared, as well as the first mammals. Today, it is theorized that later reptiles began chemically regulating their internal body temperatures, a practice that mammals further refined. Becoming warm blooded required a great use of energy, and fur was an energy-saving adaptation that allowed mammals to live in climates too cold for reptiles. Plants were also evolving, and [flowering plants](#) appeared about 135 million years ago. Flowers become seeds, and the eventual appearance of fruit provided a symbiotic relationship with the animals that ate them, as they spread the seed. As trees became more sophisticated and branchy, a class of mammals particularly adapted to tree life appeared: primates. Primates have opposable thumbs, limbs with great range of motion, binocular vision and most significantly, large brains (thought to be an evolutionary response to the visual demands of their environment). As animals increased in their sophistication, they became more adaptable. When environmental conditions change, animals and plants adapt or die off. Few animals leave their ecological niches, and if they do, it largely has to do with food availability. Larger primates, especially monkeys, are highly social creatures that can live in packs of more than 100 animals. Most monkeys eat fruit as their dietary staple, although most primates are omnivorous.

Anthropoid apes began appearing about 40 million years ago, which were humanity's ancestors. Gradually, the larger apes left the trees, and the reason for that will never truly be known (environmental change is central in nearly all hypotheses), but it may well have been due to outstripping the arboreal food supply. As large apes left the trees, it freed up their hands for other manipulations, and they began exploiting new sources of food. There are various theories to account for increasing brain size among the anthropoid apes (more protein in the diet, using hands in new ways, [extraterrestrial](#) genetic intervention), but as brains became larger and some anthropoids used their hands for duties other than grabbing tree limbs, humanoid apes gradually appeared. More than four million years ago, anthropoid apes appeared that could walk upright. The big toe gradually lost its opposable feature in the upright apes. Tool-making began, which led to a greater availability of food sources. A significant use of early tools was probably scavenging predator kills in Africa. About two million years ago, African predators migrated beyond Africa, and early members of the genus *Homo* apparently migrated with them. Such migrations are nearly *always* presumed to be in response to changes in the ability of their former environment to provide enough food (energy), or the supply being insufficient for the increased numbers of animals.

Around a half million years ago, early humans made their first great energy-using innovation by [harnessing fire](#). Around 100,000 years ago, anatomically modern humans appeared, and all other human species eventually died out, leaving *Homo sapiens* alone on the humanoid scene. According to my [mystical sources](#), that was also when humans became sentient, or ensouled. Science has its theories about what sentience means, and religion has its theories about what ensoulment means, and that debate may never end, but I agree that something happened that set humans apart from other land-based mammals ([cetaceans may have been sentient/ensouled](#) for far longer than humans have). Was it “divine intervention?” Is the real story of humankind’s creation somewhat like the Book of Genesis and other creation myths? Was it [extraterrestrial](#) and/or inter-dimensional intervention? How many, if any, technologically advanced civilizations have called earth home in the distant past?

Whatever the case may be, early humans kept increasing their technological prowess, which was always directed toward greater energy availability. About 40,000 years ago, humans markedly increased their tool-making ability, and they created weaponry and hunting tactics that made them super-predators. With their new killing ability, they began spreading across the planet, migrating to previously unsuitable environments, and it was the golden age of the hunter-gatherer. Large mammals that had never seen humans before, with few or no natural predators, were easy prey to the new methods and technology. First, Africa’s large, slow mammals were rendered extinct, and the [wave of extinctions](#) across the earth closely coincided with human settlement.^[4]

About 10,000 years ago, human settlement spanned the planet, and all easy meat was rendered extinct. Humans then began exploiting new energy opportunities, and [plants and animals were domesticated](#). Cellulose comprises most plant matter, and most animals cannot digest it (which is a good thing, or else animals would have devoured all plant-based life). Humans then largely domesticated animals that *could* digest cellulose (cattle, sheep, goats, horses, llamas, yaks), and domesticated plants that could provide digestible calories, generally in their roots and seeds. Various melons/fruits were also domesticated, as well as plants that could provide fiber for fabric, rope, etc. Sheep and llamas provided wool and meat, cattle provided milk, meat and leather, and horses and llamas provided transportation.

Civilization began forming with the Domestication Revolution, partly because humans could become sedentary, not continually roaming the land in search of food. The “agricultural surplus” of the Domestication Revolution began allowing for people to develop skills other than food procurement, and professions began forming. Also, the

[diseases of civilization](#) began appearing. In addition, *humans* were domesticated. [Slavery](#) probably began when civilization did, or even helped lead to it, as human slaves could be uniquely productive, performing work that llamas and horses could not. While domesticating a horse took work, convincing humans to accept their enslaved status was more difficult, and early slave conditioning was almost certainly the beginning of ideological indoctrination, so slaves would accept their status. People born into captivity, who never knew freedom, were always the easiest-managed slaves. Forced labor institutions existed until the Industrial Revolution, and machines could do the work of humans. Humans were then rented instead of owned.

Humans began working metal early in the Domestication Revolution. It is thought that [copper](#) is the first metal ever worked. As with its cousins silver and gold, copper could be found in nuggets, as it was relatively non-reactive (resistant to entropy), and could be found in a relatively pure state. Because copper is harder than silver or gold, it had practical uses. Because of copper's relatively low melting point, it is estimated that around 7,000 years ago, people learned to melt copper in their hearth fires in the Fertile Crescent's steppe region. Humans reversed entropy in a new way by smelting metals. With the advent of metallurgy, humans could manipulate their environments as never before, to extract more energy from them. Humans invented bronze, which was far harder than copper, and bronze made plow agriculture more feasible (along with draft animals to pull them). The earliest use of each metal appears to have been artistic, but soon gave way to practical applications. A common use of metal was in weaponry, in order to kill human competitors for energy (land, food, shelter, animals). Organized intra-species murder can be seen in chimpanzees today, the only great ape besides humans that engages in such behavior. [Warfare](#) is a peculiarly human activity.

Virtually all early human technology, from stone tools to dwellings, clothing, pottery, weaponry and the like had to do with extracting/preserving useful energy. As the environment was manipulated to human ends, nearly all other species suffered for it. Earth is currently experiencing its sixth major extinction episode, which began with the [megafauna extinctions](#), and has continued to accelerate with human "progress." Today, one fourth of earth's mammal species, and one-eighth of its bird species, are in immediate threat of human-caused extinction. The methods of civilization also destroyed the environment. The Fertile Crescent, where civilization first appeared, is largely desert today (as is much of the Mediterranean region), as [deforestation](#) and plow agriculture destroys forest ecosystems, and forests are the world's greatest soil builders, and soil is the basis for land-based ecosystems. Deforestation also disrupts the land-based hydrological cycle, even changing the climate, making it drier, which leads to desertification. Civilization's very methods cut its legs out from under it.[\[5\]](#) There have

been exceptions to that trend, particularly in the New World, where the [Pacific Northwest culture](#) was environmentally sustainable, as was the [Plains economy](#), and also the [Eastern Woodlands](#). The [Amazon region](#) may also have been a consciously husbanded environment. Such environmental gentleness may have evidenced the [spiritual attitudes](#) of New World natives, with their spirituality that saw humans as *part* of the circle of life, and nature as their partner. That attitude was in stark contrast to the [Book of Genesis](#), which put humans in charge of earth, with its angry, vengeful [male sky-god](#), and the nature-fearing/conquering mentality of many Judeo-Christian peoples.

As human technological prowess increased, higher temperatures enabled humans to create [iron implements](#), which greatly increased human ability to manipulate the environment, and create much greater carnage in warfare. Also, ideology increased in sophistication, and was used to herd and control the masses under a ruling class. Organized religion appeared with civilization, with slaves, artists, farmers, herders, prostitutes, politicians, priests and soldiers being among the earliest specialized occupations. Writing made its appearance, and history thus began, with [Sumeria](#) becoming the world's first literate society.

With ensoulment/sentience also came the human ego, and the capacity to choose "good" or "evil." For the entirety of human civilization, its elites have engaged in luxurious consumption. Whether it was the [Egyptians working slaves to death](#) to mine gold for royalty, or Hawaiians making brightly feathered capes for its monarchs (which drove the birds with such plumage to extinction) or today's rocket rides into space (for about \$20 million a trip), human elites have always indulged their egos at the expense of others.

Earth's surface is finite; its available energy has always been finite, and all ecosystems have operated within the parameters of available energy. The other limiting factor has been the availability of water, upon which all earthly life depends (and some nutrient issues such as nitrogen and minerals). Water's availability (for land-based creatures) has always been dependent on the hydrological cycle, which is driven by the sun's energy.^[6] Migrating past the (energy-rich) tropics to human-hostile environments required the many energy-acquiring/preserving innovations that have marked human "progress," and energy scarcity became an obvious issue to early humans, probably as all the easily hunted mammals began disappearing. The [Zero-Sum Game](#) then began forming. It became institutionalized very early in civilization, and is based on the *assumption* of scarcity. In the words of Buckminster Fuller, the game for soldiers has always been, "You or me to the death - on behalf of yours or mine - for there is not enough to sustain us both."^[7] The fact, however, is that there has always been

thousands of times more available energy than humankind uses on earth's surface, just in the sunlight, heat, wind, tides and the like, that energy scarcity can seem a ludicrous idea. However, energy scarcity has defined the human journey, which has largely been one of plundering an energy resource until used up, and then moving on to the next resource until used up, and so on ([megafauna](#), [trees](#), arable land, fish, [birds](#), [fur-bearing animals](#), [whales](#), [coal](#), oil, etc.).

Accompanying the rise of civilization and ideology (and helping *cause* it) was abstract thinking. The pursuit of religion, writing, art, politics and other endeavors required abstract thought. A major hazard of abstract thinking is its creation and use of symbols, which are often substituted for "reality." Mistaking the symbolic for the real has been one of humanity's greatest pitfalls. Because religion deals with realities beyond the physical plane (or purports to), there is no non-physical reality to physically point to, to validate a great deal of religious symbolism. That has been the bane of all religions, trying to depict non-physical realities in physical reality. It can easily fall prey to idolatry and dogma ("it is this way because I say so," or some "authority" says so), and Western science's methods were partly a reaction to that unenlightened practice (such as Galileo's principle of *observation*, although that principle is regularly [abandoned by the scientists themselves](#)). However, such abstraction also takes place in ideologies having nothing to do with trans-physical realities. In addition, because most humans are captive to their egos to one degree or another, being [mainly self-serving](#), substituting symbols for realities has been a primary method by which humans have manipulated each other's minds, in pursuit of ego-serving activities.

One discipline particularly susceptible to substituting symbols for reality is economics, and that practice dates to human civilization's earliest days. The human journey, ever since the genus *Homo* left Africa a couple million years ago, has been about 99.9% centered around obtaining enough food. Even today, the preoccupation of most of earth's humans is getting enough to eat. The human stomach is the bedrock economic reality and always has been. As humans plundered new energy sources (or developed ways to harvest more energy from the environment, such as the [paddy system of China](#)), there was relative energy security, but humans soon bred to the energy supply's limits, and as the supply became insufficient, people would starve, engage in warfare, etc. In that respect, Malthus' perspective of the human journey was accurate. When people have energy security, they become relatively content.

The first economic abstractions were probably done for political/religious reasons. Early political/religious elites concocted ideologies that made them more worthy of being fed than commoners or slaves. *There are no starving kings*. In early Sumeria, economics,

politics and religion were united, with priest-bureaucrats running the societies. The Sumerian temples were the gold repositories, as well as the seat of temporal power. [Gold](#) had artistic merit, and was used in early religious symbology. While the concept of money was invented independently in numerous cultures, as a way to exchange goods (usually food) the earliest known use of money is thought to be about 2500 BC in Sumeria, and silver was the preferred money in the Fertile Crescent and vicinity for millennia. Gold and silver became the logical basis of money, because they were scarce (although abasement of gold with copper was practiced even by early pharaohs), and were probably used as money long before there were written records of the practice.

Money has no intrinsic value, except money that can be consumed, and in “primitive” economies, food was often used as money, with ears of maize used as currency in Mesoamerican society, and barley in the Fertile Crescent (by its non-elites). When symbols became substituted for reality, then conditions became ripe for deception, as symbols can be manipulated so that reality can be distorted or even turned upside down, as people become mesmerized by the symbols, while ignoring the underlying reality the symbols theoretically represent. *Real wealth* is food, shelter, transportation, free time (all are energy concepts, or rely on energy) and the like. [Real wealth](#) has nothing to do with money. Money is merely the scorekeeper, not the game.

In economic theory, there are two sub-disciplines, macroeconomics and microeconomics. Macroeconomics deals with the economy of a nation, for instance, and microeconomics deals with the economy of a single market or a single family, for instance. There is an inherent conflict between the two disciplines. The world’s first major economic treatise was [Adam Smith’s *The Wealth of Nations*](#). Smith’s ideal was that each person, competing in the “free market,” would benefit the entire society through their self-interested efforts. So, microeconomic decision-making would benefit the macroeconomic picture. [Charles Darwin](#) theorized similarly about the natural world, that through creatures warring with one another, in their struggle for survival, comes the “progress” of evolution. One of the most enlightened bodies of work I ever encountered [dismissed that notion](#). Smith’s and Darwin’s theories were partly projections of the British mind onto the real world, theories that are *highly* subject to challenge, although their work has become Western dogma.

A historic example of the conflict between microeconomics and macroeconomics, and the difference between wealth and its symbol, was history’s greatest gold rush, the [Spanish plunder of the New World](#) during the 16th century. The world’s biggest gold rush [helped the Spanish Crown go bankrupt](#). Spain was probably [worse off in 1600 than it was in 1500](#), while Spaniards helped [kill off 90% of a hemisphere’s population](#) (a

situation of such enormous magnitude that nothing in history compares to it). A few mercenaries became rich while the nation became poorer. The Spanish sovereigns neglected Spain's real economy while pursuing wealth's symbol. Spain's ignorance of what real wealth *was* doomed their imperial efforts. The [English](#) and the [Dutch](#) were far more successful in their imperial enterprises, with their [mercantilist](#) plunder of distant lands. While some success was simply the confluence of circumstances their countries benefited from, they were more scientifically minded than their Spanish rivals as well as more business-oriented. With the advent of paper money and today's electronic global banking, the abstraction of wealth reached even greater heights, also leading to greater elite manipulation.

All of [science's greatest breakthroughs](#) have come when new paradigms were erected, and they always came about by [questioning the founding assumptions](#) of the [previous paradigm](#). The *assumptions* of today's prevailing economic theory are scarcity, fear and greed. Those principles are *assumed* in the law of supply and demand, and the "invisible hand of competition." The [law of supply and demand](#) states that people will increase the price of scarce commodities in order to make greater profits at the expense of their customers. Monopoly control of supply is the dream of every capitalist. Such economic ideology rationalizes [greed](#) (the fear of never having enough), and makes it a founding *assumption* of the modern economic paradigm. Once *assumed*, founding principles are rarely examined afterward, as questioning it could topple the entire paradigm. That is largely why scientists, and nearly all people, are highly resistant to questioning their *assumptions*. Today's invisible hand of competition is the fear that your competitor will put you out of business (or erode your [profit](#) margins). That fear motivates *all* capitalistic empires, and virtually all industries and professions have [largely turned into rackets](#), wiping out the competition being their primary goal. That is a major reason why America's standard of living has been declining for the past generation. An *assumption* of abundance would completely overturn today's economic paradigm, and may be the chief catalyst in bringing [heaven on earth](#) into being.

Real wealth has always been rooted in earth's ability to support life. As [Brian O'Leary](#) once told me, there can be no economy on a planet that cannot support life. An old Native American saying was that when the white man chopped down the last tree and poisoned the last river, he would realize that he could not eat money. Today's economics, where money measures everything, and destroying an environment in pursuit of short-term economic gain does not appear in the tally, is a house of cards, built on false assumptions while wearing blinders. To separate environmental reality from economic theory is an ideological decision that serves to further obscure what *real* economics is. Such ideological gamesmanship is no accident. Today's economic

theory is dominated by economists from the [University of Chicago](#), an institution that history's most notorious robber baron, John D. Rockefeller, built. Academics and scholars *not* owned by such interests see the ideology coming from the University of Chicago and similar institutions as a [form of brainwashing](#).^[8] As [Noam Chomsky](#) and others make clear, when Western states largely lost their ability to establish their "legitimacy" by simply using force on their domestic populations, then elites had to resort to controlling what people thought.^[9] That idea has nothing to do with a "conspiracy theory," but is an easily researched [social engineering project](#) that is more than a century old. The "[dumbing down](#)" of the U.S. population (and to a lesser extent, Western Europe and the former British colonies) has been a goal of industrial and corporate elites for a long time, something I was eventually able to see [in my own indoctrination](#), after I had my "radicalizing" experience.

Accordingly, Chicago School economists will turn a blind eye (probably unconsciously) to the underlying reality of the [energy industry](#) driving the world economy, as their chief patron [controls the world's energy industry](#) to some degree. One [astute site](#) shreds several false assumptions of today's economics, a discipline that not only tries to ignore environmental realities, but also political ones.

It is a hallmark of Western reductionism to ideologically separate economics from the environment and politics. The food industry is part of the energy industry. Whether energy is measured in calories, kilowatt-hours or barrels of oil is of relatively slight importance, not meaningful enough to segregate them into entirely separate disciplines. For every calorie of food that makes it to a Westerner's dinner table today, several calories of fossil fuel energy are consumed to grow it and get it there. Categorizing the food and energy industries separately is partly why people are unable to see the big picture of what is really happening. It is also a primary reason why most activists hack at the situation's branches, while ignoring the root.

While tree hugging and peace marches can be noble activities, unless the root issues are addressed, they are largely futile gestures. When I was with [Dennis Lee in Boston](#), and we dealt with anti-nuclear-energy protestors, our message was that the best way to "fight" nuclear energy was to make it obsolete. We found, however, that protestors were far more interested in chaining themselves to the front gates of the Seabrook nuclear reactor. I hug trees, and was in several peace marches since the "terrorist" attacks of [September 11, 2001](#), but until the underlying economic motivation of why America is about to invade the Middle East is addressed (seizing control of the world's most lucrative energy supply and expanding imperial domination), all the peace marches and civil disobedience will have a very limited effect.

Perhaps *all* wars for the entirety of world history had an underlying economic basis, but the ruling classes cannot get the masses to throw the lives of its young men away with that stark understanding, so elites have conjured all manner of ideological cover story to mask the underlying economic motivation. The rationales given have been religious, racial, ethnic, political, [humanitarian](#), and whatever else can delude and motivate the masses. Truth has been the first casualty of *all* wars, and that dynamic will never change.

The global ruling class (I have seen solid evidence that it exists, and can play very dirty when it needs to – see [this link](#), and [this one](#)) has been busy enforcing the scarcity paradigm, so people can be incited to commit violence against others. Free energy definitely exists, but a [global effort](#) to derail anything that can challenge the [current energy industry](#) has long been in place. It is real, and I have [borne the brunt](#) of it, but it has been virtually impossible to get anybody to comprehend the root issue of energy scarcity and how it is being managed on a global basis. How difficult is it to imagine that global elites [like ruling in hell just fine](#), and will derail anything that makes humans independent of the global exploitation system, which personal abundance would do? The notion of conscious manipulation of the global political-economic system is almost universally derided as a “conspiracy theory.” The global elites will never advertise the real game, although it *does* surface in the public record sporadically, such as David Rockefeller’s Trilateral Commission issuing a report that global democracy is a threat that needed attention.^[10] Also, there are [rare admissions from the inside](#) as to what the game really is. People with their eyes and minds open can easily figure it out.

Political “democracy” in the absence of economic democracy is an empty vessel, which most Americans realize at some level, which is largely why the United States has the “free” world’s [lowest voter turnout](#). As a corollary, political activism in the absence of economic activism is impotent. The proper term for the American political-economic system is a *plutocracy*, which means that the rich run it. The rich have *always* run the United States, going clear back to when [America’s richest man](#) became its first president, and its first Supreme Court Justice (John Jay) openly stated that the people who own the country should run it (it was his favorite maxim, according to his biographer).

Democratically free, environmentally harmless energy exists but is suppressed by a global effort, and its liberation is probably the key step in [overturning the scarcity paradigm](#) that has dominated human thought and action for at least the past 10,000 years.

The hazard of paradigms is that they are built on assumptions, [assumptions that can blind people](#) indoctrinated into those paradigms. Hacking at branches can be useful, as long as it ultimately aims for the root. While energy is the root issue of our physical existence, there also is a deeper root, one the great masters know well. Until the advent of Western materialism, all peoples have had a sense of a “higher” reality, a divine origin from which this universe manifested. That sense has been the root of all religions, and that source has been called names such as the divine light, the force, the infinite spirit, God and so forth. The energy that created and sustains this universe, and all of Creation, is the energy of love. That is what “God” really is. Energy is the root issue of creation too, something that [Jesus knew well](#), as did history’s other masters. To say that energy is the root of the issue, or to say that love is the root of the issue, [is stating the same thing](#). It just depends on how big we want to draw the picture. Will we have [hell on earth](#) or [heaven on earth](#)? It [is up to us](#).

Footnotes

[1] See Fuller’s *Utopia or Oblivion*, for instance. Steve Meyers studied under Fuller and made me aware of this aspect of Fuller’s work after this web site was substantially completed in September 2002. Fuller saw humanity’s prime commodity being “ephemeral ideas aligned with the principles of creation” and their practical application, with energy being the most fundamental supporter of human needs on earth. When America had its first energy crisis in the 1970s, Fuller said the real crisis was one of human ignorance, not energy. I agree with that perspective, although it still comes down to energy being the root issue for the human journey. Without energy, there is no life. With enlightenment, boundless energy can be made available to humanity, in a way that harms no other creatures. Although Fuller’s major theme was creating a sustainable global civilization, and the energy issue was central to it, academia and the media have ignored/suppressed that aspect of his work, and most people have only heard about Fuller because of his geodesic dome. During January and February 2003, I had the pleasure of reading Fuller’s *Utopia or Oblivion* and *Grunch of Giants*. Steve said that *Utopia* best summarized the overall theme of Fuller’s work, while *Grunch* was the closest Fuller came to calling the global political-economic system what it really is, with a perspective similar to [Noam Chomsky’s](#) and other radical leftists ([Parenti](#), [Herman](#), etc.). Reading Fuller’s work was discovering the professional grandfather I never knew I had (although Fuller declined to call himself a professional - *Utopia*, p. 336). The material for *Utopia* came from the mid-1960s, while Fuller wrote *Grunch* soon before his death in 1983. Parts of *Utopia* seemed limited, incorrect or dated, but some of what was missing in *Utopia* became more evident in *Grunch*, as far as how Fuller saw humanity’s situation. Steve said that Fuller had to walk a tightrope: making his case without being marginalized as Chomsky has, and Chomsky has been the world’s most prominent academic for the past forty years. It is probably no accident that Fuller wrote *Grunch* at his life’s end, purveying his pithier observations when he could no longer be penalized. Just as Martin Luther King Jr.’s legacy has been misrepresented and watered down since his death (Jesse Jackson says the establishment transformed King into the “harmless dreamer” after his death), and [Adam Smith’s](#) work has been distorted by the corporate capitalists, so has Fuller’s legacy been diluted, misappropriated and even ignored by today’s establishment.

Whatever criticisms might be made about Fuller's work are mere quibbles compared to pondering his masterful synthesis and his great humanitarian labors. He was far ahead of his time. As far as the differences between Fuller's work and this site: he deals with geometry in detail (partly how he invented his geodesic dome); this site incorporates more of a [spiritual perspective](#), and deals with the evolution of the [medical establishment](#) and the racketeering that pervades [all of today's industries and professions](#); this site does not shrink from the political-economic-historical topics that Fuller treaded rather lightly upon until *Grunch*; I have seen first-hand evidence that manipulating the global political-economic system is partly conscious (see [here](#), [here](#) and [here](#)), while Fuller describes the more [structural](#) (unconscious) aspects of it; this site focuses on more than just humanity's welfare, but [all life on earth](#); Fuller relieves U.S. citizens of a great deal of their personal responsibility for what is happening, while I *emphasize* our responsibility, largely because Americans are uniquely positioned to initiate bringing a global Utopia or destruction into being. It is an awesome responsibility, and so far, [Americans](#) are not handling their inheritance very well. Steve Meyers is Fuller's direct professional descendent. Humanity stands poised to create a global Utopia, or [we may destroy ourselves](#). The mass of humanity has largely come to this stage of its existence unconsciously, usually without trying to benefit anybody other than themselves. The time to become conscious, and help *all* people attain sufficiency in life's necessities, is upon us. Failure to do so may mean our demise by our own hand. With that comparison out of the way, what follows are some of the simple but profound truths that Fuller pursued for many years.

Humanity's [hands and intelligence](#) led to tool-making ability that allowed humans to exploit energy in ways that other animals could not. That led to people expanding their range across the planet. Humanity's journey has always centered around manipulating the environment to gain energy security, and our reservoir of knowledge and skill has generally been a process of compounding itself, as our ancestors evolved through their stone, bronze, iron, industrial and information ages. Until relatively recently, there have never been enough resources so all humans can live to a reasonable life expectancy of ninety years or so. The concept of scarcity was ingrained in humans early on, and is the great invisible assumption of today's humanity. However, it is an obsolete assumption, at least as far as human life on earth is concerned. The technology came into being a generation or two ago to clothe, house, feed, transport and educate *all* of humanity at a standard of living not even attainable by European royalty during the 19th century.

Nearly all the metal ever mined is still being used by humans, as all elements are eternally recyclable, as long as there is sufficient energy to do so. When Europeans [learned to sail the oceans](#), what followed was largely an act of global piracy. Technological and scientific advances were conscripted into making ships hold more cargo, to make them swifter, to make their armaments more deadly, and so on, as Europe's nations vied for supremacy. That competition greatly accelerated the trend of "doing more with less." Technology developed for ships was used in land applications much later, such as with steel and refrigeration. Sea dominance eventually gave way to air dominance, and [space dominance](#) is the new goal. The emphasis for centuries has been making vessels lighter, more capable, and deadly. The "doing more with less" idea can be summed up in one word: efficiency.

Before the invention of radio, ships at sea could not effectively communicate with their imperial masters, so sea captains needed training in diverse disciplines, as they needed to be self-reliant (*Utopia*, pp. 41-42). With the invention of radio, captains could take orders directly from their superiors in real time, and

diversity in a captain's training was no longer as necessary. Specialization has been the hallmark of science and industry, but specialization also tends to contribute to tunnel vision. Specialists know about their particular discipline, but rarely see the larger context their efforts impact. Fuller called himself a generalist, and meant it in a comprehensive sense. Fuller believed that the specialization in science and other technical endeavors was a ruling class tactic to keep specialists from seeing the big picture, so they could be controlled (*Utopia*, p. 334). Science is largely a slave profession (*Utopia*, p. 304), and its master is capital, i.e., stolen and hoarded wealth. Only comprehensivists can see the big picture, and thereby consciously develop the big answers.

According to Fuller, scarcity has always been the [motivation of soldiers](#), and until the scarcity problem is resolved on a global basis, we will always have wars. Because of perceived scarcity, [greed](#) became the centerpiece of today's economic ideology. One of Fuller's most trenchant observations was that *all* political ideologies are founded upon the idea of scarcity, and politicians are preoccupied with who gets the scarce resources. Capitalism avers that idle capitalists should enjoy the scarce resources, while Marxism posits that workers should. Fuller noted that because politics is founded on scarcity, or what I call the [Zero-Sum-Game](#) idea, no political ideology is of *any* use in resolving the scarcity issue. Fuller wrote,

"Making the world resources adequate can't be accomplished through political system competition. All politics are obsolete as fundamental problem solvers. Politics are only adequate for secondary housekeeping tasks. Mankind must take universal initiative in effecting the design revolution." (*Utopia*, p. 156)

Fuller repeatedly wrote that if all politicians and ideologues were relocated to the moon tomorrow, but all the industrial infrastructure was left intact and the people who operate it, human society would do just fine. Take away the machinery and industrial capacity, while leaving the politicians and the attendant political infrastructure intact, and most of humanity would starve to death in a few months (*Utopia*, p. 157). Under an abundance paradigm, today's politics are useless. Fuller wrote that politicians have *always* been "stooges" of the economic interests (*Utopia*, p. 276). Fuller wrote that the old Utopias always failed because they were based on shared austerity. A Utopia based on abundance has a chance of coming to pass.

Many of Fuller's visions did not come to pass as he envisioned, and most are still in the future, if they ever happen. Steve Meyers and I have long discussed people's resistance to visions such as Fuller's or ours. It has been awesome to witness the general population's intractable resistance to the *idea* of abundance, and for many years, Steve and I have beaten our heads against the walls of organizations that *claim* to be seeking answers. We have shown them solutions that make the big problems, the ones that threaten humanity's existence, go away almost overnight, and [what we get back is nearly complete silence and denial](#), or worse, derision. Dennis Lee discovered the same thing [on his journey](#). That might be the most mind-boggling part of my strange journey, and I came to a new understanding of the phenomenon in [early 2006](#). The vast majority of people *do not even want to know* that there are solutions waiting to be used, and those who say they seek solutions are often the biggest obstacles to achieving them. What follows

are our speculations, based on our *experiences*, on why most of humanity *does not want* to solve its problems.

Fuller stated that for virtually the entirety of human history, only one-in-one-thousand people lived to a ripe old age, and only one-in-one-hundred-thousand was an economic success (*Utopia*, p. 340). Consequently the concept of failure has been nearly hardwired into human consciousness. Most people seem *addicted* to the fear/failure/scarcity paradigm, and ideas of abundance are literally outside their universe of possibility. Also, people often subscribe to ideologies that short-circuit their awareness, [blinding](#) them to what is really happening. The quickest dialogue-ender I have ever experienced regarding my work is people telling me they are “skeptical” that free energy is even possible, and I respond with the offers we received to cease our pursuit of free energy, the last one being [at least one billion dollars](#). I do not even get back, “I do not believe you, give me evidence of your offer” (our treatment [was pretty standard](#), as I eventually discovered, but more extreme, because we were more “threatening,” as far as being able to deliver alternative/free energy). When I mention the offers we received, I receive pure silence as their response, virtually every time. Why? Steve thinks it is because if they acknowledged that situation, it would shatter their comforting fantasies of how this world operates. The radical left, with its “[conspiracy phobia](#),” has virtually never responded to my work, even from those who say they are *looking for answers*. Even Noam Chomsky says that earth’s rulers would [rather destroy the planet](#) than give up their “power.”

I believe the [cognitive dissonance](#) dynamic partly explains the denial I have encountered. It is far easier to dismiss my experiences than acknowledge them, because to acknowledge them, people would have to rethink their worldviews. In the end, it probably comes down to integrity. I discovered the hard way that [personal integrity may be the world’s scarcest commodity](#). Only one-in-thousands of people have proven to have the integrity needed to pursue the world’s big problems. Fuller’s ratio of people who can technically create answers was even larger. Fuller wrote that only one-in-one-hundred-thousand trained scientific types will make the breakthroughs necessary to keep technologically advancing humanity, but that one would be enough (*Utopia*, p. 261). I believe that the low collective integrity of the human species, combined with that low number of creatively competent technical types, is largely why we are heading toward oblivion today more than we are Utopia. Nearly every major scientific/technical innovation was initially [greeted with outrage and/or denial](#) by the scientific community, and many potentially earth-shaking ones are marginalized and derided to this day, to humanity’s detriment. It is probably worse today than it was when the [Wright brothers](#) were ignored for five years after they first flew.

Another ingrained problem that Fuller mentioned, and [I have also seen](#), is that [scientific and technical types](#) are deeply naïve about politics and other real world factors. Most American scientists and technical types work in some capacity for the war industry, and consequently have wholly swallowed their nationalistic and related indoctrination, unable to see beyond the tiny reality framework they were inculcated into.

Fuller and others have written that weaponry and warfare have been the driving forces behind most technical innovation (he called it humanity’s “suicidal fixity” on the killing aspect of the efficiency and design revolution - *Utopia*, p. 203). Fuller often wrote that if humanity directed its efforts at creating “livingry” rather than weaponry, the scarcity paradigm could evaporate almost overnight. However, we flirt with our self-destruction. Fuller wrote that if the scarcity paradigm was not toppled by the late 1980s, humanity’s chances of survival were probably less than 50%. He may be right, but it is never too late to

begin trying. Fuller stressed warfare as the factor that may destroy humanity, but it has [competition today](#), environmental collapse being a prominent competing factor.

Fuller noted that when college students became engaged in pondering and solving global problems, notions of nationalism and other group ideologies quickly faded into insignificance (much to the consternation of their elders, who could not shed their indoctrination), and the students all saw themselves as simply humans, or “earthians” (*Utopia*, p. 248). There is [another step beyond that one](#), which Fuller’s work did not quite address, which is understandable for a man of his generation.

This site could be accused of plagiarizing Fuller’s work, although we took independent and parallel paths, and he was from my grandparents’ era. Fuller and I agree that energy *is* wealth (*Utopia*, p. 287), and is the root of the human journey. I hope, for humanity’s sake, that Fuller’s brilliant, pioneering work is rescued from its obscurity, and soon.

[2] See Prigogine and Isabelle Stengers’ *Order out of Chaos*, David Bohm and David Peat’s *Science, Order and Creativity*, and James Gleick’s *Chaos*.

[3] Photosynthesis is the capture of photon energy to increase electron energy, to overcome the atom’s/molecule’s resistance to react with other atoms/molecules, known in chemistry as activation energy. Chemical reactions must pass their activation energy threshold in order to happen. For some reactions, the needed energy is high, and for others, less so. Reactions are also exothermic or endothermic. Exothermic means that the reaction gives off more energy than was used to initiate it, while endothermic means there was a net absorption of energy in the reaction. Burning wood is an exothermic reaction, with the reaction begun by heating the wood to the point where its activation energy is exceeded, as with a spark or match flame. In heat synthesis, subterranean bacteria are able to take advantage of high temperatures (of hundreds of degrees), and have an endothermic reaction that absorbs energy, to fuel its life. Much of that chemical synthesis can only happen under high temperatures, and has been found in geysers, undersea volcanic vents, or far beneath the earth’s surface, where temperatures of several hundred degrees can be found. Such chemical synthesis is today considered a primitive precursor to photosynthesis, and is only performed by microscopic organisms. Those microscopic organisms are called archaea, and there are also some classes of chemicals (salts and methane, for instance) where certain archaea can eke out chemical reactions to fuel their lives. Archaean life forms may be earth’s oldest.

[4] Because humans evolved in Africa, their fellow mammals also adapted to their presence. Although there were African megafauna extinctions, they were more modest than elsewhere on earth. It is thought that the surviving African megafauna adapted to human predation because humans “grew up” around them, and learned to fear them. They survived the rise of the human super-predator, and are about earth’s only living examples of what kinds of mammals populated earth before humans appeared.

[5] Clive Ponting’s *A Green History of the World* is an excellent overview of that process, and Jared Diamond’s *Collapse* is also good reading on that subject.

[6] The hydrological cycle is largely considered to be the circulation of water through earth’s landmasses. The sun’s energy evaporates water from the oceans’ surface, and most falls back to the oceans as rain.

Water vapor that floats over land and falls as rain or snow drives the land-based hydrological cycle. That water is needed for earth's land-based ecosystems to exist, as it passes on its way back to the oceans via rivers and lakes, or is vented back to the air by plant respiration and evaporation. Some trickles underground, and creates great aquifers.

[7] See Fuller's *Utopia or Oblivion*, p. 6.

[8] For instance, [Edward Herman](#) is an economist who takes the "Chicago School" to task regularly in his work.

[9] See, for instance, Chomsky's *Necessary Illusions*, and Herman and Chomsky's *Manufacturing Consent*.

[10] See *The Chomsky Reader*, p. 45, or Chomsky's *World Orders Old and New*, p. 93, or *Necessary Illusions*, pp. 2-3.

The Next Section: [Site Timeline](#) (236K)

Site Timeline

By Wade Frazier

This section grew from a friend's trouble with trying to keep straight in his mind various names, dates and events that are on this web site.

This is not supposed to be a history-of-the-world timeline, although it can appear that way. It is a linear listing of various events discussed on this site, including links where the events are dealt with in some depth.

[Timeline from 1492 onward.](#)

	This timeline presents events related to this site, with links to pertinent parts of it.	
Date	Event	Human Population Statistics
4.6 billion BC	A star is born. We call it the sun.	
4.5 billion BC	Earth appears.	
3.8 billion BC	Life appears on earth.	
2.3 billion BC	First ice age known of occurs.	
950 million BC	Ice age appears and lasts for 350 million years. Ice ages have periods of advancing and retreating ice sheets over parts of earth.	
900 million BC	Algae appears on earth.	
570 million BC	Complex sea animals appear in earth's oceans.	
500 million BC	Fish appear, world's oceans teem with life.	
450 million BC	Ice age appears and lasts for 50 million years.	

438 million BC	First mass extinction episode, with 85% of earth's species becoming extinct.	
435 million BC	Land plants appear, with vascular systems.	
410 million BC	Insects and amphibians appear.	
367 million BC	Second mass extinction episode, with 82% of earth's species becoming extinct.	
360 million BC	Large fern forests appear.	
330 million BC	Reptiles appear. Ice age appears and lasts for 90 million years.	
245 million BC	Third and so far greatest extinction episode, with more than 90% of earth's species becoming extinct.	
240 million BC	Dinosaurs and mammals appear.	
208 million BC	Fourth extinction episode, claiming 76% of earth's species.	
205 million BC	Birds appear.	
135 million BC	Flowering plants appear.	
65 million BC	Dinosaurs become extinct in fifth mass extinction episode, which claims 76% of all species. First primates appear.	
45 million BC	Whales are evolving from land-based to aquatic life.	
38 million BC	Anthropoid apes appear, the ancestors of humans.	
12 million BC	Evolutionary split, which separated eventual orangutans from other great apes, begins.	
7 million BC	Evolutionary split that leads to chimpanzees begins.	
> 4 million BC	First erect protohumans appear in Africa, differentiating from their great ape cousins.	Human population = 0
> 2 million BC	Large-brained bipedal hominids, of the genus <i>homo</i> , appear in Africa.	

< 2 million BC	Homo erectus begins migrating from Africa, and fire was first used as a tool. The African ape diet was partly abandoned as fruit, blossoms, seeds and leaves were less available beyond the tropics, meaning more meat eating.	Human population <100,000
1.6 million BC	Pleistocene ice age begins, ending 12,000 years ago.	
1 million BC	First motion picture, starring Raquel Welch.	
c. 400,000 BC	Fire consistently used . First regular food processing practiced – cooking.	>100,000
c. 130,000 - 100,000 BC	First anatomically modern humans appear in Africa and migrate across Asia, eventually displacing other hominid species.	
c. 40,000 BC	Advances in hunting skill and technology allow humans to hunt larger animals . Boats invented. Modern humans first appear in Europe and Australia.	
c. 35,000 BC	Humans populate Tasmania and eventually become isolated from peoples in Australia, probably from rising ocean as Ice Age ends.	
c. 30,000 BC	Humans probably first appear in North and South America. Cave murals are first drawn, in European caves. One of the earliest artistic works, and possibly a religious artifact, the Venus of Willendorf, is made in central Europe. It, and many works like it, is evidence that goddess-based religion flourished from humanity's earliest days.	
c. 25,000 BC	Pottery first appears, in Europe.	
c. 23,000 BC	Bow and arrow invented, probably in Europe.	
c. 11,000 BC	Methods for processing and storing food appear in Fertile Crescent. Australia experiences extinction of its large animals, probably due to over-hunting by humans. Australia did not have a continental ice sheet. Extinction of large mammals begins in northern Eurasia, probably due to over-hunting and climate/ biome change.	

c. 10,000 BC	The most recent ice age ends. Dogs are the first domestic animals, appearing in the Fertile Crescent region. Copper , possibly the first metal ever worked, is worked in the Fertile Crescent region.	
c. 9000 BC	Extinction of most large mammals in North America, possibly caused by human over-hunting, probably also influenced by climate changes.	
c. 8500 - 8000 BC	Large mammals become extinct in South America , which was not covered in a continental ice sheet, probably from human over-hunting. Hunter-gatherer lifestyle is increasingly unsustainable. First permanently inhabited town, Jericho, begins developing. Domestication Revolution begins in Fertile Crescent and the Americas. Wheat, peas and olives domesticated in Fertile Crescent. Squash and pumpkins first domesticated in Mesoamerica. Beginnings of marine-based culture of North America's Pacific Northwest.	4 million
c. 7500 BC	Domestication Revolution begins in east Asia.	
c. 7000 BC	Sheep and goats begin domestication in Fertile Crescent region.	
c. 6500 BC	First large human communities, such as Catal Huyuk, appear in present-day Turkey. The clearing of forest to make farm fields, and the resultant puddles, led to the spread of malaria, probably originating in Africa.	
c. 6000 BC	Cattle and pigs begin domestication in Fertile Crescent region. Chicken and rice begin domestication in east Asia.	
c. 5500 BC	Agricultural communities appear along the Nile river.	
c. 5000 BC	Civilization begins forming in the Fertile Crescent. Early societies are egalitarian. The agricultural societies have goddess-based religions, while the pastoral, herd-tending societies develop male-based religions. The mobile pastoral societies begin invading the sedentary agricultural societies. Irrigation is first used in the land between the Tigris and Euphrates rivers, and in Nile river valley. Villages appear along Yangtze river. Metallurgy first practiced near mountains of Eastern Europe. Copper weapons developed by herder societies of steppe regions. People of Greece and the southern Balkans adopt	5 million

	agricultural practices.	
c. 4500 BC	First large religious facilities built at site of today's Iraq. Stratification of early society begins, with elites - priest class, craftsmen, rulers and probably the first medical doctors. Earliest known bronze implements are made in Thailand.	
c. 4000 BC	Horse domesticated in steppe region north of Black Sea. Llama and Alpaca domesticated in South America. Camel first domesticated near Fertile Crescent. Invasions from steppe regions wash across Europe, Fertile Crescent and Middle East. Warfare practiced on large scale. Iberians migrate to today's Spain, from either northern Africa or central Europe. They also become the British Isles ' first permanent inhabitants during the historical period.	
c. 3500 BC	Migrating farmers from Fertile Crescent settle Indus valley in present day Pakistan. Bronze age begins in Fertile Crescent . Soil salination begins affecting Mesopotamian agriculture, and salt resistant barley is raised in place of wheat, comprising half of southern Mesopotamian grain production. Siltation of river water from upstream deforestation also contributes to environmental degradation. The wheel is invented in Mesopotamia. By this time, corn, potatoes, manioc, beans and turkeys are domesticated in the Americas.	
c. 3000 BC	Sumeria becomes the world's first literate society. History begins. State bureaucracy and military establishment are developed. The earth-based Mother Goddess begins being replaced by thunderous, male, sky gods in Middle Eastern mythology. Elephants, giraffes and rhinoceroses are extinct in Nile valley. Plow agriculture begins in Fertile Crescent. The Pacific Northwest marine-based culture begins fully developing, from southern Alaska to Northern California.	14 million
c. 2600 BC	Imhotep is credited with building the world's first large stone building, a step pyramid in Egypt. Imhotep was also a physician. He was later deified, and was probably the model for the Greek god of medicine, Asclepius.	

c. 2400 BC	Crop yields continue declining in Sumerian fields. Wheat yields decline by 42% between 2400 and 2100 BC.	
c. 2100 BC	Ur abandons wheat cultivation. Wheat comprises only 2% of Sumerian crops.	
c. 2000 BC	Great migration wave of pastoral societies from steppe regions (generally between the Caspian and Black Seas) into the Fertile Crescent, India and Europe. Third Dynasty of Ur collapses. Violent, male, sky-god religion accompanies the invaders. Feminine, earth-based religion and mythology in the Fertile Crescent, Mediterranean region and Europe are eventually overthrown by the invaders, replaced with male, sky-god religions. Helen of Troy becomes a famous female healer and mythological figure, but female healers begin disappearing from medicine at this time. Intense deforestation of the region from Morocco to Afghanistan commences. Today, only about 10% of that forest remains; much has turned to desert.	
c. 1900 BC	Indus valley society collapses. Declining food production due to soil salination probably led to population decline and internal collapse, combined with foreign invasion.	
c. 1700 BC	Wheat yields in Sumeria decline by 65% since 2400 BC. Fields turn white from salt. Sumer declines as a power, and the center of Mesopotamian civilization shifts north.	
c. 1500 BC	A four hundred year period of chaos and warfare begins to sweep Europe, the Fertile Crescent and Mediterranean region. The violent, male sky-gods come to dominate religion, including one named Jehovah. The Aryan (pastoral tribes of the steppe regions) invasion of India leads to their caste system; the invaders are the favored class.	38 million
c. 1400 BC	Iron first smelted by Hittite civilization in present-day Turkey . Agriculture begins in Japan.	

c. 1200 BC	Iron made into weaponry. Iron weapons rapidly replace bronze and become common throughout Europe, the Fertile Crescent, Egypt and elsewhere. The feminine-friendly Minoan civilization on Crete collapses, as does Mycenaean civilization. Joshua's Israelites lay siege to Jericho . Celts invade from region of today's Austria into France and Germany. The Polynesian expansion, from the region near New Guinea to the South Pacific's islands, begins.	
c. 1100 BC	The Phoenician maritime civilization rises, based in today's Lebanon, and flourishes for centuries. They invent the alphabet.	
c. 1000 BC	Agriculture collapses in central Mesopotamia due to soil salination. In 1990, Iraq imported 70% of its food. The anti-feminine culture of ancient Greece develops, known as Greece's "dark age." Women are gradually excluded from public life. Although male gods dominated Greek mythology, women were also present, if subservient. The Picts migrate to Scotland from Europe. The Greeks make the first heat-treated iron weapons . Chinese begin using coal for smelting copper coins .	50 million
c. 900 BC	Asclepius lives at this time, and eventually became "sainted" in Greek culture and became the Greek god of healing during its classical period. The mythological Asclepius was the son of Apollo, who was the son of Zeus. Hygeia and Panacea were Asclepius' daughters.	
c. 700 BC	A village that began with shepherds' huts, eventually known as Rome, is growing.	
c. 650 BC	Expanding Greek settlements begin causing noticeable environmental degradation.	
590 BC	Solon argues against agriculture on steep slopes in Greece because of rapid erosion.	
586 BC	Babylonian king Nebuchadnezzar II's armies destroy Jerusalem, with remaining Jews being taken to Babylon as slaves. Their first forced emigration was in 597 BC, when skilled Jews were taken. It began the dispersal of the Jews across the world.	

c. 563	Gautama Buddha is born; he died in about 483 BC.	
560 BC	Peisistratus becomes tyrant of Athens, and pays bounty for farmers to plant olive trees , as they can survive on the badly eroded land, and put down roots to penetrate the exposed rock.	
539 BC	Persia conquers Babylonia, under Cyrus the Great. Persian Empire becomes the Old World's largest. Babylon's Jews are allowed to return home, but many, if not most, prefer to stay.	
509 BC	Republic of Rome begins, which takes power away from local kings. The Roman republic tries balancing the needs of peasants and aristocrats.	
c. 500 BC	Celts begin invading the British Isles, absorbing the Iberians. Women enter the healing profession in Danish Celtic culture. Pythagoras, the world's first mathematician and the West's first vegetarian , dies. His followers taught that the earth orbited the sun. Etruscan civilization is at its peak influence, to eventually fall to neighboring states. The world's most sophisticated agricultural system, the paddy system , is developed in China, expanding across Southeast Asia during the next millennium.	
480 BC	Persians sack and nearly destroy Athens. Themistocles, and later Pericles, rebuilds Athens into a great city. At its height, of its 200,000 inhabitants, only 50,000 were citizens (men). The rest were women, slaves and foreigners.	
c. 450 BC	Roman law codified on twelve wooden tablets. The laws make men the absolute rulers of family households, giving them the authority to sell their children into slavery, among other rights.	
432 BC	Peak of the Greek classic period. Hippocrates , Socrates, Thucydides and Aristophanes are alive. During Peloponnesian War (begun in 431 BC), war-crowded Athens is afflicted with a plague (probably smallpox or typhus) in 430 that lasts three years, killing about a third of the population and leading to Athens' decline.	

c. 400 BC	Centuries of Greek deforestation and agricultural practices devastate the environment and soils, remarked upon by Plato and other observers. The degraded environment led to falling crop yields and Greece's decline, as had been happening to other empires for thousands of years. Rome begins rising as a power, eventually defeating the Etruscans of today's northern Italy, and incorporate Etruria's cultural and technical achievements. By the time of Jesus, Etruscan culture was almost completely absorbed into Roman culture.	
334 BC	Alexander the Great of Macedonia conquers Persia and tries uniting East and West. The short-lived Macedonian Empire helps pave the way for the Roman Empire. Alexander supposedly said that he "died by the help of too many physicians."	
264 BC	After subduing Italy, Rome engages in its first war against Carthage. Italy and Sicily are rapidly deforested to meet Rome's needs.	
202 BC	Rome defeats the forces of Carthaginian general Hannibal, ending the second Punic War.	
c. 200 BC	Picts migrate to Ireland from Scotland. Lion and leopard are extinct in Greece and coastal regions of Asia Minor. Beaver is extinct in northern Greece due to trapping.	
197 BC	Rome invades Greece and conquers them. Rome would incorporate much of Greek culture into its own, borrowing its gods and technology, although denigration of Greek physicians and medicine was typical.	
146 BC	Greek resistance to Roman rule leads to the complete destruction of Corinth and the sale of its inhabitants into slavery. That same year, Rome does the same to Carthage . The Roman Republic begins expanding across Europe, northern Africa and the Middle East.	

58 BC	Rome begins handing out free food. Eventually, hundred of thousands of Rome's citizens received free food for political reasons. Intensive agricultural exploitation of imperial lands are undertaken to feed the empire. Places such as today's Libya are forced to become farms for Rome, with the agricultural practices eventually turning Libya into the desert nation it is today.	
54 BC	Julius Caesar's armies defeat the inhabitants of southern Britain.	
31 BC	Cleopatra and Anthony's forces defeated by Rome, and Egypt comes under Roman rule the next year.	
27 BC	After a century of bitter civil war, the Roman Republic ends with the naming of Augustus Caesar as the first Roman Emperor. Rome's citizens cease having representation in government.	
1 AD	Jesus is alive. Much of Palestine, Syria, Lebanon and surrounding regions are deforested by Rome, eventually turning it into desert. In the Caribbean, agricultural Arawakan peoples begin migrating along the archipelago from South America, eventually displacing/absorbing the hunter-gatherer peoples there. They populate the Greater Antilles in the millions by 1492 , and are loosely known as the Taino. At this time, and perhaps a few centuries earlier, Polynesians begin colonizing the Hawaiian Islands. The Chinese probably invented paper around this time, although tradition gives the date as 105 AD.	World population: 170 million.
C. 30 AD	Roman writer Celsus translates works of Hippocrates, writes a mammoth series of books, and the eight devoted to medicine have survived.	Roman Empire's population: 50 million
66 AD	First Jewish revolt against Roman rule . Rome responds with typical brutality, the revolt ending with the mass suicide at Masada in 73 AD. Jews begin their dispersal from Palestine.	
122 AD	Hadrian's Wall built by Rome in northern England, which marked the northern extent of its empire.	

132 AD	Jews revolt against Roman rule again. Rome responds in standard fashion, completely destroying the Jewish state in 135 AD and laying waste to the entire region. Hundreds of thousands of Jews die; the survivors are sold into slavery and dispersed across the Roman Empire and beyond.	
165 AD	The Antonine plague, probably smallpox, sweeps through the Roman Empire, brought back by returning soldiers from Syria. It rages for 15 years, killing about five million people, or about a quarter to a third of all of those exposed to the disease, including Emperor Marcus Aurelius in 180, as it did his predecessor in 169.	
c. 169 AD	Marcus Aurelius appoints Galen to be personal physician to his heir, Commodus. Galen writes prodigiously, his work guiding Western medicine until the 1500s.	
c. 200 AD		200 million
251 AD	An epidemic again sweeps through the Roman Empire until 270, killing 5000 of Rome's citizens each day during the epidemic's peak, including the Emperor Claudius in 270. Rome was forced by the population loss to recruit barbarian troops. The first mass conversions to Christianity were apparently a consequence of the epidemic. Centuries of Roman games have rendered the elephant, rhinoceros and other animals extinct in Northern Africa. Tiger is extinct in Persia and Mesopotamia.	
c. 276 AD	Mani dies in captivity . Unlike Jesus or Buddha, Mani attempts to create a religion, and he succeeds. It is a syncretic religion that incorporated elements of Christianity, Buddhism, Zoroastrianism and Gnosticism. Although the Roman Empire and others heavily persecute Manicheans, Manichaeism becomes one of the world's great religions, and lasts for a thousand years before it is finally wiped out.	
300 AD	Babylonia becomes the center of the Jewish culture.	

324 AD	Roman Emperor Constantine convenes the Council of Nicea, his gambit to hold the fragmenting empire together through a state religion. There were 20 different versions of Jesus' crucifixion circulating among the numerous Christian sects of the day. The council was charged with creating a state-approved institution and version of Jesus' life for mass consumption. The other 19 versions were suppressed, as well as rival Christian sects, such as the Arians. Roman Catholicism became the official religion of the Roman Empire in 325 AD. The Council of Nicea may have something to do with the fact that more than half of Jesus' life is missing from the <i>New Testament</i>. Feminine imagery is almost completely missing from Christian religious mythology. Constantine also establishes Constantinople in 324 AD at the site of the ancient city of Byzantium, and it becomes the center of the Eastern Roman Empire and the repository of Hellenistic (Greek) culture and learning.	
410 AD	Visigoths invade Rome, for the first invasion of the city in eight centuries.	
451 AD	Hun invasion of Roman Empire stopped by a great battle in France. Hundreds of thousands die in battle.	
476 AD	Western Roman Empire falls. Germanic peoples invade the Roman Empire's lands in Europe during the late 400s, including the Anglo-Saxon invasion of Britain. The Eastern Roman Empire lasts nearly continually for the next 1000 years, with Constantinople (earlier named Byzantium and later Istanbul) as its capital city. Europe, however, fell into its Dark Ages. Ancient Greek texts were burned as pagan, including Hippocrates' works. The Roman Catholic Church largely took over medicine, and Galen's work became dogmatized by the Church. That situation would dominate Western medicine for more than 1000 years. By this time, whales are extinct in the Mediterranean.	
c. 500	Polynesian explorers discover Easter Island, and soon colonize it.	

541	First recorded instance of bubonic plague, beginning in Egypt and racing to Constantinople, where it killed off as many as 10,000 people per day and 40% of the population. Epidemic diseases would periodically sweep Europe and Asia, with cities such as Rome suffering greatly.	
562	32-year drought begins to afflict the Moche culture in South America. El Niño cycles regularly affect South American civilization , and elaborate food production and storage systems are designed to cope with them, as well as other environmental challenges. That region's people become the world's greatest agricultural experimenters.	250 million
c. 570	Muhammad born, founder of Islam.	
632	Muhammad dies, after an amazing life that founds one of the world's great religions. Islam sweeps throughout the Arab world, spreading widely.	
c. 650	Mesoamerican empire centered in city of Teotihuacan begins its collapse, to be replaced in power by the militaristic Toltecs, similar to the way empires rose and fell in the Fertile Crescent.	
711	Islamic armies invade the Iberian Peninsula. Jews live under Moorish rule in Iberia , and it is their golden age in Europe, lasting for 300 years. Learning was an Islamic ideal, and Islamic scholars kept the teachings of the ancient Greeks alive in the West. Influential doctors such as Abu'l Qasim (936-1013) and Maimonides (1135-1204) came from Moorish Iberia. China is undergoing urbanization and population explosion.	
C. 800	Mayan civilization begins its collapse. It attained a peak population of several million, before its overtaxed environment failed to support the population. Famine, war and disease accompanied the collapse of the Mayan population to perhaps a million before 1000 AD, similar to Fertile Crescent dynamics. The forest recovers and covers the Mayan ruins. Charlemagne tries to create a new Western Roman Empire, with a unity of church and state. The Holy Roman Empire lasted until Napoleon. Vikings begin raiding the British Isles, and some settle in France and become the Normans. Others go inland and become the Russians.	

c. 900	Brown bear nearing extinction in the British Isles.	
c. 1000	Polynesian explorers discover New Zealand. Invaders, probably from Tahiti, come to the Hawaiian islands and conquer the inhabitants, setting themselves up as the ruling class, and a slave class was created. Leif Ericson extends Viking colonization past Greenland settlements to North America, probably in today's Newfoundland. They may have driven Irish monks from Iceland before them to North America. The Vikings' violent ways quickly create resistance from the local Algonquin people, and their colonization is not permanent. In Iceland, the Vikings are unable to easily plunder neighboring lands and quickly become a peaceful people, engaging in trade.	
1012	Jews expelled from the Rhineland , in one of Europe's earliest expulsions of Jews.	
1036	Umayyad dynasty ends in Moorish Iberia, and fractures into mutually hostile, petty kingdoms.	
c. 1050	Northern and central Europe, especially the Germanic lands, engage in great age of deforestation , making way for civilization, clearing about a third of the forest in a couple of centuries, and up to 75% deforestation by the end of the medieval era. This is the beginning of the High Middle Ages. In 1900, about 25% of the forest remains.	
1056	Ferdinand I, who proclaimed himself the Emperor of Spain, undertakes "Reconquest" of the Iberian peninsula.	
1066	William the Conqueror leads the Norman invasion of Britain. Islamic preachers incite anti-Jew riot in Granada , which kills about 5000 Jews.	
1085	Christian conquest of Toledo , which introduces European scholars to the ancient Greek writings via Islam. The introduction of the Greek writings leads to humanism, the Renaissance and Protestant Revolution.	

1096	Christian Europe makes its first united act: the first Crusade to Palestine . The first wide-scaled Jew slaughters in Europe take place as a warm-up for the first Crusade, in France and Germany. Jews would no longer be safe in Europe, and warfare would be the European way of life until World War II ended.	
1144	In England, the rumor begins that Jews murder babies in their religious rites , which is Europe's first such rumor.	
1145	Bernard of Clairvaux (Saint Bernard), who may have established the Order of the Knights Templar, visits southern France, Europe's most cosmopolitan region. He finds it ripe for heretical sects to flourish, and his Cistercian monks begin to try countering the nascent Cathar influence in the region. Their efforts are ineffectual.	
1158	Munich founded.	
1163	Notre Dame cathedral in Paris begins construction.	
c. 1170	Mesoamerican Toltec city of Tula is destroyed, probably due to major drought and population migrations that led to war.	
1175	Peter Waldo tries reforming Catholic Church corruption, and eventually forms the Waldensian sect.	
1182	Jews expelled from France .	
1184	Peter Waldo is excommunicated from the Church and a papal bull orders bishops to "direct inquisitions" on heresy.	
1195	Council of Evreux tries stemming Catholic Church corruption, such as bishops selling relics.	
c. 1200	Polynesian people begin colonizing New Zealand. The Islamic culture attains the world's highest standard of living. Incan people conquer the land around Lake Titicaca, the first step in their empire building. Human hunters render large mammals on Madagascar extinct.	

1204	Fourth Crusade ends up sacking its “ally” Constantinople. Pope Innocent III tries getting the Cistercian order to preach against the Cathars , an attempt that fails.	
1209	After a decade of attempting to curb the Church’s corruption, and after gentle methods to try bringing the Languedoc region back to the Church’s fold, Pope Innocent III calls for a Crusade on France to eliminate Catharism . The resulting Albigensian Crusade kills about one million people. Innocent also authorizes the formation of the Franciscan sect , which copies Cathar austerity.	
1212	In a great battle near Toledo, Christian armies defeat the Islamic forces in the decisive conflict of the “Reconquest” of the Iberian Peninsula.	
1214	The Dominican order is founded, which also copies Cathar austerity.	
1215	Magna Carta sealed by England’s King John I. Pope Innocent III convenes the Fourth Lateran Council .	
1221	Genghis Khan’s Mongol armies conquer Islamic armies in Indus valley. Islamic peoples are devastated by the Mongol invasion, and Islam begins its decline as a social force.	
1244	Massacre at Montségur, the last stronghold of the Cathars . The Catholic Church eliminates the greatest threat to its religious monopoly, until Martin Luther posts his Ninety-Five Theses in 1517.	360 million
1254	Jews expelled from France .	
1257	Coal smoke from local fires drives Queen Eleanor from Nottingham Castle.	
1258	Mongol armies raze Baghdad while slaughtering at least a million people. Islam is devastated.	
1264	Iceland accedes to Norwegian rule and begins its decline, their fortunes turning worse when Denmark takes over in 1380, and Iceland eventually becomes a captive nation.	

1274	Dominican monk Thomas Aquinas dies. He tried reconciling Christian theology with other systems of thought, most notably Aristotle's.	
1290	Jews expelled from England .	
1295	Marco Polo returns to Venice from many years in the court of Kublai Khan in China. His account deeply influences European merchants.	
1307	Royal edict issued in London, banning coal fires . The edict is ignored.	
1314	Europe is gripped by major famine that lasts until 1317.	
1315	Dante Alighieri finishes his <i>Divine Comedy</i> .	
c. 1325	Immigrants to Valley of Mexico settle in marsh in the valley's lake, the only land available to them. They are known as the Mexica, and eventually form the Aztec Empire.	
1326	Ottoman Empire is born, as the Turks attack the Eastern Roman Empire.	
1337	England and France begin the 100 Years War. Originally invented in China several centuries earlier, but used for fireworks, gunpowder for weaponry begins to be manufactured in England and Germany at about this time. English Parliament restricts fur wearing to royalty, as fur-bearing animal populations collapsed.	
1344	The Pope "awards" the Canary Islands to Castile.	
1346	The Black Death probably originated in China. In 1347 it swept across Asia to Europe. The death toll for Europe and Asia was about 50 million people by 1351, wiping out one quarter to one-third of Europe's population, and periodically recurring for the next three centuries. Epidemiology being what it was in those days, Jews were accused throughout Europe of causing the plague, and 50,000 Jews were consequently killed. War and death imagery would become prevalent in European art.	Europe's population declines from about 75 million to 50 million. It would not regain 1345 levels until the 16 th century.

1378	Contested election of Pope Urban VI leads to the Great Schism, an embarrassment that would last half a century, climaxing with the spectacle of three men claiming to be Pope at the same time.	
c. 1385	Turkish ruler Tamerlane's armies catapult smallpox victims into cities they are besieging, in perhaps history's first instance of biological warfare.	
1391	Anti-Semitic furor leads to Jew slaughters in Seville , and Jews began accepting conversion to Christianity to survive.	
Late 1300s	Beginning in northern Italy's city-states, a multifaceted phenomenon begins which is now called the Renaissance. Humanism takes root, which eventually undermines the Catholic Church's influence.	
1399	The Black Death makes a final visit to Europe, and then disappears for many years.	
1400	After a century of unrelenting epidemics, warfare and calamity, Europe's population is two-thirds-to-half of what it had been in 1300.	400 million.
1405	Ming Dynasty begins mounting great naval expeditions along southern Asia, which reach Africa. They <i>do not</i> plunder the people or lands they sail to. The last expedition is in 1433.	
1410	Christian Reconquest of the Iberian Peninsula reenergized with attack on Granada.	
1415	Portuguese defeat Moors at Ceuta in North Africa . Prince Henry subsequently encourages and helps fund the study of maritime science. Henry's motivation is outflanking Islamic rivals in the gold trade.	
1418	Portugal begins colonizing the Madeira Islands , the Azores in 1439 (discovered in 1427) and the Cape Verde Islands in 1456. The prominent cash crop is sugar, which played to the biological predisposition of humans to sweet food, reflecting the distant ape past in Africa , when fruit comprised most of the diet. Settlers to Madeiran island of Santo Porto introduce two rabbits, and soon they rapidly reproduce and denude the entire island.	

1421	Jews expelled from Vienna , in one of many European expulsions during the 15 th century.	
1428	Itzcoatl leads Mexica to military victory and Aztec Empire begins.	
c. 1430	"Little Ice Age" begins, and runs for four centuries, until about 1850.	
1431	Joan of Arc burned at the stake.	
1444	Portugal enters the African slave trade.	
c. 1450	Gutenberg invents printing press in the German city of Mainz.	
1453	Ottoman armies capture Constantinople, which terminates the Eastern Roman Empire, controls Europe's trade route to the Orient, and inspires effort to find another European route.	
1455	The Wars of the Roses, which are several dynastic civil wars that last until 1485, begin in England.	
1456	Walruses could still be found on the Thames River.	
1469	Isabella I of Castile marries Ferdinand V of Aragon.	
c. 1470	Incas conquer the imperial city of Chan Chan and the Chimoran people, completing their imperial consolidation.	
1474	Paolo Toscanelli of Florence suggests to Prince Alfonso V of Portugal that the quickest way to the Indies (spice trade) is sailing across the Atlantic. Toscanelli was wrong. Christopher Columbus eventually obtains the letter from Toscanelli that makes the suggestion. Castile and Aragon formerly united under Isabella and Ferdinand.	

1479	Portugal cedes Canary Islands to Castile, and Queen Isabella I mounts their invasion. The Canary Islands were inhabited by the Guanche, who settled the islands in antiquity, building step pyramids and making mummies, much as the Egyptians did. The conquest of the Guanches was complete in 1496 , and the Guanches became an extinct culture by 1600.	
1480	Isabella I initiates the Spanish Inquisition , which is largely concerned with hunting down Moors and Jews who were forced to convert to Christianity, but may still practice their erstwhile faith in secret.	
1486	Last wolf sighted in England.	
1488	Portuguese explorer Bartolomeu Dias rounds the southern tip of Africa, and Portugal abandons the idea of reaching Asia by crossing the Atlantic Ocean. Columbus, who made a living in the Portuguese slave trade, takes his plan to sail across the Atlantic Ocean to Castile, which the experts thought was an impossible plan because the distance to Asia would be too great. Columbus had badly miscalculated the earth's circumference. His early attempts to convince the Castilian court fail.	

Timeline from 1492 Onward

1492	The Spanish "Reconquest" of the Iberian peninsula ends in January with the conquest of Granada, the last city held by the Moors. Jews are given the options of conversion, expulsion or death. In April, Columbus finally gets authorization for his doomed plan to reach Asia via the Atlantic Ocean. He stumbles into the New World in October, enslaving the first humans he meets. He builds a fort on Española from the wreckage of his flagship. By this time, the Bay of Biscay has been " whaled out ."	World population: 470 million, at least half in East Asia and India. Population in the Americas: 50 to 100 million (this site uses 80). Europe's population: 70 to 80 million. Taino population: 2 to 10 million. At least one million on Española (this site uses 2)

1493	Columbus is named Admiral of the Ocean Sea and returns to Española to mount a large-scale invasion . The Incan Empire is at its peak in South America.	
1494	Treaty of Tordesillas delineates the eventual New World domains of Portugal and Spain.	
1496	The genocide of the Taino is well underway on Española. Selling the Taino in the European slave markets does not work, because they quickly die upon being shipped to Europe, and the Spanish sovereigns officially frown upon the idea when it proves unprofitable. Columbus devises a tribute system to force the Taino into mining gold.	
1497	Vasco da Gama sails from Portugal to India around Africa; Arab traders cure his crew of scurvy in 1498 , and he returns in 1499 with trade specimens, including valuable spices.	
1499	First major gold strike on Española.	
1502	Montezuma II crowned, the last pre-invasion Aztec emperor.	
1504	Michelangelo finishes sculpting his <i>David</i> statue.	
1506	Leonardo da Vinci finishes his <i>Mona Lisa</i> . Columbus dies a rich man in bed in Spain, although he is an obscure figure.	
1509	Henry VIII ascends throne of England.	
1510	Portuguese ships conquer the Muslim port of Goa in India, beginning the era of Portuguese dominance along southern Asia. Portugal makes its first official sale of African slaves in the New World .	
1511	Portuguese traders capture Malacca, in today's Malaysia, establishing themselves in the spice trade .	
1512	Michelangelo finishes painting the Sistine Chapel's ceiling.	

1513	Vasco Núñez de Balboa “discovers” the Pacific Ocean in present-day Panama, and claims it in the name of the Spanish crown. Juan Ponce de León hunts for slaves for Caribbean gold mines and “discovers” Florida. Natives likely already knew of white men, as they battle and drive off the Spaniards. Niccolò Machiavelli writes <i>The Prince</i> , which foreshadows future European political practice.	
1516	Hieronymous Bosch dies, leaving behind a surreal body of work that will later influence Salvador Dali, among others.	
1517	Martin Luther publishes his Ninety-Five Theses, which begins the Protestant Reformation.	
1518	First New World smallpox epidemic begins, wiping out most of the surviving Taino on Española, who were already only about 1% of their 1492 population.	
1519	Hernan Cortés and his men kidnap Aztec Emperor Montezuma and loot all the gold they can get. As Columbus did, Ferdinand Magellan seeks route across Atlantic to the Asian spice trade. He dies in 1521, battling the natives in the Philippines, but his mission circumnavigates the planet in 1522. Charles of Spain bribes his way into becoming the Holy Roman Emperor.	
1520	Smallpox epidemic that began on Española in 1518 comes across with the Cuban governor’s army, probably killing several million people in Mesoamerica.	
1521	The Cortés-led siege of Tenochtitlán completely destroys what is probably the world’s most spectacular city. Ponce de León invades Florida again, and dies from battle wounds. Diet of Worms, where Martin Luther is asked to recant his criticisms of the Catholic Church. He refuses, and is declared an outlaw.	
1524	Giovanni Verrazano , an Italian explorer in the employ of France, sails along the coast of North America.	
1525	European epidemic sweeps through Incan Empire, kills emperor and ignites civil war.	

1528	Pánfilo de Narváez ' <i>entrada</i> into Florida ends in disaster.	
1529	Ottoman armies lay siege to Vienna , but fail, in the greatest advance into Europe it would make.	
1530	The Portuguese begin their colonization of Brazil .	
1532	Francisco Pizarro invades Incan Empire , kidnaps Incan emperor and sacks empire. Anne Boleyn, Henry VIII's second wife, gives birth to Elizabeth.	
1535	Native American medicine man cures Jacques Cartier's crew of scurvy on Saint Lawrence River with evergreen foliage and tree bark tea, which was high in vitamin C. Henry VIII's England begins confiscating Roman Catholic properties.	
1536	The world's first life insurance policy is written.	
1537	Ambroise Paré accidentally ends the practice of pouring boiling oil on battlefield wounds and initiates more gentle treatment.	
1539	Hernando de Soto invades southeastern North America, seeking gold.	
1540	Francisco Vázquez de Coronado invades southwestern North America, seeking gold.	
1542	Juan Rodríguez Cabrillo "discovers" the Californian coast. Hernando de Soto dies on banks of Mississippi River after his fruitless gold quest devastates southeastern North America . Spanish expedition asserts Spain's claims to the Philippines . Efforts of Bartolomé de Las Casas persuade emperor Charles V to sign laws repealing native slavery .	

1543	Nicolas Copernicus ' posthumously published work theorizes that the earth orbits the sun, re-establishing what Pythagoras thought more than 2000 years earlier. Considered the first work of the scientific revolution. Andreas Vesalius ' <i>De Humani Corporis Fabrica</i> is considered the first work of modern scientific medicine. It challenges a thousand years of dogma based on Galen's work. The Catholic Church increases its efforts to ban books. Portugal begins trading with Japan .	Taino population on Española: 200
1545	The great silver mine at Potosí (in modern-day Bolivia) is established.	
1549	A Portuguese expedition establishes a large colonial presence in Brazil.	
c. 1550	Easter Island reaches its peak population, of about 7000 people. Clans compete in making stone idols, and the island is quickly deforested by idol-transporting activities, leading to environmental and population collapse by about 1600. The English deforestation of Ireland is underway. Neither Ireland nor Easter Island has recovered its forests.	
1552	Las Casas publishes his A Short Account of the Destruction of the Indies , which quickly becomes a bestseller, especially in Protestant Europe, and the "Black Legend" begins.	
1553	Michael Servetus publishes an accurate description of pulmonary circulation. Escapes Spanish Inquisition to only be burned at the stake in Calvin's Geneva for his heresies.	
1556	Portuguese establish port of Macau on Chinese coast.	
1557	Spanish crown goes bankrupt , the first of several bankruptcies that would chart Spain's decline as an imperial power.	
1558	Elizabeth I becomes England's first ruling queen.	

1559	Catholic Church publishes its index of banned books. Index survives until the 1960s. Tristán de Luna expedition goes where de Soto's went, hoping to find rich lands to plunder as de Soto did, and finds the region depopulated from aftermath of de Soto expedition. Portuguese Crown gives official approval to begin shipping African slaves to Brazil .	
1562	Wars of Religion begin in France, a series of nine conflicts that last until 1598.	
1564	Spain begins conquest of the Philippines , and establishes Manila in 1572.	
1565	Saint Augustine , in today's Florida, is established, originally a fort to protect Spain's plunder route from pirates. It is the first permanent European settlement in North America.	
1566	Ottoman sultan Suleiman dies, and the Ottoman Empire begins its long decline.	
1568	Oppressive Spanish rule leads to Dutch revolt, which lasts until 1648. Spanish "discovery" of the Solomon Islands .	
c. 1570	Hiawatha and Deganawidah form the Great Law of Peace and the Iroquois Confederation, which influences the creation of the U.S. Constitution . It might have been formed as early as 1200 AD, however.	
1576	Martin Frobisher seeks gold near Baffin Island. He ravages natives and hauls back hundreds of tons of fool's gold to England on the next voyage. Last wolf sighted in Wales.	
1577	Francis Drake mounts pirate expedition to plunder the Pacific ports of Spain's empire. His successful voyage circumnavigates the world, returning home in 1580, and got him knighted as well as made him England's richest private citizen.	
1580	Spain annexes Portugal , and remains in control of it for sixty years. Castile is no longer able to produce enough food to feed its population.	

1582	Russia invades Siberia in pursuit of fur trade.	
1585	Walter Raleigh establishes the ill-fated Roanoke colony.	
1586	Spain goes to war with England, to try ending the Dutch revolt.	
1588	Spanish Armada is destroyed in battle with English navy. The defeat marks the end of Spain's imperial dominance.	
1593	South Pacific islanders cure Richard Hawkins' crew of scurvy with citrus fruit.	
1595	Walter Raleigh seeks golden city of El Dorado in South America.	
1596	Spitsbergen whaling grounds opened. Bubonic plague visits Spain, carrying off 10% of its population during the next several years.	
1598	The year its Wars of Religion finally conclude, the French try to establish a colony on uninhabited Sable Island off of Nova Scotia, in a rich fishing area, and with no interference from natives or European rivals, the colony completely fails.	
1599	Spanish forces slaughter hundreds of Pueblo Indians at Acoma, in present day New Mexico, in revenge for the killing of eleven Spanish soldiers who had been plundering and raping the natives at will. Spain ends the 16th century probably worse off than it began it.	Native population of the Americas: 8 million
1600	Giordano Bruno burned at the stake for his heresies, notably for stating that the earth orbits the sun. The English East India Company is incorporated. The Dutch begin sailing to Asia for spices, and establish their own East India company in 1602.	
c. 1601	William Shakespeare writes <i>Hamlet</i> .	
1603	Elizabethan Era ends with the death of Elizabeth I of England. England completes its conquest and subjugation of Ireland.	

1604	King James I publishes A Counter-Blaste to Tobacco , and tours England to warn of its dangers. English war with Spain ends, and Spain never again rises to its former imperial dominance.	
1605	Squanto , of Puritan fame, first kidnapped by the English.	
1607	Jamestown established . The first task is finding gold.	
1609	With their French allies using guns, Huron warriors surprise a war party of their Mohawk rivals, with deadly effectiveness. On behalf of the Dutch, Henry Hudson, while searching for the Northwest Passage, explores the river that is named for him, in present-day New York.	
1610	Galileo Galilee publishes his discovery of Jupiter's moons, using the newly invented telescope.	
1614	Squanto is captured by John Smith's men.	
1615	Jews are legally allowed to live in the Netherlands , for their only haven in Western Europe.	
1618	The Thirty Years' War , Europe's last great religious war, begins. About 4 million people die in the conflict.	
1619	Squanto returns as interpreter with English, and discovers that his entire tribe had been wiped out by European disease. The Puritans would settle on that tribe's land. The Dutch establish Jakarta , which becomes the center of the Asian spice trade.	
1620	The Pilgrims land at Plymouth , and Squanto teaches them how to survive in the New World. Squanto dies in 1622 of disease.	
1626	The Dutch "buy" Manhattan Island from the natives.	
1627	Last wild European bison dies	

1628	William Harvey publishes his research on function of human heart. Dutch ships seize entire Spanish silver fleet off of Cuba.	
1637	The English surround Pequot village of several hundred people on the Mystic River at night, then burn it to the ground while killing nearly every inhabitant, selling the few survivors into slavery.	
1638	Three million pounds of tobacco per year are exported from present-day Virginia, reaching 17 million in 1672. Caribbean sugar growing becomes a business on Barbados, and the great period of New World sugar growing begins. New Sweden established in present-day Delaware.	
1639	Japan kicks out Portuguese traders , and thereafter trades exclusively with the Dutch. Dutch fleet defeats Spanish fleet in the English Channel.	
1640	Fur trade renders the beaver extinct in the Hudson River Valley. English Civil War, also called the Puritan Revolution, begins. It is the last significant religious conflict in Europe.	
1641	The Dutch governor of Manhattan offers the first scalp bounty.	
1643	Spanish army destroyed by French army at Rocroi.	
1644	John Underhill successfully reproduces his strategy of strategy of surrounding Native American villages at night and annihilating all of its inhabitants. That time, he did it under hire to the Dutch, and the Manhattan church fathers declared the second Thanksgiving to celebrate the feat.	
1646	Pamunkey tribe (natives who initially fed the Jamestown invaders) is completely destroyed, and survivors sold into Caribbean slavery.	
1649	Only forty years after receiving military assistance from the French, the Huron tribe becomes extinct . King Charles I of England is publicly tried and beheaded.	

1652	English and Dutch navies begin a series of wars that last until 1684.	
1661	Coal smoke in London creates the greatest lung hazard on earth .	
1664	The Dutch lose their North American possessions to the English.	
1668	Antoni van Leeuwenhoek invents the microscope.	
1670	Charleston founded , which becomes the center of the early English-American slave trade.	
1672	Nantucket becomes heart of American whaling industry.	
1675	The French East India Company establishes its first outpost in Bombay .	
1676	King Phillip's War results in the extinction of the tribe that welcomed the Puritans.	
1680	The Pueblo Indians revolt against brutal Spanish rule, and kick them out of today's New Mexico. The Spaniards begin their reconquest of them two years later. The revolt leads to horses becoming part of Native American life, especially benefiting the Plains Indians.	
1682	Frenchman La Salle explores Mississippi river , finds it deserted, depopulated by disease left by de Soto's expedition and other European-introduced epidemics.	
1687	Isaac Newton's <i>Principia</i> is published.	
1688	England has its Glorious Revolution, which limits the power of English sovereigns and empowers its Parliament.	

1689	King William's War begins, between France and England, largely over dominance in North America, and it involves the native tribes. The English Bill of Rights is passed by Parliament, and the Toleration Act, which promotes religious toleration. Those laws become the model for the U.S. Bill of Rights.	
1692	Twenty people executed in Salem , Massachusetts, for practicing witchcraft.	
1700		600 million
1702	Queen Anne's War begins between the French and English in North America. It was known in Europe as the War of Spanish Succession.	
1707	England unites with Scotland, becoming Great Britain.	
1709	Englishman Abraham Darby advances brass-making science, and invents coke smelting in this year, producing iron with it. It initiates increased demand for coal and metallurgical advances.	
1712	Thomas Newcomen invents steam engine for pumping water.	
1717	Voltaire spends his first stint in the Bastille, for his satirical writings. His work would come to embody the ideals of the Enlightenment.	
1739	Spain tries halting trade between England and its American colonies, and the conflict is called the War of Jenkins' Ear, and becomes part of the War of the Austrian Succession, which begins in 1740.	
1743	Last wolf sighted in Scotland.	
1744	King George's War begins, which is waged in North America, but is also part of a larger war, the War of the Austrian Succession.	
1750	The Enlightenment becomes prominent in France at about this time. Johann Bach dies. China and India comprise 57% of world industrial output.	

1754	James Lind's experiments aboard HMS Salisbury prove that citrus fruit cures scurvy . French and Indian War begins in North America, which was the last war of dominance between England and France in North America. Benjamin Franklin, influenced by the Iroquoian model of government, introduces his Albany Plan of Union , which sought to unite the colonies. The plan becomes the first step toward creating the U.S. Constitution.	
1756	The Seven Years' War breaks out in Europe between the imperial powers, England and France most notably. The Third Carnatic War in India between France and England breaks out at this time.	
1763	Lord Jeffrey Amherst suggests deliberately introducing smallpox amongst the Native Americans who resisted the English invasion. The subsequent epidemic kills more than 100,000 natives. The French and Indian War ends in North America, with the English prevailing. The Third Carnatic War in India ends, with the English victorious over the French. The English announce the Royal Proclamation of 1763 , which forbids the American colonists to settle west of the Appalachians.	
1764	Battle of Buxar establishes British rule over Bengal. The British rape of India begins.	
1768	James Cook visits Australia, names it New South Wales, and targets it for British colonization.	
1769	James Cook visits New Zealand and claims it in the name of Great Britain. The Maoris had eliminated about a third of New Zealand's forests by that time, and large animals, such as the Moa, were about extinct. In the first century of the European invasion, more than 75% of the Maori population dies off. Similar population collapse accompanies the Europeans wherever they appear in the South pacific. Junípero Serra establishes first mission at San Diego. James Watt patents the modern steam engine, and the Industrial Revolution begins. Daniel Boone begins the illegal invasion of Kentucky.	800 million worldwide

1770	British exploitation of Bengal leads to a great famine that killed one-third of Bengal's peasantry. Famines always greatly increased wherever Europe had colonial dominance.	
1773	James Cook makes the first visit to Antarctic icepack and surmises that it had to be formed in connection with a landmass. Boston Tea Party helps lead to the American Revolution. The King of Sweden allows Jews to migrate there .	
1776	The American Revolution begins. Adam Smith publishes his <i>Wealth of Nations</i> .	
1778	James Cook "discovers" the Hawaiian Islands, with the world's human-friendliest climate. His crew's venereal disease rapidly spreads through the islands, quickly depopulating Hawaii. The Hawaiian Islands' population possibly approaches one million inhabitants. Within 100 years, fewer than 50,000 Hawaiians were alive.	
1782	Kamehameha begins conquering the Hawaiian islands, using Western arms and waging bloody battles. It takes 13 years to complete his empire building. George Washington proposes a plan to the Continental Congress to swindle the Native Americans out of their land. His plan becomes national policy for the next century. Padre Serra establishes his last mission, San Buenaventura, today called Ventura . The Austrian emperor issues an edict of toleration toward Jews .	
1786	Because of the American Revolution, England can no longer ship its criminals to North American penal colonies. Australia is picked as the next English penal colony. The population of the aborigines in southeastern region of Australia (site of the penal colony) declines by about 95% in 60 years. Shays' Rebellion begins in the United States.	
1788	Britain claims Tasmania , and within 50 years, none of the 5000 aboriginal inhabitants remain on the island. Only 43 survived in 1843, and the last Tasmanian aborigine died in 1876.	

1789	French Revolution begins. George Washington becomes the first U.S. president. The U.S. Bill of Rights is passed, 100 years after the English Bill of Rights.	
1791	Inspired by the American and French revolutions, Haitian slaves lead a successful revolution against the French colonial masters. The U.S., with its millions of slaves, would not officially recognize Haiti until the American Civil War. Wolfgang Mozart dies, which marks the beginning of the end of the classical era of music. The U.S. Army suffers its greatest proportional defeat ever, at the hands of Native Americans, as it invades the Ohio River Valley .	
1793	Benjamin Rush begins era of “heroic” medicine in U. S. during yellow-fever epidemic.	
1794	Antoine Laurent Lavoisier is beheaded in France. His work with oxygen, combustion and respiration founds modern chemistry. Whiskey Rebellion over American taxation begins. The Battle of Fallen Timbers completes the U.S. theft of the upper Ohio River Valley.	
1795	260 years after Jacques Cartier’s crew is cured of scurvy , and more than one million preventable deaths later, the British navy begins issuing citrus juice to its sailors.	
1796	Samuel Hahnemann first uses the term homeopathy to describe a new system of medicine that he was developing. Edward Jenner performs his first smallpox inoculation.	
1798	U.S. Congress passes the Alien Act and the Sedition Act . The Sedition Act makes it a crime to criticize American government officials. The Alien Act authorizes summary deportations of “aliens.” It is specifically intended to rid the nation of people with revolutionary ideas, such as French and Irish immigrants.	

1799	Napoleon leads overthrow of French government. He begins war with neighbors in 1803 and crowns himself Emperor in 1804. Benjamin Thompson and Humphry Davy's work demonstrates that heat transfer is an exchange of energy, eventually killing the phlogiston theory.	
1800	Woodland bison is rendered extinct in Eastern North America. Fur industry in Siberia collapses from centuries of trapping. Sea otter population of northern Pacific also collapses due to Russian over-hunting.	
1802	French invasion to try reconquering Haiti fails.	
1803	The United States consummates Louisiana Purchase from France. Lewis and Clark expedition sets out to reconnoiter the new territory. The expedition initiates the short-lived exploitation of the fur trade 's last frontier.	
1804	First locomotive built in England by Richard Trevithick. Haiti declares itself independent, for the world's only successful slave rebellion.	
1807	Robert Fulton 's steamboat <i>Clermont</i> makes its famous voyage from New York to Albany up the Hudson River. Spain supports Napoleon in war against Portugal, which ignites the Peninsular War, which lasts until 1814.	
1808	In reaction to Napoleon crowning his brother as the King of Spain, Venezuelan colonists form self-government, and send Simón Bolívar to England as its emissary, to try gaining recognition.	
1811	Venezuela is first Spanish colony to declare its independence , a revolution that fails the next year.	
1812	Napoleon begins his disastrous invasion of Russia. War of 1812 begins.	
1814	British troops burn Washington DC. First self-contained cotton mill is built, in Waltham, Massachusetts. Napoleon's reign ends, as all of Europe unites against France.	

1815	Battle of Waterloo ends Napoleon's bid for a comeback to power, a year after he was finally defeated. The Congress of Vienna is convened by the European powers, to reestablish lines of political demarcation.	
1819	After years of battles and exile, Simón Bolívar and his troops overthrow the Spanish Crown in 1819 in New Granada, now called Colombia. It is the first successful Latin American revolution, with Bolívar becoming Colombia's first president. Bolívar seeks to unite South America on the model of North America's United States, a plan that fails.	
1822	Americans establish colony to ship slaves back to Africa . In 1847 the colony became Liberia. Brazil achieves its independence peacefully .	
1823	The Monroe Doctrine is formulated.	
1824	Sadi Carnot publishes treatise that becomes the basis for the second law of thermodynamics.	
1825	The most abundant metal in the earth's crust, aluminum , is first isolated.	Humanity passes 1 billion
1826	After decades of bitter fighting, Maryland passes its "Jew Bill," giving Jews the right to vote.	
1830	Belgium emancipates its Jews , leading to emancipation movements throughout Europe.	
1835	Charles Cagniard-Latour works with yeast , and theorizes that it is alive. Theodor Schwann , the father of histology, confirms Cagniard-Latour's work at about the same time and takes it further. Using Western arms, Maori warriors of New Zealand brutally invade and conquer the Moriori people of the Chatham Islands. By this time, the beaver pelt trade has collapsed in western North America, after only 30 years of exploitation.	
1836	American settlers complete theft of Texas from Mexico .	

1838	Cherokee and other “civilized” tribes are forced into migrating to Oklahoma, even after the Cherokee prevailed in the U.S. Supreme Court. The genocidal relocation becomes known as the Trail of Tears .	
1839	Three million Americans use Samuel Thomson’s brand of medicine. Britain begins exploitation of China with first Opium War, and forces opium addiction on China by also forcing the Bengal region into opium production. Prickly pear cactus introduced to Australia, and by 1925 it dominated 30 million acres, pushing out all other plants.	
1841	Britain captures Hong Kong.	
1843	Charles Dickens publishes <i>A Christmas Carol</i> .	
1844	American Institute of Homeopathy founded . Anesthetic properties of nitrous oxide first used by American dentist Horace Wells . European “hunters” render the great auk , which once lived in great numbers on the islands of the North Atlantic Ocean, extinct.	
1845	American Medical Association (AMA) founded . Irish potato famine begins.	
1846	America wages war on Mexico to steal what becomes the Southwestern United States. American whalers show up off California coast, hunting the gray whale and seals.	
1847	Ignaz Semmelweis invents Western medicine’s first sterile practices, used in maternity wards. Peak year of American whaling.	
1848	Louis Pasteur discovers molecular chirality , beginning his career. U.S. finishes stealing most of southwestern United States from Mexico. Gold discovered at Sutter’s Mill in California . Revolution sweeps Europe. Karl Marx presents his <i>Communist Manifesto</i> .	
1850	California admitted to the union, and its first governor declares open season on the natives .	

1851	Herman Melville publishes <i>Moby Dick</i> .	
1853	Diplomatic invasion of Japan by the American Commodore Perry forces Japan into the world economy. Expanding rail system allows mass “hunting” and shipping of passenger pigeons from American Midwest to markets in east. Passenger pigeon population begins collapsing. Seal fur trade collapses in North Atlantic. Crimean War begins, in the first great struggle of the great European powers, a conflict that would eventually lead to the World Wars of the 20 th century. A French diplomat publishes book that marks the rise of anti-Semitism in France .	
1854	Antoine Béchamp begins his Beacon Experiments . German parasitologists have documented parasitic pleomorphic life cycles , ending the spontaneous-generation controversy regarding parasites.	
1858	Rudolf Virchow publishes his <i>Cellular Pathology</i> .	
1859	First American oil well drilled. Charles Darwin publishes his <i>Origin of the Species</i> . Rabbits introduced to Australia, initiating ecological disaster.	
1861	American Civil War begins. Calomel is the standard medicine for the troops. Antiseptic surgery is not yet invented . Pasteur tries taking credit for discovery of Béchamp. Sammelweis publishes his great work on sanitary practices.	
1862	The United States recognizes Haitian independence .	
1863	John Rockefeller enters the oil industry and concentrates on taking over oil refining. American whaling industry is collapsing .	
1864	Pasteur publicly takes credit for overturning spontaneous-generation theory. The germ theory of disease follows from his work. Sand Creek massacre of Black Kettle’s Cheyenne tribe in dawn attack. The AMA steps up its anti-abortion campaign .	

1865	American Civil War ends. Svend Foyn perfects cannon-harpoon, initiating industrial phase of whaling.	
1866	Béchamp calls the sub-cellular life forms that he discovered <i>microzyma</i> .	
1868	George Custer 's troops slaughter Black Kettle's Cheyenne tribe in dawn attack. Revolution in Japan leads to a unified nation, and Japan begins playing catch-up with the West.	
1870	Joseph Lister produces his first report of the success of sterile surgical procedures. Franco-Prussian War begins. It is the last major conflict on European soil until World War I.	
1876	" Custer's luck " runs out at the Little Big Horn. Beginning of proprietary medicine craze in America. El Niño-caused drought that lasts three years, combined with European export crop imperialism, devastates India, China and Brazil , causing as many as 30 million deaths from starvation and disease. Japan forces trade agreement on Korea; similar to what Perry did to Japan in 1853. William W. Keen begins using Joseph Lister's sterile surgical procedures at the St. Mary's Hospital in Philadelphia.	
1878	Yellow-fever epidemic begins in New Orleans. People treated with homeopathy have less than half the death rate of the general population. Congress is impressed. One million American families use homeopathy.	
1879	Thomas Edison perfects light bulb , and science refuses to acknowledge his feat.	
1880	John Rockefeller's empire controls 95% of U.S. oil refining. Pacific whaling industry has largely collapsed , in less than 80 years of Pacific whaling.	
1881	William Halsted begins his surgical career in the United States.	
1882	Jews expelled from Moscow , and Jewish pogroms spread in the Russian Empire.	

1884	New York Cancer Hospital opens . Later named Memorial Sloan-Kettering Cancer Center, the world's most influential cancer research organization. Elephant seal extinct on islands off California.	
1885	Belgium begins plundering the Congo .	
1886	In the United States and France, scientists discover how to refine aluminum economically.	
1887	John Rockefeller begins rebuilding a Baptist seminary into the University of Chicago . The Tesla Electric Company files its first patent on alternating current technology, which provides electric power to the world today.	
1890	Massacre at Wounded Knee , ending Native American resistance to U.S. land theft. Extermination of Plains Indian sustenance, the bison, is also complete, as only 23 animals survive in the wild, compared to 40 to 60 million before the white man's invasion. Vincent van Gogh commits suicide.	
1891	Starlings introduced to America, and displace native species in their population explosion. Walrus extinct on Pribilof Islands off Alaska, once known as the Fur Seal Islands.	
1893	Columbian Exhibition in Chicago, celebrating 400 years of European presence in the New World. Largest event attendance in world history to that time.	
1894	Japan wages a war and easily defeats China, supplanting China as the dominator of Korea.	
1896	Emil Grubbé invents X-Ray treatment of cancer. Another El Niño-caused drought , combined with European exploitation, ravages India and China, causing perhaps another 30 million deaths over several years, similar to 1876 event.	
1899	George Simmons hired by the AMA. He soon takes it over. Chinese uprising against foreign occupation becomes the Boxer "Rebellion." It is put down by foreign troops, including American, British, French, Russian, Japanese and German troops.	

1900	After 150 years of European exploitation, beginning in Bengal , China and India produce 8% of world industrial output, versus 57% in 1750. The gray whale is thought to be extinct at this time. Some survived, however, and its population has largely recovered. The right whale was also considered extinct in the Northeast Atlantic. Some survived, however, but its population has not recovered.	
1903	Wright brothers first fly . Science and the media ignore them for five years. U.S. steals Panama from Colombia , creating the divided nation of Panama so it can own the route for its proposed canal.	1.6 billion
1904	The devastation of the world's last unplundered whaling grounds, the Antarctic Ocean , begins.	
1905	Japan beats Russia in war. Albert Einstein publishes his paper on special relativity.	
1906	Mark Twain writes King Leopold's Soliloquy regarding the Belgian rape of the Congo , and the American publishing establishment completely suppresses its publication in the United States.	
1910	Flexner Report is issued, and directs Carnegie and Rockefeller "philanthropic" funding of medical schools.	
1913	Ludlow Massacre committed by Rockefeller strikebreakers. Rockefeller founds American Cancer Society predecessor organization. Morris Fishbein is recruited to the AMA by Simmons. Federal Reserve Act sneaks through U.S. legislature.	
1914	Pasteur Institute confirms bacterial pleomorphism. World War I begins. The last passenger pigeon dies in captivity in Cincinnati. From a population of 5 billion pre-white man birds to extinction in little more than one century, for history's most spectacular extinction episode.	
1915	The United States invades Haiti , overthrowing its government.	

1918	World War I ends. Prescott Bush , father of George Bush the First, allegedly robs the grave of Geronimo , and the remains were put on display at the Skull and Bones Society, an oligarchical secret society at Yale. George the First and Second also belong to the club . The Great Powers of Europe begin carving up the Ottoman Empire into controllable nation-states. Oil politics dominates the affair.	
1924	Divorce scandal forces Simmons to step down at AMA. Fishbein takes over . He tries to buy out Hoxsey's cancer treatment and begins persecuting Dinshah Ghadiali . Hitler writes <i>Mein Kampf</i> .	
1926	Pancho Villa's tomb raided, and his skull allegedly acquired by the Skull and Bones Society at Yale .	
1927	John Rockefeller begins funding the Memorial Hospital, later named Sloan-Kettering . Rockefeller's Empire enters into its first cartel agreement with I.G. Farben .	
1929	American Tobacco Company begins campaign to addict American women to tobacco . Wall Street collapses later that year.	
1930		2.0 billion
1931	The findings of Royal Rife's microscopes begin generating great scientific interest, and Thomas Rivers of the Rockefeller Institute tries discouraging it. Three independent studies conclude that the fluorine ion is responsible for tooth mottling .	
1933	Hitler comes to power. Franklin Roosevelt takes office as president. American industrialists try to mount a Fascist coup of the White House .	
1935	Under Fishbein's guidance, Phillip Morris launches an ad campaign for its cigarettes , making a health claim to do so, quickly becoming the biggest U.S. cigarette seller. <i>JAMA's</i> pages are filled with cigarette ads for a generation. Smedley Butler writes War is a Racket .	

1937	Japan invades China, and the Rape of Nanking is the first major atrocity of what became World War II. Gerald Cox, of the Mellon Institute, begins suggesting that the fluoride ion is good for teeth .	
1939	After hearing of miraculous success with Rife's treatment , Fishbein tries buying into Rife's company. When that fails, the AMA wages lawsuit, destroying Rife's company. Nazi Germany is in midst of anti-smoking campaign led by Hitler , as well as beginning World War II.	
1941	Japan attacks Pearl Harbor , and U.S. enters World War II. Hitler's Final Solution is underway.	
1942	The FDA has Dr. William Koch thrown into jail. The tide of World War II turns with the Nazi disaster at Stalingrad late in the year. Father of George Bush the First is director and shareholder of company that U.S. government seizes because it helped arm and finance Nazi Germany. The Rockefeller Empire, which also helped Nazi Germany , escapes that fate.	
1943	George Orwell writes Animal Farm and has trouble finding British publisher, and a censored version of book is eventually published. The censorship still exists.	
1944	Manhattan Project has huge fluorine accident , which the government covers up. Harold Hodge of the Manhattan Project helps with the accident cover-up, and soon begins promoting the health benefits of fluoride.	
1945	Third Reich ends, as well as greatest war in human history, ending with two nuclear bombs being dropped onto civilian population centers . After only 30 years of exploitation, the sardine industry in California collapses due to overfishing.	
1946	Dr. Max Gerson presents recovered cancer patients using his treatment to a U.S. Senate committee. Anti-Jewish sentiment in the United States reaches its all-time high.	

1947	The term “flying saucer” is coined by UFO sighting by pilot near Mount Rainier, and the Roswell Incident happens soon after. The CIA and NSA are formed. The United Nations proposes the establishment of Israel. U.S. engages in first major manipulations of post-war era, as it overthrows popular communist movements in Greece and Italy. Oscar Ewing, lead counsel for ALCOA, the world’s largest fluoride polluter, heads government effort to fluoridate America’s water supplies.	
1948	Israel established, and Jewish oppression of Palestinian people begins. Bell Labs invents the transistor.	
1949	George Orwell’s 1984 published. In the wake of Harry Hoxsey’s victory in court, Morris Fishbein is dumped from the AMA, ending his 25-year reign. Fishbein goes to work for cigarette-maker Lorillard.	
1950	Immediately after Fishbein’s fall, JAMA publishes its first report on the link between smoking and cancer. ALCOA is selling its sodium fluoride refining waste to municipal water districts in the most profitable hazardous waste disposal program in history. U.S. invasion of Korea begins.	
1952	Lorillard begins an ad blitz promoting its asbestos cigarette filter, using research that their highly-paid consultant Fishbein helped design. The CIA recruits Ralph McGehee into its ranks; as an All-American football player, he is one of the CIA’s more treasured recruits.	
1953	Fitzgerald Committee finds that organized medicine wiped out a dozen alternative cancer treatments, including Krebiozen and Hoxsey’s treatment. U.S. prevents nationalization of British oil monopoly in Iran by overthrowing the government, installing the Shah and one of the 20th century’s more brutal regimes.	

1954	JAMA finally discontinues running cigarette ads , because the drug advertisers complained. U.S. prevents nationalization of United Fruit's investments in Guatemala by overthrowing its U.S.-friendly government , leading to a generation of brutal rule by Guatemalan juntas. The U.S. takes over from the French failure of trying to recolonize Southeast Asia.	
1957	Wilhelm Reich dies in a U.S. federal penitentiary. His work was burned in the U.S. and Nazi Germany.	
1960	John Crane thrown into prison for pursuing Rife's work.	3.0 billion
1963	John Kennedy murdered . Gerald Ford of the Warren Commission would help concoct the "magic bullet" theory to pin the crime on "lone nut" Lee Harvey Oswald.	
1964	American Surgeon General releases report that makes smoking hazard clear . The AMA and tobacco companies produce their own "research" that attempts to counter the Surgeon General's report. Gaston Naessens is run out of France. Beatles appear on <i>Ed Sullivan Show</i> . The U.S. fabricates the Gulf of Tonkin Incident , and begins the destruction of Southeast Asia.	
1965	CIA helps military junta take power in Indonesia . Suharto's forces "cleanse" Indonesia of about a million "communists" by murder. Globally, the whaling industry collapses , as there are few whales left to kill.	
1967	Israel invades neighboring areas and seizes large swaths of land.	
1968	Martin Luther King, Jr. and Robert Kennedy are murdered by "lone nuts." Nixon elected president. In Saigon, Ralph McGehee finally figures out what the CIA is all about.	
1969	United States lands on moon , and begins "secret" war in Cambodia , killing hundreds of thousands of people and setting the stage for the Khmer Rouge's reign.	

1972	Watergate burglary , planned by the CIA's E. Howard Hunt , begins Nixon's downfall. George Wallace shot by "lone nut" while campaigning for president.	
1973	OPEC oil price shocks create worldwide cycle of inflation until the 1980s. Vice president Agnew resigns to avoid criminal charges of bribery and income tax evasion. U.S. overthrows elected Marxist government of Chile and installs one of the world's most repressive regimes.	
1974	Nixon resigns, taken down by his own people. Gerald Ford takes office, makes Nelson Rockefeller his vice president, and pardons Nixon for alleged crimes.	
1975	Two assassination attempts on Gerald Ford by "lone nuts," nearly making Rockefeller the second appointed president, Ford being the first. With American approval, Indonesia invades East Timor using U.S. weapons, killing off about a third of East Timor's inhabitants.	4.0 billion
1977	Sloan-Kettering rejects laetrile as a cancer treatment, although its famous chemotherapy researcher Kanematsu Sugiura found positive results, and fires Ralph Moss for making that contradiction public. Jimmy Carter signs treaty to give Panama Canal back to Panama.	
1979	The Shah of Iran is overthrown in a revolution. The United States manipulates the Soviet Union into invading Afghanistan.	
1980	Ronald Reagan elected president. October Surprise operation , probably aided by George Bush, helps sabotage Carter's attempt for re-election. John Lennon murdered by "lone nut." Iraq invades Iran , beginning eight-year war.	
1981	Ronald Reagan becomes president. " White paper " of fabricated documents "justifies" reign of terror that the U.S. begins in Central America . Reagan shot by "lone nut" friend of vice-president George Bush's family . Panamanian national hero Omar Torrijos dies in "plane crash," and Manuel Noriega takes over.	

1982	Ronald Reagan signs Savings and Loan deregulation law , setting the stage for America's greatest financial scandal.	
1983	Dr. Ernst Krebs , the discoverer of laetrile, goes to jail. After a two-year legal battle, Ralph McGehee's heavily censored Deadly Deceits is published.	
1984		5.0 billion
1985	U.S. ships weapons to "enemy" Iran through Israel. It becomes basis for Iran-Contra Scandal. Dennis Lee makes a run at bringing alternative energy to the United States marketplace, in perhaps the most formidable effort yet made in U.S. history.	
1988	George Bush is elected president, and the next week the American people are told of the magnitude of the Savings and Loan Scandal .	
1989	Gaston Naessens is put on trial . Berlin Wall falls. U. S. invades Panama and Bush apprehends his former employee, Noriega.	
1990	With virtual encouragement from the United States, Iraq invades Kuwait. Tomb of Omar Torrijos robbed , probably by the Skull and Bones Society that both George Bushes belong to.	
1991	Jimmy Keller is kidnapped by U.S. Justice Department from Mexico . After actively avoiding negotiations for an Iraqi withdrawal, the U.S. bombs Iraq into the Stone Age, and the subsequent death toll is more than one million people.	
1995	Canadian factory trawlers cause collapse of the Grand Banks fisheries, which was about the world's most prolific. It is only one of many examples of collapsing fisheries across the planet. A slow recovery is happening.	
1996	Dr. Stanislaw Burzynski is put on trial.	

1998	Charles Pixley is released from prison. His crime was trying to make 714X a legal import. Jimmy Keller is put back into prison.	
1999		6.0 billion
2000	George Bush the Second comes to office in a voting scandal.	
2001	714X treatment making news in the U.S. Keller gets outs of prison again, has stroke. Terrorist attacks on World Trade Center and Pentagon. George Bush the Second begins his “war on terror.”	
2002	Enron Scandal makes news. America prepares to invade Iraq .

Visions of What Can Be

By Wade Frazier

[Alternate Realities, Visions and Prophecies](#)

[What is, and What Can Be](#)

[How It Is, and How It Got Here](#)

[How It Can Be](#)

[Activities Americans Can Do, and Now](#)

[Footnotes](#)

Alternate Realities, Visions and Prophecies

Nearly every contemporary account of experiences in dimensions beyond the physical plane reports that time and space are attributes peculiar to physical reality, and that they either do not exist beyond this dimension, or they take on properties considered bizarre by physical beings, such as [spherical time](#), as opposed to linear. People who have had [Near Death Experiences](#) (NDEs) report examining every instant of their lives, in great detail, during earthly death events that are only minutes or seconds in length. Einstein theorized that time is relative, and it may be far more relative than scientists think.

Jane Roberts' [Seth](#) described the concept of probable realities, which science fiction authors have explored many times. Probable realities, in Seth's conception, are genuine and populated by alternative "versions" of beings. For instance, I am living a life that began in 1958. Probable versions of myself died in 1965, 1976 and 1989, while others will live longer than my earthly life will prove to be. In some of those lives, my probable selves took other career routes, into the military, chemistry, computer science and a life of crime. Seth says that those probable realities are as real as the one I live today, and those probable versions of myself may be as skeptical of my existence as I might be of theirs. Jane Roberts and her husband reportedly met one of their probable selves,

selves that took an unpleasant life direction, and the experience affected Jane and her husband profoundly.[\[1\]](#)

Explorations of those ideas can lead to strange musings about what reality *is*. Helen Wambach specialized in mass hypnotic regressions. She originally performed her research to challenge the notion of reincarnation. She regressed more than one thousand people. To Wambach's surprise, 99% of the subjects reported detailed descriptions of other lives and the times they lived in, with arcane details subsequently confirmed by historical research. Wambach published her findings in *Reliving Past Lives* and *Life Before Life*. Those were published a generation ago. During her research, some subjects reported details from *future* lives. Wambach then embarked on her most provocative research: hypnotically progressing subjects to *future lives*, aiming for specific time frames. It is the only published research of its kind.

During both the future life progressions and the past life regressions, Wambach discovered a statistical anomaly that stands as some of the best evidence of reincarnation yet presented. Today's mystical path is [mainly the province of women](#), as that discipline is a subtle one that uses [feminine principles](#). The statistical anomaly was this: although 80% percent of the participants were women, the past life regressions yielded nearly an exact 50/50 ratio of male and female past lives, something unexpected if the subjects were "making it up." When Wambach performed the future life progressions, the ratio of women and men's lives for the period after the year 2300 AD was 50% male, 44% female, and 6% androgynous.[\[2\]](#) Her progression work's statistics also suggested that earth's human population will decline drastically in the coming years.

Wambach died before publication of the future life progressions' results, but her colleague Chet Snow published *Mass Dreams of the Future* in 1989. The future life progressions fell into four distinctly different future scenarios, and were named types one through four. Type one memories were of people living in space stations or colonies on other planets. Type two memories were of the classic New Age scenario, where people lived in peace and love in pastoral environments, wearing robes and having powerful psychic abilities. Those societies were built on love. Type three memories were of high tech societies, either underground or in artificially enclosed environments. They lived that way because the industrial excesses of previous generations left the planet's surface uninhabitable. Type four memories were of remnant societies that survived a holocaust that largely destroyed human civilization. Some memories were of living in a pre-industrial state in the countryside, while others were of eking out an existence in the rubble of destroyed cities. For the 2100-2200 AD life progressions, those were the predominant scenarios.[\[3\]](#) For the beyond 2300 AD scenarios, it was slightly more varied.[\[4\]](#) The [mystical](#) and [fringe science](#) ideas on this web site were evident in those future life "memories."

Wambach's research results were consistent with Seth's probable reality concept. Each person *chooses* the future they will experience, and they choose it with the *decisions they make today*. Tomorrow comes from what is decided today. Seth said that every morning when we open our front doors, we open them to a new probable reality that we have *chosen*. This world is a reality we have all chosen, and by our decisions today, tomorrow can begin "progressing" toward a much different reality, based on what *we* decide. This is a co-created reality, with each of us creating it.

That idea is paradoxical and seemingly nonsensical, but most mystical sources agree: each one of us exercised our free will to create this co-created reality. It is nearly identical to accounts of the astral plane and Robert Monroe's [Focus Levels](#). The [heavens](#), [purgatories](#) and [hells](#) that await us are also our creations. A primary difference between physical reality and the astral plane is that creating our realities there is far more obvious than it is here. We largely create our realities here unconsciously, and there are many "ground rules" that we all had to agree on (such as gravity) in order for this reality to work, which limits a great deal of our "free will" here. Many choices and innate abilities had to be "left at the door" when we came here. Earthly masters are simply more conscious than the rest of us, and can create their realities more consciously, performing feats that appear to "break the rules," such as walking on water and doing the loaves-and-fishes trick.

Once the concept of probable realities is understood, prophecy is seen in a different light. All prophecies depict *probable* realities, and all prophets know they only describe what *might* be, not what *must* be. When prophecies are dire, the intent is that they be heeded. If people change their ways, the grim probable future can be avoided. The best prophet is the false prophet, and Jonah of the Old Testament is the classic false prophet. He told the citizens of Nineveh that their city would be destroyed if they did not repent their ways. The citizens *did repent*, and the destruction did not happen. Some probabilities are more probable than others, and many prophets have keen insight into future probabilities. However, dismissing their warnings can bring the "bad" prophecies into being. As a rule of thumb, any prophecy that seems to carve the future into stone, so nothing can change it, can be ignored. Earth-change prophecies are nearly always related to the environmental devastation that humanity has inflicted on the planet. If we stop inflicting the destruction, the earth change prophecies will either not come true or be milder. If we continue to [inflict awesome devastation](#) onto the planet and each other, worse than the worst of them will come true, as humanity may indeed exterminate itself, a probability more than possible.

With that caveat, this essay will explore some visions of the near future. [Dannion Brinkley's](#) spectacular [Near Death Experience](#) (NDE) provided a great deal of prophetic information recorded by Dr. Raymond Moody. As the foretold events kept happening during the subsequent generation, Moody's skepticism slowly melted.^[5] The 1994 publication of *Saved by the Light* made the probable future Brinkley saw a public matter, and bringing it into mass awareness also created an alteration of the probable future, as more people became aware of it and could help change it. That is partly why his later prophecies have not occurred as foretold. The future is always in motion. The Armageddon scenario Brinkley saw happening during the 1990s still might happen, as Brinkley was told that the date of everything coming to pass and the world being vastly different was the year 2004.

[Tom Brown's](#) Apache shaman mentor, Stalking Wolf, was shown a series of visions in 1962, and the possible future he saw was every bit as ghastly as Brinkley's, and also foretold events that came true, such as the bizarre notion of "holes in the sky." The hole in the ozone layer, discovered a generation later, made Stalking Wolf's strange prophecy eerily prophetic.^[6] No prophets worth their salt want to see their dark visions come to pass.

One of the most fascinating bodies of mystical material is Dolores Cannon's work. Cannon

specialized in hypnotically regressing subjects to past lives, partly as therapy for them. Sometimes she hit the jackpot, regressing a subject to a non-human lifetime, or into [afterdeath](#) realms. Two of her most intriguing works came from “accidentally” regressing subject to lifetimes where the subjects knew Jesus and Nostradamus. With Jesus, the subject regressed to the life where she was the Essene tutor of Jesus and John the Baptist. Those regressions are produced in Cannon’s *Jesus and the Essenes*, which is also a compelling account of the times in which Jesus lived. His spiritual mastery was evident as a young boy, something the New Testament also preserved.

Jesus’ tutor described the crucifixion and resurrection much as the New Testament does, but deflates today’s doctrine around Jesus’ death. The tutor asked how anybody could pay for another’s sins, and rejected the standard Christian notion of his death’s purpose. He said that we all pay for our own sins. Nobody can step in and pay them for us. He said that Jesus never intended to be worshipped. Remembered and marveled at, yes. He was here to help guide humanity to fulfilling its potential, not to become an object of worship. The tutor also discouraged following anyone blindly, and said that the only devil exists inside us. He said that Jesus would return. When asked about Jesus’ philosophy, the tutor said,

"...he feels that love is the only law that one must abide by solely. And after that all the others pale into insignificance. We did not teach him this. He came to this conclusion through inner....what do I say..? discussions with his soul, and deciding how he feels about certain things. Love cannot be taught. It is something that must grow...It is important to not think evil in your heart."[\[7\]](#)

Cannon’s “jackpot” regression of a subject to a lifetime as Nostradamus’ pupil eventually yielded Cannon’s largest work, the three-volume *Conversations with Nostradamus*. As Cannon guided her subject to her life as Nostradamus’ pupil, he walked into the room of that subject’s past life, knew what was happening and offered to speak with Cannon. That was very out of character in a regression, where the “target” in the past-life situation was aware of the hypnotist guiding the subject from the future. When it happened, Cannon “felt the hair stand up on the back of my arms and a cold shiver run down my spine...Nothing like this had ever happened in my work before.”[\[8\]](#) Thus began an astonishing dialogue. For the next few years, Cannon sent that subject and others to speak with Nostradamus. The central issue was his prophecies, the cryptic thousand quatrains. What did they mean? [The Inquisition](#) would not have appreciated not only his prophecies, but also his method of seeing them, so Nostradamus was secretive and cryptic. Even if made from whole cloth, *Conversations with Nostradamus* is an engrossing body of work, and some is startling when seen in today’s light. For instance, in Century II, quatrain 75, is:

"The noise of the unwanted bird having been heard,

"Upon the canon of the highest story,

"The bushel of wheat shall rise so high,

"That Man shall be a man-eater."[\[9\]](#)

The standard interpretation is that it means aircraft, space warfare, [famine](#) and cannibalism. That is a straightforward interpretation. In *Conversations with Nostradamus*, Nostradamus expands on the quatrain. Nostradamus retranslated it, and said that there would be a famine, but because of war, where the nations that had the wheat could not get it to the ones that needed it, mainly because warfare had interrupted all the shipping, and the price was too high for those nations to afford it.[\[10\]](#) That was written in the 1980s.

State of the World's 1997 edition, chapter three, was devoted to preserving global cropland. In that chapter, the author discussed the problems with industrialization, particularly in East Asia. Several Asian nations are already grain dependent, meaning that they must import more than 20% of their grain consumption. Those nations were Japan, Taiwan, South Korea, Malaysia, Sri Lanka and North Korea. The threshold of grain dependency is 600 to 700 square meters per person. Japan was the lowest at 190 square meters per person. The industrialization trend, where arable land ends up becoming roads and golf courses, is colliding with Asia's population increase. By 2020, at current trends, India will be the only East Asian nation of significance not grain dependent, and it will not be far behind. China was barely grain sufficient in 1995 and at current rates will be grain dependent before 2020. The main grain exporting nations are the United States, Canada, Argentina, Australia and Europe, and the nations that really need it are in Asia. Nostradamus' prophecy does not seem farfetched. Nostradamus was looking into *probabilities*, and *Conversations with Nostradamus* is tantalizing.

This section will conclude with two of humanity's probable futures. [Michael Roads](#) is a modern-day Dr. Doolittle, able to communicate with all manner of consciousnesses, including those of animals, plants, rocks, clouds and so forth. His odyssey is recorded in a series of four books: *Talking with Nature*, *Journey into Nature*, *Journey into Oneness*, and *Into a Timeless Realm*. The events in the final book happened before those in the other three, and the series' final book is its most unusual. Readers are advised to read his first three books before his final one, so it makes more sense. Roads is unpretentious, gregarious and humble in person - a fitting persona for a veteran of his journey.

In *Into a Timeless Realm*, Roads described an out-of-body experience he had, one that lasted all night and propelled him into his awesome trek through realms of consciousness. While traveling with his otherworldly mentor, Roads visited two probable futures of the human species, about 300 years into our future. Roads' mentor stated that the probable futures they visited were only two of an infinite number of possible futures, but they were toward both ends of the spectrum: societies that did not choose love, and those that did.

One was worse than *Blade Runner's* Los Angeles, while other was a heavenly world that a Disney movie could not do justice to. At this footnote is a fairly detailed description of those two worlds.[\[11\]](#)

The hellish reality was created because people did not choose love, and the heavenly one existed because its inhabitants chose love. Love is the only way this reality can begin heading in that direction.

What is, and What *Can* Be

“You are never given a wish without also being given the power to make it true. You may have to work for it, however.” - **Richard Bach**[\[12\]](#)

“If you want to be a true practicing idealist, then each step that you take along the way must be worthy of your goal.” - **Seth**[\[13\]](#)

“You are not in competition with other species, nor are you in any natural competition with yourselves. Nor is the natural world in any way the result of competitiveness among species. If that were the case you would have no world at all.” - **Seth**[\[14\]](#)

"The ultimate weakness of violence is that it is a descending spiral, begetting the very thing it seeks to destroy. Instead of diminishing evil, it multiplies it...Through violence you may murder the hater, but you do not murder hate. In fact, violence merely increases hate... Returning violence for violence multiplies violence, adding deeper darkness to a night already devoid of stars. Darkness cannot drive out hate; only love can do that." - **Martin Luther King, Jr.**

[Seth's view of idealism](#) is not a Peter Pan fantasy, but an understanding of *how Creation functions*. People cannot kill the “bad guys” and make the world peaceful, because killing *always leads to more*, as [Martin Luther King Junior](#). and many others have noted. There will never be a war to end wars. Only peace will. The road to hell is not paved with good intentions, but with *acts that violate those intentions*. Seth said that there has never been and never will be a justification for violence, as the means *become* the ends. That is the most enlightened message regarding practical action I ever received from mystical material, and was about the first.

How It Is, and How It Got Here

Human beings are intelligent, naked apes that [migrated beyond their natural range millions of years](#)

[ago](#), and invented many adaptations of behavior and diet in order to survive in unsuitable environments. The human journey, ever since it [left its primordial home](#) in the tropical forests, has always been about securing and consuming *energy*.

All animals are designed to eat living food. Great apes are [ideally suited to eating fruit](#), which comprises most of their natural diets. The intelligent ape steadily enhanced its ability to manipulate earth's environment, although it also became further estranged from its natural diet and behaviors. As people improved weapons technology, there was a 30,000-year period of hunter-gatherer bliss, before the [easy prey was rendered globally extinct](#). Then the [Domestication Revolution](#) happened, probably by necessity, and humans reached new levels of environmental manipulation and devastation, with [organized warfare](#) humanity's most peculiar behavior, as well as the appearance of slavery. The human population slowly grew from about [four million when the Domestication Revolution began](#), to about [800 million](#) as the next major change happened, the [Industrial Revolution](#). That revolution helped bring an end to slavery, which began with the Domestication Revolution. The new revolution took energy exploitation and the means to [manipulate and destroy the environment](#) to extraordinary levels.

The Industrial Revolution began in societies that had [already conquered the world](#), and who commandeered the resources necessary to industrialize (the first and [most industrialized nation](#), Britain, had about the fewest domestically exploitable resources). The imperial peoples were by far the world's most violent, which was why they prevailed. They mercilessly [exploited the conquered lands](#), and as more imperial aspirants came to the table, the world was not big enough to sustain imperial industrial practices for all who wanted to play, so the 20th century saw awesome wars waged over which colonial powers could plunder the planet. The [United States came out on top](#), with virtually unchallenged global hegemony. America called the most devastating war earth had ever seen the "[good](#)" one, and capped it off with gratuitously [dropping nuclear bombs onto civilians](#). Industrial wars inflicted devastation onto peoples and environments of such magnitude that they threatened to destroy *all* civilizations. In industrialized societies, the ruling classes had limited ability to inflict violence onto their domestic subjects, and they no longer could really fight each other, so they inflicted [virtually unlimited violence onto their colonial subjects](#), and the [manipulation of the imperial class' minds](#) became [a science](#) during the 20th century.

The United States has been the heart of industrial imperialism for the past century. It has [earth's most brainwashed people](#), because their opinions *do* matter, as their government is nominally democratic. During the year 2002, form prevailed over substance to the extent that [Orwell's dark prophecy](#) has largely come to pass, with most living in the nightmare incapable of even seeing that it came true, which was also part of Orwell's vision. With the current [War on Terror](#) declared [virtually perpetual](#) by America's [Secretary of Defense](#), with nearly half of earth's nations on America's hit list, as it secures all lands with oil and other coveted resources, with the U.S. president and Vice President unabashedly *owned* by the energy interests, the nightmare *has* come to pass, and is rushing headlong toward a future that may be immensely worse.

In the words of America's [unelected](#), semi-literate president, America is by definition good, and its resisting victims evil, and that president threatened the entire planet as he declared that everybody was either "with us, or against us." The document that theoretically limits presidential power, [the Constitution](#), has been rendered a meaningless relic, with the unelected president given virtually unlimited power to wage war, and as of August 2002, open discussion of [invading one of the world's most oil-rich nations](#) takes place with scarcely a hint of opposition or irony (the September 2002 "debates" in Congress were more over how to get the job done, not to question the nature of the undertaking, which is typical – it is largely a debate between hawks, without a true dove to be seen). Iraq has already suffered a [genocidal destruction that the United States inflicted](#), begun by the current president's father.

Orwell's continual war *has* been declared. War *is* peace, freedom *is* slavery, and ignorance *is* strength. Reality has been turned upside down, with [vices turned into virtues](#). Powerful figures publicly and proudly display behaviors that [five-year-old children are taught are unacceptable](#), and few seem to notice or mind. Orwell wrote that the masses could throw off the elite manipulators as a horse shakes off flies, if they woke up. [Flag-waving](#) has replaced thinking, also as [Orwell predicted](#). Today, America is eagerly [militarizing space](#) for offensive purposes, with potential consequences nearly too horrific to contemplate.

In the more "rational" world of science, there is [blindness of a different sort](#). The most blinding *assumption* of today's science is that there are only five senses, and they tell us everything there is to know (or extensions of our senses, such as telescopes, microscopes, radio telescopes, etc.). The so-called [skeptics](#) are ardent defenders of materialism. All of science's giants were [mystical in their outlook](#). Today's [materialism](#) is an ideology, just as nationalism is, just as communism and [capitalism](#) are, just as all organized religions are. Materialism is perhaps the most seductive of all; it seems to conform to what our senses and rational minds tell us. As [Seth](#) has stated, our senses are lovely liars. A week of taking the [Silva class](#) has shattered the materialistic *assumptions* of many scientists. Once people realize that the five senses tell only part of the story, new vistas beckon.

As energy sources were depleted and new ones discovered, oil became the new big game at about the same time an ideology that [exalted greed](#) was invented. The same man who [quickly took over the new oil industry](#) engaged in social engineering soon thereafter, and his efforts not only [created the institution that dominates today's economic ideology](#), but also today's [medical paradigm](#), and he became involved with [banking](#) and other institutions, further corrupting them. About a hundred years ago, the [man who invented the means to electrify the world](#) was also pursuing free, non-polluting energy, and [another robber baron pulled the rug out from under him](#). As [I discovered first-hand](#), alternative energy [has been ruthlessly suppressed](#), on a global scale, for the past century. Free, non-polluting energy and anti-gravity technologies *do* exist. People close to me have [had it demonstrated to them](#). Some may be related to [reverse-engineering captured extraterrestrial spacecraft](#). Free energy is already here, but is not simply suppressed; virtually nobody even suspects that it has been, and even some of [America's most enlightened groups](#) have [ideological](#)

[objections to the notion](#), deriding such facts as a “conspiracy theory.” Their materialism blinds them, and their ineffectiveness is partly due to the fact that they are economically impotent. They have not yet glimpsed a world where the economic pie can be a *hundred times bigger than it is today*, so they can stop fighting to try preserving the tiny slice the poor have. When the pie is a hundred times bigger (and free energy would catalyze the biggest and most democratic redistribution of wealth the world has ever seen), no people would need to fight for their slice. For all their brilliant radical perspectives, most activists are still largely hacking at the situation’s branches, not its root.

It is time for the world’s people to take their economic destiny into their own hands and end the [Zero-Sum Game](#). Humanity’s survival may depend on it.

The vision presented below will be radical, and “radical” means one that attempts to burrow to the heart of the issues, addressing them at their root. All worthy radicalism attempts that, but [America’s Orwellian establishment](#) has made “radical” into a disparaging epithet. Nearly every human group on earth has been [blinded to one degree or another by its ideology](#). The problem with ideologies is not that they exist, but are mistaken for *reality*. Every ideology is simply an involved theory, an artificial way of viewing the world, and *every theory is wrong*, as Einstein was candid enough to admit. Ideologies blind their adherents when dogmatically held, with the ideology’s founding *assumptions* mistaken for *reality*, and never again questioned. Questioning the dominant paradigm’s *assumptions* has led to all of [science’s major breakthroughs](#).

The paradigm humanity has been operating from for the past 10,000 years I call the [Zero-Sum Game](#). It is a game based on an *assumption* of scarcity, particularly the scarcity of energy, where the world is seen in terms of “I win, you lose,” and “if I do not kill you, you will kill me.” All land grabs and other exploitations of land and humans have been primarily about [securing control over energy supplies](#) (food, wood, oil, etc.). Along with energy supplies, human intelligence and manipulative ability - the [three factors that led to humanity’s rise](#) - have been the subject to elite control since the dawn of civilization. The only true energy is love, and the energy (power) struggles humanity has seen have everything to do with [learning about love](#). If we choose love, the [heavenly future that Roads saw](#) will be closer to becoming reality for the majority of today’s humans. If we continue to choose fear and unconsciousness, then the [darker future](#) is more likely to come to pass, or even worse, as we might wipe out our species and take the planet’s ecosphere with us. No matter how unconscious humanity might seem, what will happen is our *choice*.

How It Can Be

As the concept of [probable realities](#) posits, no future is carved into stone for *anybody*. The future we will experience is dependent on what we *do* today. What we *do* is dependent on what we see and *think*, and this section is intended for Americans more than any other group, because it is all about what *we can do*, and what *we can create*, it we *care* to.

With free, environmentally friendly energy, the [Zero-Sum-Game](#) paradigm can topple, and unlimited abundance for humans and *all earthly creatures* is possible. Without free energy, the paradigm shift probably *cannot happen*.

The choices facing humanity are obvious, regarding its long-term survivability. These are a few possibilities.

1. Humans revert to living in their natural environment (the tropical forest), eating their natural diet (mostly fruit), and living in their Edenic state. Earth can support probably no more than a million people in that fashion.
2. We revert to the hunter-gatherer lifestyle, adopted after migration from the tropics. When people [exterminated all of earth's easily killed big animals](#), there were about [four million of us](#), and the limit that earth can support using the hunter-gatherer lifestyle is not much greater.
3. We adopt something like the Pacific Northwest culture, which was one of the few environmentally sustainable civilizations earth has seen, where people farmed the oceans by setting up villages next to rivers [where fish came to spawn](#). There were perhaps several million natives living in that culture before the [white man showed up and destroyed it](#). There are few places on earth that could sustain that method of subsistence today, as those ecosystems have been largely destroyed. If earth could recover its razed forests and the climate stabilized to its pre-warming stage, there are many places on earth where a fish-based economy could flourish, and perhaps support fifty million or more people in that fashion, although it is not the ideal human diet. We could engage in fruit cultivation and gathering activities to supplement that lifestyle.
4. Adopt the practices of other North American natives, such as the [Great Plains](#) bison economy, or the environmentally gentle [agriculture-hunter-gatherer economy of the Eastern Woodlands or the sustainable milpa methods of today's Mexico](#). The [Caribbean culture](#) of the Taino also appeared fairly sustainable, with a combination of sea harvesting, gathering and agriculture. In short, agricultural practices that do not deforest the land and disturb the soil are the most sustainable. Many pre-industrial peoples had that practice in the New World (largely because there were no draft animals to pull plows). Earth might be able to host hundreds of millions of humans using those environmentally gentle practices of the plains, woodlands and *milpas*. The [Amazon](#) may also be a consciously created and husbanded environment.
5. About 99% of the human race wakes up and gently throws off the shackles that the elite one percent has put on it, and humanity begins to use free, environmentally harmless energy. We could use our intelligence and manipulative ability in increasingly enlightened and refined ways, creating a culture that is harmless to the environment and humanity's fellow creatures, and the relationship with nature and each other is even mutually beneficial. Using technology that already exists or is close to being developed, an environmentally harmless

world society can be created that could feed and house *more than ten billion people*, at a standard of living that is orders of magnitude beyond what exists today.

The rest of this essay is mainly devoted to showing how option five can come to pass. In order to happen, humanity needs to begin healing and opening its collective heart, begin caring for each other and refuse to be manipulated by those on the [spiritual dark path](#), who play with humanity as if they are puppets and toy soldiers. Waking up can be initially painful, but staying asleep will be far more painful, and even suicidal.

Alternative and free energy has been suppressed by a [worldwide, clandestine effort](#), as the energy oligarchy not only keeps the energy racket intact, but also the greatest lever of manipulating the human species. Many [alternative energy pioneers have suffered greatly](#) at the hands of the energy gangsters, and theirs has been a lonely path, but their greatest adversaries have been the [inertia and indifference of the masses](#) and the [betrayals of their allies](#). If fifty people had supported [Dennis Lee](#) as [Mr. Professor](#) and I did, the world might have free energy today. If a hundred did, it would have been easy. There may not be a hundred people to find who would commit themselves at that level, so this web site is devoted to a different strategy: getting as many people as possible to comprehend what is at stake, what is possible, and if merely one percent of America simply became aware and cared enough to simply *ponder the possibilities*, it might help generate enough awareness and effort to overcome the energy gangsters' efforts, without there needing to be any more hero/martyrs.

With free, nonpolluting, [environmentally harmless energy](#), here are the short-term, [intermediate-term](#) and [long-term](#) possibilities of what it could produce and catalyze.

Short Term

1. There would be an immediate cessation in creating the primary [human-influenced greenhouse gas](#), carbon dioxide. Whatever the alternative theories may be, the [radiation-trapping properties of carbon dioxide are real](#), denied by nobody [not owned by the oil companies](#). The immediate cessation of greenhouse gas production will halt the component of global warming due to it. The catastrophic threat of global warming could immediately end.
2. Control over the world's energy sources is the primary preoccupation of the [criminals](#) that run the American Empire, and their current [War on Terror](#) (the latest [phony rubric](#)) could easily

ignite [World War III](#), which could destroy most of humanity. With free energy, the motivation to hold *that* hammer over the world's head would evaporate.

3. The energy industry's elimination would put perhaps a quarter or more of America's cash flow back into its pocket, while the short-term effect of making free energy machines would be an economic boom and redistribution of wealth of unprecedented proportion. The decline in America's standard of living would quickly end, and free energy would create a global economic boom of a kind never seen before. While there would be short-term "losers," the same awakening that would manifest the possibilities of free energy can also bring to awareness the need to lessen the short-term discomfort of those relying on fossil fuel revenues.
4. Burning fossil fuels [causes most air pollution](#), including acid rain. Virtually all air pollution would immediately disappear. Global respiratory problems would largely cease, as would stress on trees and other plant life, which makes them susceptible to diseases and is killing off forests today and is [acidifying the oceans](#).
5. Oil spills, the environmental devastation of oil drilling, coal mining and other energy-acquisition practices would immediately cease.

Intermediate Term

1. Because the entire human journey has been about the [acquisition, preservation, and consumption of energy](#), and the supply has always been scarce or finite, a paradigm has accompanied the human journey for the past 10,000 years, one I call the [Zero-Sum Game](#). It is the idea that the only way to improve one's station in life is to exploit others. No other event could help shatter the illusion of scarcity and the Zero-Sum-Game paradigm better than free energy. If people begin seeing beyond the Zero-Sum-Game [blindness](#), vistas scarcely imagined today can be glimpsed.
2. Humanity seems to be an intelligent, sentient species. Ending the Zero-Sum Game can also end the lives of quiet desperation that most people lead, and help open their hearts, which will also unleash the potential of their minds. Today, there is a system designed to [purposely dumb Americans down](#), but if Americans begin waking up, those games will end. Human intelligence in the service of an awakened heart is a force that most people today *cannot imagine*; with the awakening that free energy can catalyze, intelligence and imagination can be used as never before.
3. Many simple things can be done immediately to improve people's lives. For instance, [more than a million Americans live in their trucks](#), making the American consumer system work; the technology exists today to easily make it so [every driver could sleep at home each night](#).

The only barrier has been ideological blinders, such as the threadbare and increasingly unviable [capitalistic ideology](#).

4. There are [many existing cures](#) for the diseases that Westerners fall prey to, and they are currently being [suppressed in the name of greed](#). The vast majority of people have been easily [manipulated to their graves](#). An awakening West can almost immediately embrace [sane, gentle and healthy paradigms](#), instead of the deadly ones purveyed today.
5. Humanity's water-use practices are currently unsustainable, with water tables plunging worldwide, largely due to over-pumping for irrigation. It is creating widespread environmental devastation, including soil salination. With free energy, done intelligently, environmentally harmless desalination plants could exist in the oceans, desalinating ocean water and pumping it to land. The most enlightened first use is filling back up the depleted water tables. In addition, the dissolved solids collected from desalination could largely replace the need for mining. Also, for earth's regions that have been turned to deserts because of human practices, desalinating water could be part of a program to turn those areas back into fertile lands (more on that below). The two biggest killers of children worldwide today are polluted water and air. Although the [greed-based World Bank and IMF](#) are behind privatizing the world's water supplies, even in the United States, [which has led to disease outbreaks already among the poor](#), that desalinated water would also make universally free and pure water available to all humans.
6. With free energy, there is no barrier to setting up machines to extract carbon dioxide from the atmosphere, and bring those greenhouse gases down to their pre-industrial levels. There are even mainstream organizations devoted today to that issue, but they usually need to burn fossil fuels to get the energy to extract carbon dioxide, which partly defeats the purpose. Those extracted greenhouse gases can be put to better use in the chemistry revolution, as [discussed below](#).
7. The West's dominant paradigms are [truly insane](#). The only power sold to Western consumers is the *power to consume*. Mining the earth, consuming part of it and then throwing the rest away (and dumping the waste onto the world's poor), is about the most destructive and suicidal ideology ever invented. By itself, there is nothing wrong with consumption (although Americans are [history's fattest humans](#)), but the awesome destruction it has inflicted on humanity and the world is far from healthy. Free energy can catalyze both the means and motivation to begin undoing that damage. All of humanity's toxic dumps and other repositories of waste can be mined (even [nuclear waste](#)), not only cleaning up an immense problem, but the recovered material can be made as good as new, and used for raw materials for new goods.[\[15\]](#)

With the end of the [Zero-Sum Game](#), people can also began thinking about how they can reduce

the harm their existence causes others, which leads to the long-term possibilities.

Long Term

The [rise of the human species](#) was dependent on exploiting new energy sources by using intelligence and manipulative ability. The new paradigm can be catalyzed by free energy (there is nothing else more likely to do it, or so close to becoming reality), and then unleashed intelligence and manipulative ability in the service of a healed heart can create an incredible future. Pondering the possibilities of free energy for nearly thirty years has led to many realizations, and here are *some* possibilities that are not far off. That future heavenly world [Roads saw](#) is not so seemingly fanciful. Humanity can make huge steps in its direction during my lifetime. This section is devoted to exploring some of them.

1. Most chemistry today is performed in the service of greed, with [the profit motive paramount](#). With free energy, a new paradigm of chemistry can appear. Most substances used to clean things, such as chlorine in the water supply, laundry detergent and other soaps, bleach and other household cleaners, can be replaced with hydrogen peroxide, oxygen, and ozone. Those three chemicals “deteriorate” into water and oxygen. They are infinitely recyclable and of zero environmental impact, and they are creatable in virtually infinite amounts with free energy; a primary reason today’s toxic agents are used is that they are chemically persistent. Chlorine in the water will stay there, killing microorganisms, with free energy, ozone could be continually created and put into water. The U.S. government is today demanding that ozone purification replace chlorine purification within the next decade, creating the same effect without the persistent poison in it. Even that is an intermediary vision (desalination distillation can leapfrog the whole issue). The basics of using hydrogen peroxide, oxygen and ozone is simply using free energy to [increase the electrons’ energy](#), and using it for cleaning purposes. Such a practice would introduce zero pollution and keep human environments spotlessly clean and non-toxic. There are new horizons of chemistry that await the awakening that free energy can help catalyze, and goes far beyond cleaning agents.
2. Humans have been able to artificially reproduce manipulative ability and intelligence. Reproducing manipulative ability began with the era of machines, and the reproduction of intelligence began with the computer age. Both ages are still in their infancies. Most mainstream environmentalists have [austere solutions](#) to humanity’s energy issues, such as riding bicycles. Free energy can blast those austere blinders to shreds, and should. The [heavenly world that Roads saw](#) was technologically advanced, and they were particularly masters of the loving manipulation and use of energy. The [hellish world he visited](#) was also technologically advanced. It all depends on whether love or lack of it is the underlying motivation. With love, intelligence and manipulative ability can rise to currently-undreamed-

of levels, and can begin approaching that heavenly future that can await most of us, *if we want it*. I am a believer in computers, especially their potential when wedded with machines. Popping the Zero-Sum-Game paradigm also will unleash amazing levels of genius that *exist today*, but are [suppressed in the name of greed](#), as [Roads' mentor stated](#). Robotics is in its infancy, and free energy, machines and intelligence can create marvels that today's science-fiction authors can barely imagine. Today's scientists are able to manipulate material at the atomic level as they make computer chips ever smaller and faster, while our [energy production methods](#) are not far removed from the cave days. That contrast is one of many mind-bogglers in today's world, and could spur people to begin thinking about what is wrong with that picture; with the increase in robotics sophistication, no human need toil on behalf of another, unless that is what they *want to do*.

3. Although people can seem clever, it is probable that our high-tech revolution was at least assisted by [extraterrestrial technology](#), either given to us, or we stole it. The same people who have covered up free energy have covered up anti-gravity technology. I know people who have had it [demonstrated](#) to them in underground conditions, people I know and trust. Those in the know understand that today's military possesses technology that is about ten years ahead of what is publicly available, but the spook world, the realm that has supranational security (even the American president is an uninformed stooge) has technology about one hundred years ahead of what is publicly available today. Among the technologies they possess, besides antigravity and free energy, is the ability to create [holographic Illusions](#), similar to the Holodeck on *Star Trek*, according to sources I respect, such as [Barbara Marciniak's Pleadians](#). Only those with developed spiritual abilities can tell the difference between the holographic illusion and the real thing, which is another reason for people to begin pursuing their inner world and [developing their innate abilities](#). Once awakening humanity blows the lid off the spook stuff, and we gently take our responsibility back, technological quantum leaps are possible. [Crop circles](#) are probably part of a gentle wake-up call from our otherworldly pals.
4. The [Domestication Revolution](#) was the beginning of humanity's creation of artificial environments. A house is an artificial environment. A farm is an artificial environment that grows artificially manipulated plants that [can provide useful calories to humans](#). The reason for those artificial environments is that humans are poorly suited for life on earth, at least in [numbers of more than a million](#). If more than one million humans happily live on earth, they must do it using artificial methods. By itself, there is nothing wrong with that. Unfortunately, humans have created their artificial environments at the expense of all other living creatures. It does not need to be that way, here is why.
5. Earth's best and nearly only [soil-builders are forests](#). Soils are the basis for all land-based life, and humanity's prodigious forest destruction could lead to the end of land-based life, at least for a time, until the oceans (if they are not also rendered devoid of life) can generate the conditions of [several hundred million years ago](#) that made life on land possible; trees are the greatest introducers of energy and nutrients into land-based biomes. What have humans done to forests, and why? Originally, [humans, as with all primates](#), lived in the forest. [They left that forest and the tropics](#), and when they finally killed off their extra-tropical food source,

their only option was to begin to turn the forest into useful energy. Consequently, forests were chopped down, and the trees used for energy as they were burned. The [energy that went into making wood](#) was used to build dwellings and other structures, and sunlight that formerly fell on forests instead fell on plants to raise for human consumption, or pastures for human-consumed animals. Chopping the forests down also [killed the hydrological cycle](#) that trees created, which made life on land possible, and agricultural practices eventually destroyed the soils the forests created. The so-called [Fertile Crescent](#), where those activities first happened on a large scale, is largely desert today, as deforestation, plow agriculture and irrigation destroyed the soils. The dynamics today are what the Fertile Crescent experienced. It took the Fertile Crescent thousands of years to turn to desert. Modern industrial methods are making that transition happen much faster elsewhere.

6. Every use of wood today can be replaced with free energy, intelligently and lovingly used, and even the land used for forests would not be needed, and the forests can all grow back, even “farmed” by enlightened humans. The practice of using wood for energy would immediately vanish. Complementing the free energy and [chemistry revolutions](#) would be a materials revolution, which had also happened in [both future worlds that Roads saw](#). The main reason for why mining practices are so destructive has been, once again, the limitations of available energy. Earth's crust is about 85% oxygen, silicon, aluminum and iron, in nearly the exact proportions that it could all be turned into glass, steel and aluminum, with no waste byproducts, lasting virtually forever, and all infinitely recyclable; because of energy scarcity and the dominant paradigms, driven by [greed](#) and other deadly sins, virtually nobody is *even thinking* in the directions that chemistry could go. It is not much of a leap to quickly approach something like the replicators on *Star Trek*, where the toilet feeds them, mass continually being recycled, with energy added and the elements recombined in useful ways, the food-to-waste-to-food cycle is how our ecosystems operate, with the sun's energy adding the needed boost. It could all be artificially provided, but still letting life do its thing. Humans are a long way off from creating life, and today's genetic engineering is [potentially suicidal](#), but simply providing the energy and nutrients that plants and microscopic organisms can use to grow healthily can be extremely beneficial.
7. Buildings made of glass and steel, that do not need to take up ground space, can easily be made if free energy, anti-gravity and advanced materials technology were available. Dwellings, even cities, could be made on stilts, or even underground, with the land undisturbed (or the land below them used for orchards and playfields, with light and water provided), or ten-mile-in-diameter cities could float on the oceans, totally stable and stationary (if stationary is desired), and vast environments could be created for living, recreation and perhaps most importantly, agriculture.
8. Such buildings would have perfect climate control, with its rooms, even independently, made as warm or cold, wet or dry, light or dark as desired. Those domed cities and farms would have perfect environmental controls, the air always clean and fresh; and crops growing in perfect environments. Those domes could have protective force fields surrounding them, so that not even a bird could be hurt by flying into it. It could have a holographic covering, making it look like a mountain. It could be on a kind of antigravity buffer, activated during earthquakes, so there would not even be environmental catastrophe risk (today's earth

changes are probably largely due to humanity's spiritual degeneracy and the harm it is inflicting, so earth behaving violently would largely disappear anyway).

9. The "raw material" for the soils for those indoor farms has already been washed down the world's rivers by deforestation and agriculture, and it would not be difficult to "mine" that silt (a lot of it is in the way anyway), leach out the man-made toxins and ocean salts, and use it as a starting point for making those soils (and hydroponics could also be used). An indoor, perfect environment, for raising fruit and other live foods that humans are designed to eat, may take less than half an acre per person, and multistoried farms like that could pepper the earth, where the humans living in them had their own food supply, and no human would be dependent on imported food, as is seen in the West today. Cities and farms would become one; completely self-sustaining homes in Antarctica are possible, or anywhere else on earth. Large cities would probably disappear, as there would be no need for them, nor would anybody desire to live in one. They could all be recycled into the smaller communities, and even Manhattan Island could be turned back into forest.
10. A major reason why [environmental devastation is happening](#), [Americans are so fat](#), so easily [brainwashed](#), easily succumb to [preventable diseases](#), and [file to their deaths](#) at the hands of modern medicine, is their disconnection from the natural world. American children are being told that [Big Macs grow in hamburger patches](#), and similar fairy tales. Americans need to reconnect with nature, and a great beginning is to start having a hand in raising the food they eat. Those domed, multi-storied farms might be a generation off, but beginning to go in that direction is possible even today. All animals are designed to eat [live food](#), and my ultimate eating experience has always been eating fruit off the tree and berries of the bush. Not only is it how we lived in the tropical forests, no food has ever tasted better or been better for us. The American food supply is degenerate on several levels, and locally grown fruit, harvested by those who eat it (or getting it the same day or week it was picked) can go a long way toward not only improving humanity's health, but also reconnecting minds and spirits with nature, to begin seeing the world with healthy eyes and hearts.
11. [As discussed above](#), forests are largely responsible for the existence of today's land-based life. With free energy and the materials revolution, the uses of wood for fuel and buildings would disappear. It would also disappear for furniture. Already, America is on the brink of eliminating paper for printing information. I rarely use my computer's printer anymore, and read everything on my computer. Words can be on computer screens, LCD tablets that look like books; projected onto sunglasses, walls and even the retina. It can even be spoken aloud by voice generation; with just a little ingenuity, we could eliminate paper for information transmission.[\[16\]](#) All plant fiber is simply water and air that photosynthesis turned into cellulose; all animal fibers such as wool are other transformations of sunlight. Already, synthetic fibers have eliminated much of the need for using cellulose and animal fiber; some organic fiber can still have some use, but could be provided by cotton or hemp, grown in those indoor environments; there could still be *some* use for wood, but it can be taken from newly dead trees, in environmentally harmless fashion. Even toilet paper can be replaced by laser-guided warm water, perhaps with a little hydrogen peroxide or other sterilizing agent present (and a blow dryer!). That would not be much of a technical feat, in light of these other dynamics. In short, every use of wood and paper could become largely obsolete, and

humans would not even need the land the forests stood on for their energy needs. Then forests could become what they used to be; homes for forest denizens and places for humans to recreate. I want a [forest experience like Roads had](#). There can be some places where it is not forest, but human-tended “flatlands” as he also saw in that [heavenly future](#), but there would not need to be much of it.

12. Mining would largely disappear. Not only has enough raw material been mined from the earth to create nearly all of the facilities needed (“mining” the roads, as they will no longer be needed, will provide raw materials as well as pave the way for those lands to be healed, as well as mining all the dumps), and ocean desalination could provide other materials (as well as help clean them up, similar to [mining the carbon dioxide](#) from the atmosphere); whatever small amounts of mining might be needed can be done in a few places, with no mine tailings (as it could all be used, and whatever might be “waste” can be made into stable, non-leaching rocks), and the mine closed and turned into a lake, park or forest when finished).

With such abundance, the [Zero-Sum Game](#) will end, and nobody will need or want to keep score anymore. In that heavenly future Roads saw, they had no money, and economic ideology (or any ideology) did not even exist. Today’s *Star Trek* depicts a future where money and striving for material possessions became relics of humanity’s primitive past. Gene Roddenberry was not depicting a future that was all that fantastic.

After long years of imagining what is possible, and looking into the areas deeper, no idea presented here is outlandish. When the lid of suppression is taken off and humanity allows its heart and mind free reign, that [world that Roads saw](#) is only three hundred years into our possible future. Glass domes instead of [electromagnetic domes](#) is something achievable in my lifetime.

Such a vision can seem overwhelming and impossible to achieve, particularly with the situation seen in today’s world. I am an American, and I can only speak to Americans, as far as what we can do to help bring that vision to pass. Peoples of other nations could pursue many of these ideas themselves. Unfortunately, the suppression of free energy is an effort of global scale. The only nation on earth that may not be subject to the [manipulation of the energy gangsters](#) is China, and waiting around for them to develop free energy is a dubious strategy. People have regularly asked me if another nation less corrupt than America could pursue it. [Tom Bearden and friends](#) are trying to make their devices outside the United States. They know how the game is played. While my prayers are with Tom and his friends, looking for heroes to save us is insane, and also an abdication our responsibility. The above visions will not come to pass as long as people keep playing the victim game, seeing the world as one of [heroes and bad guys](#). We are all creators, and it is time we begin acting like them. So, for my fellow Americans, the next section is devoted to things *we can do*, now, to help the above visions begin to become possibilities for humanity.

Activities Americans Can Do, and Now

Unplug – The United States has history's most sophisticated and subtle brainwashing system. People who wanted to control humanity, and turn Americans into mindless pawns, [designed it](#). That is not even a so-called “[conspiracy theory](#),” but [easily researched social engineering that began more than a century ago](#). Americans have been “dumbed down” like no people in history, and [Orwell's world](#) has largely come to pass. Both the brainwashers *and the brainwashed* deny this, and Orwell also foresaw the denial. America's indoctrination process nearly begins in the cradle. Mass murderers and thieves such as [Christopher Columbus](#) and [George Washington](#) are held up to American children as heroes, with national holidays in their names, and outright fairy tales told about them. The [history that American children are taught](#) is a fabrication. Unsavory facts are left out or spun out, while the few good facts are overemphasized or [even made up](#). The news produced by America's corporate media is largely [fairy tales for adults](#). Nearly the entire American media system is pernicious, but the most effective brainwashing tool is television (and there is probably subliminal brain manipulation going on, even beyond the insipid program content and ads). Turning off the tube may be the most effective thing an American can do to begin unplugging from the brainwashing machine. Ceasing consumption of the mainstream media in its other forms is the next best thing to do. Immersion in alternative forms of information, mainly those not corporately owned, is probably part of the waking up process. Nearly everything we have been taught [is a lie](#). Once people have broken away from the machine, they can go back later and take a look, and can easily recognize the brainwashing rubbish it serves up; it will no longer seem so tasty, and they will never go back to it. Because the manipulators have been trying to create mindless, childish and easily manipulated *consumers*, part of the unplugging process is also unplugging from mindless consumption, which Americans excel at. Simplifying our lives and disengaging from the consumption squirrel wheel is part of the process.

Clean up - While the above [vision](#) has plenty to do with cleaning up the planet, everything starts at home. The cleansing of minds, bodies and spirits is an essential part of the healing process. [Unplugging](#) is part of cleaning up the mind. Adopting a largely [live food diet](#), and adding [regular fasting](#) to the American regimen are two behavioral changes that can go a long way toward cleaning up American bodies, as will regular exercise, preferably in nature. Giving up deadly comforts such as tobacco and alcohol is part of that cleansing process, as is drinking pure water. There is no argument that an industrial waste is dumped into America's water supply and called medicine. Looking into the [history of fluoridation](#) is horrifying. Although the evidence has been suppressed for more than fifty years, the fluorine ion [damages the human brain](#), and [scientific careers have ended](#) when it has been experimentally demonstrated. It is legitimate to wonder if fluoridating the water supplies is part of a mind-control program, especially with the other undeniable mind control activities. Calling the fluorine ion a medicine is the height of insanity at best. If more people become aware of the facts, just maybe we will stop adding a brain-poisoning, tooth-crumbling industrial waste to our water and calling it medicine.

Be gentle - As [Elisabeth Kübler-Ross](#) has documented, unpleasant situations or inevitabilities, such as death, are originally met with denial, to evolve through anger, bargaining, depression and

acceptance, and *can* lead to transcendence and enlightenment.[\[17\]](#) Regarding what is happening as of the summer of 2002, virtually all Americans are in denial or anger, or combinations of both. The [crazed flag-waving](#) after the [World Trade Center attacks](#) was a textbook example of trying to reduce [cognitive dissonance](#), where people tried drowning out the reality of why America may be hated around the world with waving the largely meaningless [symbol of America's secular religion](#). Those people need to be dealt with gently, if for no other reason than they are frightened and dangerous. In addition, harsh methods will not help wake them up, but spark further games of denial, and many carry weapons. These are the days when heretics can burn. As [Martin Luther King, Jr.](#), Gandhi and others have noted, violence will only beget more, and gentleness is the salve we need. America has tens of millions of [Young Warriors](#), and their primary delusion is that might-makes-right. Perhaps the human race's only hope is trying gentle solutions to our problems; it may be the only thing that will work. I advocate removing criminals from power such as Bush and friends, but not unethically or violently. There is no argument that [George Bush the Second](#) is [not even elected](#), and the [U.S. Supreme Court criminally intervened](#) to put him into office. The [invasion of Iraq](#), its justification built on a mountain of lies, is at the very least an impeachable offense. There are legal and gentle means to remove them from power, such as a national referendum. Bush's current plans to invade Iraq are impeachable offenses, although Capitol Hill is his accomplice, so we cannot expect much auspicious to happen in Washington DC. Dismantling the executive branch and even dismantling the United States should be on the table of possibilities. Thinking that the average American will wake up to that degree might seem hopeless, but the means *will become the ends*. Harsh methods will only make things worse. The [dark path folks](#) pulling the strings *want* people to react in fear, hatred and violence, as it ultimately keeps them in a negative spiritual spiral that [can be exploited](#).

Go within - Every religion has betrayed the teachings of the master it was modeled after. However, that does not deny the masters' enlightenment, and they all realized that the inward journey is the path to enlightenment. The materialistic West is outwardly focused, and is largely why it is so degenerate. The [Silva Method](#) can teach a person in forty hours how to attain deep meditative states, without religious baggage attending it. Perhaps no other course is better suited for Westerners to quickly learn powerful meditation techniques. [Robert Monroe](#), [Bruce Moen](#) and others have blazed trails that anybody can follow, but it is an inward journey. It is not an intellectual process, and largely defies Western attempts to describe it, but meditation and prayer can help lead to enlightenment, and there is a greater need today for enlightened people walking earth than ever before. Just *becoming aware* of our internal light has a powerful effect on anchoring enlightenment on earth. Some of the most powerful acts people can do today are what they can do *inside* their heads and hearts.

Remember - Related to [going within](#) is becoming more mindful. It is an act of raising human consciousness. For [older souls](#), memories of [other lives](#) are more available, and mundane memories of current lives can be better recalled by the inward journey, and people can remember the more important things. Much of what Americans have forgotten are life's basics, the things that [Robert Fulghum said were taught to us by age five](#). Much of the remembering does not have to be mystical, but just remembering what is important, such as love, truth, and integrity.

Act - Living one's enlightenment on a mountaintop is easy. Far more challenging is living it in the world, especially today's. As never before, there is need for enlightened action. In the West, people often equate "action" with violence. Gandhi was active, as was [Martin Luther King, Jr.](#) Calling violence "active," and pacifism weak or inactive is an example of a [false dichotomy](#). There are more opportunities for gentle, enlightened, healing action than ever before. It is best pursued, however, by people whose hearts are whole. Action in the service of fear is the path of disaster, particularly now. Action in the service of love is perhaps the most important thing anybody can do today, and with people's hearts awakened, they will *know* what to do. Nobody need tell them. Anybody who advocates violence is not operating from an enlightened perspective.

Forgive - Today's world is full of misery, violence and exploitation. There is plenty to forgive. True forgiveness is not about being a "spiritual heavyweight," and able to "forgive" violations, but realizing that every "violation" is a co-created experience. With true forgiveness, the dynamic of those past events can be healed and set aside, and the victim perspective can be shed. That can make room for a creator's perspective to come into play, and a new dynamic can appear, one immensely more fun and loving. The [heavenly world](#) that Roads saw did not come into being by imposing "justice" on others, vengeance or related acts. True forgiveness can help release the fear and hatred in today's world, and particularly forgiving ourselves.

Those are activities that Americans can do now, and although they may seem nebulous as far as making a difference, they can go a long way toward healing humanity and the planet. Raising our awareness may be the only way out of this mess, and then taking action related to our increased perceptions. On an [ancillary link](#) are some frank observations about what I think is happening and what is possible, in the near term, as well as observations on what it was like to make this site. Free energy is the biggest first step toward the visions presented in this essay, and raising awareness of what is at stake, and how close the planetary healing can be, is this web site's main purpose. It is up to us.

[5] One of the funnier events regarding Brinkley's visions was the prediction that an actor-cowboy with the initials "RR" would become the American president in 1980. When Moody asked Brinkley who that might be, Brinkley answered "Robert Redford." Ever since Ronald Reagan became the U.S. president in 1980, Moody has mercilessly ribbed Brinkley about getting the vision "wrong."

[11] Because Roads was a farmer and rancher, that was the initial orientation of his visit to the probable world that *did not* choose love. Roads and his mentor visited a dairy. Today, there are [genetic engineers](#) working for [agribusiness](#) corporations who are unabashedly trying to create that dairy Roads visited. In that dairy, the art of genetic engineering reached its zenith. The cows had been bred and manipulated into becoming nothing more than an eyeless, earless head, a legless torso, and one huge udder that provided milk. The liquid feed went in the mouth via tubes, the milk came out the udder into the milking machine, and the cow became a Borg-like (a species depicted in *Star Trek*) wedding of flesh and machine, with the cows called "cow units." The cow units spent their entire lives hooked up to those feeding-milking machines. As Roads observed, two dairy workers walked down the production line and stopped at the stall of a cow unit whose production had declined. They watched it for some moments, then one pressed a pen-like device to the cow unit's head, and with a sharp hissing sound it immediately died. They then unhooked the cow unit from its device and smoothly dumped it into a trolley that had rolled into place. Then the trolley drove it to another building. Roads and his mentor followed the trolley and saw the dead cow unit dumped into a vat, where it quickly dissolved. The vat's contents became raw material for growing new cow units, incubating in nearby artificial wombs. The embryonic cow units grew in their jelly-like "wombs" until ready to be put into production.

Roads staggered from the dairy, full of disgust and revulsion. In his out-of-body state, he could also sense the mental-emotional states of those in that world. From the cow units came an intense feeling of discord and misery. Roads shuddered to imagine the effect such milk would have on those drinking it. Roads and his mentor then visited the farm where the cow units' feed was grown. The field was brilliantly green, with the grass-like plants growing before Roads' eyes, and being sucked up into a big "lawn mower" that continually glided over the field. Roads turned his spirit eyes toward that scene, and was again assailed by a deep feeling of discord, that time emanating from the plants. He stepped back and looked around, and realized that no nature spirits were in the vicinity; those devas that help nurture all plant life on today's earth. Roads encountered nature spirits throughout his journeys, but that was the only reality he ever saw where nature spirits had entirely abandoned it.

Roads turned down an offer to visit a hospital in such a society, but his mentor took him to visit a city. As with the genetic engineering wizardry the dairy evinced, the society was technologically advanced. However, it resembled the world of *Blade Runner* more than *Star Trek's* earth. That society created an alloy

of plastic and steel that was virtually indestructible and unbelievably strong. They built their cities miles into the air. The bottom levels of the city looked like *Blade Runner's* Los Angeles, in perpetual twilight, and there was a heavy stench in the air. It was impoverished, and virtually all people in the lower realm were young. When Roads asked why there were no old people, his mentor replied that medical treatment was reserved for those with enough "credits," which was that reality's money. When anybody in the lower levels became ill or infirm, a pill was provided them at no cost, which gave them a painless death. That reality was built upon the principles of [greed](#) and indifference.

In that reality, organized warfare ceased to exist, because each person was the adversary of everybody else. Roads and his mentor began ascending through the city's levels, and it became progressively brighter and less impoverished. They reached levels where the wealthy lived, and it was astounding. Vast parks laden with flowers beckoned. Sweeping vistas of verdant plains, distant mountains and ever-present rainbows danced before Roads' eyes. Now, that was more like it! What he was seeing should not have been possible, on top of a skyscraper. His mentor then told him to tune in with his spirit eyes again, and Roads saw that the extraordinary scene was an elaborate holographic illusion. The rich people strolling by, seemingly blissful, were in a drug-induced stupor. If people could afford it, they could buy a fabulous, illusory existence. Most people on that level believed they were experiencing reality, not a carefully contrived illusion. They could not tell the difference between the holographic illusions and "reality," living in a perpetually deluded state. They were that society's "winners." Roads asked his mentor that if they believed it, then was it not real for them? To which his mentor replied with a smile, "What is reality?"

Roads asked his mentor what could be wrong with such a world at the higher levels of the city. Many elderly lived in the rich areas, appearing quite healthy, and the children lived naked in the warm, safe environment there. Even if drugged and living in a holographic reality, was it not pleasant? Roads' mentor told him that the lower levels were left to rot, eking out their lives, but the rebels of that netherworld were where change for the better would come. Their shame of their world's callous indifference was the only saving grace that reality had.

To make his point clear, Road's mentor then took him to the city's "penthouse." It was at the very top, and opulence scarcely imagined surrounded Roads, with castles spun from rainbows and gardens to take the breath away. Roads' mentor said that on the top level it was not all a holographic illusion, but a carefully manufactured reality, with synthetic soil and other techniques that created a realm that was mostly "real," and only slightly helped by holograms and other high-tech tricks. At that level lived people whose wealth in credits was beyond measure. A family walked by, and they all had shimmering, multicolored auras. They looked like gods to Roads, but his mentor stated that their condition was due to extremely involved and expensive genetic manipulation, something orders of magnitude beyond a Beverly Hills facelift.

Then Road's mentor took him to that reality's final destination: a social gathering in one of the penthouse palaces. As Roads looked at the milling people, he realized that some were not human, but grey-looking humanoids. They wore a holographic disguise, and the humans took them for normal people. Those grey beings were that reality's shepherds. They manipulated the entire society from its highest levels, keeping everybody in misery, as it created an emotional energy they fed off. They were at the very top of that reality's food chain, but Road's mentor said that the grey beings were losers too, as their negative harvest kept them locked into a hellish baseness of spirit. In that reality, *everybody* was a loser. The grey beings did not create that reality, but were opportunists who took advantage of that greed-based reality. They set themselves up at the hierarchy's emotional-food-chain apex. Roads' mentor told him that as long as greed and indifference are in the human consciousness, realities like that one would be created. We all create our realities, and that was merely one of infinite realities that exist, and one that some of today's humans will

experience in about three hundred years. Roads thought it ironic that humans, who are beings made of love and light, could create such a reality for themselves.

Elements of the *Blade Runner-ish* reality are easily seen in today's world, with that dairy being the [goal of some of today's genetic engineers](#), with today's [factory farms](#) raising animals in conditions not far removed from that dairy's. Many of today's urban hells could compete with that *Blade Runner-ish* world. The notion of [feeding off of people's negative emotions](#) and being in holographic disguises, helping shepherd humanity, can be seen in today's mystical literature, phenomena *that are happening right now*, on earth. Today's predominant economic ideology, capitalism, is [based on greed](#), and has become more overt through the years, with [outright gangsters running the White House](#). George Bush the Second and friends are almost certainly puppets of those pulling their strings, puppet masters who stay in the background, playing the power-behind-the-throne game. They will never take the fall for anything their puppets do, using new puppets when the others break or outlive their usefulness.

After that harrowing experience, Roads was ready for something more pleasant. He and his mentor visited a reality as far into earth's future as that *Blade Runner-ish* one, but beings that chose love populated that one. As they began descending into the other reality, the very atmosphere radiated peace and joy, which Road's mentor said was due to the love energy that the beings in that reality radiated. As they approached a city in that reality, the trees lining the street looked like spruces, but with silver needles. Roads thought they looked artificial, but the life energy emanating from them was far too strong to ignore. Roads examined a tree and saw that the needles slowly swayed, like sea anemone tentacles. His mentor confirmed that that tree was the result of genetic intervention, and sea anemone DNA was indeed involved. However, it was done with the tree's consent. That reality also had genetic engineering, but done with the utmost respect and *cooperation* with the life forms involved. The trees enjoyed the movement that their silky, silvery needles provided.

In the *Blade Runner-ish* reality, Roads and his mentor were ghostly beings, unseen by that reality's inhabitants. When they showed up in that new, loving reality, the people could see them and knew Roads' mentor, as he was a regular visitor. A group of teenagers invited Roads and his mentor to their school. To a casual observer, the teenagers looked remarkably like those god-like people in the rich levels of the *Blade Runner-ish* world, but they needed no drugs, genetic tinkering or holographic crutches. Those teenagers were highly developed, both spiritually and mentally, and love increased their abilities to astonishing levels.

The teenagers took Roads and his mentor on that city's equivalent of a bus: it looked like a rainbow running down the street. As soon as Roads stepped on it, it whisked him away. It responded to his mind, going where he wanted, as rapidly or slowly as he wanted, and before he knew it, he had already disembarked at his destination. The school was in a park setting. The lawn was a kind of fern-ish plant that smelled faintly of lemon and never needed mowing. The area emitted a feeling of tranquility, as if it was a specifically induced atmosphere. In the park was a large domed building that housed the school, and the teenagers invited Roads inside. Each lay down in a bed that adapted itself to the student, and they received an education where information was fed directly into their brains while in a meditative state. The students' entire bodies were involved, each cell participating in the learning experience. The students *experienced* what they learned, and they learned about fifty times faster than students in today's schools learn, so by age six a child knew nearly everything there was to know about the human body, and how to be healthy.

Roads was disbelieving at first, but he saw that the students were all physically perfect and radiated robust health. As Roads goggled, his mentor reminded him not to compare that reality to his world, and his mentor

made a statement that nearly sums up this web site:

“You are living in a time when the great potential of many brilliant individuals is suppressed. Your people are stricken with disease, war, famine, and suffering on a level that rivals anything in your historical past. All your true geniuses who develop the means for holistic health and a global abundance of food are persecuted, ridiculed, restrained, and controlled by rampant corporate greed and consensus reality. However, as always, the greater the suppression, the greater the resulting explosion... You live in a time of great cataclysm, a time of an explosive upheaval in consciousness. This can be seen environmentally in the unprecedented speed of change. The times you live in will be the determining factor of your next reality frame. Some of your humanity will incarnate into the reality that we visited earlier; some will incarnate here. The big majority, however, will probably incarnate back into a reality frame that is a continuation of your present mode.” (see Roads, *Into a Timeless Realm*, p. 227)

In that heavenly reality Roads visited, there was no disease, sickness or hospitals. Utopia barely begins to describe it, and Roads only saw a sliver of it. Then Roads’ mentor took him to a forest outside of town. Roads is a veteran of many incredible mystical experiences, where he has communed with nature and all manner of consciousness, but that forest experience was one that a Disney cartoon could not begin to portray. Birds and butterflies flew everywhere, nature spirits abounded and trees talked to him. The entire planet had a rainbow expressway that webbed it, and connected city to farm to wilderness. The rainbow was just one form of transportation. The most common form of long-distance travel was the equivalent of a huge soap bubble, which was made of electromagnetic energy, and everybody over age six had one. The bubble responded to the “driver’s” mind, taking each one wherever they wanted to go.

Their last visit in that reality was to a farm. As with the *Blade Runner*-ish world, the farming was automated, but as the grain was harvested, it nearly leapt into the harvester, with the grain emitting a deep sense of fulfillment. The farmland had larger versions of those traveling bubbles, but those protected crops, and could cover up to a square mile of land and provide a perfect environment, including temperature and moisture control, while the surrounding land would be unaffected. Those bubbles were made of electromagnetic energy and were nearly invisible, but the most powerful tornado could not have dented one. That reality had no pets, but animals and people could become each other’s companions if *both wanted to*. Of course, [vegetarians](#) entirely populated that reality. No animal was abused or killed by humans in that reality.

[12] See Bach, *Illusions*. p. 92.

[13] See Jane Roberts’ *The Individual and the Nature of Mass Events*, p. 277.

[14] See Jane Roberts’ *The Individual and the Nature of Mass Events*, p. 277.

[15] The recent efforts using [thermal depolymerization](#) are mere baby steps toward a “cradle-to-cradle approach to production and waste.” See William McDonough and Michael Braungart’s *Cradle to Cradle*.

[16] William McDonough and Michael Braungart's *Cradle to Cradle* is printed on recyclable plastic.

[17] Brian O'Leary's *Miracle in the Void* takes an enlightened look at that process.

[The Big Picture...and Solutions](#)

[Free Energy](#)

[Health and Environment](#)

[Alternative Cancer Treatment](#)

[Political and Human Rights](#)

[Spiritual](#)

[Channeled](#)

[Fringe Science and the Offbeat](#)

[Catastrophic Quicksand](#)

Here are various links to sites referred to in my web pages, as well as others that I have respect for.

The Big Picture...and Solutions

The primary purpose of this site is identifying the problems and possible solutions to the phenomenon called life on earth. What I eventually realized is that until the big picture can be glimpsed, the comprehensive solutions cannot even be *pursued*. So, this section is devoted to big picture people, and deals somewhat with proposed solutions. [R. Buckminster Fuller](#) was one of those "big picture" people. He called himself a generalist, which really meant a comprehensivist, where his work crossed lines of specialization to develop a comprehensive, big picture view of the problems, as well as the solutions. Here are authors and activists with that Big Picture approach. Their work is highly recommended.

[Brian O'Leary](#) - Ex-Astronaut and fellow free energy visionary. Brian sees the big picture, and is worth listening to.

Brian has now founded the [New Energy Movement](#).

[Jay Hanson's page](#) - Where humanity is headed if we do not embrace renewable, harmless energy.

Free Energy

There are obviously other free energy sites besides these ones. A number of sites are not here because of my questions about their motivation. One site is prominent, but the only mention of Dennis is a link to [Mr. Skeptic's](#) propaganda web site. I have had little involvement with Dennis since the 1980s, and this web site is not an endorsement of what he is doing or promoting, mainly because I am not qualified to comment on it.

[Tom Bearden](#). Here is some of his information on [Sparky Sweet and his amazing technology](#) and how to get a video. Other Sparky links: [1](#) (this one is taken from Sparky's writings), [2](#), [3](#), and on his mentor [Gabriel Kron](#).

[Steven Greer and Space Energy Access Systems](#)

[New Energy Congress](#) - They may end up doing some good work.

[Infinite Energy](#) - The late Eugene Mallove's formidable magazine. Here is a [link](#) to his open letter on ways to do free energy. Unfortunately, I wonder about [how his legacy is being handled](#).

Health and Environment

[Jack La Lanne](#) is a true American original. Although his original influence in matters of health, [Paul Bragg](#), was a charlatan, La Lanne is genuine, still going strong in his nineties.

[Dean Ornish](#) - Can we reverse heart disease and hardening of the arteries without drugs and surgery? He is the professional descendant of the people [who saved my father's life](#). He was a doctor to the president.

[Peter Duesberg](#) - One of world's leading virus experts who has [challenged orthodox theory regarding AIDS and HIV](#).

[Julian Whitaker](#) - Another sane and courageous doctor in America.

[John Robbins](#) - Heir to the Baskin-Robbins fortune [who instead took a modern day Buddha's journey](#). His [defense of the soybean](#) from [the soy assailants](#) is impressive.

[Gary Null](#) - A longtime health researcher and writer, who has done important work on [vegetarianism](#). He might seem a little too commercial for some, and Robbins or [Cousens](#) are less so.

[Puget Consumers Cooperative](#) - The leading edge of a healthy future - organic food, cooperatively-owned, no animal testing, fair pay for all members of the food production chain, environmentally-friendly, they are exploring the way humanity needs to go if it is to survive.

[Acidifying oceans](#), another consequence of burning fossil fuels.

[Greenhouse gases](#) - A good discussion of them on Wikipedia, and the role of carbon dioxide.

[Genetically Engineered \(GM\) food](#) - Site that exposes the [awesome risks of GE foods](#). Here is a [UK site](#).

[Greenpeace](#) - They may be a little too disobedient, and maybe too much like a business, but I respect many of their efforts. Perhaps the world's best environmental site.

[Natural Resources Defense Council](#) - A large environmental site. Though they are mainstream and subject to

the corrupting influence of fundraising and the like, they have my respect.

[EnviroVideo](#) - They have my respect. They are an environmental media organization, operating on a shoestring, as do all alternative media organizations.

[Friends of Freedom](#) - Canadian organization devoted to health choice.

Alternative Cancer Treatment

[Ralph Moss](#) - The Big Kahuna of alternative cancer treatment.

[Cancer Tutor](#) - Excellent overview of alternative cancer treatments.

[Gaston Naessens and 714X](#) - A [treatment](#) based on a different paradigm for viewing degenerative disease..

[Stanislaw Burzynski](#) - The FDA has [tried wiping out](#) his harmless, ingenious and effective treatment numerous times, and he is still hanging in there. His is the only cancer cure hope for many Americans.

[Royal Rife](#) - One of the many medical establishment snuff jobs on [a cancer cure that worked](#).

[Barry Lynes](#) - The leading writer of Rife's tale.

[Hulda Clark](#) - Good stuff, from cancer to other diseases to parasites to flushing out liver and gall bladder stones.

[Good links page to alternative treatments](#).

[Jimmy Keller](#) - [Kidnapped from Mexico](#) in one of the most egregious methods to wipe out alternative cancer treatments that I have seen.

[Cancell Page](#) - Very good web site on an alternative treatment and the cancer business in particular.

Political and Human Rights

[Z Magazine](#) - My favorite political magazine.

[Fairness and Accuracy in Reporting](#) - My favorite media watchdog organization.

[Counterpunch](#) - These guys don't mess around. They particularly take on the Washington D.C. crowd, and follow the money.

[Medialens](#) - Edwards, Cromwell and some of the best of the left.

[Common Dreams](#) - Another good site with radical perspectives.

[Working for Change](#) - Another good, progressive site.

[PR Watch](#) - Excellent site on what the public relations industry is up to. [Their work](#) has [helped expose Steven Milloy as a tobacco company front man](#).

[Truthout](#) - Eclectic news items, lib rather than rad. Too bad.

Great political cartoonists

[Tom Tomorrow](#)

[Mark Fiore](#)

[Ted Rall](#)

[Troubletown](#)

[Andy Singer](#)

[Matt Wuerker](#)

[Stephanie McMillan's Minimum Security](#)

[The Onion](#) - Good humor.

[Independent Media Center](#) - Good site devoted to grassroots media, though its open-publishing newswire is often jammed by a right wing offensive. In 2004, their servers in the UK were seized by the FBI, in a gross violation of human rights.

[Worldlink TV](#) - New TV station in the U.S. Offering television coverage that you will not find in the U.S. They actually played [Manufacturing Consent](#), for the first time I know of, on an American-based TV station.

[Reuters](#) - Far less biased than the American mainstream media.

[Al Jazeera](#) and [here](#) - Virtually the [Arab version of CNN](#).

[Asia Times](#) - Good analysis from Asia

[Der Spiegel](#) - German media in English.

[The Guardian](#) - A leading British web site. Far better than the American mainstream media. Unfortunately, the British press is the least trusted media in Europe, but I cannot read other languages.

[The Independent](#) - Another British media organization. This one features the work of [Robert Fisk](#), the West's best Middle East correspondent.

[John Pilger](#) - Another Western journalist with integrity, with a career that is decades old.

[Project Censored](#) - What the mainstream media will not tell us.

[Information Clearing House](#) - News not found in the U.S. mainstream media.

[Covert Action Quarterly](#) - It was once about the single best periodical regarding what our government is really up to. Site is fairly inactive as of December 2005.

[An excellent CIA analysis page.](#) - Yahoo once refused to list it. It is easy to see why. The emperor is stark naked.

[International Action Center](#) - I respect Ramsey Clark's organization. They are "sectarian," but their courage is inspiring. Considered too "Marxist" in some circles, I wish there were more folks around like them.

[War is a Racket](#) - A frank assessment of the war racket, by one of America's greatest war heroes, [Smedley Butler](#)

[Rat Haus Reality](#) - An excellent archive of important writings on health, politics and science.

[Disinformation.com](#) - Sprawling site that deals all manner of controversial issues. Well done.

[Noam Chomsky](#) - Z Magazine's archive of the great man's work.

[Howard Zinn](#) - Site of my favorite American historian.

[Edward Herman](#) (and [here](#)) - He is Uncle Ed to me, as I received a lot of my political education at his scholarly knee. He is one of the finest dissident scholars in U.S history. His articles on the [kangaroo court at The Hague](#), where [Milosevic is interned](#), and the [2000 election coup](#), are timely. Vincent Bugliosi also [wrote a formidable account of the voting scandal](#). Ed has also [written about mass graves](#) being [discovered in Afghanistan](#), where thousands Taliban POWs were murdered and dumped into pits, with the U.S. media failing to cover it, as usual. Here is a [great link](#) on his fisticuffs with the "Cruise Missile Left" that defended the invasion of Iraq.

[Michael Parenti](#) - Another voice of integrity from the radical left.

[Edward Said](#) - A tribute page to a great voice of conscience from Palestine.

[Allan Nairn](#) - One of America's [most courageous journalists](#).

Excellent material on the [Crop Circle](#) phenomenon.

[John Taylor Gatto](#) - One of America's finest teachers, [who takes a frank look at the American education system](#).

[Common Courage Press](#) - One of the world's most important publishing companies.

[South End Press](#) - Another one of the best publishing companies on earth.

[Oxfam](#), [British](#), [International](#) and [American](#) - One of the world's premier relief organizations, one that also sees [the politics that creates the famine and misery](#). As usual, it appears to be subject to slow co-optation and undermining by the establishment.

[Mark Twain's anti-imperialist writings](#). A highly suppressed body of work by one of [America's greatest citizens ever](#).

[Michael Ruppert and From the Wilderness](#) - Another good piece of investigative reporting, tackling subjects that America's media will not. [His case](#) for [Bush administration foreknowledge of the World Trade Center](#)

[attacks](#) deserves to be taken seriously, particularly the [short selling of airline stock](#) and [war games](#) evidence.

[Richard Heinberg](#) - Has produced excellent, interdisciplinary work on the trajectory of human civilization and where we may be headed.

[Guerilla News Network](#) - Good stuff.

[Black Op Radio](#) - Featuring material ignored by the mainstream media.

[BNN](#) - Brilliant satire on events in the Middle East

[Third World Traveler](#) - Excellent alternative views

[The Bush family history](#) - The version you will not find in mainstream bookstores. From a right wing source, and its conclusions are not necessarily my own, but a valuable depository of facts not easily found.

Ralph Nader [1](#) and [2](#) - While I have seen many people question his motivation, including some close to me, I have not seen a more prominent national political figure telling more truth about what is happening in America, and trying to unite people in seeking solutions. If nothing else, his work can lead to finding out much more about what is happening.

[Xymphora](#) - Excellent blog on current events

[Rodney Stich and Defrauding America](#) - In an age almost completely bereft of acts of integrity and courage, Stich is a beacon in the darkness. *Defrauding America* is one of the most important American books ever written.

[JFK Assassination Site](#) - This site presents the [best work](#) I have seen regarding the [backyard photo evidence](#) against Lee Harvey Oswald, and the issue of the Minox camera. The alleged murder weapon may well be a [vintage weapon](#).

[Operation Northwoods](#) - These are apparently declassified documents that spell out how JFK's Joint Chiefs of Staff planned to kill Americans and frame Castro's Cuba for it, to justify invasion. This revelation is not all that surprising, given the milieu of the day, and has given grist for the mill of the 9/11 conspiracy theorists, theorizing that I am skeptical of. However, it gives a great deal of credibility to [Gary Wean's tale](#) of a CIA operation that used JFK as a target for a fake assassination that framed Castro.

[Blueprint for a Prison Planet](#) - This is a compelling, levelheaded and even hopeful rendition of an issue that I am familiar with, but have generally not dealt with on my site, as it can easily overwhelm people, and there are enough pieces of the puzzle missing (not available for public inspection), that it can lead to various interpretations. However, I have directly experienced enough events that fit into this person's narrative, and heard of others, such as [here](#) and [here](#), that I do not dismiss it. I think that in large measure, what he is writing may well be true.

[The New Enlightenment](#) - Interesting combination of politics and spirituality.

[Without Sanctuary](#) - A site devoted to the [American advertisement](#) of lynchings.

[Women in Black](#) - Granny Power! Those old women show more courage than all the U.S. politicians put together. The FBI calls them terrorists.

Spiritual

[Swami Beyondananda](#) - A longtime spiritual comedian who has given me many laughs and smiles over the years.

[Tom Brown](#) - America's leading outdoorsman, who learned almost everything he knows from an Apache shaman. His mentor's life story an amazing and inspiring true story, and shows one path to humanity's salvation.

[Michael Roads](#) - A modern-day Dr. Doolittle. [His work](#) is vitally important.

[Afterlife Knowledge](#) - An excellent introduction to what people can expect when learning to [explore the metaphysical realms](#). I have no doubt of the material's validity, as I have had too many similar experiences, and know many others who have. As the site's author emphasizes, those "fantastic" experiences are open to anyone who pursues them. The only "inside track" any of us has on these experiences is desire, experience and integrity. His account of a ["hell" he visited](#) is vital reading.

[Dannion Brinkley](#) - His "lightning therapy" both [ended and changed his life](#).

[NDEs](#) - A collection of Near Death Experience accounts. [George Rodonaia's](#) experience is one of the most extraordinary ever recorded.

Channeled - Channeled material has influenced me the more than any other area of study. I do not prefer the term "channeled," but have learned to live with it. Many intellectuals and [skeptics](#) despise channeled material, dismissing it *a priori*. [Linear and purely rational thinking](#) cannot comprehend the material's meaning. Its critics often attack the genre's poorer examples. Religious fundamentalists often see it as the devil's work. Taken as a whole, it is the most enlightened and loving genre of literature I have encountered. Speaking in tongues was an ancient form of channeling, as was the process by which Richard Bach wrote his masterpieces. The gospels of the New Testament were probably channeled (though one might be a forgery, and they have been heavily edited). The Koran seems at least partly channeled. Automatic writing is a form of channeling. God's voice coming from a burning bush or from a cloud in peals of thunder is a close cousin of channeling. That [voice in my head](#) that told me to study business and [move to Seattle to meet Dennis Lee](#) was a form of channeling. Dennis' inspiration, Einstein's, [Tesla's](#) and other [geniuses' breakthroughs](#) are related to channeling. Eventually today's genre will die off as all people learn to bring their own wisdom through their consciousness.

[Seth](#) - My [first exposure to channeled work](#), over twenty years ago. It began the modern channeling phenomenon. People like me did not like the term "channeled" when it was coined in the 1980s (and some of us despise the term "New Age"), including Jane Roberts' husband, but we have learned to live with it. The Seth Material is still a giant among channeled works, holding up quite well over the years.

[The Michael Teachings](#) - A [rare teaching](#) in that it is channeled by many people. An awesome perspective of our reality and the journey of our souls. The most insightful view of the human condition that I have encountered.

Lyssa Royal [1](#) and [2](#) - One of the best.

[Barbara Marciniak and the Pleiadians](#) - Possibly my favorite.

[Kryon](#) - A superb body of material.

[Bashar](#) - Excellent, uplifting material, as are all the channeled works on this link page.

Ramón Stevens and the [Alexander Material](#) - Very good stuff, a kind of cross between Michael, Seth and Marciniak's Pleiadians, delivered in a unique and engaging style.

Robert Shapiro's Zoosh and friends - Shapiro has probably created the most diverse body of channeled work in existence. Link is dead for now. I hope another one appears one day.

Ken Carey - More than channeled, his work is unique. He has suffered quite a few slings and arrows as he has tried living his work. His appears to be gone, like many others from my original version of this link page.

[Neale Donald Walsch and the *Conversations with God* Material](#) - The first channeled work to hit the *New York Times* Best Seller List, which gives me hope that humanity and America might wake up in time.

[Hinono and ancient native wisdom](#) - Only one book out so far (four books in one, actually), but very good..

[The Sedona Journal of Emergence](#) - The leading channeled periodical. I have subscribed for years, and plan on continuing. Excellent material. Nice artwork on the covers!

[The Ra Material](#) - One of the best bodies of channeled work.

[Emmanuel](#) - Poetic channel

[Michael Topper's](#) interesting analysis of the milieu.

Mystical/Spiritual links that I wish existed: Bartholomew, Eric Klein, Michael Schuster, Graham Bernard's Richard material, Robbyn and his Merry Bande, and many others.

Fringe Science and the Offbeat

[Close-Minded Science](#) - A vast site which, among other issues, deals with how close-minded scientists can be, hiding narrow mindedness and dishonesty under the mantle of "skepticism." Also deals with true scientific investigation of the strange and paranormal.

[Richard Milton's Alternative Science](#) - I am a fan, and learned of important aspects of the scientific establishment from his work. His work on [James Randi's Million Dollar challenge](#), and how [Randi ran away from a challenger](#) while calling him names, is important. Here is [another account](#) of Randi's challenge.

[Steven Greer and CSETI](#) - Here is a man who has [suffered greatly](#) for trying to make UFOs a public issue.

[Moon Base Clavius](#) - Jay Windley's site, and one of the best sites that debunks the claims made by the moon hoax theorists who argue that the moon landings were faked.

[Flatland](#) - A timeless classic on how we can become captive to our point of view.

[Jeff Rense](#) - Another good voice from the fringe.

[Richard Hoagland](#) - Somebody has to do it, and I am glad Richard is out there.

[Daniel Drasin's hilarious primer](#) on how to be a "[skeptic](#)."

[Wingmakers](#) - Food for thought. The site's information may seem incredible, but the theme is familiar, and my own [mystical experiences](#) make me seriously consider it.

Catastrophic Quicksand

While researching the debunking career of Carl Sagan, I slipped into the quicksand of catastrophism. It was not bad quicksand, but still quicksand. Catastrophism is gaining popularity, as evidenced by two recent motion pictures that depicted comets crashing into earth. I first became aware of the subject while studying [Carl Sagan's attack on Immanuel Velikovsky's theories](#). Ten thousand pages of reading later, from all sides of the controversy, I have concluded that there is enough to catastrophic theory to keep a person busy for the rest of their lives assessing it. Velikovsky derived a multidisciplinary hypothesis for planetary near-collisions in historical times. His theories were audacious. His story is a long one. I doubt that he was entirely right, but he was mercilessly maligned by the scientific establishment for nearly the last thirty years of his life. His theories exercised the mind of his friend Albert Einstein, who was studying Velikovsky's *Worlds in Collision* when he died, partly because one of Velikovsky's theories about Jupiter had recently been proven correct. I have refrained from much mention of catastrophic theory in my work, partly because I am unqualified to fully assess it. I believe that Velikovsky was unfairly attacked for his theories, most prominently by Sagan. If people want something to keep their minds busy for the next fifty years or so, they can delve into catastrophic theory. It is a highly intriguing body of theory, one that incorporates diverse disciplines such as astronomy, geology, mythology, physics, psychology, archeology and a host of other subjects. Here are some links.

[Phil Burns](#) - Maybe the best site for an introduction to catastrophism.

[A good catastrophic links page](#)

[Kronia](#) - Good folks.

[The Society for Interdisciplinary Studies](#) - An organization devoted to catastrophism.

Miscellaneous - This site was designed so that the only links external to it are from this page, so below are external links from my essays which do not really belong in the above sections.

What [Scientific American](#) had to say about reports that the Wright Brothers were flying, which was a [typical response](#) from the scientific establishment regarding breakthrough innovations. My Journey and Life's Work in Five Pages

By Wade Frazier

March 24, 2006

This essay was initially written to assist readers of a [post](#) to a [site that discusses the "enigma" of Dennis Lee](#), where I outline how [his most prominent and persistent assailant](#) since 1996 [has dishonestly portrayed Dennis' past](#). While recalling my days with Dennis can revisit pleasant memories, the process is usually agonizing. Repeatedly demonstrating how dishonest Dennis' critics have been is an unwelcome task, and I decided to make lemonade out of lemons. Telescoping my life's work into five pages was difficult, and this essay stands as my most succinct introduction to my writings. This essay summarizes many hard-to-believe experiences, and if any of them seem too "way out," I suggest taking the link to the more complete version of the event, to put it in its proper context.

My alternative energy journey began in the early 1970s, when my first professional mentor invented [the world's best engine for powering an automobile](#). My first exposure to the real world of alternative energy was when my mentor told me that during the hoopla over his engine, a high-ranking government official told him that if he planned to bring his engine to market, [he had better make his funeral plans first](#). At age 19, I [had a paranormal experience](#) that changed my college studies from chemistry to accounting. After college I became a CPA, and at age 27 I [had another paranormal experience](#) that led me to move from Los Angeles to Seattle and [right into Dennis Lee's company](#), which was in its death throes. Dennis had just finished what is arguably the most significant attempt yet made to bring alternative energy to the American marketplace. The energy interests pulled out all the stops [to destroy his company in Seattle](#). Their efforts [resulted in the death of one of his employees](#), which radicalized Dennis in his pursuit of alternative energy. The energy interests ran Dennis out of the state, and he tried rebuilding his venture in Boston, with the [Washington authorities hounding him across the continent](#). However, I would not be denied my boyhood dream of changing the energy industry, and [I was the only employee to follow him out to Boston](#). Dennis had about four hundred employees in late 1985.

As I was driving to Boston, bringing along his family's few possessions, Dennis received his first free energy idea. He wanted to marry his [heat pump](#) to a [low temperature turbine](#) that he heard about two days before I arrived. We saw it demonstrated the day after I arrived. I raised the money to get Dennis' free energy venture off the ground, and became his partner. Those

were innocent and happy days for me. We had unwittingly landed in the middle of an energy controversy in Boston over the [Seabrook nuclear power plant](#). Dennis always thinks big, and [offered to buy the Seabrook power plant](#), never put nuclear fuel in it, and instead use it as a storage device to balance the load from all the free energy machines that would feed it. Dennis soon had an audience with the [Seabrook Association's chairman of the board](#). At about the same time, we [received the first offer to buy us out, for \\$10 million](#), a sum that I now know is [the going rate to buy out and shelve innovative energy technologies](#). The Boston venture failed, partly due to a [media blackout](#) on our company. In the meantime, I had tied into more capital and some world-class technical talent in my hometown of Ventura, California. We [moved the company to Ventura](#) in June 1987.

In late 1987, my first professional mentor came forward and proposed that if we married [his engine](#) to Dennis' heat pump panels, "free energy" might be possible. In January 1988, [Victor Fischer came aboard](#), with a similar engine to my mentor's, and one that had been extensively developed in Australia. We then tried marrying Fischer's engine to Dennis' heat pump panels, and Dennis began making earnest free energy noise. We also had a highly successful program of selling information kits for making, installing and manufacturing Dennis' heat pump. We were flying high. Two days after Dennis publicly announced that we were pursuing a free energy prototype using Fischer's engine and Dennis' heat pump panels, thirteen armed deputies of the Ventura County sheriff's department [raided us](#). During the raid, they stole or photographed all the technical material from our chief researcher's office, in a blatant act of [theft](#) and [espionage](#).

The previous year had already been very stressful, but after the raid it began going rapidly downhill for me. I was the company controller, and the sheriff's department [seized all my records](#) and refused to provide us copies of them. After six weeks of sixteen-hour days to try surviving their carefully aimed deathblow, I began going into general physical collapse, and that was the beginning of the end of my days with Dennis. I left the company to try recovering in May 1988. At about the same time, [Dennis received the second offer to buy us out](#). A CIA man representing European interests made the offer, and Dennis could have asked for a billion dollars and they would have paid it. Dennis refused their offer, and the next month Dennis was arrested with a [million-dollar bail](#). When the big carrot did not work, they brought out the big stick, and then the nightmare truly began.

Little did I know it while growing up, but Ventura County regularly makes the top-ten list of most corrupt police forces and judicial systems in America (it is the home of the Rodney King beating verdict), and [I discovered it first-hand](#). I became familiar with evil during the Ventura nightmare, with the sheriff's deputy in charge of the "investigation" bringing me to my [pivotal moment](#). [Instead of getting a shotgun](#) and "cleaning up" Ventura County, I [mortgaged my life](#) to give Dennis a slim chance of avoiding life in prison, and probably being murdered while in

prison. My quixotic gesture worked, and Dennis was released from jail on April Fools Day, 1989. With the nightmare over, my legal fund helped secure the services of the most prominent Constitutionalist attorney in America, who [gave the IRS a black eye in the U.S. Supreme Court the year before](#). Kangaroo court still prevailed, however, when [the judge took Dennis' attorney hostage](#), and Dennis was forced to plead guilty to a civil law infraction. A parking violation was a more willful breach of the law, but the courts violated his plea bargain all the way to the U.S. Supreme Court, and Dennis did hard time in the state penitentiary, [nearly being murdered in there](#). Dennis' case [set precedents all along the way](#), even to illegal parole conditions.

I began waking up fast when I was at Dennis' company in Seattle, but when the dust cleared in Ventura I was radicalized. I would never again see the world in the same way, and I spent 12,000 hours of unpaid labor [creating my 1,200-page website](#). I saw many lives destroyed during my journey with Dennis, including mine. [I buried one of the few heroes of Dennis' journey in 2002](#), and I do not want any more adventures in alternative energy, and seek the quiet life these days.

Dennis, however, is like no human being I have ever known or heard of. I met him immediately after he was released from behind bars both times, and he began going back at it more fervently each time, as if his stints behind bars gave him a chance to rest. I could only stand back and watch with awe as he went back at it. I was *there*, and *I* have a difficult time fathoming what Dennis has lived through. For several years, Dennis kept trying to coax me back into the saddle with him, but I was in no mood or shape to walk back into that hurricane. My years with him comprised a learning experience like no other, but such learning experiences are rather hard on the student, let us say. When Dennis was released from prison in 1994, he surprised me by quickly getting a national profile, trading largely on his credentials gained by what had happened to us in Ventura. I joined back up with him in November 1996 in New Jersey, but it only lasted a few months. The years have been hard on me, and I do not have the recovery capacity or crazed persistence that Dennis has, and in April 1997 Dennis allowed me to return to Seattle, where I was born. I have lived here ever since, and have no plans of ever leaving.

I also discovered first-hand during my days with Dennis that the American media is an integral part of the power structure, and [brainwashing the American people](#) seems to be its primary function. That was not fun to discover, but a byproduct of creating my website was the realization that most of my "education" while young [was a pack of lies](#).

From 1990 to 1996, all of my spare time was spent reading a vast spectrum of material, and just before I joined up with Dennis in 1996, I hastily completed and published a 600-page website. Soon after I published my site I met [Mr. Skeptic](#) in cyberspace, who had published a website the day after Dennis' Philadelphia show, where Dennis put 5,000 people into a sports

stadium to talk about free energy. I tried educating Mr. Skeptic about Dennis and what we were doing. I had studied the “skeptics” at length as part of my research, so my optimism was guarded about his comprehending the free energy milieu’s reality. I had seen shocking dishonesty displayed by [Carl Sagan](#), the leading light of the “skeptical movement,” and I had seen many instances of “skeptical” minds so closed or locked into linear thinking that it astonished me. Perhaps the most closed-minded “skeptic” I have seen is [James Randi](#), and he was Mr. Skeptic’s mentor. I came to realize that the “skeptics” are mainly fundamentalist materialists who adopt a “skeptical” attitude to everything that does not conform to their “faith.” There are few scientific geniuses in their ranks. The giants of physics were almost all [mystics](#). My first professional mentor [invented like Tesla did](#), with his inventions coming to him complete in his mind’s eye, and Dennis’ mind works similarly, except that his inventions were mainly in the marketing and entrepreneurial field.

Dennis is obviously a controversial figure, and has had no shortage of critics over the twenty years I have known him. However, as I discovered first-hand, [integrity is earth’s scarcest commodity](#), and almost without exception, Dennis’ critics were either people who tried to steal from him and failed (or they *did* steal from him, and realized their booty was not as lucrative as hoped), people who were being paid to beleaguer Dennis, as [the BPA Hit Man was](#), or people who fired potshots from their comfortable armchairs. In addition, many people have been caught in the crossfire of all the mayhem that has surrounded Dennis’ efforts, and many have lost their life’s savings and had their lives ruined. I have seen a great deal of carnage over the years. However, nobody has suffered more in Dennis’ adventures than Dennis himself. He has survived [combat](#), [murder attempts](#), [paralysis](#), [medical negligence](#), [starvation](#), [malnutrition](#), and [prison](#). Second place in the suffering department has been the people closest to him. [When I helped bury Mr. Professor in 2002](#), it was obvious that his premature death was directly related to his years with Dennis. [Mr. Financier had his life ruined in Washington](#), as Dennis’ company was destroyed. I will always be picking up the pieces of my shattered life. Dennis is not exactly living on the Riviera with his ill-gotten millions. Nearly his entire adult life has been lived in poverty, with the clothes on his back purchased in thrift stores, losing his teeth because he could not afford dental care, and so forth. However, with his unforgettable style and all the merciless libel and derision aimed Dennis’ way for the past thirty years or so, he is the face people remember, and he gets blamed for many things that were not his doing. The energy interests, both global and local, and their eager minions owe an awesome debt to humanity, not the least of which are all the people who were hurt as they overtly or subtly derailed Dennis’ efforts. An amazing fact is that [Dennis has probably been hurt more by his “allies” than he has by the Big Boys and their agents](#). Dennis constantly treads in dangerous territory.

I do not believe in [ideological approaches to the free energy issue](#), of which Dennis’ current religion approach is one, as was his Patriot approach. I doubt those approaches will work, but Dennis works with what he has and what he is. Persistence and integrity are two of the most vital keys to making free energy happen, traits that Dennis possesses in great abundance, so

he can never be totally counted out of the game. Personally, I am not into “faith” and have faint hope that messiahs can save us from ourselves, and I doubt I want them to. I think it is time for humanity to begin demonstrating self-responsibility and manifesting personal integrity. It may be the only way out of our self-created mess (but our [ET friends may help](#)). However, I have *never* seen a public criticism of Dennis’ efforts that was informed, intelligent and, most importantly, honest, at least until I read [Sterling Allan's recent comment on Dennis' efforts](#). A fair number of his observations I tended to agree with, and I contacted him, which led to writing this essay. However, people who are fixated on criticizing Dennis, without pursuing the lessons to be learned from his preposterous journey, are missing the point. The goal is free energy, something that has [already been done many times](#). Whether Dennis is a crook or not, or has a prayer with his approach or not, is not really the issue. It is about *somebody's* getting over the finish line.

Dennis is obviously a fast-talking combination of P.T. Barnum, a preacher and an entrepreneur. That is his public image, and there is significant truth behind it. I have seen him called a “snake-oil salesman” for the past twenty years. But does he have malicious intent? I have yet to meet a person who cares more for humanity than he does, and Dennis has always put his *life* where his mouth was.

When Dennis is playing pitchman he embellishes events, and I have told him so, particularly when he embellishes the facts around my participation or those I brought into the operation. The tale told in this essay is obviously quite dramatic, even ludicrous, and the straight truth is plenty spectacular enough. In Dennis’ books, particularly *My Quest* and *The Alternative* (both largely written when he was behind bars and could slow down), when Dennis relates the facts of his journey, he is telling it straight and even conservatively. For those who want a web-based rendering of the facts of Dennis’ life and efforts, he has many hours of streaming video on his site, and I have a [quiz on my site](#) that links to the pertinent facts of Dennis’ past. Dennis' writings regularly veer into right wing conspiratorial theorizing, which I believe is far from the most important aspect of the [free energy conundrum](#). The Big Boys are definitely out there and [have been actively mischievous](#), and Dennis has borne the brunt of their machinations, but they can only play their games with the power that humanity has *given* them. Dennis plays showman, but that attracts people who come for the show. The very same people who gave Dennis a standing ovation one day would cheer at his lynching the next, as that was a good show too. Crowds like that seemed to be little help in making free energy happen. Any effort to bring [free energy to the world will face many obstacles](#), but the inertia and easy manipulability of the masses presents the most formidable hurdle. The enemy is us.

This essay will now deal with Mr. Skeptic’s dishonesty. I present the facts of my relationship with him at [this link](#). I also inserted a [lengthy footnote](#) discussion of just why Mr. Skeptic’s [Skeptical Inquirer article](#) was dishonest. It was not libelous because Mr. Skeptic was hasty or sloppy or unintelligent. After months of interacting with him, it became obvious that he was

desperate to attribute criminal motivation to Dennis' efforts. That *Skeptical Inquirer* article was published months after I stopped interacting with Mr. Skeptic. The article was only about two pages long and was the crowning moment of his skeptical career. The only cited sources in it were from two libelous and obscure newspaper articles that presented false "facts" about the prosecutions and convictions of Dennis in Washington and California. Those articles stated that Dennis pled guilty to having criminal motivation, and *that* was what Mr. Skeptic sought. Mr. Skeptic had easy access to the official documents. He even published on his website part of my original website, which outlined the facts and documents, and Dennis' books also reproduce them, books that Mr. Skeptic claims to have carefully read. The official documents contradicted those easily disproved lies. Attributing criminal motivation to Dennis was the only thing that made Mr. Skeptic's crusade *appear* the least bit credible; accordingly, Mr. Skeptic knowingly lied, which was a criminal act. He even called his libelous article "funny" on his website, and has only escalated his accusatory rhetoric over the years. That is the point of this essay.

Mr. Skeptic attacked me in an Internet forum in 2003, and I am familiar with his disinformation style. [His initial post at the peswiki.com site](#) is representative of how he plies his trade. He began by stating that Dennis pled guilty to multiple felony counts, to make it *appear* that Dennis has criminal motivation. If he can make the reader believe *that*, then his job becomes easier. His statement about Dennis' pleading guilty is technically accurate, in a limited sense, but misrepresents the situation. Disinformation specialists usually use "facts" to establish their cases, at least a few of them. They then add supposition, rumor and half-truths, stripped from their context, and then construct their house of cards, hoping that uninformed audiences will be duped by it. Telling outright lies is unprofessional and can backfire, as it is doing here, which is another reason why I believe Mr. Skeptic is probably an amateur. I am about half convinced that Mr. Skeptic is free-lancing his efforts, and is not a paid provocateur as [Bill the BPA Hit Man](#) was. When I read Mr. Skeptic's article, I realized that he was dishonest, and his behavior since then has only reinforced that notion. I will never interact with him again. As a wise man once wrote, never debate a liar or a fool, as the audience will have trouble distinguishing who the liar or fool is.

Introduction

December 2005,

My childhood had a significant bearing on my adult experiences. From an early age, the idea instilled in me was that I must leave the world a better place, or the life I had lived was not worth much.

I was gifted in science and mathematics, and took it for granted that I would be involved in science somehow. It did not turn out as planned. I had a mentor of international reputation who was an engineer and inventor. His inventions revolutionized some industries, and some were so revolutionary that they were suppressed in order to preserve the status quo. One invention was considered the [world's most effective engine for powering a car](#). Another was a bomb that eliminated most conventional warfare without harming people (quickly suppressed by the Pentagon). Another was a circuit that revolutionized the electronics industry and earned the man who stole the invention the title of "Electronics Design Man of the Year." Although a government study devoted about \$10 million to analyzing his engine, it went nowhere, partly due to [auto industry inertia](#). During the hullabaloo over his engine, one of my mentor's well-connected associates told him that if he really thought his engine would make the internal combustion engine obsolete, he had better start making

his funeral plans.

I was a teenager when my mentor invented his engine, and I had visions of revolutionizing the energy industry and ending the insanity of producing energy by raping the planet. That was more than thirty years ago. What I could do about the world's energy situation when I was a teenager, I had no idea. I held the dream for many years and had the chance to try making my dream a reality. For that alone, I feel fortunate.

In the meantime, I was graduating from high school and going to college, studying biochemistry. Chemistry was my second love, an affair that began at about age twelve, after an infatuation with paleontology when I was about nine. I had vivid dreams about the elements, such as a dream about gallium. In my second year of college I came to the existential crisis that many young people encounter, and decided I did not want to spend my life in a chemistry lab. For the first time in my life I felt lost. If I would not become a chemist, what would I do with myself? I flailed around for months, seeking a direction.

I had been introduced to the paranormal and spirituality a few years earlier. [After forty hours of meditation training at age sixteen](#), I had dramatic experiences that demonstrated that everybody has innate extra-sensory perception abilities, and there is far more to earthly existence than meets the eye. From that moment forward I became an avid student of spirituality, and have studied that more deeply and intensely than all other subjects put together. When I was a teenager, studying Jesus' life and (what is now called) [channeled material](#), I wondered what practical use any of it would be, but I was enthralled. Colleges did not offer degrees in mysticism and it did not pay the bills, but I have never studied anything as enthusiastically.

I was nineteen, and had dropped my organic chemistry, calculus and physics classes, knowing that my life would not be lived as a scientist. I went from the top of my class in college science studies to dropping all my classes. I felt that I was careening toward disaster, a rocket wildly off course, not knowing where I would crash. One night, after months of flailing around, I hit rock bottom. Although I had meditation training and was studying spirituality, I had never really prayed, at least in the standard way. That night, as I lay in bed, I beseeched with all my soul for somebody to give me a clue. I had never experienced a "higher power" before, and although I had studied spirituality intensely, I was not *sure* that anybody would hear my plea. My plea was this: "If anybody can give me a hint about what to do, I desperately need your input. Please give me a sign, I beg you."

I fell into a dreamless sleep. The next morning as I lay in bed, looking across the room, my first waking thought was a voice speaking inside my head. The voice said, "Have you ever considered studying business?" I had nearly no idea what the voice was talking about. "Business?" I thought. "That sounds like a great idea, but what is it?"

My only academic perspective at that time was learning "important" stuff such as chemistry and physics, or "loafing" and studying English, history or social science. I had no idea I could study business in college. My father's career was spent working for the government. I called the counseling center at my college and said, "Are there any classes at your college where you study business? Is there such a thing as a degree in business?" I had been following a science/math curriculum throughout my academic career, and had about zero knowledge of the business world. The only thing that I knew about accountants was hearing about them on the news every April 15th. The counseling center said, "Sure, we have a business curriculum. We have business counselors here. We will set up an appointment for you for next week." I was on my way.

The next semester I took Introduction to Business and Bookkeeping 101. My mathematical mind gobbled up the bookkeeping. My professor said that accounting paid well. I began my introduction to the world of business and capitalism. I was taught that accounting was the language of business, about how superior capitalism was to communism, and how business was a great force of light in the world. I learned about Adam Smith in my economics classes. I was taught about the wonders of free markets and the invisible hand of competition. In my idealism I ate it up. My zeal for learning and my talent was fully brought to bear upon my business studies.

During my next year of business studies I worked as a janitor in an office building, cleaning the offices of attorneys, accountants, investment advisers and other businesses. I retrieved the *Wall Street Journal* and other business publications out of the trash and read them. I was seeing how business could be an ideal vehicle to serve one's self *and* humanity. I was over-idealizing the situation. I was not completely naïve, remembering the "[make your funeral plans](#)" comment my mentor received. Yet, I was a babe in the woods. I began playing the stock market with my savings, playing the capitalistic game at age nineteen. I played casino stocks, short sold, bought options, started to play the commodity futures game. I was gambling with my college fund. Somebody up there was looking out for me, as I just about broke even in all my gyrations, with thousand dollar swings in one day.

I was at the top of my class in my business studies. I decided that I would pursue an accounting degree. I went to a community college my first three years, then off to the university, playing in the big time. There were national accounting exams given to the university students. I got the highest score in the university's history. I went from being the chemistry prodigy to being the accounting prodigy, but my last year in college wore me out. I became fed up with academia and the rote exercises that can be found in every college curriculum.

I graduated in 1981, during the worst recession in forty years. I went to college in California where I was raised, but I was originally from Seattle. I wanted to go home, and did. A California kid did not have a prayer of getting into the Seattle Big Eight firms (the world's largest and most prestigious accounting firms, as of 2003 only four are left) during a deep recession, one that hit the Washington State economy hard.

After a sobering experience of working for a small CPA firm the winter of 1982, and being laid off a few weeks after April 15th, it was evidently more important at that life juncture to pursue the proper career path than live where I wanted. I moved to Los Angeles and joined a Big Eight firm. My winter spent working at the small CPA firm was a brutal introduction to the profession, but working in downtown Los Angeles was a deep dive into the "real world." It was a trial by fire. Those were my life's unhappiest years.

In America, downtown Los Angeles is the most conservative business district west of Manhattan, and as one of 700 professionals in my office I was thrown into a dog-eat-dog world. Those recruits fresh from college, as they began their CPA apprenticeship in the Big Eight, were called "Grunts," "Lambs to the Slaughter" and other terms. "Assume the audit position" was used to describe the auditor's life. As an auditor I traveled throughout the Los Angeles region, spent several months on audits out of town, and worked in Skid Row Los Angeles for several months. I experienced events such as passing by a dead Mexican-American man on the sidewalk as I was walking to lunch, having sneezing fits for months because the air pollution was so fierce, being accosted by beggars every day and so forth. I became street-wise fairly quickly.

I was the first male in my family in a hundred years [who did not serve in the military](#), but I experienced the corporate version of it. The regimentation was extreme. A mystical, non-materialistic vegetarian did not fit in. I was required to eat at restaurants everyday, and being a vegetarian was less acceptable back then than being a homosexual in the environment I worked in. I gave up being a vegetarian to work there, which affected my health. I was virtually [forced to drink alcohol](#), and developed a bad habit that I gave up in 2000.

The lambs were assigned mentors in the firm's hierarchy to help groom their careers. The sage advice I received from my mentors (they were trying to help me, and I liked them) was that my shoes were not shiny enough, I was not dazzling them at the phony weekly cocktail parties, and if I wanted to get ahead at the firm I had to crawl over the bodies of my peers.

The people I worked for, particularly the men (there was not one woman partner in the office when I began) who had attained the lucrative and coveted position of partner, were human wreckage, virtually all of them. They nearly all looked at least ten years older than they were. Many drank heavily, and I could not imagine living their lives. Their average income was \$150,000 per year (in 1983, in 2003 it is about \$300,000). Many of

my peers were determined to make it, and trampling each other on the way up was a minor hurdle in many minds. Not everybody was Machiavellian, but it was the most impersonal and least friendly working environment I have yet encountered.

The environment was bad enough, but what constantly nagged me were the challenges to my idealistic vision. I was not very bothered by the "I have a BMW, therefore I am" mentality that I saw in many of my peers and throughout the Los Angeles yuppie community, but I had a difficult time seeing how our audits benefited society. The collision of indoctrination and reality could be a harsh one for the lambs. I had been told that auditing provided a valuable safeguard against the excesses of capitalism. By performing audits of corporate America we insured that accurate financial statement information was being published, thereby ensuring a fair playing field in the capital and financial markets, but I was having a hard time seeing that happen. Here is a vignette to make it clearer.

Believing in the Easter Bunny

I did not know what auditing was when I graduated from college. Part of adjusting to the "real world" was making sense of the income I made and how much money the firm received for my efforts. During my final year in college, I worked as a cook and dishwasher in a "greasy spoon" restaurant, making \$3.50 an hour. With a diploma in hand, I made more than \$9.00 an hour and was being billed out at \$39. My first "busy season" (the winter months, when year-end audits are performed for corporations) was spent making photocopies, running errands and adding up columns of numbers. I was part of an army of auditors at a huge bank. Alongside me at the photocopier was a peer who had recently received his MBA at USC, and it was also his first busy season. He had the same disturbed sense of wonder that I did. Being an MBA, he was being billed out at \$42 an hour. One day, after a morning spent at the photocopier, he said, "That stack of copies just cost the client more than a hundred dollars."

The idealist in me tried making sense of my place in the scheme of things, and I wondered how I was contributing to society, particularly in light of the money that attended my efforts. I knew the party line about auditing being good for the business world and a benefit to society, but it was difficult to see it from the trenches.

After a few months on the job, when the busy season was over, there was a one-week training class for the new junior auditors. Near the week's end there was a "quiz the partner" session. A partner would come to the class and answer any question we had. We put our questions in a basket in order to have anonymous questions.

On that day, among the standard questions for the partner ("How much do partners make in the LA office?" "\$150,000 annual average," the partner replied) was mine: "How does auditing increase the world's real wealth?"^[1] There was a snort or two, then everybody began giggling in genuine humor, and I laughed with them, the question was so out of place for the setting. If somebody could have spoken for the group mind at that moment, it probably would have been approximately, "How delightful! Somebody still believes in the Easter Bunny."

The partner put on a straight face and gave the standard answer that auditing helped provide reliable financial information for the business community, so better investment and other business decisions could be made. A couple of years later I was on an audit with him, and saw how he really felt about the value of auditing.

I was with him on a savings and loan (S&L) audit. One day he was talking about an audit our firm had performed that blew up in our faces. As auditors, we issue "opinions" on our client's financial statements. That opinion is what the client pays for. It ends up on the client's annual report and their filings with the

SEC (Securities and Exchange Commission). The opinion usually reads something like: "We audited XYZ Corporation's financial statements and found them to be fairly presented in accordance with Generally Accepted Accounting Principles." In other words, we audited them and found them playing by the accounting rules. That is what we received a million dollars for, which was the standard fee for a large corporate audit in those days. Today, it is two or three times as much.

The audit opinion can state that the client played fair, while the financial statements themselves show a company on the ropes. That is not an audit failure, but if a company gets too close to the edge, there is a "going concern" principle that states if the company looks as if it may go out of business soon, the auditors are supposed to qualify their opinion. A qualified opinion is always bad news for any corporation, and auditors rarely issue them. Qualified opinions usually mean the firm is in serious trouble.

An audit "blowing up in our face" means that the auditors issued their standard unqualified opinion, and the company soon capsized. Auditors are not fortunetellers, but if a company goes out of business a few months after they issue "healthy" financial statements, and there is an unqualified audit opinion accompanying their statements, the auditors often are sued for a negligent audit. In some ways an audit is a crapshoot, because a future event that nobody foresaw can capsize the company, but the "deep pocket" theory means that shareholders and other folks left holding the bag will try extracting money out of *somebody* for the business failure. That is a risk of being an auditor. Partners physically sign the company's name to the audit opinion with a pen and ink. Every partner learns how to sign opinions with a signature that looks like every other partner's signature.

There we were, auditing an S&L that had melted down, blowing up in the faces of our predecessor auditors, and that partner who reassured me about the "Easter Bunny" was looking at the financial statement and audit opinion of another firm we audited that "blew up." He said, "That signature looks a little shaky to me." It was a joke about the partner's state of mind while signing the opinion, inferring that he felt in his bones that the opinion he was signing would someday haunt him.

Getting the Bad News about the Easter Bunny

There was an inherent conflict in my indoctrination versus reality. As auditors, we theoretically rendered independent opinions on our client's financial statements. Our clients paid our fee, and could choose another auditor if they wished. I did not understand that situation's implications in my early days. I was just trying to survive. In 1984, something happened that eventually made it clear. I helped audit one of the world's highest profile savings and loan (S&L) institutions. During my first two years at the firm I periodically heard a cynical sentiment regarding the worth of auditing, and no auditor ever relied on the work of another, but I had not yet figured it out. That S&L audit eventually made it clear. We were brought in to audit the S&L immediately after the previous auditors had been fired. That situation was called a "high exposure" audit. "High exposure" meant that the likelihood of the auditors being sued was high.

The previous several months had seen that highflying S&L run out of money. They were posting record revenues and profits, until one day they were unable to pay their creditors and depositors. Then it all came crumbling down. Suddenly, those record profits appeared illusory. There was a 1930s-style bank run, and the federal government stepped in to keep its doors open. The S&L's shareholders filed a several-hundred-million-dollar lawsuit against the previous auditors. I was the junior auditor on that "high exposure" audit. On an audit such as that, the lambs did not do the work, but my firm flew in real estate and banking experts from our offices across the nation, and managers and partners did work usually done by the lambs. I coordinated hotel rooms, rental cars and the administrative logistics of the audit. I was also the right hand of the partner who ran the audit. The senior manager who worked with him (who made partner a couple of years later) was my direct supervisor. Those two men were some of the nicest human beings I ever encountered

in public accounting. The reason they were on that audit was probably because they were such nice guys. People were not exactly volunteering for the job. I was on the job as a lost waif in the office. Although I was the lowest man on the audit's totem pole, they treated me as if I was a peer. I was treated better than I ever was in the Los Angeles office.

On my first day there, my manager briefed me, telling me what lead to our audit. He said, "As usual, you can make the numbers say whatever you want to until the money runs out." I had heard it before, but did not really understand it. That S&L became one of the highest profile and earliest meltdowns of the entire [Savings and Loan Scandal](#). The S&L had been doing creative accounting, and had concocted bogus transactions to hide their losses. They abandoned basic accounting principles. By itself, that was not the crime of the century, but was common corporate activity, unfortunately. It was our job to make sure that did not happen, applying Generally Accepted Accounting Principles (called GAAP in the profession) to their books. As we began auditing the S&L, it became obvious that our predecessor auditors had abandoned basic accounting and auditing principles, and allowed their client to bully them into signing off on fictitious financial statements.

The gist of the problem was this: the Holy Grail of capitalism is profits. Corporations only exist to make profits for their owners. Over the years, I have seen numerous instances of corporate executives making a sagacious statement that goes like this, "Gentlemen, you must not forget that we are not in the business of (fill in the blank; I have seen everything from "producing eggs" to "treating patients" to "making cars"), we are in the business of making money."^[2] When the corporate elite makes those astute observations, they are repeated endlessly in corporate halls as mottoes to never forget.

With the drive for profit being the ultimate reason for a corporation's existence, corporate managers have the incentive to report the largest possible profits. There are principles of accounting, such as the conservatism principal, the revenue realization principal, the objectivity principle, the matching principle and many others that supposedly guide accounting practices, so profits are not overstated or counted before they are "in the bank." The Big Eight's very existence depended on laws passed during the 1930s in the wake of Wall Street's collapse and the Great Depression, designed to help ensure those events would never be repeated. Our job was to keep corporations honest in reporting their profits.

At the university, my auditing professor told us why the Big Eight partners made so much money. He said it was because sophisticated professional judgment was required to render an independent audit opinion. My professor said that such highly qualified professionals, with their sophisticated auditing practices, which entailed numerous levels of review, did not come cheaply. He said if the government took over the auditing profession, they would create bureaucratic guidelines so that a monkey could do an audit. They would produce substandard audit results and the profession would be ruined. With no frame of reference other than his, I believed it.

On that S&L audit, even I could see that our predecessor auditors were signing off on ridiculous accounting practices, things a lamb could have spotted. How could a highflying Big Eight firm, with its highly paid, pin-stripe-suited auditors, approve such phony financial statements? After a month on that audit, the partner in charge, my manager and I went to lunch. The partner said, "If you look at what (our predecessor auditor) approved in their audits, it is shocking what they signed off on. Yet, if we had been in their shoes, I'm not sure we would have done any differently." He was the nicest partner I ever knew, and his candor that afternoon was a major influence in helping me figure it out.

What he said did not fully sink in until years later, when the Savings and Loan Crisis became headline news in 1988. That partner was saying that the predecessor auditors had allowed themselves to be bullied by their client (the S&L) into signing off on bogus financial statements. How could they be bullied, with all those accounting standards, levels of review, and highly honed professional judgment? To put it bluntly: by a million-dollar audit fee. If an auditor proved too stubborn in applying GAAP to the S&L's financial statements, the S&L would merely hire a more pliant auditing firm. For a million-dollar fee, the partner who lost the

account because he refused to see the financial statements the client's way could ruin his career.

A few years before that audit, the CPA profession was deregulated, in a sense. The "free market" ideology of the time, exemplified by Ronald Reagan and his administration, created the acceptability of doctors, lawyers and CPAs to begin getting "competitive," advertising and trying to take business away from each other. It brought capitalistic principles to the professions.

The notion of CPA firms rendering "independent" audit opinions became a farce. Those were the go-go years for Reagan's boys. [Greed was a virtue](#) in 1984. Michael Milken, Ivan Boesky, Donald Trump and other capitalistic heroes dominated the scene. By 1984, only two years after Reagan deregulated the savings and loan industry, the writing was on the wall. What we saw on our audit was typical throughout the industry. The S&L we audited was just one of the first to run out of money. What my manager said was true: as long as a company has money in the bank, it can get compliant auditors to sign off on virtually any financial statement. For a million-dollar audit fee, independence goes flying out the window.

That crime was far greater in the S&L industry. Take an industry such as energy, for instance. In theory, if Exxon goes out of business, its shareholders lose their money (this was originally written in 1998; in the 2002 update, I could have inserted "[Enron](#)" for Exxon). At least that is the theory. Capitalism, profits and market discipline all sound nice, but when a corporate giant is on the ropes, our government runs to the rescue with taxpayer money to bail them out. Americans older than me should easily remember the government bailouts of Lockheed and Chrysler. U.S. Government bailouts and interventions have propped up industries such as aerospace, automobiles, steel and semiconductors. In theory, shareholders take the risk if the business fails. In banking however, with deposit insurance, the government, which is ultimately funded by the taxpayers, guarantees the liabilities of the bank or S&L. Banking is a regulated industry, where the government has assumed a great deal of the risk. Bank and S&L liabilities are essentially guaranteed by public money. The deal for that protection was to adhere to certain regulations. Banks and S&Ls were limited in the kinds of loans they could make, the interest they could pay on their deposits, etc. The public was ultimately the rock that stood behind the bank, making that \$100,000 of deposit insurance per account mean something.

If anything, the public accounting profession had a larger duty to perform independent audits on regulated corporations such as banks and S&Ls because a bank failure would ultimately risk the taxpayers' money, not just a bunch of rich shareholders' money. In a regulated industry there is an extra level of auditing and accountability, in theory. Along with fancy Big Eight auditors there are also governmental auditors (federal and state) looking over the bank's shoulders, making sure the public's interest was being looked after, and banks were acting prudently. [Ronald Reagan](#), in the interest of "getting the government off of the public's back," began gutting the government agencies that regulated industries such as banking.

The nature of Reagan's deregulation was insane (or diabolically sane) and ushered in the S&L failure. Reagan "deregulated" the prudence side of the industry, letting S&Ls invest in almost anything they wanted, while letting them give out whatever interest rate to depositors they wished, while *raising* the deposit insurance from \$40,000 to \$100,000. Those acts dramatically shifted the risk from the S&Ls to the taxpayer. It let the S&Ls "go to Vegas" with speculative real estate deals, giving out whatever interest rate they wanted, and increased the weight of the bag the taxpayer would hold if it all came crashing down. It is said that organized crime rings avidly watched the deregulation bill make its way through Washington, rubbing their hands with anticipation. It was obvious to those with eyes to see where Reagan's "rescue package" was headed.

If my profession had been honest, and the auditing profession structured to eliminate the conflict of interest of corporations being able to hire any auditor they wanted, the S&L crisis would have never happened. The alarm bells would have been going off back in 1983 throughout the industry, and something would have been done about it. The S&L industry was already doomed because of the inflation of the 1970s, related to the oil price shocks of OPEC. Increasing computer technology also eliminated much of the reason for S&Ls to exist.

The price tag to responsibly phase out the industry would have been less than \$10 billion in 1983. The number did not start growing large until about 1986.

What happened was avoidable. The Big Eight was not responsible for creating the S&L crisis, which was the result of global political-economic factors, corrupt politicians, greedy S&L executives and the land owners who made the really big money in the scandal. Many books dissect the scandal. Although we did not create the crisis, our prostitution for the audit fee, which was profession-wide, helped a \$10 billion problem become a \$400 billion (in today's dollars) disaster.[\[3\]](#)

When it came time to protect the public's interest, which was the only reason our profession existed, we were busy kissing our clients' backsides. As it stands today, the public accounting profession is worthless. More than half of the Big Six's (now Big Four) revenues come from those audits. Back in 1984, the annual U.S. auditing revenues of the Big Eight were a few billion dollars. In 2004 they were about \$10 billion. The inherent conflict of interest that existed in the profession in 1984 is still there. They have made some minor attempts at reform, but auditors *cannot* render independent audit opinions if the auditee pays their fee, and can choose another auditor if they come up with the "wrong" answer. I have no confidence that when the next financial scandal looms on the horizon, the Big Six will sound the early alarm (again, the [Enron Scandal](#) happened four years after this was originally drafted, and now it is the "Big Four"). If they are financial cops, they are cops on the take.

Remember the movie *Snow White*? The Seven Dwarfs worked in a gem mine, and at day's end, they happily marched home, singing their song. Dopey was the last one out. He shut the door, locked it, and left the key on a peg next to the door. The Big Eight was as valuable in protecting the public's interest as that door was in protecting the gem mine. I did not completely figure it out until the price tag of hundreds of billions of dollars was announced immediately after George Bush was elected in 1988. Bush's son Neil was on the board of Silverado Savings in Denver, and helped ride it into the ground to the tune of \$1 billion taxpayer dollars, and the S&L scandal was kept quiet until George Bush was elected.[\[4\]](#)

Money does not evaporate in such a scandal. It goes into somebody's pockets. The S&L crisis was a defrauding of the public from beginning to end, and a great deal of criminal activity was engaged in, in addition to all those riverboat gamblers running S&Ls, lighting cigars with \$100 bills and funding "see through" office buildings. There were S&L execs who went from one S&L to the next, looting it until it went under, then another S&L would hire them where the pattern was repeated, the CIA laundering drug money through them, and sheer Mafia gangsterism.[\[5\]](#) The scandal is dealt with more fully at this [link](#).

The other main activity the Big Six firms engage in is tax accounting. I had largely figured out that game when I was still in college. I was determined that I would never do professional tax accounting. That goal lasted a couple of months, as that first tax season at the small CPA firm in Seattle saw me doing nothing but tax returns for my three-month stint there. The theory given for why professionals are needed so citizens can properly pay their taxes is that the deductions available under the tax code are a benign form of governance. The theory is that offering financial incentives for certain kinds of economic activities, and financial disincentives for others, is far less coercive than other methods of state power. That was what I was told in school, which is probably still the drill today. I believed it, even if I did not believe *in* it. I now realize that I was sold another bill of goods. For instance, the rationale for the capital gains deduction was presented to me as a way to encourage investment, risking capital for a higher return than mere interest at the bank, or with bonds. I believed it, with my capitalistic indoctrination.

As I have been waking up over the years, the left's literature has allowed me to see that capital gains deduction in a new light. If somebody works at [McDonald's](#) or [drives a truck](#), the sweat of their brow is taxed at one rate. If somebody sits on their backside, "investing" their wealth in stocks, the money rolling in as passive income is taxed at a lesser rate. That is a neat scam. When I did tax returns professionally, I performed tax research, and one cannot spend much time doing that before finding tax laws so obscure that one wonders if they apply

to even ten people. It becomes obvious that rich people write the tax laws. Legislators promoting appropriate economic activity did not write those obscure deduction laws. They are written at the behest of rich people (and large corporations), using their power to lobby congress with their wealth, giving them tremendous tax breaks.

How did I ever believe that baloney? All those tax laws and obscure deductions take a progressive tax system and eliminate its progressive features. Corporate income taxes have steadily declined during the past couple generations. The public accounting profession is a parasite. Its professionals spend years being trained in tax law so the rich can avoid paying taxes. During those glorious Reagan-Bush years, regressive features were increasingly added to the tax system. For instance, they kept raising the Social Security rate, which is a tax that begins at the first dollar people earn. The rationalization is that it is paying for the retirement of working people. The reality is that the increased flows into the coffers of government on raising Social Security rates gets appropriated to cover the federal deficit. The net effect was another transfer of money from the poor to the rich. All those tax cuts the Reagan-Bush people rammed through, while simultaneously raising a regressive tax such as Social Security, had a net effect of transferring money from the poor to the rich. Those kinds of mechanisms have made wealth in the United States so concentrated. In 1997 the richest one-percent of Americans had 39.1% of the wealth, a share that had doubled since the 1970s.[\[6\]](#)

On a global scale, the wealth concentration is far worse, although it is hard to append much responsibility to CPA firms. The richest 400 people in the world have about the net worth of the poorest three billion, for a wealth ratio of nearly ten-million-to-one. That is one effect of [global capitalism](#) and our global economy. It has been happening for the past five hundred years, as the West conquered the world. The global disparity in wealth has never been greater, and there is no sign it will get any better. The rich are getting richer as never before, and people are starving to death across the planet while Americans are the [history's fattest people](#).

The current system that has been carefully constructed is how the rich keep getting richer. On the federal level of the U.S. government, the tax breaks and subsidies given to the rich are [more than three times larger](#) than the transfers made to the poor. Fixed wages with unlimited profit potential (supposedly because the capitalists take the "risk") is another mechanism. In the end, brute force is what keeps the rich getting richer, as any nation that tries opting out of the global capitalist system is bombed, invaded or otherwise bludgeoned, such as Vietnam, Chile, Cuba, Nicaragua, etc., etc. Corporate propaganda is part of the system, as [they own the media](#). The manipulation of the [international banking system](#) is another part of it. The phenomenon is multi-faceted.

Hitting Rock Bottom and Meeting Dennis Lee

For audits and tax preparation, CPA firms provide about zero public benefit, but take in about \$20 billion per year in the U.S. If our government were honest, the Securities and Exchange Commission would have taken over the audit field long ago. CPA firms are so rich that they have their hooks quite deeply into the SEC. It is known in economics jargon as "[capturing the regulator](#)" which means that the government has been corrupted by the very industries it regulates, and no longer looks after the public interest. I finally realized that my profession was worthless.

The sixty and seventy hour weeks during the busy season of auditing took their toll. I began suffering from stress symptoms. There were many factors, but sixty-hour weeks, having to change my diet, attend endless phony social functions and having a hard time believing in what I was doing had a cumulative effect.

In early 1986, I was looking to get out of public accounting and find a job in Los Angeles in "industry." One day in February of 1986, I hit rock bottom. I was at the end of my rope, shaking from stress, with eyes that looked like

a raccoon's, dreading the next day. For the second and so far last time in my life, I went to bed while sending out a desperate plea to the cosmos, asking for a clue. I had done my best, and felt backed into a corner with no way out. I even considered taking a clerical position, as long as it was close to home. What happened the next morning was not as dramatic as when the [voice told me to study business](#), but during my first waking hour the voice snuck up on me, whispering, "Well, what do you have to lose? You can starve in Seattle as easily as you can starve here, and you would like it there better." It was like a brilliant day dawning after a long, black night. I was practically jumping up and down.

The manager I worked for on that S&L audit was helping me leave the company on my own terms. He put me on the payroll to stay at home and look for work as long as I needed to. I called him up that morning, which was a Tuesday, telling him that I was moving to Seattle. I arrived in Seattle the next Monday and moved in with my grandparents. I spent a day getting my résumé updated, and then began looking for work. On Thursday, I had a meeting with an executive search firm, which are called "headhunting" firms in the business. The recruiter told me that in a month or so I would easily find something to my liking.

I went home that afternoon, ready for the long haul of finding work. I was in my paradise, hiking in the Cascade Mountains every week. That voice was right: I would be far happier starving in Seattle than in Los Angeles. The next morning I was lying in bed at about 9 a.m., still asleep. The phone rang and I heard my grandmother's slow footsteps as she came to tell me that I had a phone call. It was the recruiter I had spoken to the previous afternoon. He asked me if I could be ready for an interview that afternoon with a "solar company." It felt as if a lightning bolt hit me. It turned out to be the company owned by Dennis Lee.

When I found out what they were doing, I bowled over the controller who interviewed me. There were no other contenders for the job after I was finished. A week later I interviewed with Dennis and was hired on the spot, to begin work the next day.

When I met him, Dennis was [marketing a heat pump](#) that he had sold for several years. A serendipitous cowboy [invented a "solar heat pump" in 1974](#) during the first energy crisis. Standard heat pumps today get what is known as a Coefficient of Performance ([COP](#)) of between two and three. In 1986, they averaged about a two. That meant that for every unit of electricity used to run a heat pump, two units of heat would be delivered into a home. The heat pump Dennis sold got a COP as high as twelve, and had done as high as a COP of five in Minnesota in January. It was two-to-three times as efficient as standard heat pumps. Dennis had been selling them on the East Coast for years, where customers would switch from oil or gas heating to his heat pump, and they would save seventy percent in operating costs versus heating with fossil fuels. It is still the best heating system the world market has ever seen.

Dennis had a [marketing plan was sheer genius](#). For \$4000 dollars he could fund the cost of marketing, manufacturing and installing his heat pump. He would sell the heat pump for \$10,000, the customer would make a \$4000 down payment that the federal government would refund to the customer, and the \$6000 dollar balance would be paid by the customer over several years, based on proven savings. The customers risked none of their own money. Virtually everybody who ever heard of the deal went for it. What did they have to lose? For years, Dennis could not get any financiers to back his plan. Financiers, rich men and entrepreneurs got involved, but nobody ever saw the genius of Dennis' plan. Their attitude was almost universally, "This is a great piece of equipment, the price is \$10,000 cash." They never realized that a customer would not part with \$10,000 for a piece of equipment they were not sure worked. Dennis removed the customer's risk, but the money would not be completely collected for several years. Businessmen rarely think that far ahead, not when they smell the quick kill. When Dennis had his companies stolen time after time, the people who stole them thought the gold was the system, and promptly discarded Dennis' "crazy" marketing plans. They promptly all went out of business.

The Discover Card is a watered down version of [a card Dennis invented](#) years before he got into the energy business. As a marketer and entrepreneur, Dennis is an Einstein. I saw his genius immediately.

Because of my mentor when I was young, I became a student of genius, and knew what it looked like. Genius is simple, and turns ideas upside down or inside out, looking at the problem without the presumptions that blind most people. Dennis definitely had that knack.

Soon before the Mafia and his business associates stole his company for the last time on the East Coast, that time even stealing his personal possessions, leaving him and his family with only the clothes on their backs, Dennis was on the brink of having a household name corporation put up [\\$1 billion to carpet America with his heat pumps](#). The chairman of the board saw Dennis' genius. Finally, Dennis stood in front of somebody who understood. Just as they were getting to the deal's short strokes, his greedy business associates collapsed his company while stealing hundreds of thousand dollars from him. Soon after that, the Mafia stole what was left, and Dennis had to start again from scratch.

After a several month relationship with a rich business associate in [Yakima](#) who also did not understand, one day Dennis had enough. Mr. Rich was telling people that he did not need Dennis anymore. Dennis bid Mr. Rich goodbye, packed his family into a beat-up station wagon, and drove over the mountains to Seattle with twenty dollars in his wallet and no place to sleep. That was in October of 1984, and Dennis sold 1000 systems in a few months, and tried carpeting Puget Sound with them.

Dennis figured the job would only get done by doing it himself. His Seattle strategy was selling thousands of systems before he had financing, and maybe tens of millions of dollars of sales would finally get a financier's attention. In the meantime, he was trying to attract the electric companies' interest. He thought he would be their hero, bringing the energy conservation that their ads said they desperately needed. They rebuffed him at every opportunity. He was surprised, but would not let that stop him, and sold systems as fast as he could. The Renewable Energy Tax Credit expired in 1985, and no system installed after December 31, 1985 would qualify for the credit.

Although Dennis did not figure out who was behind the vendetta for a long time, the electric companies pulled the strings and wiped out his company, and a corporate hit man was responsible for the [death of one of Dennis' employees](#).

The most complete rendition of Dennis' Seattle experiences is in *My Quest*, written from his jail cell in 1988-1989.^[7] By the end of 1985, Dennis' company had endured media smears, a fraudulent consumer protection lawsuit filed by the Attorney General's office, numerous break-ins and sabotages of their facility, bomb threats, theft of their phone equipment, attempted theft of all their records, surprise visits by the fire department and OSHA, a threatened investigation by the IRS, pressure being put on his financier, his suppliers, his customers, and his employees by various parties, such as the corporate hit man, the Attorney General's office and the courts. A [fraudulent bankruptcy suit](#) filed by the hit man and a few gullible employees he manipulated into filing with him [capped off the circus](#). The Attorney General's office was involved with the hit man. They possessed documents he stole from the company, which they produced when Dennis threatened an FBI probe of their files.^[8] The media splashed the company in the newspaper and the evening news, which scared away customers and employees, and shook up others, such as the financier. The electric companies were mobilizing all their forces to wipe out the threat of a superior technology.

When I joined the company in March of 1986, it was in its death throes. In June 1986 I witnessed the theft of Dennis' company, and my boss, the controller, engineered it, [while the employees cheered](#). The financier had his company stolen two weeks before Dennis' in a move that the financier believes was part of a conspiracy.^[9] I lost [plenty of innocence](#) back then. I received one paycheck before the company stopped making payroll. I was so on fire that I worked three months for free until the company was stolen. I was reverberating from the lightning bolt that hit me in March. Dozens of employees were hanging around the office, seemingly loyal to the cause. I felt a comradeship that I had never had before. I felt surrounded by people who were committed to making the world a better place, and saw Dennis' vision. When I saw that their loyalty was to their paycheck,

I had a valuable learning experience, although not a fun one.

Dennis was essentially run out of Washington. A member of the Washington version of the SEC attended the shareholders' meeting where Dennis' company was stolen, where those "loyal" employees showed their true colors. The representative calmly watched it happen, subpoenaing Dennis immediately before the company was stolen, seemingly trying to find him at fault for having his company stolen.

Chasing My Dream

After seeing the outrageous and criminal acts engaged in by the authorities and others, Dennis felt their next move would be for the police to "find" a barrel of heroin in his closet. He left the state in June, moving to Chicago and soon to Boston, trying to rebuild the venture. Although all I had seen was bloody ruin, [my spiritual training](#) came in handy. I could spot a great soul. I saw who Dennis was, and was sold on him. Of the hundreds of employees Dennis had in Seattle, I was the only one who followed him to Boston.[\[10\]](#) Months of working without pay had reduced me to moving back in with my grandparents, working as a temporary employee, and saving a few hundred dollars so I had gas money to drive to Boston. After years of trying to live in Seattle, I was leaving it to chase a crazy dream. It was one of the hardest things ever did. In November of 1986, with tears in my eyes, leaving behind a girlfriend who soon ended the relationship, I drove out to Boston.

I went to Boston with nothing more than the promise from Dennis that he had a floor I could sleep on. The day after I got there, Dennis and I met with a company that had developed a turbine that ran off a 200° F heat source. Dennis got the idea of hooking up his heat pump to that turbine and make "free electricity." It was a naïve idea at first, and the [Second Law of Thermodynamics](#) said it could not be done. I became far more involved than I thought I would. I raised money to get us going again, a couple months after I got there, and I brought in my [old mentor](#) to take a look at what we were doing. He thought we had a chance, and even gave his world's best engine to Dennis, to try marrying with his heat pump panels to try making free energy, which my mentor thought was possible.

In Boston, in early 1987, Michael Dukakis was readying his run for the presidency, and one of the state's big political issues was the Seabrook nuclear power plant. Seabrook was in New Hampshire, next to Massachusetts. Dukakis was getting political mileage out of opposing the reactor, and if Massachusetts did not approve the evacuation plan for Seabrook, they could prevent it from going online. We had unwittingly landed in the middle of a huge energy controversy.

I first became aware of "[Astroturf](#)" organizations in Boston. An Astroturf organization is a fake grassroots organization, bankrolled by corporate America or other powerful interests, but camouflaged to appear as private citizens merely agitating for their own cause. The first Astroturf organization I encountered (at least that I knew was one) was called the Coalition for Reliable Energy. While we presented our first "Greatest Energy Shows on Earth," the Coalition for Reliable Energy began a media blitz on Boston television and newspapers. The Coalition presented itself as an amalgamation of grandmothers and concerned citizens, making sure that New England had reliable energy and that all energy sources were considered. At the end of their first TV ad, a grandmotherly figure mumbled, "and nuclear energy options." That happened in January and February of 1987.

In a rare instance of mainstream investigative journalism, just as the Coalition's ad blitz was firing up, the *Boston Globe* revealed that 95 percent of the Coalition's funding came from the Seabrook Association, which consisted of the electric companies that invested in the Seabrook nuclear power plant. The Astroturf organization was unmasked.

Probably, not many people took their ads seriously after that revelation, but the ad blitz kept coming all spring. By the time we left Boston in June 1987, the ads became brazen. They featured a thirty-something professional man telling the viewer, "You will have to pay for the Seabrook nuclear power plant whether you use it not, so why not use it?" It was perhaps the most flagrant exercise of corporate propaganda I have ever seen.

The *Boston Globe* continually ran front-page coverage of the Seabrook protests. Demonstrators chained themselves to the reactor's front gates almost daily. At that time, we were holding "free energy" shows, telling our audience that the best way to eliminate nuclear energy was to make it obsolete. We met with a local protest group that staged many of the protests. We presented them a plan for the electric companies to pursue free energy technology and end the nuclear insanity. Later, one of the group's high-ranking members told Dennis that their real motivation was not opposing nuclear energy, per se. The person bankrolling them owned land that could be sold at a high price for a hydroelectric project. They were proposing a hydroelectric solution, and their sponsor would get rich in the process. That was disillusioning. It appeared to be another Astroturf organization, although most of its members likely did not realize it.

At a show we had a quarter mile from Seabrook's front gates, Dennis announced his intention to buy the reactor. He proposed to use the containment vessel as a heat storage facility, using free energy machines to supply the electricity. The mouse roared. Before the electric companies in Washington wiped his company out, Dennis' stock in his company was worth \$48 million. He barely escaped the state with the clothes on his back.

Dennis made a multibillion-dollar offer to buy the nuclear reactor, but to never put nuclear fuel in it. At the show, attended by about 200 people, Dennis announced his offer to the Seabrook Association. The next day he mailed his proposal. The Seabrook Association chairman of the board called our hole-in-the-wall office the next day, within minutes of receiving the package. He said he could come immediately to our office to discuss our proposal. *That* was a much different reception than Dennis received in Seattle.

Publicly, the Washington electric companies said they knew little about Dennis except that he was crooked and his technology was a scam. Soon after we arrived in Boston, a banker we encountered called the BPA to check out Dennis' story. He called the BPA switchboard, asking if anyone could tell him about Dennis Lee, which was a strange way of approaching a huge bureaucracy such as the BPA. The next day he received a call from the BPA's conservation department. The banker told us that the BPA man was extremely cautious, but admitted that, "For three months, all our entire department thought about was Dennis Lee." That was the same organization that hired the hit man, the same organization that publicly said "Dennis who?"

The Seabrook chairman invited Dennis to his office to discuss the proposal. The next week Dennis and his engineer (Mr. Engineer) went to the Seabrook Association's palatial offices, and were given the red carpet treatment. The chairman and his pals talked about working with Dennis and his free energy ideas, thinking they might work. Dennis said it was almost amusing to watch them in action. Those were not nice guys, but acted as if Dennis was a long lost son. Dennis could see their masks slip at times, and it was evident that they were playacting.

Later, when Dennis composed a press release of his offer for the chairman's approval, the chairman began backpedaling, and it became obvious that placating him was their goal all along. In Boston and California, we had friends on the inside, high in the electric company hierarchies, who told us things. We heard that New England's electric companies convened secretly to decide what response to give to a wild man selling free electricity machines. Instead of the snuff job Dennis got in Seattle for merely selling a heat pump, at the secret meetings the consensus was they might have to cooperate with us.

As far as I know, the *Boston Globe* has never mentioned Dennis. To add a weird touch to those days, electric company representatives attended our Greatest Energy Shows, something they admitted when Dennis met with them. Right after one show, in the *Boston Globe's* weekly science section they interviewed a scientist who thought we could mine moon dust, extracting an isotope of helium from it, thereby solving our energy

problems.^[11] It was as though they knew exactly what they were doing, and rubbed our faces in it. They ran front-page news of protests at Seabrook, while ignoring our show at the Seabrook gates. While we received the red carpet treatment from the Seabrook chairman, and while New England's electric companies held secret meetings about us, the *Boston Globe* ran an article about mining the moon to solve our energy problems.

I lost more naïveté in Boston by witnessing a media blackout on us, seeing Orwellian ads from the Astroturf Coalition for Reliable Energy, reading moon dust articles and other oddities. The electric gangsters in Washington had not forgotten about Dennis. The Attorney General's hatchet lady, who repeatedly lied and bloodied her hands while trying to destroy Dennis' company, quit her job soon after her final confrontation with him. She came to his office one day on a document-hunting expedition, but Dennis had her meet his employees, who grilled her for two hours about her underhanded actions toward the company. Much later, Dennis found himself sitting next to her on an airplane flight. He asked her how she slept at night, and she gave the Nuremberg defense, that she was only following orders. Then she said, "But you will notice that I do not work for them anymore." Her hands got too bloody, her conscience finally woke up, and she quit the Attorney General's office.

The Attorney General's office had a pinch hitter that sicced the authorities on Dennis everywhere he went after they ran him out of Washington. Ms. Pinch Hitter contacted the authorities immediately after Dennis arrived in Boston, and she duly warned a Middlesex County District Attorney Investigator that the criminal of the century was in his backyard. The investigator swaggered into Dennis' office a few days later, telling Dennis he looked forward to throwing him into jail, and other officious threats. In Ventura, a telling document surfaced regarding the attacks on Dennis. That Middlesex investigator wrote to the sheriff's deputy who finally threw Dennis in jail on fabricated charges. The investigator wrote:

"Mr. Lee was attempting to duplicate his Washington operation in our state. We were attempting to proceed criminally against Mr. Lee but, without clear cut violations of our law, could only proceed in the manner in which we did. I don't believe our AG completed their investigation before Mr. Lee left our state."^[12]

In other words, the investigator tried jailing Dennis based on the word of Ms. Pinch Hitter, but failed to find a law that Dennis broke. Given enough time, they would have found something, but we left the state before they could attack. They could not find a violation in California either, but that did not prevent them from making it up. The Secretary of State's office was sharpening its axe as we were leaving Boston, trying to snare us in a securities law violation. They started a fishing expedition just before we left. The red carpet was going to turn redder with our blood if we stayed in Boston much longer.

Mr. Professor and Ventura

In the meantime, I sent a Christmas card to the professor who inspired me to become an accountant. Mr. Professor was the best teacher I ever had. We kept in touch over the years, and I told him what his crazy student was doing in Boston. Over the years, Dennis' organizations have interfaced with tens of thousands of people. Dennis has had plenty of public exposure over the years, on TV and hundreds of radio talk shows. Millions of people have heard of Dennis in America. Mr. Professor's response to me was the rare time that somebody became excited about our project because of its potential benefit to humanity. Talk is cheap. Before it was over, Mr. Professor showed what he was made of. He displayed a level of integrity I have only seen in a few people.

Mr. Professor wanted to help bankroll the venture. I had tied into technical talent in California, and Mr. Professor was putting up more money. We moved to Ventura (where I was raised) in the summer of 1987. I would not have believed it at the time, but our experiences before Ventura were the easy days. In the fall of 1987, my mentor came forward with his [hydraulic heat engine](#), and we started flying high. We were soon approaching gross revenues of a million dollars a month, selling informational kits on how to make, sell and install the heat pump.

On New Year's Day of 1988, we became involved with [Victor Fischer](#), who had also invented a hydraulic heat engine and built some prototypes in Australia, prototypes coming closer to the [Carnot ideal](#) than any engine ever developed. On January 12, 1988, Dennis publicly announced that the technology was in hand that could make free energy a possibility. In the crowd was a deputy sheriff investigator, whom I will call Mr. Deputy. He talked to one of our administrative people a few weeks earlier. The Better Business Bureau was forwarding requests on us to Mr. Deputy, and our employee called him, asking what was happening. Our employee used to be a sheriff's deputy himself, and knew that if our company was doing something wrong, the investigator was legally obligated to tell us when we asked him. Mr. Deputy replied that all was fine and that he would stop investigating us.[\[13\]](#)

Mr. Deputy was in the audience on January 12th, and the next day he was readying a search warrant for a [raid on our facility](#). On January 14th at about 10:00 a.m. I stood in our company's parking lot and watched ten cars speed into our driveway in a cloud of dust. Mr. Deputy, leaping out of the lead car, asked me if the building behind me was ours. The raid was on. Not only was Mr. Deputy guilty of entrapment, telling us three weeks earlier that we were not breaking any laws, but the raid was the first time I experienced felonious acts engaged in by law enforcement personnel.

The raid had a few purposes, as we discovered later. The first was the felony act: the raid was an espionage exercise. Thirteen armed deputies raided our facility, rampaging through our building and herding everybody into our conference room. We were photographed and had to produce identification before we could leave the building. All employees were arrested. Then they kicked everybody out of our building and occupied it for hours.

That building was where our technical material was. Our chief researcher's office (whom I will call Mr. Researcher) was located next to our machine shop and research area. In his office were technical details regarding the free energy prototypes we were developing (including Fischer's, and technical material on inventions other inventors had sent us), and Mr. Researcher's personal papers. The research facility had mirrored windows so people could not see into the building during daylight. Mr. Researcher and the machinist went behind the building where the mirrored windows were, after being kicked out of it. While standing behind the building, they suddenly saw into the building because it was momentarily brighter inside the building than outside. Why was it brighter inside the building? It was due to the repeated flash of a camera. When the camera flashed, they could see inside the building. The door to Mr. Researcher's office was open to the machine shop, and with each flash, they could see where it came from. The sheriff's deputies were in Mr. Researcher's office, rolling out the blueprints on his desk and photographing them. It was an outright espionage expedition.

About an hour later, hours before their official search began, they were seen taking boxes out of the building, loading them into a car and driving off. In those boxes were all the papers in Mr. Researcher's office. After they stole the technical data they suddenly became cooperative, and eventually allowed me to accompany them on their official search, while they sought the evidence that their warrant authorized them to seize. In their official search, they pointedly ignored Mr. Researcher's office. It was the last place they officially searched, and the receipt they left stated they removed only one piece of paper from his office: a parts list for the heat pump. The raid lasted from 10:00 a.m. to after midnight. The next morning, when Mr. Researcher got back into his office at 6:00 a.m., the wreckage in his office told a different story. His office had

been cleaned out. They took every scrap of important paper that they could. The blueprints were too big to sneak out in the boxes, so they photographed them. Everything else important was taken, and there sat a receipt, saying they took only one piece of paper. That kind of outright, naked crime, committed by police officers, not only shocked me, but for the first time in my life I seriously harbored violent thoughts. Mr. Researcher was white in the face for weeks, and I thought he was going to keel over. He quit the company a few weeks after the raid, not able to handle how he had been raped. That was only the raid's first goal.[\[14\]](#)

The second goal was putting us out of business by seizing all our records. I was the controller, and they cleaned out my office to the walls. During the raid, as I was escorting Mr. Deputy around the office, I told him they could have whatever records they needed. I did not yet know what they had done to Mr. Researcher's office. Mr. Deputy said I could have copies of anything I needed to continue running the business. He tried convincing me that Dennis was a crook because of what happened in Seattle. When I told him that I was with Dennis in Seattle and knew what happened, he stopped that angle. I was relieved of my duties after several hours of escorting the deputies through our buildings. The next morning, I found that they had taken every scrap of documentation we had, and Mr. Deputy reneged on his promise of letting me have copies of our records. When he told me he was going back on his word, he had the audacity to tell me we were lucky they did not also take our computers. We did not even know who all our customers were after receiving their lobotomy. That alone nearly put us out of business. It was a carefully aimed deathblow.

The third goal was the legal one: gathering evidence for the "crime" that we committed. What was the crime? During the raid, I asked Mr. Deputy what we did to warrant thirteen armed deputies storming our building. He said we may have violated an obscure franchise law that nobody had heard of. Not one California lawyer in a hundred had ever heard of California *Civil* Code 1812.200, the Seller Assisted Marketing Plan Act (SAMP). It was known as a "worm farm" law, due to the short-lived worm farm businesses in the 1970s, where people put their life's savings into questionable business opportunities. The law was designed to regulate the sales of business opportunities. It was a law that required a business to register with the Secretary of State's office. To comply with the law, a business filed a one-page form with the Secretary of State's office. The form provided cursory information about the business, and the filing was accompanied by a fifty dollar filing fee.

There had been one prosecution in California's history under that law. It is what Dennis called a "Red Tie on a Tuesday" law. It was a law that nobody knew of, but through corrupt law enforcement it became a crime to do what everybody else did, such as wearing a red tie on a Tuesday. Of the million men who wore a red tie on Tuesday, you were the only one thrown in jail for it. Before Dennis' case was over, he got an affidavit from the lawyer who *wrote the SAMP law*. In a conversation with our attorney, the lawyer estimated that up to 100,000 California businesses could qualify under the law for its filing requirements. According to his affidavit, only 250 companies had ever made the filing, for a compliance rate of 0.25%.[\[15\]](#) Dennis was the second person ever prosecuted under those laws; the other was for a man selling Little League franchises, and his conviction was overturned on appeal. Dennis is likely the only person who will ever do prison time for "violating" that *civil* law.

We sued for civil rights violations and the theft of our technical material in the raid. We made noise. Thousands of people called the sheriff's department to protest. The next several months were nightmarish for me. Working with no records was a small fraction of what I suffered through during those days. The stress symptoms I suffered in Los Angeles came back soon after I raised the money in Boston, and friends began attacking me. I had to come to terms with possibly being murdered for my efforts, and I worked seventy-hour weeks. After the raid, my stress symptoms blossomed. I had to work sixteen-hour days just to survive.

What happened in Ventura caused a number of close family members to refuse to speak to me for several years. Mr. Professor, Dennis and his wife and I felt nearly alone in a world of insanity and darkness. By May 1988 I was becoming useless at work, just sitting there, quivering. I asked Dennis if I could take the summer off, not knowing if my body, mind and emotions could withstand such a situation again. He had a good idea of

what I was going through. I was involved with my future wife by that time, and those events put our relationship through severe stresses.

In May, the same month I left the company, Dennis received an offer. It was not the first time he received an offer like that, and this tale will digress a little, with the kinds of offers that Dennis and others like him get.

Make Them an Offer They Can't Refuse

What the [Attorney General's office did in Washington](#) can easily be called a conspiracy. How much cooperation was going on between the electric companies, the Attorney General's office, the media, the federal bankruptcy courts and others? The local police refused to arrest or even investigate the BPA hit man, even after [his actions caused one woman's death](#), when his accomplices in our company confessed to espionage on his behalf, and when documents he stole were later found in the Attorney General's investigative files on Dennis. The Attorney General's office hurriedly returned them to Dennis when he threatened them with an FBI probe. What exactly happened can be difficult to figure out. When bullets fly at you from every direction, it is legitimate to wonder if somebody is orchestrating the salvos.

When the Middlesex County investigator in Massachusetts admitted that he was [investigating Dennis](#) because the Attorney General's office in Washington contacted him, it made me wonder. It is possible that the attacks on Dennis were not coordinated, since [capitalistic gangsters](#) are the same everywhere.

I felt that the Attorney General's office contacting Middlesex County and siccing them on Dennis was not necessarily conspiratorial on the part of Middlesex County. I now know that low intelligence combined with zero integrity and vindictiveness is not that unusual in law enforcement. On the Attorney General's side, however, it was definitely conspiratorial. That does not mean that everybody was in on it, but there were people in Washington who knew exactly what they were doing, and sent their soldiers marching after Dennis. The BPA hit man knew exactly what he was doing and why. He was in on it. There is no conceivable explanation for his behavior other than him being a corporate hit man. Whoever hired him knew exactly what they were doing. However far that might venture into a worldwide conspiracy is debatable, but the hit man changing costumes and becoming a ["noted Tesla researcher"](#) after he helped wipe out Dennis' efforts in Washington seemed part of a more comprehensive effort. The barrage of attacks by the Attorney General's office *after* Dennis left the state also has the whiff of a broader conspiracy.

It is possible, however, that it was merely a mean-spirited vendetta by the Attorney General (AG) to inflict vengeance on somebody who stood up to his attacks. Dennis made the AG suffer. When the AG's office attacked the company with their phony lawsuit and media blitz, Dennis responded. He bought a full-page ad in *The Seattle Times* that ran on October 18, 1985.[\[16\]](#) It enraged the public about the AG's actions. The AG's office was inundated with public protest. Dennis later heard what the AG's reaction was while he read Dennis' full-page ad. The man was livid.

Years later, Dennis heard that he became famous by standing up to the AG. It apparently was one of the two worst publicity black eyes the AG ever endured while trying to crush somebody. The other black eye came from wiping out an activist who tried ending the homeless problem with affordable housing solutions. The activist fought back, and his campaign aired the AG's dirty laundry while he was running for governor in 1992, and may have been a key reason he barely lost. The woman who "pinch hit" for the hatchet lady who quit the AG's office was a prominent member of the AG's staff. When the AG ran for governor, the pinch hitter quit her AG position and joined his campaign. Perhaps siccing the authorities on Dennis everywhere he went was just vengeance by the AG, and his close relationship to the pinch hitter[\[17\]](#) gives evidence of the AG's personal interest in making Dennis' life miserable.

I have seen no evidence that the Massachusetts Secretary of State's investigation into our money-raising efforts in Massachusetts had anything to do with Washington. I have heard nothing about why they did it, but it was obviously instigated by somebody up high, because we were not doing anything that should have attracted their attention. It appeared to be a fishing expedition for something they could hang us on. I suspect that the electric interests in New England instigated it.

Somebody also instigated what happened in California. Mr. Deputy's investigative report regarding what got him involved with investigating Dennis is amazing reading. According to Mr. Deputy, he was minding his own business when a man contacted him who attended Dennis' Saturday show at our facility, where Dennis pitched the technology. According to Mr. Deputy, the man "said that he was bedazzled by the caffeine in the coffee, the sugar in the donuts and the speaker's presentation and really wasn't sure what you get for the money."[\[18\]](#) The man did not buy anything. He was not a complaining victim. That supposedly got Mr. Deputy hot on his career-making case. We were drugging our marks with coffee and donuts, and Dennis closed the deal on our bedazzled victims.

[Mr. Professor](#) knew somebody high-ranking at the local electric company. During the summer of 1987, the electric company knew very well about Dennis and what we were doing. Mr. Professor asked his friend what they planned to do about Dennis, and the man replied that the electric company had not yet decided. It looks as if Mr. Deputy's "investigation" in the fall of 1987 was related to the decision they finally made. We heard from other sources that the chairman of the board ordered the hit on us. Maybe it was not the chairman. I will never believe that when the deputies ransacked Mr. Researcher's office [during the raid](#), stealing the technical material, that they did it for their own edification, to peruse at their leisure while watching Sunday football games on TV.

How far that bona fide conspiracy went, I cannot say. Not all the deputies at the raid knew what really happened. One was a former student of Mr. Professor, and had no idea what really happened that day. As [Smedley Butler](#) said, soldiers blindly following orders can serve evil as easily as "good." I doubt the thieving deputies knew who they stole the technical material for, or even cared. When studying covert actions by folks at the [CIA](#), NSA etc., it becomes obvious that few see the big picture, except those at the top. Those in the chain of command work on a need-to-know basis, with strict compartmentalization, secrecy and the rest. Later events later made the picture clearer for me.

[Conspiracies](#) do not explain everything that happens, or even all that much of the suppression dynamic. That is too simple-minded, but I believe that the attacks on Dennis were not *all* isolated and unrelated instances of local energy companies protecting their revenue base. There is substantial evidence that supports arguments for an energy industry "immune system." The dynamics I have seen in energy I have also seen in medicine, particularly in [the cancer racket](#). The more wealth and power vested in any particular industry or profession, the more ruthlessly it protects itself. Every industry and profession has an infrastructure designed to protect itself from competition. How far they take their defensive strategies, and how far they *can* take them, is dependent on how powerful that industry or profession is. The more concentrated that wealth or power, the more likely one will see conscious and ruthless activities designed to keep the competition at bay.

There is perhaps no more powerful industry than the energy industry. People can say that the military is more powerful, but it is obvious that the military is not running the show, but is the muscle used to keep the rackets flowing smoothly, and it is [one of the biggest rackets itself](#). As [Smedley Butler](#) said, those order-following soldiers have little idea whose interests they really serve, which is part of the racket's design.

The geopolitical devastation the energy industry has inflicted on the planet is not pretty. In Nigeria, [Indonesia](#), Saudi Arabia and other places, the ruling elite has a sinister relationship with the oil companies, and their domestic populations are repressed. Those situations make for unpleasant realizations regarding the connection between the oil those nations have, their repressive governments, the Western oil companies

and the governments of Western nations.

If Americans think I am unfairly picking on America, part of the reason is that Americans *can do something* about America's behavior, and they are my target audience. Pointing out the flaws in the Soviet Communist system, and there were many, can be a rewarding exercise, but that does not excuse our murderous international behavior. As [Noam Chomsky](#) has said, we are responsible for the predictable consequences of *our* actions, not the actions of somebody in China, for instance.

Here is an example of blood on the West's hands that is not all America's. In 1995, Nigeria's government executed Nobel Prize literature nominee Ken Saro-Wiwa and several others. Their ostensible crime was their activism for human rights and resisting the corporate practices of Shell-BP, whose operations are devastating the Nigerian environment, particularly the land of the Ogoni tribe, of which Saro-Wiwa was a member. In the case of Nigeria, Great Britain is the chief culprit, arming the dictatorship in [neocolonial](#)-style while the oil flows unabated from the region. Saro-Wiwa's execution, along with several other activists, was one of the greatest human rights outrages of the 1990s. The United States, Britain and other nations, such as South Africa, stood by and watched it happen. The tragedy continues. Nigerian literature Nobel laureate Wole Soyinka lived in exile with a price on his head for years. Genocide and devastation is OK as long as the oil keeps flowing. The American-sponsored genocide in [East Timor](#) was another instance of securing more cheap oil for the West.

Oil is not the only big prize, whereby the masses suffer greatly to keep the cheap energy coming. [Coal](#) is another, and Native Americans have suffered because uranium was discovered on their "worthless" reservation lands in the 20th century.[\[19\]](#)

With that [teenage dream](#) of revolutionizing the energy industry, I also realized that our energy production methods devastate the environment, are not sustainable, and harm many people. I also saw that our dependence on fossil fuels, particularly those Middle East "reserves," might lead to World War III someday. That was another monkey on my back. Free energy might just [help save humanity from self-destruction](#). [Brian O'Leary](#) feels the same way, as do many others.[\[20\]](#) The U.S.-caused holocaust in [Iraq](#) and today's fraudulent "[War on Terror](#)" is something that I have tried preventing for my entire adult life. For all the value of uranium, wood, hydroelectric energy and coal, oil has always been the greatest prize, and the industry wields tremendous international power.

In Boston, I began new levels of education. Just before Dennis made his public offer to buy out Seabrook, one of our merchants lined up an interview on a New Hampshire radio station. Dennis and I drove to the station for the interview. It was being taped for later airing. As we arrived, the receptionist told us to wait a minute, as our interviewer was "talking to a Senator." I thought nothing of it, and we waited for a minute. Then the man came out, welcomed us, and we entered his studio for the interview. It was a typical interview, with questions such as "So, Mr. Lee, you say you have a heat pump that gets high efficiencies, and you say you can generate free electricity with it. Wow!" It was a "gee whiz" interview. After he finished taping the interview, he turned off his professional reel-to-reel tape recorder. He was affable, with his leading man voice. He then said, "Off the record, Mr. Lee, what is going on here? Do you think you can really make free electricity? Are you trying to challenge them? Let's have a friendly chat. I want to know more." Just as he was saying that, he turned on a small desktop tape recorder. For the next half-hour, Dennis talked about how he was not threatening the electric companies, but wanted to work with them to end pollution and bring renewable energy to the world.

After our chat, we walked to my car. As we pulled away, Dennis said, "Did you see him turn on that small tape recorder after taping the show? That was the real interview. That tape is going to the Big Boys. They will never air our original interview." I looked at Dennis in shock and disbelief. "What?!" I stammered. Immediately, the wheels in my head were spinning a million miles an hour, trying to make sense of what he said. Dennis would later write that I looked at him as if he was crazy. Maybe it looked that way to him, but it

was more like being told something shocking, not knowing what to make of it. As I sat there, driving the car in puzzlement, Dennis sighed and said, "This is going to be a long haul. Let me tell you some of what is happening."

Dennis told me what he thought was happening behind the scenes. It was during those days that I faced the possibility of being murdered for pursuing free energy. I decided that if it came to that, it did. Nobody lives forever, and I could think of nothing more worthwhile to pursue. If the energy gangsters murdered me, well, it happened. It is one thing to face such a situation in one's mind. It is another reality entirely to face it in real life.

Dennis thought the informal interview was the real one, and that the energy boys wanted to know what his attitude really was. They wondered if Dennis was a belligerent revolutionary or if they could work with him. It was the next week, I believe, when Dennis received the call from the Seabrook chairman. Our radio interview never aired. I bet the chairman himself heard that "informal" interview. It appears that Dennis was right.

[Brian O'Leary](#) is an ex-Astronaut, ex-colleague of Carl Sagan, the first human slated to visit another planet (Mars), and a free energy visionary. O'Leary's *Miracle in the Void* contains one of the best, most succinct summaries of free energy's suppression. Brian wrote of his encounter at a free energy symposium bankrolled by a multi-hundred-millionaire. Brian attended the symposium at the rich man's behest and subsidy, and heard the rich man's marketing gurus tell why he was not committing significant funding to developing free energy:

"He explained to us that the situation was similar to that of a river. For optimal profits we want to catch the river where and when it flows fastest. Until then it would be foolish to put up much money now. Why spend millions of dollars now, with uncertain results, if we could hold back those millions until such time is truly ready to enter the marketplace and can outcompete the others?"[\[21\]](#)

Brian described his anger and awe. While humanity may be on the brink of self-annihilation, the rich man would wait on the sidelines as a vulture would, seizing the best opportunity to make a killing in free energy.

In those Boston days, as Dennis first made his "free energy" noise, we received our first offer. A group of businessmen came to our company and met with us. They offered ten million dollars for the rights to our technologies. It would have made us rich, but that was not our program. Our program was bringing free energy to the world, not being bought out and the technology shelved. We could not say for certain that was their goal, but it smelled similar to the stories I had heard when I was younger.

We did not accept their offer, but kept plugging away on a shoestring. We almost became involved with a household name marketing organization at about that time. They performed some shoddy investigation of our technology, tested a broken system, and decided against becoming involved with us. We were becoming desperate for money, but Dennis was relieved that we did not get involved, because it would mean losing his freedom.

In Ventura, Dennis hit on a program that worked. We ran ads in newspapers, such as *USA Today*, modestly titled "Free Electricity!" and we sent out videotapes of our pitch, offering to sell educational materials to market, manufacture and install the heat pump, and told them we were working toward free energy. People began mailing us checks for thousands of dollars. About all I had seen with Dennis was disaster until September of 1987, but Dennis said he had found the new rocket ship.

The program exploded. Money began pouring in from across the country. We were so buried in orders that we were more than a month behind in shipping them out. We went from a few volunteers to more than forty employees in about two months. The rocket was taking off. I did not see Dennis' glory days in Seattle, but I saw it in Ventura. It was like holding onto a rope tied to a rocket ship.

After the raid, as we tried avoiding the next deathblow, it gave us *more credibility*, not less, with the public. Many people had some idea how the system worked, and being attacked told many that we were onto something. Our sales *increased*, and in May of 1988 Dennis received a second offer. That one was different. Dennis was invited to meet some bankers in Chicago. Dennis met a CIA man who represented "European" interests and said that they would write Dennis a check. They would "put a '1' on it" and Dennis could put on the zeroes. It is one thing to hear the stories from people who approach you; it is another level of understanding when it happens to you.[\[22\]](#)

Dennis' integrity had already been tested many times, although he never got a "name your price and we will pay it" offer before. Dennis made a counteroffer: he would to put the zeroes on the check, but the money would go right back into the European interests' pockets, and they would be forced to spend that money on bringing free energy to the world! The CIA man was stunned. He sat there, speechless. After he recovered from his shock, he regained his friendly demeanor but said he was not prepared to accept Dennis' offer. He met Dennis in California a few weeks later, but never again mentioned the offer. The next month, Dennis was arrested with a million-dollar bail. Dennis thinks that his arrest was their response to his offer. I would have been a millionaire many, many times over if Dennis had taken that deal, but dealing with the devil never works out too well. I could not have lived with myself if we had taken that quiet money. That was the exact *opposite* of what we were about.

Such offers are never put on paper. I have now heard of many like it. Nobody goes to court to try enforcing those kinds of deals. Now that I have heard many stories similar to ours, from those with no reason to lie to us, I see the game. As Don Corleone did, they make you an offer you can't refuse. If you refuse their offer, they destroy you. Here are other stories told to us or myself, from people we believe.

A few weeks after we came to California in the summer of 1987, Dennis ran "Free Electricity!" ads in the *Los Angeles Times*. In those ads, he was looking for salesmen. One evening, Dennis and I were in Mr. Professor's office (we had not gotten going in California yet) and Dennis was calling the ad leads. As I worked alongside him, Dennis talked to a sales lead that told Dennis that he was the marketing director for a company that made cars that got 100 MPG. He said the company no longer existed because the founders were in prison. The government prosecuted them for fraud. It was the standard "protect the consumer" angle. The man said the prosecution's star witness claimed that he was an important engineer for their company, who worked for them for years. The "engineer" testified to the company's fraudulent practices. Nobody at the company had ever seen the man before. Forged payroll records were produced at the trial to "prove" the witness worked for the company. The man told Dennis, "You don't know what they'll do to you!" Dennis told the man "Admit it, you called me because you believe some people have the guts to do it. You want to see me succeed." Dennis was jailed less than a year later.

With the national exposure that Dennis receives from time to time, we became a magnet for others like us, and they came, telling familiar stories. Our experiences were far from unique. After the raid, and before Dennis was arrested, we had a number of people approach us, telling their tales. Here are two more.

One man told us of living in a chiropractor's back office for two years. His friend taught at a California State University. He developed a chemical method to extract platinum from ore considered unmineable. The process promised to make platinum much more available, hence cheaper. Experiments yielded nearly unbelievable results. They became involved with the big money boys, some famous old New York money. They were financed and began using the process to mine in the California desert. They bought the necessary mining equipment with the New York money. Suddenly, the bank seized their funds, and the

sheriff was beating their door down for violating a law that nobody had enforced since the nineteenth century. The two men fled in a panic. The teacher's truck was found abandoned in the desert. He was never seen again. The other man slept in the back of a chiropractor's office for two years in order to stay alive. The New York money now owns the land where the mine was.

One man showed up at our office in a limousine. He told us that he once owned a windmill facility in the Southwest that actually worked, not an investment scam used to get federal tax breaks. He was selling electricity, competing against the electric companies. One evening he was working late at his facility, and he received a phone call. The caller told him that if he did not immediately leave the premises and never return, his family would be dead by dawn. The caller made it clear that he was serious and could deliver on his threat. The man took out his calculator and did some figuring. His net worth was about \$400 million, and he had invested \$35 million in the windmill project, about nine percent of his net worth. It was not worth it. He packed up his briefcase and left the premises, never to return. At our business he said, "I wish you the best, but you do not know what you are up against."

Those people had no reason to make things up. They were relating their traumatic experiences to people who would listen, not ridicule, and perhaps heed their cautionary tales. I now know how they felt.

One thing decried as an "urban legend" by the "[skeptics](#)" is the high MPG carburetor. I had an engineer friend who was designing and building his own high MPG carburetor. The basic flaw with today's carburetion systems is that they introduce liquid into the combustion chamber, and therefore the gasoline cannot completely ignite. Coming out the tailpipe are the results of combustion and uncombusted fuel, now completely vaporized as it exits the exhaust pipe. If carburetors can be designed to inject vaporized gasoline, the combustion will be more complete, and more energy released. All high MPG carburetors work on that principle, and are called vapor-injection carburetors. My friend was building a vapor injection carburetor and sent away for lists of patents on them. The ones he saw marketed were poorly designed, and he thought he could do better. He got back quite a list. Practically every patent was in the name of auto companies and other large corporations. He wisely abandoned his project.

One corporate coworker of mine was a U.S. Department of Justice investigator early in his career. He worked undercover, and sometimes he rotated into other duties. He was assigned one of the Justice Department's more mundane tasks: responding directly to public inquiries. It was crummy work, but somebody had to do it, and the low-ranking people got that duty. The phone calls came into the Justice Department and were recorded. One day he responded to a caller who said that an American automobile company had threatened his life. My buddy called the man back, figuring it was one more paranoid tale, but he could not lightly dismiss alleged death threats. He called and said, "Sir, what evidence do you have that (the car company) is going to kill you? The man replied, "Because they told me so. Showed right up at my house and told me so." When he asked why, the man replied, "Because I invented a carburetor that gets more than one hundred miles a gallon."

As the conversation continued, my buddy realized the story was becoming difficult to dismiss, and he decided to visit the man. He got on a plane and flew to his house. The man invited him to his garage to see his carburetor. The man said that the car company tried buying it from him. When that strategy failed, they threatened him. Then they tried both tactics at once, culminating with a man showed up with a half million dollars in cash in a sack, telling him to take it. He was told that if he did not take it, he would be killed. The investigator began taking the case more seriously, and asked what the man wanted the Justice Department to do. He said, "I want you to protect me!"

The investigator looked more deeply into the matter, and the man was apparently telling the truth. Here was the Justice Department's response, as delivered by my buddy,

"We cannot protect you forever, unless you move away and change your identity, which we can help you do, but if you try selling your carburetor again, they will find you. We suggest that you settle the matter with them."

The man settled with them, when given those options. He let them buy it out, and it was a pretty good deal, better than the earlier ones, probably because he got the Justice Department involved. The deal was for a million dollars a year for fifty years, payable to his heirs in the event of his death. My buddy told me that the oil companies funded it. My buddy was not a wild-eyed, paranoid lunatic. He was a corporate big shot who performed the investigation himself, somebody I worked with for five years. I imagine that man's carburetor was on the list of vapor injection carburetors that my engineer friend received. Another buddy who [worked for General Motors](#) told me a similar tale, as have others.

I had an encounter with [Tom Bearden](#), the leading theorist of free energy. [Richard Hoagland](#) presented a conference in Seattle in September 1988 in which Bearden and the astronomer Tom Van Flandern also presented their theories and data. It was an interesting conference. There were question and answer sessions. None of my many submitted questions were answered, but Bearden answered somebody else's question regarding the suppression of free energy. I have immense respect for Bearden's experiences in the field and what he knows. Bearden spent about twenty minutes answering the question, and when he finished the audience was stunned.

Bearden is aware of a global infrastructure that suppresses free energy research, development and marketing attempts. He said it was not the oil companies, per se. The oil companies were in the business of finding oil, extracting it, refining it and selling it. They do not bother themselves with suppressing alternative energy, at least not the efforts Bearden described. Bearden said that some oil company *owners*, however, were extremely vigilant, and they were behind the suppression of free energy. He said they had developed the global infrastructure that wiped out free energy innovations.

Bearden may not see the entire picture (if anybody does), as our experiences were related to the electric companies, not the oil companies, but Bearden's opinion is not to be taken lightly. Bearden said that the small group of oil company owners (Rockefeller agents are nearly guaranteed to be involved) have built a sophisticated organization that keeps its ear to the ground, keeping tabs on free energy efforts and making sure they never succeed. He said they were experts in "game theory." Bearden said he might write a book about it someday.

Bearden said they build dossiers on all free energy researchers and pioneers. They study each individual for weaknesses. Does a man have a weakness for attractive women? Does he smoke pot? What angle can they use on him? Can they direct an inventor toward his organization whose personality will clash with the others? Bearden said their game theory was a discipline of strategy, probability and outcome, whereby a free energy pioneer is similar to the king in a chess game, and maneuvering him into checkmate is the goal. Those people working for the oil company owners (it may extend to all energy companies) spend their careers derailing free energy threats. It is only when clandestine moves fail that they escalate the strategy. Death threats, prison terms and violence only happen when the game reaches higher levels.

Here is a good place to insert a quote from Machiavelli:

"And one should bear in mind that there is nothing more difficult to execute, nor more dubious of success, nor more dangerous to administer than to introduce a new system of things: for he who introduces it has all those who profit from the old system as his enemies, and he has only lukewarm allies in all those who might profit

from the new system. This lukewarmness partly stems from fear of their adversaries, who have the law on their side, and partly from the skepticism of men who do not truly believe in new things unless they have actually had personal experience of them."[\[23\]](#)

Bearden told the crowd of an event that happened to him, demonstrating how the secret teams operate. Bearden has been involved with numerous companies for years, trying to get free energy developed and working with many free energy inventors. He has seen working free energy prototypes, but the game theory boys have been actively mischievous, making sure that nothing gets far along. One company Bearden worked with was looking for money. A person approached their company, presenting his credentials as a high-flying financial whiz who could get the money, but was really a plant from the secret team. He approached the Justice Department, telling them that he hired on with Bearden's company, but as he got deeper into their organization he realized that they were crooks, going for a big scam. He told the Justice Department that he would help them nab Bearden and friends if he got immunity.

Unbeknownst to the Justice Department (likely) or Bearden and gang, the secret team plant pieced together a financial deal. It involved offshore bank accounts, relatively anonymous organizations and other shadowy aspects. It seemed like a relatively straightforward deal to get legitimate money, but probably came from a money laundering operation for the drug lords or CIA. The money was not "clean," but unless Bearden and gang performed a thorough investigation, they would never know. The plant put the deal together, but told the Justice Department that Bearden and friends were putting the deal together, and that he was the chump they hired to finalize it. The Justice Department was lured into the deal, rubbing their hands, ready to nab Bearden and his partners.

The secret team plant presented the deal to Bearden and friends, telling them that he found the money. They merely had to sign their name and the big money was theirs, making their noble free energy dream a reality. Bearden's funny bone quivered. It did not smell right. He had been there before and told the company president that the deal smelled suspicious, and to not sign it. They did not. In the next room were U. S. marshals, handcuffs ready, waiting for Bearden and friends to sign the documents. If Bearden and friends had signed the deal, they would have gone to prison for twenty years or so. They could nearly hear the groans from the secret team plant and marshals in the next room when Bearden's friends took his advice and did not sign.

Bearden told that story as an example of their non-violent Machiavellian methods to derail free energy inventors. Then Bearden told what happened when those "benign" game theory tactics failed. Only then would inventors and entrepreneurs get anonymous phone calls, telling them to stop their efforts if they wanted their family to live through the night. Their homes and businesses might mysteriously burn down at night. Bearden told of the friendly buy out offer. The inventor would be approached, asking if a few million dollars would be enough to buy out his technology. If the inventor or entrepreneur proved recalcitrant, he would get the offer he could not refuse: "If you don't take \$10 million to buy you out, we will kill you and your family." Bearden's stories sounded very familiar. He said that \$10 million was the going rate the last he knew, and knew an inventor friend who he thought was forced to "bite that bullet" fairly recently. They use big carrots and big sticks. How can they offer a carrot to a multi-hundred-millionaire building a [windmill farm](#)? They usually cannot, so they move straight to the big stick. I have also heard nightmare tales of them carrying through on their threats, where entire families have been murdered, their houses set on fire and then bulldozed. Those extreme measures can permanently derail certain free energy threats, but are only undertaken sparingly as they attract too much attention, as a world unaware of their suppression efforts is their best protection. Their methods have worked very effectively for at least the past sixty years.

For several reasons, I rarely use names when writing about these matters; the anonymous' fear for their health and their families' is a primary reason. Also, [naming names can get me killed](#). I have seen many lives

destroyed while on my journey, and many still live in fear today, all these years later. Several more people have to die before I can name many more names in my work, but it is now “safe” to mention [Sparky Sweet](#) by name, as his tale is famous and he died in 1995.^[24] Sparky was Bearden’s friend and a successful research scientist whose work may be partly based on that of General Electric scientist [Gabriel Kron](#). After retiring from General Electric, Sparky kept researching in his specialty of magnetism and eventually developed a prototype that generated a million times more energy than went into it. Even though some call him a “[maverick](#),” he was anything but, and went to great lengths to interest the energy establishment in his work. A limitation that plagues most inventors and engineers is their political-economic naïveté. R. Buckminster Fuller [wrote about that problem](#), and Sparky was naïve about what the energy interests’ reaction would be to mailing working prototypes to them. Their official response was silence. Instead of a tickertape parade for solving the world’s energy problems, he was hounded to a grim end. The Big Boys were interested in his work, all right, but their attention was limited to putting him under surveillance (including showing him pictures that they took of him through the walls of his home), sabotaging his efforts to bring his technology to the public and making death threats that eventually drove him into hiding and a lonely and possibly violent end.

Sparky’s fatal “heart attack” may well have been a natural one, but the spooks who use technology where they can photograph people through the walls of their homes can also shoot them with a microwave weapon which can induce a heart attack as they sit at their kitchen tables. Another free energy comrade may have experienced one of those spook-induced heart attacks while in his home, but he survived it and did not figure out what probably happened until years afterward. The spooks are experts at killing people and making it seem like an “accident” or “natural causes.”

One of Dennis’ technical advisors from the Ventura days was invited by the now-defunct International Tesla Society to visit Sparky in the late 1980s. Sparky lived in the Los Angeles area, not far from Ventura, where the fireworks began for us. When they met, Sparky was aware of what had happened to Dennis and voiced his sympathy. Sparky then showed Mr. Advisor his device. Mr. Advisor related to me the awe he experienced while watching it operate as ice formed on it. Sparky then related his experiences while developing his device and offered to make Mr. Advisor his partner, as Sparky knew him by reputation. Mr. Advisor, having lived through the Ventura nightmare, had no desire to repeat the experience and had retired from the alternative energy scene. He declined Sparky’s offer. Sparky still wanted the benefit of Mr. Advisor’s mind and lent him the textbook he wrote to describe his prototype’s function and the theory behind it (some of which is [on the Internet today](#)). Mr. Advisor was impressed, and told me that the math was particularly elegant.

When I heard [Steven Greer say in 2004](#) that the Big Boys told him that they paid off 10,000 people at an average of \$10 million each over the past sixty years or so, it made perfect sense to me. Ten million dollars times ten thousand people is \$100 billion in quiet money. I would not be surprised if the Big Boys spent another \$100 billion on their global surveillance efforts and snuff jobs. That is a pretty penny, but is a pittance at the level they play at: keeping an entire planet enslaved to the [scarcity paradigm](#). Greer also knows a fair number of billionaires, and when any have tried devoting funding or other help to a free energy effort, they have immediately received threats, the kind that [windmill entrepreneur](#) did. Again, it is difficult to dangle to effective carrots to the rich, so the Big Boys go straight to their big sticks when the rich poke their noses into the affair.

A high-profile friend of mine once received a demonstration from the spooks. He was transported, blindfolded, to an underground location where they demonstrated free energy, anti-gravity and other technologies, along with an explanation of why such technologies will remain underground for now. That friend has proven his integrity to me many times - he has not abused me with a fanciful tale. But very few can tell such a story, and virtually no one will tell it publicly. Those spook technologies my friend saw were probably developed at least partly by back-engineering “captured” extraterrestrial craft, the kind I have now [seen with my own eyes](#). What my friend saw neatly aligns with what [Steven Greer’s 400-plus UFO witnesses have to say](#).

Here is my final anecdote from the free energy milieu. A fellow traveler once told me about his early experiences in the free energy field. He had a mystical awakening while a college physics student, and used his new insight to create a working free energy prototype. Within hours of getting his prototype to work, he received a "men in black" experience where the spooks descended on his lab bench, confiscated his prototype and incarcerated him. He was dazed when released, wondering what the heck had just happened. He eventually became indignant and planned to redevelop his prototype in secret. Years later, he rented a hole-in-the-wall lab under an assumed name and worked in the utmost secrecy. Immediately after he got his new prototype to work, the same "men in black" treatment happened again! He then stopped trying to make prototypes, and his free energy path has since taken a different direction. When I heard him say that, I imagined that the Big Boys must have a technology that can detect when anybody on earth taps into that energy field. In 2005, I heard from somebody whose opinion I respect on these matters, and he said that, indeed, the Big Boys have satellites in orbit that can tell when anybody taps into that field. Then they send their "men in black" after them to eliminate the threat of free energy. I have seen other [weird evidence](#) of the global control mechanism that the Big Boys have developed.

The technology the spooks possess is apparently about a hundred years ahead of what is on the market today. The American military has technology that is "only" about ten years ahead of what is on today's market. The spooks apparently have technology that can create holographic illusions that the people think are real events, not virtual reality. That is in the "way out" category not explored much on this site, because I have presented information people can pursue for themselves, and have avoided impossible-to-demonstrate information that is usually derided as "conspiracy theory."

That all-too-real scenario of the Big Boys' global control mechanism can seem depressing, but if enough people began waking up and *caring* about something beyond their egocentric existences, the Big Boys could not maintain their tyrannical grip over humanity for long. Finding and educating those people was why I made my website.

The math and physics that underlie zero-point energy and other unorthodox alternative energy technologies are not subjects that average Americans can easily study. What laypeople *can* study relatively easily, however, is why Dennis' [heat pump](#) was the world's best heating system and why [my mentor's engine](#) was the world's best for powering an automobile. There are only so many hours in a day and years in a life, and I decided long ago to focus on studying the political-economic aspects of this situation, and this site's material is easily studied by laypeople, if they devote the effort to it.

This section will conclude with a quote from Victor Marchetti, the first ex-[CIA](#) employee to really go public with what they really do, and The Brookings Institute's advice to NASA in 1960. Marchetti said:

"The purpose of the international conspiracy is to maintain a workable stability among the nations of the world and for them, in turn, to retain institutional control over their restive populations. Thus, for these governments to admit that there may be...technological capabilities obviously far superior...could, once fully perceived by the average person, erode the foundations of earth's traditional power structure. Political and legal systems, religious, economic and social institutions could all soon become meaningless in the mind of the public. The national oligarchical establishments, even civilization as we know it, would collapse into anarchy. Such extreme conclusions are not necessarily valid, but they probably accurately reflect the fears of the 'ruling classes' of the major nations, whose leaders (particularly in the intelligence business) have always advocated excessive governmental secrecy as being necessary to 'preserve national security.' The real reason for the secrecy is, of course, to keep the public uninformed, misinformed, and, therefore malleable."[\[25\]](#)

Soon after NASA was founded, it commissioned The Brookings Institute to write a report on the social implications of space exploration. The report was delivered to NASA in 1960. The report ended with some shocking recommendations and observations.

The report warned of the implications of discovering signs of intelligent life elsewhere in the universe. It said that religious fundamentalists would be "electrified" by the discovery of life elsewhere, and said that scientists and engineers might be the most threatened of all by the discovery of intelligent life elsewhere, if it was significantly more advanced than ours. Those scientists and engineers:

"might be the most devastated by the discovery of relatively superior creatures, since these professions are most clearly associated with the mastery of nature, rather than with the understanding and expression of man. Advanced understanding of nature might vitiate all our theories at the very least, if not also require a culture and perhaps a brain inaccessible to the earth scientists."[\[26\]](#)

The report further stated,

"Anthropological files contain many examples of societies, sure of their place in the universe, which have disintegrated when they have had to associate with previously unfamiliar societies espousing different ideas and different life ways; others that survived such an experience usually did so by paying the price of changes in values and attitudes and behavior."[\[27\]](#)

Near the end the report stated,

"Questions one might wish to answer by such studies would include: How might such information, under what circumstances, be presented to *or withheld* [emphasis mine - Ed.] from the public for what ends? What might be the role of the discovering scientists and other decision makers regarding release of the fact of discovery?"[\[28\]](#)

There is little difference between the motivation to cover up UFOs, ETs or free energy.

Jail and Kangaroo Court

The local courts summarily dismissed our civil rights suits against the Ventura County sheriff's deputies. A few days after they were dismissed, Mr. Deputy and friends struck. Dennis was arrested with a carefully orchestrated media splash across the southern California media, and Dennis was thrown in jail on a million-dollar bail. That was in June 1988. The bail schedule for the "crime" Dennis supposedly committed was \$5000, but Mr. Deputy, who led the investigation, raid and arrest wrote a creative affidavit, asking that

Dennis' bail be raised to one million dollars. The judge rubber-stamped it.[\[29\]](#)

What happened in Ventura made the [Seattle experience](#) pale by comparison. Dennis was the catch of Mr. Deputy's career, and a few weeks after arresting Dennis, he was promoted to lieutenant, put in charge of the jail, and given an award for accomplishing the most difficult investigation in department history. At about thirty years of age, he was about the youngest man ever promoted to lieutenant in the department. He received a strange promotion, from a sergeant-investigator. Strange, until one realized that he personally oversaw his career catch, seeing to his comfort. His sidekick received a big promotion also. Mr. Deputy had his finest hour after arresting Dennis and imposing an astronomical bail, by far the highest of the jail's 1200 inmates, some in there for murder. Charles Manson had a million-dollar bail. Mr. Deputy had a steady stream of frightened employees kneeling in his office, begging for his mercy. Employees were making offers to [steal documents](#) from our office and deliver them to him, and he took them up on it! Such activities were documented in their investigative reports.

They were trying to put Dennis away for life. A civil law "violation" would be stretching it for a life sentence, so they concocted a few fraud charges as well. The case was fabricated from start to finish, with fabricated victims, fabricated charges, a law nobody had heard of, while law enforcement personnel committed [the boldest felonies](#). In order to make the fraud charges stick, they had to portray Dennis as a man selling no viable technologies. How they could do that, when he was selling the best heating system the world market had ever seen, with government certified test data, I had no idea. I had yet to find out how extreme Kangaroo Court could get.

As in Seattle, there appeared to be another energy-industry-hired saboteur in our ranks. He was a [dealer from Texas](#) who tried ingratiating himself into the inner circle from the day he joined. When Dennis was arrested, the man led a coup attempt to take over the organization. He easily manipulated the dealers and employees, and worked with the sheriff's department to keep Dennis in jail. Dennis' wife was trying to raise the bail, and Mr. Texas discovered who put up bail collateral and threatened or lied to all of them so they would pull their collateral. He lied to one rancher who was putting up his ranch for collateral (who had installed one of our systems in his greenhouse and was saving nearly \$500 a month with it) and told him that if Dennis was found guilty, the county would seize his ranch.[\[30\]](#) That was a spectacular, felonious lie, but if one works for the right people, it merits a raise, not jail. In a month of manipulation and rapacity, Mr. Texas and Mr. Deputy closed the company's doors.[\[31\]](#) Then Mr. Texas turned around and destroyed the fools who supported his power play.

In 2003, [Mr. Texas was arrested in a religious scam](#), demonstrating that he was probably a free-lance criminal, not a provocateur. Mr. Texas' tale provides an example of how difficult it is to distinguish paid provocateurs from the everyday criminals that thickly populate America's entrepreneurial waters, because they both act the same.[\[32\]](#) [Mr. Skeptic](#), the latest and most persistent assailant that Dennis has encountered, is probably also a free-lance assailant.

Destroying the business was partly to make sure Dennis had no money to defend himself. After the business was destroyed, Mr. Deputy made sure that nobody with technical expertise could testify at Dennis' trial. Demonstrating the viability of the technologies that Dennis promoted would ruin the railroad job.

Every inventor and technical employee and/or consultant headed for the hills when Dennis went to jail. Some of them crawled into Mr. Deputy's office on their hands and knees, begging for his mercy. Mr. Deputy convinced them all that testifying on Dennis' behalf would make them a suspect themselves, and most wanted convincing anyway, which was why they crawled into Mr. Deputy's office. Mr. Deputy told anybody who needed convincing that they might occupy the cell next to Dennis' if they did not work with the prosecution.

The most heart-rending situation was Mr. Researcher's. He lived locally and had unimpeachable credentials.

He saw what they did to his office during the raid, yet got on his knees and crawled into Mr. Deputy's office, saying every bad thing about Dennis that he could. Yet, he also knew the technology worked, and told Mr. Deputy so. Mr. Deputy started yelling at him, telling him that if he testified that the technology worked, he could expect to go to jail.[\[33\]](#)

Mr. Texas strolled through our offices the day [he successfully closed the company's doors](#). He told the employees that anybody who kept working there would be arrested. The employees stampeded out the door. They fled before payday, and were owed one-week's wages. Therefore, many stole anything that was not nailed down as they left. They stole our computers, office equipment, camera equipment, records and even equipment we had rented. Our machinist sold our entire machine shop, pocketed the money and left town.

Dennis' wife was desperately trying to raise the bail collateral. The bail bonding company kept changing their bail requirements, frightened by the obviously political nature of Dennis' incarceration. To try denying Dennis the chance to get out on bail, the Ventura County court set a new legal precedent. The SAMP charge had one precedent in California's history. The motion the DA filed to deny bail had one precedent in *United States history*. The DA filed a "Motion to Examine Sources of Bail." The only precedent in U.S. history was the case of a New Jersey drug lord who sold a million dollars worth of heroin to raise his bail. Equating a SAMP with heroin dealing, the DA filed the motion. The logic was that since the "crime" was related to the business Dennis ran, he could not use any money from his business, money he might have received in salary from his business, or any assets of any of his business associates! That ruling would put Bill Gates in jail with no chance of making bail.

In the meantime, I was not enjoying myself. The year before, in addition to working seventy hours a week, raising money, bringing in the technical talent and working for practically nothing (my personal income for those years was about \$4000 per year), I lent the company my American Express card to help the cash flow. When Dennis was arrested, his wife, in her desperation to get him out of jail, did not pay off my credit card so she could pay the wages for those "loyal" employees who stole everything that was not nailed down. When it all came crashing down, I was stuck with \$27,000 on my credit card. I tried working it out with American Express, but they did not want to, and preferred forcing me into bankruptcy, which I did before the year was out.

In the fall of 1988, Dennis was rotting in jail with his astronomical bail. I was driving to LA, working as a temporary employee. I was going blind in a basement, looking at microfiche all day long, reconciling a garnishment account for a huge security company. I was trying to scrape up enough money to file for bankruptcy, and was helping Dennis however I could. Dennis' preliminary hearing was coming up. Mr. Professor took in Dennis' wife and children and supporting the entire operation to try rescuing Dennis. He ended up spending hundreds of thousands of dollars of his own money. The events helped destroy his health and [nearly killed him](#).

Mr. Deputy's fraudulent investigation and prosecution was largely successful. He chased off every technical expert. One way the court kept test data suppressed was by ruling that the person who performed the testing would introduce the only admissible data. They made sure that Dennis had no money by destroying his company, so he could not afford to fly witnesses to the trial.

In Arizona a few years earlier a government-certified lab produced test data on our heat pump. One of their tests measured a COP of more than seven. They were close to California, and we might have gotten them to testify. Their data could have been a problem for Mr. Deputy's case, but he adroitly handled the situation. One of Mr. Deputy's sidekicks wrote a letter to that Arizona lab. He lied to them, telling him that Dennis was using their name and test data to pull off a scam, and the unit they tested was not the one that Dennis promoted. That was in the Big Lie category. It was the same equipment. Later, the president of the company that hired the lab asked them for a certified copy of their data. His company paid for the tests. The lab wrote him back a strange letter, stating that their attorney was advising them. They would only provide certified test data if he wrote a letter stating that the unit they tested was not the one that Dennis promoted, and that he had

no business connection with Dennis.[\[34\]](#) Then the lying letter the deputy used to scare them surfaced.

When the preliminary hearing was held, the nearly paraplegic Dennis attended it in leg irons. They violated Dennis' civil rights almost daily while he was in jail, as they tried breaking his spirit. Since Mr. Deputy was promoted to run the jail, Dennis received extra-special treatment. The prosecution apparently had the most extravagant preliminary hearing in county history. They flew in more than twenty witnesses from across the nation. They spared no expense, spending hundreds of thousands of dollars to prosecute Dennis. Meanwhile, the defense was broke. The only technical witness locally available was Mr. Researcher, but remembering Mr. Deputy's threats when he was on his knees, he quailed and hid to avoid the subpoena that Dennis' lawyer was trying to serve him.

That left me as the key witness. The prosecution tried intimidating me by subpoenaing me several times. Some people, looking out only for their own hides, tried convincing me to fall on my knees in front of Mr. Deputy myself, and beg for his mercy. Again, virtually nobody "got it." The reign of terror by Mr. Deputy was so effective that only Mr. Professor, a few other people and I were not frightened into running for the hills. With everybody gone, I became Dennis' star witness.

The defense was in such straits that I testified to [thermodynamics](#) and the technology. I could do a fair job of presenting it, but had no credentials that the court would recognize. Even so, I tried.

In retrospect, testifying was a pivotal moment in my life. I did not come to that conclusion until relatively recently. Life-changing events are not always obvious while one experiences them. I took a day off from work to testify, and spent several hours on the witness stand. I had never been in a courtroom before meeting Dennis. I had one heck of a first experience. When I walked into the courtroom, it was nearly empty. Just as I walked in, there stood Mr. Deputy, a few feet away. He was talking with the local newspaper's reporter. The reporter looked younger than me, and I was only 30. They were engaged in furtive laughter as I walked in. The local paper was particularly merciless and libelous in reporting Dennis' case. That cub reporter wrote most of the stories. The situation I saw made me think of an arrogant fraternity brother holding court with an obsequious pledge. They were softly laughing. Mr. Deputy was regaling Mr. Cub Reporter with the goodies on Dennis. It was a conversation along the lines of, "And let me tell you something else, buddy," with Mr. Cub Reporter's jaw dropping open as Mr. Deputy told him another sensational revelation about how crooked Dennis was. Mr. Cub Reporter was trying to contain his laughter, but not very effectively. They were trying to be quiet, but it was not that quiet, and their charade dominated the room as I entered. It was high theater.

I was gradually finding out about the county I was raised in. Ventura County has a reputation for having one of America's most corrupt judicial systems. A few years after I testified, Ventura County made news by acquitting the officers charged in the Rodney King beating trial, an event that triggered riots in Los Angeles. It also has one of most corrupt police forces, and even makes the top ten lists of people who track such things. The local newspaper is part of the corruption. I was discovering it firsthand.

It seemed that our attorney had been privately told what the program was. He was probably threatened with vengeance if he vigorously defended Dennis, but he never admitted to us what had happened.

The high theater that greeted me while walking into the courtroom was merely a warm-up. Ms. Prosecutor was a local law school graduate (the place nearly looked like a barn, and graduates of it often acted like it was one), and she prosecuted the case from the moment Dennis was arrested. Technically, he no longer had a million-dollar bail. In the first bail hearing the judge reduced it to a paltry \$750,000, which was still by far the highest bail of the 1200 county jail inmates. At that hearing, I was shocked to hear Ms. Prosecutor telling outrageous lies to the judge. If Dennis had ever told a lie remotely as big as the ones I heard her tell, he would still be behind bars. Soon after Dennis was arrested, his lawyer approached Ms. Prosecutor, asking her if they could work out a deal. Her response to Dennis' attorney was, "If he pleads guilty to all charges, I will see that he doesn't get the death penalty!"

Dennis' attorney made no preparations to defend Dennis. Dennis and his wife were doing all the work. They prepared cue cards for the lawyer to read, so he would ask the right questions. About the only time the lawyer spent on the case was in the courtroom. Dennis and his wife prepared about seventy questions to ask me. It was going to take a long time. As soon as I got on the witness stand, the judge broadcasted an obvious attitude. Prosecution witnesses go first and defense witnesses last in trials, to favor the innocence of the defendant, as the most recent testimony the jury would likely remember best. I was the defense's star witness, and could testify to many practices that would have determined any fraudulent nature regarding our business. I handled all the money and helped run the business. My testimony would be key to the issue of fraud, but as soon as I got on the witness stand, the judge made a statement regarding how long the trial was taking, and how he hoped it would not take long for my testimony. The prosecution spent endless time and money with their witnesses, while the defense had to be quick about it.

The prosecution had an "impressive" list of witnesses and "victims." The raid happened on January 14th, and Dennis was not arrested until late June. In the intervening months, Mr. Deputy and his pals took our customer list and called all our customers. They were fishing for "victims." As in Seattle and Boston, in Ventura the investigation did not begin because victims complained to the authorities. There were no victims, but when there are no victims, they must be manufactured. That was what Mr. Deputy spent the majority of those months doing. They called all our customers, asking them leading questions about their satisfaction with our company.

The ranks of Dennis' organizations have always been filled with constitutionalists and other political activists. They knew we were not only about making money with a free energy machine. They knew that our project might be one of freedom's last chances, so many customers received Mr. Deputy's fishing expedition rudely. They told him where he could stick his "investigation," particularly ones outside of California, knowing the long arm of his corruption could not reach them. His response was to uncooperative "victims" was threatening them, telling them that if they continued to participate in the organization, they would be suspects themselves. Mr. Deputy was trying to scare away anybody associated with the company, threatening them with jail. He told Dennis' salesmen that they could spend sixty years in prison for working at our company.[\[35\]](#)

After his campaign of cajoling and intimidation, Mr. Deputy rounded up nine "victims" from our hundreds of customers. They worked through the customer list in alphabetical order. One day we would hear from a customer whose last name began with an "A." The next week we would hear from a customer whose last name began with a "C," telling us that Mr. Deputy (or sometimes *the sheriff himself*) had contacted them. Who were the nine "victims?" One "victim" had his check lost in the raid, so he never paid for his materials. Another "victim" was from our early days in Ventura, before we had our operation running smoothly. He lived locally and we lent him the materials, telling him he could bring them back if he did not like them, or pay for them if he did. He was one of the many thieves we encountered. He took our materials, then reneged on his promise to either return them or pay for them. We made numerous calls to him. Every time we called, he told us a cheap lie, such as "The check is in the mail." That charade went on for about nine months. We chalked it up to experience. He had actually *stolen* our materials, and he was one of the victims.

Another "victim" bought our materials and liked our technology so much that he set up a competing organization, trying to lure away our customers to his operation. His victimhood was an attempt to wipe out the competition. His testimony was ironically the only one accepted by the court where somebody testified regarding the high COPs our system got. He testified for the prosecution, telling the court that the system he bought from us and installed got a COP of nine, and that he was trying to build a free energy machine himself using Dennis' technology. He was quite a victim.

Before the raid, we had a policy of a ten-day free trial. We would Federal Express our materials to the customer. If in ten days they had not sent back the materials (at our expense), they bought it. That is one of the few places where the prosecution might have had a legitimate case. Depending on the state, consumer protection

laws can require that the refund period be extended to months, not only ten days. I doubt they even tried that angle. Since all of our records were seized, we had no idea of the status of many orders. In the raid's wake, we were battling just to keep the doors open. After about six weeks of trying to operate with my records gone, I began going into a general physical collapse, caused by the stress. I was looking like a raccoon again. We were understandably slow in getting out refunds to customers who we had no record of.

Another "victim" purchased his materials just before the raid. Through records on our computers, we at least had the phone numbers of many of our customers. We called all our customers we knew of, asking them to send us whatever documentation they had. We called him, and when he heard what had happened he called Mr. Deputy to find out more. It is easy to imagine how that conversation went. After talking to Mr. Deputy, the man returned his materials. In the pandemonium of trying to survive the raid, that man who returned his materials did not get a prompt refund. He called our office, saying that Mr. Deputy had talked to him, asking him to sue our company. I talked to the customer. He told me he had returned his materials within the ten-day trial period, but did not have his refund yet. I told him some of our problems, and said I would expedite his refund if I could find his properly returned package in our building. I hung up the phone, searched our office, and found his properly returned materials. I prepared a refund check and overnighted it to him. I enclosed a note with his refund check, apologizing for the delay in refunding his money, and asked him if he could send us a note, telling us what Mr. Deputy told him. The man paid for his materials, returned them according to our terms (when scared into it by Mr. Deputy), and we refunded his money, as we did for every customer who properly returned the materials. That man was one of the nine "victims."

Mr. Deputy visited some of our customers; the ones close enough to easily drive to. Mr. Deputy thought he would be more effective in manufacturing victims if he personally met them. One customer lived in the San Fernando Valley, about an hour's drive from Ventura. The San Fernando Valley is in Los Angeles County, so was out of Ventura County's jurisdiction. Mr. Deputy showed up at the man's house unannounced and began asking his clever and leading questions. Mr. Deputy was an expert manipulator, which was partly why his career was so successful. The man in the San Fernando Valley had not paid for his materials (he asked us to not cash his check, and we did not), believed in what we were doing, and thought Dennis was the finest human being he had ever met. He became increasingly irritated with Mr. Deputy's line of questioning, and told Mr. Deputy the interview was over, and further told Mr. Deputy to get off his property. That man became another "victim." The man did not even know he was a "victim." He was shocked when asked why he was pressing charges against Dennis. He said he did not think he was a victim, and he thought it was horrible what they had done to Dennis. That victim was quickly crossed off the victim list by the prosecution.

Of the nine "victims," only one truly acted like a victim, and his story bears telling. After the raid, we realized what laws they were using against us, and we got educated. The SAMP law was about making disclosures. The law provided a "cure" if it had been violated. Our crime was not filing a one-page form with the Secretary of State and paying fifty dollars. That was the crime, and that is what they "got" Dennis on. He spent two years behind bars for that "crime." Part of the "cure" was offering refunds for inadvertent violations of the law. Dennis had a "Cure Tour" a few weeks after the raid, offering refunds to those who thought they deserved them.[\[36\]](#) I attended one in Los Angeles. Dennis told the story of what happened, what he was planning on doing, and letting anybody out who wanted to. When Dennis speaks at events like that, people regain their faith and support him. It is one of his talents, for better or worse. If he had the bent of a Hitler, he would be a dangerous man.

At that Los Angeles "cure" meeting, during the question-and-answer period, one man looked like an off-duty deputy and began making rude and accusatory remarks about Dennis. He sounded like an abrasive lawyer. People were shying away from him as he made an ass out of himself in public. He had purchased our materials and wanted his refund. The event was for people to get refunds if they wanted them. The man was not satisfied with merely getting his refund, but made a scene about how crooked he thought Dennis was. He was even quoting what Mr. Deputy said about Dennis. In another venue, the crowd might have pounded him to a pulp, but we ushered him from the room and told him that if he sent his materials to our office, he would

receive his refund. He then made the strange remark that that was all he wanted. He acted like the [BPA hit man](#) and other provocateurs I have seen. He reminded me of the ruthless kind I often saw in Los Angeles [during my early CPA days](#). Being in his presence was decidedly unpleasant.

A few days later, I accepted the return of his material and gave him his refund. He showed up with his wife. Because I was about to give him his money, he wore an unctuous air, heaping on the fake friendliness a lemon-selling used car salesman might use while closing the rip-off deal. My skin was crawling. His wife made some compliment about a picture on my wall, and I affably handled them, trying to get them out of the office as quickly as possible. One deals with that type as cautiously as possible. At the preliminary hearing, he acted like the biggest "victim" of them all. He apparently was as obnoxious on the witness stand as he was at the "cure" meeting. Getting a total refund was not enough, the man reasoned. He had spent hours reading the material we sent him, and thought he should be reimbursed for his time spent reading the material, at a very high rate per hour.

Dennis was sitting there in leg irons with a \$750,000 bail. He had been in jail for five months at that time, and that man had the gall to claim a right to be paid for his time in reading Dennis' material. If anybody was a plant from the sheriff's department, it was that man. Those were the "victims" that Mr. Deputy hung his hat on, going for life imprisonment for Dennis.

Ms. Prosecutor asked me if I had ever heard Mr. Researcher "tell Dennis he was going too fast?" Immediately the defense objected, as that kind of question Mr. Researcher should have answered, not me. I am not a lawyer, but it had something to do with hearsay, I believe. The judge overruled the defense's objection and ordered me to answer the question. I truthfully said, "No." The prosecution wanted a different answer. A few seconds after I answered, the judge said, "I reverse myself. Strike that testimony from the record." It was the wrong answer for the judge too. It was my first experience on a witness stand, and I was in Kangaroo Court. A year later, in the heat of other grim situations, Ms. Prosecutor accused me of perjury for that answer I gave, the one stricken from the record by the judge.[\[37\]](#)

Dennis' lawyer would not even read the cue cards properly. After barely asking me any questions about the business, he said, "I have no further questions for this witness." There was a surprised snort from Dennis, and he almost strangled his attorney, whispering fiercely, and his attorney said, "I'm sorry your honor, I have a few more questions for this witness." Then the judge became piqued, telling Dennis' attorney that he would allow a few more questions, but that time was short and they needed to get me off the stand as quickly as possible, to stop wasting the court's time. I left the witness stand having answered only a small percentage of the questions prepared for me.

That situation was merely the backdrop for my pivotal moment. The part that changed my life was Mr. Deputy's performance. While I testified, Mr. Deputy sat next to Ms. Prosecutor. The way the courtroom was arranged, he sat directly in front of me, about twenty-to-thirty feet away. Looking straight out, I looked directly into his face. Apparently, the proceedings were not rigged enough for Mr. Deputy. He tried intimidating me as I testified. His charade with the reporter was only a warm-up. When I testified about thermodynamics, the prosecution protested. Then Ms. Prosecutor thought she could show how ignorant I was, and asked me what I knew about [Carnot and thermodynamics](#). My answer showed that I knew a little about it. Mr. Deputy made faces at me while I testified. His reaction after I testified about thermodynamics was a theatrical expression that conveyed, "Gee, the kid knows something. Give him a point."

Before my testimony on thermodynamics, Mr. Deputy made a number of disdainful reactions. His sidekick was sitting in the public seats behind him. When I made a statement, Mr. Deputy would dramatically turn his body around, put his hand next to his mouth, and act as if he was talking to his sidekick. His body would shake as if he was laughing. When he finished making his comment, (nearly silent, but not quite) he would turn back to face me, always trying to wipe a feces-eating-grin off his face, but never quite succeeding. It was never to the point of disrupting the proceedings, but he was playing Marcel Marceau, my pantomiming adversary as I

was testifying. If a child did that in a fifth grade classroom, the teacher would swiftly put an end to it. In Kangaroo Court, the judge and Ms. Prosecutor pointedly ignored his imbecilic behavior. Sometimes he would snort when I said something.

My future wife took the afternoon off from work to watch me testify. Other than Dennis' wife, Mr. Cub Reporter and Mr. Sidekick, my future wife was the only person in the public seating. Mr. Deputy was not jumping into the air and doing jumping jacks, but sitting directly in front of me, which was surely no accident. There was a brief recess while I testified, and I asked my wife if she had noticed Mr. Deputy's gyrations. She did not, as she was far more focused on me. I told her to keep an eye on him while I testified after the recess, and she could see what kind of trial it was. Mr. Deputy did not disappoint her. His faces, gestures and theatrical asides to Mr. Sidekick escalated after the recess. His sweeping gestures even took in Mr. Cub Reporter. The newspaper articles that Mr. Cub Reporter wrote about the trial were virtually dictation from Mr. Deputy. The lies were thick and furious.

The last question I was asked was how much money the company took in during a certain span of time. When I said about \$2 million, Mr. Deputy nearly leaped out his chair, turning his body all the way around, gesturing to Mr. Sidekick and Mr. Cub Reporter. Mr. Cub Reporter even began laughing, so my wife said. Apparently, they were trying to make a connection between the gross revenues of a company and how much money Dennis "stole." It was an ignorant sentiment, repeated in Mr. Cub Reporter's next article, which was published the next day. The term "gross revenues" does not mean it went into Dennis' pocket, which was one of the many malicious rumors that Mr. Deputy had circulated. He was telling everybody that Dennis had jammed millions of dollars into his pockets somehow. It was an outrageous lie, which anybody with any business experience knows well.

Mr. Deputy's performance was in November of 1988. After the pitiful defense was finished, the judge remanded the case to trial, and then came the wait until trial. At that point, after seeing how the preliminary hearing went, it looked like Dennis had a snowball's chance in hell. I was still working as a temporary employee, looking for permanent work in LA, getting my bankruptcy filing prepared. Mr. Researcher fled into hiding to avoid the subpoena, and was in hiding for months. It was a grim December. I found work in Los Angeles as an accountant in a [medical lab](#), and began work the week before Christmas, the day after I filed for bankruptcy. There were several betrayals by my friends and family during those days, and some were major; it was a grim time.

A few days later, it was Christmas. Dennis is a literalist Christian, which has something to do with his migrant farm worker upbringing. I will take the loving parts of any religion, and when Dennis is not attacking homosexuals or feminists because the Bible says he can, he has the love part of Christianity down fairly well, about as well as I have seen. His stay in the county jail was not pleasant. Dennis was about eighty pounds overweight when he was arrested. During his life he has often fasted, usually for the biblical forty days. For his first month in jail, Dennis was just trying to survive. In jail, the meals had a calorie intake barely above the starvation level. That was partly because of the county's corruption; the money not spent on prisoner food made it into a government official's pocket.[\[38\]](#) Hunger was a constant for the prisoners.

Dennis fasted his first month in jail, but went to all the meals and gave his meals to the biggest, meanest guys there. He made friends fast. Dennis is so charismatic and amazing that within a month he was running his cellblock. Within a month, he had transformed his cellblock from a place of fear into a dormitory atmosphere. Dennis, as his wife said, blooms where he is planted. He figured that as long as he was in jail, he could do his Christian ministry there. He had a welcome wagon for new inmates. He saved up his chocolate ration to give to new inmates who were kicking heroin cold turkey, as chocolate helps the withdrawal symptoms. Mr. Deputy did not want Dennis getting too comfortable. After a month, just when Dennis had transformed the environment in his cellblock to a dorm atmosphere, he was suddenly moved to a new cellblock, where he knew nobody. That was a violation of Dennis' rights, but it was simply part of the psychological warfare Mr. Deputy and his minions were waging to break Dennis' spirit in jail. Somebody

paid the county officials handsomely to keep the heat on Dennis, but some of his treatment was probably just sadistic, free-lance malice, engaged in by those who ran the jail.

Dennis also became a jailhouse lawyer, going to the jail law library as often as he could. He filed more than one hundred legal motions while he was in jail. He also eventually ran his new cellblock. After the farce of a preliminary hearing came and went, it looked bleak. Dennis wrote the story of his adventures after the preliminary hearing. It became his book *My Quest*.

With Christmas rolling around, Dennis was his usual extravagant self. He was going to throw a Christmas party for his inmates, and then tell them about his interpretation of Christmas. There were about thirty-five inmates in his cellblock. Mr. Professor contributed \$50 so Dennis could throw his party. It worked out to about \$1.50 per inmate. The jail had a commissary, and inmates could have an account to buy things in it, such as cigarettes, candy, paper, pencils, etc. Dennis was going to buy goodies for Christmas gifts for the inmates. The commissary account had a limit of \$30. Dennis had it split \$30 on his account and \$20 on a cellmate's, and they planned the party. Suddenly, Dennis' inmate was transferred to another cellblock, and Dennis was thrown into solitary confinement. He had violated rule number 38, which said he could not transfer money or goods to another inmate.[\[39\]](#)

As with the SAMP law, the intent of the law and its execution by evil-minded people are like night and day. They were turning down the screws on Dennis, to break him for trial. They also knew he was writing a book that did not flatter them. They tried it on the wrong man. Dennis was able to make collect phone calls, and he talked to me from solitary confinement. He told me how peaceful and quiet solitary confinement was, and how he got more writing and research done in solitary. Ministering to his inmates was taking his time, and solitary was like a vacation for him. I have never met another like him.

It is Darkest Before the Dawn

Meanwhile on the outside, I was driving to Los Angeles every day. When I drove home, I went right by the county government complex. It was a park-like setting, but I knew Dennis sat in that tall building in the distance, and it appeared that he would never live to see this side of the bars again. It was at about that time that I had my worst moment. It was the most horrifying part of my journey so far. I am an avowed pacifist, and have not touched a weapon since I shot a BB gun as a child. At that time, I found myself thinking that getting a shotgun and "cleaning up" Ventura might not be such a bad idea. That I could even be brought to have thoughts such as that, however fleeting, was the most horrifying part of my entire journey. I immediately dismissed such thoughts as a product of my pain, but that I could be reduced to even imaging those scenes of violence was about as soiled as I have ever felt. I had gone far past losing my innocence. I was staring into the bowels of hell, wondering what it would vomit up next.

I decided to do whatever I could to save Dennis' life. During those dark days, Dennis' wife encountered other victims of Ventura County's legal system. Dennis was in good company. The most prominent person fighting the Ventura County corruption was [Gary Wean](#). He became a friend of Dennis' wife in their common plight. Gary was a policeman who wrote a book about his adventures, published the year before Dennis was arrested, titled *There's a Fish in the Courthouse*. I obtained a copy through Dennis' wife and began reading. I was almost afraid to go to bed with the light off after reading it.

Gary was a policeman who worked in Los Angeles for a decade, then moved to Ventura County, then back to Los Angeles to become an investigator for the LA District Attorney's office. He did that for seven years, and then moved back to Ventura County in 1964. According to Gary's book, political murder was common in Ventura County. From Dennis' wife I got his telephone number and called his house. I talked to his wife, who was brusque until I told her who I was. Then she became friendly, telling me that they did not trust anybody

who called them out of the blue. Gary was at a meeting that evening, trying to help some local people prevent a land grab by Ventura County's plutocrats. He went out of his way to meet me that evening.

We talked awhile about Dennis and our experiences. Gary told a little about his adventures, and said that the only reason he was still alive was that he never broke the law. He was an old time policemen who believed in the force of law and its potential for justice. Gary believed the law could work if properly enforced, and he had seen it all. While he could not claim many victories while challenging the legal gangsters, he believed he someday might.

I asked him what I could do to help Dennis. I said I would go to Washington D.C. or wherever I could to meet with somebody in government, any government, to intercede in the legal gangsterism that kept Dennis behind bars. He said, "There is nobody anywhere in American government who will help you. They are all in the same club. If you are going to help Dennis, you will have to do it yourself." Gary suggested that I refile my civil rights lawsuit in the local court, and that it might put heat on them. Gary had been waging lawsuits against the legal gangsters for many years. Gary had to become his own attorney because no attorney had the courage to help him confront the awesome corruption. While I respected Gary's opinion, I did not have the stomach to try taking them on in their own court, for civil rights violations.

They were going for a fraud conviction, and would have to portray Dennis as a snake oil salesman selling no viable technologies. The SAMP act was a civil law, and they were not going to put him away for forty years because he did not file a form. I did not think that even they could pull *that* off. Mr. Deputy also knew that, which was why he intimidated all the technical people that surrounded Dennis. There were several experts with impeccable credentials, and if any one of them testified, the legal gangsters would have a hard time making the fraud charges stick. Although his highly paid experts fled, there were others around the country that had experience with Dennis' heat pump and could credibly testify to its performance. At the preliminary hearing, the "experts" the prosecution paraded onto the witness stand included: two ex-Seattle employees who tried [extorting money](#) from us the year before and did not [understand the technology](#) well, and one even demonstrated his [amazing ignorance](#) on the stand; an electric company consultant who had never seen Dennis' heat pump run before, but testified that it would not work; and a man whose experience was limited to once testing a broken system.

If Dennis had competent expert witnesses testify at his trial, I thought he had a chance to beat the fraudulent fraud charges. I doubted that Dennis had much of a chance, whatever I did. Dennis himself was writing that he would be murdered behind bars, never living to be free again.[\[40\]](#) I could not stand by and do nothing. By that time, Dennis was out of solitary, but they were turning the screws down harder each day. They had him hog-tied in jail. They even began threatening him.

With little hope of getting Dennis out of jail, I did the only thing I could: I mortgaged my life. Mr. Professor was busily trying to keep the business alive, and was housing Dennis' family and doing everything he could. Mr. Professor taught at the local college more than twenty years and was one of Ventura's most respected people. At the college, he was beloved by all. He was a millionaire before he met Dennis, and what happened to Dennis was the most educational and horrifying experience Mr. Professor ever had. I was raised in Ventura, but Mr. Professor was a pillar of the community. He had a hard time believing what he was seeing. As with me, the more corruption Mr. Professor saw, the more determined he was to stand up to it.

In late February of 1989, I approached Mr. Professor. I asked him if he would mortgage his home and lend me \$50,000 so I could pay for some kind of defense for Dennis. Mr. Professor said that he would have to ask his wife.

The next week we met at his office, and Mr. Professor and his wife said they would lend me the money. I was going to borrow \$50,000 from them at 10% interest to make a legal fund for Dennis. When they agreed, I was torn by several emotions at once. On one hand, I was relieved that I could help Dennis. On the other, I

had just guaranteed that I would be spending the next ten years of my life paying off the loan, and it probably would not help Dennis at all.

After the preliminary hearing, they stepped up the heat, finding Dennis "guilty" of an infraction nearly every day. He had not had one during his first six months in jail, but he was suddenly being written up every day. It was part of a plan to forestall any chance of Dennis getting out on bail, making him seem less than the model prisoner. When Dennis had an attorney, the jail was caught opening his legal mail. Private mail between an attorney and his client is a part of the lawyer-client privilege, and one of our legal system's supposedly sacred cornerstones.

After the preliminary hearing, Dennis' lawyer said that he needed *big* money to continue representing Dennis, and quit. Dennis was his own attorney after that. Dennis was also writing *My Quest*. The jailers used the excuse that Dennis wrote about his God in his manuscript, which they creatively interpreted as a religious tract, to announce they would read everything that went between him and the outside world, to limit his proselytizing. All his phone conversations on the jailhouse phones were recorded, and all his mail read. The deputy who ran the jail personally read all of Dennis' writings, bragging to Dennis' wife that he could read thousands of words per minute. Dennis had no private contact with the outside world. Mr. Researcher was still in hiding at that time.

During the next month, the tide began turning. When the case was remanded to Superior Court, Dennis finally had one judge presiding over his case. Dennis previously made eight bail appeals, all summarily rejected. They all upheld Mr. Deputy's astronomical bail request. The Superior Court judge who inherited the case had a legal tarbaby on his hands. If Dennis was convicted, that judge would be responsible for how his legal treatment went. We believe it was no accident that that particular judge got Dennis' case. Dennis said he was the smartest judge he ever saw, and was the smartest one in the county.

Mr. Deputy's million-dollar-bail affidavit was an exercise in creative writing. His rationale was a combination of misrepresenting Dennis' "criminal" past, puffing up his own credentials as an expert in investigating fraud, and the highly strained logic of Dennis' victims helping hide him from "justice." Mr. Deputy theorized that the very people Dennis was defrauding would create a national underground network to hide Dennis from the law. It was one of the most ridiculous things ever written, but in Kangaroo Court all those judges rubber-stamped it. The DA's precedent-setting "Motion to Examine Sources of Bail" was one of many irregularities in Dennis' treatment.

The judge had a problem. Mr. Deputy and friends were not letting up in jail. The prosecution tried burying the defense in sheer paperwork. The prosecution introduced ten thousand pages of documents into discovery evidence. Documents that [Dennis' employees stole](#) when the company went under made up much of it. With Dennis being his own attorney, he had to sift through the discovery evidence to see what they were throwing at him. The jail was a state-of-the-art facility, and building the County Center was actually a huge defrauding of the Ventura County taxpayer, as chronicled by Gary Wean in *There's a Fish in the Courthouse*. The jail was a brand new facility of steel and concrete. If there were one building that was the *least* likely to burn down in Ventura, it would have been the new county jail.

One of the jail's "rules" was that an inmate could only have one cardboard box for his personal papers. It was like a box that oranges come in. With ten thousand pages of discovery evidence, that Dennis' wife had to copy at her own expense at the courthouse (paying to copy documents stolen from us was one of the many ironies of those days), one box would not hold all the documents Dennis had to sort through. Imagine that situation for a moment. They had rules that said he could only have one box, but they introduced evidence that took up two boxes. The jail was adamant that Dennis could only have one box. That recalls the old Soviet joke of "Have you stopped beating your wife?" Dennis was damned, whatever he did. One of Dennis' many legal motions was to have two boxes to hold copies of the evidence being used against him. The DA and jail heatedly contested his motion. Why? They said that two boxes would be a fire hazard and might jeopardize the jail.

The judge granted Dennis' request over the heated objections of Ms. Prosecutor. It was about Dennis' first legal "victory." After he won his "big victory," the man who really ran the jail came to Dennis' cell (he was also the man who read all of Dennis' correspondence with the outside world) and told Dennis that if the jail burned down because of Dennis, he would take personal vengeance on him (a thinly-veiled threat to his life).

We will probably only know a fraction of their evil deeds during those days. For instance, we know they tapped our telephones. One technique of phone taps, particularly illegal ones, is to use the phone line to transmit the recorded conversations to a central recorder. A friend from childhood, who worked at Dennis' company, heard a conversation of his from the day before, being transmitted to the central recorder. He happened to pick up the phone while the transfer was in progress. He was stunned. If *his* phone calls were being recorded, it is guaranteed that mine, Dennis', Mr. Professor's, Mr. Researcher's and others' phones were also tapped. That phenomenon of phone lines being used to transmit the recorded conversation, and somebody coincidentally picking up the phone while it was being transmitted, is not all that uncommon. I have heard of it before, but with *illegal* wiretaps. My phone has probably been tapped for years, and is probably being tapped today. While they were tapping phones around Ventura County, they also scrutinized every telephone conversation Dennis had, and were reading all his mail in or out.

Years later, Mr. Professor regularly received calls from men who were cellmates of Dennis' (Mr. Professor's home was Dennis' only phone number for years). The men called to tell Dennis that they had trod the straight and narrow ever since meeting Dennis. They were calling the man who changed their lives.

With my legal fund, Dennis was able to hire an attorney again, but we could only get a young lawyer who had never worked in a courtroom before. However, it did allow Dennis to have private mail going in and out again, and regained him a sliver of privacy. The jail had already been caught opening his legal mail. The judge had reprimanded them for doing it, and ordered them to stop.

In late March of 1989, the judge did something very strange. Dennis had been winning minor motions, such as getting two boxes for his papers, but one day in the middle of a hearing regarding other motions Dennis made, the judge asked Dennis why he had not brought up the issue of his astronomical bail. Dennis was stunned. Dennis had already made eight bail appeals, all summarily rejected, except for the first time when the judge lowered it to \$750,000. Dennis replied that he was not ready to ask for a bail appeal just yet, because he was trying to assemble his strongest possible case, trying one last time to get out of jail before trial. The judge said, "Then I am calling for my own motion to look at your possibly excessive bail." Something was up.

Dennis saw his opening and ran for it. He had his wife assemble all that she could for his bail appeal. She rounded up affidavits regarding various threats that Mr. Deputy made to employees, witnesses and anybody who might obstruct their plan for putting Dennis away. Dennis' wife was his legal runner, which among other things allowed her to spend more than the half-hour a week of visiting time that the jail allowed its prisoners. A few days before the scheduled bail hearing, Dennis' wife had a phone conversation with Dennis. She told him that she was sending him affidavits regarding the threats Mr. Deputy had made to people during his reign of terror.[\[41\]](#) She was sending it in his legal mail package.

There were jail procedures for delivery of the legal mail. It was delivered directly to the inmate, bypassing the normal mail delivery. Dennis waited futilely for the legal mail. It was not delivered. It was delivered hours later, with the regular mail...and it had been opened. When the deputy delivered the opened package, Dennis made a scene, yelling for his fellow inmates to come witness the delivery of his opened legal mail. They all signed a statement that they witnessed it. The deputy who delivered the mail was shaken up. Dennis had one more big motion to add to his bail appeal. They were caught red-handed doing something the judge had already ordered them to not do.

I was at the bail hearing to testify to Dennis' character, to help make the case that he was no threat to jump bail. Mr. Professor and his wife were there. Mr. Deputy showed up with *his own lawyer*. The judge opened

the hearing by saying that there were several motions Dennis had made about the jail's misconduct and Mr. Deputy's, which he would consider. Mr. Deputy's lawyer ate humble pie, apologizing profusely for opening Dennis' legal mail and claiming that it was an innocent mistake. He was even going to produce a deputy to admit to the "clerical error" in opening Dennis' legal mail, testifying that nobody saw the package's contents except him. The judge thanked him for his apology, and said he was sure it would not happen again.

Then he said that it seemed that Dennis' "victims" appeared to have paid \$20,000 to Dennis' company (it was actually \$14,000). The judge then said he was lowering the bail to Dennis' own recognizance, with a \$20,000 restitution deposit posted to reimburse the "victims" if Dennis was found guilty of fraud. Mr. Professor said that when the judge made his announcement, Mr. Deputy turned white as a sheet, looking as if he had swallowed his shoe. The next day, April Fools Day as fate would have it, Mr. Professor took \$20,000 from my legal fund and paid Dennis' bail.

Meanwhile, Dennis was saying farewell to his inmate friends. Although they threw Dennis into solitary confinement for trying to throw a Christmas party, Dennis had an Easter celebration in jail, and even had an Easter egg hunt for the other inmates. Dennis came from the hearing and said, "The judge reduced my bail to my own recognizance!" His inmates gave a cheer and hoisted him on their shoulders.

Dennis again documents events from there quite well. The only way Mr. Deputy and friends could put Dennis away for life was to have him hog-tied and unable to defend himself from their fabricated charges. When he got out of jail and hired Mr. Big Time Attorney, the fraud charges were soon thrown out. As the fraudulent nature of Mr. Deputy's investigation became clearer, from fabricated victims to threatened witnesses to intimidated folks such as the Arizona test lab, Mr. Deputy's career-making case began crumbling.

Mr. Big Time Attorney had a national reputation. He was the leading attorney in the United States in defending U. S. citizens against the depredations of the Internal Revenue Service (IRS). Mr. Big Time Attorney specialized in taking on the IRS, and one of his cases [went to the U.S. Supreme Court](#). That case dealt with criminal activities engaged in by IRS agents while prosecuting his client. In a case with parallels to Dennis', the Supreme Court ruled that the IRS agents *had* committed felonies in their pursuit of Mr. Big Time Attorney's client, but the Supreme Court ruled that although they had committed crimes, it did not mean that the case would be thrown out. The IRS agents would be prosecuted separately, independently of the case against Mr. Big Time Attorney's client. That alone was Orwellian, although Supreme Court Justice Thurgood Marshall notably dissented from the court's majority position. The criminals are admittedly doing the prosecuting, but the court ruled that their criminal behavior could be separated from their prosecutorial behavior, not tainting the government's case. Such Supreme Court rulings are not unusual. In 1992, the U.S. Supreme Court ruled that the U.S. Justice department was legally kidnapping people from Mexico because the extradition treaty with Mexico did not specifically say, "[no kidnapping allowed](#)." Their intervention to put [George Bush the Second into the presidency](#) is simply another instance of the Supreme Court's criminal behavior.

Mr. Big Time Attorney had to go to trial, his client was found innocent, and the IRS agents were found guilty, ruining their careers. Mr. Big Time Attorney was in the process of moving to San Diego from out of state, and Dennis took a day and went to see him. While other big name attorneys were asking for \$250,000 up front to defend Dennis, Mr. Big Time Attorney was so impressed with Dennis' case that he only asked for a \$10,000 retainer. That was almost exactly what was left of my original \$50,000 loan from Mr. Professor. Mr. Big Time Attorney later told me that what originally drew him to Dennis' case was the million-dollar bail. "Is a SAMP a deadly weapon?" he said. "Was Dennis beating people over the head with his SAMP filing?" Mr. Big Time Attorney took Dennis' case more to sue the county for violating Dennis' civil rights than winning Dennis' trial, which he thought would be a joke to win.

Mr. Big Time Attorney gave us another peek into what happened behind the scenes. I do not know all the stories, but I can relate the ones that I heard. For instance, about a month before the raid, when we were flying high, an attorney flew out from Virginia to give us \$10,000 for two full kits of materials. He was a friend of

Ed Meese, who was the U.S. Attorney General at the time. I have little admiration for anything that went on in the White House during the Reagan-Bush years, but Meese was the nation's highest-ranking prosecutor. The attorney asked Meese what he knew about Dennis. Meese knew Dennis *by name*. Meese said, "We have investigated him thoroughly, and he is *squeaky clean*." The attorney emphasized the words "squeaky clean" as he handed Dennis a check for \$10,000. I would not trust Ed Meese with my life, but if he said that about Dennis, it was not because Dennis had Meese in his hip pocket. On the day of the raid, as I was talking to Mr. Deputy and he was talking about the SAMP law we might have violated, I told him what that attorney said Meese said. Mr. Deputy replied with a grin, saying that he would not believe anything that Ed Meese said.

Mr. Big Time Attorney, soon after he took Dennis' case, hearing the unbelievable situations surrounding it, asked his FBI friends to look into what the intelligence world had on Dennis. His friends came back with something like, "Wow! Not only is there massive information in the FBI's files on Dennis, but it went to the CIA and beyond." Putting 5000 people into a stadium to talk about free energy gets attention in high places.

Soon after Dennis' 1996 Philadelphia show, Yull Brown, whom Dennis was promoting as nobody else had ever done before, had a meeting with Al Gore, otherwise known as Mr. Environment. Yull made a [discovery](#) that may lead to techniques to neutralize radioactive waste, and he successfully demonstrated it numerous times, even to Department of Energy personnel armed with their Geiger Counters.[\[42\]](#) Gore is more of a politician than an environmentalist, and it showed in his meeting with Brown, as he backed off from any further investigation of Brown's technology. During Brown's conversation with Gore, he mentioned that Dennis Lee was promoting him, and a Clinton staff member replied, "You had better hope that the President does not hear you say that."

We even had the fun of a prosecutorial misconduct hearing, undoubtedly one of the few in county history, if not the first. Mr. Deputy eventually ascended to the hot seat, having *amazing* lapses of memory on the witness stand. All those threats were suddenly remembered as *warnings*. In the affidavit he wrote to justify increasing Dennis' bail from \$5000 to \$1,000,000, Mr. Deputy wrote of his expertise in investigating the crime of fraud. He stated that he had investigated hundreds of cases with fraud elements in them, and that he was such an expert on fraud, and Dennis was such a clear case of it, that the judge should heavily rely on his opinion in raising Dennis' bail to \$1,000,000. When on the hot seat, Mr. Big Time Attorney asked Mr. Deputy if he could tell the court what the legal elements of the crime known as fraud were. Mr. Deputy could not recall them. He said that he did not remember technical things such as that. Mr. Big Time Attorney asked him to recall just *one* of the elements of fraud. Mr. Deputy was unable to. Those fun days are documented in *The Alternative* in detail.

Although the prosecution was on the run, they still kept up the gutter maneuvers. They made a motion to have Dennis re-jailed that was nearly laughingly rejected by the judge. Mr. Researcher eventually came out of hiding, testifying to the threats he received and what he saw happen in his office on the [day of the raid](#). Mr. Deputy was "too sick" to testify at the prosecutorial misconduct hearing, which held up the proceedings for months. Dennis is fairly certain that Mr. Deputy spent those months not on his sick bed, but receiving coaching for his impending testimony. An investigator for the District Attorney's office pinch-hit for Mr. Deputy, keeping up the dirty work while he was out of commission. Mr. Investigator was Ms. Prosecutor's assistant for the case. He performed the "investigation" used to concoct the motion to have Dennis re-jailed. Mr. Researcher eventually came out of hiding and was subpoenaed by Dennis. He went to the courthouse to see if the subpoena was valid. He was immediately grabbed by Ms. Prosecutor and questioned for hours.

Mr. Investigator attended the questioning session. After Mr. Big Time Attorney took the case, it was really the judge against him. The judge put words in Ms. Prosecutor's mouth from time to time. She was along for the ride after that, following orders. Although the judge was not going to nakedly play kangaroo court judge, he still had his orders to get Dennis convicted of *something*.

Mr. Researcher had a few conversations with Mr. Investigator during those months. While Mr. Deputy was "ill," Mr. Big Time Attorney drove all the way from San Diego (an eight-hour round trip) for the hearing, only to be

told that Mr. Deputy was too ill to testify. Those days spent driving back and forth from San Diego apparently was a stalling tactic, designed to eat up Dennis' legal funds. Mr. Investigator even frankly admitted it to Mr. Researcher. During those delays, Mr. Investigator had a conversation with Mr. Researcher where he said the judge said there was no way he would throw the case out, no matter how much prosecutorial misconduct there was. Mr. Investigator then said, "The defense must be out a lot of money with all the delays. Lawyers coming all the way from San Diego cost a lot of money. Where are they getting the money to do this? What is Dennis going to do when his money runs out?"[\[43\]](#)

At one point, Mr. Researcher asked Mr. Investigator, "Has it ever occurred to you that Dennis Lee just might be innocent?" Mr. Investigator made the memorable reply: "I could not care less if he is innocent. I am paid to get convictions." Mr. Researcher said that the prosecution's case appeared to be built on lies and deception, and Mr. Investigator said, "Sure we lie. Everybody lies. I will do however much lying I feel is necessary to get that conviction." Mr. Investigator was trying to disabuse Mr. Researcher of any fairy-tale notions regarding the legal system. He was voicing notions probably held by most prosecutors across America, but only in Ventura could they be heard saying it aloud. Mr. Researcher has used Mr. Investigator's words ever since in the courtroom, in front of the judge, when he has been summoned for jury duty. He is immediately dismissed from duty when repeating Mr. Investigator's words.

Mr. Big Time Attorney became so disgusted by the constant gutter maneuvers by Ms. Prosecutor that he filed a suit in federal court on April 18, 1990, suit number 90-1942, suing the county officials for their many criminal and unethical acts while prosecuting Dennis. For instance, during his first day in court he told the judge that he could not yet legally defend Dennis in California, because the California Bar had not yet issued him his license. The DA's office immediately called the Bar, accusing Mr. Big Time Attorney of practicing without a license. His license was held up for months due to their interference. Ms. Prosecutor never gave Mr. Big Time Attorney a copy of her motions before the hearings, as was normal and ethical in the legal profession. Instead, he would be handed them as Ms. Prosecutor would begin arguing her motions in court. That was one of the many gutter maneuvers they used.

Some of the crimes Mr. Deputy and friends committed were identical to what the IRS agents did while prosecuting his client, and Mr. Big Time Attorney beat the IRS in the U.S. Supreme Court over it. He was rubbing his hands together, expecting to tear them up in federal court, but the IRS' political muscle paled compared to whatever was behind Dennis' prosecution. He called a press conference when he filed the federal lawsuit, and had Dennis contact all the Los Angeles media to get them to be there. They all told Dennis that they would. Mr. Big Time Attorney said that the press *always* came when he gave a press conference. Nobody showed up. As Mr. Big Time Attorney sat on the federal courthouse steps in downtown Los Angeles with Dennis, amazed that no media showed up to his press conference, across the street was a camera crew for a Los Angeles TV station. Mr. Big Time Attorney crossed the street and introduced himself to the TV reporter. He said, "I don't know what you are covering here, but it can't be as newsworthy as what is going on across the street. I am suing Ventura County legal officials for their gross violations of my client's civil rights...." The reporter surprisingly answered, "Yes sir, Mr. Big Time Attorney, I know who you are. I am aware that you called a press conference for today. I saw the invitation on my editor's desk, and I asked him if I could cover it, but instead I was assigned to cover the story that I am covering right now. Yes, your story looked far more interesting than what I am covering, but I report on what I am told to. Sorry."[\[44\]](#)

One rude awakening that Mr. Big Time Attorney had was discovering how deeply ingrained the corruption in California was. Mr. Big Time Attorney had worked mostly in the Eastern federal courts. Gangsters run the West Coast federal courts, literally. As documented in Gary Wean's *There's a Fish in the Courthouse*, he discovered the federal courts' corruption. Wean wrote about seeing an aspiring young attorney regularly hanging out with the Jewish gangster [Mick Cohen](#). The man was a protégé of Cohen's. Gary saw him with Cohen regularly during his LAPD duties. Today that man is a judge in the ninth district federal court. I still see his name in the news from time to time. The man *is* a gangster. Gary's book describes the many criminal enterprises the man has engaged in, using the power of his position to swindle the public and others out

of millions, if not billions, of dollars.

Mr. Big Time Attorney found out how the land lay when they not only threw his federal case out of court, but also *threatened to disbar him* if he refiled it. Mr. Big Time Attorney received a harsh education. He thought he had seen it all, but Dennis' case taught him some hard lessons about who *really* runs America. In the end, there was too much pressure being brought to bear on Dennis' case from high places. The judge eventually held a legal gun against Mr. Big Time Attorney's head, essentially telling Dennis that he would bankrupt Mr. Big Time Attorney unless Dennis did a plea bargain. Dennis pled guilty to not filing the form and paying the fifty dollars, but part of the deal was having the higher courts rule on the constitutionality of the law as it applied to his case. When Dennis pled guilty to not filing the form, the District Attorney himself came to the courtroom three times that day, and sat in the audience while Dennis affirmed his deal with the judge. The DA's presence was so startling that the courtroom's bailiff told Dennis, "I have been a bailiff here for eight years, and I had never seen the DA in person before today. Now he comes here three times today for your case. Who *are* you?" [Mr. Skeptic](#) says that Dennis' claims of being persecuted are a "delusion."

Dennis suspected it would happen, and the courts violated their deal, all the way to the U.S. Supreme Court. They maneuvered strangely on Dennis' case, all the way up the chain of appeals, and in late 1992, Dennis had to go to prison for more than a year for not filing a form. For his "violation" of a civil law, and fabrications in his file about his past, Dennis was put into prison with murderers. It may have been a parting shot from his friends in Ventura County. Dennis was nearly murdered in prison, and the guards put him in that position. That he was *even in* that prison was incredible. Dennis was "lucky," and only had some fingers broken and teeth knocked out.

His being in a medium security prison for an unintentional "violation" of a civil law was so bizarre that the director of the Little Hoover Commission, a commission trying to reform the California prison system, showed up at Dennis' prison unannounced, to interview Dennis.[\[45\]](#) Who knows how much the Little Hoover Commission's interest influenced what happened next, but Dennis was quickly transferred to a minimum-security prison where he served out his remaining months. Being railroaded into spending two years behind bars for "violating" a civil law was not the end for Dennis. His case set precedents and received special attention all the way. He did not get off parole until 1997. There were irregularities with his parole, but he slipped through the net. Ventura County originally tried forcing Dennis to serve his parole in Ventura County, where he would have undoubtedly soon enjoyed Mr. Deputy's hospitality again, and they could have tried again to put him away for life. Dennis' wife penetrated the bureaucracy however, and had his parole transferred to New Jersey, where she and her children had been living for years. That was how Dennis escaped California's clutches. He was on parole for years, and was suddenly and illegally put back on parole for another year after he was off it, when he began doing national speaking tours.

One last item is of interest. Within a few months of Dennis being hoodwinked by the judge into making the plea bargain that was never honored, the judge suddenly retired, and was subsequently promoted to a higher court. Ms. Prosecutor became a judge herself. All for a job well done? How deep it all went is anybody's guess.

In the May 1992 edition of *PC World* is an in-depth investigation published under the title: "SCAM! How a group of Los Angeles mail order companies ripped off consumers, distributors, banks, and publishers and why they're getting away with it." The article was illuminating.

In Ventura, Dennis was selling information kits by mail order, and advertising nationally to do it. When people ordered the kits, we sent them. Nobody ever paid for their kit and got nothing, and if they felt their kit was not what they expected, we gave them 10 days to mail back their kit (at our expense) for a full refund, a commitment we always honored. After the raid, we even gave *everybody* a chance to get their money back, and some took us up on it.

Below is the situation that *PC World* documented. A group of Los Angeles con men set up mail order computer businesses where the consumer could mail-order a computer or accessories. The con men ran their ads in national computer magazines, alongside other vendor ads. Their prices were low, but not ridiculously so. The consumers then ordered the products by calling the number in the ad, paying by check or credit card. No product ever came. The company simply took the money and ran. Their scam was taking place at the same time that Dennis was in jail in Ventura, one county away. One of their offices was a few miles from where Dennis was arrested.

The con men would set up a facade corporation to take orders and money. When they had collected a few hundred thousand dollars from the duped consumers, they would shut down the company. A few months or weeks later, another company would spring up in LA and perform the same scam. *PC World* undertook an extensive investigation. *PC World* estimated that its readers were out \$450,000 on responding to the scam's ads in *PC World* alone. *PC World* was being victimized itself, as the companies never even paid for their ads.

PC World was not the only group investigating the scam; there were other groups also investigating, as many people were being stung. Those con men had been at it for years. The investigations yielded their identities, and the article outlined the trail they traveled in setting up one phony company after another. It was all documented, down to the handwriting analysis of nineteen fictitious business statements filed by the conspirators, twelve in the same penmanship. They were nailed down to their underwear. They had no defense. Comparing their undeniable crimes to Dennis' situation, one might think those boys would be put away for a long, long time. They were blatantly defrauding the consumer and making millions of dollars.

In a summary chart of what consumers can do about being had by such scams, *PC World* lists who to contact if they have been had. Then they list the law enforcement agencies they themselves contacted to try getting some prosecution done. Not one law enforcement agency picked up the ball placed in their laps. The men were not being prosecuted by *anybody*. The excuses the law enforcement agencies gave for not prosecuting were interesting. The California Attorney General "punts to other agencies." The U.S. Postal Inspector's Office "pleads overwhelming case load." The LA City Attorney "rejects cases from individuals." The Federal Trade Commission "doesn't act on individual cases." The Secret Service (which actually does have jurisdiction in such a case) "puts lives of presidential candidates above your pocketbook." Most poignantly, the local police "can't afford to fly in out-of-state fraud victims to testify." In LA they could not afford it, but in Ventura they sure could.

A great deal has been left out of this story. The essay was perhaps the most emotionally difficult part of this site to write and edit. I have used names such as Mr. Deputy, Mr. Big Time Attorney, etc., to protect people's privacy, and I am not into naming names, even "public servants" such as Mr. Deputy, who committed monstrous crimes in his efforts to protect the [energy racket](#). If it really matters to anybody, all those identities are easily discovered if the story is researched. I wish nobody any harm, even the "bad guys."

I moved to Ohio soon after Dennis made his plea-bargain. I staggered out of Ventura, realizing that whatever I was taught about the world did not remotely jibe with my experiences. I spent the next twelve years figuring it out, and this web site is the fruit of that investigation.

The Journey Continues

I wrote this epilogue in November 2005. Dennis tried to rebuild his venture but his companies failed. I watched a number of attempts to steal his companies *after* the Ventura days.[\[46\]](#) I have mostly remained on the sidelines, this site being where I focused my efforts. Dennis is still at it, and can never be totally counted out, but is now trying the [religion route](#) to free energy. [Mr. Professor](#) died in 2002, his life shortened by his involvement in

my adventures. He never recovered from the complications of his diabetes that spun out of control during the Ventura nightmare (as with me, going bankrupt was a minor inconvenience when compared to the other dynamics). He reluctantly admitted to me that those events contributed to his health's deterioration, which was a remarkable admission, as he was saintly and the epitome of the strong, silent type, never complaining about anything.[\[47\]](#) I attended his funeral in North Dakota, and he was buried near his family's farm. His widow told me that if she had not [taken him to Mexico for treatment](#), he would have spent the last ten years of his life without his legs.

As his widow made her final goodbyes to his body in the funeral parlor, I sat in the viewing gallery, went into a meditative state and saw Mr. Professor in his heaven, which looked like a cross between North Dakota and Alaska (his favorite recreational venue). One day, I will visit his heaven and do the things that his health prevented us from doing. While I was meditating, I had a startling, unexpected vision that he seemed to send me. I later related the vision to his wife, and she replied that what I saw was one of his favorite scenes while on earth (probably when he felt the most spiritual). I suppose that was some compensation, hearing that he was doing fine on the other side of the veil, but the finality of watching his broken body being buried will always haunt me.

While I said goodbye to his body, a realization hit me that I had never suspected before: the first time that [voice spoke in my head](#), it was about a lot more than changing my career path; it was to meet Mr. Professor, who was the reason I went into accounting. The first time the voice radically changed my career path, and the [second time](#) it led me straight into Dennis' company. It can be said that I asked for it, but I hope I never hear from that voice again. I suffered and continue to endure great personal devastation that my public writings only hint at. Seeing countless lives wrecked by the Big Boys as they play their "rule in hell" game, while "average people" have eagerly performed most of the Big Boys' dirty work for them, has been a nightmare.

The terror attacks of September 11, 2001 coincided with what seems to be beginning of the second stage of my mid-life crisis, a stage that has yet to finish. For its first two years, [my mid-life crisis](#) was about my thirty-year journey being futile, as far as healing the planet goes. The past four years has been watching George Bush the Second and his neoconservative cabal take America and maybe the world on a sleigh ride to hell, as America leads the world to the brink of World War III. All for oil and empire, with barely a glimmer of sentience or integrity evident among my fellow Americans. I am way beyond tired of the emotional agony. I was coaxed out of my seclusion to begin some free energy activism in early 2003, but it was very disappointing.[\[48\]](#) I found that virtually nobody on earth has what it takes to pursue free energy in today's environment, which was the answer I never wanted to hear.[\[49\]](#) I am in deep seclusion these days. More than ever, I realize that the scarcest commodity on earth is [personal integrity](#), but is the only thing that will rescue us from ourselves. The only way I see out of this global nightmare is for people to reach deeply inside themselves and find some integrity (another way to say it is "[caring for others](#)").

I was originally planning to spend my free time in 2006 and 2007 re-editing my site and adding significant new material, but those close to me have informed me that I am in poor emotional shape to undertake that task, an assessment I have to agree with. The last couple months of 2005 saw me doing minor editing of my site - to correct the more glaring grammatical errors - add a little [new material](#) and smooth out some rough spots. Maybe by 2010 I will finally finish my site in a satisfying manner. I do not want any more adventures. A quiet life is about all I seek anymore.

Footnotes

[\[1\]](#) In the world of capitalism and economics, "wealth" is a concept of value. For instance, if I have to work four hours a day to obtain my food one year, and in a later year I only have to work two hours a day to procure that food, I am wealthier, as

I am getting the same goodies for less effort. Wealth is considered to be a real thing. [Gold and money are not wealth, but symbols of it.](#) In speaking of “real wealth,” when I asked if we were increasing the world’s wealth, it was an economist’s way of asking if there was a net benefit to the world from our efforts. Increasing the “world’s real wealth” was a common phrase in business and economics, but not commonly heard outside of those professions. The question I asked was a cliché in the business, something every first-year accounting student hears.

[2] See John Robbins' *Diet for New America*, p. 67, where Fred C. Haley, the president of a 225,000-hen poultry firm in Georgia states, "The object of producing eggs is to make money. When we forget this objective, we have forgotten what is all about." The drive for profit has brought us the hellish institution of [factory farming](#), where pigs, chickens, sheep and cattle live nightmare lives in the quest for the most profitable meat.

[3] As it stands today, the federal government will pay about \$32 billion per year for the next thirty years to clean up the S&L disaster, which translates to perhaps \$400 billion in today's dollars, depending on the interest rates applied. The original price tag was about \$157 billion, but it was funded with long term bonds, increasing the price. See Zepezauer and Naiman, *Take the Rich Off Welfare*, pp. 45-52.

[31] Very early on, after a very polished performance gained him access to our inner circle, Mr. Texas began acting like the kind Dennis has encountered many times before: an opportunist that Dennis could not turn his back on. In July 1988, when Dennis was in jail with his \$750,000 bail, Mr. Texas unmasked himself to Dennis during a phone call from Mr. Professor's house, while the [trio](#) was there. The trio was essentially demanding that Dennis turn his company over to them, or they would destroy it (as they worked closely with [Mr. Deputy](#)). During the heated discussion, Mr. Texas got on the phone and Dennis said, "Tell me what you want, and you will get it." Mr. Texas then engaged in a charade for the benefit of those in the room but could not hear Dennis' end of the line. Mr. Texas engaged in a fake argument with Dennis, acting like Dennis was on the other end, being belligerent. Mr. Texas ended his performance with something like, "Dennis, stop being a maniac and listen for once!" and then slammed down the phone. Dennis listened from the jail in shocked silence, knowing that Mr. Texas had unmasked himself (to Dennis, at least) and was playing his hand. Dennis knew from that moment forward that Mr. Texas was going to attempt the same shenanigans that [Bill the BPA Hit Man](#) had, and thought that Mr. Texas was probably another paid provocateur. Mr. Texas indeed engaged in the same stunts that Bill had, but in light of his 2003 arrest, it looks like Mr. Texas was just a free-lance criminal, probably not hired to do what he did in Ventura.

[32] A quote from Howard Scott sums up America's entrepreneurial waters: "A criminal is a person with predatory instincts without sufficient capital to form a corporation."

[33] Typical of the sheriff's department's criminal activity, Mr. Deputy's interview of Mr. Researcher took place in a county interrogation room where they secretly recorded the conversation. When we had heard about the interview, we demanded a copy of the tape. The session lasted four or five hours, according to Mr. Researcher. After an hour or so, when the conversation had been fairly cordial, Mr. Deputy began getting belligerent, eventually shouting at Mr. Researcher, yelling at him that he did not "know anything" and that if he testified in Dennis' defense, he would immediately become a suspect himself. When the sheriff's department reproduced the tape of the session, they only reproduced the first hour, mysteriously "losing" the rest. I wish I had a dollar for every instance I have seen of law enforcement "losing" evidence that would expose their corruption.

[34] See *The Alternative*, exhibit 4B.

[35] See *The Alternative*, exhibit 3M. He told that to our two best salesmen.

[36] See the law and Dennis' "Cure Tour" schedule in *The Alternative*, exhibit 2G and 2H..

[37] I have copy of a letter from Ms. Prosecutor to Dennis' attorney, dated January 4, 1990, saying that Mr. Researcher was amazed I would deny it "under oath."

[38] [Gary Wean's](#) *There's a Fish in the Courthouse* chronicles the hair-raising corruption in Ventura County.

[39] See *My Quest*, pp. 455-456.

[40] See *My Quest*, pp. 456.

[41] See *The Alternative*, exhibits 3M, 3N, 3Q and 3R regarding threats Mr. Deputy made to employees and witnesses. Those affidavits were in that legal mail package. See also exhibits 3H, 3I, 3J, 3K, 3L and 3P for other evidence of Mr. Deputy's malfeasance, particularly evidence that he was working closely with Mr. Texas to take the company down.

[42] Christopher Bird wrote of Brown extensively, and died before writing his planned autobiography of Brown. He had a series of articles published in *raum & zeit*, in 1992 (vol. 3, #s 2, 3 and 6). U.S. Congressman Daniel Haley investigated the Department of Energy demonstration and its amazing attempt to explain away what their Geiger counters told them. He relates the results of his investigation in Planetary Association for Clean Energy, Inc.'s July 6, 1993 issue.

[43] See *The Alternative*, exhibit 5E.

[44] Naturally, with that conversation, I can be accused of taking some poetic license by putting in quotes what is likely not the verbatim conversation. It was the essence of the conversation, and I was not there to hear it, but heard it later from Dennis, who was there with the attorney when it happened. In a few places I put words in quotes that I cannot prove are verbatim conversation, but you can tell where I do it, I believe. If I footnote it, I refer to where it can be found in writing. There is no place where I have put something in quotes that does not nearly capture the conversation word for word. For instance, when that lawyer who gave Dennis the check for \$10,000 while telling Dennis that Ed Meese said that he was "squeaky clean," the lawyer himself made special emphasis that Meese indeed said "squeaky clean." When I said that Ms. Prosecutor said that if Dennis pled guilty to all charges, she would see to it that he would not get the death penalty, she said those words, although maybe a "that" or "and" is missing from her verbatim words.

[45] See *The Alternative*, exhibit 9E.

[46] Here are a couple of examples of attempts to steal Dennis' companies after the Ventura days. The first I witnessed in 1992, when Dennis was trying to tie into Wall Street money and talent for a public relations campaign. He flew me out to Las Vegas to attend a conference of hundreds of his joint-venture partners. One conference speaker owned a company that offered organizational assistance to the partners. At the conference, Dennis introduced the speaker and

said how impressive the man's commitment was, as he attended on "his own nickel" and even brought along some of his staff. When the conference was finished I flew back home to Ohio, and in the row in front of me was that man and his staff, heading home to New York. I kept a low profile at the conference and they did not know who I was. I just read in my seat. As we approached the landing in Columbus, I put my book away and stared into space ahead of me, daydreaming. Next to the conference speaker and directly in front of me was one of his employees, who I recognized from the conference. As I was staring into space, that staff member held up a yellow legal pad in front of my eyes. He was probably admiring his handiwork, composed during the plane flight, but the words leapt off the page into my passive eyes. He had written an outline of "The Plan to Rape and Pillage [Dennis' joint venture partners]". It was a four-part plan to entice Dennis' partners away. The man probably realized that he should not have held up his masterpiece where others could see it, and quickly looked over his shoulder and realized that I had probably seen his plan. The plane landed a few minutes later and I raced through the airport, looking over my shoulder, hoping that nobody was coming after me. I called Dennis immediately and told him what I had seen. When the conference speaker called Dennis the next day, eager to take the next steps in their relationship, Dennis asked him about his "rape and pillage" plan. The man tried explaining it away, but Dennis never heard back from the conference speaker.

The second attempt was actually a few dozen attempts, but they all made the same play. In 1996, Dennis mounted two national tours. During those tours Dennis hooked up with [Yull Brown](#) and he promoted Yull and his technology like nobody has before or since. Brown was planning on transmuting radioactive material during the tour's final show, which was held in the arena where the Philadelphia 76-ers played. Five thousand people attended that show. Brown was the main attraction, and for the rest of his days Brown continually replayed the video of the standing ovation that that crowd showered upon him. In the weeks before that show, more than thirty of Dennis' business associates called Yull to try enticing him away from Dennis before the show. Yull politely took the names and phone numbers of those contacting him with their offers and then gave Dennis the list. Those are two of more than a dozen examples that I could present of incompetent attempts to steal Dennis' companies.

[47] Dennis and I were among several people (including other former students) who offered our organs to Mr. Professor for transplant. Mr. Professor declined all the offers, saying that he would only accept organ donations (a kidney and perhaps part of our pancreas) from those who were as "old and useless" as he was.

[48] In early 2003, I was coaxed out of my seclusion by a number of people and began a little free energy activism. I was invited into an alternative energy Internet forum that was populated by scientists, engineers and other technical professionals. Long ago I decided to specialize in the political-economic aspects of the free energy issue, and my first post to that forum briefly described my adventures. The most common reaction to the [billion-dollar bribe](#) we received has [been silence](#), but the engineer who dominated that forum replied in a way reminiscent of Monty Python's *Argument Clinic*. His response was "No you didn't!" I lay out [plenty of evidence](#) so people can assess the story and investigate further. I replied that I was reporting my *experiences*, and that if he wanted to call me a liar he could, but that he should do some homework before doing so. The engineer then dismissed me as a "[conspiracy theorist](#)." Such an *ad hominem* attack was [irrational at best](#), as reporting one's experiences has nothing to do with any theory. The forum moderator evidenced a bit more intelligence and open-mindedness by telling me that he would read some of my work before forming his opinion. I heard from him a few weeks later, and he said that putting political information into my work on free energy was inappropriate, which demonstrated that he *completely* missed the point of my work. The political-economic aspect of the free energy dynamic is *why we do not have free energy*. That understanding appears beyond the reach of nearly all the scientists, engineers and technical professionals that I have encountered in the alternative energy community.

The scientific corollary to the most common and [naïve response](#) that that I receive to the idea of free energy is, "If free energy machines existed, I should be able to buy one and scientifically study it. Otherwise, I have no reason to believe that free energy machines exist." When I have tried coaxing those scientists out of their armchairs and get them actually *investigate* the situation, I have never been successful. Their soft berths in academia and in corporate America have proven too comfortable. To believe that somebody is going to drop a free energy machine in your lap, so your testing lends them credibility, is to know absolutely nothing about how the real world of alternative energy works. The genuine technology is removed from circulation almost immediately.

In early 2006, after I published my [free energy conundrum essay](#), I made attempts to engage various groups in discussion of the free energy issue. My attempts also triggered some sites to present parts of my work. My early 2006

experiences were so dismaying that some radical left writings and other sources finally became clear to me. My work does not dance around the free energy issue. My [summary of the situation](#) is direct and succinct, and I posted summaries of my work in forums where it had previously been discussed (in a deficient manner), and hoped to engage in some worthwhile discussion. The responses astounded me. I learned long ago that general public forums were not the place to discuss my work, so I have sought a *few* audiences that I hoped could engage in rational and honest discussion of the issues. My expectations were not high, as I have interacted with people for twenty years on the issue, and have encountered very few who truly understood. Forums devoted to suppressed technologies and sites devoted to free energy pioneers seemed to hold some promise. I could not have been more wrong. In early 2006, I made posts that briefly discussed my points and linked to places in my work that supported my contentions (as well as some private emails to people who were supposedly familiar with the milieu). The forum respondents *completely* ignored my writings and links, acting as if they were not there, and then regurgitated their physics textbooks to show why free energy was “impossible,” and even presented sites unrelated to the points I was making, presenting *them* as what I was arguing for. It was so bizarre that I had to reassess what I was seeing. It was tempting to think those respondents had [low intelligence](#) or were dishonest, but I think I was seeing something else. The respondents were able to write proper sentences and make somewhat coherent arguments and cite their textbooks, but their responses had nothing to do with my arguments and evidence, yet they acted as if they had rebutted and dismantled my work. As with that [engineer who irrationally dismissed me as a conspiracy theorist](#), I believe I was seeing how the ego defends itself from information that threatens its delusions. They lashed out from deep-seated (and unconscious) fear, and I am sure those respondents thought they were being rational and even giving my work a fair hearing, even though they failed to acknowledged even reading it. Calling it [denial](#) I believe is too simple. I have come to *expect* those kinds of responses in general forums (which is why I no longer post to them), but was not expecting it in forums supposedly devoted to the issues I wrote about, not to the uniform degree I saw it. In one of the forums, there was not even *one* response that evidenced any consideration of my work. I have not contacted every potential group on earth, but there are only a couple left on my list that I think might have promise.

[Ed Herman](#) has criticized the writings of establishment pundits for many years, and has regularly shown how they effortlessly perform logical summersaults to [defend the indefensible](#) acts of their rich and powerful patrons, while trying to *appear* rational and ethical. Ed has written that those pundits were *incapable* of acknowledging what was so obvious to everybody else (because, I believe, the admission would expose how completely they have sold their souls). I believe Ed was describing the same thing I have seen for many years. Virtually nobody on earth today seems *capable* of honestly and rationally engaging the [free energy conundrum](#), but rationality and honesty appear to have little to do with it, although defending egocentric delusions are not acts of integrity. The free energy situation's reality is simply too threatening to people's cherished fantasies of how the world works, and they will avoid the implications at all costs. The vast majority simply stays in denial so complete they will never become aware of the situation. I was able to understand them and do not engage them. But it has taken me many years to finally understand those who fancied they had open minds and even proclaimed familiarity with the situation. They have what one friend has called “sophisticated egos.” They pride themselves on being reasonable and ethical, but are incapable of being reasonable and ethical when encountering information that threatens their illusions. To say they are *incapable* of realizing how their world works might seem to absolve them of responsibility, but if virtually nobody on earth is capable of acknowledging the reality of the world they live in, the question then begs to be asked: “Are humans really a sentient species?” And if we are, does sentience mean much?

[49] Over the years, I have generally kept abreast of what was written about Dennis or my work on the Internet. Dennis has also been the subject of nationally televised shows and many newspaper articles. My work has been discussed in numerous Internet forums, and I have found very few discussions worth joining. The situation has been much worse regarding Dennis' efforts. During the past twenty years, I have *never* seen an honest, intelligent and informed critique of his efforts. There is plenty to criticize about Dennis' efforts, as with all efforts like his. But almost all of his critics are of the armchair variety, and most of them resort to repeating each other's lies, in the style of [Mr. Skeptic](#), driving home the [primary lesson](#) of my journey even more deeply.

One libelous effort has been particularly notable. The critic is a scientist who writes about the free energy situation. He has a multi-faceted approach, much as I do. However, the author libeled Dennis in an essay written in 2001, claiming that Dennis has raised \$100 million from his victims over the years. Being a scientist, one might think he would either qualify his “estimate” of what Dennis has raised (an “estimate” that I know is about an order of magnitude askew from reality) or tell the reader how he derived it, or even tell them that it *is* an estimate, but he presented his wild guess as a fact in

an attempt to legitimize what the authorities did to Dennis in [Seattle](#) and [Ventura](#). I considered the article another low integrity effort and ignored it. Apparently, because that scientist has some writing talent and experience in the field, that essay has been given to me at least a dozen times, in person and also by email, as the premier commentary on the free energy conundrum, and several times by people who should know better. In 2003, I was invited to join with others an effort to educate the public on the subject matter my work covers, but their free energy information was dominated by that scientist's [libel tract](#). I informed the editor that I could not publicly join an effort that libeled Dennis, and even spent days of my time informing the editor why that tract was libel, and my explanation sailed right over his head. That public effort prominently promotes that libel tract to this day, turning their efforts into disinformation rather than useful information. That scientist has also been informed about his libel and *why it is libel*. He has not seen fit to retract his libel, which only reinforced my opinion about his integrity level.

I was invited into another educational effort around the same time. To my dismay, I was also handed that scientist's libel tract at one of the organization's meetings, as an example of excellent writing on the issue. That scientist was subsequently invited into that organization's inner circle, even to speak at one of our organizational functions and perhaps even sell his technology through our organization. When I brought up that man's libel (when *handed* his libel tract) and how he obviously did not have the right stuff to advance the free energy effort, I doubt that anybody in that organization understood my point. They thought that scientist could be "managed," or that maybe he owed Dennis an apology or that they needed to somehow comfort my emotional distress or they had some other excuse. That organization had barely gotten off the ground, and already it was aligning with people that I *knew* had low integrity (that scientist was not Dennis' only libeler close to the organization). As a group, they did not really understand the integrity issue regarding the pursuit of free energy. I then realized that our effort had little hope of success and left the organization. Without a [large nucleus](#) of high integrity people, there is no point in even initiating a free energy effort, unless learning harsh lessons and achieving martyrdom is the purpose. Earth may not currently host enough of those high-integrity people to form that nucleus, but if they do not exist in sufficient numbers, then pursuing free energy is futile in today's environment.

The Next Section: [A Vegetarian's Journey](#) (24K)

[Return to My Home Page](#) (The address on the Internet of my home page is <http://www.ahealedplanet.net/home.htm>)

A Vegetarian's Journey

By Wade Frazier

I decided to write this essay because I became embroiled in the vegetarian issue, a controversy I did not know existed until 2000, when I was surprised to read an article that attacked vegetarianism, in an alternative medicine magazine. It was framed under the rubric of [myth debunking](#), which is a [popular strategy](#) these days.[1] I heard people express concern over the health dangers of being vegetarian when I became one during the 1970s, but those concerns seemed groundless, and I never heard anybody voice it since. I had been a happy vegetarian for many years when I read that article, and I felt like Rip Van Winkle, sleeping through a controversy that has apparently not abated. I began surfing the Internet to read other writings by that author and his chums, and the more I read, the angrier I became. Some of their work read like [Elizabeth's Whelan's](#), with links to [CSICOP](#) and other establishment defenders.

The author put in a disclaimer that the meat interests were not bankrolling him, and perhaps they were not, but his work was nearly as supportive of their interests as Whelan and [Steve Milloy](#) are supportive of their patrons. I wrote a furious letter to the editor, and I was shocked when they published it a few months later, with the author's rebuttal.[2] That author betrayed his own anti-vegetarian fervor by making the irrelevant observation in his riposte that Hitler was a vegetarian. The more I read their work, the clearer their mission became.[3] They also [assail the soybean](#).

This subject is better served by discussing issues that have been muddled by both pro-vegetarian and anti-vegetarian advocates. Both can miss and confuse important issues. The United States has the world's biggest flesh-eating culture, as well as [history's fattest humans](#), and the United States is by far the world's [largest purveyor of violence](#). Flesh eating has something to do with the situation, but is not the whole story. Americans are also history's most sedentary people, and eat more "junk food" than any people on earth. When my father reversed his heart disease by our [family going "health nut" in 1970](#), vegetarianism was not part of the regimen. Probably at least 90% of American health problems would disappear if Americans had live food (preferably organically grown) comprise at least 60-70% of their diets, and gave up tobacco and alcohol.

I became a vegetarian in 1978, going vegan, just to see what it might be like. Profound changes happened to my body, such as my body odor disappearing, and the next year was the only one during my college athletic career that I was not injured. I also lost ten pounds, as I did not even *try* to get any protein. I was vegan for eighteen months, and then I wanted to

become an All-American in my event (the javelin throw), and I knew I could not do it at six foot, one inch and 142 pounds. I then ate six hard-boiled eggs a day and weight trained, and gained twenty pounds of muscle in three months during 1980, but my body odor also became fierce. I largely retained that muscle, and have been a vegetarian since 1987.

I was forced into giving up my vegetarian ways when I [moved to Los Angeles to work in the high-rise world](#) in 1983. After I left LA, I became a vegetarian again. Although I have not quite become a vegan again, my home diet has been virtually vegan for years, with cheese and eggs only eaten when I do not eat at home. One day, probably before long, I will become a vegan again. Although I never advertised that I was a vegetarian, it is difficult to hide that fact when I eat with other people. During the past fifteen years, people have continually called me a vegetarian (sometimes with disdain, sometimes with awe, and sometimes with humor), as if that described my primary relationship to food, and I thought it was *the* prescription for good health. Abstaining from flesh does not have much to do with a healthy diet. Vegetarians whose diets are mostly processed food are not eating very healthily. Eating steaks everyday is also not so good for people (and hell on the cow), but if I had to choose, not eating live food is more harmful to human health than eating flesh. Humans are the only animals that eat [dead food](#), and the frequency of our degenerative diseases is also unique on earth (pets also eat dead food, and get human-style degenerative diseases).

Another misconception I wish to slay, which made me angriest at the work of those anti-vegetarian crusaders, is that probably less than one percent of vegetarians are the kind of activists that populate PETA and other militant organizations, such as those who “liberate” experimental animals by sabotaging laboratories. [Animal experiments are evil business](#), and this will be a happier world when people stop killing animals to eat them, but [the ends do not justify the means](#). Those vegetarian activists can be like those misguided “black bloc” protestors (for those who are not [outright provocateurs](#)) who have been at anti-globalization demonstrations, giving the police a convenient excuse to [use billy clubs, plastic bullets and pepper spray on non-militant protestors](#). Those vegetarian militants are operating from the victim principle, not the creator principle. I have met many vegetarians, and never met a zealous or “doctrinaire” one (and neither has my wife, who is largely a vegetarian). The author of the “myths of vegetarianism” article, as well as his crusading pals, consistently portrays all vegetarians as fanatics, using the [straw man](#) tactic. No vegetarian I ever met preached to anybody else about vegetarianism. I have rarely gotten into “vegetarian-rap” with any of my “brethren.” They all considered their vegetarianism a personal and private decision.

Sometimes the vegetarians I met did it for health reasons (the owner of the [medical lab I worked at](#) did it for his health), and other times for ethical or spiritual reasons. All three reasons influence me today. The first time I became a vegetarian, it was for none of those reasons. The second and last time, it was for health. Flesh eating took a toll on my body that I could feel, and eating red meat made me sick, so even when I was forced into giving up my

vegetarian ways for years, I avoided red meat whenever possible (just being around it can make me nauseous). Today, I am a vegetarian for ethical/spiritual reasons more than any other. [My journey](#) made me more aware and sensitive to the suffering of others, and I slowly came to realize that if I did not *need* to eat animals to live, I should not support robbing them of their lives. To decide to lessen our burden on the planet we live on and our fellow life forms is a profoundly personal [and spiritual](#) decision. As [John Robbins](#) and others have made clear, human carnivorism's [toll on earth's environment](#) is tremendous.[4] [Spiritually advanced societies](#) are mainly vegetarian, if not exclusively.

Because of the abuse I have received over the years for being a vegetarian, I understand how such treatment can make people fanatical. To create fanatics, oppressing people is effective, as America has seen with the [World Trade Center attacks](#) and other acts of "terrorism."

As proto-humans left their arboreal habitat millions of years ago, they changed their diet and behavior. Tool making was about [increasing their food supply](#), and when protohumans migrated beyond the tropics millions of years ago, killing animals and eating them was the primary substitute for their formerly fruit-eating, live food diet. Making weapons to kill animals more effectively is what allowed humans to migrate to earth's farthest reaches. However, the same technology that allowed humans to migrate to hostile environments also allowed humans to kill *each other*.

Humanity's murderous ways are directly related to its carnivorous ways.

With our great ape cousins, the carnivorous/murderous relationship is also seen. Chimpanzees are the most carnivorous great apes, with around 1% of their diet being mammal flesh, and perhaps 5% being insects. They are also the only great apes known to kill each other and engage in cannibalism. The mountain gorilla eats insects as the most carnivorous part of its diet. The great ape diet is two-thirds fruit, as the human diet should be. The human sweet tooth comes from our fruit-eating heritage.

Also, humans were a little too successful with their hunter-gatherer lifestyles, and [killed off all of the planet's easily killed large animals](#). About 10,000 years ago the hunter-gatherer lifestyle became unsustainable on a global basis, and the [Domestication Revolution began](#).

The anti-vegetarian-crusader analysis of nutritional research needs to be considered in the context of their ardor. If people read their work, then read the work of [John Robbins](#), Gabriel Cousens[5] or [Gary Null](#), they can decide for themselves.[6] Being a vegetarian rarely, if ever,

really endangers the health. There are some issues germane to the vegetarian path, such as vitamin B-12 (which is produced by bacteria living in dirt and on animals, and carnivorous humans can also have the deficiency), protein and some other nutrients, but nobody who puts forth some effort to become informed need much concern themselves with nutritional deficiencies. If all I ate were apples, then yes, I would develop nutritional deficiencies, but that is not what being a vegetarian means. There are also several definitions of vegetarianism, and some call those who eat fish and birds vegetarians, although I do not.[\[7\]](#)

People have different blood types, health histories and metabolisms, and each person needs to discover what is best for them. Pure fruit diets or pure brown rice diets are not ideal, and those are the kinds of extremes that can give people health problems and vegetarianism a bad name. I am allergic to spirulina, getting it by being disinformed by 1970s vegetarian researchers regarding how much protein I really needed. For me, getting enough protein is no big deal.

The general rule-of-thumb for an enlightened human diet is the less sentient the prey, the better off everybody is. The scale of greater-to-lesser violation of the prey is: humans, cetaceans ([whales and dolphins](#), although they may be *more* sentient than humans), mammals, birds, reptiles, amphibians, fish, insects, plants, microscopic organisms and fruit; eating fruit is actually a [symbiotic relationship with the plant](#). Prey-cannibalism is the greatest violation of the spirit, while eating fruit is the other end of the spectrum.

Comparative anatomy studies clearly show that humans are ideally fruit eaters, which our great ape cousins demonstrate. Many in the anti-vegetarian crowd have compared humans to horses, rats and pigs, but the most meaningful comparison is obviously to our closest biological cousins. Classic omnivores, the bear, panda and raccoon particularly, were originally predators that adapted to eating vegetable matter, and their anatomy does not have much correspondence to human anatomy, especially regarding suitability for a carnivorous diet. From our teeth, jaws and saliva, to stomach acid volume and concentration, to intestinal length, humans are obviously not of carnivorous design. The adaptation to meat to extend the human range and numbers came with a price, warfare and violence only part of it.

Humans *can* be carnivorous, and have been for many millennia. However, there is also dramatic evidence of certain diseases disappearing when societies suddenly became vegetarians (such as Denmark under Nazi occupation during World War II – colon cancer nearly disappeared). There is plenty of literature and research on the health benefits of a vegetarian diet, but there *are* some risks, if it is not done with care. None are that serious, but they exist. Some education is recommended if a person wants to try a vegetarian diet.

[Mystical students](#) have long known that eating flesh lowers the spiritual awareness. Eastern masters have stated since ancient times that the less flesh consumed, the higher the enlightenment attained, and have advocated vegetarianism for the spiritual initiate. It partly

has to do with the fear the animal experiences when it is killed. Sometimes, lowering the spiritual vibration can be useful. [Channels](#) often eat meat after channeling, to help “ground” them. Many also smoke or are overweight. Those are not ideal grounding mechanisms (I hike in the mountains with fifty pounds on my back to ground myself), although they work. Killing and eating animals definitely creates negative karma, which can directly affect the body.

Gandhi regularly discussed vegetarianism, and said that those who did so for “moral” reasons used vegetarianism to help them evolve to higher spiritual states, while those who merely did it for health reasons did it selfishly, received limited benefit from it, and were usually the ones who abandoned vegetarianism. He said that vegetarianism that was all about food and disease was, “the worst way of going about the business.” He also said,

“The Spiritualists hold, and the practice of the religious teachers of all religions... shows that nothing is more detrimental to the spiritual faculty of man than the gross feeding on flesh. The most ardent vegetarians attribute the agnosticism, materialism, and the religious indifference of the present age to too much flesh-eating and wine-drinking, and the consequent disappearance, partial or total, of the spiritual faculty in man.”[\[8\]](#)

What hit me between the eyes when reading that was that the two behaviors I was *forced* into doing when I [began my career in Los Angeles](#) was drinking alcohol and eating flesh. In retrospect, [when I discovered how worthless my profession was](#), I wonder how “knowing” such behavior was. Not from a conspiratorial sense, but there is often a deadening of one’s humanity that accompanies the descent into the business world, and forcing people to drink alcohol and eat flesh was part of that process. Those in “the club” were unconscious, and were making sure I became like them. It was the most ruthless work environment I ever encountered, with the personal lives of my colleagues largely disasters. .

Gandhi’s pacifist activism and his vegetarianism were no coincidence. Also, it is no coincidence that meat and alcohol (and formerly tobacco) are military and corporate staples. Fruit is the ideal food for spiritual reasons also, as eating fruit is a symbiosis with plants; it does not harm them and helps spread their seeds.

After years of being a vegetarian, a perspective gradually came into focus as I looked at flesh food: it is a carcass, once part of a living, breathing creature, one not much different than me. Today, I have a visceral revulsion toward meat eating that far exceeds any thoughts I might have about its effect on my health or spirit. There is no will power in my vegetarian ways, as I can barely fathom putting flesh in my mouth. I am not laying that trip on anybody else, but that is a “hazard” of being a long-time vegetarian: flesh eating can eventually be seen as

disgusting, horrifying, and a cousin to cannibalism. I passed the point-of-no-return in the 1980s.

For those who feel they *must* eat animal flesh, the most spiritual and ethical way of doing it is to look the animal in the eye while taking its life, and thanking it. Eating it raw and on the spot is also the “natural” way to do it. Anything less is not being a true carnivore. If that style of carnivorous behavior seems revolting, then it might be helpful to ponder why, as that is the most ethical, spiritual and healthy way to eat flesh. People can also get parasites that way, which is another reason humans are not ideal carnivores; true carnivores have far more acid and a far more acidic pH in their stomachs, which kills parasites. Cooking flesh destroys a great deal of its nutritional value, and is another unnatural human practice.

Vegetarianism is part of the path to a [healed humanity and planet](#), and some of humanity’s darker possible futures have [animal abuse](#) as signposts of their degeneration, but nobody should be coerced, bribed or deceived into the practice. It is a deeply personal issue, and one that all people need to decide for themselves.

Footnotes

[3] They then engaged in an advertising campaign (they have arrogated the pioneering work of [Weston Price](#), but that is a story for another time). They had an ad for their material in *Nexus Magazine*, in the January-February 2001 issue, p. 70, and their headline nearly said it all: “Confused about nutrition? We set the record straight.” That is a bold claim. Then their ad purported to debunk myths about nutrition, and the first “myth” they debunked was, “Animal fats cause cancer and heart disease.” Their “truth” was that animal fats “protect” against cancer and heart disease, and vegetable oils cause it. The Beef Council could not have said it better.

How I Developed my Spiritual Perspective

For me, my worldview does not become comprehensive until the metaphysical/spiritual/mystical (pick the term that seems to suit best) perspective is incorporated, because I view all my work and life through a mystical lens. By that, I mean that I always seek the biggest possible picture in everything that I look at and experience. In order to speak to the world of scholarship, science, history, et cetera, it has been necessary to try speaking the language of those disciplines. While my work on [Columbus](#) and the [European conquest of the world](#) can stand on its own historical legs (or my research on [fluoride](#), [thermodynamics](#) and [cancer treatment](#) can stand on its own scientific legs), history only tells part of the story, no matter how comprehensive it may seem, no matter how heavily it relies on "[primary](#)" source material.

The world of our everyday conscious minds is a limited one, bound by our sense perceptions and the course of our thinking. A history that only hews to the "facts," or a science that is only concerned with what its instruments can tell it, is materialistic. While a historical account that adheres to the "facts" can be admirable, "facts" [are not as objective](#) as we might like them to be, and what facts are presented and omitted is hardly an objective undertaking. Materialism is the worship of the material world and our physical existence. [Carl Sagan](#) practiced it, as did [John D. Rockefeller](#), although he was a devout Baptist (Rockefeller became the most excited when pondering how rich he would become^[1]). A mystical viewpoint also looks beyond the physical plane, seeking a larger framework of understanding, and exploring the nature of our consciousness.

[James Randi](#) and [friends](#) aver that there is no solid evidence for anything existing beyond the physical plane.

The rationale for that viewpoint usually relies on the logic of making evidence of a reality beyond the physical plane conform to the physical plane's rules. If people begin with the *assumption* that the only "real" things are those detected by their senses, their circular logic will "prove" their assumption's accuracy. If somebody has visited another dimension, only an artifact of that dimension (or conformance to this one) can convince materialists that they really went there. That introduces standards of evidence that are often impossible to achieve, so Randi can be right. This essay will lay the groundwork for how I developed my perspective. An intellectual game did not bring me to my perspective, but my *experiences*.

"Reality" may not be objective. My reality does not have to be Carl Sagan's. Paranormal experiences have shaped my view of reality far more than the study of books and science. I cannot "prove" my reality to anyone else. My experiences are nobody else's, but I have discovered that having "paranormal" experiences is something that anyone can attain. Nobody need take Randi's word or mine for it; they can seek and have their own experiences. When people have their own paranormal experiences, they are not at the mercy of the world's Sagans and Randis, telling them that there is no veil, so therefore nothing on the other side, or that they were just "imagining" it.

My Early Paranormal Experiences

My mental gifts were recognized early in my childhood, and my parents groomed me for a life of achievement. It did not quite turn out as anticipated. When my sixth grade teacher remarked that he thought my parents were pushing me too hard, and that I could not seem to accept failure, I think he was sincere.[\[2\]](#)

The spiritual aspect of my upbringing was not ignored, nor was it pushed. My parents were raised in staunchly Christian environments. My mother's mother ran her Lutheran church for about fifty years, and my father was a Bible scholar who once had thoughts of becoming a minister. To my parents' credit, their children were not subjected to intense Christian indoctrination. I attended Sunday school for about three years of my childhood, until I was twelve. As I look back from an adult perspective, I appreciate what those church workers did. There was love there, and they were trying to help raise "good" children, but I was largely oblivious to it, just wanting to get my Bible verses accurate and getting my goodies for acing the "curriculum."

A few years later, my maturing mind considered the Christian view of God and the Cosmos, and I decided it made no sense to me, and I began calling myself an atheist. It was a ridiculous label to use, as at that age few children can willfully ascribe to any "isms." Parents and other authority figures heavily influence a child's worldview at that age. By age 15, I was fully involved with growing up, dealing with the new rage of hormones coursing through my body - replete with acne, body odor and unbidden erections - and preparing myself for the adult world. I kept pulling the straight A's, and was at the top of nearly all my classes, from kindergarten through my college diploma.

My parents sent me to Europe for two months in the summer of 1974, just after I had turned sixteen, as part of a student tour that studied the Old World's art and culture. It was an intense tour, visiting nine nations (we would have also visited Turkey, but the Cyprus War was being waged) and about 50 cathedrals, 50 museums, and nearly every noteworthy cultural relic in continental Western Europe. The students were the tour guides, each becoming an expert for part of the tour, having signed up for what they wanted to lead.

At that age, I was oblivious to art and culture. I had visited several science museums, but European art and culture was alien to me. About the only exposure to other cultures was knowing my Mexican-American friends and watching *Kung Fu* on TV, not for the Eastern philosophy, but for how Kwai Chang Caine kicked righteous butt every show (only when egged into it, so I thought). I was a *Gilligan's Island* fan. I had no interest or even knowledge about what to become "expert" in, which was a major reason I did not want to go, because of the homework required to prepare. When the list finally came around to me, about the only part not taken was a man named Vincent Van Gogh and Holland. I had never heard of him, but had to study his life and work to play tour guide in Holland and the museums that housed his work. I discovered the world of art, and to this day Van Gogh is my favorite artist. I have stared at his paintings and drawings for many hours, sometimes mesmerized in museums while looking at his work. If I did not have to earn a living, I would prefer being an art historian.

My summer in Europe was a rite of passage, and the beginning of my adulthood. It was an awakening, but on the spiritual front there was nothing happening. I had abandoned religion as a superstition, and my early fascination with strange phenomenon (I avidly read Frank Edwards' *Strange World* and *Stranger than Science* at age thirteen) was being replaced with an adult, no-nonsense view of such things. That changed. In the autumn of 1974, my father and brother came home one night and said they could see my aura. I had never heard of an aura. They stood me in front of a white wall in our home and told me what they saw. They said the class they were taking had trained them to see auras. I was amazed. I asked, "Can I see it too?" Their response was that I could, after taking the class.

The next month my entire family took the course. The class was called Silva Mind Control. Reading auras was not part of the official Silva curriculum, but something our teacher had thrown in. Silva Mind Control was not marketed as a class to develop one's psychic muscles, read auras, or any of those "New Age" concepts that abound today. Instead, it was marketed as a way to improve the memory, think positively, and a host of "tame" ideas. The course was presented with a scientific basis. The buzzwords of today's "New Age" were not in evidence. The class taught the students how to meditate, without Eastern religious concepts. Instead, the class was about controlling brain waves. By slowing brain waves from the usual waking consciousness of 21 cycles per second, to the range of REM (rapid eye movement) sleep of around 11 cycles per second, the brain could work more effectively, more creatively, remember more, etc. The class was forty hours long, about half lecture and half meditation exercises. The instructor had galvanic skin response devices where we could measure our brain waves. Those devices were predecessors to today's biofeedback machines.

From Monday to Friday, we attended the class in the evening. On the weekend we finished with two ten-hour days of instruction. I had no idea what I was getting into, or what the class was really about. With each new exercise, I became more familiar with the mental state they called "being at level." It is not easy to describe, and can be subtle. Unless one is familiar with meditative or prayer states, or has been through intensive meditation exercises, it is difficult to comprehend that state. In general, people are more relaxed, their minds clearer and not easily distracted. Usually, there is nothing spectacular about it. It is similar to the hypnotic state, but where the subject controls the process. As we performed our meditative exercises, the instructor played a tape with a somnolent sound. He also read us the Silva script, which was filled with positive images and conditioning.

One conditioning statement was that if we fell asleep during the mediation sessions, three taps on the shoulder would wake us up. It was similar to a posthypnotic suggestion. About the third night (class was from about six to ten PM and was held about an hour's drive from home, which made for long days), I fell asleep during a session, and all I remember is feeling a tap on my shoulder and springing almost out of my chair in shock. I was embarrassed as I saw the instructor standing next to me, and the whole class (about 20 people) looking at me and smiling. When the exercise was finished, I was asleep, and the instructor demonstrated to the class how powerful the mind is. He stood next to me and tapped my shoulder firmly. The class noted that I did not budge. Then the instructor tapped my shoulder firmly again. There still was no response from me. As he touched my shoulder for the third time, I nearly leaped out of my chair. The class was impressed, I was embarrassed, and as I look back, that was my only warning that my worldview and life direction was about to radically change.

On the weekend came the ten-hour days, the exercises becoming progressively longer and more involved. No longer were we merely learning how to "go to level." The instructor had us "project" our awareness into a cube of metal that we held, and eventually had us project our awareness into our homes, plants, and family pets. The exercises were fun, and my imagination was being used like never before. It did not feel much different than daydreaming, but was perhaps more vivid.

On Sunday afternoon came the end of class and the grand finale, one my father and brother had not told me about. We were going to project our awareness into people and "work cases." It was strange to me. The idea was thinking of somebody I knew with a health problem, and I would write that person's name, gender, age, and city of residence on a card, as well as their affliction. Then a second person would read off the name, gender, age, and city of residence to a third person who had "gone to level," and they would "project" their awareness into that person, going on nothing more than that information, and diagnose the problem and send healing energy to the person.

I had a strange mixture of exhilaration and uneasiness. On one hand, it was similar to a classroom experiment, my academic background came to the fore, and I loved the classroom. On the other hand, I would be the experiment. I avidly read Frank Edwards' stranger tales years earlier, and doubted the scientific worldview told us the entire story. I suspected we might have unacknowledged abilities, but being put on the spot to perform psychically was unnerving. I had one of my "cases" easily picked out.

My first employer was a black man named Isaac Brown. I worked for him the year before, tearing apart a walnut farm, salvaging the wood from the buildings. He lived in Ventura's poor section and my father bought scrap wood from him. My father got me the job, and I made \$1.50 an hour. Mr. Brown had diabetes and an injury related to it. My employment ended while he recovered from his injury-related illness and the business folded. Mr. Brown also had an index finger that had been severed at the middle knuckle, but he was my case because he had diabetes. I was the scientific kid, and I remember hiding my card as I wrote his condition, not wanting to compromise the reading with flashing the card to the potential psychic, whomever that might be. I did not write about his index finger being severed. His diabetes had caused him to lose half of his foot. Those were his spectacular medical conditions, and I certainly did not write about his race. I did not even think about his finger.

The "psychic" who worked Isaac Brown's case was a woman that people might call a "yuppie" today. She probably felt as I did: she was not taking the Silva course to increase her psychic prowess. She probably did not feel too psychic. Improving the memory and thinking positively was how the course was pitched, and I do not know for sure, but that probably drew her to the class. She closed her eyes and went to "level," and I gave my card to the moderator. He read off: "Isaac Brown, age 42, male, Ventura, California." The class was held in Santa Barbara, about 40 miles from Ventura, and I doubt that woman would have known a poor black man named Isaac Brown.

The woman's eyelids fluttered, and within seconds of being given Isaac Brown's information she said, "I keep getting the impression that he is black," and she then held up the hand where Isaac was missing most of his index finger, bent the finger where it was severed and said, "He is missing the end of this finger." From

the moderator reading Isaac's name to her holding up her finger took less than ten seconds. The first ten seconds of her first "case" changed my life forever. The "probability-and-outcome skeptics" who try explaining such events as sheer luck carry no weight with me. The odds of somebody trying to act psychically after finishing forty hours of training, and having a "hit" such as that on their first attempt, and attributing it to coincidence, is one in millions. The "skeptics" can never take away my knowledge with their pronouncements and arguments. I *know*. They have only their empty theories; I have *experience*.

One requirement of performing psychically is quieting the intellect we operate from so often, letting the impressions come forth without judging how reasonable they seem. Her intellect may have kicked in after that, and I cannot recall if she even determined that he was diabetic. I just sat in awe of her holding up her bent finger, telling us that its end was missing. I was stunned. For the moments she let her impressions flow unencumbered by the intellect, she performed with the best of them. One might say that Isaac Brown is a cliché name for a black man. Maybe so. The index finger, which I did not even write on the card, and she had no way of seeing anyway, eventually expanded my universe of the possible about a million-fold.

Then it was my turn. It can make people nervous to perform that way. It felt like I was making it up. When the impressions come, keeping the intellect at bay is the key to being accurate. In my first case, I said the woman had a stroke that had paralyzed her right side. One diagnostic tool is "putting on" the head of the person being read, and feeling what they feel. That is how I diagnosed the paralysis. My "wild guesses" and irrational feelings were correct. Everybody in the class had similar experiences. I discovered that day that the abilities of human consciousness were barely dreamed of by mainstream society. I have sat in several Silva classes (attending the class for the rest of my life is free) and have regularly witnessed students making "hits" similar to the ones I saw in my first class.

[Brian O'Leary](#) (astronomer, ex-astronaut, and free energy visionary) had a similar experience to mine, five years after I did in a course called Lifespring, which was a cross between Silva Mind Control and EST (another human potential class that I took in the 1970s). When it came time for Brian to work his "case," he made up out of the thin air that his case was a man who was a meteorologist-journalist who preferred hanging out on the west coast of Maui and lost his wife by death. Those "wild guesses" were true.^[3] Others in the "New Age" community entered it through Silva Mind Control, including Shakti Gawain. She nailed ten cases in a row when she took Silva Mind Control.

The introduction to Silva Mind Control began my spiritual journey. Silva has classes in most large cities. Because of revelations of government mind control programs such as [CIA's M-K-ULTRA](#), the course now is called the Silva Method. There are millions of satisfied graduates, and the money-back offer has been around since the beginning. I heard of one person once who took them up on it. Actually, I heard of two, but the first one got her money back to prove to her family that the course was not a "scam", and then her entire family took the class and she paid the money back.

After that class, I was taught how to see auras, and it takes the same training to "work cases" to get one sensitive enough to where auras can be seen. For the "skeptics" who think it was the after-image retina phenomenon, I have news for them: it was not. In the fifth grade I became fascinated with the after-image phenomenon, and for a few months I created image after image that I could stare at, and then stare at a blank wall and see the "negative" of the image before my eyes. I am familiar with that phenomenon, and it was quite different than seeing auras.

For anybody who risked a few hundred dollars (Silva has always given refunds to anybody who wanted their money back for any reason) and a week's worth of their time, they could have proven those things to themselves, and they can today.^[4] Nobody needs to read "research," hear "debunkers," or watch "psychics" on TV. They can prove it to themselves. We cannot prove our experiences to anybody else, not really, but we can prove it to ourselves. The "miracles" that Jesus performed did not seem so impossible anymore, but neither did they provide a basis for worshipping the man. He was a great master, yes, but he was demonstrating abilities inherent in everybody, and he said we would "do greater works" than he performed. I believe it, now. Over the years, I have participated in and witnessed phenomena that went far beyond "working cases."

Many years later I would discover the work of [James Randi](#) and other "debunkers," with their broad proclamations and arrogant boasts. One of Randi's books is titled *Flim-Flam!, Psychics, ESP, Unicorns and other Delusions*, putting his opinion of those he investigates and the phenomena's legitimacy in the book's title. The "debunkers" usually have no idea of what they are talking about, as they are bereft of *experience*, and most have never even pursued it.

Studying the debunkers' work has been educational. Randi is so highly biased that he disqualifies himself as an investigator.^[5] There are a fair number of reasons why Randi and others are doomed if they really

seek evidence of the paranormal, and abilities of human consciousness that go beyond the ability to rationalize. Their goal is "proving" that their narrow view of reality is the "right" one.

Experiencing the paranormal is one of the easiest things to achieve if one seeks sincerely and leaves one's mind open. If people fervently believe that there is nothing to the paranormal, they will probably never experience it, or if they do, their minds will go into overdrive to convince themselves that they did not have the experience. Wanting to be right might be humanity's greatest failing.

After our family took Silva Mind Control, we explored those new realms. We learned how to communicate mentally with our cats. Animals are naturally psychic, much more so than human beings. We went to level and mentally pictured our cats doing something that we wanted them to. To do it successfully, it must be an atypical behavior but not one that was disagreeable to the cat, because we are asking the cat for a favor. We had two kittens, and we mentally pictured them jumping into our laps, something they never did. One of us would sit on a stool and go to level, while the others watched. The cat began looking at the person at level intently, then walked over and jumped into his lap. I saw our kitten do it for my brother, and it did it for me.

My father began experimenting with pyramid power. Pyramid energy is one of the more derided aspects of the "New Age." My father bought some pyramids and began experimenting with them. He had one that he put his razor blades on, to keep them sharp. I cannot speak for how effective such "uses" of that energy are. I have seen Kirlian photographs of an energy spike coming off the apex of pyramids, and even the Great Pyramid. *Something* is happening. Pyramid energy is apparently a subtle energy that is not very detectable by our modern instruments, but I saw that plants could recognize it.

My father built a pyramid with a wooden frame and clear plastic stretched between the frames, forming its planes. Such pyramids are usually built to the relative dimensions of the Great Pyramid at Giza, as my father did. My father made the pyramid about four feet wide at its base. He designed it to be suspended from the ceiling over a chair, so somebody could sit under it. Nobody in our family really used it, and my father eventually hung it from the ceiling in a corner of our enclosed, fiberglass roof patio, to get it out of the way. On the patio were pet cages (my brothers and I raised rats and mice), bicycles and other assorted clutter. On a table, my mother had some houseplants, and one was vine-like, hanging over the table's edge, dangling a few feet, its end nearly touching the ground. My father hung the pyramid on the patio. The pyramid's base was about five feet off the ground. It was a couple feet above the table that held the plant, and a couple feet away horizontally. About a week later, I was sitting on the patio and noticed that plant. It is one of the most amazing things that I have ever seen. The vine dropped down over the table as it had been, but at about a foot below the tabletop the vine made about a 130° turn, and more than a foot of the vine's end was pointing into the air, aiming at the pyramid! In botany, there is a phenomenon known as phototropism, where plants can grow toward a light. That plant was growing toward the center of the pyramid, about where the King's Chamber is in the Giza pyramid.

The "skeptical" crowd derides pyramid energy as pure moonshine, while the scientific community also ignores "pyramid energy" as a fantasy. I once knew a houseplant that knew better (or perhaps it read the *National Enquirer*). After witnessing that phenomenon, I have never laughed at anything being theorized about the Great Pyramid's purpose.

Aura reading became quite a pastime for us. We went to classes where twenty of us took turns getting in front of the class, and we all looked at our auras. Reading auras requires the kind of training that meditation offers, although some can naturally see them. Today, I cannot see auras anymore. I am "out of shape." If I want to see auras again, I will have to regularly meditate to redevelop those "psychic muscles" (something I am planning to do after this web site is finished).

I had a childhood friend take the class, and we used to "work cases." Each person had their preferred method of doing readings. What worked well for me was "putting on" the person's head and feeling what they felt. It was an empathic method. Once I read an old man that my friend knew. While doing the reading and "wearing" his head, my back felt as if I was wearing a hubcap between my shoulder blades, and I must have looked like Quasimodo. When the reading was over I asked my friend if he noticed my hunched back, and what it might mean. He said that the old man had a very hunched back, which looked like the way I was hunched over.

Sometimes there was a downside to being empathic. I have participated in plenty of "hands on" healing over the years. Once I worked with somebody who had severe back problems that resulted in volcanic migraine headaches. While laying my hand on his neck, suddenly the muscles in the back of my neck tightened up and my neck was sore for days. He said that was what his neck felt like. One might say that it "backfired." I have had numerous paranormal experiences such as those, and they would usually happen when I did not expect them.

I have attended dozens of "channelings," in which somebody lets another being come through their awareness. The "skeptics" dismiss the phenomenon as bogus, either as a fraud, wishful thinking or some other delusion. I once had a private session when the channel told me that I was misaligned with my spirit's light (during my dark days with Dennis), and she asked my guides and other helpers, such as angels, to help align my body with the light of my spirit. I had little idea what that entailed, and did not know what to expect, if anything. The channel is a friend of mine, and I did not expect her to try to convince me that something happened when it did not. As I sat there, she looked at me and said that my friends were trying to help me. Just then, something strange happened. My awareness began "turning" in my body. It is difficult to describe. It felt as if my awareness was being twisted in my body, as though I was no longer "straight" in my body. My head wanted to twist to the side, and I was straining to keep it pointed straight ahead. It was quite a trip. I had nothing to compare it to, although years later I heard that my experience was related to vertigo. I do not know if what my unseen friends attempted was successful, but it was strange.

Those experiences and many others were part of a drastic change in my worldview. The single biggest change was the first, when that woman held up [Isaac Brown's severed finger](#). After that, I was not quick to call anything "impossible," especially regarding the abilities of human consciousness. By age twenty-one, I had five years of increasing study under my belt. In those days, a few books were highly influential to me; one was *Illusions* by Richard Bach which was his follow-up to *Jonathan Livingston Seagull*. I have read a vast array of spiritual material since *Illusions*, but it is still one of the greatest spiritual masterpieces I have seen. Perhaps the most influential book I ever read was the *Aquarian Gospel of Jesus the Christ*, first published in 1907. Levi Dowling, an American Christian minister, wrote it. Dowling produced the book over a number of years while in a deep trance state. He was supposedly accessing the Akashic record, where every thought and act of Creation is recorded. That is the theory, anyway. After my experience with Silva Mind Control, I would not scoff at much in the paranormal realm. I read the *Aquarian Gospel* at age eighteen. For the first time, I began understanding spirituality. For two years, that book was on my bedside table. Every night as I went to bed, I picked up the book and read from it.

Something happened when I took Silva Mind Control. It was a dual blessing. One effect was that my imagination became more vivid. In addition, my intuition and sense of truth was awakened. If I had read the *Aquarian Gospel* at age 15, it probably would have been largely meaningless, but with my intuition awakened the text leapt off the page. The words sang to me. I had a sense that I was reading The Truth. By "truth," I do not mean the sense of right and wrong or what really happened two thousand years ago when Jesus walked the earth. It bypassed the intellect. The words spoke to my soul. Perhaps the right and left halves of my brain were becoming integrated, or my head and heart were united. I realized that my linear, logical mind was not in charge of the process, but was along for the ride.

I studied the life of Jesus as ardently as any fundamentalist Christian, but not the version they did, and without their fundamentalist beliefs. The sense I received of Jesus' life was radically different from the typical Christian view of his life and work. Jesus was a mystical master second to none. The feats I performed and witnessed on my journey with Silva Mind Control were baby steps compared to the mastery of Jesus. He was a living example of humanity's potential. Walking on water, turning water to wine, raising the dead and doing the loaves-and-fishes trick seemed quite normal once I realized its nature. Jesus said those "feats" were a part of human nature, and once we had attained our own self-mastery we could all do those things, and greater still.

Yet, all those "feats" were merely ancillary to his primary message: love. Jesus demonstrated the power of love. Love is such a peculiar word, yet the most important. The Beatles could sing about love in every song, but that word is not used in our Western world often. What is love? It seems to be the power of Creation, or God's real name. What we feel when we think of our spouses, children, parents and friends is a pale reflection of God's love. Our love is not unworthy, yet few of us have attained unconditional love: love for love's sake. That is the love of God, and that was the state that Jesus attained, his Christhood, asking the Creator to forgive his murderers, for they did not know what they did.

From studying the *Aquarian Gospel* I understood that Jesus did not want to be worshipped. Paul began corrupting it, turning the good news *from* Jesus into the good news *about* Jesus. That was where Christianity made the wrong turn, from which it has yet to recover. Christianity is the cult of Jesus. Jesus lived to show us all our innate potential, and awesome it is. We can all attain the mastery of Jesus and go beyond it, and I understand it is the destiny of us all, someday. I have hardly picked up the book during the past twenty years, and as I am writing these words I have been leafing through the *Aquarian Gospel*, and it holds up well. Long ago, I realized that [the only thing worth knowing about Jesus was love](#). It has been the true north of my spiritual compass ever since. The yardstick I have used ever since in assessing spiritual material, the motivation of others and myself is this: is it loving? In the end, that is all that matters to me.

Love does not judge. Pure love is unconditional. The Creator does not judge his/her creations, but loves all equally. When Jesus spoke of loving the enemy, he was talking about a level of love that few people in the past two thousand years have even attempted. He was far, far ahead of his time.

At about the same time I read the *Aquarian Gospel* and *Illusions*, my father introduced me to body of work that was creating a sensation in the spiritual community. It was the work of a non-physical entity named [Seth](#), who spoke through Jane Roberts, an American. There was little to compare it to at the time. Mystics and spiritualists across the globe studied the books. Seth's identity was a source of speculation by many, including Roberts. I did not care much about who or what Seth was; it was *what he said* that got my attention. My awakened sense of truth was awed by Seth's perspective, which was loving and of unfailing good cheer. Even if he was Jane Roberts' alter ego, I had heard no mortal evince such an exalted and loving perspective. Seth looked at the BIG PICTURE of life. Along with the loving attitude was an involved and challenging perspective of our physical dimension, why we are here, and what lies beyond this reality.

The first book Seth dictated was *Seth Speaks*, followed by what many, including me, feel is his magnum opus, *The Nature of Personal Reality*. Two books followed that nearly broke my brain, titled the *Unknown Reality*. When the Seth books were published, there was nothing quite like it in Western culture, particularly a prominently published book (bodies of work such as the Silver Birch and Theosophy material qualified, but were not widely known in the West in those days). Later, the term "channeling" came into vogue to describe the phenomenon. As a body of channeled work, I consider the Seth Material still one of the best. If one's intuition is not awakened, the words of Seth can be seen as gibberish, and many have dismissed it as nothing but the alter ego of a deluded woman.

In the end, the mark of enlightened material such as *Illusions*, the *Aquarian Gospel* or the Seth Material is that its message leads people back to their own integrity, the value of the individual, the power of the self, and it is always loving. Those perspectives sought no acolytes and addressed each of us as equals. If cults sprang up around them, it was not because the masters encouraged it.

While I avidly studied the masters' teachings, my life was also barreling along. I was attending college, becoming a staunch pacifist, becoming involved with women, being a collegiate track athlete, entering the working world, driving and growing up. At age 19, [I prayed for guidance](#) and was told that I might like studying business. That happened concurrently with girlfriends, track, work and my spiritual studies. A lot was happening, and I did not always handle events as well as I would have liked, but I have no regrets. We are all on our divine journeys, and all roads are there to be walked. Every experience is an important part of the journey, and to regret any of it is to deny our divinity. Making "mistakes" is one of life's most important parts. Even not learning from our "mistakes" is important, from a certain perspective, and we get as many chances as we need to get it right, and "getting it right" means learning the lesson of love. That is my understanding today, and I doubt it will change much.

As I look back, a vital part of my journey was trying to integrate my spiritual studies with my academic studies. I tried wedding my spiritual studies with my studies of business and economics. I tried seeing how capitalism could be an ideal vehicle for enlightened spirituality. I was in for some painful realizations. Yet, if I had not been that way, I would not have walked my path. I see a divine plan in my strange journey, and I am not sure where it will ultimately lead, but I trust the journey, although some days I whine and ask for Scotty to beam me up.

My "[Easter Bunny](#)" question evidenced the "[cognitive dissonance](#)" I was undergoing. My spiritual training gave me the strength to question what I was seeing, because my capitalistic indoctrination was colliding with the real world. If I had no spiritual foundation, I may have quickly joined my comrades, easily dismissing the question of whether we were truly contributing to the world. I would not have really cared about the answer, as long as I was well paid. If I had played the game as my peers did, I would probably be rich today, but my soul would be gnawing at me, and I would be wondering when I would do something important. My dream of [changing the world of energy](#) and helping heal the planet, however grandiose that might seem, would probably have eaten at my soul like a cancer.

Eventually the mystical student realizes that spirituality is not really about other dimensions and arcane powers. It is only valuable in how it is applied to *this* world. The old saying of being so heavenly bound that one is no earthly good applies richly to the spiritual journey. Living one's enlightenment on the mountaintop is easy. Far more difficult and rewarding is living that enlightenment in society. In the end, there is only one Creation, one universe, one place where we all exist. An important aspect of this plane of existence is that the path of truth abounds with paradox and dichotomy. As the great physicist Niels Bohr once said, when scientists encountered a paradox, it was great news, because wrestling with paradoxes was where the scientific progress was made.[\[6\]](#)

As an analogy, suppose I am a virtuoso violinist in this life. [On the other side](#), I do not lay down my violin, but join a great symphony, learning to participate in making music that I could not produce by myself. Ultimately, every one of us plays our part in Creation's symphony, and although some of us may play solo leads at times, and some play kettledrums while others play the piccolo, every instrument is essential. On the other side, we find ourselves playing music that we doubted was possible on this side.

Serving Ourselves and Serving Others

Whether people believe in an immortal soul, or believe their existence is dependent on their body's chemistry, every earthly human can probably agree upon one idea: we all have a physical body. Because we all have bodies, and they all have needs such as air, water, food, shelter, sex, etc., to an extent we are all "self-serving" as we care for our bodies. Since it takes two people to procreate, and few have a tropical island to themselves or can survive alone on a mountaintop, humans interact.

To the extent humans interact, we serve each other's needs. People are other-serving when seeing to the needs of others, and self-serving when seeing to their own. All humans engage in both activities. According to nearly all mystical material, that interaction is the primary reason we are here. We evolve our souls by inhabiting this dimension, interacting with each other (including animals, plants, Mother Earth, etc.) helping and hurting each other, and living with the consequences. Even for people who believe that oblivion awaits them at death, they can probably relate to the self-serving/other-serving dichotomy.

Throughout our lives, we constantly make decisions whether to serve ourselves or serve others. Infants are totally focused on survival. Parents are (usually) totally focused on that infant's well being. The infant is self-serving, the parent other-serving. As with all decisions in life, especially when humans interact, the question of whom we are serving is constantly with us, and can make seemingly straightforward decisions more complicated. Why do parents have children? Is it to give life where there was none, passing on the blessings they have received? Is it to breed a farmhand, somebody to exploit today and perhaps support them when old and feeble? Is it to have built-in friends, built-in sex slaves, or a built-in retirement plan? Is it a bid for immortality? Do people do it in a moment of lust, not thinking or caring about the consequences of bringing a child into the world? Is their own motivation to serve the child or themselves? Is it both? Is it to serve the Creator? It can appear extremely complicated, but always comes down to whom is being served.

There is not a single human interaction where the issue of it being self-serving or other-serving does not apply. The ideal is getting as good as we give, being self-serving and other-serving at the same time, or balancing the scales in the end. The Beatles sang, "The love you take is equal to the love you make." Our motivations are not always clear to others, or sometimes even to ourselves. Even the issue of self can become contentious. Is the "self" the body? What is called the consciousness? Is the self the individual, the tribe, the nation, the universe, the soul? Is it all of the above? Most people probably think of the conscious mind and the body it inhabits as the "self."

Most people on earth are mostly self-serving. Stated another way, if all human decisions made in one day were weighed by relative scale (where helping an old lady across the street would not count as much as jumping in front of a train to save somebody's life), sorting to one-side the self-serving actions and other-serving actions to the other, the scale would tip to the self-serving side.

There is tremendous variation with each person, each day. A nursing mother is generally other-serving when she nurses her infant. When she is feeding herself, she is serving herself, although part of her motivation may be being healthy in order to properly care for her infant.

Most mystics say the reason we are here is to learn about love, to remember who we are - divine children of Creation, and in fact, the Creator itself. A life lived in service to others is apparently the most "worthwhile." Very few people have ever achieved such a lofty goal on earth. People who do so become "saints," religious icons and beloved heroes. The quality that "elevated" them was often their love and consideration for others, but a predominantly other-serving life is an ideal that few attain.

Yet, each person has "heroic" moments. The mother awakening to cries at 2 AM and soothing her child, the father awakening at 5 AM to earn the family's daily bread, jumping in front of a train to save somebody's life, can all be profoundly other-serving activities. But on balance, most people are mainly concerned with caring for themselves.

A deeply profound body of mystical literature is the Ra material, which presents an intriguing way of viewing a soul's evolution. In Ra's perspective, ensouled entities on the physical plane mostly fall somewhere between 50% self-serving and 95% self-serving. Ra discussed planetary evolutions and an event known as a "harvest." Harvest happens when an ensouled being attains a mastery of their physical plane lessons, and are "promoted" to the game's next level. Ra did not discuss good or evil, but "positive" and "negative polarization." Positive polarization is equated with an other-serving mentality, while negative polarization is equated with the self-serving mentality. Ra called it "love of other self" and "love of self." Ra stated that if an ensouled being devotes greater than 50% of its energy to serving others, it is eligible for harvest on the service-to-others path. If an entity devotes greater than 95% of its energy to serving itself, it is eligible to be harvested on the service-to-self (or love of self) path.

Both paths require intense dedication. On today's earth, few are eligible for harvest on either path (Ra stated that 20% of the human race may be eligible for harvest today). Ra stated that Genghis Kahn, Rasputin, Hermann Goering and Heinrich Himmler were all harvestable on the love-of-self path (otherwise called self-serving, negatively polarized, or what I call the dark path).^[7]

Ra made no judgment regarding the two paths, even stating that the two polarities are required so souls can evolve through this plane. Without the tension those poles create, there would be no growth. Other planes have other means of growth. Ra also called the path of love-of-other-self the "study of what is," and the path of love-of-self the "study of what is not."

Those polarities can also be described as the paths of light and darkness, good and evil, etc. Whereas the path of light is committed to truth and love, the path of darkness is committed to illusion and fear. Ra described further dimensions of existence that pursue those paths. It is a fascinating perspective that this essay cannot do justice to. It provides a framework to understand interactions between beings on this plane and beings in others, how humans evolve on the physical plane, and the soul's journey. Others have called the path of serving others the path of service to self through others. Ra said that the dark path leads to a dead end of sorts. The study of "that which is not" is valid, with many valuable lessons learned along the way. As that path is progressed, higher levels of power and understanding are attained. Along the light path are constantly increasing levels of expansion and integration into Creation. Along the dark path there are constantly increasing levels of concentration and a withdrawal into one's perceived self. Along the light path there is an eventual reunification with the source of creation, the ultimate coming home. The source of creation is love, and it is the force that created and sustains not only this universe, but also all of creation.

Because love is the power of creation, love is the game humans are learning, because we are learning to be creators here at earth school.^[8] There are no spiritual lightweights on the planet at this time. This is an extremely challenging place to be. As the light path leads to a wondrous reunion with the Creator, those at the dark path's highest level also realize that a reunification with The Source is its next step. When a highest-level dark path being attempts that reunification, it gets a rude awakening: the dark path does not lead home. As it is the study of "that which is not," the entire path is ultimately one of illusion, and self-deception.

As that highest-level dark path entity "knocks on God's door," God's greeting is approximately:

"I am glad you are here, but I have news for you. You are a being of light, not darkness. You trod your path because I gave you the freedom to choose it. It was not real, not in the way you might think. I am proud of you, my child, but there is an important lesson your path has not taught you, the lesson you must learn before you can come home. You cannot fit in here, as much as I would like you to. You would not be able to stand it. I created you and everybody else. I love you, as I love all my creations. Your path has led you here, but loving yourself, while an important lesson, is only part of the journey. The journey is not complete until you love *all* of Creation, as I do. You have racked up quite a tally. You incurred many debts to others as you failed to love them, and only loved what you thought of as yourself. As you failed to love others, you also failed to truly love yourself. You owe yourself a great debt that you can only pay while serving others. I have a deal for you. All the mastery, all the wisdom, all the greatness you attained on your path, which is indeed impressive, you can trade in for an equivalent status on the path of light. From that exalted rank of light, you will labor long to settle your debts, make right your wrongs, and bring as much light to Creation as you earlier brought darkness to it. I think you will find that loving others is highly rewarding, not only to yourself, but also to others. You have a choice. You can stay where you are, at the dark path's highest level, where you can progress no further, because there is nowhere else to go. Or, you can accept my offer, working magnificently with me, engaging in fabulous work on behalf of Creation, and when you have balanced your scales, you can come home, and it will be glorious."^[9]

The Ra Material is popular and highly regarded. More obscure are two recent books by Gina Lake, channeled by "extraterrestrials." Her themes are similar to Ra's.

The dark path is self-serving, and a primary goal is exploiting others. They see others as there to serve their needs. While light path beings live by love, the dark path motto is "look out for number one." They believe that looking out for themselves is the only credo worth living by, and they see light path beings as naïve or foolish. Their [afterlives are not pleasant](#). The dark path is an inverted view creation. Put another way, the dark path is an attempt to become the Creator without love. It is an impossible dream, but such is the dark path's folly, the study of that which is not.

What goes around comes around, and dark path initiates realize that God created with love, and God's creations love it back. There is a feedback effect, whereby the love of God's creations also help sustain God. In the inverted dark path perspective, they think that manipulating others is how creation functions. They think love is weak, better dispensed with. Fear is "what it is all about" to them. They have yet to realize that love is the greatest power, and indeed the only power. God's creations ideally give love back to God as freely as God gave it to them. In the dark path's inverted perspective, they believe the exhilaration of the fear they experience is Creation's essence, and they induce fear in others, receiving a feedback effect, nourishing themselves. They think God does something like that. Their understanding is inverted. Fear is the absence of love, and in the dark path's inverted logic, they feel if they can inspire fear in others, they are becoming creators.

As stated in Lake's *The Extraterrestrial Vision*, those dark path initiates are acting appropriately, in light of their beliefs. She summarizes the situation on earth regarding the committed self-servers with:

"Self-servers are as diverse as any random group of people. They work in many different professions, but are particularly drawn to ones involving power. Much of the corruption in business and government is perpetrated by self-servers, many of whom are highly intelligent. They are never found in service professions, except as impostors or con men who prey off those in need. They have no sympathy for the needy, because they believe everyone should be self-sufficient. They believe that those who can't take care themselves will learn to take care of themselves by being taken advantage of. Consequently, they feel a spiritual duty to take advantage of the weak."[\[10\]](#)

Lake's material evokes Ra's perspective, as well as another extraordinary body of work known as the [Michael material](#), which has been produced by various channels. As souls evolve through the physical plane, they progress through "soul ages," which can be likened to the changing perspectives a human being passes through while they progress from birth through age eighty. Generally, the more lives we live, the more our souls evolve and become "older." I have never seen channeled material that does not admit that reincarnation is a fact, although a number of the Eastern religions' distortions are not necessarily valid.

Some dark path goals are inciting fear in others and recruiting others to their path. They are nourished by fear, in a pathological way. In Barbara Marciniak's seminal *Bringers of the Dawn*, in chapter eight is another perspective of the dark path. It appears that dark path entities that have evolved beyond physical plane realities, such as Genghis Kahn, are helping humanity stay in fear, because fear creates an energy that nourishes them. A humanity in fear, bathed in violence and misery, is something they thrive on. Humanity has proved a most productive herd for negative emotional "nectar."

In a [first-person account](#) by [Michael Roads](#), in his mind-blowing *Into a Timeless Realm*, he saw those beings that keep humanity in misery because they thrive on it.[\[11\]](#) Those parasitic beings did not create the conditions of human misery - humans largely did that to themselves - but they capitalized on it and furthered it, using deceptive and secret tactics.

[Michael Topper](#) and his wife echo those themes in Topper's peculiar prose. Topper's perspective is decidedly mortal, yet interesting. The theme of dark path beings thriving on fear, even to the point of inducing fear in people, extracting chemicals that fear produces in the human body, then bathing in it, are in Topper's writings.[\[12\]](#)

What Is the Relevance to My Work?

To bring this essay back to "earth," how does it relate to my work? The self-servers on this planet are in it for themselves. They feel a duty to exploit others. Evil is their business, profiting from the misery and exploitation of others. This site documents many extremely dark situations, and many people refuse to believe that people will actively and consciously create situations where others suffer and die. They cannot believe that people could act so "diabolically." Dark path initiates depend on that denial.

Because the dark path is the study of that which is not, deception and secrecy are their tools, which is [largely how the U.S. government operates](#). In the end, the dark path folks' greatest victims are themselves, and the most deceived chumps of all are themselves, completely misunderstanding who and what they are. The greatest deception is self-deception. It takes two to tango, and while dark path beings play their games, they actively deceive others, and their greatest victory is not forcing people to do their bidding, but having them freely choose to.

Dark path initiates know that few will consciously let themselves be used by dark path practitioners. So, they must deceive people into serving dark path interests instead of their own. That is not an easy trick. Most people are consciously committed to neither path. They worship comfort. Most merely try surviving. A full belly, a roof over their head, and their addictions sated are primary goals of the vast majority of humanity at this time. Most people can be called "good," because they will try doing the "right" thing if it does not cost them too much, and usually will not go out of their way to hurt others. Most Americans would return a wallet they found on the ground, provided it did not have too much money in it (recent research - in 2001 - shows that about half of all Americans will return that wallet; I was being too optimistic). [My experiences](#) ruefully showed me that it goes little further than that, however.

How can the dark path folks exploit people, while having them believe that their actions serve the common good? Dark path initiates commonly use a singularly effective tactic: enslaving people, while telling them they do it to protect them. When the [FDA](#) relentlessly [wipes out cancer cures that actually work](#), while throwing doctors into jail, or [Dennis is thrown into jail](#) on fabricated charges to [prevent free energy from happening](#), or a [life insurance company](#) that specializes in selling term insurance because all other policies are scams is ruthlessly attacked by police state tactics, the stated rationale is always "protecting the public."

Protecting the public is the world's largest protection racket, and the vast majority of humanity pays dearly for such "protection."

Dennis was fond of saying, "Put a man in a big enough cage, and he thinks he is free." Barbara Marciniak's Pleiadians say that the most effective prison is one where its prisoners do not realize that they are in prison, and those prisoners will believe almost any clever lie, as long as believing it keeps their bellies full.

The dark path is dark indeed. In the family of light, ties of mutual love bond them together. In the family of dark, it is mutual self-interest. They work together not for love of each other. They might experience some light and often-phony camaraderie, but they generally fear and hate each other. Each realizes that they cannot subjugate an entire planet or galaxy by themselves, so they need comrades of like mind. They are always watching their backs around each other, as they know that everybody is in it for themselves. There can only be one Emperor of the Universe, and they all want the title, so the kinds of power plays that occur in their circles most would rather not hear about. In addition, their conspiracies and game plans are always falling apart, because they cannot work in unison very effectively. They are all vying for power with each other. The idea of following orders is a dark path invention, used to keep those below them in the hierarchy in line.

Most young men [would never willingly kill people in war](#), if left to themselves. Consequently, a [system has been devised](#) to glorify violence, dehumanize the "enemy" (young men just like them), shield them from war's realities until they are on the battlefield, condition them to obey orders and call them cowards and even execute them if they do not obey. [Wars](#) are always created and egged on by dark path initiates, with the masses falling into line as they have given away their responsibility to the "powerful." A twist on the "protection" racket is having people support violence to "save" somebody, or "get" the bad guys, such as riling up Americans to [cheer the bombing of Iraq, Yugoslavia or Afghanistan](#). The dark path folks must laugh heartily

as the American people fall for it each time, as those cheering Americans believe they are helping the people they bomb.

Einstein once remarked that human stupidity is one of the truly infinite aspects of our universe, and dark path members eagerly exploit it. They play to people's sense of helplessness and feelings of victimization by selling violence as a remedy for the world's ills, as if there were no other choice. The demonization of [Saddam Hussein](#), [Manuel Noriega](#) or [Slobodan Milosevic](#) (or America's demon of the hour, [Osama bin Laden](#)) is merely state propaganda, and the masses fall for it every time. Indonesia's [Suharto](#) makes them look like choirboys, but he *always* did our bidding, so he was a respected ally who we heavily armed. Hussein, Noriega and bin Laden all were lauded U.S. allies while they did our bidding, and became demons when they failed to. The dark path folks smile every time people support violence, as they know it *always* leads to more violence, and they truly get thrills out of bloodshed (as long as it is not *their* blood being shed) and the suffering of others. Millions of people cheering massive violence wreaked against distant peoples is a dream come true for dark path initiates.

"Power" as discussed in this essay is not true power. Love is the only power. The earthly power of controlling and manipulating others to one's will is counterfeit power. It is stealing the power of others. True power comes from within. Detonating a [nuclear bomb](#) is "powerful" in its own way, but is a pale and dark imitation of real power, which the dark path initiates have yet to learn.

Val Valerian, in his *Matrix III*, establishes broad categories to classify humanity into, with rough percentages. It relates somewhat to the light-dark polarity. [\[13\]](#) Valerian did not present his data to expressly deal with the integrity issue, but it has a relationship and gives rough numbers. Valerian sees it in terms of those who give away their personal power. It can also be seen as serving themselves. Most people do not want to be responsible for their lives, and arriving at a new level of integrity and taking back their responsibility has a price. When faced with the decision to be responsible for one's life, more than half of humanity at this time readily falls back into complacency, easily controlled, giving up their freedom for comfort and "security." As [Ben Franklin](#) once observed, those who give up their freedom for security deserve and receive neither. About a quarter of the human race feels there is something wrong with the picture, but shuffle along with the herd nevertheless. About ten percent *know* there is something not quite right, and have tried to do something about it at some level, but were repressed in one way or another and still shuffle along with the herd. A few percent have figured it out and have broken away from the herd. About five percent of humanity are committed self-servers, and actively and knowingly use others for their own ends. Those numbers are handy and relate to the integrity issue. Those few who have broken away from the herd are mainly other-serving. The ten percent have tried to be other-serving and are to a degree, but have been beaten back into line. About ninety percent of humanity makes up the "Great Herd" and is easily manipulated. The five-percent manipulator class is composed of those on the dark path.

Those are general categories and percentages, and are only for illustration, not to be taken literally. That category of five-percent dark path initiates has various levels of accomplishment and commitment. The dark path is not forever, either. Eventually, all dark path initiates wake up. Not many reach that highest level of dark path evolution and meet the Creator, to be told they cannot get home on their path. Most figure it out before then, getting a belly full of the [pain and suffering that attends their path](#), and eventually revert and pursue the light path. An initiate who attains the "mastery" of the dark path, equivalent to a Genghis Kahn is far less than five percent of the population. A Genghis Kahn is one in many millions. On the light path, a Jesus or a Buddha attained levels of mastery that have proven to be one in billions on planet earth, so far.

Being other-serving is the ideal, and the vast majority of humanity loves other-servers, partly because they get something out of the deal, and the 95% of us not on the dark path can be inspired by their example. That ninety-percent of humanity will not accept personal responsibility for their lives, and rather easily give it up. They look for other-servers to give it to. That is *their* great folly. Other-servers realize that nobody should give their power away, and usually do not seek positions of earthly power. As Lake's ET friends stated, the self-servers seek power and can be found flocking to positions of power as moths flock to a light bulb. The self-servers engage in a charade. They masquerade as other-servers, asking the masses to give them their power (responsibility) so they can serve the "common good." As Dennis has said, they serve humanity all right, they serve up a plateful that they feast on every night. It is not always the case, but those in positions of power in today's world are largely self-serving.

Because of the game humanity plays today, other-servers can fill those "powerful" roles, not because they lust for it, but they realize it is a way to counterbalance the self-servers, hoping to help steer the masses toward a brighter future. It is dangerous work, not only due to the many temptations, but they are swimming with the sharks. Every self-server in public life says they are an other-server, battling all the self-servers. Nobody stands up and says that they are a "bad guy." Everybody sees themselves as good guys, rationalizing their

deeds, whatever they may be, no matter how dark.

Many years ago I read about the shantytowns that ring Latin American cities such as Buenos Aires, Rio de Janeiro, Mexico City, etc., where life is nearly unbearable. Life is cheap there, with children on their own on the streets, trying to survive with no parents, at age three. Life is so horrible there that a class of children assassins developed, and a practitioner was called a pistolero. A pistolero was a gun for hire, committing murder for a price. Life was so cheap they would murder somebody for as little as five American dollars. One of those teenage assassins righteously defended his profession. He said, "There will always be bad people who need to be killed. I am providing a public service." For as little as five dollars, that pistolero would be convinced you were a bad person who needed to die.

While discussing assassins, it is worth mentioning that they are usually men. Women have an inside edge on the light path over men. They have bodies designed to serve others. Their wombs and breasts are designed to nourish life. They are more inclined to be other serving than men. That does not make women "better" than men. Neither gender is superior, and humans all spend plenty of lives as each. The [war against women](#) the West has waged for millennia is revenge, somewhat. It is a reaction to a time when men were denigrated, relegated to being little more than something to inseminate the female, who possessed the power of life (men were perceived similar to how a drone bee is). The coming age, if we make it, will have a balance between the sexes, with each fully appreciated for its distinct and valuable qualities. The world's situation today can be seen as the male principle out of control. That perspective can be seen in many areas, such as the [endless wars](#), the environmental rape (raping Mother Earth), or [male-based Western "medicine,"](#) where the body is seen as a battlefield, with the only legal medicines being drugs and surgical procedures, violent methods that violate the body's integrity. Healing is feminine work.

Regarding light workers in politics, although [Abraham Lincoln's](#) tenure as president had many dark and bloody events, and Lincoln was a lawyer and politician, with all the unsavory ramifications of those professions, Ra says that in 1853 Lincoln's soul made a deal with a fourth dimensional light being. Lincoln then became a "walk-in," whereby another entity inhabited Lincoln's persona, and the great labors of his last twelve years were accomplished by a great light being.[\[14\]](#) I will not contradict it, although many people in the South may not agree with that assessment. Ramtha has called Lincoln America's "greatest king." The imperial impulse had much to do with [keeping the union together](#).

There are more other-servers in the CIA than [Ralph McGehee](#) and the few other CIA employees who spoke out as he did. Ralph's intelligence was not what enabled him to figure it out, but his pure heart. The CIA psychologically screens its fieldwork applicants, trying hiring people who blindly follow orders. For every Ralph McGehee who took the high, hard road, there were numerous other CIA employees who at one level or another eventually saw the big picture. Some quickly became disillusioned and quit the CIA, getting a "real job" or becoming a missionary or other undertaking designed to serve humanity. Others developed a gradual uneasiness over the years as their experiences contradicted their indoctrination. At some point, the CIA ceased to be fun and they left. Others gradually felt the pain of having their ideals and reality clash, but developed coping behaviors such as drinking and other dysfunctions. Some devoted their spare time to charity work or something else they saw as truly helping.

Others figured it out as Ralph did, but did not have the courage to take his path. As with Ralph, they were too far along in their careers to practically change into another. They watched the calendar, counting the days to retirement, drinking themselves into a stupor nightly to live with their situation, exemplifying a life of quiet desperation.

In his *In Search of Enemies*, John Stockwell wrote about CIA case officers who return to the CIA headquarters at Langley from abroad (as Ralph McGehee did) and reception they receive,

"Case officers often come back unnoticed, drained by their experiences and haunted by their consciences, by the suspicion that the things they had done were pointless as well as cruel. They rarely have the same sparkle and drive on the next assignment - or the next. In offices throughout headquarters were those who had given up, who were walking out their years before early retirement, becoming grey fixtures like safes and Xerox machines."[\[15\]](#)

Some would speak up in the CIA's halls, trying to reform it or openly question the CIA's stated mission, only to

be quickly swatted down or ostracized. If they stayed in the CIA, their lives were made unpleasant. Very few would wake up as Ralph did and do something about it, taking great personal risk to tell the world what was happening. Ralph is around one in twenty thousand. During World War II, there were virtually *no* German soldiers who [spoke out against the Final Solution](#).

There are also CIA employees who see the situation exactly as Ralph does, and are supremely happy. They are dark path initiates, crave positions of power, and love being on the "winning" side. How many in the CIA's ranks are like that? It is probably ten percent at most. The others engage in many sophisticated rationales for their actions. To one degree or another, they have had the opportunity to see what Ralph saw, but prefer to not. They do not want to believe they are serving darkness, and engage in many games of denial to protect their consciences. McGehee's CIA associate who was assigned to work with him on censoring his book thought McGehee should be taken out and shot. He believed McGehee was a traitor to the noble cause. That man was a prime example of how the masses react to a Ralph. Ralph represents a shattering of the mass illusion, and the herd does not like having its self-serving illusions shattered. The emperor may be stark naked, but few want to hear it. In an earlier time, Ralph may have become a victim of mob violence, nailed to a cross or have some other grim fate. Many years later he may have become a posthumous candidate for sainthood, but in America, there are other ways to deal with Ralph. The most effective method is denying him access to the podium. If his voice is a mere whisper next to the trumpet blare of propaganda, and he is discredited with lies, few will hear his voice or heed it, and few want to anyway. Everybody wants to believe they do good deeds, and do not take kindly to being told otherwise. Ralph has been actively spied on and subjected to a campaign of intimidation over the years as the [CIA tried silencing him](#), quite illegally. In 2000, the CIA finally succeeded in silencing him. In 2004, [John Perkins](#), after years of soul searching, spoke out from the privatized middle management of the empire.

That is the point regarding spirituality and how it relates to my work. As the Bible says, many are called and few are chosen, and the world's fate rests in few hands. It [does not have to be that way](#). The forces of darkness easily manipulate humanity. The relatively few committed light workers are trying to wake us up, so we do not stampede over the nearby cliff. The dark path is not easy to tread. They are continually trying to navigate between enslaving humanity and destroying the planet, which would end their racket. They want alive and terrified slaves, not a destroyed planet, but it is not an easy tightrope to walk.

[Mr. Deputy](#) is a dark path acolyte. He is fairly accomplished, but not in the dark hierarchy's upper echelon. He is a soldier, following orders and making a good living by preying upon others, doing his part to keep humanity in chains, posing as a "public servant." He may not realize the full implications of his actions, but even if he did, they probably would not affect him, other than feeling good about a job well done. Until people [encounter their mentality](#), that may seem to be going too far. Dark path initiates rely on the denial of the average person. People do not want to believe that those in positions of power are self-serving, because they have given their power away to them. Therefore, they often go to great lengths to stay in denial about the state of affairs, although the effort they can expend in battling their [cognitive dissonance](#) can reach [surreal levels](#).

There is reason to be optimistic about the future. If enough people make the effort to simply choose the light, not because it will win, but because it is good, [a great age of light, love and healing](#) awaits us. The Bible describes the Thousand Years of Peace. Native Americans have called it Paradise Restored. Some call it the New Age, and various cultures have other terms for it, but we are not there quite yet. We also might destroy ourselves. If we do, either through warfare, environmental destruction, or both, we will continue our incarnation cycles, but on another planet. Michael says that if we do, we will probably choose a life form that cannot manipulate its environment, [dolphins and whales](#) being examples of ensouled species that cannot destroy their environment. We probably would have no opposable thumbs in our next attempt to get it. One reaction to that notion is that if we did something like that, we will not have learned our lesson. The truly happy ending would have us finishing our incarnation cycle in a life form that can manipulate its environment, and finally learn the lesson of living in harmony with it. That *would* be the ideal, but Michael says the ideal is rarely attained on the physical plane, and very few wrap up their incarnation cycles by living the life of a Jesus. Our physical lifetimes do not end until we enjoy being here, loving the trip. Then we graduate to other adventures.

Robert Shapiro's Zoosh says that the path to the New Age, healed planet, etc., is not by destroying the darkness with light, but by honoring the darkness for what it is, appreciating it, and having it take its rightful place in the cosmos. Darkness is largely running the show on Earth, and that was not its intended stature. Unmitigated evil will always destroy itself in the end, when there is nothing left to destroy. Zoosh states that the ideal mix of light and darkness is about 98% light and 2% darkness, to spur continued growth. Without some "discomfort" on this plane, there would be no incentive to grow. What is happening, according to Zoosh, is a healing and redemption of the darkness, where it will play the role it was designed for. The lessons learned by having darkness in charge have been profound and harrowing for humanity, yet valuable for Creation. It is apparently a great sacrifice for every one of us to be here, acting on this stage at this time.

The [Michael material](#) covers those topics in depth. Michael says a species destroys its home planet by warfare or environmental destruction a third of time, and completes its incarnation cycle on another planet in a different life form. Of that third, one-third is by warfare, and two-thirds is by environmental destruction. Humanity is today at that juncture where we may kill ourselves off. This is the turning point in our evolution. Michael's vast perspective and dispassionate view of an ensouled species destroying its home planet and simply choosing another one to continue its journey can be unnerving. Michael says that if we do destroy this planet (or make its environment hostile to life), those who have contributed the most to its destruction (mainly dark path acolytes) will incarnate on this planet as it is dying, experiencing the consequences of their activities. That is not because God forces them to, but because the nature of our souls and the incarnation cycle is acting in the world, and learning by reaping the results of our actions. We reap what we sow. It is a law of creation that applies from top to bottom. Often we sow in one life and reap in the next.

Michael's perspective can be interpreted as stating that those on the dark path are generally younger souls. Lake's ET perspective states that plainly. Spiritual teenagers are running the world today, seeking "power" over love, and even confusing the two. Every soul is divine, and the path of darkness is one of God's gifts. It is a consequence of having "free will," which is something that animals do not have. A rabbit, bear, tree, shark or dog cannot choose to be "good" or "evil." They are not playing that game. To the extent animals are "vicious" in today's world, they are largely reflecting back to us our consciousness. They are also not too happy playing that role. They look forward to when we "get it." Viciousness is not their natural state, and the time is coming soon when the lion *will* lay down with the lamb. Mother Nature is not competitive, [but cooperative](#), which is another lesson that humanity has yet to learn.

Another way of describing the coming transition is calling it a dimensional shift, where humanity is transitioning from the third to fourth dimension, which apparently has never been tried before while staying in a body. Robert Shapiro's Zoosh discusses those concepts and length in the *Explorer Race* and *Shining the Light* series. In the fourth dimension, people can read each other's thoughts, so the charade of dark path initiates deceiving others is impossible. Consequently, in the fourth dimension one does not find light and dark path initiates sharing the same planet. They each have their own planets, and imagine a planet where everybody is on the dark path and they all know it.

Those different schools of thought do not contradict each other, and neither do the teachings of masters such as Jesus, Buddha, Mohammed, etc. Michael likens the seeming differences in the various mystical philosophies to studying various systems of the body, where Jesus' teachings are like studying the circulatory system, Michael's teachings are like studying the endocrine system, Buddha's teachings are like studying the nervous system, the Ra material is like studying the lymphatic system, Jane Roberts' [Seth](#) material is like studying the digestive system, the [Alexander material](#) is like studying the skin, [Barbara Marciniak's](#) Pleiadian teachings are like studying the sensory systems, [Neale Donald Walsch's](#) *Conversations with God* material is like studying the immune system, Zoosh's *Explorer Race* material is like studying the skeletal system, and so on. Each is a valid system of study, seeing a different facet of reality, each complementing the other.

That is what I have learned on my journey so far, and I will surely have a somewhat different perspective in twenty years. Nobody need agree with everything (or anything) presented in this essay, but it gives some insight into the perspective that dominates my writings.

The Human Afterlife

The earliest human writings evidenced ancient belief in the supernatural and in realms of existence beyond the physical plane. The Babylonian epic of Gilgamesh and his otherworldly journeys circulated as oral histories for a millennium before being written in cuneiform on clay tablets. That epic influenced myths ever afterward, including Old Testament tales.[\[16\]](#)

Only with the modern age's appearance have any peoples ever officially disavowed the idea that anything existed beyond the physical dimension. Such a viewpoint is known as [materialism](#), although such terms as atheism, agnosticism and "[skepticism](#)" have also described philosophies that reject the notion of life after death. America's [Founding Fathers](#) were largely deists; they believed in a creator of sorts, but one that remained aloof from the physical plane and the concerns of humanity. [Thomas Jefferson created a Bible](#) that edited out all of Jesus' "miracles," and ended with his entombment.

Although mysticism never died out, the West was fully in materialism's grip during the 20th century. A curious phenomenon happened during the later decades of the 20th-century; Western emergency medicine advanced to the point where clinically dead people were revived. They reported otherworldly realms remarkably similar to what mystics had described for millennia. The current research on the phenomenon began with Raymond Moody's *Life After Life*, which appeared in 1975. Before Moody's first book was even published, he met a person who had one of the most spectacular near-death experiences (NDE) yet recorded. [Dannion Brinkley](#) was struck by lightning in 1975 and died. While he was dying and dead, he had most aspects of the classic NDE, with the tunnel of light, the being of light, the love that permeates the place he visited, a love immensely more intense than anybody feels on earth, a life review and visiting realms that no motion picture can do justice to. As with most who return from an NDE, Brinkley wanted no part of coming back to earth's vale of tears, but was told that his work here was not finished, so his consciousness came back to his body while it was being taken to the morgue.[\[17\]](#)

One of the few NDE accounts that might top it is [Grigorievich Rodonaia's](#). He was a Georgian dissident that the KGB assassinated, and his body was taken to a morgue and frozen for three days. When the doctor began cutting into his body for the autopsy, Rodonaia's eyes opened. They closed his eyes, and they popped back open. At that point, the doctor panicked. Rodonaia was brought back to life and spent nearly the next year in intensive care. He reported visiting realms similar to those described in mystical accounts. As Brinkley was shown many future events that came true (Moody recorded them, and his amazement grew during the subsequent years as the predicted events kept happening), Rodanaia brought back "proof" of his death experience's validity when he told the hospital staff that he had been able to see into an infant there, and the child's pelvis was fractured, which the doctors were unaware of. X-rays proved Rodanaia's information accurate.

There have been many pieces of evidence that validate NDEs, as far as human consciousness not being dependent on the human body for existence. The materialistic presumptions of science, as well as the "Pearly Gates" tales of Christianity, have been challenged by the NDE phenomenon, and there have been numerous attempts to challenge the validity of NDEs, coming from both mainstream religion *and* science, them being the former and current authorities of reality. While creditable efforts have demonstrated that NDEs are influenced by the person having them, such as their culture, beliefs in an afterlife and so forth, no attempt to invalidate them, such as calling them demonic experiences (fundamentalist Christian debunkers) or byproducts of the brain's chemistry (the "skeptics") has been persuasive.[\[18\]](#)

It is nearly impossible to find anybody who has had an NDE and has been convinced that "they just imagined it," or it was a byproduct of lack of oxygen to the brain. The post-NDE transformations of people's lives are nearly as spectacular as the NDEs themselves. Brinkley is a case in point. He was in about 6,000 fistfights while growing up, and was a triggerman for a U.S. [assassination squad in Southeast Asia](#) while [America was killing millions of people](#). After his "lightning therapy," Brinkley developed startling psychic abilities.[\[19\]](#)

Although his soldier background is evident in his perspective (he is a right wing Southern boy who was a Marine), he also renounced violence and realized that life was all about love. Nearly every NDE survivor has a radical change in their life's priorities, seeking the spiritual and abandoning materialism. That radical change in people's outlooks has led to many divorces, as their materialistic spouses cannot handle the change. Whereas having the nicest house or the newest car on the block may have once been the goal of the pre-NDE-person, the post-NDE-person wants to help others and enjoy every breath, and none of them have any fear of death, as far as it meaning oblivion. They *know* they are on earth for a reason, and know that when their time comes, they will leave earthly life, and gladly.[\[20\]](#)

The life review portion of an NDE can be astounding. When Brinkley had his NDE, he not only reviewed every moment of his life, but also what everybody *felt as they interacted with him*. When he relived his 6,000 fistfights and his murders, he also saw them through the eyes of those he fought and murdered, feeling what they felt. That was the worst part of his NDE, and makes the Golden Rule a little easier to understand, and the concept of sowing and reaping. It was sickening to feel the emotional pain people felt as he beat them up or murdered them. The worst feeling of all was when he beat people up for the sheer fun of it. He also was able to see the "ripple effect" of his actions. When he was an arms dealer to the United States' [Latin American puppets](#), he got to see and feel the effects of the weapons he sold, such as feeling what a little boy felt when his father was murdered with a weapon that Brinkley sold. After his agonizing life review, he expected some kind of rebuke or punishment from the being of light with him, and instead received love and joy, with an enigmatic reply:

"Who you are is the difference that God makes...and that difference is love."

Just before being sent back to his body, with his new mission in life of helping to raise human consciousness, Brinkley's guide told him,

"Humans are mighty spiritual beings. All they need to realize is that love is treating others the way they themselves want to be treated."[\[21\]](#)

When he was dead, Brinkley was shown a device he was supposed to build when he returned to earthly life: a bed that helps people have out-of-body experiences, and across-the-veil experiences with "dead" people. The Monroe Institute does something similar. One of the most validating parts about the NDE and out-of-body phenomenon is that [Brinkley](#), The Monroe Institute, [Bruce Moen](#) and others is that they do not ask anybody to believe anything they say, but they assist others in *having experiences* of those states for themselves, and they can make up their own minds. It has nothing to do with faith, especially the blind kind. Today there is even a TV show, *Crossing Over*, where [John Edward](#) brings messages from the other side to people in the studio audience. Every show, Edward has "hits" of the [Isaac Brown](#) variety. The "skeptics" who try explaining it away as a "cold reading" or other trick carry zero weight with people who have *experienced* John giving them messages from their departed loved ones.[\[22\]](#) As with all efforts such as Edward's, the goal is teaching others to do it for themselves. Nobody need rely on the "experts;" anybody can seek and *have those experiences* for themselves, but it requires *self-discipline*

The many [testimonies of people who have had NDEs](#) strongly correlates with what mystics and [channels](#) have been saying for a long time. The term "afterlife" is something of a misnomer; time does not exist beyond the physical plane, so nothing can really be "after" anything else. The trappings of conventional heavens and hells are rarely reported. The beliefs of the experiencer help create their immediate afterlife experiences. Whereas ancient Greeks crossed the River Styx after they died, some modern Christians were also greeted at the Pearly Gates and given the standard-issue harp, which they began strumming. Those with rigid beliefs about what awaits them can become mired in those expectations. Hard-core religious fanatics and hard-core materialists can be stuck there for a long "time." Hard core materialists can spend centuries in a kind of catatonic state, constantly repeating to themselves that they do not exist. Eventually they realize that *something* is saying "I do not exist," and they begin waking up to life in the other side.

Robert Monroe called the out-of-body realms he visited "Focus Levels," with every being focusing on the level appropriate to their development. In Monroe's terminology, Focus 1 is physical reality, and Focus 10 is like a waking dream. Focus 23 is where some beings go after physical death, where they either do not realize they are dead or are unable to free themselves from the attractions of earthy experience. What people call ghosts are usually beings caught in Focus 23. It is related to the Christian concept of purgatory. Focuses 24 to 26 are where most people on earth today quickly end up after they pass over. They are also called "belief system territories." In Focuses 24 to 26, there are Romans hanging out in Elysium, harp-strumming Christian heavens and every otherworldly realm that any human group has ever postulated. They are real, in that people experience them as real, just as we experience physical reality as real. They are way stations, however, that people are attracted to based on their beliefs and spiritual development. Nobody is *sent* anywhere; people go to what they are drawn to. If a small town's citizenry all attended the same church, believing that a particular kind of afterlife environment awaited them, they will go there and live after their physical deaths, until they are ready to move on to their larger lives. Physical existence is an extremely traumatizing experience, and among those "many mansions" are places for souls to recover from earthly experience.

The harp-playing heaven is not all that heavenly, and after plucking those strings for what can seem a long, long time, souls begin wondering if harp playing is all there is to heaven. When they begin wondering if there is something more, helpers are always nearby (angels and other friends) to help them discover what that might be. Focus 27 is a place where beings begin integrating, healing and putting their earthly experiences behind them.

Focuses 24 to 26 also contain what can be called hells. Once again, nobody sends anybody anywhere, especially against their wishes. Those who live in the various hells are there because *they are attracted to them*. [Bruce Moen](#) was one of Monroe's pupils, and [he once visited a "hell" in Focus 25](#), where emotional sadists lived, playing evil tricks on each other. The major difference between such a hell and earth is that there is a vast spectrum of spiritual attainment of people living on earth. Some are on loan from heaven, more are on

leave from hell, and most today just try getting through life without hurting anybody too much, or helping anybody too much, either. So, people on earth interact with a wide spectrum of souls. The emotional sadist that Moen visited, named Max, played his games on unsuspecting people during his earth days, but in Focus 25, Max's world was completely populated with emotional sadists like him. On earth, Max was a big fish in a little pond. In Focus 25, Max was near the middle of the food chain, bearing the brunt of emotional sadism as often as he inflicted it. In that hell, they all lived to inflict emotional pain on others, but the only victims they had to prey upon were each other. If there ever was a fitting hell for Max, he was in it. He is going to stay there as long as he wants to play the emotional sadist game. There are also thief hells,[23] soldier hells, murderer hells, rapist hells and so on. Some try out each hell in succession, an experience called "hell-riding." The only way out of those hells is through love: being able to both accept it and give it.

Some are so attracted to their hell that they become masters of it, becoming the "king of hell." They are so clever that nobody can beat them at their hell game, then always getting the upper hand. All souls are part of a larger entity, as with the mid-causal entities [Seth](#) and [Michael](#). Those in hell are stuck, with arrested development. All entities evolve, and when a group of a thousand souls is ready to travel to the causal plane, and one of its souls became the king of its hell, the thousand souls will "move heaven and earth" to try getting that soul to leave its hell and rejoin the others. If the soul cannot be persuaded to leave, the other souls will move on. Little did the "king of hell" realize that those other souls were part of its larger self, and when the other souls leave the astral plane for the causal, much of the "substance" that helped sustain the "king of hell" also leaves, and the king of hell cannot "hold itself together," and its personality eventually disintegrates, with the "king of hell" eventually becoming little more than a fly, buzzing around in that hell's energy.[24]

Cult members can live together in the Belief System Territories for a long time. Their heaven, however, can be a hollow one, like that harpist heaven.[25] When they finally decide they have had enough of the Belief System Territories, they move on to Focus 27. Each teaching, such as Monroe's, has particular terminology, and can be seen to correspond to concepts in other teachings. In the Richard Material, what Monroe calls the Belief System Territories and Focus 27 (also called the Reception Center, or the Park), Richard calls the Place of Self-Deception (like a Hollow Heaven), the Lower Regions (like [Max's Hell](#)), and the Place of Preparation.[26] It is the *realities* that are important, not the terminology. Robert Sibley's *The Science of the Soul* covers that territory and far more, describing the various planes of existence, at least those somewhat knowable by earthly souls. It is not a matter of belief and dogma, but realms that sincere seekers can explore for themselves, but *usually* only [older souls](#) have much interest or talent for such undertakings, as they are on the inward journey, not the outward one that younger souls are on.

There are also heavenly realms that far exceed in love and grandeur anything that can be written about or even imagined while on earth. The [Michael](#) teachings describe the planes he is familiar with, and earthly souls can somewhat comprehend the astral plane, but not really the higher ones. Michael is a mid-causal entity, and readily admits that the next plane of his evolution, the [Akashic plane](#), is as much a mystery to him as the astral plane is to us.

There are high-quality accounts of the other side of death, by people who recently passed over. Ken Akehurst's *Everyone's Guide to the Hereafter* and Helen Greaves' *Testimony of Light* are excellent accounts of the initial afterlife experience. Akehurst was an average everyday English workingman, and he reported from the Belief Systems Territories. Life was "good" there, immensely more enjoyable than physical existence, but Akehurst also advised earthlings to give up their addictive behaviors before they died, because they would simply bring them along to the other side, but with no way to satisfy them. Robert Monroe and others have described beings that died with physical addictions. They often become "trapped" in Focus 23, alcoholics hanging around earthly bars to possess a passed-out drunkard, to get the brief thrill of being inebriated. All physical additions can lead to agony on the other side, where the addiction cannot be sated, which can lead to hanging around those who are still physical, to try getting a vicarious "sniff" of their addiction. Greaves channeled the experiences of a Catholic nun she knew in life, and the woman began dictating to Greaves mere weeks after she had passed over. The nun was in the Belief Systems Territories to begin with, but rapidly passed on to Focus 27, where she met her soul. Greaves described the dramatic change in the nun's appearance and demeanor after she met her soul.

Virtually every existing account of the other side and channeled teaching accepts reincarnation as a fact. The only exceptions are people who have *only* had an NDE, where they are *merely* on the threshold of the other side (Bettie Eadie's *Embraced by the Light* is one of those accounts), or *only* in the Belief Systems Territories, as Akehurst was. Akehurst was not yet to the point of reuniting with his soul (it does not happen in the Belief Systems Territories, but further along the path), and asked around about reincarnation, but was left to figure it out on his own. Greaves wrote another book titled *The Wheel of Eternity*, which described her experiences with a woman who was a ghost in her home, trapped in Focus 23. Greaves participated in helping that ghost

realize where she was and why, and helped her move on. Greaves also helped an English aristocrat who went straight to “hell” upon leaving earth life, but was granted “shore leave” to come to Greaves’ home, where she also eventually was able to accept love, leave her hell, and move on.

After exploring the literature on crossing to the other side and what awaits us, and leavening it with [my experiences](#), one issue is clear: bribing people with heaven or threatening them with hell are counterproductive. We go to whatever *we are attracted to*, and how we live our lives on earth determines where we go on the other side. What we *think* is important while we are here, but more important is what we *say*, and what we *do* is the most important, and the motivation behind our actions is all-important. Religious fanatics often have the most difficult time on the other side; their beliefs are conditioned by fear, not love. Rigid beliefs are the greatest obstacles to enlightenment, and all belief-fanatics are advised to give them up if they want a pleasant transition to their heaven. Living by Jesus’ Golden Rule - treating others how we would wish to be treated - is the best prescription for raising one’s awareness and having a joyous transition to the other side. Love is the *only* answer.

A Tale

I want to paint the big picture, as far as can I glimpse it from my limited physical perspective. So, here I will tell a tale. I will reference parts of it, where some sources are, but that is only for the reader’s reference. The following tale is not necessarily the “right” one. Richard Bach’s Donald Shimoda said he did not know if his view of creation was “true,” but he believed it because it was fun to believe it.[\[27\]](#) I cannot “prove” this tale to anybody, and it is partly mine. Nobody *needs* to believe it, even me. This could all be wrong. We are not our beliefs, and believing that we are can get us into trouble.

The question I ponder the most these days is “why?” Why are we here? What game are we playing? Why *this* universe? It is the unfathomable question. Even Sai Baba says he does not know what God had in mind when this reality was set up. All the same, many sources hint at it, although I wonder if they really *know*, either.

Virtually every mystical source agrees that beyond the physical plane, time and space largely do not exist. They are artificial constructs used to create this dimension, a dimension that is ultimately illusory. There is also plenty of first-hand human testimony regarding that phenomenon. People who clinically die and are revived report reviewing their entire lives, in greater detail than is seemingly possible, in mere instants of earth time.[\[28\]](#) The further a physical being “progresses” on “the other side,” the less their existence has time and space-like attributes, to eventually be abandoned, much as a child eventually abandons training wheels. With that limitation acknowledged, I will write in time and space terms, being that I live in a dimension where it defines our existence.

In the beginning, the creator gave birth to an immense number of beings, somewhere on the order of the number of stars in the observable universe (200 billion multiplied by one trillion), and perhaps a truly infinite number. They were the creator’s playmates, in a sense fashioned from the creator’s rib. There was no physical reality as we know it. All beings had free will, and creation was one big celebration, with everyone laughing and playing. All were equal to the creator, as everybody was made from the same “stuff.” One day, one being decided to play a game of creating a hierarchy. He said to his pals,

“Give your will to me. Free will can be burdensome, and I have a special ability to handle it. If you give your will to me, I will take care of it, making your decisions for you, and making your existence easier.”

Some say the being made his pitch at the creator’s request.[\[29\]](#) Others say that the being was an outside agent, seeming to come from outside creation. That being’s sales pitch was well done, but about 99% of the creator’s playmates replied with something like,

“Thank you for your offer, but I think that my will is something I am supposed to manage by myself. Yes, some decisions seem difficult, but if I do not make them, I think I will diminish myself (and hence creation) in some way. Your offer is generous and noble, but I think I am better off making my own decisions.”

After eons of recruiting effort, that being recruited about 1% of the creator's playmates to his new program. The new recruits gave their free will to that being. A hierarchy was created, with that being managing the free will of that 1%, with other beings helping him. It developed into a hierarchy, with that recruiter at the top, the helping levels below him, and those giving away their free will at the bottom. Eventually, those at the bottom gave away virtually *all* their free will to the hierarchy. Free will was an essential component of the creator, and when those beings gave away their free will, they also lost other given attributes, particularly their awareness. In Judeo-Christian circles, that loss of awareness is known as "The Fall." That being who invented and recruited others to his hierarchy is known as Lucifer in those circles, and that time of carefree play is known as the Garden of Eden. The tale has been greatly distorted in Genesis, with women being blamed for The Fall, the sin was seeking knowledge, the Garden of Eden was in today's Middle East, and that tempter was in the form of a snake, as the serpent was the symbol of women [thousands of years ago](#).

The Fall took a long time. As everybody has free will, the creator could not infringe upon what transpired, even if his playmates gave their will away. Even though he cautioned that 1%, he had to watch them give away their will and gradually lose their awareness. They devolved to a state that had not been seen before. Whether Lucifer did it at the Creator's bidding or not does not alter today's situation. If Lucifer did the Creator's bidding, however, I am not currently happy about it, because I am a member of that fallen 1%.^[30] Was it a test that God invented? Did we ask to take the test? Did we think we could become creators, and God replied, "So, you think you want to be a creator? I have a little test, to determine if you are ready." If it happened somewhat like that, at this time I question my wisdom. Life on earth is not my idea of a good time, having lost awareness and a seeming lack of free will, not continually bathing in the love that is a natural part of the "other side" and being at the mercy of forces seemingly beyond my control.

So, what to do about the fallen 1%? No being can fall so far that all awareness and memory is lost. As awareness was lost, those beings also fragmented into a hierarchy of awareness that resembled Lucifer's. The aspect of those beings that remembered their Garden of Eden days preferred their former awareness to what happened after they gave away their free will. They realized their mistake, and the creator (with the other 99% assisting) invented a system to allow them to regain their awareness and reclaim their will. A remedial school was developed for lost beings to regain their awareness. No being embarked on the journey that did not desire to regain its awareness.

The densest, lowest, most elementary part of the course was invented. It is known as physical reality, where I live. In the fragmentation of awareness, "lesser" beings were created. Paradoxically, creation is one being. There is truly no separation from the creator, yet we all have our individuality. In this dualistic plane of existence, all explanations of the big picture contain paradoxes. Every being is part of the whole, and the whole *cannot be* whole without each part present. Every *atom* is a necessary and infinitely valuable aspect of creation. That is the unfathomable aspect of creation that no earthly source has ever dealt with to mortal satisfaction. Earthly brains are not equipped to comprehend infinity and dimensions where time and space do not exist. That is part of the frustration of being here; having extremely limited awareness while inhabiting the physical realm. While the physical realm is the densest and cruelest of dimensions, it is also where the most growth happens, and lessons are learned here that cannot be had anywhere else.

Humans are considered sentient. Sentience is quite a ways along the developmental path. Sentient beings begin their physical reality journey as less aware forms. Today's human beings began their physical reality journey spending time as parts of stars, interstellar dust and other things before focusing on earth. As we focused on earth, our early experiences were involved with being parts of the atmosphere, even as clouds. Our awareness eventually became earthbound, and we spent eons as parts of earth, parts of oceans, mountain ranges and deep within the earth's core. As we got the hang of physical reality, we eventually became life forms, the simpler, unicellular organisms to begin with. Our awareness became ever more fragmented with that process, but it was also a way of creating a "concrete" foundation for us to begin rebuilding our former awareness.

This story will seem similar to the theory of evolution. The scientists have an accurate view of the process, to a limited degree, but they also largely have it backwards. Our current consciousness is not a *byproduct* of chemical and evolutionary processes, but is the *driving force* behind them. There is an interaction, however, similar to Marx's dialectical materialism, but not materialistic. Materialism largely ignores consciousness, chalking it up to a phantom of chemistry, but consciousness is the engine of the entire process. Life is not an accident, but the *purpose* of physical reality. Everything in the universe is alive in some way, as it is all a manifestation of consciousness. Physical reality is a place of interaction of more evolved consciousness with less evolved, the less evolved seeming to be rocks, trees and other "unaware" things. Each has its own awareness, perhaps less evolved than human consciousness, but no less divine and necessary for creation.

[Seth](#) says that there is no division of the self, which is another way of saying creation is one. Nevertheless, each particle of creation has its individual integrity, and every atom has its divine awareness. Seth says that the bedrock of our reality, its most elementary component, is a unit of consciousness, which is far, far smaller than an atom or any subatomic particle that has been identified.

In the fragmentation of awareness of which physical reality represents the lowest level, there are many levels of awareness, wholeness and fragmentation. An electron in a squirrel's toe has an awareness of itself, its role in the oxygen atom it is part of, its role in the water molecule it belongs to, the cell it helps comprise, the muscle it is part of, the squirrel it is part of, the squirrel species it is part of, the planet it is part of, the solar system it is part of, the galaxy it is part of, and the universe it is part of. They all build upon each other, all part of the whole, similar to an onion's skin.

The package of consciousness that concerns humans is commonly called the soul, which is an entity that manages the growth of awareness through the physical plane for sentient beings. Every human being is part of a soul, or as it is stated more commonly, each human *has* a soul. [Michael](#) calls human beings fragments. According to Michael's view of creation, an earthbound human is generally one of more than one hundred lives that a soul experiences on the physical plane. In the grand plan of regaining fallen awareness, souls help integrate the growing awareness. Michael's conception of a soul is probably not the same thing as those who gave away their free will to begin The Fall, but it could be considered close. The entity that Paddy McMahon dealt with seems to equate the two.[\[31\]](#) Virtually every piece of mystical material admits that reincarnation is a fact. The mystical branches of the Judeo-Christian religions, specifically the Rosicrucians, the Sufis and the Cabbalists (the mystical branches of Christianity, Islam and Judaism) all taught reincarnation as a fact, while their orthodox counterparts denied it. On the other side of the veil, the closer a personality is to their earthly life, the less they are aware of their soul, or other earth lives their souls have lived. Although the heavily edited New Testament removed more than half of Jesus' life, and probably many references to reincarnation, Jesus' statement that John the Baptist was Elijah returned to human form has survived.[\[32\]](#)

The plan to regain awareness is a vast one that no earthly awareness can fully comprehend. Even the exalted awareness that Jesus and Buddha manifested can only hint at the big picture. Physical reality is where awareness grows at its most elementary level. The lessons learned at the physical reality level are essential for the progressing levels of awareness, similar to a three-year-old's lessons of caring for himself being essential lessons that see him through his earthly life.

Everything on the physical plane has correspondence to the "higher" planes. The most beautiful tree on earth is a drab reflection of how it appears in higher planes. The most profound and intense love we ever feel for our loved ones barely hints at the magnitude of love that permeates the higher planes, and it is as available as the air we breathe. The physical plane is the most rudimentary manifestation of the higher planes' principles. Numerology studies the mystical significance of numbers. Numbers are not only for scientists and accountants, but a reflection of the higher planes, and today's mathematics is merely one of many ways to deal with numbers. There are perhaps an infinite number of valid mathematics systems, and we could glimpse many that would have little or no meaning to our minds. Nevertheless, there are many significances to numbers that go well beyond what scientists think of them, with one, two, three, four and five having a great deal of mystical significance. If there was a "divine" number, however, it might be seven. There are many systems of thought where the number seven has special significance (seven chakras, seven deadly sins, sacred seven prayers, seven days of the week, seven colors of the rainbow, etc.). The Michael teachings are oriented around the number seven, and can be highly useful in helping understand the soul's journey through the physical plane.

The [Michael teachings](#) define the soul as an entity that inhabits the astral plane. The astral plane is the one just "above" the physical plane. The soul that Michael describes "gives birth" to about 120 personalities that inhabit the physical plane. Some souls live only one earth life, while others live thousands and some never do. It is up to the soul. Again, there is not time as it is thought of past the physical plane, and the soul's 120 personalities all exist at once as far as the soul is concerned, similar to leaves on a tree. However, the physical plane has been set up with linear time, so part of the soul's awareness experiences those lifetimes in linear sequence, each experience building on the other, as the soul's awareness "grows" through the physical plane. The soul grows in awareness with each physical life lived. The astral plane is where souls rest between lives. When people have NDEs, out-of-body experiences or visions of heaven, they are generally describing the astral plane. In a paradoxical fashion that earthly brains cannot fully comprehend, souls "invest" themselves in each earthly personality it gives birth to. The soul experiences each physical lifetime and learns the lessons it provides, although the earthly personality has little or no conscious awareness of the soul that gave it birth. On one hand, that does not seem very fair. On the other, the "on its own" aspect

of the earthly personality allows it to develop in its own right. When the earthly personality leaves physical reality, it comes back to the astral plane and is eventually reunited with the soul, but it might take quite some “time.”

Just as every atom has its own awareness and “soul,” so does each human being. The human soul is no “better” than the atom’s “soul,” as all are ultimately made of the creator, and *are* the creator. Even so, the human soul is much “larger” and more complicated and evolved than the atom’s soul, just as the soul is a more evolved and complicated entity than an earthly personality. That does not detract from the integrity of each atom or human personality, however.

Each soul eventually becomes part of a larger entity on the plane “above” the astral plane, called the causal plane. Michael claims to be an entity composed of more than 1000 souls. With each soul living more than 100 lives, the Michael entity draws upon the experience of more than 100,000 human lives to inform his perspective. The further the entity integrates on its way back to the godhead and full awareness, the less “personality” it possesses, so Michael has a clinical detachment and dry sense of humor, mostly confined to puns. Michael hails from the middle of the causal plane, and is thus called a mid-causal entity. [Seth](#) has also been called a mid-causal entity. Seth evidences far more personality than Michael does, perhaps partly because Jane Roberts is part of the Seth entity, him being a “big brother” of hers. Many people channel the Michael entity, but each interacts with a slightly different facet. One person may channel a facet composed of 50 souls of Michael’s 1050, while another person channels a “subgroup” of 40 others. It, combined with the people doing the channelings, gives the Michael material a slightly different flavor, depending on who is channeling it.

The Michael teachings correspond to many others, such as Gurdjieff’s, the Indian caste system and others (the caste system being a badly distorted corruption of valid perspectives). When souls begin the long journey, they choose a “role,” which is a common theme in mystical material. Seth discussed “speakers” as one of the permanent roles that some souls choose, while [Alexander](#) describes a system quite similar to Michael’s. In Michael’s view, a soul will choose one of seven roles: artisan, server, warrior, scholar, sage, priest and king. Each has its own orientation and awareness, and it will always have that role. Each role has its strengths and vulnerabilities. Each role progresses through its ages, its awareness expanding as it “grows” older. Michael teaches that there are seven soul awarenesses, or “ages,” with seven levels within each “age.” On the astral plane, the soul is aware of all its physical lives, but as the physical plane journey progresses with its linear time, each personality is somewhat aware of its “earlier” lives, and builds upon that awareness with each succeeding life.

The “grand plan” to regain awareness has been designed so no soul can “backslide” all that far. We cannot really “fail.” That is apparently part of the creator’s compassion. No soul can become so lost that it cannot get back home one day. We have free will, but it is constrained by some fairly narrow parameters on the physical plane: we cannot remember our nightly trips back to the astral plane, we generally cannot recall our past lives, we must eat to sustain our bodies, gravity makes us earthbound, the love energy that comprises the very atmosphere on the higher planes is not obvious here, we feel pain and must die one day.

Mystical students often read about how wonderful an opportunity earth life is, but discarnate entities say it. It is easy to wax rhapsodic about earthly existence when one does not live here. Although third grade was a valuable experience, I do not want to live through it again. It is difficult to imagine a sane being *choosing* the existence found on today’s earth. Earth is a vale of tears, and has largely been so for a long time. I hope we somehow *earned* this difficult existence. The sources I respect the most say that physical reality, especially life on earth these days, is not an easy experience. I consider [Donald Walsch’s Conversations with God material](#) a masterwork, although Walsch’s God can seem a somewhat flippant Pollyanna at times (and [other problems](#)), but Walsch’s God admits that our best day on earth is the day we die and leave behind this dense existence. The general mystical consensus is that being born is the hard part of being here, and dying the easy part. If earthly life was the best that the creator could come up with when he decided to do a little creating, then we all could make many suggestions. Whatever delights may wait on the veil’s other side do little to mitigate the cruelty of this existence, not while we are here. The standard mystical tale, however, is that we all chose to be here, and only the bravest of the fallen are on earth right now. This [is the cutting edge](#) in many ways, apparently. For humans, earth is a school, not a home, and there is nothing “wrong” with trying to make the school cleaner and prettier (or making sure we do not burn it down), the curriculum less painful and the classes more fun.

There are no human souls, just as there are no cat souls. There are souls that express themselves as humans, and souls that express themselves as cats. Animals are not ensouled as humans are. While it is usually one soul for each human, it is more like one soul for a flock of geese. Also, that “soul” is not playing the same game as a soul playing the human game. Humans exercise free will in a way that animals do not. A goose cannot decide to be “evil,” although there are some mean geese out there.[\[33\]](#) Domestic animals

are usually bridging the transition between sentient and non-sentient animals. Domestic animals are around humans partly to investigate what being ensouled is like. Our pets observe us for more reasons than we might think. If they find the ensouled state attractive enough, they may begin incarnating on the ensouled cycle.

Each of Michael's roles has its positive and negative pole. The pole operated from depends on if the personality is operating from love or the lack of it (fear). We can choose love or fear here in physical reality (the freewill deal), and fear is a normal condition, largely based on feelings of not being in control of what happens to our bodies. Love is the energy of creation. God creates with love. It can even be said that God *is* love. In physical reality, love is not as readily available as it is on the other side, where feeling love is as natural as breathing. The feeling of separation from God's love is perhaps the cruelest aspect of physical reality.

Once the cruelty of not remembering to ask to come here, and having a difficult time feeling the hidden love that sustains this universe, is accepted, the rest is not difficult to imagine or comprehend. The discarnate entities say it is in our best interests to not remember our larger lives, but they also do not live here. Our goal here is choosing and feeling love. As souls "age," each level has unique lessons to learn, and souls adopt "overleaves" for their physical personalities. In more than 100 lifetimes, each overleaf is explored. Each overleaf also has its positive and negative aspect. The [overleaves](#) are: goals, modes, attitudes and a "chief feature," which is how fear predominantly accesses the personality. At the footnote ending this sentence is a highly abbreviated rendition of the Michael material.[\[34\]](#)

On earth, the "Young Soul" stage of the cycle has dominated human awareness for the past two thousand years. Young Souls are great at building civilizations and destroying planets. Winning is everything to the Young Soul. Killing and being killed has been a predominant theme for the past two millennia, especially for [the Europeans who conquered the planet](#). Humanity is at the brink of self-extinction, as it has focused its awareness outwardly as far as it can. The inward journey that the Mature Soul awareness initiates is humanity's next step. It is the most dramatic transition that any ensouled species makes. Mature Souls began outnumbering Young Souls on earth during the past generation (during the past decade it became 34% versus 33% of the world's human population), and the transition is underway to begin exploring emotional and inner realities. Whether the transition will be completed before humanity exterminates itself has yet to be determined. The human race will probably make it, but billions of people may not survive the transition. Those who still prefer playing the kill-and-be-killed game may soon find themselves on another planet to continue their game, as Earth will not allow herself to be destroyed. Although the kill-and-be-killed game provides valuable lessons, no planet can host that game indefinitely. The gentle *will* inherit the earth, and Earth will eventually ascend to higher planes and leave this one behind, just as humans do.

In earlier lives, with the focus outward, humans typically incur a huge burden of negative karma. They spend their later lives paying it back. Those early lives are when people can more readily walk the "dark spiritual path," making self-service a science.

It is easy to see how limited human awareness has been, even during our history. For one instance of many, the Catholic Church's dogma had earth being the universe's center. Today's dogma from many corners is that [humanity is alone in the universe](#). Hundreds of years ago the West rediscovered what Pythagoras knew: earth orbits the sun. As science rose, our sun became understood as just another star in the sky, and the one our planet orbited. Eventually the Milky Way became seen as a cloud of stars, and not long ago the concept of a galaxy was developed. Eventually our sun became seen as merely one of about 200 billion stars in our galaxy. As our scientists kept looking outward, other galaxies were seen, and seen, and seen. Today, it is accepted that there are perhaps one trillion galaxies in the observable universe. Now *that* is a universe created by a big "C" Creator. What if the universe is 100 billion times larger than we think it is? What if it is truly infinite?

Seth and Michael state that humanity has barely scratched the surface of the physical universe's vastness and strangeness. Seth says that science has erred in estimating the earth's age by a few orders of magnitude, and that the earth is actually *trillions* of years old and has not always resided in our solar system. Michael says that humanity is merely one of one million ensouled species in our galaxy, and pondering one trillion galaxies gives a tiny glimpse of the potential diversity of our physical universe. To glimpse that diversity, we share this planet with another ensouled "species": cetaceans (dolphins and whales). They chose bodies that cannot manipulate their environment. There are many first-person accounts of [whale and dolphin sentience](#). Cetaceans play the game differently than humans do. A pod of twelve dolphins will have twelve souls, but the souls share the bodies, swapping them, which is one reason they do not fear death as humans do. Whales apparently think holographically, which is nearly impossible for us linear thinkers to comprehend. As Europeans conquered the world and [exterminated humans across the planet](#), they also drove whales to near-extinction. Many dolphins and whales are only beginning to suspect that *human beings* are sentient, as

they did not think a sentient species was capable of the genocide their kind experienced at human hands.

In the universe there are sentient clouds, mountains, trees, birds and life forms humans can barely imagine. Humans are a sentient form of ape. Channeled material regularly describes how humanoid sentient species are the predominant ones in our little corner of the galaxy, as they all hail from the same rootstock, the inhabited planets being “colonized” in a sense. The human race apparently has had plenty of help from our galactic cousins, genetically and otherwise.^[35]

Channeled entities often throw out statements that blow away the participants, the listeners shaking their heads in dismay or awe. Once somebody asked Michael if the Big Bang and the scientific establishment’s notion of an expanding and contracting universe, to lead to another Big Bang in billions of years, was correct. Michael replied that there is some truth in that notion, but the universe had done it more times than there are atoms in our universe. Seth says that our universe is not expanding in the way our scientists think. Whatever the “right” answer may be, our earthly minds, with their puny conceptions, are poorly equipped to grapple with those ideas. Throw in infinite [parallel and probable existences](#) (and physical dimensions where time and space are more “fluid”), and no earthly mind fails to “blow a fuse” when trying to comprehend those concepts.

The Michael material is only one of many [worthy teachings](#). What is coming up for humanity is a healing of the “heart-mind split.” It is also called the Second Coming, the New Age, Paradise Restored, etc. Love will reign, not fear, but we must *choose* it. It will not fall into our laps.

It is also possible that there is something very big afoot on earth. There might be a lot more about to happen than merely an ensouled species turning the corner, beginning its inward journey after a long time of focusing outward. Michael admits that the human species is more sexually polarized than 95% of ensouled species (again, we need only look at cetaceans to get an idea of less polarized species). [Kryon](#), [Zoosh](#), [Barbara Marciniak’s Pleiadians](#) and others say that the [human race is a special experiment](#), and its outcome could change the way our universe functions. That can seem grandiose, but it may also be true. If true, it has everything to do with love. I once asked [Hinono](#) a few questions. He said, “the Creator is coming,” with a “big love” that nobody here has quite experienced yet.

Michael claims no ultimate awareness, nor does Seth or any other reputable channeled entity (except perhaps Walsch’s God). Jane Roberts would periodically channel Seth Two, which Seth called his “big brother.” Seth Two was obviously unused to using a human body, and said that his joy created universes, and that it was challenging for him to relate to human awareness and emotion.

All those ideas are worthy to ponder, but our reality is that we must eat to survive here, and growing our awareness while caring for our bodies is our earthly task, and it keeps our hands full. If people truly begin caring for each other, then humanity might have a gentle transition to a healed humanity and planet. [Much is possible](#), but not when most Americans predominantly operate from their personalities’ [negative pole](#), while calling it its positive pole. Humanity’s primal nature is love, and Jesus and other masters came to remind us of that fact.

In the final analysis, it is our reality, our world, our everlasting lives. What will we do with them?

Footnotes

^[1] See Collier and Horowitz, *The Rockefellers*, p. 18, 19, 33.

^[2] I saw those words in my school district’s “cumulative file” after I graduated from high school. My sixth grade teacher’s comments stared out at me. I believe it was sincere, but also was influenced by two factors. I was a bit of a discipline problem in those years. Another factor was that I was more intelligent than my teacher, and sometimes better informed. I was a normal child in most ways, but one day my teacher showed the class the eastern and western hemispheres on a globe. The only problem was that he was pointing out the northern and southern hemispheres. I raised my hand and said I doubted that he explained the hemispheres accurately. To his credit, he asked me to show the class how I thought the hemispheres were oriented on the globe. I did. It retrospect, that was quite a spectacle, to have a student challenge a teacher’s presentation because it was inaccurate, and the teacher allow the correction. I had never seen it done before, and have never seen it since. When I finished showing the class how the hemispheres really lined up, my teacher said that he would perform some research that evening. The next day he announced that my explanation was correct. It took a big man to admit that his eleven-year-old student had corrected him. Yet, I believe that the event, along with my admittedly unruly demeanor, had something to do with my teacher’s writings in my cumulative file. I do not feel that my parents pushed me too hard, although it could have appeared that way. They conscientiously undertook the task of raising a well-behaved, helpful and obedient child whose IQ was in the

genius range, and I was blessed with experiences that many children my age did not have, and I cannot fault my parents for it.

[3] Brian describes that event in the foreword to his book *The Second Coming of Science*, and Brian credits that event with propelling him into mysticism.

[4] I have a close friend who was a Silva instructor for many years, and he recently told me that in the unfortunate situation in today's hurried society, the Silva class has been truncated to twenty hours, a "Silva-lite" to those of us who took it the old way. I think the old way still exists, but may be more expensive. I recommend the full course, not the abbreviated version.

[5] Also, Randi may not be [as honest an "investigator" as he seems](#). .

[6] For an example of that mentality, see Werner Heisenberg's "Truth Dwells in the Deep" in Ken Wilbur's *Quantum Questions*, pp. 33-38. Heisenberg relates a conversation that he, Bohr and Wolfgang Pauli had. Those men were [decidedly mystical](#), as were nearly all the greatest physicists of the twentieth century.

[18] NDEs have been a subject of considerable personal interest for me, as [my paranormal experiences](#) prepared me to investigate them. Kenneth Ring performed the seminal work on NDEs, as far as attempting controlled research and comparing NDEs to extraterrestrial close encounters. See his *The Omega Project*.

Gregory Little attempted something similar, though more from a debunking perspective. Little chalks up most paranormal phenomena to electromagnetic illusions. See his *Grand Illusions*. There is significant Bible quoting in *Grand Illusions*. John Michael McCarthy's phantasmagoric cartoons strangely dominate it. The thesis of *Grand Illusions* is worth considering, but the admittedly Christian Little had an agenda. To a degree it was a defense of his faith, and needs to be read with that in mind.

Going further into materialistic, "its an illusion" dismissals of the NDE experience is the work of Susan Blackmore, the leading "[skeptic](#)" to try formulating a materialistic theory of NDEs. See her *In Search of the Light*, and her materialistic theory of the NDE experience in *The Near Death Experience - A Reader*, edited by Lee Bailey and Jenny Yates. At least she appears to be an honest debunker. Her theory is partly based on dismissing the notion of reincarnation, and she formulates a questionable interpretation of the words attributed to Buddha. Buddha emphasized the here and now, and his de-emphasis on the afterlife and reincarnation has been misinterpreted by many Westerners as being a strike against the reincarnation concept. Astute scholars of Eastern literature, especially regarding Buddha's teachings, assert that anybody thinking that Buddha was skeptical that reincarnation was a fact is sorely mistaken. See Radhakrishnan, *The Principal Upanishads*, pp. 948-949. See Head and Cranston, eds., *Reincarnation, an East-West Anthology*, pp. 12-16. See Zimmer, *Philosophies of India*, pp. 464-487. See Huston, *The World's Religions*, pp. 82-153, especially pp. 115-116. See Yogananda, *Autobiography of a Yogi*, p. 484. See Evans-Wentz, *The Tibetan Book of the Dead*. Blackmore then invented a chemical/physiological explanation that was creative, to say the least. Blackmore's and Little's are the *best* efforts I have seen that try invalidating the NDE experience, and had serious shortcomings.

Perhaps the strangest attempt to invalidate the NDE experience is Richard Abanes' *Journey into the Light*. Abanes attempts to demonize the NDE, arguing that NDEs are encounters with Satan. Abanes spends most of the book enlisting the work of scientific debunkers of NDEs, in an effort to try invalidating all NDE experiences. The last third of the book, however, is a betrayal of any pretensions to scientific objectivity, and is a descent into demonizing anything that cannot be found in the Bible. The book is a strange alliance of science and religion to try invalidating experiences that challenge both worldviews. Abanes' book made it to the mass market, but is appropriate only for the fundamentalist Christian section of bookstores. The last part of Abanes' book was reminiscent of Ron Carlson and Ed Decker's *Fast Facts on False Teachings*, which calls every philosophy, faith and religion not fundamentalist Christianity the devil's work.

[19] See Brinkley's *Saved by the Light* and *At Peace in the Light* for his account of coming to grips with his new abilities.

[20] See Cherie Sutherland's *Reborn in the Light*.

[21] See Brinkley's *Saved by the Light*, p. 59.

[22] Joe Nickell is one of the "skeptical" faithful, always ready to invoke the "scam" angle, no matter how much evidence flies in the face of his theorizing.

[23] See a description of a thieves' hell in Moen's *Voyage to Curiosity's Father*, pp. 149-154.

[24] See Moen's *Voyage to Curiosity's Father*, pp. 111-170. I suspect that the Creator does not simply leave things there, but at some stage those "flies of hell" will receive their redemption by an act of grace that no earthly being can currently imagine.

[25] Moen describes a "hollow heaven" in his *Voyage to Curiosity's Father*, pp. 171-186.

[26] See Graham Bernard's *The Challenge of Evil*, pp. 5-7.

[27] See Bach, *Illusions*, chapter 17.

[28] See [Brinkley's](#) *Saved by the Light*. Michael Roads, in his *Into a Timeless Realm*, described time as appearing "spherical" instead of linear. Many near-death experiences (NDEs) describe that "fast-forward" life review.

[29] Robert Shapiro's Zoosh says this. After this essay was written and this site pretty much finished, an article came out in the *Sedona Journal of Emergence*, November 2002 issue, pp. 69-70, titled "The Sacrifice of Lucifer," by Yaël Powell, who claims it is a channeling from God. It is along the lines of humanity exploring "anti-love" due to the free will God gave us, and Lucifer volunteered to help us make this exploration that God did not anticipate, as God knows that love is all there is, we are exploring what we are not. It is a very compassionate article.

[30] Paddy McMahon's *The Grand Design* material discusses that issue.

[31] See Paddy McMahon's *The Grand Design* material.

[32] See, for instance, *Reincarnation, An East-West Anthology*, edited by Joseph Head and S.L. Cranston; Arthur and Joyce Berger's *Reincarnation, Fact or Fable?*; *Reincarnation*, edited by Sylvia Cranston.

[33] : -)

[34] Many people channel the [Michael teachings](#). The sources used for this essay are: Chelsea Quinn Yarbro's *Messages from Michael*, *More Messages from Michael*, *Michael's People* and *Michael for the Millennium*; Joya Pope's *The World According to Michael* and *Upcoming Changes*; José Stevens' *Tao to Earth* and *Earth to Tao*; Shepherd Hoodwin's *The Journey of Your Soul*; *The Michael Game* by The Michael Digest Group and *The Michael Handbook* by José Stevens and Simon Warwick-Smith. Below are tables that outline most of the Michael teaching's basics

Soul role for earthbound souls	% of human species	% of America	How roles view the human world
Artisan	20	30	The world is their artistic model

Server	30	10	The world is their guest
Warrior	20	30	The world is unconquered territory
Scholar	15	15	The world is their object of study
Sage (artisan exalted)	8	8	The world is their audience
Priest (server exalted)	5	5	The world is their flock
King (warrior exalted)	2	2	The world is their realm

Role	Positive Pole	Negative Pole	Primary Delusion	# of Karmic Ribbons Created and Burned
Artisan	Creation	Artifice	My creations are real	500
Server	Service	Bondage	I am forced to serve	500
Warrior	Persuasion	Coercion	Might makes right	2,000
Scholar	Knowledge	Theory	My theories are correct	1,400
Sage	Expression	Oration	I am always worth listening to	2,000
Priest	Compassion	Zeal	I always know what is best for all	3,000
King	Mastery	Tyranny	I should always be in charge	4,000

Goal	Mode	Attitude	Chief Feature	Centering
Discrimination	Caution	Skeptic	Self-Destruction	Emotional
Acceptance	Power	Idealist	Greed	Moving
Re-evaluation	Repression	Stoic	Self-Deprecation	Intellectual
Growth	Passion	Spiritualist	Arrogance	Instinctual
Submission	Perseverance	Cynic	Martyrdom	Higher Emotional
Dominance	Aggression	Realist	Impatience	Higher Moving
Stagnation	Observation	Pragmatist	Stubbornness	Higher Intellectual

Soul Age	Positive Pole	Negative Pole	Theme	Life is About	Relationship to Nature
Infant	Innocence, openness	Terrified inhibition	Let's try it, but life is scary	Survival	Connected with nature

Baby	Structure	Rigidity	Let's do it right, or do not try	Following the rules	Controls nature
Young	Accomplishment	Egotism, destruction	Let's do it my way. I win, you lose.	Winning	Conquers nature
Mature	Emotional depth	Melodramatic	Do it someplace else. Life is intense	Emotions	Preserves nature
Old	Love and acceptance	Laziness, "I am better"	You do it your way, I'll do it mine	Love	Lives with nature
Transcendental	Social revolution	"You can call me master"	We can make things better		
Infinite	Mastery, love	None	We are one		

Michael's Soul Ages	Rough Correspondence to Maslow's Hierarchy of Needs	Less "age" oriented terminology
Infant	Survival	Stage 1
Baby	Safety	Stage 2
Young	Social	Stage 3
Mature	Esteem	Stage 4
Old	Self-actualization	Stage 5
Transcendental		Stage 6
Infinite		Stage 7

Life Monads	Age of Monad	Planes of Existence, Tao is Source of all	Body Types
Birth		Physical	Lunar
Awareness as individual	2	Astral	Venusian
Leaving "nest"	18-22	Causal	Mercurial
Mid-life crisis	35-50	Akashic	Saturnian
Reflection on life lived	65-70	Mental	Martial
Realization that death is coming		Messianic	Jovial
Death		Buddhaic	Solar

These tables give only a bare outline of the Michael teachings. Joya Pope gave me a reading in the early 1990s, and

read me as an Old (level 2) Artisan, an Idealist/Skeptic with a goal of Growth, in the Observation mode with a strong slide into Perseverance, with Emotional centering complemented with a Moving part, a chief feature of Impatience and about 65% feminine energy. I have a Saturnian body, which is rugged on the positive pole and gaunt on the negative pole, and I have experienced each in this life. I am one of those "slow learners" who has lived more than 160 physical lives, most on earth as a human. Joya's impressions (done over the phone) and glimpses of my future were extremely accurate in many ways. This web site is a classic Old Artisan undertaking, but Old Artisans also leave behind many unfinished works. This site was largely completed in September 2002, overcoming the flagging inspiration that Old Souls are vulnerable to. Since love and being of service to others is the royal path, Servers complete their incarnation cycle with the fewest lives and incur the least amount of negative Karma. Violating another's free will in a way that harms them creates negative Karma. It can be paid back in eye-for-an-eye fashion, but that is the least enlightened way. If I murder somebody in a life, them murdering me in another can pay it back, but can also lead to a new round of Karma. Saving their life can also pay it back, and can lead to creating Philanthropic Karma, which is a positive Karma. Kings incur the largest Karmic burdens as they play tyrant when acting out of their negative pole ("off with their heads!"). Hitler was a priest, as was Gandhi. The Transcendental and Infinite souls rarely manifest on the physical plane. Transcendental souls usually initiate great social changes, and in history there have been few, such as Socrates, Muhammad, Zoroaster and Gandhi. The Transcendental soul often paves the way for the Infinite soul to manifest. The Infinite soul manifests through final incarnation priests and kings, and history's have been: Jesus, Buddha, Lao-tzu, Krishna and Ra. There have been others that history has not recorded. The Great Peacemaker of the [Iroquois](#), Deganawidah, may have been a Transcendental soul, or perhaps Infinite. The early soul stages easily fall prey to their "false personalities," which is essentially herd conditioning: having attitudes and beliefs indoctrinated by society and not from direct experience. The false personality is generally founded upon fear- and scarcity-based beliefs. Setting aside the false personality and bringing through one's "essence" (soul) is the Great Goal of all sentient species, and it can only be done through love.

In the soul cycle, the first three are outwardly focused into the physical world, the Late Young stage being the apex of outward focus. Societies at that stage are materialistic, nearly anti-spiritual, and that is the stage where ensouled species that can manipulate their environment can destroy their planet, by either warfare or environmental destruction. Michael says that ensouled species do it a third of the time. If a species makes it past the Young Soul stage, it begins the inward journey, and Mature Souls explore their emotions. The final stage is Old Soul awareness. While love is mainly what matters to them at that stage, they can also fall prey to their particular foibles. They can be lazy, sloppy and think their experience makes them better than the younger souls, and toleration and acceptance are their great lessons. They can be intolerant of the intolerance that younger souls often display. In humanity's upcoming transition from Young to Mature Soul awareness, there may be several Transcendental and Infinite Souls manifesting during my lifetime, and they might mainly be women.

[35] On those themes, see Lyssa Royal and Stephen Davis' *Future Sex*, Royal and Priest's *The Prism of Lyra*, *Visitors from Within* and *Preparing for Contact*; Gina Lake's *ET Contact* and *The Extraterrestrial Vision*; [Barbara Marciniak's Bringers of the Dawn, Earth and Family of Light](#); *The Ra Material*; Dolores Cannon's *The Legend of Starcrash*. [Robert Shapiro and friends' The Explorer Race and Shining the Light](#) series. There are many other excellent works on those themes, but those are a good start.

[Dennis Lee's Past - A Quiz](#)

[Footnotes](#)

A Note to My Readers: Many readers of this essay are reaching it directly from links on other sites. This essay is a minor part of this site, and a minor part of my [energy writings](#). Far more is written about Dennis and my days with him elsewhere, especially at this [link](#) and [this one](#). This essay was written to demonstrate the nature of the criticisms I have seen launched at Dennis since 1986. I have had virtually no dealings with Dennis' organization since the late 1990s and very little from 1989 to now, and this essay does not endorse what Dennis is doing

today, partly because I am not qualified to venture an opinion on it. A major point of this essay is showing how Dennis' critics lie about his past. It is particularly telling when people resort to lying to make the case that Dennis is a criminal. If people want to shoot holes in what Dennis is doing these days, they can have at it, with my blessings. They should do it with integrity, however, and not scrape up libelous newspaper clippings to make their case. If they want to be taken seriously as a "defender" of the public or assailant of Dennis' integrity, they need to demonstrate some integrity of their own. The official documents are available, for anybody who does the legwork. Dennis publishes many of them himself.

Dennis and I largely parted ways in 1988, partly because I am not the warrior he is. I had to take time to lick my wounds, and have traveled other paths. Dennis and I are human, with our foibles, but if we were crooks, we would have to be the stupidest ones on earth, working much of our adult lives for free. That is not how true criminals play the game. There are at least two sides to every story. I know what I saw, and if people wish to challenge the veracity of my experiences, they are welcome to try, but I have never seen any of my challengers do *any* of the necessary homework, as they launch their fact-free opinions from their keyboards.

Dennis Lee's Critics

This essay was written from the perspective of having [many years of experience](#) watching Dennis in action, and seeing and fielding countless criticisms of his free energy/alternative energy efforts. I wrote it in response to the merciless derision and libel I have seen directed Dennis' way in the media since 1986, and on the Internet since 1996.

Dennis became involved with the energy industry [in the 1970s](#), and has been trying to transform it ever since. I rode in the saddle with him for a few chapters of his adventures, and have been watching from a distance since the 1980s. I witnessed about twenty attempts to steal his companies while I was with him, and they succeeded twice. I helped Dennis rebuild a couple of times.

During my years with Dennis, I encountered thousands of people. A phenomenon I regularly saw was the constant criticism of what he/we were attempting. Dennis is about the quickest thinker I have ever seen, and perhaps the most creative. He has tried nearly every possible avenue to getting alternative energy developed.

Dennis approached Wall Street numerous times; he tried getting large energy companies interested; he directly sold the equipment and hoped for financing later; he almost got into bed with a household name international marketing firm; he almost had a [billion dollar deal](#) put together to finance his unstoppable (at least honestly) marketing program for his [heat pump](#) with a household name corporation; he used volunteers; he surrounded himself with

Christians; he tried numerous marketing/financing programs that he usually devised himself; he formed nonprofit organizations; he tried grassroots movements; he talked with foreign national governments; he talked with many free energy inventors and tried developing their technologies; he tried media campaigns; he tried direct mailing campaigns; he tried telemarketing campaigns; he tried buying out electric companies; he tried working with anti-nuclear protesters; he talked with numerous billionaires (and they never parted with a dollar); he tried working with numerous environmental organizations; he tried getting movie stars involved with him, he tried doing it from jail; he considered trying it in foreign countries; he rented out a ballroom in Washington D.C. and invited every politician in town to attend his meetings, to work with him on bringing free energy to the marketplace responsibly; his companies have marketed, built and installed his technologies. I do not know what he has not tried, and Dennis does nothing halfway. He is immensely talented, and made a worthy attempt with all those techniques.

Perhaps the most common reaction I saw when describing our latest attempt or situation to people, be they potential employees, potential dealers, strangers, friends, family, etc., was their instant criticism. After hearing about what we were attempting for less than one minute, or perhaps as long as five, people would often chime in with something such as, "Aha, I know what you are doing wrong, you just need to (fill in the blank)." Their helpful advice always consisted of something tried before, or was something quite naïve, such as giving it to the energy companies, letting them bring free energy to the world. The energy interests have [buried more technologies](#) with the potential for free energy than the world will ever know of. The [energy interests](#) have ruthlessly crushed many energy-saving technologies, even ignoring what I lived through with Dennis.

The most naïve comment (and perhaps the most common) I have heard regarding the predicament of bringing free energy the world is this: "If it is so great, why can't I buy it?" Being naïve is no crime. Naïveté is the starting point when we enter the world. [I lost mine honestly](#). Naïveté (at least regarding the "real" world) is a state where we have a mistaken worldview due to our lack of experience, and think others share our view and act as we do. Clinging to our naïveté, when our eyes tell us otherwise, leads to [denial](#). Believing the energy companies are a consumer's best friend reflects a mentality one might find on children's television shows, but the corporate world, contrary to popular opinion, only embraces innovation [if it increases its profits](#).

The larger and more monopolistic an industry is, the more it can throw its weight around, [wiping out competitive and innovative upstarts](#). Energy, transportation and medicine are three classic cases of that phenomenon. Energy production methods have not fundamentally changed during the past century, if we ignore, as Einstein said, the "one hell of a way to boil water," nuclear energy. Alternative energy still comprises [less than one percent](#) of energy consumption in America. The automobile and its internal combustion engine have [not](#)

[fundamentally changed](#) since Henry Ford. Many [superior engine designs were invented](#) during the 20th century. The reason they are not in cars today is that the level of investment in current technology makes sure Detroit does not convert.

Today's [medical paradigm](#) is insane. Drugs and surgical procedures, with extremely few exceptions, are the [only legal "medicines" in the United States](#). That is not because they are the best, but because they are the most lucrative. Watching alternative cancer treatments being [wiped out by the dozen](#), or seeing [books banned](#), [burned](#) and attacked because they suggest that changing our diets [can reverse our health problems](#), is indicative of a tremendous racket that rakes in the cash as millions die needlessly.

Competition is a nice Economics 101 concept, but all [capitalists hate the idea of competition](#). Competition is hell on profit margins and makes for an uncertain future. [Eliminating the competition](#) is the arguably the primary goal of every industry and profession, particularly their trade and professional groups.

Nearly everybody likes to criticize Dennis, but precious few will actually help him. The loudest critics usually try stealing from him while they lambaste him.

Dennis is the eternal optimist and does not like hearing "bad news." He has a way of turning the darkest outcome into an opportunity. That is a mixed blessing and he could be accused of being a Pollyanna, although it is not true. His eternal optimism is partly based on his faith. As the Dalai Lama once said, optimism is the only attitude worth having when faced with dire challenges. The eternal optimism of a promoter of Dennis' stature is a challenging fit with the mentality needed to investigate and develop technologies. Visionaries see the goal, and "realists" get there. It is rare to find one person possessing both attributes in great measure. Dennis is not the universal man, and I doubt that any exist in today's world. He is not a scientist, nor does he need to be. He has his important role to play, but does not need to do it all. Yet, it was educational to see him understand some technologies [better than the engineers who worked for him](#). Dennis was heavily involved in developing the [heat pump technology](#) that he used to market. Scientists and engineers do not have all the answers or insight either, and are often [amazingly blind to unorthodox data and theory](#), being so indoctrinated by their training that they cannot think past their textbooks.

Dennis has been learning painful lessons about developing and marketing new technologies, although he has probably also been subject to the "[game theory](#)" strategies of the energy gangsters, being subtly sabotaged. I know of no person more fit to lead the effort to bring alternative energy to the marketplace, although I wish there were a hundred like Dennis, so he would not be the target he is. Dennis is prominent by default. He is doing something that anybody else could do, but his combination of integrity, talent and courage may be unique. The answer for those asserting that they can make it happen (usually asserted while attacking

Dennis) is "Nothing is stopping you from doing it yourself. Dennis has no monopoly on it."

I will not denigrate the many noble efforts that have been made during the past century, but I know of nobody who [staged a better attempt](#) at breaking through the stranglehold that the energy gangsters have over humanity. Dennis had them quite frightened for a while, to the point where they [offered at least a billion dollars](#) to make him go away. Dennis' associates will ride his coattails while he is flying high, and when the energy gangsters attack, his associates see their golden opportunity to steal the business. Dennis has [had his company stolen](#) numerous times. Have the thieves ever done anything productive with what they stole? No. It always crumbled in their hands, and they gutted the ship as it sank, stealing every dishonest scrap they could. Dennis makes it happen. There are always those appearing on the scene, thinking they can do better. If only they tried building it from scratch as Dennis has. That requires far more integrity than they possess. Instead, they try stealing what Dennis built.

Dennis has never really written his life story. There have been pieces of it in books such as *My Quest*, but if his full story were ever told, it would sound ridiculous. Dennis is a promoter of no mean order, but he need not stretch anything when discussing his life. He has his virtues and failings, as with all of us. What makes Dennis "great" is not his [marketing genius](#), his entrepreneurial savvy, his audacity, his clever mind or promoter's talents. It is his integrity and great heart.

Mr. Skeptic and Friends

Since 1990, I have studied the "skeptics" at length. Carl Sagan, Isaac Asimov, [Martin Gardner](#) and James Randi have all been prominent members of the Committee for Scientific Investigation of Claims of the Paranormal (CSICOP), and the CSICOP publishes the *Skeptical Inquirer*. Their use of the word "skeptic" is an [Orwellism](#). They are skeptical of everything but their beliefs, which they consider "facts." While there were some skeptics whose work I had some respect for, they were relatively few. For every article in the *Skeptical Inquirer* that impressed me with the reasoned investigation of a researcher, even if I did not always agree with their conclusions, two articles left me shaking my head. The same goes for the magazine *Skeptic*. The CSICOP skeptics supposedly investigate paranormal phenomena, as the name of their committee suggests, but I have never heard of them finding evidence of the paranormal. I [found it easily](#) when I was a teenager, which makes me wonder what kind of investigators they are. Here is a [humorous primer](#) on how the "skeptics" operate.

In 1996, Dennis mounted national speaking tours, promoting technologies and talking about free energy. In September 1996, he finished his second national tour of the year in Philadelphia. Five thousand people attended the show held in the sports arena where the

Philadelphia 76ers played. I readily admit that he did not "demonstrate" much that was impressive regarding free energy at his Philadelphia show. Dennis is not my first candidate to explain the physics of the technologies he promotes, but he was showcasing a few technologies that have extraordinary potential and was talking to a lay audience. Even if [hydraulic heat engines](#) could not produce free energy, they would represent the first new heat engine cycle in a century, and might sweep aside nearly all the others.

Billions of dollars should be spent developing hydraulic heat engines, even if they could not produce free energy. Just as Detroit swatted down, froze out or bought out [all the new engine designs](#), they surely could not be trusted to develop new engine designs. At the Philadelphia show, among the five thousand attendees was Mr. Skeptic, who was an aspiring debunker and founder of a Philadelphia skeptic group.

The day after the Philadelphia show, Mr. Skeptic had up a web site, claiming to investigate Dennis' "claims." I had already written one book that was more of a diary of my experiences. I reproduced a [medical quotation section](#) from it, and an earlier essay that I wrote on American history. During October 1996 I wrote 400 new pages of text and slapped the whole thing onto the Internet in November 1996.

As I published my web pages and registered them with the various search engines I searched the Internet, seeing if there was anything out there about Dennis. I found Mr. Skeptic's web site. For the next five months we engaged in a cordial dialogue. I allowed him to call me at home, and we had a three-hour conversation. Mr. Skeptic's web site was rather large, and devoted megabytes of information to Dennis. Mr. Skeptic said that his wife was irritated with the hundreds of hours he spent on Dennis. The man was *obsessed* with Dennis. Mr. Skeptic used one word all over his web site and in my discussions with him. It was the word "fraud." He obviously thought Dennis was a crook. He speculated loud and long on that issue. He even listed fraud hot line numbers to every state government.

I knew Dennis was not a crook, and had plenty of experience in defending him over the years. I began a dialogue with Mr. Skeptic, presenting my case. If nothing else, I tried encouraging Mr. Skeptic to perform some actual investigation. There were heat pumps in Philadelphia that he could have tested, customers he could have talked to, true investigation he could have performed to see if Dennis was crooked or crazy. Merely sifting through the legal documents regarding the various governmental cases against Dennis was stunning. The best book Dennis has written about his experiences was *The Alternative*, available even today for [\\$25.00 at his company](#). That book provides plenty of official documentation and witness affidavits that clearly present the government's cases against Dennis. The book is strongest when Dennis merely documents what he lived through, and arguably weakest when he ventures into right wing conspiratorial theorizing.

Although Dennis became the biggest case in Mr. Skeptic's skeptical career, I became

increasingly disturbed at how Mr. Skeptic *avoided* investigation. Dennis has dealt with many establishment hacks over the years who were on the government/energy company payrolls and whose jobs were to discredit him and destroy his companies. Dennis had no patience with Mr. Skeptic from the beginning, and it was understandable. Mr. Skeptic took a position from the start and virtually never wavered from it. I have almost never seen a skeptic say there was anything legitimate in what they investigated. Why did they bat 1000? Could they have perhaps made up their mind before they began investigating? Is that practicing skepticism?

My experiences with the skeptics' work did not make me too optimistic about Mr. Skeptic, but I tried to get him to at least investigate. The man seemed determined to not perform any investigation. Since about 1990, Dennis has not tried to market his heat pump, per se, but was trying to marry the large evaporator from his heat pump to a hydraulic heat engine to make free energy. To investigate Dennis' potential crookedness, the logical place to start would be looking into his past, investigating what he sold, seeing how crooked that might have been. Mr. Skeptic said that he would not investigate the heat pump, since Dennis was no longer selling it. He said he only cared about free energy. My position with Mr. Skeptic was approximately, "Okay, take that position, but admit that you know nothing about the man, and you have plucked your fraud speculations from the thin air."

To my knowledge, Mr. Skeptic never even parted with \$12.95 to get *The Alternative*. Immediately after the Philadelphia show, he called Dennis' company to try getting a free copy because he was an "investigator." I have performed far more investigation than Mr. Skeptic will ever pretend to, and I have never asked for free materials, particularly from somebody I was planning on writing unflattering things about. Mr. Skeptic even advertised how much money he had, giving out his broker's contact information so people can confirm his healthy bank account balance, so he could back up his "reward" for indisputable evidence of free energy. As the months went by, Mr. Skeptic was confirming my worst suspicions about the skeptical movement. Being civil to the man was becoming a challenge. He continuously concocted psychological theories to explain how Dennis' followers were deluded, or Dennis was deluded, or I was deluded, in denial about what a con man I had been taken by. They were some of the more strained theories I had encountered, but there was a consistency to them. At every turn, Mr. Skeptic defended the establishment. I had been developing the opinion that the skeptical societies were little more than establishment attack dogs, scientific and otherwise. Mr. Skeptic is clear evidence of that theory.

The general skeptical attitude is that everything the establishment does is good and righteous, while anything not promoted by the powerful is suspect. That may seem an extreme assessment, but it is formed from a long time of examining the "skeptical" world. The skeptics believe that the government faithfully hunts down the crooks that threaten society. Although Mr. Skeptic had apparently not bothered obtaining the official documentation regarding the continuous prosecutions of Dennis, he wrote that Dennis' perception of being a victim of establishment persecution was a "delusion." Even when he admitted that perhaps the sheriff's deputies [stole technical materials during the raid](#), Mr. Skeptic theorized that they did so

because they were overzealous in protecting the public, not because they were corrupt.

In far right circles there is a phenomenon known as [Holocaust Denial](#), where a number of "scholars" are trying to rehabilitate the image of fascism and Uncle Adolf. They make out the Jewish Holocaust to be a fiction, dismissing the testimony of many thousands of death camp survivors, the testimonies of Nazis who worked in the camps, and engaging in what I have to call intellectual fraud.

Mr. Skeptic specialized in Corruption Denial, dismissing the testimony of nearly everybody closely involved in the Dennis issue while launching his theories, which invariably defended the establishment. For reasons not entirely in my control, my web pages came down in April 1997 and I did not communicate with anybody associated with Dennis for years.

Mr. Skeptic was a skeptical "hobbyist." He was not a true professional as [James Randi](#) is. Randi tutored Mr. Skeptic as they debunked a technique known as Touch for Health, Mr. Skeptic learning at Randi's knee. Mr. Skeptic finally hit pay dirt with his investigation of Dennis. He [had an article published](#) in the *Skeptical Inquirer* in the summer of 1997. Mr. Skeptic unmasked himself. Putting up a web page is one thing, but submitting an article for publication is an entirely different matter.

There is plenty of official documentation regarding the prosecutions and "convictions" of Dennis. *The Alternative* clearly lays some of it out. One thing is clear if one follows Dennis' story: the last thing he does is cover-up his past, particularly regarding the legal system's attacks. His books lay them out in excruciating detail. Investigators are inundated with official documentation if they begin researching his case, being treated to search warrants, investigator reports, court transcripts, witness affidavits, court rulings, prison records, etc. For anybody who begins researching Dennis' case, what is impressive is the documentation he provides.

Mr. Skeptic's article is glib and condescending, in standard *Skeptical Inquirer* style. Mr. Skeptic begins his article with some facts, such as he attended a show in Philadelphia where Dennis talked a lot and did not demonstrate much. I have no argument with that. There were some reasons for that, partly governmental and not in Dennis' control. Mr. Skeptic scoffed at that notion.

Then Mr. Skeptic spent a few paragraphs comparing Dennis to his snake-oil model. At best, Mr. Skeptic evidenced no investigation of the existing and marketed technologies, but hung his hat on whether Dennis had free energy. Mr. Skeptic's theorizing was amusing and I thought the article harmless until the final paragraph, where Mr. Skeptic committed libel. It was not a gentle, unknowing libel. Mr. Skeptic was too knowledgeable to chalk up that paragraph to ignorance. He knowingly lied, but was calculating about how he lied. It would be no surprise if a lawyer reviewed Mr. Skeptic's article before publication. That article was the crowning work

of Mr. Skeptic's debunking career. He is quite proud of it.

Mr. Skeptic quoted a newspaper that libeled Dennis. Mr. Skeptic wrote,

"The *Utah...News* reports that Lee was indicted for fraud in New Jersey in 1975, charged with fraud in the state of Washington in 1985, and pled guilty to two felony counts of consumer fraud in California in 1990 in connection with the sale of his energy-saving heat pump kit. Well, what the hell... they say Jim Bakker is planning a comeback, too."

During 1991 and 1992, Dennis tried reviving his venture after getting out of jail the first time. He became involved with the Patriot Movement, which is located in the northwestern United States and has more than a tinge of white supremacy associated with it, along with many self-serving "leaders" who seem more interested in selling videos than turning America around. Dennis became high profile in the movement, to the point where other "Patriot" leaders felt they had to discredit him. The Mormon Church was so alarmed that they allegedly threatened ex-communication to any member who became involved with Dennis. "Coincidentally," a Utah newspaper published some libelous articles about Dennis. Of all the massive documentation surrounding Dennis' cases, much of it official and published by Dennis himself, Mr. Skeptic quoted a Utah newspaper regarding the government's cases against Dennis.

The official record is clear. The 1975 indictment had to do with [unintentionally bouncing some checks](#) as his company was going out of business, when a customer put a stop payment on a big check to his company. After getting poor (and probably *intentionally* poor) legal advice, Dennis naïvely pled guilty to fraud for bouncing some checks, a decision that still haunts him. Dennis was *not* charged with fraud in Washington in 1985. He was charged in a *civil* matter regarding consumer protection issues, and if anybody committed a crime, it was the Attorney General's office and their buddies. Their efforts [killed one of Dennis' employees](#).

Dennis did *not* plead guilty to two felony counts of consumer fraud in California in 1990. He pled guilty to not filing a form and paying fifty dollars [regarding a civil law](#). Civil law is not criminal law, and is called "civil code" in the business. His guilty plea amounted to not knowing about the filing requirement (and subsequently believing that he was not required to file) and getting a ruling from the courts on it, and Mr. Skeptic knew it. In addition, the situation regarding his so-called guilty plea is far different from how Mr. Skeptic and others have reported it. The plea was that Dennis in fact did not file the form, but the deal was that the courts would rule on the constitutionality of the law *as it applied to Dennis' case*. The courts reneged on that deal, and never held up their end of the "bargain."

That situation of U.S. courts violating their own deals is as [American as apple pie](#). Ask the Native American tribes how often the U.S. government and courts honored the treaties that they forced on the natives, which was a fraudulent strategy crafted by [George Washington](#). In one rare instance when a tribe prevailed in court, the Cherokee tribe won in the U.S. Supreme Court, and the sitting president, [Andrew Jackson](#), openly stated that he would ignore the court's ruling, and the genocidal Trail of Tears followed soon after.

Mr. Skeptic wrote that Dennis "pled guilty to two felony counts of consumer fraud" in California. In *The Alternative*, Dennis produces his prison records and court transcript of the proceedings. The judge said that:

"One of the things that we must keep in mind here is that the defendant has not been convicted of theft, he's not been convicted of a crime that requires or there's been any proof by an admission or otherwise that the defendant is convicted of intentionally defrauding people."[\[1\]](#)

Dennis also reproduces his prison records that plainly stated the "offense" he was in prison for: "Failure to register marketing plans. (A misdemeanor.)" and cited the *civil* code that Dennis "violated."[\[2\]](#) Anybody who had performed the elementary step of reading *The Alternative*, which thousands of people have, would know that Dennis did not plead guilty to felonious fraud in California.

In Washington, Dennis was *not* prosecuted for fraud. With those prosecutions, the mind-boggling fraud was perpetrated by the Attorney General's office, the electric companies, the sheriff's department, the District Attorney's office, the Superior Court, etc. In Washington, Dennis' company was charged in a *civil* matter. Fraud is a criminal matter, not a civil matter. The Washington civil suit was an unconscionable fraud. The Deputy Attorney General who prosecuted the lawsuit (whose conscience eventually got to her, and she [quit her job](#) in the midst of bludgeoning Dennis' company) made her case in her correspondence with Dennis, trying to entice him to settle her lawsuit. She stated that she could find a violation of the law, even if there was never any intent to deceive anybody.

Ms. Deputy Attorney General based her entire case on a letter from a person who innocently misunderstood one statement made in the video pitch Dennis' company used. She seized on the fact that *one* person in the entire state misunderstood *one* thing Dennis said. In her letter to Dennis, she made it clear how she would get him. She stated:

"... It is important to underscore that the consumer protection lawsuit is a civil suit... state does not allege, nor does it need prove that the defendants intended to deceive or deal unfairly with their customers...Rather the issue is whether representations have the tendency or capacity to mislead regardless of the intentions of those who make them...the seller's state of mind is excluded. Intent to deceive or act unfairly is not an element of proof in a Consumer Protection cause of action; similarly lack of intent is not a defense for the seller."[\[3\]](#)

Dennis was the only person in the state singled out that way. Mr. Skeptic is familiar with Dennis' case and the documentation surrounding it. For several years Mr. Skeptic published a page of mine where I outlined the facts of the cases against Dennis, referring to the exhibits in *The Alternative* that present the government's cases. I wrote that essay partly in response to Mr. Skeptic's complaints that he was hearing too much from Dennis' defenders (I was not the only one), and he would like to see the government's case presented. I presented it with the government's own documents, right from Dennis' book.

When it came time to go on the record about Dennis, what did Mr. Skeptic do? Instead of referring to the readily available official documentation regarding the cases against Dennis, Mr. Skeptic did some digging and discovered libelous comments made by a newspaper, and then presented it as his evidence that Dennis was crooked. In [Logic 101 classes](#), what Mr. Skeptic did is called "appeal to inappropriate authority" and the logical fallacy of "omitted evidence." If we are prudent and logical, and if the voice of authority stares us in the face, telling us what their legal actions against Dennis were, we accept their rendering of the issue, or at least give it weight. What we do *not* do is ignore them, scraping around for a *rumor* about their actions that suits our uses better. Not only is it crudely dishonest, it abandons the most elementary standards of scholarship and logic.

Ironically, Mr. Skeptic gave a better endorsement of Dennis than I ever could. After spending hundreds of hours "investigating" Dennis, when it came time to go on the record, Mr. Skeptic resorted to a logical sleight-of-hand. His motivation has been laid bare, and there is no reason to take him seriously as a "debunker." To be polite, he is a propagandist. His *Skeptical Inquirer* article told me more than I needed to know about the skeptics. I have seen Carl Sagan display dishonesty that was shocking.[\[4\]](#) I have seen evidence of James Randi not quite playing straight.[\[5\]](#) Mr. Skeptic's libel removed my lingering, charitable doubts about the skeptics' motivation, and *the Skeptical Inquirer* publishing such a scandalous article proved to me what kind of rag it is.

It is also worse than that. I informed Mr. Skeptic about his misrepresentations of Dennis' "criminal" past years ago, as have others. I *knew* that Mr. Skeptic was being intentionally deceptive with his presentation of Dennis' "criminal" past, or he had seriously impaired

intelligence. Instead of uttering a thousand *mea culpas* when informed of his libel, Mr. Skeptic stepped up his attacks, harping on Dennis' "criminal" past. During the summer of 2001, Mr. Skeptic campaigned against Dennis, to, in his words, "put him away" in prison. [Mr. Deputy](#) could not have found a better soul brother in his efforts to "protect the public."

Over the years, people have defended Mr. Skeptic's libel. However, they never defended it by addressing the *facts* of his libel. The worst of them simply ignored the facts and called me names and played other games of obfuscation and misdirection. The *best* of his defenders made excuses for his state of mind, calling him either sloppy or too eager to play debunker. Early drafts of this essay presented in greater detail the context of Mr. Skeptic's libel, but my editor thought I was belaboring the facts. In 2006, it became clear that some people still need it spelled out. For more information on why Mr. Skeptic's [Skeptical Inquirer article](#) was consciously dishonest, see this footnote.[\[6\]](#)

Mr. Skeptic's web site gives the appearance of thoroughly debunking Dennis and his efforts. *Appearance* is the operative word. Here is a final example of the criticisms of Dennis on Mr. Skeptic's site. He reproduces an anecdote from a person who once introduced Dennis to a crowd.

The man wrote:

"I first ran into him at the Global Sciences conference in 1989 in Denver. At that time, I heard several reports of an incident at a supplemental presentation he set up, which was not part of the actual conference proceedings. Because it was not a regularly scheduled part of the conference, I was not in the room at the time. Therefore, a friend arranged for me to see a video of the incident. A noted Tesla technology researcher came into the room, and when given an opportunity, asked a pointed question as to why none of Lee's investors had yet received any money back. Lee then went into a bizarre diatribe against this individual, accusing him of having murdered an 8-year old girl. Eventually the researcher left the room, as it appeared the incident was about to degenerate into a physical fight."

The man summed up his version of events with: "I came away with the impression that Dennis Lee is a singularly dangerous individual."

The "noted Tesla technology researcher" was in fact a [hit man](#) from the Bonneville Power Administration. His "noted Tesla technology researcher" image was the latest sheep's skin that the wolf wore, and many at the Global Sciences meeting thought that a bona fide corporate hit man was a sincere researcher and their friend.

Mr. Skeptic has frequently announced that he "debunked" and otherwise disposed of Dennis. Dennis feels that Mr. Skeptic may be clandestinely working for the energy interests or some agency such as the CIA. It is difficult to distinguish provocateurs from freelance, low integrity operators, as they largely act the same. I would respect Mr. Skeptic's work more if he was a paid provocateur, as the BPA Hit Man was, but like [Mr. Texas](#), Mr. Skeptic is probably free-lancing his efforts, for reasons only he knows.

The media attacks that accompanied Dennis' 1999 tour were sickening. Diane Sawyer even smeared him on national television, after loading up her sling with mud for several years.

Dennis' case is a classic example of the complete ethical bankruptcy of our legal system and power structure. I have read numerous media accounts of Dennis, and they nearly always use the "you lie, and I'll repeat it" tactic that Mr. Skeptic used. Tell a lie often enough and it will never go away. That was how Goebbels operated, and the [mainstream media works the same](#). The mudslinger always wins.

In nearly every account I have read since 1986, they continually referred to Dennis' "criminal" past. The latest libelers never, ever say that his "guilty plea" in California was concerning a [civil law](#), and he unintentionally broke the law because he did not know about it (nor did anyone else in California). They constantly have said "felony, felony, felony." One site even reproduces Dennis' plea in California, the plea says "felony" at the top of it, which is true, but that is telling about one percent of the story, if that.

According to how the Ventura County courts (home of the Rodney King beating verdict) interpreted the statute, nearly every businessman in California should have been behind bars. In kangaroo court, however, Dennis was singled out [from 100,000 of his peers](#) for a million-dollar bail. In kangaroo court, unintentionally breaking a civil law that nobody has ever heard of becomes a "felony." That would be bad enough, but the prosecution committed numerous bona fide felonies while persecuting Dennis, including [theft](#), [espionage](#), [threatening witnesses](#), [destroying evidence](#), [threatening employees with prison](#) for working at our company, not to mention the numerous, blatant lies they told daily, in the courtroom and elsewhere.

Ventura County officials today state that Dennis was crooked and pled guilty to crimes. Dennis stood in court and made it clear that he was not pleading guilty to any "intent to defraud anybody." The judge replied that he understood that plea, and asked the prosecutor herself if she agreed, and she said "That is correct. Your Honor, in dismissing the 487 [fraud - Ed.] counts, I believe we dismissed the counts that carried with them the intent to defraud."[\[7\]](#) Dennis did not plead guilty, nor was he convicted of intending to deceive or defraud people, but I have never seen a media article, or anything written by Mr. Skeptic, that admitted such. The only "crime" that Dennis has ever admitted to (or has been convicted of) is unintentionally

bouncing some checks more than twenty-five years ago as his company was being wiped out in the general mayhem of America's first energy crisis. A customer putting a stop payment on a large check to his company made those checks bounce.[\[8\]](#) Why do none of those reporters or Mr. Skeptic report the truth of matters?

Mr. Skeptic and the Crackpots

A prominent piece of Mr. Skeptic's web site is a "crackpot" page. He put substantial effort into constructing it. His crackpot page is a compendium of links to "crackpot" web sites. I have read the work of [Jewish Holocaust deniers](#), the militias, and the political spectrum's right and left ends. Dennis was prominent in the Patriot movement. Many people associated with Dennis' organization have some very alternative thinking. I have studied fringe science for a long time, and have [studied the paranormal](#) since I was a teenager. I was acquainted with many of the sites that Mr. Skeptic listed as crackpot sites.

Once I hit Mr. Skeptic's crackpot page, I was treated to *X-Files* music and the moving image of a ghoul, as if it were trying to grab me. Other images were big eyes that blink (paranoid eyes), a flying ghost, a marching religious zealot, and other "funny" images. He listed well more than a hundred links to "crackpot" sites. Few will argue against there being many strange groups out there, and Mr. Skeptic linked to many, but his derision and commentary were telling. His categories were: Hate Groups, Dizzy New Age Groups, Total Schizo, Just Stupid, Strange Hobbies, Political Crackpots, Pseudo-science, Religious Nuts, and Other Lists of Crackpots. As if his headings were not informative enough, he provided commentary: "This broad really hates men... more pro Waco wackos... a wacky female channeling cult... hot headed gays," and so on.

Mr. Skeptic has linked to some strange sites, but a fair number did not seem to justify his ranting. Some were not in English. He labeled many things not mainstream thought as crackpot, even if it was from some of the most respected intellectuals alive. Here are a few examples of some of those "crackpot" sites.

Mr. Skeptic and Mumia Abu Jamal

Mr. Skeptic linked to a group of activists trying to prevent the execution of Mumia Abu Jamal. Mr. Skeptic listed that group under "Hate Groups," alongside neonazi groups. Mumia Abu-

Jamal is one of the world's most famous political prisoners. He was on death row for a crime he supposedly committed in Philadelphia, which has one of America's most corrupt police forces (in late 2001, his death sentence was thrown out by a judge, in one of the greatest victories for human rights organizations in recent years). For years, Frank Rizzo headed Philadelphia's police force, and it was legendary for its brutality and corruption.

For generations, the FBI has been a key element in destroying American social movements. The FBI's infamous COINTELPRO program during the 1960s and afterward was specifically designed to wipe out political activists. Black, Native American, student, anti-war, and civil rights activists were among those targeted by the FBI for "neutralization."[\[9\]](#) The FBI virtually wiped out the Black Panthers, murdering a number of them outright, such as Fred Hampton. The FBI personnel behind Hampton's murder were openly disappointed (when talking to their FBI buddies) that they did not murder more "niggers" in that operation.[\[10\]](#) Many others were railroaded into prison on a variety of fabricated charges. The FBI often worked closely with local police. The worst offenses were committed in Philadelphia, New York City, Los Angeles, Oakland and Chicago. Today, the Bush administration is reviving COINTELPRO-type activities in its "[War on Terror](#)," which many groups are viewing with horror. They have not forgotten COINTELPRO, even if it has been flushed down America's [Memory Hole](#).

Mumia Abu-Jamal helped establish the Philadelphia chapter of the Black Panthers. His political career goes back to age 14 when he protested at George ("Segregation Forever") Wallace's 1968 presidential rally, and was beaten and arrested for his trouble. He became an influential journalist who the intensely racist Philadelphia police hated. During his career, Abu-Jamal interviewed such people as Julius Erving, Alex Haley and Bob Marley, and his work received national recognition, ending up in the *Associated Press* and on *National Public Radio*. *Philadelphia Magazine* named Abu-Jamal as one of its "people to watch" in 1981, citing his "eloquent, often passionate, and always insightful interviews (which) bring a special dimension to radio reporting."[\[11\]](#) For the FBI and Philadelphia police, Abu-Jamal had long been one of their "people to watch." He was under surveillance for years, and had been openly threatened by Philadelphia policemen.

In Philadelphia, radical blacks formed an organization called MOVE. MOVE was a back to the earth, militant, self-help movement for the blacks. Its leader, John Africa, became an incendiary political figure, a great orator who spoke out against the system's exploitation of black people. Predictably, the group came under fire from the Philadelphia police. They regularly harassed and beat MOVE members, sometimes murdering them. Abu-Jamal produced journalistic criticism of the police regularly, earning him the hatred of the police and then Mayor Rizzo. At a press conference, Rizzo openly called for silencing that gadfly Abu Jamal. Not long after that ominous comment by Rizzo, Abu Jamal found himself on death row.

In 1978, Philadelphia police laid siege to a MOVE home with 600 police. In 1985, the Philadelphia police made history when they dropped a firebomb from a helicopter on a MOVE

neighborhood, murdering six adults (including John Africa), five children and burning down sixty homes.

Kangaroo Court has been a standard feature of the Philadelphia judicial system. In recent years a scandal has rocked Philadelphia, as more than one hundred prisoners have been released due to irregularities in the judicial process, such as paying witnesses for perjured testimony to gain a conviction.[\[12\]](#)

Abu-Jamal was moonlighting as a cab driver one night in 1981 when he saw the common scene of a Philadelphia policeman beating a black motorist. The motorist was Abu-Jamal's brother. It may have been a case of mistaken identity, as the brothers looked alike. Abu-Jamal stopped the cab and tried to stop the beating. In short order, Abu-Jamal and the policeman were lying on the ground with gunshot wounds.

Therein lies a mystery. Abu-Jamal survived and the policeman died. The official record is clear on the matter: Abu-Jamal was tried, convicted, and sentenced to death on charges of first-degree murder. The two main witnesses who convicted Abu-Jamal were both under Philadelphia police influence because of their criminal records. Compelling evidence exists that their testimonies were fabricated. Several other witnesses to the crime had testimony supporting Abu Jamal's innocence, and their testimony was suppressed. Similarly, the police fabricated a "confession" by Abu Jamal, months after Jamal supposedly made it. The bullet removed from the policeman could not be matched to Abu Jamal's pistol (he had it because he was moonlighting as a cab driver in inner city Philadelphia, an understandable situation). Abu-Jamal had been on death row since his conviction. There were many irregularities with his trial and conviction.[\[13\]](#) The judge who sentenced him to death sentenced more black men to death than any other active judge in the United States. They used to call judges like him "hanging judges." Six former prosecutors have gone on the record, stating from experience that no accused person had a chance at a fair trial in that judge's court.

When one of their own dies, police go out of their way to make somebody pay, and it was apparently too good to be true when a bleeding Abu-Jamal was found lying next to the policeman. I have seen [Kangaroo Court](#) in action myself and Abu-Jamal's case reads like a textbook example. Abu-Jamal was perhaps America's only political prisoner on death row.

One thing is clear: Abu-Jamal is a talented writer. His reputation as a journalist was deserved. Just before his scheduled execution in 1995, he published *Live from Death Row*. It is an eloquent series of essays, especially being written from death row. As in Dennis' case, writing from prison is considered a crime in the minds that often run our prison systems, particularly when the writing does not flatter the jailers or judicial system. Abu-Jamal was served with a misconduct report for writing the book. In 1997, Abu Jamal published another book, *Death Blossoms, Reflections from a Prisoner of Conscience*.

In 2000, *All Things Censored* was published, which had a compact disc that played the radio commentaries that Abu Jamal gave from a death row telephone. *National Public Radio* scuttled its plans to air those commentaries, under pressure from various political groups, in one of the more egregious instances of American censorship during my lifetime. Those radio commentaries, given from death row, must rank with the best journalistic performances in history, and they are actively censored in the United States.

During the summer of 2001, the courts denied the testimony of Arnold Beverly, who admitted that he shot the policeman Abu Jamal was convicted of killing. Beverly's testimony is quietly and competently delivered, yet sensational in its implications. According to Beverly, he was a professional hit man who killed that cop as part of a police-assisted hit. According to Beverly, that cop was too corrupt even for Philadelphia, and other cops had him killed, as he was infringing too greatly on the Philadelphia police's protection racket. Abu Jamal was just in the "right place at the right time" to end up on death row. Beverly's open confession was refused as evidence regarding Abu Jamal's innocence, but may have had something to do with a judge throwing out Abu Jamal's death sentence not long after Beverly delivered his testimony.

The groups trying to save Abu-Jamal's life were the standard left wing groups that have been speaking out against racism, murder and other outrages in our society and around the world. People such as Nelson Mandela, Salman Rushdie, Elie Wiesel, Archbishop Desmond Tutu, Jesse Jackson, Wole Soyinka, ex-attorney general Ramsey Clark, Vaclav Havel, actor Michael Farrell (Alan Alda's sidekick on the TV show M.A.S.H.), Ed Asner, Alice Walker (author of *The Color Purple*), author E.L. Doctorow and many others spoke out. "Hate Groups" such as Amnesty International, the ACLU, Human Rights Watch, the European Parliament, and members of the governments of Japan, Denmark, Belgium and others also tried preventing his execution. I was involved with trying to prevent his execution. In all, global organizations whose members number in the millions protested his impending execution. It is almost incomprehensible that Mr. Skeptic listed a group trying to prevent an execution as a "Hate Group."

One agonizing issue regarding executing a journalist is that America is about the world's only "free" nation with a death penalty, and one of six nations that executed juveniles in the 1990's, and today is the only nation that will officially execute children. We are the world's leader in executing people for crimes they committed as children.[\[14\]](#) The issue of Abu Jamal is illustrative of our nation's barbarity.

Mr. Skeptic and McDonald's

Mr. Skeptic classified a group of people protesting McDonald's' corporate practices as a "Hate Group," describing their site as having a "neo-PC hatred of McDonald's restaurants." The

McDonald's case is another instance where the powerful have tried silencing a voice of dissent. In one sense, calling McDonald's protestors a "Hate Group" is aligned with the skeptical philosophy, where huge corporations and other powerful groups can do no wrong, and anybody who challenges them has a screw loose or are "Hate Groups." The McDonald's situation epitomizes the havoc that corporate practices wreak on the population and environment.

McDonald's helped pioneer the notion of "fast food," and has been the leader in industrializing the eating experience. The McDonald's protest situation covers vast territory. McDonald's is the world's largest user of beef, and second place in chickens. Raising animals to slaughter and eat is a tremendous waste of resources. The West's meat-eating culture is creating large-scale environmental devastation. The numbers are overwhelming. To produce a single pound of meat requires 2500 gallons of water.[\[15\]](#) It takes 100 times more water to produce a pound of meat as a pound of wheat. Animal flesh is a terribly inefficient method of producing dietary protein. In the watery Northwest, more than half of its vast water supply is used to raise livestock for meat.[\[16\]](#) The meat and dairy industry in California consumes half that state's water supply.

The global political-economic order, led by the United States and huge transnational corporations such as McDonald's, rules the world. Anybody who steps out of line or tries opting out of the global capitalist system will invariably be [visited by U.S. troops or a U.S.-financed destabilization effort](#).

The McDonald's phenomenon is a classic example of how rampant capitalism is destroying the planet. In bringing assembly line strategies to the eating experience, everything has been reduced to the lowest common denominator. The McDonald's strategy has been to sell vast amounts of cheap food with a low profit margin per unit, and the profits attained by the huge volume of food sold. It is a standard corporate strategy, and what has it cost the planet?

On the meat front, McDonald's has been a leading influence in revolutionizing how animals are raised. In order to sell the greatest amount of meat at the lowest possible price, the practice of factory farming came into being. I used to say that if a person visited a slaughterhouse and saw what was done to animals to produce their tasty burgers, bacon, and hot dogs, most people would become [vegetarian](#) on the spot. Today with factory farming, people only need to visit where the animals *are being raised* to become vegetarians.

Visiting today's chicken and pig factories is a hellish experience. In the drive for maximum profit and minimum costs, fast fading are the days of pigs wandering around a farm, or a barnyard full of chickens. Today's pig and chicken factories are the ultimate triumph of farming's industrialization. Those pigs and chickens live their entire lives without seeing the light of day. They are kept in cages stacked to the ceiling, and fed drugs, antibiotics, hormones, cheap feed, and stimulated to produce the largest weight gain in the shortest

amount of time for the least amount of resources used.

Across America's heartland, pig and chicken factories are replacing farms. Seventy percent of America's pigs are raised in pig factories today, and half of America's small family farms that raised pigs have gone out of business during the past decade. The traditional American farmer is not doing the work anymore. America's underclass, such as Mexican immigrants, work in the farm factories owned by huge [agribusiness corporations](#). It is among the lowest-paid work in America, down there with picking beans. Chicken factory workers have injury and illness rates far higher than coal mining and construction. Meatpacking is America's most dangerous job, with a serious injury rate five times the national average.^[17] In the pig factories, the workers are supposed to wear gas masks because the excrement fumes are overpowering. Even so, according to the American Lung Association, 70% of those pig factory workers develop respiratory disease symptoms, and 58% have chronic bronchitis. Workers have died numerous times by being exposed to excrement fumes. The pigs do not get gas masks.

Pigs are among earth's most social animals and are probably smarter than dogs. As pigs are crammed into cages, the stress of their inhumane environment leads them to kill each other and engage in cannibalism. In factory farming, pigs, chickens, sheep and cows become "[production units](#)" with zero quality to their lives. They are merely machines to turn feed, drugs and antibiotics into profitable flesh. Another problem introduced by pig factory farming is the issue of pig excrement. Across America today, there are lakes, almost oceans, of pig excrement from the factories. Nobody is quite sure what to do with it. It is a problem similar to the nuclear waste lakes at nuclear facilities across America, although fortunately, pig excrement is not radioactive...yet.

A protégé of mine previously worked at a chicken company where they raised egg-laying hens. They raised them from egg to sale. One day he told me about the business. At their facility, they had huge incubators where the eggs hatched. As the chicks hatched, they were immediately swept onto a conveyor belt, beginning their corporate careers. The first people the chicks met were known as "sexers," who turned them over to see what sex they were. If the chick was female, it could look forward to a life expectancy of less than two years. Outside of the factory setting, chickens can live to be twenty years old, and average nearly ten. If the chick was male, the sexer dropped it into a chute that led to a grinder where the chick was instantly shredded and carted off as hazardous waste.

The female chicks were immediately put into pens and fed. That company only raised chicks to egg-laying age. They produced an egg-laying hen for about 50 cents apiece. Without antibiotics and drugs, factory farming would be impossible. The confined quarters breed disease, so all factory animals have antibiotics as part of their feed. About half of America's antibiotic production goes directly into animal feed.

In a few months, the chicks have been fed and stimulated to maturity and are ready to begin their egg-laying careers. The modern egg factories typically have cages stacked to the ceiling. Inside those huge buildings the lighting is manipulated (simulating night and day) to gain maximum egg production. The chickens are crowded several to a cage that is about the size of an oven. The chickens can barely move. Identical to the pig situation, the crowded chickens engage in anti-social behavior, attacking, killing and eating each other. The solution implemented by the geniuses that designed such systems is to de-beak the chickens. De-beaking is done by cutting off the top-half of their beaks, a process performed with no anesthesia, obviously, and a procedure that kills many chickens from sheer shock.

The chickens lay about an egg a day under the factory conditions, far more than normal egg-laying hens used to lay. After about eighteen months of life, the hen's back end blows out due to the stress of excessive egg laying. About twenty percent of the chickens die under those conditions, and do not make it to eighteen months. Those dead chickens are called "spent fowl" in the industry parlance. The "spent fowl" is sold to soup and pet food companies. My protégé told me that the production managers lamented the fact that the hens only produced for about a year before their "ass blew out." Another ingenious solution is being developed for that problem: genetically engineering chickens that will not explode for perhaps two years of production. Here is a quote by one of those hard-working biological engineers, stating with pride and not a trace of irony, "At the Animal Research Institute, we are trying to breed animals without legs, and chickens without feathers."[\[18\]](#) He might [reach his goal one day](#).

Chickens without feathers are easy to pluck, and animals without legs will not "waste" energy moving around, and instead put that food energy to better use, such as getting fattened up. A similar situation exists in dairy farming. Dairy cows used to live to be about twenty years old. With the new factory methods, a dairy cow will live to be four if she is lucky. Dairy cows are artificially inseminated and artificially stimulated to keep producing that milk. That is why they do not live long. Another byproduct of the dairy industry is the male offspring. Similar to the chicken industry, if the young animal is female, life is "good." If the offspring is male, a common fate is becoming a veal calf. Veal calves are produced by methods not far removed from what the Nazi doctors dreamed up.

A veal calf is a similar byproduct to those superfluous male chicks, although their careers last longer and there is an economic value to them. Veal is treasured for its tender, pale flesh. How do they produce such tender, pale flesh? A veal calf is put into a cage and chained so he cannot lie down, but must stand. He will spend his entire life there. In that manner, he is purposely kept from exercising, keeping his muscles soft, which is how the softness is produced. The pale flesh is created by purposely malnourishing the calf. Veal comes from calves fed a diet designed to make them anemic, hence the flesh's pale color. Such conditions are ripe for disease, so the calf's diet is liberally laced with antibiotics and drugs. Even then, veal calves suffer from diarrhea and other maladies. After about six months of that existence, never seeing the light of day, the calf is slaughtered. Veal is a menu delicacy, which, like pork, is another one of America's "white meats." Hundreds of thousands of calves meet that fate

each year in America.

As always, the goal is [maximizing profits](#) by keeping costs low. The trends are obvious, the goals understandable. In the constant quest for more production, a few years ago Bovine Growth Hormone (BGH) was introduced to produce even more milk from those beleaguered cows. [Steve Milloy](#) and [Elizabeth Whelan](#) think BGH is another wonderful agricultural innovation. That system truly is faithful to the [materialistic viewpoint](#) that has prevailed in the West for centuries. Factory farming is a logical conclusion of that mentality. In a world where the prevailing view denies humans the benefit of souls, animals are far, far down that contrived scale of creation.

Another byproduct of that worldview is the practice of animal experimentation. Tens of millions of animals are killed in American laboratories each year for "testing." The apologists for that practice are well paid and many, telling us how "vital" animal experiments are for our standard of living and health. The apologist's standard argument is that if we ever stopped the practice, it would seriously impact our health. Animal experimentation is called "necessary" for everything from winning the war on cancer to testing shampoo. Many people do not agree. There are many groups trying to abolish those inhumane activities. They propose alternatives to every animal experiment there is.

The only rationale for our treatment of animals is "might makes right." We murder tens of millions of animals in "experiments" each year because we can. Few seem to ask themselves if such a practice is ethical, but from both Christianity and science come ready rationales. God [put us in charge](#) of the animals, to do with as we please, so goes the popular interpretation of the Book of Genesis. Science has declared that we are the crowning achievement of evolution. Although we possess no souls, according to the materialistic scientism of Carl Sagan and friends, less evolved beings such as animals are there for our use. Similar logic has justified slavery, genocide and a host of horrors. If humanity survives the coming transition, a [new level of awareness](#) will take root, and we will desire to harm no living thing. For all the grotesque justification for animal experimentation, not all doctors and scientists are of the same mindset. Here is a quote from a founder of the Mayo Clinic.

"I abhor vivisection. It should at least be curbed. Better, it should be abolished. I know of no achievement through vivisection, no scientific discovery that could not have been obtained without such barbarism and cruelty. The whole thing is evil."[\[19\]](#)

The world's most evil people do not staff McDonald's. They are just pioneers and one of the

most successful practitioners in an evil system. The protestors took on McDonald's to protest the system, McDonald's being a logical target.

With all the bad publicity they have received in recent years, McDonald's investigated the possibility of using free-range eggs, but abandoned that idea upon learning that "free range" eggs are 50% more expensive than factory eggs.[\[20\]](#) On the issue of cows and beef, McDonald's has long been known to buy the cheapest beef it can. In California, the beef industry is large and I had friends in the business. One buddy told me a story regarding a cow auction he attended, where the corporate buyers assembled to buy their supply. The McDonald's buyers were infamous for buying the cheapest cows they could. As a McDonald's crew began loading their bedraggled purchases into the cattle cars, one cow collapsed. The law states that a dead animal cannot be used for human consumption. It must be properly slaughtered. The industry is prepared for collapsed cows. The McDonald's crew had a winch on their truck that they attached to the collapsed cow, and hauled it aboard. If they could get the cow into the slaughterhouse while still alive, it would be legal meat. My buddy told it as a funny story.

In the dairy industry, the cows' bodies become depleted from the stresses of their lives, which is why they do not live long. Similar to "spent fowl," when a cow collapses, the industry term is "downed cow." Those "downed cows" are sold to companies that make their flesh into something fed to the American public.

That multifaceted evil ultimately takes a human toll. Human consumers of factory-farmed animals eat flesh loaded with antibiotics, drugs, hormones, and other chemicals, as well as the hormones that misery and fear produce. About 20-30% of all supermarket chickens are infected with live salmonella bacteria (although recent efforts by the [USDA](#) are lowering that number; the meat is not from healthier birds, it is just free of salmonella). Hundreds of Americans have died due to bacteria-infected hamburgers. Mad Cow Disease has made its appearance, caused by feeding cows their ground up relatives, in another ploy to increase those profits. Other nightmares are sure to follow. The solution to those mounting problems are other technological "fixes," such as subjecting it to radiation as a way to kill the diseases increasingly appearing in the food.

In the 20th century, menarche steadily decreased in the industrialized nations. A meaningful comparison is Hong Kong versus Mainland China. Hong Kong has an industrialized diet, and 25 of McDonald's 50 biggest outlets are in Hong Kong. In Hong Kong, menarche dropped to 12, whereas on the mainland it is still 17. A prime suspected culprit is the growth hormones the meat was raised with. Since McDonald's first arrived in Hong Kong, the average teenager has gained 13% in weight.[\[21\]](#) Americans are [history's fattest people](#).

Nutritionally, McDonald's food is indefensible, as is virtually all fast food. It is high in saturated fat, sugar, salt and dozens of additives, and low in fiber, vitamins and minerals. An internal

McDonald's memo surfaced that frankly admitted, "We can't really address or defend nutrition. We don't sell nutrition and people don't come to McDonald's for nutrition."[\[22\]](#)

What do people go to McDonald's for? They go for a cheap, fast, tasty meal. Children go there to play on the McDonald's playground, get toys from the latest Disney movie (McDonald's is the [Disneyland](#) of food), and see Ronald McDonald's smiling face.

McDonald's workers are among the lowest paid workers in their industry, and the retail food industry is one of the lower paying industries to start with. As with virtually all corporations, McDonald's is staunchly anti-union, firing pro-union workers. The employee turnover is immense, at more than 100% annually (I have seen as high as 300% in America). McDonald's also helped pioneer another profitable labor practice: hiring part-time workers. Part-time workers receive minimal employee benefits. Companies such as Wal Mart and United Parcel Service have emulated such practices. In standard [neocolonial](#) fashion, those cute toys given away with Happy Meals are usually made in sweatshop conditions in Asia.

The trash created by fast food is staggering. Fast food establishments create a prodigious amount of trash. Every American city has fast food trash blowing in the wind.

The fast food revolution is also [chopping down the rainforests](#). It is bigger than just McDonald's, but McDonald's is part of a neocolonial system whereby rainforests are being chopped down to produce cattle ranches so Westerners can have cheap beef. Although McDonald's now avows that their beef will not come from ex-rainforest land, they have led the juggernaut that has produced the trend of chopping down the rainforests to pasture cattle, getting the world hooked on beef. Brazil is a notorious example. Cattle ranching in devastated rain forest areas is about as ecologically unsound a practice as there is. Tropical rain forest soils are thin, and cattle ranching on those soils is disastrous, quickly turning the rain forest into lifeless moonscapes.

McDonald's is no more rapacious than any other corporation, at least consciously. They are [going for the profit](#), as all corporations do, and if they must use sweatshop labor and factory-farmed animals, turn cropland into far less productive pasturage and sell their product with a clown's smiling face, so be it. All fast food companies play the same game. McDonald's was just the pioneer and most successful practitioner. McDonald's is the logical conclusion of industrialization, capitalism and materialism brought to the eating experience. One way that McDonald's kept criticism of their practices from being very public was suing anybody who spoke up, which is another standard corporate practice.

In England, a handful of people protested McDonald's practices. In 1985, six people handed out flyers titled "What's wrong with McDonald's?" In 1990, McDonald's threatened lawsuits against the protestors. Four backed off, and only two had the courage to continue: a barkeeper and an ex-mail carrier. They were affiliated with Greenpeace.

McDonald's sued for libel, asking \$30 billion in damages. It blew up in their faces. What would have become one more marginalized tale became a global story when McDonald's sued those two people. A \$30 billion corporate giant tried silencing two people for telling the truth. It became the longest trial in Britain's history. Libel laws in England are different from United States libel laws. McDonald's pressured the court as much as possible. Money and power talk very loudly in the courtroom, although from behind the scenes. The judge's mouth moves, but the corporate voice is heard. The trial was rigged in a number of ways, and McDonald's was awarded 60,000 pounds. The way the libel laws in England were executed, the judge found in favor of McDonald's although no libel was proven. McDonald's was not put in the position of proving libel, as Americans know it. The defendants were put in the position of "proving" that their charges against McDonald's were not overstated for rhetorical purposes. McDonald's' lawsuit could not have been brought in America.[\[23\]](#) McDonald's bit off far more than it had bargained for. The bad publicity McDonald's received far outweighed their legal victory, although the McDonald's juggernaut rolls onward with undamaged revenues and profits. In Mr. Skeptic's mind, those English activists were a "Hate Group."

There is a silver lining in the McDonald's' story, so far. Since that libel suit and other events, such as protests, McDonald's has begun setting standards for animal treatment from its suppliers of eggs, chickens, pork, milk and beef (beginning in 1999). It is a step in the right direction, and a step in the right direction is better than a step in the wrong one, and we significantly have those "hate groups" who took on McDonald's to thank for it.

Other "Crackpots"

Mr. Skeptic had a link to Steven Milloy's "Junk Science" pages, calling it "A great compendium of Junk Science." Mr. Skeptic was an admirer of Milloy, who was also flaying those "crackpots" and their "junk science." The sarcasm and ridicule that pours forth from Milloy's web site can be breathtaking.

The notorious Cato Institute, [Julian Simon's](#) old haunt, helps fund Milloy. Milloy stepped into Simon's shoes as Cato's leading environmental adjunct scholar. As with all good propaganda, there are nuggets of truth amongst the disinformation. Milloy allows that America's health habits are responsible for a great deal of suffering, in an admission of the obvious. He is similar to [Julian Simon](#) and [Elizabeth Whelan](#), where he has apparently never met an agribusiness or petrochemical company he did not like. He lets others make many of his editorial comments. He will not always get in the line of fire himself, but will reproduce nearly any pro-chemical piece he can find. What he and Whelan have done repeatedly is look to the *Washington Times* as their paper of record. The same person who runs the Moonies owns the *Washington Times*. It is about as far right a publication as this nation has.

Milloy reproduced a *Washington Times* article that extolled the virtues of Olestra (the miraculous, indigestible "fake" fat that has given many consumers diarrhea attacks, and God only knows the long-term effects), an article where the author is openly disappointed that Olestra is not a universal food additive quite yet.[\[24\]](#) Milloy reproduced an article from an Australian organization that believes a major part of air pollution may be caused by grass.[\[25\]](#) His organization, The Advancement of Sound Science Coalition (TASSC), promoted Bovine Somatotropin (BST), more popularly known as Bovine Growth Hormone (BGH).[\[26\]](#) Milloy reproduced a *New York Times* editorial saying that 100,000 people dying each year from adverse drug reactions is "no epidemic," as it represents 0.5% of all hospital drug treatments.[\[27\]](#) That is many times the number of people who die from illegal drugs each year. Milloy reproduced a University of Washington study that suggested that being old and fat was healthier than being old and thin.[\[28\]](#) Here is a clever Milloy quote, epitomizing the tenor of his work: "Schering Plough says its competitor's product (Ex-Lax) causes cancer. I say Schering Plough deserves a junk science enema!"[\[29\]](#)

Milloy stated, "One in three Americans develops cancer as a function of being alive."[\[30\]](#) That is another example of the false logic of assuming the average is normal. Milloy adheres closely to the "you get old, you get cancer, you die" medical establishment party line.

I also saw a new twist on the dirty money angle. While Whelan has largely made it a secret where her money comes from, Milloy was somewhat open about it. In answering the "Who pays for the Junk Science Home Page?" question, Milloy's web page replied: "The Advancement of Sound Science Coalition. But who pays isn't important; the substance is. Steve figures he has the junk science debate won when an opponent raises a collateral issue like funding."[\[31\]](#) In November 2001, the *American Journal of Public Health* published a lengthy investigation regarding how the [Phillip Morris tobacco company](#) launched an aggressive public relations campaign to forestall second-hand smoke lawsuits, in the wake of a 1992 EPA report that identified second-hand smoke as a Group A human carcinogen.[\[32\]](#) In conjunction with APCO Associates, its public relations firm, Phillip Morris launched an effort to promote "sound science" in February 1993. Three months later, TASSC was born, and one of its stands was debunking the notion of the harmfulness of second-hand smoke. The *American Journal of Public Health* Internet article links to internal documents, unearthed in litigation, between Phillip Morris and APCO that show that TASSC was their joint creation. TASSC had the gall to publicly call itself a "grassroots" organization. A genuine grass roots activist's term for TASSC is an "Astroturf" organization. Corporate America has funded many fake "grass roots" organizations that advocate corporate positions from a "neutral" perspective.[\[33\]](#)

Sheldon Rampton and John Stauber have published articles at [PR Watch](#) regarding Milloy and his connections with the tobacco companies.[\[34\]](#) Early in his career, Milloy was a lobbyist with Multinational Business Services, Phillip Morris' "primary contact" in the lobbying world

regarding the second-hand smoke issue. When Phillip Morris went on the “sound science” offensive against the EPA and other environmental and health organizations, Milloy was picked to head TASSC. TASSC was merely one of a number of efforts by Phillip Morris to defend its deadly product from governmental censure. The goal was rigging the science to make it nearly impossible to declare that second-hand smoke was hazardous to health. Phillip Morris had other clandestine campaigns to fight cigarette taxes and make the ban on smoking in public places a freedom issue. Phillip Morris created the “National Smokers Alliance,” another fake “grass roots” organization that tried lifting smoking restrictions in the name of freedom. They tried linking the smoking issue to regulations on food additives and auto exhaust, showing how governmental regulations were unnecessary meddling with corporate freedom. The Phillip Morris campaign is an instructive example of how the dark side of the force operates, and Milloy is one of its front men.

In order to attack EPA findings and other scientific results, Phillip Morris concocted the “sound science/junk science” duality, “sound science” being the (Phillip Morris-sponsored) research that found cigarettes benign, and “junk science” being anything that contradicted it. Unsurprisingly, Milloy then championed the term “junk science.” Milloy has led other efforts, teaming up with [Elizabeth Whelan](#) and other corporate “scientists” in 2000 to lead a campaign named “No More Scares.” According to their corporate logic, scientific findings regarding health damage caused by corporate chemicals and waste are needless “scares.” It dovetails with Whelan’s *Toxic Terror* work. Whelan and Milloy make strange bedfellows, as the only corporate product Whelan has ever assailed, to my knowledge, is tobacco.

Although TASSC is officially defunct, Milloy’s site ([junkscience.com](#)) is still up as I write this in November 2001. It is now on the public record that Milloy ran a tobacco company front organization, posing as a scientist promoting public health. I wonder if any criminal laws might apply to his efforts. Unfortunately, the so-called “consumer protection” investigators I have seen have a rabid desire to put Dennis away, but will not touch people such as Milloy with a ten-foot-pole, not wanting to tangle with his patrons.

TASSC is a spiritual cousin of Whelan’s American Council on Science and Health. As with [Julian Simon](#), TASSC and Milloy have trolled the scientific and press release waters for whatever supports their pro-corporate position. Mr. Skeptic was a Junk Science fan, and thought Milloy’s pages were a great list of “crackpots.” Mr. Skeptic reads my work, keeping the link to this essay active on his site, and since this essay was first published, he quietly took down his “crackpot” links to the Mumia Abu Jamal activists, the McDonald’s protestors and Milloy.

Mr. Skeptic’s listed Dennis under “Just Stupid” and “Pseudo-science.” This essay will finish dealing with Mr. Skeptic with one last link. He listed *Covert Action Quarterly* under “Total Schizo,” describing it as a “great zine for conspiracy buffs.” That made me think he may work for somebody else, such as the CIA. He has the debunker vocabulary down pat, using more

than one pejorative in the same sentence. "Zine" is a hip word that describes a fun, counter-cultural publication, often published from somebody's bedroom, usually a fan magazine about underground music groups. It is not substantial enough to be called a magazine, so the diminutive "zine" came into being. If Mr. Skeptic read and comprehended an issue of *Covert Action*, he would know that "zine" is about as far from describing that *magazine* as one can get. I subscribed to *Covert Action* for several years.

It is probably the most respected publication regarding exposure of our spy agencies. One of *Covert Action*'s founders was Phil Agee, the legendary CIA agent who first exposed what the CIA really did, from an insider's perspective. *Inside the Company, CIA Diary* was published in 1975 and dealt the CIA a blow from which it is still recovering. The United States hounded Agee across the globe after his book was published. His book *On the Run* documents how he was expelled from one European nation after another, until he gained political asylum in West Germany. *On the Run* documents how the CIA tried stopping him from writing his book, to the extent that they tried luring him to Spain to "neutralize" him, whether from a Kangaroo Court scenario or outright murder is still classified. [Noam Chomsky](#) and [Ralph McGehee](#) have contributed articles to *Covert Action*.

If people could only pick one publication to find out how America is really run, *Covert Action* might be it. "Zine" does not describe that magazine. The pejorative "conspiracy buff" shows either Mr. Skeptic's political infancy or that he knows what he is doing. "Conspiracy buff" is a standard establishment label for anybody who challenges authority. "Buff" is a denigrating term that often portrays serious investigators as hyperactive stamp collectors. "Conspiracy" does not apply to what *Covert Action* investigates, unless everything our military, [CIA](#), NSA, FBI and corporations do is a "[conspiracy](#)."

There is a political spectrum in America, generally seen as extending from "left" to "right," but those terms can be misleading. There is great overlap in the "left" and "right," which are supposedly on opposite ends of the spectrum. Noam Chomsky would rather we stopped using those terms, although he has used it in correspondence with me, calling himself part of the "left press." "Left" and "right" have become clichés in many instances, but I will use it broadly here, realizing that they can be limiting terms.

America's mainstream politics are actually right wing, dominated by the rich.[\[35\]](#) To the right of the mainstream are folks such as the militias, the Patriots, the Ku Klux Klan, *The Spotlight*, fundamentalist Christians, the John Birch Society, Holocaust deniers, etc. There are many conspiracy theorists in their ranks, and sometimes the word "buff" might apply. There definitely are some strange theories there in the far right, but I have seen too many strange things to laugh at them all. Significant aspects of their theories ring true, and I have had real world experiences that attest to some of them.

The majority stands left of the mainstream. Or at least they *think* to the left, but most still

shuffle along with the [herd management](#) the elite perform, keeping everybody riveted to the tube, [reading the daily newspaper](#) and going to work every day. The “mainstream” does not really respond to the needs or wishes of most people. To the left of the “mainstream” are feminists, environmentalists, civil rights activists, peace activists, homeless advocates, gay activists, communists, socialists, child advocates, animal rights activists, advocates for the elderly and probably most of Christianity.

The right and left both point out the establishment’s abuse of power, but the way they see it happening differs. It is a conflict similar to two views of history known as the “Great Man” and “Mass Movement” views. The “Great Man” view has a few extraordinary people changing history’s course, making their way into the history books. The “Mass Movement” view sees history as the cumulative story of humanity, and the historical figures, although great as some of them may have been, were like a ship’s prow. It is what we see first, but there is plenty behind it. It is like the space program. Neil Armstrong was the [first man to step on the moon](#), but the effort of a vast number of people got him there.

The right often subscribes to the “Great Man” dynamic, and consequently sees many dark societal aspects resulting from the actions of relatively few people, usually conspiring together. The right often poses “conspiracy theories.” I do not agree with many of them, but also believe many could be true, to a degree, and I have not encountered many that seem to beam in from Neptune. With our steeply hierarchical social systems, where a few hundred people have as much wealth as a few billion, mutual self-interest is something obvious to those at the top. Many conspiracies have played out over the millennia. Julius Caesar was one of six Caesars in a row deposed by Senate conspiracies. During the past generation, the owners of America’s professional baseball teams were repeatedly convicted of conspiring to keep players’ wages (relatively) low.

The left sees history more as mass action. One prominent area of left scholarship is known as “structural analysis,” or “institutional analysis.” Those studies look at how society is organized, particularly regarding its major institutions, and analyze how those shape society’s function. In general, they do not explain the major events of history with conspiracies. They see the sweep of history as the result of how millions and billions of people live their lives, and they also admit the important role elites play. Chomsky and *Covert Action* may go too far in dissociating themselves from “conspiracy theories.” Chomsky wrote a book to debunk the notion that [JFK was assassinated](#) because he was too much of a “dove” on Vietnam.^[36] It created a stir in left circles. A noted left scholar, [Michael Parenti](#), had a vigorous dispute with Chomsky’s views on the JFK matter, and stated that there is a “[conspiracy phobia](#)” on the left.^[37] I took *Covert Action* to task in 1995 for its rather breezy reviews of *Kooks* and the *50 Greatest Conspiracies of all Time*.^[38] Much of the theorizing in those books was not nearly as way out as the *Covert Action* reviewer made it seem.

In general, those two often-competing viewpoints can also be called “conscious” and

“unconscious.” With conspiracies, events turn out just as a select few want them to. In structural analysis, the system produces the outcome without conscious design. The situation should not be oversimplified, but that is the general trend that I have noticed, and believe it also has to do with one’s spiritual beliefs. Religious people generally believe that a creator consciously designed the universe. They do not believe they are here by accident. The prevailing cosmology as promoted by Carl Sagan and others is that “In the beginning, there was the Big Bang,” and through fortuitous accidents of chemistry and physics, life evolved. Nobody designed it that way, it happened by accident. Karl Marx’s dialectical materialism has been influential.

In general, the structuralists have the Big Bang and the Theory of Evolution as their Book of Genesis. The “conspiracy theorists” believe that nothing happened by accident. It is fascinating to study those divergent points of view. There is merit in both viewpoints, and limitations in each. Obviously, *Covert Action* is not the “zine for conspiracy buffs.” For Mr. Skeptic to make that statement either displays his political naïveté or shows that he is a disinformation expert, working for somebody in clandestine fashion. I have generally believed the “clueless theory” more than the “conspiracy theory” regarding Mr. Skeptic, but I could be wrong.

That is all the writing I plan to do regarding Mr. Skeptic. I do not plan on analyzing or dealing with his work anymore. Readers might ask why I have devoted so much effort to him. Unfortunately, as with [Elizabeth Whelan](#), [Steve Milloy](#), [Julian Simon](#) and others, the media has presented Mr. Skeptic as a man with credible things to say. The media has repeatedly portrayed Mr. Skeptic as the primary critic of Dennis and his efforts, making him seem a valid critic. As Dennis has been making national noise on and off over the years, there have been numerous media accounts regarding Dennis, including a nationally televised documentary where Mr. Skeptic is Dennis’ prominent critic. This essay was partly intended to show what kind of critic Mr. Skeptic really is, and Dennis' critics in general.

Dennis Lee’s Past - A Quiz

I have never seen the mainstream media fairly present the facts of Dennis Lee’s life and efforts. [Mr. Skeptic](#) and others have followed their lead. Mr. Skeptic long ago revealed himself to me as a [disinformation specialist](#). Such people always misrepresent Dennis’s past, particularly the years I was with him. In June 2003 I had an unexpected encounter with Mr. Skeptic on the Internet. He is more strident than ever, repeating his disinformation as if it was a collection of diligently-researched and carefully-presented facts. Mr. Skeptic’s efforts have influenced others who have publicly written about Dennis. I was spurred to create this quiz. People writing about Dennis’ “criminal” past can test their knowledge before publicly embarrassing themselves while libeling Dennis.

1. What was the seminal, radicalizing event in Dennis' life, the one that propelled him into the past thirty years of his adventures? [Answer.](#)
2. What subject did Dennis study in college? [Answer.](#)
3. What event did Dennis attend, which convinced him that his subject of study was being used to manipulate the public? [Answer.](#)
4. What was the first business Dennis started after his college days? [Answer.](#)
5. What event destroyed that business? [Answer.](#)
6. What is the only "crime" that Dennis has ever admitted to "committing"? [Answer.](#)
7. What were the events that initiated that "crime"? [Answer.](#)
8. What did Dennis do after his first company was destroyed? [Answer.](#)
9. What happened to his second venture? [Answer.](#)
10. What was the final event that shut down his second company? [Answer.](#)
11. How much money did Dennis walk away from that failed venture with? [Answer.](#)
12. How many times has organized crime tried to murder Dennis? [Answer.](#)
13. What was the next business that Dennis became involved with? [Answer.](#)
14. What technology did he specifically pursue in that next venture? [Answer.](#)
15. How did Dennis help change the way that technology was being implemented? [Answer.](#)
16. What happened to his efforts with that technology? [Answer.](#)
17. What disease befell Dennis while he pursued that technology? [Answer.](#)
18. How many times was he nearly killed by the negligence of the hospital that treated him? [Answer.](#)
19. As he recovered from his disease, what technology did he become involved with? [Answer.](#)
20. How successful were his early efforts with that technology? [Answer.](#)
21. What marketing plan did Dennis unveil during his early days with that technology? [Answer.](#)
22. Under that marketing plan, how much money did the customer risk on the technology's performance? [Answer.](#)
23. Did Dennis try interesting the industrial and finance world in that technology? [Answer.](#)
24. What happened to his first company that was involved with that technology? [Answer.](#)
25. Dennis is a native of Washington State. Why did he not begin marketing that new technology to his home state? [Answer.](#)
26. What events brought Dennis and his technology to Washington? [Answer.](#)
27. After a year in Washington, what brought Dennis to the Seattle area in late 1984? [Answer.](#)
28. When Dennis arrived in Seattle, how much money did he have? [Answer.](#)
29. By the spring of 1985, how many systems had Dennis sold for \$10,000 apiece? [Answer.](#)
30. How many of those customers were offered Dennis' unique financing plan? [Answer.](#)
31. How much money did the customers opting for Dennis' financing plan risk on system

performance? [Answer](#).

32. After more than a year of trying to interest the local electric companies in his technology, what was the first public response by an electric company? [Answer](#).
33. When the Washington Attorney General began "investigating" Dennis' company, how many customers of Dennis's had complained? [Answer](#).
34. What was Dennis' response to the allegations by the electric companies to his "scam" company and equipment? [Answer](#).
35. Who responded to Dennis' response to the electric company allegations? [Answer](#).
36. By the autumn of 1985, what was Dennis' paper net worth, based on his stock in his company? [Answer](#).
37. Dennis was heavily involved in further development of the LamCo technology. What was his most significant innovation regarding the LamCo technology? [Answer](#).
38. When did the Washington Attorney General publicly attack Dennis' company? [Answer](#).
39. When the Washington Attorney General attacked Dennis' company through the media, what was their legal basis for the attack? [Answer](#).
40. When the Washington Attorney General made their highly public move, what did a provocateur from the Bonneville Power Administration do? [Answer](#).
41. What activities was the Bonneville Power Administration provocateur subsequently involved in regarding Dennis' company, both in undeniable fact and in all likelihood? [Answer](#).
42. When the Attorney General struck, how much time did Dennis' company have to install their heat pumps before Carter's Tax Credit expired? [Answer](#).
43. What was Dennis' original response to the Attorney General's attack? [Answer](#).
44. In the wake of Dennis' response to the attack, what was the response of the Assistant Attorney General who was leading the prosecution of Dennis' company? [Answer](#).
45. How many legitimate charges were in the Attorney General's high profile lawsuit against Dennis' company? [Answer](#).
46. Upon what legal issue did the Assistant Attorney General base her entire case against Dennis' company? [Answer](#).
47. Who voted that Dennis settle the Attorney General's case? [Answer](#).
48. In settling the Attorney General's case, how many crimes or intentional deceptions did Dennis admit to making? [Answer](#).
49. What percent of those contracted systems were installed by the time Carter's Tax Credit expired? [Answer](#).
50. How much money did Dennis' Systems for Savings customers end up risking by buying Dennis' heat pumps? [Answer](#).
51. What was the act by the Bonneville Power Administration provocateur that radicalized Dennis' alternative energy efforts? [Answer](#).
52. What unexpected act did the Assistant Attorney General perform during her attacks on Dennis' company, and what did she later admit to Dennis was her motivation for her

action? [Answer](#).

53. Who was the biggest financial loser in the Seattle affair? [Answer](#).
54. What was the reaction of that loser to what happened in Seattle? [Answer](#).
55. What event put an end to Dennis' efforts in Washington? [Answer](#).
56. When Dennis left Washington State in June 1986, what was his net worth, and how much money did he take with him? [Answer](#).
57. When did Dennis begin thinking about producing free energy? [Answer](#).
58. Who became Dennis' next financier? [Answer](#).
59. What was Dennis' most audacious act in Boston? [Answer](#).
60. What was the reaction to that act? [Answer](#).
61. Although the Bonneville Power Administration (BPA) publicly said they knew almost nothing about Dennis' company, what did a representative from the BPA's conservation department admit to a New England banker who was investigating our company? [Answer](#).
62. When we were in Boston, we were approached by a group of businessmen who offered to buy the exclusive rights to our technology. How much did they offer? [Answer](#).
63. Why did Dennis move to California in June 1987? [Answer](#).
64. What program did Dennis develop that began rapidly growing our California effort? [Answer](#).
65. What was the reaction of the local electric company to our initial efforts in California? [Answer](#).
66. What event got Dennis talking big about free electricity in California? [Answer](#).
67. What event further spurred Dennis' free energy talk? [Answer](#).
68. On January 12, 1988, Dennis publicly announced that he had the technology in hand that might make free electricity a possibility. What happened two days later? [Answer](#).
69. How many complaining victims were there when the Ventura County sheriff's department began their "investigation," as admitted by their investigative notes? [Answer](#).
70. During the raid by the Ventura County sheriff's department, what did our chief researcher and machinist observe the sheriff's deputies doing? [Answer](#).
71. What did the United States Attorney General say about Dennis Lee, when asked about him by an attorney friend who subsequently purchased two full kits of materials from us for \$10,000? [Answer](#).
72. During the raid, after he tried convincing me that Dennis was a crook, I told the sheriff's deputy leading the investigation and raid what the United States Attorney General said. What was the deputy sheriff's response? [Answer](#).
73. During the raid, I asked the sheriff's deputy leading the raid what crime we had supposedly committed that warranted an armed raid of our facilities. What was his reply? [Answer](#).
74. Had we known about the law that covered the "crime" we had committed? [Answer](#).

75. How many previous prosecutions had there been in California history under the laws used to justify a raid of our facilities? [Answer](#).
76. Before Dennis' case was settled in 1990, the lawyer *who wrote the law* concerning our prosecution provided statements to us regarding the law and who it applied to. How many companies did the lawyer estimate would have been subject to the law's filing requirements, and how many complied with that law? [Answer](#).
77. What was the "crime" that Dennis admitted to in California? [Answer](#).
78. For that "crime," how much time did Dennis spend behind bars in California? [Answer](#).
79. After the raid, what did the sheriff's department do for the next several months? [Answer](#).
80. How successful were those efforts by the sheriff's department? [Answer](#).
81. Of the "victims" who the sheriff's department persuaded to testify for the prosecution, how many truly acted like a victim? [Answer](#).
82. How much money did those people who acted like victims lose to Dennis' "scheme"? [Answer](#).
83. A few weeks before the raid, one of our employees talked to the deputy in charge of investigating our company. What did that sheriff's deputy tell our employee, who himself used to be a sheriff's deputy? [Answer](#).
84. In April of 1988, Dennis was approached by some bankers with an offer to buy out his operation. What was their offer and who delivered it? [Answer](#).
85. What was Dennis' response to that offer? [Answer](#).
86. Dennis was arrested in June 1988 by the sheriff's deputy in charge of the investigation. The arrest was performed in Los Angeles County, even though Dennis lived less than a mile from the Ventura County's sheriff's department, and they could have arrested him at home at almost any time. How many arrests had been made in California history under the law that Dennis was arrested on? [Answer](#).
87. What public announcement did the Ventura County sheriff's department make upon arresting Dennis? [Answer](#).
88. What did the bail schedule for such a "crime" as Dennis committed call for, in dollars? [Answer](#).
89. What level of bail did the sheriff's deputy in charge of the investigation ask for from the judge? [Answer](#).
90. What was the rationale the sheriff's deputy presented for changing Dennis's bail? [Answer](#).
91. How many of the 1200 inmates at the Ventura County jail had a bail higher than Dennis's? [Answer](#).
92. During the subsequent prosecutorial misconduct hearing, the sheriff's deputy in charge of the investigation was asked to display his professional expertise that he asked the judge to heavily rely upon in adjusting Dennis' bail. What was the deputy's response? [Answer](#).
93. When Dennis was arrested in June 1988, what happened to the sheriff's deputy in charge of the investigation the next month? [Answer](#).

94. What further motion was filed by the District Attorney's office immediately after Dennis was arrested, and what was their rationale? [Answer.](#)
95. What happened to Dennis' company during the month after he was arrested? [Answer.](#)
96. What happened to the several technical advisors and inventors who worked at Dennis' company, after he was arrested? [Answer.](#)
97. When Dennis was in jail, he fasted and gave his meals to the biggest, meanest guys he could find (the caloric intake given the inmates was at the starvation level), and within a month, he was running his cellblock, turning it from a place of fear into a dormitory atmosphere. What did the jailors then do? [Answer.](#)
98. Soon after Dennis was arrested, his attorney approached the Deputy District Attorney who prosecuted Dennis, and asked if there could be some negotiation, and perhaps some kind of plea bargain worked out. What was the Deputy District Attorney's response? [Answer.](#)
99. How much time, effort and money did the prosecution expend on Dennis' preliminary hearing? [Answer.](#)
100. Who was the first defense witness who testified about the physics of the technology that Dennis sold and was developing? [Answer.](#)
101. Who was the Deputy District Attorney's assistant during the preliminary hearing, and what was that person's reaction to not only my testimony, but all the defense witnesses' testimonies? [Answer.](#)
102. Not long after the preliminary hearing was finished in late 1988, Dennis was thrown into solitary confinement for a month. What was the "infraction" he committed to warrant such treatment? [Answer.](#)
103. What happened to Dennis' family while he was behind bars in Ventura? [Answer.](#)
104. In March 1989, what did Dennis' judge do about his bail situation? [Answer.](#)
105. What was the chain of events that led to Dennis' release from jail? [Answer.](#)
106. What adjustment to Dennis' bail did the judge make? [Answer.](#)
107. Soon before the judge adjusted Dennis' bail, Easter came. How did Dennis mark that event? [Answer.](#)
108. What was the reaction of Dennis' inmates when he told them about the judge's adjustment of his bail? [Answer.](#)
109. After Dennis was released from jail, he lived with my accounting professor. For years, the professor's home address and phone number were also Dennis'. Mr. Professor told me several years later that he received phone calls for years after Dennis no longer lived there. Who were the callers, and what did they have to say? [Answer.](#)
110. Both times that Dennis has been released from jail/prison, I met with him almost immediately. What were Dennis' immediate reactions to his ordeals? [Answer.](#)
111. After Dennis was released from jail, he obtained an attorney with a national reputation. What was that attorney's claim to fame? [Answer.](#)
112. What was the reaction of the Ventura County District Attorney's office to the famous attorney taking Dennis' case? [Answer.](#)

113. What happened to Dennis' case after the famous attorney took it? [Answer.](#)
114. What happened to the deputy in charge of the investigation/jail when the prosecutorial misconduct hearing began? [Answer.](#)
115. Who succeeded the deputy sheriff in charge of the investigation as the case continued, particularly during the misconduct hearings? [Answer.](#)
116. That new investigator traveled the United States on Dennis's case. He visited our chief engineer at his home in Ellensburg, Washington. The investigator told the engineer that part of Dennis' "fraudulent" activities was representing that he was involved with heat storage technology, when in fact such technology did not exist. What was the engineer's response, and what was the investigator's reaction? [Answer.](#)
117. Our chief researcher eventually came out of hiding, and when the prosecutorial misconduct hearing was taking place, Dennis finally served him a subpoena. The researcher went to the county courthouse to see if the subpoena was a legally compelling document (it was not, as it had not been filed with the court; Dennis was trying to not drag the researcher into court against his will, but just wanted to meet with him). When he inquired at the courthouse, the Deputy District Attorney and the investigator came out of their offices and descended upon the researcher and interviewed him (I heard the tape of that interview, and the Deputy District Attorney's lack of professionalism was glaringly evident). That led to more than one conversation between the researcher and the investigator. What did the investigator reveal to the researcher during the course of their conversations? [Answer.](#)
118. During the misconduct hearings, the prosecution presented a motion to have Dennis re-jailed without the possibility of bail. Why? Dennis was trying to rebuild the business, and by the prosecution's logic, even though the issue was still to be decided how "criminal" his activities were (and the fraud charges had already been thrown out), putting him back in jail would keep new "victims" from being created. What was the judge's reaction to their motion, and what was Dennis' attorney's reaction? [Answer.](#)
119. In the end, it appears that the judge had to convict Dennis on *something*, and how did he get Dennis to submit to a plea bargain, something that years earlier Dennis said he would never do again? [Answer.](#)
120. When Dennis went to prison for not filing that form with the state of California, what prison was he sent to and why? [Answer.](#)
121. When Dennis got out of prison, what did the Ventura County folks have cooked up for him? [Answer.](#)
122. In summary, how much cash and net worth did Dennis possess when: his first business failed; when United Community Services first failed after he tried giving it away to the Christian community; when his insulation companies were stolen; when he got out of the hospital after being paralyzed; when he had his heat pump company stolen; when he moved from Yakima to Seattle in 1984; when he left Seattle to try rebuilding in Boston; when he got out of jail in Ventura; when he moved away from Ventura? [Answer.](#)
123. When Dennis got off parole, he began speaking publicly about free energy. What happened to him then? [Answer.](#)

124. At nearly the *same time* that Dennis was first arrested, and a few miles from *where* he was arrested, real live con men were defrauding the public with a mail order scam, where people paid for computer equipment that was never delivered. How did the authorities react? [Answer](#).
125. What happened to the judge, the prosecutor and the deputies involved in Dennis' case? [Answer](#)

Quiz Answers

1. He [witnessed a starving man](#) (with his skeletal children following behind him) beg a banker for a loan. [Return to questions](#).
2. [Social Psychology](#), with an emphasis on Utopian civilizations. [Return to questions](#).
3. A conference where [B. F. Skinner talked](#), and the subject was the art of conditioning the public mind through stimulus-response techniques. [Return to questions](#).
4. A [construction company](#) that tried bringing craftsmanship back to homebuilding. [Return to questions](#).
5. The energy crisis of 1973-1974. [Return to questions](#).
6. [Bouncing checks](#) as his construction company was destroyed. [Return to questions](#).
7. [In the mayhem of the energy crisis](#), Dennis' lumber supplier illegally repossessed lumber and supplies it sold his company, which precipitated a customer putting a stop payment on a large check written to Dennis' company. It was for the job on which the lumber was repossessed, and Dennis' company's checks began bouncing. Dennis later tried getting his ill-advised plea bargain reversed, and made good on those bounced checks, but that plea bargain stands today as the only "crime" he has ever admitted to committing. [Return to questions](#).
8. He invented a [coupon card](#) that united the consumer and gave them a voice in the marketplace. Dennis' company was named United Community Services. Today his idea has reincarnated in watered-down form as the Discover Card, the card that saves as customers use it. [Return to questions](#).
9. After years in business, after beginning with no capital, the company was nearly defunct. Dennis tried [giving his company away](#) to the Christian community (being that he had recently embraced Christianity), and a famous TV evangelist invested in the company. [Return to questions](#).
10. After [investing \\$150,000 into Dennis' company](#), the TV evangelist's lawyers decided that Dennis' marketing strategy might look to some like a pyramid scheme, and in order to protect his public image, the TV evangelist pulled out of the company. Dennis' company then closed its doors. [Return to questions](#).
11. Zero. [Return to questions](#).
12. At least three times. ([1](#), [2](#), [3](#)) [Return to questions](#).
13. Energy conservation. [Project C.O.N.S.E.R.V.E.](#) was born. [Return to questions](#).

14. Urea-formaldehyde [foam insulation](#). [Return to questions](#).
15. Dennis implemented a quality-control system to ensure proper mixing of the ingredients, and invented a "battle wagon" concept to create the ability to insulate an entire neighborhood in short order. He industrialized a process that was formerly a craftsman process, minimizing human error and creating economies of scale. [Return to questions](#).
16. His [insulation companies](#) were either destroyed by his business partners, or directly stolen from Dennis. [Return to questions](#).
17. [Guillaine Barre Syndrome](#). [Return to questions](#).
18. [Three times](#), leaving him crippled to this day. [Return to questions](#).
19. The [LamCo solar-assisted heat pump](#). [Return to questions](#).
20. His first efforts were [wildly successful](#). He sold 300 heat pumps in two months in one county, while LamCo had not sold even twenty heat pumps on the whole East Coast of the United States in the previous three years. [Return to questions](#).
21. Dennis developed his [Systems for Savings plan](#), which he first used when he began Project C.O.N.S.E.R.V.E. Dennis believes it was the first shared savings plan introduced during Jimmy Carter's "war on energy." [Return to questions](#).
22. [Zero](#). [Return to questions](#).
23. Yes. Endlessly. His persistence eventually gained him an audience with the plant manager of the [world's largest heat pump factory](#), and he was on the brink of putting together a [billion dollar deal](#) with a household name financial company to carpet the United States with the LamCo heat pump. [Return to questions](#).
24. It eventually owned LamCo, but the original LamCo owners conspired with organized crime figures to [swindle Dennis out of his company's cash](#), and then organized crime figures conspired with Dennis's partner to steal his company. [Return to questions](#).
25. Washington State, due to its numerous hydroelectric projects, had the [nation's lowest utility bills](#), so the equipment was not economically feasible in that marketplace. [Return to questions](#).
26. A confluence of several events. After his original company was stolen, he tried rebuilding, but Long Island mobsters and others hounded him, and he was having a difficult time rebuilding his company. He had three children by that time, his only son recently being born. He visited his family in Yakima, Washington to show him his newborn son. The son died of crib death in Yakima, their rebuilding efforts in New York had not been successful, and the "[Whoops](#)" disaster raised Washington utility bills to the point where the LamCo heat pump was economically viable. [Return to questions](#).
27. The rich developer Dennis was involved with in [Yakima](#) became entranced with a [less efficient energy saving system](#) because he thought it was pretty, and he eventually told his business associates he did not need Dennis anymore. [Return to questions](#).
28. Dennis arrived with his family in a beat up station wagon, [\\$20 in his pocket and no place to sleep](#). [Return to questions](#).

29. One thousand, for [\\$10 million in sales](#). [Return to questions](#).
30. All of them, and most opted for Dennis's [Systems for Savings](#) plan. [Return to questions](#).
31. Zero. [Return to questions](#).
32. The local electric company said that [Dennis's company and equipment was a scam](#), that he had refused to answer their questions (the opposite was true – they stonewalled every attempt he made to attract their interest), and called for an investigation by the Attorney General's office into his company. [Return to questions](#).
33. Zero. [Return to questions](#).
34. Dennis [hosted a meeting](#) and invited all the electric companies in the Seattle area to it. [Return to questions](#).
35. The meeting was attended by one low-level electric company employee, who came because of the influence of Dennis' chief engineer. He was the only electric company representative to attend. The other attendees were two [undercover investigators](#) for the Attorney General's office who posed as college students, and a [corporate hit man](#) who was on the Bonneville Power Administration's payroll, who had infiltrated himself into Dennis' company. [Return to questions](#).
36. [Nearly \\$50 million](#), based on his ownership of the company's stock and its market price. [Return to questions](#).
37. Dennis invented the "[Heat Injector](#)," which was a self-contained heat pump which did not need field technicians to laboriously fabricate panel arrays. The Heat Injector overcame the installation and related problems that plagued that technology. As with the [foam insulation business](#), Dennis industrialized the process, making it more reliable and needing less technical skill to install. His Heat Injector never got past the prototype stage because his Seattle company was wiped out, but that was the direction the technology needed to go toward if it was going to become an industry. Dennis has rarely received proper credit for his technical contributions to developing that technology. [Return to questions](#).
38. In [October 1985](#), orchestrated while Dennis was out of town to explore moving his factory and business to Indiana. [Return to questions](#).
39. A [civil lawsuit](#) that they did not file for days after they orchestrated the media splash. [Return to questions](#).
40. He tried inciting mutiny from within Dennis' company. The effort failed. The [BPA Hit Man](#) had been unmasked, and then he engaged in a several month vendetta against Dennis' company. [Return to questions](#).
41. After the BPA Hit Man left Dennis' company after his [ten week tenure](#), he tried manipulating creditors and employees to taking legal action against Dennis's company, leading to a [federal bankruptcy suit](#) being waged in federal court. The only "creditors" he could find were a few unscrupulous and/or easily manipulated employees, and after Dennis' company was destroyed and stolen, the judge threw out their case and even recommended countersuing the petitioners. Among the BPA Hit Man's other [undeniable](#)

[activities](#) were having documents stolen by Dennis' employees, which later ended up in the Attorney General' files, and trying to frighten Dennis' finance company from doing business with him. He almost certainly was involved in breaking into Dennis' company's facilities at night, to sabotage the company in numerous ways. He also was almost certainly behind a campaign to have various regulatory authorities swoop down onto Dennis' company, and he also interfered with Dennis' suppliers and other business associates. The BPA Hit Man's most egregious act will come later in this quiz. [Return to questions.](#)

42. Slightly more than two months. [Return to questions.](#)
43. Dennis took out a [full page ad](#) in the *Seattle Times*. It turned out to be one of the two worst public black eyes the Attorney General ever received, and the second may have derailed his bid for governor in 1992. [Return to questions.](#)
44. She desperately tried to get Dennis to settle the lawsuit. [Return to questions.](#)
45. [Zero.](#) [Return to questions.](#)
46. The fact that [one person in the entire state](#) of Washington misunderstood one thing Dennis said. [Return to questions.](#)
47. Dennis' customers. Dennis would later call it the dirtiest deal he had ever done. [Return to questions.](#)
48. Zero. [Return to questions.](#)
49. [100%.](#) [Return to questions.](#)
50. Zero. [Return to questions.](#)
51. His manipulations directly [led to the death](#) of one of Dennis' employees. [Return to questions.](#)
52. She quit her job with the Attorney General's office. Long after the ordeal was over, Dennis found himself [sitting next to her on an airplane](#). Dennis offered to sit someplace else, but she replied that it was OK for him to sit next to her. Dennis asked her how she slept at night, and her response was that her attacks on his company were because she was following her superiors' orders, but that her conscience finally overcame her and she quit her job. [Return to questions.](#)
53. The financier whose company [financed the heat pump purchases](#). He not only lost millions of dollars, but he also lost his company. [Return to questions.](#)
54. He did not blame Dennis for any of it, and felt that the theft of his company and Dennis's [were part of a conspiracy](#). [Return to questions.](#)
55. His company was stolen, and my boss, the controller, [helped engineer the theft](#). [Return to questions.](#)
56. Zero and zero. [Return to questions.](#)
57. In November 1986 in Boston, when he met a company that produced electricity from [200 degree Fahrenheit water](#). [Return to questions.](#)
58. Me. [Return to questions.](#)
59. [Offering to buy](#) the [Seabrook nuclear power plant](#) and never putting fuel into it, but using

- it for heat storage the storage plant being fed by free energy machines. [Return to questions.](#)
60. The chairman of the board of the Seabrook Association called Dennis's office within minutes of receiving the proposal, said he could come to Dennis's office within an hour, and next week [hosted Dennis](#) and his chief engineer at their penthouse office to discuss his proposal. That was not all that surprising, as we heard that the New England electric companies held secret meetings to decide on how to deal with us, and they thought they might have to work with us. During those days, I once picked up our ringing office phone and asked the caller, who wanted to talk to Dennis, whom I should say was calling. It was the Seabrook Chairman of the Board. It was a decidedly different treatment than Dennis received in Washington. [Return to questions.](#)
61. That for a few months, all that the Bonneville Power Administration's conservation department [thought about was Dennis Lee.](#) [Return to questions.](#)
62. [Ten million dollars.](#) I was in the office when they came to make their offer. They were fairly non-descript people. [Return to questions.](#)
63. Because I tied into more financing and technical talent in [Ventura, California](#), where I was raised, and the effort in Boston was not going well. We had a media blackout [among our problems.](#) [Return to questions.](#)
64. Dennis developed a program where we sold materials that enabled people to learn how to manufacture, market and install the LamCo-style heat pump. [Return to questions.](#)
65. Nothing publicly. We [heard from the inside](#) that they were not sure what to do about us. [Return to questions.](#)
66. One of my mentors came forward with the [world's best engine for powering an automobile](#), a hydraulic heat engine which he invented many years earlier. He thought he could marry it to the heat pump panels and produce no operating cost electricity. [Return to questions.](#)
67. Another hydraulic heat engine came to Dennis, that one from [Victor Fischer](#), and prototypes had been built in Australia. We ceased developing a prototype for my mentor's hydraulic heat engine and immediately began building a home-sized Fischer engine prototype. As with my old mentor, Fischer also thought that his hydraulic heat engine, married to Dennis heat pump panels, could generate no operating cost electricity. Fischer worked with Dennis again in the late 1990s for a couple of years to try developing that "free energy" machine. [Return to questions.](#)
68. An [armed raid](#) by the Ventura County's sheriff's department. [Return to questions.](#)
69. Zero. This link [tells that story.](#) [Return to questions.](#)
70. While standing outside the building, they were able to see through the mirrored machine shop windows when the inside of the building was lit up by the flash of a camera. They saw the sheriff's deputies rolling out our prototype blueprints on our chief researcher's desk [and photographing them.](#) The sheriff's deputies also [cleaned out](#) our chief researcher's office, removing box-loads of documents from his office. They later denied even being in that office until more than twelve hours later, and said they only removed

one piece of paper. Our chief researcher later testified to their theft and espionage in court, and he also waged a lawsuit against them for their theft of proprietary and sensitive documents. [Return to questions.](#)

71. Edwin Meese, the U.S. Attorney General in 1987, knew Dennis by name, told his attorney friend that they had thoroughly investigated Dennis and his operations in the past, and said that Dennis and his companies were "[squeaky clean](#)." The attorney emphasized the words "squeaky clean" as he handed Dennis a check for \$10,000. [Return to questions.](#)
72. He grinned and said he would [not believe a word](#) the highest-ranking prosecuting official in the United States had to say about anything. [Return to questions.](#)
73. He said it seemed that we had violated a civil law known as the [Seller's Assisted Marketing Plan Act](#), California civil code, section 1812.200. [Return to questions.](#)
74. Yes, at least in general. A few months before the raid, I was sent and read the law for seller's assisted marketing in a Midwestern state (related to our national advertising efforts), and there were about twelve criteria for having that law apply to a company's efforts. I read the twelve criteria, and one of the twelve might have applied to our efforts if interpreted a certain way. The other eleven criteria did not apply. At the end of the criteria for that Midwestern state's law, it stated that if a company *met all twelve criteria*, then the law applied. Since it only one criterion might have applied to our efforts, I quickly dismissed the law as of no concern for us. When the sheriff's deputy mentioned the Seller's Assisted Marketing Plan Act, I told him that I had heard of it, and it did not seem to apply to us. He then grinned and said that was a matter for lawyers to decide, not us. [Return to questions.](#)
75. [One](#). [Return to questions.](#)
76. The lawyer estimated that up to [100,000 or more California businesses](#) could have been subject to the Seller's Assisted Marketing Plan Act's filing requirements. The filings ended up in his office, and he stated that only 250 filings had ever been made, for a compliance rate of less than one percent. The main reason was that hardly anybody had ever heard of the obscure law, including lawyers. [Return to questions.](#)
77. He admitted that he did not make that one-page filing with the state of California, along with those 100,000 other businesses that did not file it. [Return to questions.](#)
78. Two years. [Return to questions.](#)
79. From the customer lists they obtained during the raid, they [called all of our hundreds of customers](#) and tried to get them to help prosecute Dennis and his company. [Return to questions.](#)
80. They were only able to round up [nine "victims"](#) from our hundreds of customers. [Return to questions.](#)
81. [One](#). [Return to questions.](#)
82. Zero. The [single man](#) who acted like a victim not only received his money back several months earlier, but asked the court to compensate him for the time he spent reading the material he originally purchased from our company. [Return to questions.](#)

83. That we were going [nothing illegal that he could see](#), and that he would close his investigative file on us. Therefore the raid qualified as “entrapment” at the very least, as we pointedly asked the sheriff’s department if we were violating any laws, but were told that we were not. [Return to questions.](#)
84. The [offer was made in Chicago by a CIA man](#) who said that he represented “European interests.” The offer was to pay Dennis to stop pursuing free energy, and the CIA man’s words were that he would put a one on the check and Dennis could put on the zeroes. [Return to questions.](#)
85. Dennis said that the deal sounded good to him. They would put on the one, he would put on the zeroes, and it would go back into the pockets of those who made the offer, with [money committed to bringing free energy to the marketplace](#). The CIA man almost swallowed his spoon, and rejected Dennis’ counteroffer when he regained his composure. [Return to questions.](#)
86. Zero. [Return to questions.](#)
87. They created a video using footage of Dennis’ tapes and other footage they provided, and sent it to the [Southern California TV stations](#), where it played the next day. The TV stations played the tape unaltered, and it was slanted by the sheriff’s department to make Dennis appear to be the criminal of the century. [Return to questions.](#)
88. [\\$5,000](#). [Return to questions.](#)
89. [\\$1,000,000](#). [Return to questions.](#)
90. It was a creative writing exercise that [used novel reasoning](#). A central reason given by the sheriff’s deputy was that Dennis’ victims themselves would help hide him from the authorities. The main reason given was that the sheriff’s deputy in charge of the investigation was an expert in fraud, having investigated hundreds of cases with fraud elements in them. He asserted that the judge should rely on his deep professional experience and understanding of the crime known as fraud. [Return to questions.](#)
91. [Zero](#), and inmates were in there for murder and other crimes that far exceeded what Dennis was accused of. [Return to questions.](#)
92. The deputy was asked by Dennis’ attorney to tell the court what the legal elements were of the crime known as fraud. The deputy replied that he was unable to, as such technical knowledge was beyond the scope of his professional duties. He was then asked to recall just one element of the crime known as fraud. The deputy was [unable to recall even one](#), although he asked the judge to heavily rely on his professional experience in investigating fraud. [Return to questions.](#)
93. He was [given an award](#) for performing the most difficult investigation in Ventura County history (the investigation of Dennis), and was promoted from sergeant to lieutenant. He was one of the youngest, if not the youngest, deputies to ever make lieutenant in Ventura County. He also had a radical change in his career direction. He had been an investigator, but was promoted to be in charge of the county jail, where he could personally see to the treatment of his prized catch. [Return to questions.](#)
94. They moved that even if Dennis provided the million-dollar bail, that he should not be

freed because he [might have raised the money by fraudulent methods](#). Their rationale had one precedent in U.S. legal history, where a New Jersey drug dealer raised his bail by selling drugs. Equating the Seller's Assisted Marketing Plan Act with heroin, the motion stated that if bail was raised, it could not come from any of Dennis' customers, any money he might have made while working at his companies or any of his business associates, as they were all involved in the situation to some degree. That motion could have kept Bill Gates in jail with no chance of getting out. [Return to questions](#).

95. One of [Dennis's customers](#), who had cleverly insinuated himself into Dennis' organization, immediately mounted a "mutiny" of Dennis' customers and national network. With [two other customer/business associates](#), they worked closely with the sheriff's department to make sure that Dennis never got out of jail. The ringleader was most likely the same kind of provocateur that the [BPA Hit Man](#) was, but more sophisticated. He [threatened or lied to](#) anybody who offered their property for collateral for Dennis' bail, and sabotaged every move Dennis' wife made to try keeping the company alive. The final blow for the company was when the provocateur walked through the company's offices and announced that he has just come from a meeting at the sheriff's department, and that any employees who kept working for the company would go to jail as one of Dennis' accomplices. It worked. The employees streamed out of the building, and several stole anything that was not nailed down on their way out. I happened to [drive into the company parking lot](#) a few minutes after that incident, and had another one of my salient moments of realizing how the world really works. The new lieutenant in charge of the jail was enjoying his finest moments in those days. A stream of frightened employees crawled into his office, begging for his mercy. He masterfully manipulated people in whatever way was necessary to not only abandon Dennis, but to also help bury him. Salesmen were told they could get [sixty years in jail for working for Dennis' company](#). If cajoling worked, that was all that was needed. If people proved more resistant, they were threatened. The standard carrot-and-stick strategy used was that if they helped the prosecution, they would not be prosecuted themselves. [Return to questions](#).
96. They were all [scattered and driven/lured away](#) by either the deputy in charge of the investigation and jail, or the provocateur who helped destroy the company during July 1988. The only technical person who lived locally was our chief researcher, and [he went to the deputy's office](#) in July with all the other frightened people, virtually begging for the deputy's mercy. He tried distancing himself from Dennis, but not the technology. Since putting Dennis away for life would be difficult if it was demonstrated that the technologies he promoted and sold were legitimate, the deputy threatened the chief researcher with jail if he testified for the defense. The chief researcher subsequently [fled into hiding](#) to avoid the subpoena Dennis's lawyer tried serving on him. There had been a campaign since the raid to chase off anybody who could produce credible testimony or data regarding the heat pump or the technologies we were pursuing. [Return to questions](#).

97. They [moved Dennis into an entirely new cellblock](#), which was of questionable legality and obviously initiated by the deputy in charge of the jail, as he did not want his prized catch getting too comfortable. [Return to questions.](#)
98. She said that if Dennis pled guilty to all charges, she would "[see that he does not get the death penalty!](#)" [Return to questions.](#)
99. It apparently was about the [costliest and most time-consuming](#) preliminary hearing in Ventura County history, with the prosecution flying in about twenty witnesses from around the United States, and spending several hundred thousand dollars. [Return to questions.](#)
100. [Me](#). With all the technical witnesses driven off or in hiding, I testified about the technologies and thermodynamics. A CPA should not have been testifying about those matters, which demonstrated how effectively the prosecution had rigged the trial, and how desperate Dennis was. Fortunately, one of Dennis' salesmen had a degree in physics and was a former minister and displayed some heartwarming integrity in those dark days. Over the heated protestations of the prosecution and even Dennis' own attorney (who was probably in on the railroad job at some level), the salesman was allowed to testify. That was it for the "expert" witnesses that the defense was able to bring to court. [Return to questions.](#)
101. It was the deputy in charge of the investigation and jail, who laid around in court for the entire month of the preliminary hearing. His official job of running the jail was obviously only a figurehead position, and the bone he was thrown for snuffing us out. He tried intimidating me as I testified by [making theatrical and imbecilic gestures to my testimony](#). He sat directly in front of the witness stand. His performance was repeated for all defense witnesses, and was pointedly ignored by not only the Deputy District Attorney, but the judge himself. It was an incredible spectacle, which even the local newspaper reporter played along with. In retrospect, it was the turning point of my life. Up until that day, I had given that sheriff's deputy and the entire affair some benefit of the doubt. He unmasked himself for me that day. [Return to questions.](#)
102. Trying to throw a [Christmas party](#) for his inmates. [Return to questions.](#)
103. They were soon rendered homeless and were taken in by my accounting professor and partner in the Ventura operation. They lived with him and his family for more than a year. He was the true hero of what happened in Ventura. [Return to questions.](#)
104. The judge called for a [hearing on Dennis's excessive bail](#). Dennis was shocked, as he had already made eight bail appeals with the other judges who had presided over his case, and all had denied his appeal, except for the very first one, where the judge reduced the bail from a million dollars to a paltry \$750,000. [Return to questions.](#)
105. The first event was when [I asked my professor](#) to mortgage his house and loan me \$50,000 to provide some kind of defense for Dennis, mainly so we could afford to bring in expert witnesses who could testify about the technologies. Some of that money was also used to hire an attorney, as Dennis had no lawyer by that time. That began to turn the tide, beginning with Dennis finally regaining some ability to have private

communication with the outside world. The jail had ensured he had no communications with anybody outside the jail that they did not read or listen to. Then Dennis won some minor motions. The judge's request for the bail review was the big, unexpected event, and Dennis wasted no time in taking advantage of it. His wife began rounding up affidavits of witnesses that the deputy in charge of the investigation had threatened, and the jail was [caught illegally opening Dennis's legal mail](#) from his attorney, which had those threats in it. The jail had been previously caught opening Dennis' legal mail, and the judge warned them not to. Being caught red handed at that stage was the crowning blow. [Return to questions.](#)

106. The bail was reduced from [\\$750,000 to zero](#), with a \$20,000 restitution deposit made in case Dennis was convicted of the fraud charges. Dennis walked out of jail the next day. The prosecution was going to have a hard time putting Dennis away for life for violating a *civil* law, so they threw on some fraud charges onto the stack. Soon after Dennis got out of jail and was able to defend himself, the District Attorney's office [withdrew all the fraud charges](#), which were the only criminal charges they filed. [Return to questions.](#)
107. He had an [Easter celebration](#) in his cell block, complete with Easter egg hunts for his fellow inmates. [Return to questions.](#)
108. They [cheered and hoisted him](#) onto their shoulders. [Return to questions.](#)
109. The callers were [Dennis' fellow inmates](#). They called to thank the man who turned their life around, and to tell him that they had walked the straight and narrow path ever since they got out of jail/prison. [Return to questions.](#)
110. Dennis' response was that being behind bars was not too bad, and that he was going back after free energy full steam ahead. He also talked about how he was nearly murdered in prison, so it obviously was no picnic, but Dennis is the world's greatest lemonade maker. [Return to questions.](#)
111. He was the [United States' foremost Constitutionalist attorney](#), and his specialty was taking on the Internal Revenue Service (IRS). Soon before talking Dennis' case, he was on the floor of the U.S. Supreme Court. That case had to do with IRS personnel committing felonies while prosecuting his client. The U.S. Supreme Court ruled that the IRS personnel had indeed committed felonies, but that their crimes could be separated from their prosecutorial work, so the case would not be thrown out. The Supreme Court ruled that Dennis's attorney's client still had to face trial, which he did. He was found innocent, for well more than 100 cases in a row that Dennis's attorney had won. [Return to questions.](#)
112. They tried preventing him from receiving his California license to practice law (they accused him of practicing without a license, which was in the Big Lie category), which he was in the process of obtaining when he took Dennis' case. His license was held up for months because of interference from the Ventura County District Attorney's office. [Return to questions.](#)
113. Not only were the criminal charges dropped, but the prosecution was soon on the defense, as the prosecution's many crimes became the subject of one of the only

[prosecutorial misconduct hearings](#) (if not the only) in Ventura County history. [Return to questions.](#)

114. He strangely [became "ill" soon after the hearings began](#), and the hearings were held up for months due to his "poor health," as he was "too ill" to testify. [Return to questions.](#)
115. An [investigator for the District Attorney's office](#). [Return to questions.](#)
116. The engineer told the investigator that the heat storage technology in fact existed, and some of it was sitting in his barn about fifty yards from where they were having their conversation. I helped store that technology in that barn in 1986, just before Dennis had his company stolen. After having traveled a thousand miles to "investigate" Dennis and his past, the investigator declined to walk those fifty yards to see that technology for himself. [Return to questions.](#)
117. For starters, the [investigator told the researcher](#) that all the delays in the misconduct hearings were certainly draining Dennis' defense funds (Dennis' attorney had to make an eight-hour-round-trip drive, through Los Angeles, to attend court in Ventura County, to only be told that the hearings would still be delayed due to the deputy sheriff's "poor health"), and when those funds ran out, Dennis would probably once more not have a lawyer, and would not be able to defend himself. The investigator made those statements with poorly concealed glee. He also said that the judge would not throw out the case against Dennis no matter how much prosecutorial misconduct there was. Later in their conversations, the researcher asked the investigator if it had ever occurred to him that Dennis might be innocent. The investigator's memorable reply was, ["I could not care less if he is innocent. I am paid to get convictions."](#) The researcher also observed that the prosecution's case seemed to be built on lies and misrepresenting the evidence. The investigator replied, ["Sure we lie. Everybody lies. I will do however much lying I feel is necessary to get that conviction."](#) To this day, that researcher is dismissed from jury duty when he repeats that investigator's words to the judge. [Return to questions.](#)
118. I [watched that motion](#) being argued by the prosecution. The judge seemed to suppress the desire to laugh, but kept his decorum and dismissed their motion with a few words, almost jovially. Dennis's attorney was not so jovial. For him it was the last straw. He was a nationally known attorney, doing nearly all of his work at the federal level, and the backwoods-style gutter maneuvers he had witnessed for the past year (and bore the brunt of some of them himself) were shocking to his lawyer's sensibilities. Some misconduct that the sheriff's deputies engaged in during their investigation were identical to the crimes that he whipped the IRS in the U.S. Supreme Court over. A couple days after that hearing our attorney called Dennis. He said he was [preparing a lawsuit to file in federal court](#) against the Ventura County legal folks. He told Dennis that when he was through with them, they wouldn't be able to get jobs as street sweepers. He ruined the careers of those IRS agents and was eager to rip up the criminals that ran the Ventura County legal system. He produced the lawsuit on his own time and expense and asked Dennis to help publicize the case and get the media to attend a

press conference when he filed the lawsuit in Los Angeles. At [this link](#) is how that turned out, much to our attorney's surprise. He did not know how corrupt California was. It was the beginning of the end of his involvement with us, as he realized he was fighting something far larger than he had ever encountered before. [Return to questions.](#)

119. The investigator was right, in that the continual delays and gutter maneuvers had used up our legal fund. The high profile attorney was the third one Dennis had, and that attorney was planning to also bow out of the case if the misconduct hearing did not succeed in having the case dismissed, as he could not afford to do the trial without money up front. Dennis was fine with that situation, having been abandoned by his first attorney and betrayed by so many, and the high profile attorney was pivotal in turning the tide of the case. Instead of life in prison or some similar "justice," the deputy sheriff was hoping that *his* career was not going to end over Dennis' case. The judge, however, had other ideas. He decided [to force the high profile attorney to defend Dennis](#), even if Dennis and his attorney agreed to part ways. The judge was holding a financial gun against Dennis' attorney's head in order to get Dennis to submit to a plea bargain. With his attorney essentially held hostage by the judge, Dennis figured that his high profile attorney was not going to provide much a defense, a hundred cases-in-a-row won or not, and Dennis had no interest in financially ruining his attorney. The judge also made it clear that if the case went to trial, that he would rule on matters of law, and the fact that Dennis had not filed that one-page form with the California government was a clear-cut violation, and he also stated that he would seek the maximum possible sentence if the case went to trial. The judge played a grim carrot-and-stick game. The attorney went to his knees in front the judge a little too eagerly, which Dennis was not too happy with, and he did another dirty deal. He pled guilty to not filing the one-page form with the California government, but got a deal where the higher courts would rule on the Constitutionality of the law *as it applied to Dennis' case*. Dennis's attorney said he would file the appeals to the higher courts without pay, and told Dennis that to work its way through the legal system, all the way to the U.S. Supreme Court, would take at least seven years. Dennis' case set legal precedents all the way. The higher courts all [reneged on their end of the deal](#). Nobody ruled on the Constitutionality of the case as it applied to Dennis. The one ruling I saw essentially stated, "he pled guilty, end of story." That "appeal" process wound its way *through* the U.S. Supreme court in two years, and Dennis was subsequently railroaded into prison. [Return to questions.](#)
120. Officially, Dennis' crime was ["Failure to register marketing plans. \(A misdemeanor\)"](#) as his prison records stated. A traffic ticket was a more willful violation of the law. Even if Dennis was fully guilty of fraud, it was not the kind of crime where he needed to be in a maximum security prison. When Dennis was released from the Ventura County jail, the judge made Dennis go to the jail everyday for a year and sign in. Dennis was not even allowed to leave the city of Ventura without permission (and the first time in two years that he did leave Ventura, the BPA Hit Man [attacked his efforts](#) while using [new, fraudulent credentials](#)), so he was obviously no threat to break out of prison to escape. He was the classic minimum security prisoner, but somehow his file got all screwed up.

Imagine that. There is a method of ranking prisoners as to their security risk, and the prisoners' backgrounds are evaluated. Significant points in favor of a prisoner's security status would be if they were married, if they had children, if they had gone to college and if they had served in the military. Dennis qualified for all of those things, not to mention the *civil law* nature of his "violation." Well, even after Dennis had an interview and related all those facts during his admission, his file said he was not married, had no children, and was never in college or the military, and those "errors" helped bump his security status from minimum security to medium security. He was bumped into medium security by a whisker. Medium security prisons are where most people do hard time. Medium security is particularly designed for violent criminals, and Dennis' first cellmate was in there for murder, and the murder he was convicted of was only one of many that he committed. Dennis was nearly murdered himself while in medium security, and the guards put him in the position to be murdered. He got "lucky," and "only" had some fingers broken and teeth knocked out. It is hard to know how "conspiratorial" those events were as far as his prison experience went, but I have a difficult time chalking it up to a series of amazing coincidences. His treatment was so outrageous that the official in charge of the California prison reform effort [came a vast distance to Dennis's prison and interviewed him](#). Dennis was then quickly moved to minimum security, where he served out his remaining sentence. [Return to questions](#).

121. They were trying to get Dennis sent back to Ventura County for his parole, where they undoubtedly would have cooked up some kind of parole "violation," where he would have soon enjoyed the deputy sheriff's hospitality once more (which was also why Dennis refused probation, his faith in the Ventura Country legal system being non-existent). But when he did his plea bargain, he was free to move away, which he eventually did, as he was unable to resurrect the business in Ventura County (which also bankrupted my accounting professor, as he funded the effort). Dennis moved back to New Jersey where his alternative energy efforts began, where he lives to this day, still trying to make free energy happen. Because they lived there when Dennis went to prison, and his wife and children stayed there, his wife pierced the bureaucracy and Dennis was able to serve his parole in New Jersey, away from the corruption in California. The West Coast of the United States seems far more corrupt than the East Coast, at least from what Dennis experienced, and his high profile attorney [got a taste of that reality too](#), as have others ([1](#), [2](#), [3](#)). [Return to questions](#).
122. Zero; zero; zero; zero; zero; \$20; zero; zero; zero. [Return to questions](#).
123. He was [put back onto parole](#), in a move of highly dubious legality. He did not get off parole until 1997, nearly ten years after he was first arrested for failing to file a form. [Return to questions](#).
124. The [real life crooks had stolen millions of dollars](#) from duped customers, and the Southern Californian and federal authorities received mountains of complaints and requests to prosecute. Every governmental body with jurisdiction in the case refused to prosecute. That story was documented in *PC World* in the early 1990s. [Return to questions](#).

125. They all received big promotions. The [sheriff's deputies'](#) promotions were explicitly related to Dennis's case. The judge retired almost immediately after Dennis made his plea bargain, and was [subsequently promoted to a higher court](#). The prosecutor became a judge. I doubt those judgeship promotions were coincidental. When the District Attorney [came into courtroom to watch Dennis make his plea bargain](#), it was the first time that the bailiff had ever seen him in a courtroom, and the bailiff had worked there for eight years. The DA came to the courtroom three times that day. [Return to questions](#).

For those who answered more than one hundred of the above questions accurately, I will agree that they know Dennis' past quite well. They would almost certainly also know that he is not a criminal pulling off the history's biggest free energy scam. Across the Internet and elsewhere have appeared the most indefensible libels and slanders about Dennis. Wildly irresponsible numbers and allegations have been thrown around. Again, it is highly ironic that Dennis' critics to accuse him of being a crook, and lie and misrepresent his past in order to do it (even if it is carelessly repeating the lies and misrepresentations of others). For those who want to criticize what Dennis is doing today, they can have at it. I have not talked to Dennis for several years, and am not sure what he is up to today, but I doubt that anybody will ever convince me that he has criminal intent. For those who want to keep writing about Dennis' "criminal past," and how he got rich off all those "suckers" (Mr. Skeptic's favorite label these days) from the trailer parks, "patriot" groups and churches, they should first try their hand at this quiz. If they wish to credibly challenge this material, they should adduce some impressive facts, along with astute interpretations of them. Recycling libelous newspaper clippings, calling Dennis an "idiot," and the many other dishonest/careless/weak-minded tactics that I have seen since 1986 will fail to convince honest and intelligent readers.

[4] This will be an inordinately long footnote, nearly a section in itself. Sagan was something of an enigma. On one hand, he was the most famous living scientist, until he died a few years ago. On the other hand, there is the question of why he was so famous. He was an astronomer/professor who dealt with a wide range of disciplines beyond his formal training, but his contributions to science did not really befit his popular stature. On one hand, Sagan was a sober voice of reason in science, even of

conscience, especially when dealing with environmental or military issues. He could be quite sensitive when writing about dolphins or religious fanatics. Yet he also could be dogmatic, arrogant, pompous, and - which is the issue that concerns this section the most - dishonest. Sagan wrote in the realm of science, although some of his colleagues say that at times he did not hold up his end on collaborative efforts, being too busy with his more famous activities. Where he kept to astronomy and other aspects of his professional discipline, he never did anything Nobel-worthy. His claim to fame was being a popularizer. His book *Cosmos* spawned a TV series, and that is what made him a household word. There is nothing wrong with that. Einstein is history's most famous scientist, justifiably so, and he spent much of his time trying to make his ideas understandable to the lay audience.

Hugh Martin analyzed Sagan's use of language in *Cosmos*, and his analysis was not flattering (see "Sagan's Pseudo-Sagacity: Style as a Reflection of Character (or Lack Thereof)" in *The Velikovskian*, vol. III, No. 4.). To millions of Americans, Sagan was the voice of science. He regularly wrote articles for *Parade Magazine*, a Sunday newspaper supplement with an audience of eighty million Americans. There is a burden of responsibility in being the voice of science for millions of people. Martin analyzed Sagan's use of language in addressing his lay audience in *Cosmos*, and laid bare Sagan's lofty prose for what it was: pompous. Using words not typically encountered by the audience they are writing for is a problem that popularizers must face, and how they face it is an important test of their craft's execution. In *Cosmos*, Sagan used the words: hubristic, doxological, eschatology, circumjacent, occulted, dryad, maenad and vouchsafed. Hubristic (not "hubris" which is fairly common, but "hubristic") is a word people will never see, except in the dictionary...and Carl Sagan's writing. The use of such five-dollar words is questionable in addressing the *Cosmos* audience, but that was the least of Sagan's crimes against the English language. In *Cosmos*, Sagan also used: irreparable, interstices, transmogrified, immolate, provocation, distillation, plenum, concatenation, palpable, fecundated and integuments. The problem with Sagan's use of those words was that he used them *improperly*. To introduce another big word, Sagan was writing malapropisms. Instead of making things clearer for his readers, he confused them. That is a mistake that a thirteen-year-old boy can make, having a blast with his first thesaurus, but for Sagan to use such highfalutin words, and use them incorrectly, is less than helpful. Sagan would also write meaningless yet impressive-sounding sentences such as "The Cosmos is rich in the subtle machinery of awe."

If people are going to use big, esoteric words to a lay audience, what is their purpose? It should be to relate big, esoteric *ideas* in a way that the audience can understand, so they walk away better educated. That is the popularizer's ideal, to educate the uninitiated. When people use those big words to a lay audience, an audience that trusts them and they cannot even use those words properly, it is not educating them, but the opposite. Sagan would throw also out nuggets to his readers about how evolution and space cameras work in *Cosmos*, but he would be wrong. Sagan was committing popularizer charlatanry. As far as his image versus reality with his book *Cosmos*, Sagan was a fake. What Sagan was doing, and his readers may have lapped it up, was making his writing seem sophisticated and full of meaning. Everybody felt dazzled with his mind and the ideas he discussed, feeling good that they could even pronounce the words that Sagan was using, realizing that actually understanding what he was writing was less important than being impressed with his command of the language. With Sagan, it sometimes seemed that the bigger the word, the smaller the idea. Martin ended his critique with "Good English is honest English. Dr. Sagan's language is dishonest. A lot of people buy his books because they think they're buying difficult but profound thoughts simplified by a remarkable mind. Dr. Sagan is ripping these people off."

Sagan was not only the world's most famous scientist, he was also the world's most visible "skeptic." Sagan wrote numerous books and articles to debunk "fringe science" and the paranormal. *The Demon-Haunted World* was Sagan's last debunker book. I pick the book up from time to time, then put it down in my anger and dismay. Not all of Sagan's observations are off the mark. Some of what he has to say about the scientific establishment and other issues are worthy. One big problem is when he has no idea of what he is writing about and tries to appear an expert. One of the standard words in the debunker's lexicon is "pseudoscience." Sagan uses it dozens of times in *The Demon-Haunted World*. What does "pseudoscience" mean? Literally, it means "false science." It means something that is not science, parading around as science. What *is* science? There is a wide range of philosophical literature on that subject. The philosophy of science has a long history. Henry Bauer says the scientific method is a myth, an ideal seldom achieved. Thomas Kuhn says that scientific revolutions are the result of questioning the founding presumptions of a scientific discipline, and the new "paradigm" that science adopts may not be any more "correct" than the old paradigm, and what makes one prevail over another is the allegiance of the scientists, not really how right or wrong it is, if that can even be determined.

How does Sagan define and use "pseudoscience"? On page 13 of *The Demon-Haunted World*, Sagan gives examples of pseudoscience and why he calls them that. Sagan gives examples of paranormal events, such as if "dead people could take control of your hands and write us messages...or if our dreams could...accurately foretell the future. These are all instances of pseudoscience. They purport to use the methods and findings of science, while in fact they are faithless to its nature - often because they are based on insufficient evidence or because they ignore clues that point the other way." This site discusses metaphysics/mysticism and gives examples of the wide range of paranormal phenomena that I have [experienced and produced](#). If, as Carl said, "dead people could take control of your hands and write us messages," that is a form of what is known as automatic writing. It is only one variation in a wide spectrum of phenomena known loosely as channeling. Channeling, in one form or another, is as old as history. People have been speaking for the dead, or having the dead speak or write through them, for thousands of years, or so they say. For the skeptics' benefit, I will grant that the phenomenon has not been "proven" the way they want, which holds for every paranormal phenomenon that they have ever looked into. That is partly due to standards of evidence that rest on presumptions that defeat the very purpose of the "investigation." Yet, if I think my dead Aunt Betty is writing me a message through my own hand, how am I pretending that I am practicing science? I am not. How can it be pseudoscience when it does not even pretend to *be* science? At that point, Sagan is making the dishonest or ignorant assumption that *science* is the arbiter of reality, or at least what Sagan calls science and what Sagan calls reality. It is at that point that Sagan dons his priest's robes, becoming the authority of REALITY. The *assumption* that Sagan is making, and hoping his readers fall for his ruse, is that if something is *real*, it can be validated by science, and if science cannot validate it, it is not real. The greatest physicists [did not believe that line of reasoning](#), but a much lesser light did, one who was the very pope of his materialistic faith. Sagan laid down a slippery slope of false logic, hoping his readers went along for the ride he prepared for them, where he denigrates and dismisses anything that materialistic science cannot explain. If science cannot explain it, or does not even have the tools to explore it, Sagan calls it pseudoscience. If my dreams show me future events, and I think they are valid, how am I pretending to practice science? I am not. If I think it is real and valid, am I practicing pseudoscience? According to Sagan I am. Since the practice of Western science is only a few centuries old, when the oracle of Delphi was in action thousands of years ago, how was that "pseudoscience," when science did not yet exist? Sagan pretended that science was something it is

not. If I do not accept Carl's presumptions, I will not go skipping merrily down the path he has tried laying for his readers. This can seem like quibbling, but Sagan's materialistic writings and "investigations" have often done the opposite of bringing light into this world.

One of most egregious instances of Sagan's dishonesty was his treatment of the Face on Mars issue. On June 2, 1985, Sagan authored an article in *Parade Magazine*, a newspaper supplement in millions of Sunday newspapers across America. It was a name-calling article that had me thinking that maybe there was nothing to the Face at all. For the informed, however, Sagan's article was an amazing piece of disinformation. Sagan knew exactly what he was doing. He was not misinformed. He knowingly lied about significant aspects of the Face on Mars controversy, and one lie qualified as a Big Lie.

Sagan was writing for the lay audience in *Parade*, addressing a readership in the tens of millions. A great burden of responsibility attends writing for the lay audience, as the "expert's" science had better be as accurate as possible, because millions of people will read and heed their words, and are generally cannot tell if they are being deceived. Sagan did the opposite, taking advantage of his position to dispense scientific *disinformation*, not information. Sagan was aware of the independent image analysis being performed by various specialists, and the intriguing results being produced. His *Parade Magazine* article was artful, where he denigrated the qualifications of the image analysis researchers without naming them, calling them "amateur astronomers, flying saucer zealots, and writers of aerospace magazines." His name-calling was one of five propaganda devices Stanley McDaniel analyzed on pages 148-158 of *The McDaniel Report*, and here is the Big Lie. The process of taking photographs from a probe millions of miles from earth, transmitting them, receiving them, and processing them is not perfect. One imperfection can be missing pixels from the images obtained. One term for them is "transmission error dots." The raw images that came back from Mars had transmission error dots in them. It was a typical artifact of processing space probe data in the 1970s. Image analysis and processing is a sophisticated field. A number of the independent researchers who analyzed the Mars images were image analysis professionals, and during the years of following The Face on Mars controversy, I have become familiar with the rudiments of image analysis. There are many processes that can be used on images to refine them, and the professionals who worked on The Face images used everything in their bag of tricks. About the first thing the professionals did to the images was "remove" the transmission error dots. It was one of the process' most elementary steps. They used a program that interpolated values from neighboring pixels to arrive at a value to replace the missing data. Every processed image had the transmission error dots removed as a matter of course. Sagan studied the processed photographs that the Face researchers had produced long before he wrote the *Parade Magazine* article. Accompanying the *Parade Magazine* article was a photograph of The Face, but it was oddly processed, adding false color and obscuring its features. Strangely, the transmission error dots were left in. Such processing made little sense until reading the article and seeing the propaganda point Sagan made with the image. Of the many transmission error dots in the Face image, one fell where one might fancy a nostril. Every researcher knew it was a transmission error dot and not a nostril, something Sagan knew quite well. It was beneath mention to anybody familiar with the issue. A five-year-old boy could have figured out that the transmission error dot was not evidence of a "nostril." Everybody associated with issue knew it. Sagan was writing for the lay audience in *Parade*, however, and his performance would have made Goebbels proud. Sagan stated, "If we look more carefully at the image, we see that a strategically placed 'nostril' is in fact a bit of lost data in the radio transmission from Mars to Earth." The obvious implication was that the "flying-saucer zealot" investigators were being fooled by the transmission error dot, influencing their belief that

The Face was artificial. Sagan made the researchers look like idiots to millions of American readers by telling a lie so cheap, so big, that there is no conceivable excuse for his behavior. Sagan knew exactly what he was doing. When I understood what he had done, my respect for his debunking work fell to about zero. Such behavior is blatantly dishonest. Sagan could also be quite arrogant in private. During the pre-*Parade* days of the Face on Mars controversy, Sagan received a lengthy report draft on the Face image with the reply, "It is not whether you're right or wrong sir. You have not even entered the discussion." (see *The McDaniel Report*, p. 157, n. 4) In *The Demon-Haunted World*, Sagan reproduces his *Parade* article nearly verbatim, and even repeats his "nostril" canard. Stanley McDaniel and crowd have been gracious regarding Sagan's disinformation efforts, and lauded his admission in *The Demon-Haunted World*, that the Face bore closer scrutiny. For his admission to be buried amidst his regurgitation of his *Parade* article, Sagan's acknowledgement was faint praise indeed. Sagan even wrote, "There was an unfortunate dismissal of the feature by a project official as a trick of light and shadow, which prompted a later accusation that NASA was covering up the discovery of the Millennium." (see *The Demon-Haunted World*, p. 53). The most famous dismissal by a project official was Carl Sagan's *Parade* article! Did he keep a straight face while writing that? [Brian O'Leary](#), who was, with Sagan, the world's leading Mars expert for many years, was incensed with Sagan's *Parade* article, although Brian's big heart apologized for his anger toward Sagan, posthumously (see McDaniel and Paxson, eds., *The Case for the Face*, pp. 42-43.).

In my opinion, the artificiality of the Face on Mars has not been settled. Numerous web sites today deal with the issue, Richard Hoagland's *The Enterprise Mission* most prominent among them. NASA was guilty of eliminating about 90% of the data from the recent flyby image by removing 75% of the pixels and truncating the data's gray scale values, things they did not tell the public when the photos were released, and only partly admitted to when Hoagland and others publicly took them to task for it. There is good reason not to trust NASA's motivation [on those issues](#). If NASA had processed a photograph of my face the way that they did that first Face image, my mother may not have recognized her son. The second image, the full one obtained in 2001, rules out artificiality for many, but there are still striking geometric features, such as its "headdress." Although I do not lose any sleep over it, I await better data that might come along one day.

Sagan performed similarly in "debunking" other areas of the offbeat and paranormal. His performance on the Sirius-Dogon mystery was an instance of him shouting from his bully pulpit in the public eye, never allowing the other side to air their responses, and even continuing to write as if there was no credible opposition to his views. See Jerome Clark's *Unexplained!*, pp. 346-348 for a short summary of the performance of Sagan and his "skeptical" colleagues on that issue.

Another area of Sagan's debunking was his 1974 performance at the American Association for the Advancement of Science (AAAS) symposium on the theories of Emmanuel Velikovsky. Sagan presented a paper that discussed his "ten problems" with Velikovsky's theories. I stumbled into that controversy several years ago and have read about 10,000 pages of material regarding Velikovsky's theories and the scientific establishment's attacks on him. I delved much further into the Velikovsky issue than I originally intended, partly because the legitimacy of his theories is contested, although on science's fringes. His theories represent an ambitious synthesis of several areas of study, including mythology, geology, psychology, physics and astronomy. His theories cover such a broad range of topics that it would take many years of study for one person to properly assess. I do not believe Velikovsky's reconstructions of several planetary near-collisions in historical times, but I have not been

quick to dispose of his theories into the "crackpot" bin, and I doubt there should be such a bin. The body of theory Velikovsky promoted is known as "catastrophic" theory. There is still heated debate regarding the legitimacy of Velikovsky's theories. I have taken up the study of the topic as a hobby, but it will take years of study to properly assess his theories as a whole, and I probably will never succeed in making a learned and complete assessment of his theories. However wrong Velikovsky may have been, how "uncredentialed" he was in many areas of speculation, he was treated mercilessly by the scientific establishment ever since his *Worlds in Collision* was published in 1950. Ironically, one of the few scientists who gave Velikovsky his ear was Albert Einstein, an academic colleague in Berlin in the 1920s, and a fellow Jew and Princeton resident in his last years. When Velikovsky's prediction that Jupiter would be found to emit radio waves was unexpectedly confirmed in 1955, Einstein was impressed, offered to help Velikovsky get other scientific testing done on his theories, and when he died soon thereafter, the one book open on his desk was *Worlds in Collision*. When space exploration data from NASA and the Soviet Union confirmed more of Velikovsky's predictions, interest was renewed in his theories, leading to the AAAS Symposium in 1974. In reality, the symposium was designed to publicly put the nails in Velikovsky's theoretical coffin. Sagan led what astronomer Tom Van Flandern called a "sneak attack." Their papers were given in a rigged forum, where Velikovsky was not given a chance to review their papers before they were presented, in order to properly respond to them. Sagan's presentation was the centerpiece of the symposium, and his paper was delivered with some of the smug demeanor that he was noted for. One of his one-liners made fun of Velikovsky's theories about what might have been deposited from Venus' atmosphere on earth in a planetary near miss. After Sagan delivered his paper, he never allowed himself to debate Velikovsky in a fair forum, and his bully pulpit job at the AAAS Symposium permanently killed any interest in Velikovsky's theories by the scientific community. The debate of his theories today takes place on the scientific world's fringes. Velikovsky was not the first catastrophist, nor was he the last. Curiously, [catastrophic theories](#) are more acceptable today than in Velikovsky's day, being presented by credentialed scientists, the most accepted put forth by Bill Napier and Victor Clube. Recently there were two movies about asteroids/comets crashing into earth, as catastrophic theory has entered the popular imagination. Velikovsky's name probably should not be uttered in the same breath as Einstein's, but he did not deserve the attacks he received from the scientific establishment. The astronomer Harlow Shapley, who led the attack on Velikovsky in 1950, wrote a threatening letter (he waged a boycott) to Velikovsky's publisher, calling Velikovsky's work the "Black Arts." However accurate Sagan's critique of Velikovsky may have been, the way he delivered it, letting his reputation outweigh his arguments (obvious by his never dealing publicly with the issue again; his paper was supposed to be a deathblow to Velikovskian theory) was the kind of unfair treatment that Sagan would later display regarding the Face on Mars issue.

There is much more to say about Sagan's career as a defender of the scientific establishment and a debunker, but not here.

[5] Randi has put up a "reward" for many years for "proof" of the paranormal. It used to be a \$10,000 reward. Apparently, debunking can be a lucrative career, and Randi has raised the reward to \$1 million (apparently also with donations from supporters of his cause). Mr. Skeptic has worked with Randi, and apparently got Randi to extend his reward to Free Energy. I asked Dennis about it, and he said Randi's reward was written so that Dennis could never collect it. Randi apparently wrote his "offer" with the skill of the cleverest lawyer, giving himself an "out." I would never stoop to going after Randi's money, and I doubt Dennis would have. His "The money was never safer" (*Flim-Flam*, p. 252)

boast/joke clearly displays his mentality. Randi's "offer" is not made in the spirit of impartial investigation, but more as an arrogant boast that he is right, and dares the world to prove to him otherwise. I thought about Dennis' comment on Randi's offer, and wondered if Randi was hedging his bet a little. I studied Randi's work over the years and he seemed honest, if perhaps narrow-minded. Recently I read something that made me wonder about Randi's integrity. In Dennis Rawlins' account of a CSICOP scandal (they fudged their numbers, and it would be the last time CSICOP did any original research), he wrote unflattering things about Randi. Rawlins was and is a firm "skeptic" of paranormal phenomena, but he also professed to believe in doing honest research into the subject. Rawlins' experience gave plenty of evidence for the political nature of CSICOP and its mission. Honest skeptics doing what they think is honest investigation is laudable, if limited by the investigator's beliefs. Those who appear to be less than saints run CSICOP, as with virtually every other organization. Mr. Skeptic's indefensible [libel piece](#) on Dennis is one example of many. The Rawlins scandal evidenced the ugly power politics that plagues nearly every organization. Phil Klass wrote a rebuttal to Rawlins' account of the scandal. Rawlins too-cleverly titled his essay "sTARBABY." Rawlins should not be taken at his word about the scandal. Klass' rebuttal at least seemed to stick to the facts, but in Klass' [inimitable style](#), he could not refrain from making many observations on Rawlins' character and integrity (none of them flattering), but the title Klass chose for his rebuttal was the typical class CSICOP is known for. Klass titled his article "Crybaby." Rawlins had intimate interaction with James Randi while the scandal began unfolding. Randi was apparently involved in doing damage control on Rawlins. According to Rawlins, Randi was part of an effort to keep Rawlins quiet and in line with the debunking program. Rawlins wrote that Randi spent considerable time with Rawlins, and threatened him to keep him silent. The scandal was brewing in 1978, and Randi apparently did his part in trying to keep the scandal from becoming public. According to Rawlins, Phil Klass was also one of those trying to keep the scandal quiet. Rawlins' account confirmed my experiences with the CSICOP crowd, but one thing surprised me. Back when Rawlins was with CSICOP, Randi's "challenge" was only \$10,000. During Randi's long, soulful talks with Rawlins, Rawlins says Randi admitted that he planned on never paying out the \$10,000 reward because, "I always have an out." See Rawlins, sTARBABY, *The Velikovskian*, vol. II, no. 1, p. 39. Rawlins further states that Randi plays policeman, judge and jury for his "challenge" tests, and "thus has never supported my idea of neutral judgment of CSICOP tests." Rawlins said that Randi's motivation, as revealed in a confidential memo Randi wrote, was keeping the issue quiet so the "irrationalists" would have nothing to crow about, because CSICOP could "not afford to wash its dirty linen in public." If what Rawlins wrote was true, and I have little doubt it is not, and I heard Dennis say almost the same thing, then Randi may have to join company with Carl Sagan. Randi seemed a true believer in his cause, but having an "out" on his challenge shows that he may not be quite the true disbeliever he presents himself as. Randi may be one more debunker of questionable integrity, but one with the gall to put up a \$1 million challenge he may plan on never paying, because he gives himself an "out." [Richard Milton](#) analyzed Randi's million-dollar challenge on his web site, and presented an instance where somebody submitted their entry to Randi. He not only failed to accept the challenge, but Randi virtually ran away with his tail between his legs while insulting the challenger, using *a priori* reasoning that more than suggests dishonesty in Randi's stance. In an interview with Mr. Skeptic, Randi said the a debunker should never make up his/her mind about the phenomenon being investigated until the evidence is examined. It would be nice if Randi would take his own advice.

The debunking/investigating that may do some good for the world is telling the real story about [fluoride](#), telling the real story about the [cancer racket](#), exposing our [murderous political system](#) for what it is,

showing how legitimate our [energy industry](#) is. That kind of "debunking" could save millions of lives, [make this world a vastly better place](#) and perhaps help save our species from self-annihilation. Of course, that kind of debunking takes on the powerful and can lead to [misery](#) and [an early death](#). Debunking psychics does not.

Trying to show the world that Uri Geller is a charlatan is pedestrian debunking. Where the Randis of the world have fallen into their holes is not in believing that Geller is a fraud. If he is, sure, expose him. I know people who do not think Geller is a fraud (with credible stories to tell), but may be a trickster, always keeping somebody like Randi guessing. That is not the hole Randi fell into. The hole he fell into was not believing that Geller had no paranormal ability, but believing that *Randi himself* has no paranormal ability. Because Randi, Sagan, etc. believe that they are merely bags of chemicals, although complicated ones, they project that belief onto everything that they see, practicing materialistic fundamentalism. If Randi was able to open his mind just a little, he could readily produce paranormal phenomena for himself, and not just for the sake of the phenomena. Once people witness or produce [irrefutable paranormal phenomena](#) for themselves, it often leads to the idea that maybe they are not just a bag of chemicals, and that leads to a certain comfort that all the materialistic "science" can never take away, and can open up new realms to explore, such as the realm of the soul. Reality is not out *there*, it is in *here*.

Having paranormal ability and what it entails has nothing whatsoever to do with superstition, although Randi thinks so. Superstition, as with materialism, is putting the power outside of one's self. Walking the light path is putting the power into *ourselves*, and granting others their own inner light. The Randis and Sagans of the world are trying to banish that inner light, although they seem to think that sterile reason is all the inner light anybody needs. Fundamental materialism is a dreary philosophy, but it somehow exhilarates the world's Sagans and Randis, although it seems to have been part of making them such reportedly unpleasant men.

[6] Mr. Skeptic first published a web site about Dennis in September 1996, the day after Dennis' Philadelphia show, and I began communicating with him in November 1996. By early 1997, Mr. Skeptic stated that he had spent hundreds of hours "investigating" Dennis. Mr. Skeptic often could not get his basic facts straight about Dennis, but one thing became clear early in our brief Internet relationship and during a three-hour conversation with him in early 1997: Mr. Skeptic was becoming increasingly desperate to demonstrate that Dennis' efforts were inspired by criminal motivation, and the word "fraud" constantly spilled from his mouth and keyboard. In the legal world, fraud is a criminal matter, because it makes a determination regarding the accused's state of mind. If somebody has been convicted of or pled guilty to fraud, the legal finding is that their *intent* was to deceive their victims. Dennis has *never* pled guilty to intentionally deceiving anybody, and has *never* been convicted of that crime. Because of the *intent* aspect of fraud, it has always been defined and prosecuted under criminal law. Civil law, on the other hand, does not deal with criminal intent. In both Washington and California, Dennis was prosecuted and "convicted" under civil law.

In Washington in 1985-1986, there were *never* any criminal charges brought against Dennis or his company, so fraud charges were never filed. Not only was Dennis *not* prosecuted for fraud in Washington, the Deputy Attorney General leading the prosecution officially stated that Dennis' [state of mind was not on trial](#).

In California, the prosecution was waged using *civil* law. When they originally arrested Dennis with a [million-dollar bail](#) and [handed out promotions all around](#), they piled on some fraud charges (so they could try for life-in-prison, as life in prison for a civil law “violation” would be a bit of a stretch, even for them). When I [mortgaged my life](#) to give Dennis a prayer in those [rigged proceedings](#), it led to Dennis’ release on his own recognizance within six weeks of my quixotic gesture. Once Dennis was free and able to defend himself, the prosecution quickly dropped *all* of the criminal charges. In open court the prosecution admitted that they were [not prosecuting Dennis for criminal intent](#), which the [judge also made clear](#). That is why Dennis calls himself the “accidental felon,” because the prosecution and court admitted that they never demonstrated criminal intent, and Dennis’ prison records even said his “crime” was [failing to register](#) his marketing plan under *civil* law, which was classified as a *misdemeanor*. In kangaroo court, failing to file a form and pay \$50 becomes a felony, even though the [lawyer who wrote the law](#) estimated that up to 100,000 Californians had committed the same “crime,” and Dennis is the only person who will ever spend time behind bars for that “crime.”

In addition, the settlement in Washington and plea bargain in California were only accomplished by the prosecution and judge taking people hostage and forcing Dennis to capitulate. In Washington, the prosecution took Dennis’ customers hostage, and Dennis only settled because his customers voted for him to settle. Dennis calls it the [dirtiest deal he ever did](#). In California, the judge took Dennis’ [attorney hostage](#).

The official records are clear: Dennis was *not* prosecuted for fraud in Washington; he did *not* plead guilty to fraud, and was not convicted of it, in California. Dennis has published those facts in his books, usually by presenting or quoting the official documentation (court transcripts, prison records, official correspondence from the prosecutors, etc.). Mr. Skeptic had all of that information in his hands by late 1996. For several years (and it may still be true) Mr. Skeptic maintained an essay on his site from my original 1996-1997 website that presented the evidence of what happened to Dennis in Washington and Ventura, which cited the many official documents presented in Dennis’ books. I stopped interacting with Mr. Skeptic in April 1997, when I left Dennis’ company.

The official documentation regarding the prosecutions of Dennis has always been readily available; the officials in Washington and California have always been happy to present their documentary evidence to anybody who asked, even express-mailing it.

None of the official documentation that Mr. Skeptic ever saw demonstrated criminal intent on Dennis’ part. As Mr. Skeptic interacted with people who knew the *facts* of Dennis’ journey, because we had been there, we always easily invalidated his *theories* about Dennis’ criminality, which he tacitly admitted by abandoning his new line of “evidence” that Dennis was a criminal, and doggedly searched for others. It took some digging for Mr. Skeptic to find the articles he quoted at the end of his [Skeptical Inquirer article](#). If Mr. Skeptic even cited those 1992-1993 articles accurately, they are about the only articles I am aware of that actually *lied* about the legal actions against Dennis, insofar as stating that he was prosecuted for fraud in Washington and pled guilty to fraud in California.

Mr. Skeptic’s article should be put into its proper context. His article was not an off-the-cuff post in an

Internet forum, an ill-advised email or part of his many writings on his website. The *Skeptical Inquirer* article was Mr. Skeptic's initial fifteen minutes of fame. The aspiring debunker finally made the big time, having an article published in the house organ of the "skeptical" movement. His use of those libelous articles was a careful and conscious act, because those were about the only existing documents that he might credibly cite that "proved" that Dennis had criminal intent. Mr. Skeptic had to present a veneer of academic respectability, particularly in a magazine that claims to speak for rational people. When it came time to go on the record, did Mr. Skeptic cite *any* official documents? He did not even cite the many libelous articles that were written in California and Washington, but found something from a Utah newspaper that provided the "facts" he needed to make his case.

Libel is not only intentionally defaming somebody, but it is also having a reckless disregard for the truth while attacking somebody in print. If Mr. Skeptic did not commit libel with his *Skeptical Inquirer* article, then nobody has ever committed that crime.

For a moment, let us continue to give Mr. Skeptic the benefit of the doubt. His reporting that Dennis was prosecuted for fraud in Washington and pled guilty to fraud in California was obviously a false rendering of the events. Mr. Skeptic was repeatedly informed that he had committed libel, a libel that was easily proved. If Mr. Skeptic possessed a shred of integrity, he was given ample opportunity to display it. He could have mitigated his crime by contacting the *Skeptical Inquirer* and having the libel retracted. To my knowledge, Mr. Skeptic has never even acknowledged his libel, calling his article "funny" on his debunking site. Far from uttering any *mea culpas*, Mr. Skeptic has only stepped up his rhetoric since 1997, constantly harping on Dennis' "criminal" past. Mr. Skeptic attacked Dennis on a [site](#) devoted to exploring the "enigma" of Dennis Lee in early 2006, and began by noting that Dennis "pled guilty to multiple felony counts" in California, which is technically true but misleading. If Mr. Skeptic can deceive his readers into thinking that Dennis pled guilty to criminal intent, his disinformational task becomes easier.

Mr. Skeptic is dishonest, and all of his writings about Dennis should be read, if they are worth reading at all, with that in mind.

[7] See Dennis Lee's *The Alternative*, p. 63.

[8] See Dennis Lee's *My Quest*, p. 6.

[9] The literature is vast in this area. There are three epic books written or edited by Churchill and Vander Wall: *The COINTELPRO papers*, *Cages of Steel*, and *Agents of Repression*. Also, see the periodical *Covert Action Quarterly*, and Parenti, *Dirty Truths*. The crushing of dissent and positive action in this country is merely the domestic version of what the United States has been doing to countries around the world for many years. For the international versions of that phenomenon, see Chomsky, *Deterring Democracy*; Chomsky and Herman, *The Washington Connection and Third World Fascism*, and Blum, *Killing Hope*. For the latest target of the FBI and our police state – environmentalists – see Helvag, *The War against the Greens*.

The Handiwork of the BPA Hit Man

By Wade Frazier

Dear Reader: This is a slightly edited diary excerpt from the early 1990s. When I wrote the following pages, it was so emotionally draining that I stopped writing in my diary for six months. I do not want to rewrite my work and go through the harrowing experience of rewriting. The style is somewhat different from my writings today, and you have my apologies, but people are often curious about how Dennis' employee died. This narrative best relates to [this piece](#) of this site. Here it is.

I have been asked more than once how Mr. Hit Man (I am writing about the Bonneville Power Administration (BPA) hit man here) caused the death of one of Dennis' employees. I will tell you about Mr. Hit Man, who was little more than a bit player in this tale, and show you how much could be written about all of it.

First off, his name is Bill. Although I have never met him, he is about six foot seven and weighs about three hundred pounds. I hear he is unforgettable to meet if only because of his great size. Apparently Bill gained fame and credentials by waging a "battle" with an electric company over the right to produce hydroelectric electricity on his land. He won and used it to give him credibility as a proponent of "alternative energy", and Bill told Dennis that through it he got to know people in the industry and found that working with them instead of against them was the way to go.

Was Bill's original "battle" with an electric company staged? Or did he sell himself as a prostitute to the electric companies after his first encounter with them? I don't know, but there is no doubt that his masters were and are the electric companies. Bill admitted that he worked as a "consultant" for the electric companies, and Dennis says he can prove that Bill was getting paid by the BPA all during his several month vendetta against Dennis' company.

During the middle of the electric companies' fervent, if anonymous, campaign against Dennis' company in Seattle, along came a man who gave his credentials and asked Dennis to hire him to smooth things with the electric companies. Dennis had been around the block quite a few times by that time, and immediately suspected Bill for who he was, and Dennis' wife was also

afraid to have Bill around. Dennis [hired him](#) and told his wife, "Then let's not trust him. But I'd rather have my enemy up close where I can watch him."

Bill worked for Dennis about ten weeks. He didn't do *anything* productive for the company during his tenure. But what he *did* do was try to befriend the company's key people, to place doubts in their heads about whether Dennis was really the man for the job. Never mind that Dennis was the owner of a multimillion-dollar company that he built from a twenty-dollar bill eight months before. During those ten weeks came repeated attacks from the media and the Attorney General's (AG's) office, working hand in hand. During one particularly vicious, backstabbing attack by the AG, orchestrated during a business trip when Dennis was out of town, Bill started working in earnest to incite a mutiny from the inside, just as those on the outside were trying to breach the hull.

Dennis came back from his trip to a company in pandemonium. He ran a full-page ad in *The Seattle Times*, submitted just before the weekend when it fortuitously ran under the weekend editor's scrutiny (and thus ran without being killed by the big wigs) that enumerated the crimes being perpetrated by the electric companies and the AG. It created quite a splash and it backed up the AG several steps, people like him being taken aback when their victims fight back.

Dennis then called Bill in and sent him home for two weeks, with pay, to calm things down at the office. Bill denied he was trying to incite mutiny. He was sent home, understanding that he would be fired if he talked to any other employees during his stay at home. Legitimately fulfilling the job duties that he had actually solicited to Dennis' company did not require contact with any other employees.

Bill knew he had been found out and kicked his campaign into high gear. His job was to destroy the company, and he went to work in earnest. The next day he contacted everybody he could who was related to the company. "Let's just get rid of Dennis and I'll be happy to run the company, with the electric companies' blessings of course." It was amazing, or maybe not, how many people bought those lies.

Two days after Bill was sent home he flew to the finance company that had financed Dennis' company to the tune of millions of dollars. He used all his powers of persuasion to try convincing the financier to pull the rug on Dennis. It shook up the financier. Not everybody was completely fooled, and Dennis was still running a viable company. Mutiny would come later, when the ship was sailing quite low in the water with gaping holes in its sides.

But Bill kept working on anybody and everybody he could, and eventually scraped together about a half-dozen misfits from Dennis' hundreds of employees, including one who appeared to be another electric company plant.

Then Dennis' place of business started being broken into every night. In a six-week period the factory and offices were broken into about thirty (30, not a typo) times. The police eventually became tired of responding to the alarms. Dennis' people found one door that was easy to jimmy, and ordered a special lock that took over a month to get. Other doors were left open by anonymous employees, allowing easy access for the burglars.

Documents would be missing from all the departments, critical phone equipment was stolen in one of the night raids, leaving the company without phones for two days. During that time Dennis hired a security service to also see to the building's security.

Then one morning at about six a.m. the security guard caught them in the act. All the company filing cabinets had been dragged to the loading dock to be loaded into a pickup truck, a truck that looked just like the one Bill drove. What a coincidence. They tore out of there, peeling tracks in the snow. That was a little too close for comfort. That would have likely been the end of the company. Dennis hired armed guards and offered a \$1,000 reward for catching a burglar in the act - dead or alive. That stopped the break-ins. The company chained one door (only during the night, after hours) that kept getting broken into, then the fire department showed up the next day, responding to an anonymous tip, and pressed criminal charges against Dennis for chaining the door (eventually thrown out of court).

Units on the assembly line were being sabotaged. Suppliers would get mysterious phone calls canceling orders for critical parts, or orders for things the company didn't need. The IRS got an anonymous call telling them to jump on Dennis' back, and pronto, because he wasn't paying his taxes. They called to come down and audit the company. OSHA got an anonymous tip that the factory was in violation of safety regulations, and came for a surprise inspection that Dennis' company passed with flying colors. The company received bomb threats. Dennis had anonymous threats on his life. I am not making any of this up, as hard as this may be to believe.

Bill was burning the midnight oil, earning his pay from the BPA. One of the many dark deeds of the AG's office was to force Dennis into signing a consent decree, in theory settling their assault on his company. I don't want to go too far into the detail of the consent decree and its background, but in essence the AG took four hundred of Dennis' customers hostage, and unless Dennis signed the decree, his company would be destroyed and the customers would be out \$4,000 each. It was all done in the name of protecting the consumer. The decree admitted to no guilt of anything and said Dennis' company would do the things they were already doing. It was a useless document. But over the years the decree would be used many times by unscrupulous law enforcement personnel, district attorneys, media hatchet men, "skeptics" and other people as hard evidence Dennis was a crook.

One provision of the decree was that Dennis would provide a list of installed customers. The first batch of names and phone numbers went to the AG. Immediately the customers called

Dennis' company, saying the AG's office had contacted them, and asked many leading questions regarding their satisfaction with their system. They were told that if any of them wanted to get out of their contracts for their systems, the AG would be more than happy to make it happen for them. Good old Big Brother, protecting the public. Dennis gave the AG no more names of customers.

"Coincidentally" Bill and his dupes went on a campaign to get the customer list for "themselves." One woman worked for one of Bill's misfits, Harlow, and had access to the customer list. Harlow and Bill began working her over with lies, promises, assurances, etc., to get her to give them the information. They did that with any employee who might be useful to them.

Bill started dating a married woman in the accounting department. They were just good friends, the woman would profess, but she was stealing documents and giving them to Bill. One day the woman was caught in the act of theft and signed a confession that she was stealing records for Bill. Dennis went to the police with the signed confession, trying to get Bill and the woman arrested and charged with industrial espionage. The police would have to "look" into the matter. Predictably, nothing happened. Dennis then filed a charge to have Bill arrested. The police refused to accept the petition for arrest.

At about the same time a petition was filed in federal bankruptcy court to have Dennis' company declared bankrupt. Guess who were the petitioners? Bill and his misfits, of course. When the petition was filed, Dennis thought it was a joke. The company was in the midst of trying to install four hundred systems before the energy tax credit expired at the end of 1985, and they had hundreds of employees, not one delinquent creditor, inventory, orders, and cash. Bankrupt?

The petition didn't have one legitimate creditor on it. In fact Bill, through having the woman in accounting steal documents, was desperately trying to find legitimate creditors to con into filing with him and his dupes. Failing at that, he and his dupes just made up things and filed their petition. Bill, who worked ten weeks for the company, claimed he was owed \$5,000 in vacation pay. One salesman who had been overpaid and owed the company \$12,000 was another filer. His wife filed also, for thousands. Another salesman (the other likely plant) who worked there less than a month claimed the company owed him \$37,000. And Harlow, the dupe who had been Bill's first treasured find in the company, because Dennis (deceptively) told Bill how valuable Harlow was to him, said the company owed him thousands in wages. The Department of Labor had previously come to Dennis' company and audited the wages paid to Harlow, determining that he had been overpaid \$2,000 by the company. Dennis would loan Harlow money against his wages. But by golly, Bill had assembled five "creditors", the minimum required to file the bankruptcy petition.

After knowing who the creditors were, who could predict this bankruptcy "petition" would be the

blow that would eventually bring the company down? The bankruptcy action put Dennis' company into a court it would never escape from. The law was not even remotely on the petitioner's side. But the electric company influence in Washington State apparently reached far and wide, clear into the federal courts.

(Dennis read this and informed me that the final deathblow was when his company was stolen, and that he was trying to maneuver around the bankruptcy action when it happened. I can agree with that interpretation of events, especially as I was beginning my tenure with Dennis when those events happened. The bankruptcy petition *did* strangle the company, but was part of an array of weapons that were being used. The bankruptcy petition, along with the other blows, made the company of dubious value, and the thieves really did not steal all that much. I doubt, and I believe that Dennis does also, that if he was able to dance around the bankruptcy action (which in light of the kangaroo court activities in Ventura makes it a questionable hypothesis), the electric company gangsters were going to wave the white flag and leave him alone. I will grant that Dennis' interpretation is more informed than mine regarding those events, but see *My Quest*, pp. 134, 142, 150-153, which supports my view of events.)

There is a section of the bankruptcy code, called section 303 I believe, and I think it is under Chapter 11, which will allow 5 *bona fide* creditors to take advantage of section 303. Bona fide creditors means creditors that have undisputed, proven claims. Bill's buddies made their claims up out of the thin air, completely undocumented. Can you imagine me and four of my family members making up stories and taking IBM into bankruptcy court? I think under section 303 they had to also be owed over \$5,000 apiece. No wonder Bill was owed \$5,000 in vacation pay.

The law was intended to protect creditors and the company. Putting a company into a 303 situation put them into a bankruptcy holding pattern. The company couldn't use its assets, but it also was shielded from its creditors. In effect it acts as a de facto bankruptcy, with a future court date to determine whether the company was really bankrupt or not.

So Bill drug four people into court telling lies that had not one shred of supporting documentation, and asked for a bankruptcy motion the law says is expressly denied their breed of "creditor." The judge (lawyer) says "Sounds great to me, motion granted."

For the next seven months the company slowly died, strangled by the inability to refinance, borrow, or do any financial maneuvering in the face of the other assaults the company suffered. They tried to have the petition thrown out, but the judge denied it, aided by Dennis' highly recommended bankruptcy lawyer's inexplicable loss of ability to make one coherent and forceful argument. I have seen Dennis' lawyers lie down and play dead more than once now. They are coached (or threatened, or bribed) into that posture, unbeknownst to their client. And do you think Bill came up with his 303 bankruptcy scheme all by himself?

Bill had been seen in the AG Hit Lady's (I call her [Ms. Deputy Attorney General](#) on my web site.) office more than once, but when confronted with that charge, she denied it, along with about a hundred other lies she told. When the AG Hit Lady couldn't get the information she believed she was entitled to, Bill tried to get it by his more devious means. Bill also had other informational needs, and wonder of wonders, A.G. Hit Lady gave Dennis' company a shopping list of documents she needed that was almost identical to the documents Bill was trying to steal.

On one of AG's shopping sprees, when they came to the company in hopes of making off with sacks full of documents, Dennis put the heat to them, and his in-house lawyer questioned the legality of the possession of the documents they already had on Dennis' company. It worked, and the next day came a package to the company stuffed with the documents the woman in accounting had confessed to stealing for Bill. Accompanying it was a letter from the AG Hit Lady, professing innocence and claiming no knowledge that she had possession of stolen documents (See *The Alternative*, exhibit 1F). She said Bill's lawyer gave them to her, the Bill she had never heard of.

AG Hit Lady did not have nearly as much success in snuffing out Dennis' company as she was supposed to, and within weeks of the final confrontation she left her career with the Attorney General's office and got a job teaching at a law school.

With a signed confession of theft by the woman in accounting, and a signed letter from the recipient of the stolen documents (the Attorney General's office) stating receipt of them from Bill's lawyer, Dennis' in-house attorney (who later helped engineer the eventual theft of Dennis' company) filed a complaint himself to have Bill arrested. The detective who received the request for arrest said he was legally obliged to accept the request from the lawyer, but they were so busy they probably wouldn't get around to arresting Bill for at least six months. Bill was never arrested or even investigated. He worked for the right boss.

Now we come to the death of Dennis' employee. That happened soon after the break-ins stopped. There was that woman I previously mentioned who worked for Harlow. After Harlow was fired she became an important potential source of customer lists and other information for Bill. She cooperated with them. She became one of their spies and everybody knew it. Also her attitude became a little overbearing, probably because her mind had been so poisoned by Bill and Harlow, so she had little respect for the company anyway. Dennis' wife eventually confronted the woman with the charges, and the woman denied them, even though Dennis' wife knew she was doing it. When the woman was confronted with the charges she became very fearful of losing her job, and begged not to be fired.

Dennis' wife struck a compromise, sort of like the deal Dennis gave Bill, except for the pay. She was to go home and stay there for two weeks without pay. If after two weeks Dennis' wife was convinced she had stayed away from Harlow and Bill and kept her nose clean, she would

be welcomed back, with a new attitude, it was hoped.

At that point all Dennis and his wife knew was that an employee cooperated with those trying to destroy the company, and they hoped the discipline would straighten her out. What they didn't know was that the woman had experienced a very difficult past that included drug and alcohol abuse, a recent divorce, a young daughter to take care of and the inability to keep a job for more than a few days or weeks. She was living with her mother and viewed her job at Dennis' company as her greatest opportunity to pull her life back together.

She went home properly chastised. She refused all phone calls from Harlow and Bill, using her mother as a shield. They tried everything to get to her, even trying to meet her at the supermarket. She was terrified of losing her job. She had held that job longer than any other, even though she had been there only a few months. The two weeks were coming to an end and she was getting depressed, believing she might not get called back to work.

On the last evening of her two-week suspension her mother had to leave the house and took the woman's daughter with her. Harlow and "a very tall man with a beard and mustache" (Bill) came to her house with a bottle of whiskey in hand, and the woman answered the door. That would be the last and greatest mistake of her life. Although she had recently won her battle against alcohol addiction, in her vulnerable state Bill and Harlow got to her.

A couple hours later the woman called her sister, who's husband worked in the installation department for Dennis. The woman was drunk and told her sister that "they" had convinced her that Dennis and his wife would never hire her back, that they were mean and were liars. She told her sister that she gave Harlow and Bill what they wanted, and she wanted her sister's husband to give them information on the most recent installations. Her sister refused to let her talk to the husband, and asked if she could come over. The distraught woman sounded like she needed it. The woman replied, "No, I'm just going to bed. I'll be alright."

The woman's mother came home with her granddaughter, and the woman's bedroom door was closed. Apparently she had gone to bed. The next morning their phone rang. It was Dennis' secretary, calling to tell the woman to come back to work. The woman's mother got excited and said "let me go tell her", and taking her four-year-old granddaughter in her arms she went to the woman's room to wake her. They opened the door to find the woman's brains sprayed across the wall. In her despair she shot herself the night before.

Dennis knew nothing of the woman's problems and Bill even showed up at the funeral, spreading the rumor that she had killed herself because she had been treated so badly by Dennis and his wife. Bill is an ardent student of the dark path, duly employed by the local electric agency to keep their electricity racket unchallenged by any change or competition. Killing a person didn't slow Bill down at all. I'm not sure people like him have what we would call a conscience.

The electric czars owe a great deal to a great many, not the least of whom was the woman's daughter, who will likely be traumatized the rest of her earthly days. Bill is one of the many people that have been sicced on Dennis over the years. [Mr. Deputy](#) is another; [Mr. Texas](#) (the man who destroyed Dennis' company when he was arrested) is another. Bill's story is not yet over.

Out of the blue the woman's family came to Dennis' office the week after she died. Her mother and sister told Dennis the story. When Dennis found out what had happened, he came to a whole new level of inspiration. He became determined to at least go into competition with the power companies, who he believed were behind the actions that were taken against his company. He sent an anonymous letter to the heads of the electric companies and the Attorney General, telling them they had "drawn first blood". It was then that he decided to declare war against them (His "war" was "Project WPPEE" pronounced whoopee, which stood for Worldwide Privately Produced Electrical Energy. See *The Alternative*, exhibit 1E. It was actually Dennis' first "free electricity" idea, though he had no idea about what technology might be able to do it at that time. I attended the WPPEE presentation that he gave at the Seattle Center on March 18th, 1986, the day Dennis hired me and the day before I began working for him.)

After Dennis' company was stolen, and the only man who could do anything was taken out of the picture, the thieves of the company got the bankruptcy case thrown out of court, with the judge recommending countersuing the pants off the original petitioners (he saw the light at last). At the hearings to throw the bankruptcy case out of court, which I attended, and to finally see Bill being part of my motivation, Bill was nowhere to be seen. The dupe petitioners had a "falling out" with Bill and were waging the petition on their own. Bill had performed his job, the company was dead, and his dupes were left holding the bag. I wonder if they ever realized how they were used to screw over their own lives and the lives of many others.

Bill disappeared from then on, to resurface years later when Dennis spoke at the Global Sciences Congress in Colorado in the summer of 1989. When Dennis [got out of jail in 1989](#), he had to sign in at the county courthouse every day for a year. He never missed a day. It was a form of house arrest that Dennis never got prison credit for, for another of the many oddities surrounding his case. Dennis was invited to speak at the Global Sciences Congress in Colorado. He asked and got the judge's permission to go there. When Dennis arrived at the conference, guess who showed up? Mr. Hit Man from Seattle! He looked like he had been crawling around in the woods for years, which is what he does when not "on duty."

Dennis conquered the urge to tackle Mr. Hit Man on sight and said "hi" to him without any increase in his blood pressure. Dennis was willing to forget the past, but Mr. Hit Man was there on business. When Dennis speaks at those symposiums, he is always the big hit because of his extraordinary speaking ability. At the show after his big speech he had a smaller meeting of only a couple hundred people, to get folks involved with his project, as all

the speakers there do. Dennis' meetings are always the most popular.

Mr. Hit Man couldn't very well interrupt a meeting with several hundred rapt listeners, but at the smaller meeting he tried interrupting the meeting by shouting his clever and not-so-clever lies. Dennis had him removed from the room, but he stood outside poisoning every person he could after the meeting was over. Dennis later found out what Mr. Hit Man's angle was at that conference. He corralled every person he could who looked like they were excited about Dennis. One group was quite excited and Mr. Hit Man invited them out for lunch so he could tell them his experiences with Dennis. He told them that he was a person who Dennis conned into investing in his company. Mr. Hit Man's story was that he invested a small fortune into Dennis' business and Dennis never even tried delivering anything with it. A sociopath like Mr. Hit Man can easily tell whatever lie suits his needs, but what was amazing was how easily others believed it. They never even approached Dennis, asking him about Mr. Hit Man's tale. They just walked away from the whole thing. It was only years later that Dennis bumped into somebody from that original group who told him what had happened.

Also at the Global Sciences Conference was a sign up sheet for further meetings for those who were really serious. Dennis always draws the most for those also. On the day of the meeting nobody showed, and Dennis proceeded to find out why. "Somebody" had written "cancelled" across Dennis' sign up sheet. Dennis scheduled a meeting for the next day and the sign up sheet was similarly wrecked, with the names of those who signed up actually crossed out. Mr. Hit Man went back to Seattle feeling good about a job well done.

When I originally wrote about Dennis' encounter with Mr. Hit Man, I thought the courts and electric companies conspired to sic him on Dennis the first time he was allowed outside of Ventura in over a year. But in 1990 I joined the U.S. Psychotronics organization. In 1991 they held the national conference in Dayton, where I lived at the time. I worked at it.

The Global Sciences Congress is the old Denver chapter of the U.S. Psychotronics organization that split off and formed a new organization for reasons I don't know. Both organizations are two of a handful of organizations that are pursuing the science of the future. The conference I attended had some very impressive people there, as well as "flakes" (or as Beverly Rubik told me, "ungrounded people"). The organization explores: alternative medicine, energy, and farming; psychic phenomena, UFO's and a host of other disciplines.

The president of the U.S. Psychotronics organization thought for years that tales of FBI and CIA surveillance of their activities was so much paranoia, until the day he picked up his phone and heard a conversation he had the day before. His call was being transmitted to the central recorder. That also happened to my childhood friend at our Ventura company.

There was a local chapter of the Psychotronics organization that I joined. Wright-Patterson Air Force Base was nearby (home of Hangar 18, the Blue Room, etc.), and engineers from there

also joined the chapter. I was told that all of them were under surveillance by the air force, which is no surprise.

The power structure publicly ridicules/ignores the Psychotronics organization and similar organizations as a collection of flakes and fakes, better left ignored. In reality they know they are the future of science and watch them very carefully so they don't upset the power structure by coming up with the solution to the world's energy, medical or other problems, and ruin their rackets.

I worked at the registration table at the national conference, and in front of me was the member list. I referred to it to validate incoming registrants as members of the organization. Guess what I did when nobody was looking? I looked up Bill's name to see if he belonged to that organization. Yep, there he was! One theory down the drain and another, more ominous, one takes its place. Bill's membership had just recently expired, he was slipping a little, but it was evident why he showed up at the Global Sciences Congress. He likely joined all of the "new science" organizations, keeping his ear to the ground for his masters.

Like the provocateur that he is, he developed some "credentials" for himself before infiltrating Dennis' company by "waging a battle" with an electric company to be able to produce hydroelectric energy on his land. After he took care of Dennis' company, he became a "noted Tesla researcher," "investigating" the free energy possibilities of Nikola Tesla's work. The man is a wolf in sheep's clothing, but the "free energy" community readily accepted this man, [believing him to be a fellow comrade](#) in their quest for free energy.

He read in the organization literature that Dennis was going to speak there, and he came running. I don't know if his performance at the Congress earned him a bonus, or if it was all in the line of duty, and he was only reimbursed for his direct expenses of attending. How many people like Bill are in the ranks of those organizations? I can only guess, but I'll bet he is far from the only one.

That ends my tale of Bill the BPA hit man. I have not heard of him since.

Watching UFOs with James Gilliland

By Wade Frazier

June 2005

[2005 Visit](#)

[2006 Visit](#)

2005 Visit

In 2003, a friend in the new energy field told me that his introduction to paranormal phenomena was watching UFOs with James Gilliland near Mount Adams in Washington State. In early 2004, a friend who works at Boeing suggested that we go watch UFOs at James Gilliland's ranch. In June 2005, I finally went there to see for myself. I had never seen a UFO and had never tried. I know many people who claimed to have seen UFOs, and seeing one had long been on my list of things to do. When my Boeing friend arranged a trip to Gilliland's ranch, I was ready to go.

James Gilliland's Web site is [here](#). We met James at his ranch on June 4th, 2005. He was the perfect host, spending several hours talking with us and offering to let us spend the night at his ranch, which we did. James is very mild mannered, particularly when considering the wide range of intense and controversial topics that we discussed (such as the coming earth changes, political skullduggery in elite circles, close encounters with bigfeet and other creatures, free energy, etc.). His ranch has a spectacular view of Mount Adams. The below photograph is from his "backyard," a few yards from his house, where people gather from all over the world to watch UFOs.

Click on image to enlarge

About 3,000 people have witnessed UFOs at James' ranch. He has published many [testimonials from visitors](#). James has had numerous visitors from the U.S. military, the CIA, NASA and other alphabet soup agencies. He has had Special Forces operatives visit him, as well as people who say they worked on captured extra-terrestrial ("ET") craft, to reverse-engineer their technology. I have independently [encountered that phenomenon](#). As is evident from the testimonials, a common incident is a UFO "powering up" and becoming very bright in the sky. No mundane phenomenon can account for it, let alone the many sightings where the craft have flown low over James' ranch. If UFOs fly close to the ranch or land on Mount Adams, the U.S. military and related organizations can be counted on to chase or attack them, sometimes shooting exotic weapons, such as lasers

and plasma weapons (which do not seem to affect the craft). Operatives from the spook world have watched those UFOs “power up” above James’ ranch, and they say that nothing “we have” can do that.

While we talked with James on that Saturday afternoon, airplanes flew by in an endless procession, leaving heavy contrails that James and others call “chemtrails.” In the photograph above, all the high “cirrus” clouds are those heavy contrails left by jets. The photograph below shows those “chemtrails” in more detail.

Click on image to enlarge

Chemtrails are controversial. Investigators have collected samples of chemtrails for analysis, which U.S. government agencies such as the EPA have refused to test. James told us that a member of U.S. Congress recently tried opening an investigation of them, and was advised by a high-ranking military official that if she valued her career and her family’s health, she should cease her investigation (which she did). If chemtrails are a genuine covert action phenomenon, I doubt the motivation behind chemtrails is benevolent. The military and related attention to the Mount Adams area likely has nothing to do with the “threat” that UFOs pose to humanity, but the “threat” that they pose to the world’s power structure. All the attacks and other games are most likely not to keep humans safe from ETs, but to keep ETs from openly interacting with humans, in alignment with the [Brookings Institute’s](#) advice to NASA many years ago. James has endured great harassment from the people trying to remove UFOs from public awareness.

By that evening, the chemtrails had blown away and the sky was clear. James said that the best time for viewing UFOs was between 10:30 and 11:30 at night, or at about 5:00 in the morning. We went to dinner and arrived back at the ranch at about 10:00 PM. At 10:00 PM, Mount Adams was in twilight, and by 10:30 the sky was about as dark as it gets in the summer. There was no moon that evening.

There were about fifteen people watching the sky at James’ ranch that night. We watched one satellite make about a thirty degree turn as it changed course from moving in a northwesterly direction to moving due north as it passed over Mount Adams (at least from our perspective), although satellites are hundreds of miles away in the sky. One veteran sky watcher said that normal satellites cannot make a turn like that, as he watched it make that turn. It was interesting but not spectacular. A few other anomalous “satellites” were seen that evening.

At about 11:00 PM, James decided to “call” a UFO and began flashing his ten-million-candlepower spotlight into the sky. He later said that he also prayed for one to make its presence known as he flashed his spotlight. James said that they respond to heartfelt human desire to see one, and they respond best to a joyful attitude. He said that the dour, stern UFO “nuts and bolts” investigators do

not have the right attitude to go UFO hunting. Somebody said that afternoon that the “permanent scowl” that UFO investigator [Phil Klass](#) wore defeated him before he even began, and that is giving Klass the benefit of the doubt that he was not working on behalf of the power structure as a UFO debunker.

Within a couple of minutes after James began flashing his spotlight, it happened. One innocuous “satellite” that was passing slowly south, to the east of Mount Adams, suddenly “powered on.” For about five seconds, it was the brightest thing in the sky, by far. Think of Venus-times-ten in brightness, and you get an idea of what we saw (one of my Boeing pals called it “Mars times fifty”). It was spectacular, and nothing that could be explained by the typical “[debunker](#)” explanations. It was not “one of ours.” After about five seconds of brilliance, it powered down and became just one more “satellite” trailing across the night sky. I had seen my UFO. There was no doubt among any of us regarding what we had seen, and some were very experienced at watching satellites and other lights in the sky (as James’ [testimonial section](#) used to show, which I hope reappears soon, one of the witnesses that night was a retired Air Force captain).

Being ready to film a UFO “powering on” for a few seconds is not an easy trick, and we did not film it. However, James publishes many photographs on his Web site, and publishes DVDs with footage and photographs taken over the years. James said that the psychic abilities he has developed over the years (beginning with his [near-death experience](#)) allows him to anticipate when they appear, so he is often ready with his camera.

Below is a frame from a video that James took of a UFO lighting up, which is almost exactly what we saw, sans the “Star of David” effect (the image below also [links to the clip](#), which is a 5 megabyte file, and Apple’s QuickTime can read it, as can Microsoft’s Media Player 10). We received a fairly typical show. Other clips can be seen at [this link](#).^[1]

On June 4, 2005, with aerospace and military personnel in attendance, I observed a UFO "light up" over Mount Adams about a minute after James Gilliland requested that one do so. The display was very similar to the footage taken by James on the video clip that this image links to. The only significant difference between what we saw and what is depicted on James' clip is that we did not see the "Star of David" effect evident below. Thousands of people have witnessed UFO displays at James' ranch over the past generation. The show we received was fairly standard, but a little better than average.

Click

on image to play video clip

I have directed people to James' ranch since our 2005 sighting, and although what we saw was relatively standard, it was apparently better than average. When we returned in 2006, our 2005 sighting was remarkable enough that James recalled it, calling it a show put on by the "big ships." Big ship displays are fairly common at James' ranch, but ours was impressive enough that my Boeing pals talked about it with Art Bell on the [Coast to Coast show the next year](#). One Boeing pal told me that he was in a daze during the week after seeing that UFO light up above Mount Adams. His universe of the possible greatly expanded after that experience.

When my friend who first told me about Gilliland's sightings read the first draft of this essay, he wrote:

"Read your report. Glad you got to see something. It's always fun to witness one of those craft power up and become bright like that. One time, after getting bright, an object changed colors several times and then changed shapes before powering down and zooming away. Pretty remarkable."

Many in the UFO field have called James a fraud, which is a typical situation encountered in these

realms of investigation (the human ego is nearly always the culprit). James' response has always been, "come to my ranch and see for yourself." People do not go away disappointed, and only those who refuse to visit and see for themselves openly disparage or dismiss James' work and what happens at his ranch.

2006 Visit

Nine of us visited James on June 2, 2006. James was once again a very gracious host. One Boeing pal brought his wife, and the rest were my friends. We had partly clear sky on June 2. As with our 2005 visit, many "satellites" crossed the sky that evening. I began developing a trained eye for observing their behavior, and several made turns while crossing the sky, which normal satellites cannot do. In the dark, in the middle of a field, if somebody said, "look there!" few could see where they were pointing. James taught us to call out coordinates, such as an object's relationship to the Big Dipper and the compass points (i.e., north, south, east, west), so people could direct others to what they were seeing, particularly when people had to look quickly or miss the event.

As with 2005, one UFO "powered up" above us, but the 2006 experience was frustrating. It again happened at about 11:00 PM. In 2005, I saw the UFO powering up and James pointed to it with his flashlight as the event began. The 2005 event stunned everybody who was there (except those who had seen such spectacles previously). In 2006, of the dozen who were watching, only James and I saw it.

In our 2005 sighting, the UFO powered up to the northeast of Mount Adams, at about a thirty-degree angle to the ground. In 2006, the UFO powered up to the northwest of Mount Adams, and at about a seventy-degree angle to the ground. Neither James nor I saw it power up, but we saw it after it became bright. That night was a half moon (first quarter) in the southeast, and the brightest star was to the south (Jupiter, I believe). At about 11:00 PM, I suddenly became aware of a *very* bright star. This year's UFO seemed about two-to-five times the brightness of Jupiter. It was definitely the brightest "star" in the sky, but was not moving as the 2005 UFO did; it seemed to stand still. For about two seconds, my mind pondered that star's brightness and position (near the Big Dipper). I did not want to cry wolf for a normal star, but my mind raced as I considered if it might be a UFO. After about three seconds, I realized that no star in the sky had been that bright, particularly near the Big Dipper, and James and I called out at about the same time. About a second later, the "star" completely disappeared. James and I saw it probably a second after it had powered up; it went dark a second after we called out, and nobody else saw it. It was another five-second event.

I coordinated the 2006 trip. One friend flew from California to see it, and my hesitation meant that my friends did not witness the main event. We stayed for the next night, but were rained out. One veteran sky watcher said he was convinced that more than satellites crossed the sky that night, and early in the night he saw a strange flash. Even so, I returned to Seattle with a keen sense of frustration. I dragged my friends along so they could experience the awe of watching a UFO make a display, and only I saw the big show. I wonder if my ET pals influenced that situation. James voiced the same suspicion, but also playfully joked that I was his confederate in calling out a UFO that nobody could "see" but us two. As I watched that UFO light up the sky, it felt as if I was being

subtly prevented from calling out in time. That is not a product of fermented frustration, but immediately after I called out and the UFO went dark, I wondered why I had not called out sooner, even though my hesitation was no more than two seconds.

I doubt I have made my last trip to James' ranch.

Footnote

[1] Well meaning people have challenged the validity of what we saw. I will answer some of those questions here.

People have proposed that those "satellites" "powering on" are something more mundane than UFOs responding to James' request for them to light up. On one of James' videos, a TV news report is produced where a scientist says that the people at the ranch are really seeing satellites and other human-launched space hardware. Nobody who has been to James' ranch buys that explanation, and "explanations" like that are what detract from the armchair "[skeptics](#)" credibility with those who investigate the paranormal. No acknowledged satellite has the ability to suddenly become the brightest thing in the sky for a few seconds and then dim back to its original brightness, or radically change direction and velocity, or change shape and color, or land on Mount Adams. Another proposed explanation was that the spotlight that James used to "call" the UFO is what lit it up. If it was a real satellite, it was at least a hundred miles away in orbit. James' spotlight can light up trees a few hundred yards away. There is a big difference between hundreds of yards and a hundred miles, and James was not flashing his spotlight on the UFO when it lit up. James recorded video footage at this [link](#) mentioned above, and no spotlight was involved in that sighting.

Others have wondered if James was playing some kind of high tech trick on the people at his ranch. We stood out in the middle of a field many miles from the nearest city, watching the night sky, and a "satellite" became brilliantly illuminated for a few seconds, within a couple minutes of James trying to call one. You can't fake a "satellite" suddenly becoming the brightest thing the sky. I know of no earthly technology that could accomplish that, much less doing it in a field next to a collection of modest dwellings in the middle of nowhere.

At this time, I lean toward believing that the "[orbs](#)" that James and others have photographed are mundane anomalies relating to digital cameras, although he showed us numerous anomalous photographs that could not be explained as artifacts of digital photography, such as a ghost whose face was recognizable as the person who died in the home the ghost appeared in, and who was "hassling" the house's current resident.

No mundane explanations proposed for our UFO sighting have held any water so far, and when I watched James attempt to attract a UFO, and watched one "power up" a couple of minutes later, nobody will ever "explain it away" to me. Many years ago I had undeniable proof that [all people are inherently psychic](#), and subsequently learned that a person with *experience* is not at the mercy of a person with a theory.

Pictures from My Life

By Wade Frazier

This web site isn't *all* about my intense writings. I have fun also.

I was born in Seattle, a third generation Washingtonian. Although the story of how Europeans "settled" this land is not pretty, here is where I came into the world. I am a hiking "fanatic," enjoying my time in the mountains and wilderness immensely. Below are some shots accumulated over the years.

I began developing my bad habits at a very young age. I am not sure if my first vice was smoking, gluttony or drinking, but I obviously indulged all the them.

The first of the above three photos is of me, hiking with my uncle in 1998. The second is me on on Sahalee Arm in 1986, above Cascade Pass. The third is one peak over from Desolation Peak, where Jack Kerouac spent a summer watching for fires, with Ross Lake and the Little Beaver Valley in the background, 1986. The fourth is me resting on Trapper Peak in 1986, in the North Cascades National Park.

The first of the above two is of me in Spider Meadow in 1986, in the Glacier Peak Wilderness Area. The second is my college roommates and me on Mt. Whitney in 1990.

Self-portrait on Sourdough Mountain, North Cascades National Park, 1998.
brother and me, above Spider Meadow, 1997

My

Meadows I have known. The first is on Sourdough Peak, 1998, on a pathless mountainside that nobody ever gets to. The second is on the way to South Pass Lake, in the Lake Chelan Recreation Area, 1983.

The first image is below Shepherd's Pass in the Sierra Nevada Range, 1990. The John Muir trail is in the distance. Awesome country. The second image records one of the more sublime moments of my life. It was taken at Blue Lake on October 16, 1999, on the back side of Liberty Bell Mountain in the North Cascades National Park. The golden trees are larches, which are deciduous conifers. Finding larches in autumn foliage (the needles are very soft) on a clear day is not easy to do. Those were the first autumn larches that I had ever seen in person. After many years of longing for a sight of the autumn larches, I finally experienced it. The third photo is of a larch grove near Blue Lake. I climbed off trail and into a grove of them and hung out with the golden larches. It will always be a vivid memory.

These photos are taken at both ends of the Lyman Lakes basin, surely one of the world's most beautiful. In the first photo, just below my left shoulder the snout of Lyman glacier is visible. People can walk up and touch that glacier. The second photo was taken the next day, in September of 1997, after we had hiked through that awe-inspiring valley. We got to the valley the "easy way," hiking 3,600 feet and eight miles over Spider Gap. We were on our way to legendary Image Lake. The blueberries were harvestable, and my brother and I suffered from purple mouth disease for several days. Somebody has to do it. The last is a global warming picture, comparing Lyman Glacier from 1997 to 2005.

The first is on the way to White Pass, in 2000, with Sloan Peak in the background. The area was so spectacular that I returned the next year, with the second taken from the top of White Mountain. The meadow in the photo's middle is where we camped for a few nights, and I picked a half gallon of blueberries. The third is looking back up at White Mountain, with me standing on the Pacific Crest Trail, next to the meadow where we camped. That last photo was taken about the last time I was emotionally "up" (at least as I write this in December 2004), as the photo was taken on September 8, 2001.

The first is of me on Green Mountain (near Glacier Peak Wilderness Area), on a dazzling day in late October, 2002. The second is on the trail to Hidden Lake Peaks, in the North Cascades National Park, in 2003. The third is my brother crossing a creek near Cutthroat Pass, in the North Cascades National Park, in early summer 2004.

Lies I Was Raised With

By Wade Frazier

[Introduction](#)

[Big Lies: The News](#)

[More Big Lies: History](#)

[Colonialism, the First Stage of Global Capitalism](#)

[Objectivity, Sources and the Historian's Ideal](#)

[Footnotes](#)

Introduction

Although I began questioning my indoctrination when I left college, it took brutal experiences with [Dennis Lee](#) to “radicalize” me. As far as “radical” goes, that means uncovering the unquestioned assumptions of my society. I eventually realized I had been sold a set of lies. It was not that everybody was in on the joke except me. The lies I discovered are those nearly universally believed. When my accounting professor told me about why [auditors make so much money](#), he believed it. In the wake of the [Savings and Loan Scandal](#), he may have changed his mind, or as the burgeoning [Enron scandal](#) has been heating up.

Since 1990, all of my spare time, and five years of full-time work, has been devoted to researching what I was taught, comparing it to my adult research, and creating this web site. What follows is some of what I discovered.

I was lied to, in many ways. The lies I was sold were sometimes different lies than others were sold. Americans growing up in regions dominated by English settlers, such as the Eastern United States, were probably not taught much about [Junípero Serra](#), as I was. They were probably taught about [Columbus](#), however. Although I cannot get my money back, I have discarded much of what I was taught, from kindergarten through my college diploma and beyond.

Big Lies: The News

Soon after graduating from college I began questioning my indoctrination, and eventually realized that [my profession was worthless](#). Just before [moving to Ohio](#), I heard of a new magazine that analyzed the *New York Times*' content. It was *Lies of Our Times*. It was my first exposure to the alternative media. In Los Angeles, before I met Dennis, I subscribed to the *Christian Science Monitor*, thinking I was getting alternative news. When Dennis was in jail, I had a roommate who talked about Noam Chomsky, and told me Chomsky's work would be educational. I had never heard of him.

Reading my first issue of *Lies of Our Times* (LOOT) is a vivid memory. It was the November 1990 issue, which came out as George Bush was whipping America into a frenzy to [attack Iraq](#). I got LOOT until they went out of business in late 1994, but my first issue's first page is still the one I remember best. That page produced a small article titled "More Translation Problems." The Bank of Kuwait's logo accompanied the article. The logo had a camel in its center, and was ringed with Arabic script. Here is the article.

"Back in March (p.19) we ran a letter Nabeel Abraham sent to the *New York Times* complaining about a mistranslation of the Arabic in the photo caption. Lebanese journalists were shown carrying a sign which actually read 'Freedom of the press. Yes to the printed word, no to terror.' The *Times* said the sign said 'In Allah's hands we are safe.' The letter, of course, was not published by the *Times*.

"Now they are at it again.

"The first page of the business section on September 12 (p.C1) presented a piece about the Bank of Kuwait. Illustrating it was the logo of the bank, shown below, with this caption: 'The logotype of the National Bank of Kuwait proclaims, "There is no deity but Allah."

"Abraham sent off another letter, which reads in part: 'The logotype says no such thing. The Arabic inscription merely says, "National Bank of Kuwait, Kuwait, 1952."

"He concluded: 'These glaring errors leave me wondering how the *Times* goes about translating Arabic language materials into English. Surely, you did not consult someone who actually reads the language, for those errors are so wide off the mark that they are laughable. I must conclude that either the *Times* is paying good money for bogus translations, or that the reporters and/or editors are making up the translations as they go along. Either way the "translators" are not drawing on their knowledge of the language, but on their storehouse of racist and demeaning stereotypes which "perceive" religious fatalism, zealotry, fanaticism every time they see an Arabic inscription. In this way the 'translators' say more about themselves than about the material they are purportedly translating.'

"We are not holding our breath while waiting to see if the *Times* prints Abraham's letter."[\[1\]](#)

That opened my eyes. The world's most influential publication could stoop below the journalistic integrity of the *National Enquirer* when the need suited them. The *New York Times*' effort on "translating" Arabic script, especially as George Bush and company were whipping up a murderous anti-Arab fervor in America, may have made Goebbels beam with approval, if he did not think it a little heavy-handed. Below are the photographs in question.

[Click on image to enlarge](#)

Soon after that, I subscribed to the *Covert Action Information Bulletin*, now called *Covert Action Quarterly*. I subscribed to the Christic Institute's *Journal of Emergence* before they were legally raped, similar to how [Mr. Big Time Attorney](#) was dealt with by the federal courts in California, but much worse.[\[2\]](#)

I began reading [Chomsky's work](#). I read *Manufacturing Consent* and *Unreliable Sources*. *LOOT* went out of business in 1994, as all alternative media organizations operate on a shoestring. Challenging the official version of reality does not pay well. Chomsky calls the *New York Times* a leader in the "agenda setting media," which means that most mainstream American newspapers follow the *Times*' lead in deciding what is newsworthy, and the *Times*' reporting also dominates the tenor that other papers give to their reporting. I have subscribed to *Z Magazine* for many years, and other "alternative" periodicals. I have studied the far right, subscribing to *The Spotlight* for years, and have read plenty of conspiratorial scholarship. During the past twelve years I studied the media far more than I ever studied accounting or chemistry.

The fact that the media presents a highly slanted view of the world is not the result of one big conspiracy. Media defenders have often stated, "How can all reporters get their orders from the same place?" It is not that simple.

In the first chapter of *Manufacturing Consent*, [Edward Herman](#) (the *LOOT* editor) and Chomsky present their *Propaganda Model* and discuss the various "news filters" that determine what news is printed. The first filter is called the "size, ownership, and profit orientation of the mass media." Because media organizations are profit-making corporations, and are increasingly large corporations that are part of even larger corporate conglomerates, the economic interests of the ownership impacts the news process significantly. The authors show how market forces have driven alternative viewpoints from the media. They present the example of the British working-class media. The government tried wiping them out with punitive laws, but in the end, the sheer market

forces of advertising revenues, affluent audiences and economy-of-scale factors drove the working-class press out of business.

In America, there has never been anything resembling a working-class press. The situation today is far less favorable toward establishing a working-class press than it was early in the 20th century. The ultra-rich own the media, and it is nonsensical to think that their interests would not be attended to by the organizations they own.

During the Gulf War of 1991, General Electric owned NBC. General Electric was one of the world's largest defense contractors, contributing to nearly every weapons system deployed in the Gulf War. The gushing coverage given to America's "smart bombs," Patriot Missiles, Tomahawks and the like, when presented on NBC, was admiring its owner's handiwork. The NBC president [killed a story](#) that even Tom Brokaw wanted aired about the "collateral" damage that the U.S. bombing inflicted onto Iraq's civilian population. Those conflicts of interest pervade America's mainstream media.

Because of the [global economy](#) that has been developing for centuries, we now have a global media. The owners' interests are greatly attended to by the companies they own. As Ben Bagdikian demonstrated in his *Media Monopoly*, the trend is toward increasing concentration of ownership, with fewer and larger corporations owning the mainstream media, a trend that has been dramatic during the past generation. That is [normal capitalism at work](#). Capitalism always tends toward monopoly. How much media diversity can there be when a few rich interests own it all? How can news be aired that challenges the powerful, when the powerful own the media? Capitalism has little or nothing to do with democracy. The rich run capitalism, by definition. They own the capital. Corporations operate in a top-down fashion, with orders coming from the top, being carried out by those down below. They are economic dictatorships. *CBS Evening News* Executive Director [Tom Bettag](#) was fired the day he tried running the clip about Iraqi civilian devastation that the NBC president killed.

The second news filter presented by Herman and Chomsky is advertising. The media serves not only the owners' interests. Because the media is commercial, the advertisers' interests are also attended to. For many years cigarette advertising had a significant influence over editorial policies. Magazines such as *Time*, *Newsweek* and *U.S. News and World Report* derived substantial revenues from cigarette companies. "Coincidentally," they never went on editorial crusades against smoking, although *Reader's Digest* [had been doing so for generations](#).^[3] In 1980, *Mother Jones* ran a series of articles regarding cigarettes being a major cause of cancer and heart disease. Immediately, the tobacco companies pulled their advertising from *Mother Jones*.

The tobacco companies marshal their clout against media organizations that step out of line. They are looking after their interests and selling as much of their product as possible and making money, not caring how many millions of people their product kills. It is the very reason corporations exist: [making money any way they can](#). One undeniable consequence is that biased news is produced. Knowledge is power.

The third news filter presented is the source of mass media news. In the corporate media, news is a product sold like anything else. Just as coffee grows on bushes in Central America and oil is found under the Middle East sand, "news" is usually found in a few choice locations. Newspaper reporters do not canvass Creation everyday, looking for a story. Reporters are assigned to places such as the White House, the Pentagon, the State Department, the county courthouse, City Hall, etc. Consequently, news organizations come to rely upon those sources of information. A few things happen because of those relationships. One is that the media gets cozy with power. The temptation is to abandon the adversarial or independent stance the media ideally takes. It happens all the time, and it becomes a working relationship instead. If reporters assigned to City Hall talks to the same people every day to get their news, how cooperative will those news sources be with the reporter who prints unflattering news? Not very. A [cub reporter](#) can end his career by reporting the wrong story, or reporting it the "wrong" way.

The media have largely become stenographers to power. With increasing regularity, powerful news sources produce the news itself. The Pentagon and large corporations have [public relations](#) departments that often dwarf the media that covers them. They produce "news" regularly, which they disseminate to news organizations. It used to be called a press release, and today extends to slickly produced videos. Downsized news organizations are handed a video of commercial quality, ready to air, presenting corporate or governmental pre-packaged news.

When [Mr. Deputy](#) orchestrated his spectacular arrest of Dennis, a video was given to the Los Angeles TV stations at the same time. A friend called me the day after Dennis was arrested, saying he saw a video of Dennis on the evening news, slanted to make Dennis look like the crook of the century. Perhaps Mr. Deputy's video was slightly edited by the TV station, and perhaps not. Viewers are rarely informed that a corporation or government agency, not the news organization, produced the "news" they just saw.

The fourth filter Herman and Chomsky present is called "flak and the enforcers." The first three filters act as coercive forces, ensuring that powerful interests are served. However, sometimes the media begins publishing stories that the powerful would rather keep quiet, or it presents the "wrong" side of the story. There is an array of punitive strategies to corral rogue newsmen or news agencies. Affiliated with powerful corporations and often bankrolled directly by them are media "watchdog" organizations that "police" the media. When the media runs a story that gores an ox that the powerful own, such as reporting corporate or governmental malfeasance, the "flak" and "enforcer" organizations pounce on them. Often the powerful groups provide their flak directly. A recent and spectacular instance was when CNN's April Oliver and Jack Smith reported on the alleged use of Sarin nerve gas by the United States in Laos in 1970, during a secret mission known as Operation Tailwind.

The reporters worked on the story for several months, interviewing people involved in the operation and Major General John Singlaub and Admiral Thomas Moorer, who were privy to operations such as Tailwind during those days. A story accusing the United States of using nerve gas would obviously be big news, and it was no surprise that CNN ran it rather than the big three: NBC, CBS and ABC, who did not touch the story. CNN's Peter Arnett also helped report the story. It was

aired on June 7 and June 14, 1998, and *Time* ran it in its June 15, 1998 edition.

CNN was prepared to support its reporters, but did not anticipate how bad the flak would get. Flak organizations such as Accuracy in Media (AIM - a far right media watchdog group that has a cozy relationship to power) went on the attack. The big heat came from the Pentagon and Henry Kissinger. CNN was quickly brought to its knees and it served up Oliver and Smith as sacrificial lambs. CNN hired two attorneys to "critique" Oliver and Smith's report. It was a slanted effort that appeared to be a hack job to justify what happened next: CNN retracted the story and Oliver and Smith were fired. The establishment press accounts of the Tailwind flap made it appear as if CNN responsibly retracted a story that its loose cannon reporters snuck through.

Whatever inaccuracies there may have been in their story, they were fired because of whom they offended. Peter Arnett's career with CNN ended in April 1999 because of the flap. He was one of America's finest mainstream reporters, but his continual reporting of the "wrong" story, such as his [uncensored reports from Baghdad in 1991](#), won him the enmity of many powerful people.

Reed Irvine, who runs AIM, publicly called for the firing of those responsible for that story airing, and he got his wish. Oliver and her colleagues were eventually vindicated. Singlaub sued Oliver to clear his name, besmirched in the Tailwind flap. On January 17, 2000, Thomas Moorer, in the presence of Oliver and Singlaub, was deposed as part of the lawsuit. The transcript of that deposition has been posted to the Internet, and Moorer confirmed all the essentials of what Oliver reported, including:

- Sarin gas (also known as "BG" and "CBU-15") was stockpiled at the Nakhorn Phanom base in Thailand, where the Tailwind mission was launched;
- The mission was seeking to find U.S. "defectors," and that killing them would have been a mission option;
- Sarin was regularly used on the secret missions, the pilots knew they carried it and knew how, when and why to deploy it; Moorer justified its deployment if it would save American lives, and admitted that the Montagnards had gas masks that were too large to fit properly, which allowed the nerve gas to kill them, prompting the U.S. to begin making smaller gas masks;
- He believed that Sarin was used on the mission and that it was successful.

In essence, Oliver's reporting was accurate. Although the Tailwind flap was huge news when it happened, the revelations of Moorer's testimony failed to receive mainstream media coverage. Singlaub's lawsuit was quietly settled, with Oliver getting a substantial settlement, although the nature of those kinds of settlements are that Oliver cannot publicly say that she was vindicated, but the silence of Singlaub and others speaks volumes, and Oliver still stands by her story. The career

of Oliver and others was ruined, but not a hint of "sorry" can be heard from Irvine or the others who attacked Oliver and her colleagues.

Similarly, reporter Gary Webb ran a series of reports in the *San Jose Mercury News* in 1996 regarding the issue of Contra complicity in the drug trafficking in South Central Los Angeles and elsewhere. They were the same stories that came out during the Iran-Contra scandal, and it put the powerful in a bad light. There was no substantive objection to Webb's powerfully supported story, and the CIA and Justice Department confirmed key elements in his story, but nevertheless, Webb lost his job.[\[4\]](#)

New York Times reporter Ray Bonner was another famous sacrificial lamb. In 1982, he accurately reported on the El Mozote massacre, committed by the U.S.-trained El Salvadoran forces. Several hundred people were murdered, mainly women and children. That was a mass murder committed by Reagan's "fledgling democracy," and reporting the truth cost Bonner his job.[\[5\]](#)

Immediately after the public professional executions of Oliver and Smith came the story of Mike Gallagher of the *Cincinnati Inquirer*, who published a series of articles about Chiquita Brand International in May 1998. Chiquita used to be known as United Fruit. The United States overthrew the Guatemalan government in 1954 so United Fruit could continue to "own" the country. [\[6\]](#) Gallagher reported that what goes on today in Central America was merely more of the same, and he found himself legally attacked by Chiquita, accusing him of illegally accessing their voicemail system.

The attacks on those who tell the wrong story are not limited to the news. All across America, college professors who fail to toe the establishment line, and lean in any way toward the "left," often have a hard time keeping their jobs and careers, and are often fired outright and then blackballed from the profession.[\[7\]](#)

In the case of [Ralph McGehee and the CIA](#), there are structural controls in place, such as how the CIA psychologically screens candidates in order to select people who blindly follow orders. The CIA almost did not hire Ralph because he did not think in the simplistic black/white way the CIA preferred its "mesomorphs" to think. Even so, it took Ralph a major intelligence breakthrough in Thailand and 16 years to finally figure out what the CIA was all about. Other structural controls existed. By the time Ralph figured it out, he was trapped in the CIA, with no other career options. [Others like him](#) lived lives of quiet desperation, counting their days to retirement.

Those constraints made it highly unlikely that a Ralph McGehee would ever figure it out and go public with what he knew. When Ralph tried going public, the CIA [abused the national security laws](#) to try preventing publication of his work, even going to the absurd extent that they tried *reclassifying* public domain material in his book. Even so, after a monumental legal battle, his final book was riddled with censorship deletions, the mainstream media has ignored him when they have not smeared him, and the CIA even went to the extent of buying his *Deadly Deceits* off bookstore shelves to limit its circulation. Then Ralph created his CIABASE web site, using public domain

material to tell what the CIA was up to. Ralph was then subjected to having his home bugged, and he would be followed to the grocery store, and they tried framing him for crimes such as shoplifting. The local police (near Washington D.C.) worked with the CIA and FBI in harassing Ralph, to the point of threatening his family. That not being enough to silence Ralph, they would periodically escalate the intimidation and dirty tricks, and spiked his food on more than one occasion, which damaged his mouth. Their efforts finally succeeded in silencing Ralph in the year 2000. Even when he moved away and stopped his CIABASE efforts, the FBI went to his new town of residence, telling local merchants to be on the lookout for Ralph, as he was a dangerous "national security threat." Those who think America has free speech should ponder Ralph's case.

When Noam Chomsky and Edward Herman [tried publishing their book](#) on U.S. international fascism and how the American establishment is a vital part of how that system works, a member of America's media oligarchy destroyed his own publishing company to try preventing the book's publication. That not being enough (the book was finally published), the media (even Chomsky and Herman's "friends" in the left and academia) have misrepresented their work ever since, while calling Chomsky a supporter of the Khmer Rouge, which is in the Big Lie category.

The [Savings and Loan Scandal](#) had a few genuinely good investigative reporting efforts on how America was defrauded by people such as George Bush and friends. The two best efforts are probably *Inside Job* by Pizzo, Fricker and Muolo and *The Mafia, CIA and George Bush* by Pete Brewton of the *Houston Post*. Although those reporters did not end up as [Danny Casolaro](#) and [Paul Wilcher](#) did, Brewton had the publication of his book essentially blocked by his publishing company until after the 1992 presidential election.^[8] During the summer of 2002, a friend co-wrote a book by an [Enron](#) whistleblower, and the major book company pulled the same stunt that Brewton's publisher did. My friend is now trying to get it published through other channels.

That is not a new phenomenon in America, of silencing reporters and others who try speaking out. The powerful do not want the public knowing of their dark acts, and skewering reporters and media organizations that have the audacity to report on it is standard operating practice. There is no "free press" in America. Those kinds of factors led to [Project Censored](#). Establishment hacks can be vicious. If they ever get into a public debate with people such as Noam Chomsky, they quickly stoop to calling them names and even yelling at them and lying, as John Silber, the president of Boston College, did during a 1985 debate with Chomsky over the Contra situation.^[9]

The real reasons for [dropping atom bombs on Japan](#) had little or nothing to do with saving American lives. It was mainly a demonstration of power to the Soviet Union, and can be considered the Cold War's first salvo. Leslie Groves, who ran the Manhattan Project, candidly admitted as much in the presence of Nobel (Peace Prize, 1995) Laureate Joseph Rotblat, who then quit the Manhattan Project and asked to return home to Britain. Rotblat attended a 1986 debate between then-vice president George Bush, American defense establishment pundit Richard Perle, and a Soviet representative regarding the beginnings of the Cold War. The debate was heated, with the Soviet debater claiming that the United States was intending to threaten the Soviet Union with atomic weapons as early as 1944. Bush and Perle hotly contested the Soviet debater's assertion. Then Rotblat stood and related the conversation that Groves had in his presence. Rotblat had

already published that conversation with Groves. Perle then rushed off the debating platform and shook his fist furiously in Rotblat's face, saying, "You have no right to be saying anything like that!"[\[10\]](#)

The final filter presented by Herman and Chomsky is an ideological one. Chomsky today says he thought the description of the filter in *Manufacturing Consent* was too narrow.[\[11\]](#) It was called anticommunism. The anticommunist mentality became an ideological rallying point through which communism was seen as a great and evil threat to rich property owners. It shaded many areas of American discourse, and anticommunist dogma was as deeply ingrained into the American psyche as any catechism ever was. Today Chomsky says the ideological filter is broader than that - mainly the portrayal of a malevolent external threat to make people submit to state power, to "protect" them. With the communist bogeyman gone, America has had to stoop lower and lower to conjure malevolent external threats, such as [Noriega](#), [Hussein](#), and drug dealers. Maybe it will be extraterrestrials next year. The media portrays the bad guy of the hour as we attack him, vanquishing a "great threat" to our nation. Sometimes it gets ludicrous, such as saying that Grenada was a threat to U.S. shipping lanes.

In late 2001, the [World Trade Center attacks](#) answered the warmongers' prayers, and as if the script was taken directly from [George Orwell's 1984](#), George Bush the Second declared a virtually perpetual war on "terror." Finally, a real threat may exist beyond all the paper tigers that were paraded in front of Americans during the 1990s. Even though the United States government has been the [world's leading terror organization](#) for the past fifty years,[\[12\]](#) the current "war on terror" will become the new Cold War, [lining the pockets](#) of the "defense" establishment and further securing U.S. global hegemony.

In *Manufacturing Consent*, Herman and Chomsky present a concept known as worthy and unworthy victims. Worthy victims are victims of our enemies. Unworthy victims are victims of our friends or of us. The authors analyzed the American media's treatment of Central American murders of Catholic priests and nuns by the security forces of national governments. The repeated murders of priests and nuns in El Salvador and Guatemala seemed a sport of their police forces. When a priest would speak out against the government's murder of its citizens, he could be expected to get it next, as Archbishop Romero did. El Salvador and Guatemala were favored client states of the United States while those murders were taking place, with American officials [covering for them](#). At the same time, Poland was undergoing its own struggles against its oppressive Soviet influence (those events were from the 1980s, when *Manufacturing Consent* was first published). In Poland, members of the Catholic Church spoke out in favor of human rights. In 1984, one Polish priest was murdered by the Polish secret police.

Herman and Chomsky compared the media's coverage of the murder of one Polish priest (a victim of our enemy, hence a worthy victim) to its coverage of the murder of 100 priests and nuns in Central America (victims of our friends, hence unworthy victims). Herman and Chomsky merely added up the amount of coverage the murders received in the mainstream American press. Their sample was the *New York Times*, *Time*, *Newsweek*, and *CBS News*. They added up column-inches and prominence of stories (front page or not) in the printed material, and airtime and

prominence (lead story or not) for TV news. The murder of the Polish priest elicited outrage in the American press, garnering headlines and top-of-the-hour coverage. The priest was eulogized as a victim of the evil empire, and the American press pointed its finger straight at the Kremlin.

The cumulative coverage of the murders of 100 priests and nuns in Central America did not exceed the coverage of that Polish priest's murder. There were no eulogies or humanizing coverage for the priests and nuns murdered in our client states, and the American media could never seem to identify the murderers. According to our media and government, they were anonymous death squad members, murdering for the hell of it, not connected to our client governments in any way. When four American nuns were murdered (when it could not be denied that the El Salvadoran National Guard did the deed, after raping the women), Alexander Haig and Jean Kirkpatrick went so far as to say the women deserved it, that they were working with El Salvadoran guerillas. Those statements by our government officials have since been proven bold-faced lies. Herman and Chomsky dryly presented their data and concluded that a dead Polish priest was more than 100 times as media-worthy in America as a dead Central American priest or American nun murdered by our friends.

The media bias presents itself in many other ways. David Croteau and William Hoynes performed an analysis on what many regarded as the best news show on television, *Nightline* with Ted Koppel. Their analysis was published in *By Invitation Only: How the Media Limit Political Debate*. Croteau and Hoynes stated that analyzing debate content was subject to a wide range of interpretation. They focused on something not subject to interpretation: their race, gender, occupation, nationality, if they appeared in the program alone or with somebody else, how long were they on, etc.

The results' publication created a stir in media circles. Their study of several hundred *Nightlines* showed that of *Nightline*'s guests, 82% were male, 89% were white and 78% were government officials, professionals and corporate representatives.^[13] They also presented the same data taken from another highly respected news show, *The MacNeil/Lehrer Hour*. Those numbers were even more skewed, at 87% male, 90% white, and 89% government officials, professionals and corporate representatives. From that data, a strong case was made for the shows' biases. In nutshell, those "news shows" were little more than platforms for the rich and powerful to air their views. The study was far ranging, and something this essay cannot do justice to. It was a sophisticated piece of analysis and difficult to deny.

When confronted with the study's results, Ted Koppel came up with a number of rationales for the show's bias. The main defense was that the rich and powerful men who ran the country were invited to the show, and when White House administrations changed, those new powerful people would be interviewed. Koppel handled his interviewees with kid gloves, and was even buddies with some of them, such as Henry Kissinger, one of his most frequent guests. [Fairness and Accuracy in Reporting's](#) (FAIR) Jeff Cohen said their response,

"...could have been uttered by a Soviet TV news programmer - pre-glasnost. American television news is not supposed to be strictly a forum for representatives of the state. FAIR does not criticize *Nightline* for inviting policy makers to appear on the show, but for its exclusion of forceful American critics of the policy. Critics, and critical sources, are part of a news story."[\[14\]](#)

In *Manufacturing Consent*, Herman and Chomsky found a tripled example, not merely a paired one, which aptly demonstrated the situation. In Central America, the nations of Guatemala, El Salvador and Nicaragua are neighbors, lined up along the narrow strip of land that joins the continents. Guatemala and El Salvador were favored client states of the United States during the 1980s, El Salvador receiving six billion dollars in military and other aid from the United States, while Ronald Reagan called it a "fledgling democracy." By almost any standard applied to Guatemala and El Salvador during those years, they had two of the 20th century's most brutal and murderous regimes. The only reason the leaders of those governments did not attain the bloody stature of Hitler, Stalin and other despots was because their nations were relatively small.

Guatemala and El Salvador were terror states that butchered their populations. The butchers that ran them were U.S. puppets, and the leaders of their "security forces" were largely trained in the United States at the School of the Americas and other facilities. When they graduated from their American schools, their first acts upon returning home were often killing women and children in sadistic fashion. Here is an example of the kinds of activities engaged in by America-trained El Salvadoran soldiers, used to keep the population terrorized, written by human rights activist and Catholic priest Daniel Santiago,

"People are not just killed by death squads in El Salvador - they are decapitated and their heads are placed on pikes and used to dot the landscape. Men are not just disemboweled by the Salvadoran Treasury Police; their severed genitalia are stuffed into their mouths. Salvadoran women are not just raped by the National Guard; their wombs are cut from their bodies and used to cover their faces. It is not enough to kill children; they are dragged over barbed wire until the flesh falls from their bones and their parents are forced to watch...The aesthetics of terror in El Salvador is religious."[\[15\]](#)

Santiago reported the story of a peasant woman returning home to find her family seated around the kitchen table. Sitting around the table was her mother, sister and three children. Placed on the table in front of each of them were their decapitated heads. Their hands were placed on their heads, as if each body was stroking its own head. The El Salvadoran National Guardsmen who created that artistic tableau found it difficult for the youngest actor in the scene, an eighteen-month-old baby, to keep its hands on its head, so they nailed its hands onto its head. Completing the scene, in the center of the table was a large plastic bowl, filled with blood.[\[16\]](#) Many Americans

wonder how people such as Jeffrey Dahmer walk the earth. America trains them.

Dan Mitrione, a CIA man and boyhood friend of James Jones of [Jonestown](#) fame, was a torture specialist. He considered torture an art form. Mitrione's motto was "The precise pain, in the precise place, in the precise amount, for the desired effect." Mitrione was a true torture professional, stating, "A premature death means a failure by the technician...It's important to know in advance if we can permit ourselves the luxury of the subject's death." Mitrione taught his Uruguayan pupils how to refine the art of torture. Mitrione had slender wires brought in by diplomatic pouch. The wires were used for one of Mitrione's specialties, inserting the wires between an interrogation victim's teeth, to administer an electric shock, which produced exquisite pain. A Uruguayan commission looked into the use of torture by the government against its own citizens. Among the tortures the commission discovered were electric shocks administered to genitals, needles under fingernails, putting testicles in vices, and using torture on pregnant women and women nursing infants. Mitrione built a soundproof torture chamber in the cellar of his home in Uruguay. In 1970, a group whose members he was torturing kidnapped Mitrione. They held him for ransom: the return of 150 of their people. When Uruguay refused, with the firm backing of the United States, they killed Mitrione. Mitrione was eulogized in America by the White House (the Secretary of State attended his funeral) as a devoted servant of "peaceful progress." His daughter called him "a great humanitarian."[\[17\]](#)

The satanic atrocities committed against its citizens were merely days at the office for the El Salvadoran security forces. Father Ignacio Martín-Baró was one of six Jesuit priests murdered in an El Salvadoran massacre in 1989, which finally spurred the U.S. media to take a deeper look into El Salvador's "fledgling democracy," after nearly a decade of Reagan-inspired butchery. A few months before he was murdered, Martín-Baró gave a talk in California regarding "The Psychological Consequences of Political Terrorism." His first point was that the most significant terrorism is that [inflicted by the state onto its domestic population](#). His second point was that terror's purpose was serving the elite needs of that nation, as the terror is part of a "government-imposed sociopolitical project." His third point was briefly addressed, but Chomsky said it was the most important one for his Californian audience, which was:

"The sociopolitical project and the state terrorism that helps to implement it are not specific to El Salvador, but are common features of the Third World domains of the United States, for reasons deeply rooted in Western culture, institutions, and policy planning, and fully in accord with the values of enlightened opinion. These crucial factors explain much more than the fate of El Salvador."[\[18\]](#)

About 75,000 civilians died during El Salvador's reign of terror. In Guatemala, the reign of terror began in 1954 when the U.S. and CIA overthrew their democratic government on behalf of the company that brings us Chiquita bananas. The Guatemalan death toll is about 200,000 people,

and the killing escalated in the 1980s. The same kinds of atrocities found in El Salvador could be seen in Guatemala, with the soldiers being trained in the United States, using U.S. weapons, with money and arms flowing from U.S. coffers.

While the butchery was happening in El Salvador and Guatemala, one Central American nation finally overthrew the U.S.-sponsored butchers. In 1979 in Nicaragua, the Sandinista revolution overthrew the Somoza regime, which was a brutal dictatorship that the United States propped up for generations. As with any military revolution, there are no choirboys on either side. What happened in Nicaragua was the closest that any Central American nation had ever come to democracy. The Sandinistas have some things to answer for, such as their treatment of the natives of the Miskitia region, but the Sandinistas' great crime was the same crime Castro committed. It was the same crime that Arbenz of Guatemala, Allende of Chile and [Torrijos of Panama](#) committed. Their crime was that committing themselves to the welfare of their nation's average people. They committed themselves to succoring the poor. They embarked on creating a society that took care of everybody, where the people would share and share alike. They took the rhetoric of America's [Founding Fathers](#) seriously, and believed that all people were created equal and deserved equal opportunity and a minimum standard of comfort.

Those who wish to challenge that characterization of those Latin American leaders are encouraged to study the parallels of those leaders, what they strove for, what they succeeded at, and what the U.S. position was towards them. U.S. rhetoric always accused them of being communist and inferred they were Soviet pawns, but in looking at the early days of each movement, they obviously had no relationship to the Soviet Union, and even their ideological links were tenuous. Arbenz was a fan of Franklin Roosevelt and consciously tried structuring a New Deal-style economy. With that fifth media filter mentioned by Herman and Chomsky working, any notion a nation had of shedding the United States' neocolonial yoke was [rubber-stamped "communist,"](#) setting the stage for attacking and destroying the social movement. The U.S. goal was always putting the plutocratic elite back in charge in those nations, while the American business interests raped them, although the anticommunist "religion" sometimes even took precedence over that.

Allende was a committed Marxist, yet had no allegiance to the Soviet Union. As with virtually every other case of American hysteria over the Soviet threat, there is no credible evidence that the Soviet Union had anything to do with Allende's rise in Chile. The Soviet Union even cautioned Chile that with its commitments to Cuba, it really could not spare Chile much time or effort. The evidence shows that while Allende's program would "hurt" American mining and other interests in Chile, the real reason that Henry Kissinger went on the warpath to overthrow Allende was not because his policies would hurt U.S. business interests. Kissinger's real passion was the "ideology" of it.[\[19\]](#) An *elected* Marxist in the Western Hemisphere was intolerable. A generation of the bloody Pinochet dictatorship left Chile in ruins, with the seventh greatest national income disparity on earth, tied with Kenya and Zimbabwe.[\[20\]](#) The plutocratic elite thinks that life there is great, but do not ask the average Chilean citizen how great it is.

Herman and Chomsky compared the nature of Guatemalan, El Salvadoran and Nicaraguan (Sandinista) elections and how free they really were, based upon independent observation. They

then compared that reality to how the American mainstream media portrayed them. In Guatemala and El Salvador, the elections were frauds. One reason was because the U.S.-backed dictatorships slaughtered the political opposition. Anybody who thought of running for office on any kind of humanitarian platform could expect a death squad visitation. Any media organization that dared criticize the dictatorships was wiped out. Blowing up their headquarters and murdering the editor were handy ways to do it. On Election Day, peasants could vote for the dictatorship of their choice. It was a one party system. In El Salvador, voting was mandatory. They could vote for their candidate if he/she was still alive. Guatemala had a similar situation. Nicaragua, on the other hand, was a nation under siege from the U.S.-financed Contra terror war. The CIA engaged in its standard activities of paying off anybody in Nicaragua who could help destabilize the government, running its own candidates in the elections, etc. In light of the outside pressure that Nicaragua was under, its elections were arguably fairer than any elections the United States has ever held.

Herman and Chomsky painstakingly analyzed the mainstream media's accounts of those elections. The media continually painted the El Salvadoran and Guatemalan elections as paragons of fairness, and constantly attacked the Nicaraguan elections as shams. For three nations sitting along the same strip of land, with the situations so starkly different, the hypocrisy of the American press was spectacularly laid bare.

In *Manufacturing Consent*, the media's performance in covering the Southeast Asian wars was also analyzed. In any war, the first casualty is the truth. Noam Chomsky, among others, makes very impressive arguments that the so-called war in Vietnam to "save them" from communism was anything but that. It was an invasion designed to keep them [enslaved to a neocolonial system](#). There is such large body of impressive literature on that subject that cannot be rationally denied, although it has never been admitted [or even discussed](#) in the American mainstream media before. America has not admitted that it invaded Vietnam. Similarly, the Soviet Union did not admit that it invaded Afghanistan. We were "saving" those invaded countries, although the Soviet Union had much more excuse than the United States had, and a key U.S. official recently bragged that he helped [lure the Soviet Union into the "Afghan trap."](#)

Some "side effects" of bludgeoning Vietnam were the secret wars carried out in Laos and Cambodia by the United States. Laos and Cambodia were two sleepy nations, among the poorest on earth, wanting to be left alone. The United States could not allow that, in its noble fight against communism. It began secretly carpet-bombing Cambodia in 1969. It was not a secret to the Cambodians, but the American press kept it secret from the American people. The five-year "war" killed about 600,000 people in a nation with a population less than eight million. Two million were made refugees, with about a million of those predicted to die in the war's aftermath due to disease, starvation, etc.[\[21\]](#)

While the United States was fighting communism and bludgeoning Southeast Asia, there were also victories. In 1965, the United States assisted a military coup in nearby Indonesia. The military strongman Suharto came to power. Communism was a "threat" in that region. The peasants thought that communism was a great improvement over the colonial oppression they received at Europe's hands. The United States [hired death camp Nazis after World War II](#). America would

embrace anybody as long as they were "anticommunist." Suharto's rise is an excellent case in point.

Before Suharto seized power, there was a large peasant-based communist party in Indonesia, largely composed of ethnic Chinese. "Communist" has the same root as the word community, and community was the operative word for those communists. Suharto's plan to consolidate his power was eliminating the political competition. The Mafia was gentler. Suharto had CIA help in executing his plan: murder every communist in Indonesia. The CIA used its intelligence methods to draw lists of communists for Suharto's troops to roundup. Then the slaughter commenced. It is estimated that between 500,000 and 1,000,000 people were wiped out by Suharto's armed forces. [22] It was more than just a slaughter. It was an ideological and instructive one. A *New York Times* account said:

"Nearly 100 Communists, or suspected Communists, were herded into the town's botanical garden and mowed down with a machine gun...the head that had belonged to the school principal, a P.K.I. (Communist Party) member, was stuck on a pole and paraded among his former pupils, convened in special assembly." [23]

The [postwar collapse of Europe's empires](#) lasted for many years. The Portuguese were able to hold onto East Timor until the 1970s, partly because the East Timorese were so tame and easygoing. In the late colonial year of 1975 there was a popular revolution, and the winner was a peasant-based leftist party named FRETILIN. East Timor was on the east end of an island a few hundred miles north of Australia. The west end was part of Indonesia, a [Dutch colony](#) that gained its independence in 1949. Indonesia was a neocolonial nation, although the generals who skimmed the economy's cream were excessively greedy even for the foreign investors, demanding steep bribes and kickbacks. [24]

The dust had barely settled on the East Timorese revolution when Indonesia invaded on December 7, 1975. As fate would have it, U.S. President Gerald Ford and Henry Kissinger were visiting with Suharto when the invasion was mounted, so Indonesia put off its invasion until Ford and Kissinger left the country, apparently to prevent embarrassment for the United States. Within a few hours after Ford and Kissinger's departure, the invasion began. Nearly as many soldiers invaded Dili, the capital city, as there were residents of the city. The soldiers killed everything that moved. Indonesia admitted that it had no legal claim on East Timor, but was taking it anyway. The United States and other nations such as Australia not only stood by and watched, but actively assisted Indonesia's effort. During those years, Daniel P. Moynihan was the U.S. ambassador to the United Nations, and he actively stifled any U.N. response to the Indonesian invasion of East Timor. Moynihan would later write in his memoirs,

"The United States wished things to turn out as they did and worked to bring this about. The Department of State desired that the United Nations prove utterly ineffective in whatever measures it took. This task was given to me, and I carried it forward with no inconsiderable success."[\[25\]](#)

The same year that East Timor was invaded, Pol Pot came to power in Cambodia. The United States' "secret war" in Cambodia created the devastation that brought Pol Pot to power. If not for the exploitation and violence of the French, followed by the violence of the Americans, Cambodia would have stayed a sleepy nation of several million people, mostly living in the jungle. France and America caused the tragedy of Cambodia.

When Pol Pot came to power, the American media immediately began a drumbeat of genocide, pinning all those American-caused deaths from the bombings, and deaths to come from the aftermath, onto Pol Pot's tally sheet. Many Cambodians did die in Pol Pot's programs, but in the American media nobody heard a whisper about the Cambodian blood on America's hands.

Meanwhile, the slaughter in East Timor progressed. Indonesia was using American weapons. Although the American media gave substantial coverage of East Timor's political ferment that led to the revolution, Indonesia's invasion and resultant genocide was not covered at all. In a few months, 60,000 of the original 690,000 inhabitants of East Timor were dead. It reached genocidal proportions after that, and as the carnage became the worst, the American media was the most silent. Indonesia began running out of bullets a couple years into their invasion, and that human rights saint, Jimmy Carter, hastily signed a bill to give Indonesia more arms. As Noam Chomsky says, in the case of East Timor the American media was not only guilty of distorting reality (or hiding it), they were actually complicit in genocide.[\[26\]](#)

If the American people had known what happened in East Timor, maybe they would not have supported it, but the [Iraqi death toll](#) is far less secret than the death toll in East Timor. It would have been more difficult to portray East Timor as a threat to American security, but Iraq, Grenada, Panama, Libya, Nicaragua and Vietnam possessed no threat either. Although the death toll is generally considered about 200,000 people, the death toll in East Timor may have reached over 300,000, for the greatest proportional genocide of an ethnic group in the 20th century.[\[27\]](#)

There are "gentler" paired examples to demonstrate the dynamics at work. One was a pair of military missile attacks on commercial airliners. The Soviet Union shot down one, and the United States shot down another. In 1983, a South Korean passenger jet flew hundreds of miles off its course, flying over sensitive Soviet airspace at night. The Soviet Union shot it down. Five years later, an Iranian airliner took off from Tehran in broad daylight, flying over the Persian Gulf. The United States shot down that airliner. They make an instructive paired example. The Soviet shooting was far more understandable than the United States'. Soon after the Soviet attack, the United States had intelligence showing that the Soviet Union thought it was shooting down a spy plane.

How did the American media respond to those tragedies? The U.S. media's condemnation of the Soviet shoot down was universal. Dan Rather called it a "barbaric act." *Nightline* devoted eight consecutive shows to the event. Koppel had viewers call in, asking whether the Reagan Administration "should take strong action against the Soviets." More than 90 percent said yes. The portrayal of the Soviets as inhuman monsters fit perfectly with Reagan's propaganda objectives, whipping up support for his Star Wars plan. On *Nightline*, right wing hawks dominated the guest list - George Will, William F. Buckley, William Safire, Jesse Helms and others. Condemnation was nearly universal, and Koppel himself chimed in, stating there was not "any question that the Soviet Union deserves to be accused of murder, it's only a question of whether it's first degree or second degree." Right-winger Terry Dolan even stated, "anyone who would suggest the U.S. would ever consider shooting down an unarmed civilian plane is downright foolish and irresponsible."

Five years later, America was faced with *exactly* that. In what was an obvious prelude to the Gulf War, the *USS Vincennes* had been playing bully of the Gulf, trying to provoke Iran into military action. When an airliner flew over the Persian Gulf, the trigger-happy captain of the *Vincennes* blew it out of the sky. What the Soviet Union did was a hundred times more justifiable than what the United States did, but the American media went into overdrive as it explained away the Iranian airliner's downing, which killed 290 people. It was a tragic accident in the American media. Nobody in the mainstream media could see *any* parallel between the downings of the Korean and Iranian airliners. It was as if the Korean Airliner tragedy never happened, flushed down Orwell's memory hole. In *Unreliable Sources* they laid the editorials of the *New York Times* side-by-side. [28] It was not even enough to call it a tragic accident. The *New York Times* editorial, as with the media frenzy the day after the [U.S. bombed the Baghdad bomb shelter](#), killing hundreds of women and children, tried spinning the blame onto Iran. To wit,

"The episode also raises stern questions for Iran. If the Navy's version of events is largely correct, blame may lie with the Iran Air pilot for failing to acknowledge the ship's warnings and flying outside the civilian corridor. Iran, too may bear responsibility for failing to warn civilian planes away from the combat zone of an action it had initiated." [29]

There were a few big lies in that editorial, such as the airliner had strayed from its legal route (it had not) and that Iran was mainly responsible for the Gulf hostilities, with the U.S. playing selfless cop (a laughable notion).

The sorry state of the American media has never been more apparent than the years between 9/11 and the 2003 invasion of Iraq. Right wing attack dogs such as Rush Limbaugh, Sean Hannity, Ann Coulter and Bill O'Reilly had free reign to attack anybody who did not wave their flags fervently enough. A right-wing campaign got [Peter Arnett](#) fired from the job he obtained *after* he lost his job at CNN over the Tailwind flap, because he had the audacity to speak some *truth* about current

events. Many other journalists lost their jobs for daring to contradict the right wing propaganda barrage. People such as *New York Times* reporter Judith Miller became White House mouthpieces, spraying Bush administration disinformation across America's media as if it were fact, to conjure American support for the invasion of Iraq. When some people could no longer keep quiet about the Bush administration's [daily lies](#), Miller and other journalists were accomplices to the crime of exposing Valerie Plame, the CIA employee and wife of Joseph Wilson, as vengeance for Wilson's exposure of the Bush administration's lies about Iraq trying to procure uranium from Africa. The American media has descended to around the level of the Soviet media, pre-Glasnost, except the American people largely still drink from that poisoned well, thinking it provides the "news."[\[30\]](#)

The structural analysis of [Noam Chomsky](#), [Edward Herman](#), [Fairness and Accuracy in Reporting](#), Michael Albert, [Michael Parenti](#) and many others of their stature is compelling. Structural analysis probably explains more facets of the dynamic than anything else, although the "conspiratorial" perspective (conscious manipulation toward a desired end) can also bring important dynamics into view.

Our media, as with our government, is owned by the rich and powerful. Their primary mission is manipulating the public, not informing them. They exist to make money for their owners and serve their interests. How *could* it be any other way?

Although an American president will probably never don clothing as an Indy Car driver does, covered with patches announcing his corporate sponsors, most Americans realize that the rich run Washington D.C., which is the main reason why Americans have the "free world's" lowest voter turnout. They realize it does not matter whom they vote for, as the same people own them all, something that Chomsky has observed. The same corporations that run the government legally own the media. Ben Bagdikian's *The Media Monopoly* has been prescient in predicting the current trend towards a media monopoly. It is largely here already, and is the logical conclusion for any capitalistic society. That is the nature of capitalism, and the rapidly evolving global media monopoly is merely one feature of global capitalism.

Probably the most widely read political book of the 20th century was George Orwell's *Animal Farm*. I had to read it in eighth grade, as have many millions of American schoolchildren. *Animal Farm* was an allegory on the Russian Revolution and how the Soviet Union performed its mind control and social control of the masses. Some animals being "more equal than others" is an immortal example of how nonsense is presented as accepted fact. Orwell began writing *Animal Farm* in 1943, when the Soviet Union was the ally of Great Britain and the United States in the war against Nazi Germany. *Animal Farm* originally had a hostile reception among the British intelligentsia because it made fun of the British ally of the moment, [Uncle Joe's Soviet Union](#). Orwell had difficulty finding a publisher. Orwell wrote a preface to *Animal Farm*. In it, he wrote about how the Soviet Union suppressed dissent and silenced unpopular ideas by direct government intervention, but the West produced the same outcome by different means. In the West, dissident writing is censored not by the government, but by the commercial interests, voluntarily. Orwell noted that genuine but dogma-contradicting news is silenced by the British press not through government

intervention but a “general tacit agreement” in the press that “‘it wouldn’t do’ to mention that particular fact.”^[31] Orwell wrote in his preface that the “[patent medicine racket](#)” was a pressure group that could censor unflattering news about itself, as could the Catholic Church. Orwell wrote regarding dogmatism,

“To exchange one orthodoxy for another is not necessarily an advance. The enemy is the gramophone mind, whether or not one agrees with the record that is being played at the moment.”^[32]

Orwell wrote that freedom of the press was almost non-existent in the British press of his day, and was not due to outside pressure, but the press themselves, censoring that which they did not see fit to print. As A.J. Liebling wrote in 1960, “Freedom of the press is guaranteed to those who own one.”^[33]

As if to demonstrate the truth of Orwell’s preface, the publishers of *Animal Farm* completely censored it. Orwell’s preface was completely missing in the original edition, and was not discovered and published until 1972. The censorship exists to this day. I have picked up several editions of *Animal Farm*, and the only version that even produces Orwell’s original preface is the Everyman’s Library edition, and even then it is not restored to its rightful place, but put in an appendix. In the wake of the World Trade Center attacks, Orwell’s 1984 [makes for timely reading](#).

There are other examples of the totalitarian nature of the Western press, although it calls itself free. Mark Twain is known for his fiction such as *Tom Sawyer* and *The Jumping Frog of Calaveras County*. Virtually unknown are the many [anti-imperialist writings of the last fifteen years of his life](#), which gave the ruling class in Europe and America a black eye. Twain probably thought it was his most important work, but it was completely censored in the West for eighty years, until an obscure book reproduced them in the 1990s, to quickly disappear from circulation. I have tried obtaining that book for years, and have never been successful. That level of suppression was probably not even possible in Stalin’s Soviet Union. When Twain wrote *King Leopold’s Soliloquy* in 1905, which outlined the genocide taking place in the Belgian Congo, with American industrialists eagerly sidling up to the trough as investors, the suppression was so complete by the American media establishment that it was never published in the United States, except as a pamphlet issued by some Congo reform groups.^[34] I have tried getting my hands on it for years, and have never been successful. The “free market” [censorship of Zora Neale Hurston’s work](#) is one of countless instances of how lesser-known authors have been regularly censored in the West.

The notion of a “free press” is one the biggest fabrications in American history - a myth concocted by the media itself. The biggest lie that our media serves up is the self-serving pretense that it is objective, merely seeking the truth. All the first amendment says is that the government cannot tell

the media what to write or not write. America has never really had true freedom of speech. It is the world's freest in significant ways, but it still is not *that* free, as [Mumia Abu Jamal](#), a journalist who has spent many years on death row, knows well. The American media is also the most manipulative of its consumers. We may have relative freedom to speak, but it does not mean that anybody will hear us. Ever since the [Sedition Act was passed in the 1700's](#), free speech has had a rough ride in America. During World War I, the [Espionage Act was passed](#), making it illegal to speak out against the war, and the U.S. imprisoned hundreds of Americans for the crime of speaking out.

If the same interests that run the government also own the media, how free can the media truly be? They are stenographers to power.[\[35\]](#) On a lighter side, the funniest and perhaps the best political cartoonist I have ever seen, [Tom Tomorrow](#), summarizes the American news process in a hilarious cartoon, below.

More Big Lies: History

Who controls the past controls the future: who controls the present controls the past. - George Orwell, 1984.

As Orwell said, whoever writes the news also writes the history. My historical investigations, which have taken several years, were to see if anything I had been taught as a student was true. My media studies were necessarily complemented with studying history and politics. They cannot be effectively separated. If you are an American and more than forty years old, compare this site's essay on [Columbus](#) to the tales you were told in school. The man who initiated history's first complete genocide of millions of people became an American national hero.

As [James Loewen](#) stated in his best-selling *Lies My Teacher Told Me*, the hero in American high school textbooks is America. American history is designed to make unthinking patriots, ready to march off to war and otherwise defend our great nation. It is an exercise in nationalism. Those history lessons in school are warm ups for the continual stream of what the media produces for our

consumption each day.

I was raised in Ventura, California, and attended Junípero Serra elementary school in grades four through six. Serra founded the California mission system, and is credited with bringing "civilization" to California, a land of triple heritage. The names of the towns reflected that heritage. Ventura was named after the Spanish mission founded there in 1782. A couple miles from my home was the town of Saticoy, named after an extinct local Indian tribe. A couple miles in another direction was Oxnard, named after white settlers who built a beet-processing factory. The Chumash tribe occupied the coastline from Ventura to San Luis Obispo, and in fourth grade, our teacher read to us *Island of the Blue Dolphins*, a story of the Chumash and their life, which included settling the islands off the coast, now known as the Channel Islands.

That same year we watched a film of Junípero Serra's life, the man who established the mission system. The film depicted Serra as a gentle man, tirelessly "civilizing" the poor natives of California, bringing them God's Word. We also took field trips to the Ventura and Santa Barbara missions. That same year we performed a play for our parents about the Gold Rush. My role was a prospector's mule, and I enjoyed running around on all fours, braying loudly.

When I was in college, I attended Cal Poly at San Luis Obispo, another mission town founded by Serra. During my last year of college, I worked as a graveyard shift cook at a restaurant a couple blocks from that mission in the center of town. After graduation, I ended up living and working in Los Angeles, another mission town. For a couple years, I audited the city of Santa Barbara, another mission town. In Santa Barbara there is a large, preserved religious facility next to city hall, and the Spanish heritage is evident everywhere. Serra and his missions were *very* ubiquitous aspects of my early years. The schools in Ventura were mainly named after other Spaniards. Half of my Serra school chums attended Balboa junior high school, named after the [conquistador who "discovered" the Pacific Ocean](#). Another junior high school was named after [Cabrillo](#), the first Spaniard to "discover" the California coast. The two public high schools were Buena and Ventura, the two halves of Ventura's legal name San Buenaventura (literally, the saint of good venture). I attended the latter school.

I always heard what a great man Serra was, and how he pioneered "civilization" in California. The tales of Serra and those pioneering 49ers were part of a general trend of celebrating the "pioneers" all over the Western United States. I lived in Houston for a year when my father worked for NASA. Texas also had a triple heritage, but just as in California, I recall little mention of the natives. In Texas, the exploits of Sam Houston and the Alamo story were the standard schoolboy fare. I visited the monument at San Jacinto, which memorialized Houston's great feat of slaughtering nearly a thousand sleeping Mexican soldiers in less than twenty minutes, [winning Texas' battle for "independence"](#) in 1836.

While I grew up in Ventura, I took three years of California history. Other than *Island of the Blue Dolphins*, the natives were rarely mentioned, and how they passed from the scene was never discussed. The wresting of California and the entire American Southwest from Spain and Mexico was also lightly covered. The emphasis was usually on the 49ers, the pioneers, the tragedy of the

Donner party, and the Spanish mission heritage. My historical investigations have researched just how Ventura came to have a triple heritage, comparing what I learned through research to what I was taught in school.

The [coming of the Spanish](#) was a horror without precedent in world history. Spanish disease, greed, slavery, violence and famine depopulated entire regions. After a century of uninterrupted plunder, the New World's natives were reduced to about 10% of their "prediscovery" population.

When the [English](#) realized there was no easy gold in North America, they came to settle the land, bringing their women with them. Although raping the native women was not the pastime for the English that it was for the Spanish, it also reflected a difference in attitude. The Spanish were extremely racist, and the lighter a mestizo's skin, the better off he/she was. The Spanish generally saw the natives as human, but inferior. The English usually saw the natives as inhuman savages.

I found that there really was an original Thanksgiving, where the Pilgrims feasted with the Wampanoag who helped them survive. The feast, with sports and games being played, lasted a few days. It really happened.

What did not make my grade school history books was that the armed Pilgrims had already chased local Indians, stolen their corn and robbed their graves before they settled at what is now called Plymouth. Plymouth was the site of the Pawtuxet Wampanoag tribe that Captain [John Smith's](#) men plundered. As with Columbus, the English had a practice of kidnapping natives to establish themselves in the New World. The strategy was to kidnap natives, enslave them, teach them English in Europe, and then return with a native interpreter to help pave the way for invasion a little more gently than simply using arms. The [Portuguese](#) used that strategy in the African slave trade. Squanto, the man who taught the Pilgrims survival skills, was a Pawtuxet Wampanoag captured by one of Smith's men in 1614 and was scheduled for slavery in Spain along with dozens of his tribesmen. Selling the natives into slavery was a favorite moneymaker for the European invaders for centuries.

When Smith left for Europe, his men left behind a calling card (it also may have been shipwrecked French sailors who left it). A European-introduced disease killed ninety percent of the Wampanoag tribe. It may have been an intentional introduction of disease.[\[36\]](#) Squanto arrived back at his tribal grounds in 1619 as an English expedition's interpreter, and found that nearly his entire village had died from the epidemic. When the Pilgrims invaded in 1620, they "settled" where Squanto's tribe had lived. The Wampanoag were rivals of the neighboring Narragansett tribe. When the Pilgrims arrived, the regional balance of power had been drastically altered, since the Narragansett had not suffered a European-introduced plague quite yet, they were trading with the Dutch, and Massasoit (the Wampanoag chief) saw a potential beneficial alliance for the remnant of his tribe.

For ten years, the settlers (about 300 of them) and Wampanoag lived in peace. When word got out about the paradisiacal life of the settlers and their benefactors, Puritans began coming by the boatload.[\[37\]](#) The original Pilgrims, to their credit, respected their benefactor, and in later years as the new settlers took more and more land that was Wampanoag, the original Pilgrims protested that

violation of their relationship with Massasoit. Those protesting Pilgrims soon found themselves expelled from their church.

Although the Pilgrims got along with the Wampanoag, by instigation of Massasoit, Miles Standish and friends murdered a number of chiefs of the neighboring Massachusetts tribe. Around New England, the natives were finding out about European benevolence. In 1641, the Dutch governor of Manhattan offered the first scalp bounty.

Eventually, Thanksgiving took on a more macabre meaning. The white invaders would have a Thanksgiving celebration each time they wiped out a native tribe. Europeans introduced a new tactic to the annals of invasion. They would surround a village at night, burn it and kill every man, woman, and child in it. At other times, the women and children of a working age (over 14 generally) would be sold into slavery and the rest slaughtered. An early and notorious instance of that tactic was the burning of the fortified Pequot village on the Mystic River in 1637, by English soldiers and their [Narragansett and Mohegan](#) native allies. They surprised the sleeping village of several hundred, burned the village to the ground and killed the fleeing natives. Neither women nor children were spared in the massacre. Native allies who had not already fled (not really having the stomach for war) were horrified at the English savagery. Captain John Underhill, who led the slaughter, would later find justification for killing those women and children by citing Kind David's Old Testament genocidal slaughters.[\[38\]](#)

Manhattan's churches declared the [second Thanksgiving](#) after a successful raid against the natives in what is now Stamford, Connecticut, where Underhill wiped out another sleeping village, killing about 500 people. Thanksgiving celebrations, given when natives were wiped out, were getting out of hand around the colonies, and eventually George Washington tried to bring some order to the affair, and named one day a year as Thanksgiving. Abe Lincoln declared the official Thanksgiving Day that we celebrate today. The day Lincoln declared the national holiday he sent troops against the Sioux in Minnesota.

Massasoit helped the Pilgrims stay alive. It was not because he was a great humanitarian, although kindness was evident at times. He thought the white people would make good allies in the region's tribal struggles. Massasoit had considerable diplomatic skill, and there was relative peace during the last forty years of his life. Although the natives were being decimated across what is now called New England, Massasoit and the Pilgrims forged a relatively peaceful and mutually beneficial arrangement.

When Massasoit died in 1661, however, his tribe was doomed, and the insatiable European greed for land initiated a war with his successor son, Metacom, called King Philip by the Europeans. One reason for the war was the native suspicion that the Puritans were intentionally introducing European disease amongst them to further clear the land. Germ warfare is an integral part of European history, and it is not farfetched to think that the English began that practice in their earliest days of invading North America.[\[39\]](#) [King Philip's war in 1675](#) was one of the few instances of a relatively successful war carried out by New World natives. It ended in about a year with the destruction of nearly the entire Wampanoag tribe, and Metacom's head was displayed on a pike at

Plymouth for 24 years. Thus ended the tribe that welcomed the Pilgrims to America,[\[40\]](#) also ending one of the most peaceful relationships that the European invaders and natives had: complete genocide was staved off for more than fifty years. Elsewhere genocide came much more swiftly, and befell all native tribes that the [European invaders encountered on today's United States East Coast](#).

The genocide of the natives of eastern North America is a horrific tale. When America won its independence, it [continued marching across the continent](#), with its deceptive treaties used as a means of swindling the natives out of their land, using a strategy that [George Washington](#) originally proposed.[\[41\]](#) Washington's profession was a surveyor, but surveying native lands for acquisition was really Washington's profession. Washington is far from the only murderous thief glorified in American myth. [Daniel Boone](#), that grand pioneer of Kentucky, was a land speculator, just like Washington. Also, as with Washington, Boone specialized in killing natives and taking their land. Boone participated in intrusive military campaigns against natives, such as George Rogers Clark's genocidal invasions.[\[42\]](#) Whether the natives were "friendly" or "hostile" often made no difference to the marauding white men.

In great irony, the [Iroquois Confederacy](#) inspired the American Constitution in no small measure, and George Washington initiated exterminatory campaigns against them. Washington's armies were particularly brutal. Scalping living natives was some of the fun that Washington's men enjoyed, but skinning natives from the hips downward procured the ultimate frontiersman's apparel: native-skin trousers.[\[43\]](#) Later, [Andrew Jackson](#), another American President-hero, had his troops cut off several hundred native noses (men, women and children) to commemorate the body count of a [successful "battle"](#). Jackson supervised his men as they stripped native skins to make into bridle reins, and Jackson even saw that trophies cut from native corpses were given to the "ladies of Tennessee" as souvenirs.[\[44\]](#) The issue of dispossessing the natives of their land was the leading issue of Jackson's presidency, but a modern historian such as [Arthur Schlesinger](#) could write a Pulitzer-Prize-winning book about Jackson (*The Age of Jackson*) without mentioning *one word* about Jackson's Indian policy.[\[45\]](#)

Similar to the [Spanish soldiers](#), the favorite quarry of the American frontiersman was human. Boone's mythmaking biographer, John Filson, once wrote that Boone killed two Indians with one bullet. Frontiersman Adam Poe was said to have relished hunting "Injins" as the best "game," more satisfying than hunting bears and cougars.[\[46\]](#) America's greed for land and gold [propelled the empire across the continent](#), wiping out the natives in its way, and was not much different than the Romans' modus operandi. Concocting Ideology to turn the natives into subhumans was an essential and time-honored tactic.

I eventually discovered there was more to the Padre Serra story than I was taught in grade school. Serra was beatified in 1988, and is up for sainthood today. He was the chief inquisitor in northern Mexico, called New Spain in those days. Among his duties was supervising the torture of confessions out of witches. Historians consider the mission system that Serra founded the first prison system established on what became American soil. Those lovingly preserved missions were

the first institutions of the genocide of California's natives.

The gentle climate of California's coast made for easy living. The natives did not need clothes for half the year, and life was easy. They were a gentle people, and among them violence was rare. The missions were their "first introduction to civilization." They had already been treated to the white man's diseases. California, as with the rest of the New World, is a source of controversy regarding its pre-Columbian population. Some scholars think it was as high as a million people. When [Cabrillo "discovered" the California coast](#) in 1542, his welcome was not always warm, as natives attacked him. The reason for the harsh welcome was that Spaniards had already been marauding through the area, killing the natives. Spaniards pillaged the land, raped the women and killed the men, spreading disease wherever they went in the New World. Cabrillo wrote of how thickly populated the islands off the coast were (the Channel Islands, right off Ventura where I was raised, now uninhabited), and other early explorers remarked on how thickly the land was settled with natives.

When Serra showed up in San Diego in 1769, the native Californian population had likely already been severely decimated by European disease. The explorers of California in the 1700s found old smallpox scars on the natives. Was the pre-Columbian population of California a million? Who knows? The prevailing estimate is that 300,000 natives lived in California in 1769, but estimates go as high as 600,000 to one million. New Spain's northern periphery was considered largely as a defensive bulwark against the intrusions of its European rivals, protecting its silver mines in Mexico. When the Russians began colonizing the California Coast, Serra made his move.

The Jesuit mission system of Baja California had reduced the natives from a "pre-mission" population of about 60,000, to 5000 in 1770. The Spanish mission system in Florida, begun as an adjunct to protecting Spain's plunder route from South America and Mesoamerica, had long ago decimated the natives through slave labor and disease. By 1700, the pre-Columbian Timucuan population of Florida had declined from perhaps 200,000 to 1000. The priests were in one way much like their soldier counterparts. The Spanish mines and plantations were instruments of genocide, and when the natives were "used up," the soldiers moved on to find more natives to rape, murder and enslave. The missions were really prisons, with the natives being penned into them, treated like slaves and animals, and dying of disease, etc, and when the natives of Baja California got used up, the priests moved on to find more natives to "save." A child's life expectancy if he/she was born in the mission could be as many as ten years. In some missions, their life expectancy was two years. I have not heard of such a low life expectancy, anywhere else in history. The largest disease vector was the syphilis that the Spanish rapists injected into the native populations. [\[47\]](#) The missions were death camps, and Serra could not have been happier.[\[48\]](#) He wrote, "In San Antonio [one of his missions - Ed.] they are faced with two harvests, that is, of the wheat, and of a plague among the children, who are dying."[\[49\]](#) The children's deaths were a "harvest" for the pious padre, just like the Grim Reaper.

The Spanish missionizing process obviously would never have succeeded without brute force. Spanish soldiers were required for the mission system to function. In California and elsewhere, it took few soldiers because the natives were so gentle, but they were required. The "deal" the

natives entered into was not something they chose freely. If they had known that they punched a one-way ticket at the missions when accepting baptism, none would have come. The priests lured them in with trinkets, food and other goodies, and many natives eventually submitted to baptism, not knowing what it implied. Once they did, it was like joining a Mafia family: there was no escape.

There were many instances of soldiers "recruiting" neophytes by scouring the countryside for them. Once a neophyte had "signed on," they were essentially mission prisoners. The padres did not always lock everybody up. They found that locking up the women usually worked fine. There were women's dormitories in the missions, where they slept locked up every night. Those dorms were hellholes, breeding disease. The children died off at incredible rates. Governor Diego de Borica identified poor sanitation as a reason for the missions' high death rates, advice the Franciscans ignored. De Borica wrote of visiting one dorm, where he was driven from it by the overpowering stench of feces.[\[50\]](#) The missions had "living quarters" for a captive native that measured seven feet by two feet. It was about the size of a cattle pen...or a coffin.[\[51\]](#)

The rapist lifestyle that the Spanish mission soldiers enjoyed in California enraged the native men (and women), leading to their few instances of violent resistance. In 1772, immediately after the Spaniards established the mission at San Gabriel, a soldier raped the local Indian chief's wife. The chief gathered some warriors and confronted the rapist. The rapist's response was to kill the chief with his musket. The warriors fled at that act. The Spanish corporal in charge had the chief's head cut off and mounted on a pole at the mission, as a lesson to the natives.[\[52\]](#)

After that episode, gangs of mission soldiers, emboldened by the mission's approval of rape and murder, marauded through the countryside each morning, hunting for native women. When they found them, they lassoed them like cattle and raped them on the spot. Resisting native men were shot with muskets. That was the "civilization" that Serra brought to California. The most common form of native resistance was flight. Some escaped numerous times, even chopping off parts of their bodies to escape their shackles.

Priestly concern for the natives' earthly welfare was practically nowhere in evidence. The game was baptizing them before they died in captivity. The priests often tried to become martyrs. Since martyrdom was the coveted way for a priest to die, the first step to sainthood, Serra eagerly sought opportunities to martyr himself, but never found one, mainly because the natives were not violent.

Drinking urine, and burning and beating one's self was normal priestly behavior in those days. Serra wore coarse clothing that scratched his flesh. That not being enough, he inserted broken wire into his clothing, constantly gouging himself. He burned his chest with candles and hot coals. For years, he beat his chest with heavy rocks while preaching, leading to shortness of breath in later life. His church superiors disapproved of Serra's activities, as they were more fanatical than most priests' practices. Serra may have been the New World's most fanatical priest at that time, a fanaticism that served him well in building the California mission system.

While preaching in Mexico City, Serra shouted for his flock to renounce their sins. As he shouted, he produced a chain that he kept for just such occasions, and began beating himself. The crowd

was swept up into the spectacle, sobbing at the display of such a righteous man beating himself for his god. A man leapt to the pulpit, seized Serra's chain and declared, "I am the sinner who is ungrateful to god who ought to do penance for my many sins, not the padre, who is a saint." The man beat himself until he collapsed. After being revived and given his last rites, he died.[\[53\]](#)

Serra was not that kind toward the natives he was "saving." When some of his captive natives escaped and took supplies to aid their escape, Serra had to be restrained by his fellow priests from hanging them. Serra shouted that "such a race of people deserved to be put to the knife."[\[54\]](#) A mission Indian never smiled, but instead [manifested symptoms of chronic depression](#). When America stole California in 1846, the native population of California was about 150,000. Serra's legacy was the death of at least half of California's native population, and a much greater extermination rate in mission country, of around 90%.

The authors of *Indians, Franciscans, and Spanish Colonization* stated,

"Indian demographic collapse in the missions was not intended but intentional, since Franciscan congregación [forcing the Indians into the missions and keeping them there under force - Ed.] continued despite the negative impacts on Indians even though one civil official, governor Diego de Borica in the 1790s, identified the problem and suggested solutions never implemented by the Franciscans."[\[55\]](#)

Those missions were the professional ancestors of Dachau. If Hitler had prevailed in World War II, the Auschwitz death camp would probably be a museum today, and would have exhibits describing Hitler's attempts to rescue the Jews from their self-imposed ignorance. Auschwitz would have been described as a place where the Nazis tried saving the Jews through honest work, reforming their lazy and greedy tendencies. Unmentioned would be their fate. They were just gone. The town would have been renamed Hitlerville, or something similar. Down the street would have been Adolf Hitler grammar school, a statue of der Führer would have been erected, and the children would have learned what a great man he was, bringing the light of Aryan civilization to the region. Is that going too far? I attended the California equivalent of Adolf Hitler grammar school, and it was not fun to discover it.

If I had lived a few blocks further north than I had, I would have attended Balboa Junior High School. [Balboa](#), the first European to see the Pacific Ocean, specialized in feeding natives to his dogs and attacking sleeping villages, seizing women for concubines and torturing chiefs to death to tell them where their gold was hidden, gold they did not have.

[Sir Francis Drake](#) was another hero of California history, the first Englishman to see California and the first to sail around the world. I have now discovered that his epic voyage was a pirate

expedition taken on behalf of Queen Elizabeth, to plunder the Spanish Empire's Pacific Coast. They reasoned that the Spanish would never suspect an attack from that side. They were right. The plundering of the Spanish Empire's Pacific ports was easy. Drake was a slave runner and pirate, but that expedition put him in the history books. The ship was leaking because it was so heavily weighted down with stolen silver. After seeking a way back to England (the elusive Northwest Passage), sailing as far north as Puget Sound, they stopped on the West Coast to repair the ship's seams, with the natives hosting them in style while they repaired their ship. They went home the only way that they could. Drake sailed back to England across the Pacific Ocean, becoming the first Englishman to sail around the world. Drake's haul was so lucrative that Queen Elizabeth knighted him ("Sir" Francis), and Drake's share made him England's richest private citizen. Serra, Drake, [Columbus](#) and [Washington](#), those were the heroes I was raised to admire.

Although Serra's mission system initiated the native genocide, there was worse to come. When California was stolen in the [fabricated Mexican-American war](#), and gold discovered soon thereafter, the "settlers" came in a rush of greed, [as in all gold rushes](#), at which time the natives were actively exterminated.

The miners and ranchers of Northern California had a hunting season on California's natives that lasted for a generation. California's first governor declared an open season on natives, and the white settlers hunted Indians every weekend. Those mass murderers became local heroes. Hunting expeditions sought out native villages, usually finding encampments of fifty to sixty people. They slaughtered them all. It was during the 1850s and 1860s that the slaughter took place in earnest. When California was admitted to the Union, it was a "free state." That meant that African slaves were outlawed. Native slaves were fine, and made more docile slaves than the Africans, who often lacked the humility required for slaves. When the 49ers annihilated a camp of natives, they often spared the children and sold them into slavery, a long-standing New World practice by the white man. There were many eager buyers in Sacramento and San Francisco. A native girl cost nearly double the price of a native boy because, as the *Marysville Appeal* phrased it, the native girls served the double duty of "labor and of lust."[\[56\]](#)

Similar to the Spanish rapists, American "settlers" also raped the native women as a favorite pastime. Richard Drinnon was raised in Oregon by immigrant homesteaders. His father was a rancher-immigrant in the late 19th century, and a pleasant rancher pastime was riding out on horseback, hunting for native women to lasso and rape. Drinnon's father enjoyed telling the story of a "squaw chase" where the prey thought quickly, squatted down and threw sand into her "privates," thwarting the ranchers' ardor. Drinnon grew up hearing that story many times, and everybody had a good belly laugh when hearing it. Drinnon thought the tale immensely humorous, and later admitted that his youthful appreciation of it showed how stunted his sensitivity was toward the native peoples.[\[57\]](#)

By 1900, the California native population was about 15,000. I never read or heard about the California genocide until these past several years. The only native reference I remember was reading a brief mention that Ventura's last Indian lived in the river bottom near my house, dying around 1900.

The nineteenth century was the [American century of genocide](#), and the most assured way of getting votes was running for office as an "Indian fighter." Custer's famous "last stand" was apparently a failed presidential campaign. Custer was an extremely vain soldier who had been hobnobbing with New York's elite during the winter of 1875-76, and they saw in him presidential material. He had just turned thirty-five, the minimum presidential age.^[58] The morning of the Little Big Horn Battle, Custer told two of his scouts, "If we beat the Sioux, I will be President of the United States - the Grandfather. If you Arikaras do as well as I tell you and kill enough Sioux for me and capture many Sioux ponies, I will take care of you when I come into my power!"^[59] Indian killers becoming presidents was as American as apple pie, and the apparent plan (more like a conspiracy at that stage) was for Custer to find glory on the battlefield that summer, sweeping him to the presidency that autumn.

Custer originally made a name for himself as an Indian fighter by sneaking up on a friendly Indian camp on the Washita River in the winter of 1868, where a dawn attack killed scores of women and children, sleeping in their teepees. That attack killed Black Kettle, the Cheyenne chief and one of history's most tragic Indians. Black Kettle made peace with the invading white men from the moment they came marching across the plains in search of gold.^[60] No matter how friendly the natives were to the invaders, Custer's boss General Sheridan soon articulated the American mentality when he said the only good Indians he ever saw were dead.

Black Kettle even [went to Denver](#) with other chiefs, smoking their peace pipes, trying to forestall the genocidal violence, violence the belligerent "settlers" took delight in. Colorado's governor was embarrassed by the chiefs' overture, as he had asked the federal government for authorization to raise an Indian-killing militia. Black Kettle and the chiefs thought they made peace, and Black Kettle took his people in sight of a fort on their reservation land, turned in all their weapons except the ones they used for hunting, and considered themselves charges of the government. It was far more than any government could ask for. Soon after, the tribe was ordered to move away from the fort, and they moved off to Sand Creek, still on their reservation. While the men were away on a buffalo hunt, an ex-minister, Colonel John Chivington, marched that militia to Sand Creek. There were truly hostile Indians in the vicinity, braves not taking kindly to the white man's invasion. They were carefully avoided while Chivington led his troops to Sand Creek.

When told of the peaceful camp of Black Kettle, Chivington said, "I long to be wading in gore." They surrounded the camp at night, attacking at dawn. Chivington ordered his eager volunteers to "Kill and scalp all. Nits make lice." They were spotted before attacking, and Black Kettle came out of his teepee to see soldiers ringing his camp. He raised a white flag and an American flag on a pole outside his tent, and stood there with his family, trying to keep his people calm. Then the attack began, which was one of the most brutal and cowardly attacks at anytime and anywhere. They killed women, children and the elderly, carving the genitals off women and men, making tobacco pouches and other fashionable items from them. They raped dying women before finishing them off, scalping them and cutting off their genitalia and other body parts as "souvenirs." They even carved open pregnant women to liberate their prized fetuses, treating their bodies like Cracker Jack boxes.

Sand Creek was one of the more egregious massacres in American history, but it also reflected typical American sentiments of the day. Attacking sleeping encampments while the men were away hunting, *especially* while the men were away hunting, was standard frontier practice. When the women, children and elderly were finally dispatched, the glowing reports from the "battlefield" almost invariably told of daringly fighting hordes of bloodthirsty braves. Those heroes at Sand Creek became the toast of Denver, proudly showing off women's genitalia they had cut from their victims, and parading around the few children they had "taken prisoner." The frontier press, whether it was in California or Colorado, exulted at each massacre. Those events were taking place while the Union was "heroically" [fighting a war](#) to free the slaves of the South. Even today, numerous streets in Denver are named after participants in the Sand Creek Massacre, there is a monument at the state capital in honor of their volunteer regiment, and a town near the "battleground" at Sand Creek bears Chivington's hallowed name. Colorado generally still beams with pride over Sand Creek.[\[61\]](#)

In February 1871, a band of Apaches arrived at Camp Grant, near Tucson, Arizona. The Apaches today have the reputation of being one of the most militant and savage of the Native American tribes. Apaches had alternately resisted and accepted the [Spanish Invasion](#) for centuries, at times fighting back, at others allowing themselves to be herded onto Spanish reservations and into missions. After centuries of genocide, as European disease epidemics regularly swept through their ranks, with periodic violence from the "settlers," the Apache fought back, led in their twilight years by Geronimo, who began fighting after Mexicans had slaughtered his entire family.

Those Apaches in 1871 were in the surrender mode, asking to live on the reservation land, as they had been rendered nomadic by the marauding U.S. cavalry. They voluntarily disarmed themselves and settled down to farming and working on the local ranches. They were under the care of Lieutenant Royal Whitman, an anomaly among American military men, one who conscientiously tried executing the U.S.' duty to those dispossessed natives. The word got out about a sanctuary at Camp Grant, and within weeks, more than five hundred Apaches had come to live there. They came and went under a pass system that Whitman used, and began their spring plantings in April. One camp on the reservation had a couple hundred people living there. The residents of nearby Tucson heard of those Apaches who had retired to reservation life. On April 28th, a group of prominent Tucson citizens left Tucson, led by the ex-mayor, William Oury. They armed themselves from the Arizona armory and marched to Camp Grant. On the morning of April 30th, Whitman heard of the vigilante band from Tucson and immediately sent word to the natives to flee to the fort, under his protection. He was too late. The vigilantes came upon the encampment, which was populated at the time by about 150 women and children, and less than ten men, as the others were gone, performing their springtime chores.

Those prominent Tucson residents proceeded to slaughter nearly all the women and children, gang-raping the women before killing them, then mutilating their bodies. They spared about thirty children and sold them into slavery in Mexico. It was one of countless massacres of peaceful natives that the white men inflicted on Native Americans during the previous four centuries, and that would be one of the last, because the Native Americans were nearly all dead by that time. What was the reaction of the "noble pioneers" who were "settling" the West? One Denver newspaper

openly cheered the massacre. Under the headline "Victory for Peace," the newspaper stated,

"We give this act of the citizens of Arizona most hearty and unqualified endorsement. We congratulate them on the fact that permanent peace negotiations have been made with so many, and we only regret that the number was not double. Camp Grant is the last of those victories for civilization which have made Sand Creek, Washita...and other similar occurrences famous in western history. It is just and right and fully demanded by the circumstances of the times."

A Tucson paper noted, "The California papers quite generally approve of the Camp Grant massacres." A San Francisco newspaper went to lengths to justify such "self-defense." A Sacramento newspaper "heartily endorsed the slaughter," and the San Diego newspapers called it "joyful news."[\[62\]](#)

Such cheering of genocidal slaughter continued right up until the last one, at Wounded Knee in 1890. About a week *before* the [Wounded Knee massacre](#), one of America's most celebrated authors, L. Frank Baum, who wrote that children's tale *The Wizard of Oz*, and who was at the time the editor of South Dakota's *Aberdeen Sunday Pioneer*, wrote the following.

"The nobility of the Redskin is extinguished, and what few are left are a pack of whining curs who lick the hand that smites them. The Whites, by law of conquest, by justice of civilization, are masters of the American continent, and the best safety of the frontier settlements will be secured by the total annihilation of the few remaining Indians. Why not annihilation? Their glory has fled, their spirit broken, their manhood effaced; better that they should die than live the miserable wretches that they are."[\[63\]](#)

When Baum wrote those words, in Austria a child was waddling around in his diapers, a child who would take the name Adolf Hitler. What is the difference between what the [Nazis did to the Jews, Gypsies and Slavs in World War II](#), and what America did to its natives? The only significant difference appears to be the level of technology and sophistication the Nazis employed. Also, while Hitler's boys tried hiding their Final Solution, America openly cheered its Final Solution. Hitler took inspiration from America's genocide of its natives, to give them "living space."[\[64\]](#) Both the Nazis and Americans were "clearing the land" of undesirable races in order to [provide land for their "settlers."](#) The Jews cleared [Israel](#) of Palestinians by slightly more genteel methods, giving them their living space. They secured their Promised Land slightly more gently than their ancestor Joshua did. Only after the land has been cleansed of the native taint do those invaders begin

developing consciences and settle into their comfortable lives, reveling in what providence and "[Manifest Destiny](#)" brought them.

If the Nazis had succeeded, Eastern Europe today would be populated with German "settlers," and they would be living lives probably not much different today than people in America's Midwest. By about now, German historians might be questioning the nature of the Holocaust, a subject that received scant mention when those years of Reich-building glory were retold, and Hitler's heroic image as the father of the Reich might finally be getting questioned in "radical" corners. They would still celebrate Hitler Day, but there might be an increasing swell of discontent with the facts versus the myths in Hitler's image. It has taken far longer for Americans to begin questioning the saintly qualities of [George Washington](#) and [Christopher Columbus](#), fathers of different kinds of Reichs.

In the Eastern Establishment, with their natives long ago exterminated, they had the opportunity to develop consciences, and a congressional inquiry was convened to look into Sand Creek. As with many "Indian fighters," Chivington was planning to capitalize on his new fame, running for Congress after his glorious victory. His fame was short lived, when even the American people were shocked by what happened there. Even so, for years he worked the talk circuit throughout America, basking in his fame. He eventually came to an obscure end in Ohio.

David Stannard nearly dedicated his *American Holocaust* to the memory of a native boy who died at Sand Creek. His death was described by Major Scott J. Anthony, First Colorado Cavalry, in testimony before the United States Congress in 1865 on the massacre at Sand Creek.

"There was one little child, probably three years old, just big enough to walk through the sand. The Indians had gone ahead, and this little child was behind following after them. The little fellow was perfectly naked, travelling on the sand. I saw one man get off his horse, at a distance of about seventy-five yards, and draw up his rifle and fire - he missed the child. Another man came up and said, 'Let me try the son of a bitch; I can hit him.' He got down off his horse, kneeled down and fired at the little child, but he missed him. A third man came up and made a similar remark, and fired, and the little fellow dropped."[\[65\]](#)

John Terrell wrote about twenty books, mainly writing about the Old West, the frontier days, etc. In the twilight of his career, he broke with his past a little and wrote *Land Grab, the Truth about "The Winning of the West."* At the book's beginning he states,

"This is a polemical book. A friend who was formerly editor-in-chief of a large publishing house advised me not to compile it. 'It's the West that Americans would like to forget,' he said.

"Obviously I did not heed his counsel. It is incomprehensible to me how a people can benefit by deliberately suppressing and ignoring opprobrious episodes of their past. By what means can they measure their social, economic and cultural progress without taking into account the mistakes, faults and crimes of their ancestors? Persons whose minds are open only to pleasant legends of bygone years are, in effect, condoning the half-truths customarily disseminated by chambers of commerce and advertising agencies and abetting the immoral practices of pseudopatriots and political demagogues.

"In this collection I present in brief form some facets of three important parts of western history. There is nothing in it that can't be substantiated in a good library."

In *Land Grab*, Terrell laid out the mentality of the 49ers and all those brave pioneers who settled the West. Of the many scholarly accounts of "settling" the American West, Terrell's informal summary is still one of the best I have seen.

"The ideas that dominated the thinking, if it may be termed that, of Americans who flooded the West during the nineteenth century are not beyond explanation. To achieve an understanding of them one only need remember that by far the larger number of persons, both male and female, who crossed the Missouri as emigrants were not blessed with great intellects. They were people of the backwoods, of the city slums, unlettered common laborers and farmers and hunters and trappers, a vast proportion of them the dregs of American society. They were, with some notable exceptions, uncouth, crude, ignorant and greedy. They were religious and racial bigots. All of them were looking for something for nothing.

"The great fallacy still harbored by a regrettably large number of Americans and still promoted by hypocritical patriots and politicians is that every man and woman who chose to enter Indian Country beyond the Missouri was a hero or heroine. Paeans still ring throughout the land for the brave souls who set out for the unknown, facing great perils of the wilderness with a burning dream to build a greater America.

"They didn't do any such thing. They thought least of all, and most likely not at all, of their country's future. The only dreams they had - except nightmares caused by fear - were of free land and free gold, of becoming rich and secure, with a minimum of exertion and little expense.

"It could hardly be expected that people afflicted with such deficiencies, of such low levels and backgrounds, could be expected to display intelligence in their relations with the Indians. Obviously they could not make use of qualities they did not possess. They were governed entirely by animalistic and materialistic instincts, and the purity of those characteristics was seldom adulterated by even small doses of compassion, consideration, or justice. As they were unable to understand

Indians, they treated them with disdain, hatred and contempt, all thoroughly normal reactions.

"The colorful euphemisms that newspapers, books and periodicals showered on the settlers who crossed the western plains enhanced the public's overall picture of the Golden West, but they concealed the ingredients of depravity and viciousness that existed. Most of the frontiersmen, pioneers and conquerors of the wild western domain, were, and still are, highly lauded and eulogized for moral principles they did not possess.

"'God-fearing' was a term generously applied to them. True, they attended church and listened to sermons and sang hymns on Sunday, but it was also true that they conveniently forgot all Biblical admonitions as soon as they left the church services. They turned their religion on and off with an effective mental spigot. They advocated and practiced a method of putting the Indian in touch with Heaven that was more certain and less complicated than that commanded by the doctrines of Christianity. It was, 'Shoot them where you find them.'"[\[66\]](#)

My grandfather was [raised on a Kansas homestead](#) nearly a century ago, and he told me that as a child, he and his friends "shot anything that moved." His attitude toward Native Americans evolved during his lifetime, and he came to finally realize the awesome injustice that his ancestors inflicted onto North America's aboriginal inhabitants. In the early days of Kansas homesteading, selling bones from the incredible destruction of the bison herds paid well. The bones were sent to factories in the east, where literal mountains were made of bison bones.[\[67\]](#) During drought years, plowing Kansas' homesteads for Indian bones paid better than plowing to raise wheat. An Indian skull brought as much as \$1.25 in Dodge City. The skulls were made into fancy combs. Indian arm and leg bones, properly "cleaned and polished," made knife handles "beautiful to behold."[\[68\]](#)

Here is an excerpt from Stannard's *American Holocaust* regarding the Sand Creek Massacre, an event that Theodore Roosevelt would later call, "as righteous and beneficial a deed that ever took place on the frontier."

"Outside of Colorado, however, not everyone was pleased. Congressional investigations were ordered, and some among the investigators were shocked at what they found. One of them, a senator who visited the site of the massacre and 'picked up skulls of infants whose milk teeth had not been shed,' later reported that the concerned men of Congress had decided to confront Colorado's governor and Colonel Chivington openly on the matter, and so assembled their committee and the invited general public in the Denver Opera House. During the course of discussion and debate, someone raised a question: Would it be best, henceforward, to try to 'civilize' the Indians or simply to exterminate them? Whereupon the senator wrote in a letter to a friend, 'there suddenly arose such a shout as is never heard unless upon some battlefield - a shout almost loud enough to raise the roof of the opera house - 'EXTERMINATE THEM! EXTERMINATE THEM!'"[\[69\]](#)

That was the voice of the average frontier American.

Black Kettle survived the Sand Creek Massacre because the few men in camp forcibly pulled him away with them. After Sand Creek, Black Kettle incredibly still attended peace conferences and did all he could to promote peace. Then one day he awoke to the call of a bugle, as Custer led the charge in the "battle" that earned him the reputation as a great Indian fighter. What Chivington could not finish, [Custer did](#). Custer's original account of the battle said that his troops killed mostly braves, which was one of many lies that he told. He probably would have made an apt president. The Battle of the Little Big Horn has been immortalized in song and legend. Custer's Last Stand was another surprise attack on an Indian encampment. Custer disobeyed orders in order to get in on the killing first, knowing that he would have to place the glorious mantle on his shoulders alone to be swept into the presidency.

As with the Washita massacre, Custer proved himself a notoriously sloppy soldier by not reconnoitering the "enemy" before attacking. That time his "Custer's Luck" ran out, and he led a charge into the heart of a camp of several thousand natives, natives that had recently crippled a nearby U.S. Army, fighting under the brilliant leadership of Crazy Horse. Custer led slightly more than two hundred men into a camp of several thousand armed natives who were following the fast-dwindling bison herds. He was in for a rude surprise. Custer's presidential campaign ended ignominiously, sending all his men to their deaths as he sought glory and the White House on the battlefield.[\[70\]](#)

What kept happening as I researched the New World's rape was a feeling of missing something important about native cultures. The Spanish actively eradicated them. The English and Americans rarely made attempts to understand them, unless it was studying the last few survivors before their race became extinct, as with Ishi early in the 20th century. The natives were not saints, but they were far from inferior human beings or the subhumans the Europeans and Americans nearly invariably portrayed them as.

Here are some examples of the cultural differences between native and European cultures, differences that surprised me.

- There were many proscriptions on behavior in Aztec society, one of which was against drinking. The Aztecs had an alcoholic beverage called pulque (fermented cactus pulp), but except on special occasions such as feast days, drinking was forbidden for most people. The penalty for a noble being caught drunk was death, but commoners received much reduced punishment.[\[71\]](#)
- In eastern North America, when natives captured a white woman, the native men never

raped her. From the native viewpoint, a woman's body was her own. That was nearly incomprehensible to European men, where raping captured women had been standard operating practice for millennia.[\[72\]](#)

- In the [Iroquois Confederacy](#) (the vicinity of present day New York State) the chiefs were men, but the women elected them. If the women did not like how a chief voted in clan meetings, they picked a new chief, for a balance of power between the sexes still never approached in any Western culture.[\[73\]](#)
- Throughout North America, particularly as native populations declined as a result of European disease, the natives tried replenishing their numbers by capturing other tribes' members and adopting them into their tribe. That capture and tribal adoption even happened to white people. In the Huron tribe, which lived in present-day Quebec, the [Hurons](#) battled with the adjacent tribes of the Iroquois Confederacy, especially the Mohawks. During those conflicts, when a wife's husband was killed in battle, the tribal remedy for being widowed was to capture a warrior from the other tribe. As recompense to the widow, the warrior was either tortured to death or adopted into the tribe as the widow's husband and given all the rights of the previous husband.[\[74\]](#)
- The natives definitely had their wars, but they were rarely, if ever, the large battles of extermination that characterized Europe. In North America, the tribes of the [Great Plains](#) were considered among the most warlike. There are reasons for that; one was the horse's introduction and the resulting nomadic lifestyle that developed, making traditional tribal boundaries a thing of the past. In those warlike tribes, the greatest battle honor was not killing the enemy. It was counting "coup." Coup was an act of bravery. The greatest act of coup was touching an armed enemy while one was unarmed. There was a stick a warrior would carry into battle, called a coup stick, which was what they touched the enemy with. It reminds me of the childhood game of tag.
- Compared to Europe and its proto-capitalistic culture, there was little greed to be found among New World natives, and in many tribes it was not only unheard of, but unthinkable. In the [Pacific Northwest](#), there was a tribal event called a potlatch. The chiefs would vie for prestige by seeing who could give away the most possessions. Sometimes they vied to destroy the most possessions (even killing highly valued slaves), for a dark side to it. Of course, one had to accumulate in order to give away, but that attitude, as with many other native attitudes, was virtually incomprehensible to Westerners. Tribal stature was gained by how well one provided for others. Hospitality was a nearly universal virtue among the Western Hemisphere's natives, as virtually every [first-contact account](#) by a European "explorer" confirms.
- The meeting of European and native cultures often brought surprises. One tactic that Europeans had long-used to terrify the enemy or to demonstrate who "won," was to decapitate enemies and put their heads on poles. It had an unintended result with the [Incas](#). Many native cultures revered the dead, and sometimes kept their bodies around, or pieces of them, as a way of honoring their ancestors. When one of the Inca rulers, Tupac Amaru, was given a kangaroo court trial and beheaded, the Spaniards put his head on a pole. The Inca subjects crowded around the pole, expressing their sorrow and reverence to the severed

head. That was not the intended effect, so the Spaniards had the head buried.[\[75\]](#)

- The New World's chiefs often bore little resemblance to European royalty. They generally had little coercive power. Nobody obeyed their orders because they did not give any. The West's view of the "chiefs" is largely our projection onto them. Tribal councils and councils of elders were often the governing bodies. The early invaders assumed that there was somebody "in charge" among the natives, and treated the "chief" accordingly. A chief could be a woman (though not often), and a tribe could have a number of chiefs, such as a chief of planting, a chief of war, a chief of harvest, etc. The lack of command authority was evident in battles between natives and the Europeans. The chiefs could never control and command their braves as the Europeans did their soldiers, which was a primary reason the Europeans usually won.[\[76\]](#)
- The natives had very different ways of treating their elderly. Among most tribes, the elderly were cherished for the wisdom they had gained through their long lives. Councils of elders were highly influential in making tribal decisions throughout the New World. Paradoxically, among the tribes of present-day northern Canada and Alaska, when somebody became old and "useless," they were often killed or abandoned to the elements, likely reflecting their harsh environment.
- While dishonesty was a European/American art form, exercised in devious ways, even for [America's greatest heroes](#), Native Americans had a markedly different perspective. While dishonesty and lying was not unknown among Native Americans, it was [seen as a sign of insanity](#). Honesty and honor were considered the mark of a healthy person, and Native Americans saw European/American dishonesty as a sign of their craziness.
- Because few tribes had a written language, the elderly were cherished, because they were the tribal libraries. The [biggest influence](#) in drafting the American Constitution was probably the [Iroquois Confederation](#). They had a working democracy that was centuries old when the Constitution was drafted, the world's only living example of democracy, and a much more inspiring example than [ancient Athens](#), where slaves outnumbered the "free" people. The Iroquois strongly influenced [Ben Franklin](#). The establishment and their "skeptics" call the Iroquois influence apocryphal, but that is partly because the Iroquois have never committed their laws to paper.[\[77\]](#)
- The New World's natives were often superior artists. The natives of California, for all the subhuman appellations bestowed on them by the white man, such as "digger" (because they dug roots as a significant part of their diets), may have been the finest basket-weavers humanity has yet produced, and the women did that work.[\[78\]](#) The Spaniards melted down 99.999% of the gold and silver artifacts that they plundered from New World cultures, but the early examples of pre-Columbian gold and silversmithing astounded the European artists who saw them. When Cortés sent back the first royal bribe from the plunder of Mesoamerica, no less than Albrecht Dürer, one the greatest artists Europe ever produced, saw the treasures on display in 1520 and was awestruck. Dürer was once an apprentice goldsmith himself, and his appreciation of Mesoamerican artistry rendered him mute. Dürer wrote "In all the days of my life, I have seen nothing which touches my heart so much as these for, among them, I have seen wonderfully artistic things, and have admired the subtle

ingenuity of man in foreign lands. Indeed, I do not know how to express my feelings about what I found there.”[\[79\]](#) When a subsequent bribe was sent by Cortés to Spain after the Aztecs were conquered, French pirates seized the biggest haul of loot to hit Europe's shores to that time, and the haul was eventually admired in the French Court. One of Europe's greatest goldsmiths, Benvenuto Cellini, saw the loot at the French Court and gave the opinion that Aztec goldsmithing was the most ingenious he had ever seen.[\[80\]](#) Those opinions by Europe's greatest artists did not prevent the director of the New York Metropolitan Museum of Art from defending the fact that not one piece of pre-Columbian native art was on display in his museum. He said that native art was not art at all, but a curiosity that belonged in the natural history museum, next to the stuffed polar bears.[\[81\]](#) That director's opinion is not from a hundred years ago, but was uttered in our "enlightened" generation.

Colonialism, the First Stage of Global Capitalism

The basic tenet of all economic systems is the capture and use of energy. Plants capture sunlight's energy by photosynthesis, and [all life on earth owes its existence to that process](#). A small fraction of that captured energy becomes plant parts that humans can digest, with that released energy fueling their bodies. Captured plant energy largely becomes cellulose, which comprises the cell walls. Burning wood releases the captured sunlight energy that made the cellulose. All organic fibers are created with captured energy. All fossil fuels release the energy captured from ancient sunlight. Humans and most animals cannot digest cellulose, but must consume other substances such as sugars, starches and fats to get their energy. Human history is largely concerned with the [pursuit of energy](#), securing either the energy of food, the land that can provide it, or controlling the energy of people, animals and machines.

All political and economic systems have been mainly concerned with controlling and concentrating energy. The rise of capitalism and the state created new ways of harnessing energy. Money generally buys energy or its fruits, whether it is food, manmade goods, metals, etc. The centralizing nature of states and corporations is largely about a select few getting their hands on energy and controlling it. The [Iroquois](#) did not have an executive branch in their government, something the [monarchical English settlers invented](#), as they nearly named George Washington the United States' first king. In the United States government, the balance of power between the three branches – legislative, executive, and judicial – has been continually eroded ever since George Washington, making the executive branch increasingly powerful and unaccountable. The concepts of wealth and power cannot be effectively separated, not in today's world, which is why the term *political-economic* is used. Ideologies such as “realism,” which try separating political factors from the economic, are not very realistic.

It has taken many years of study, after years of being brutally awakened by [my experiences in the "real world"](#), to finally realize how deeply I had been lied to during my capitalistic indoctrination.

The historical roots of today's global capitalism are deep. Capitalism is not an invention by people trying to devise a fair system, or one that "honors human nature." [Today's capitalism](#) is a system designed by [greedy people](#) trying to get rich. Adam Smith did not invent it, but helped establish an ideological framework for it.

Smith wrote that the [mercantilist system](#) of his day was designed to [wipe out competitors](#), not serve consumers. The beginnings of capitalism really began with colonialism. Arguments can be made that it began earlier, but [European colonialism](#) was the watershed.

Colonialism was simply a system of exploitation. The European powers got practice before sailing the seas by conquering their neighbors. [England's rape of Ireland](#) and Scotland is a case in point, as well as the general exploitation of Eastern Europe. The word "slave" comes from "Slav," as Eastern Europeans were among the first to endure Western Europe's rise.

Before [Columbus](#) "discovered" the New World, Spain and Portugal were busy conquering and ["settling" the islands of the Eastern Atlantic](#).

The Spanish Crown initiated the world's first capitalistic ventures; it rarely financed the [New World's "explorations."](#) Rich Spaniards did, and the Crown received a cut of the profits for sponsoring the expedition. Cortés greased as many royal palms as possible with plundered New World loot to gain official recognition for [commandeering the Cuban governor's invasion of the Mexican mainland](#). His bribery worked.

Soon, New World loot began flooding Europe. The [English, Dutch and French](#) joined the game and the [English and Dutch formed corporations](#). Corporations could be found as far back as ancient Rome and the medieval guilds, but the Dutch and English East and West Indies companies were the forerunners of modern corporations. The game was "trade." It is true that trade goods lured North American natives to deal with the Europeans, but it was dealing with the devil, as the most prominent trade goods were firearms and firewater (alcohol) from the Europeans, and furs from the natives. The firearms greatly escalated native violence, turning "wars" that were more like rugby matches into deadly affairs that extinguished entire tribes, with the white man's Machiavellian "help." Firewater was a [psychological crutch](#) for natives whose world was turned upside down by the white man's arrival. The fur trade was short lived, as it [drove the fur-bearing animals to extinction](#).

Because the Spanish were the first to arrive, raping "virgin" lands, they racked up by far the highest death toll. The [Dutch](#), [English](#) and [French](#) were no better, but because they came to the game a century later, they killed off far fewer natives than the Spanish did. Yet, annihilate them they did.

The English colonial experience in the New World was somewhat different. They [first sought gold](#), and when that failed, they turned to [tobacco](#), furs and taking the land from the natives with brute force. Wherever the climate was similar to Europe's, as in North America, New Zealand, Australia,

South Africa and Argentina, the Europeans invaded to exterminate the natives and make it their new home. In the tropical regions, the Europeans merely enslaved the natives.

I attended [business school](#), studying economics and capitalism. The atmosphere and ideology I was imbued with was that capitalism was far superior to that evil communism. As with the [American history](#) that students are taught, I now realize that I was indoctrinated into a fairy tale ideology. [Capitalism](#), especially after 1989 and the collapse of the Soviet Empire, has been portrayed as humanity's highest state, the flower of human economic evolution. What I was taught was heavily laden with [presentism](#). Presentism looks at the past through the eyes of the present, judging it by the present's standards. It is nearly impossible to entirely avoid. However, the greatest crime of presentism is to use the past to *justify* the present, rather than help explain it. The pejorative in history circles for many years has been to call such presentations of history "[Whiggish](#)," after an English style of telling history as one grand tale of "progress." The capitalistic history I learned was quite Whiggish.

What we today call capitalism was born in England, and was born due to a unique confluence of timing, geography, technology and culture.[\[82\]](#) England's early capitalism had little resemblance to today's version of it. The "bourgeoisie" concept of an urban middle class came from France, not England. The concept of the modern state came from France and its Enlightenment/revolutionary/Napoleonic era. The current notion of capitalistic development was partly fabricated retroactively to create the picture of capitalism we have today.

During the 19th century, France, England and the United States all carved out new kinds of empires. The United States was [busy securing the North American continent and periphery](#), taking land by force from its neighbors. England and France had been involved in interminable wars during the previous millennium, and competing in the plunder of distant lands complemented their rivalry. Capitalism and [industrialization](#) was making its rise, and the practice of chattel slavery ended, and instead people are rented today. During the 19th century, the European powers conquered and enslaved much of humanity.

When the Portuguese [rounded the southern tip of Africa in 1488](#), they began the era of European influence in Asia. At first, [their goal was the spice trade](#), and they had it to themselves, as far as any European rivalry went, for many years. They began defeating their Asian rivals militarily as early as 1507, and in 1510 they conquered the Muslim port of Goa. The Spanish established their presence in the Philippines in 1564, and the [Dutch](#) came in the early 17th century, and soon took control of the spice trade from Portugal. The British and French would also join the fray. Conquering the islands off Asia was the first step to European hegemony, although the Japanese knew the empire game and successfully [kept Europeans largely out of Japan](#) for centuries, until the diplomatic invasion of [Commodore Perry of America in 1853](#).

For the entire period of European imperialism, continuing to the present day, [superiority of violence](#) and ruthlessness nearly always allowed the Europeans to prevail. The imperial effort is led today by the United States, with the world's most irresistible military, as it now attempts to [militarize](#)

[space](#). Warfare in Europe long ago abandoned any notions of fighting honorably or obeying any “rules.” The only rule was winning, and the more ruthless, the better. The exterminatory [Thirty Years’ War](#) that began in 1618 entrenched the idea of total warfare to Europe. Nobody in the world could match Europe’s viciousness and mastery of violence.

The Asian mainland, however, was too challenging to invade and conquer. The Europeans were too few and the natives too well armed and organized. In addition, European diseases could not decimate the natives as they did in the New World and elsewhere. China and India, as they do today, possessed a large fraction of the world’s population, and had long-standing imperial cultures. Until the British conquered the Bengal region in 1764, about the best the Europeans could do was establish coastal trade ports, as well as plenty of Christian evangelism.

The Bengal region was possibly the wealthiest on earth when the British conquered it. With the British East Indian Company in charge, the British mercilessly plundered Bengal. With Bengal being exploited, in 1770 a drought, combined with British rapacity, created a famine that killed off one third of Bengal’s peasantry.[\[83\]](#) Similar to Spain’s rape of the New World, local imperial agents skimmed off great sums for themselves, cheating both the natives and their superiors in the mother nation. Britain subsequently refined its revenue collection efforts, which trimmed corruption in the field but also refined the process of native exploitation. Dacca was Bengal’s textile center, and in 1757, British observers called it every bit as wealthy as London. By 1840, Dacca had been bled dry, its population collapsing from 150,000 to 30,000.[\[84\]](#) The British implemented the [standard imperial formula](#): it outlawed local industries in order to protect those of the mother country. Bengali textile manufacture was outlawed, and Britain even amputated the thumbs of Bengali weavers. As with the Spanish in Mesoamerica and South America, the British exploited a fractious imperial environment to their benefit, taking advantage of the disintegration of the Mughal Empire to expand its hegemony over all of India. The British East Indian Company was soon raking it in hand over fist.

India was ahead of Britain on the modernization curve in ways, and was even better at steel making than Britain was at first. British industrialization was accomplished partly by exploiting India. As India’s industries died from being outlawed, the natives were forced into raising crops for export; Bengal became the land where indigo, jute, and then opium was raised for export. The economic concept of “value added” industries was fully implemented. The basic idea is forcing the natives to grow crops for export, such as food, cotton, jute, etc. Then it is exported to the mother country and processed in their factories (and/or consumed). Then finished product is shipped back to the subject nation, the price manipulated by the mother nation’s dominance to achieve unfair terms, economically bleeding the subject nation dry. No mills were made in India under British rule. They were forced to raise crops for raw materials, and then it was shipped to the mother country.

Most notoriously, the native society was forced to raise food for export as they starved. The British built an infrastructure to transport those export crops. British “philanthropists” made a big deal about how much they “helped” India by building their rail system. To astute observers, however, those rails took food and crops *from* India, not delivering them to needy natives. That dynamic was dreadfully evident when El Niño-created droughts descended on India and China in two events,

from 1876 to 1879, and 1896 to 1900. The British system of plunder destroyed the fabric of Indian society, and during those drought years particularly, the spectacle was often seen of masses of starving people standing next to rail cars full of grain, accompanied by armed guards, on its way to Europe. From 1875 to 1877, as the Indian famine peaked, wheat exports to England quadrupled. [85] Tens of millions died in those two famines, and many if not most deaths would not have occurred if not for the European plunder system that prevailed. As the European plunder system became its most refined, India's population growth nearly halted from 1870 to 1920. A similar thing happened to China. As in Mexico, the coming of the Europeans had anti-Malthusian effects, the subject populations stagnating or collapsing in number as they also became poorer under Europe's lash. In the two thousand years before British hegemony in India, there had been only seventeen famines. By 1878, during the previous 120 years of British rule, India endured 31 famines, increasing in frequency by about 3000%. It was no coincidence.

The "free market" created those holocausts. The food went to Europe instead of feeding the society that grew it, because they could not pay for it. It was a "free-market" genocide, while Europeans lived in a [golden age](#) and obesity began becoming commonplace. That dynamic exists to this day, but is more refined, with the [World Bank and International Monetary Fund](#) cracking the whip, where peasants are forced to grow crops for export to the West instead of local consumption. The last time I looked a few years ago, of the forty poorest nations in the world, thirty-six exported food to the United States. "Trade" engaged in at gunpoint is anything but "free."

Probably the most telling statistic of the British experience in India was that from 1757 to 1947, there was no increase in India's per capita income, while Britain became the world's richest nation, to be surpassed by its descendent, the United States. [86] In 1750, China and India comprised 57% of world manufacturing output. By 1900, it was 8%. [87] The relationship of Britain to India was a parasitic one. In 1910, India provided 60 million pounds of net income to Britain, for the world's largest international transfer of wealth. [88] India is still recovering from that two-century-long raping. The British did the same thing to China, forcing China to open itself to opium addiction, beginning with the 1839 Opium War. Bengal was forced to raise opium so Britain could force it on China. In ultimate evil, it may rival what Europe did to Africa and the New World in its triangular trade of slaves, sugar and rum. To demonstrate that it was not an aberration from a distant past, in the 1980s the Reagan administration did nearly the same thing, threatening retribution on several Asian nations if they did not open their nations to American tobacco companies, who purvey the world's deadliest addictive substance. Those [Asian nations knuckled under to the U.S. blackmail](#), and tobacco addiction rates in those nations have subsequently skyrocketed.

Jawaharlal Nehru, India's first post-colonial prime minister, spent much of his adult life in British prisons, as Gandhi did. In 1944, Nehru wrote *The Discovery of India* from his prison cell. With great irony he wrote:

"The solicitude which British industrialists and economists have shown for the Indian peasant has been truly gratifying. In view of this, as well as of the tender care lavished upon him by the British

Government in India, one can only conclude that some all-powerful and malign fate, some supernatural agency, has countered their intentions and measures and made that peasant one of the poorest and most miserable beings on earth.”[\[89\]](#)

Nehru noted that the longer the British controlled an Indian province, the poorer it became. Nehru described the rape of Bengal by the British:

“A significant fact which stands out is that those parts of India which have been longest under British rule are the poorest today. Indeed some kind of chart might be drawn up to indicate the close connection between length of British rule and progressive growth of poverty.”[\[90\]](#)

The Bengal region, once among the world’s richest, it is today known as Bangladesh, one of the world’s poorest. That is a prime example of the chief legacy of European colonialism. In grim irony, the Bengal region is once again a textile center. The [women of Bangladesh work in sweatshops](#) for Western corporations such as Wal-Mart, making pennies an hour to make clothing for export to the United States, in classic [neocolonial](#) fashion. The game is still rigged, with the only things changing being the names, faces and techniques.

During the last half of the 19th century, Europe did a similar thing to Africa, in its famed “Scramble for Africa.”[\[91\]](#) Although evangelical zeal motivated some of the early explorers and missionaries, it soon gave way to the usual dynamic of superior European violence subjugating the natives and forcing them into mining and plantation work, the fruits of their labor being exported to Europe. The same thing happened as with the British in India: an infrastructure was built to export the products of exploitation.[\[92\]](#) Nearly the entire African continent was turned into a slave camp, and they called it “progress.” Also, corporate monopolies were often the agents of Africa’s exploitation. Hand-in-hand with the exploitation and genocide were strained ideological rationales such as the [White Man’s Burden](#) (a cousin to [Manifest Destiny](#)), and outright censorship, as when [Mark Twain](#) wrote about the genocidal exploitation in the [Belgian Congo](#) under King Leopold’s benevolence, which killed about ten million people. A prominent way that Europe rebuilt itself after World War II was bleeding Africa still more, with plantation and mining activities.

Today we have more of the same, but now it is the World Trade Organization, the [World Bank and International Monetary Fund](#) oppressing the world’s poor in favor of the rich, and using military might and other punitive measures to enforce the “free market,” while saying we do it to help the world’s poor. Bigger lies have seldom been told. Today’s [global capitalist system](#) is little more than colonialism with new rhetoric, techniques and technology.

If those slaves harbor any notion of breaking away from the capitalist system, we overthrow their government, first by using the subtle tactics of the [CIA](#), such as bankrolling our favorite candidate and arming "rebels" or the military, depending on which one is our pawn. When all else fails, we invade or bomb them, as [we did to Southeast Asia](#), as we want to do to Cuba, et cetera. We think we own the world. Today's [genocide in Iraq](#) has everything to do with securing cheap access to oil. In 2004, John Perkins pulled a [Ralph McGehee](#), and [revealed the real neocolonial](#) game for what it is, from an insider's perspective.

We are not the good guys, and never have been. Europe and its descendants have visited more death and suffering onto the world's people than anyone in history. There are no contenders. The Mongol hordes were disastrous in their own way, but the last five hundred years has been the reign of the white man, and nothing has been more horrific or bloodier than that. If humanity survives the coming transition, the entire second millennium will be seen as the Dark Ages, with the twentieth century possibly the blackest.

Objectivity, Sources and the Historian's Ideal

In theory, the historian has a task, which is to tell what happened. In America, there is an ideal of objectivity that also the journalistic profession supposedly adheres to. Peter Novick wrote *That Noble Dream* to discuss the "objectivity question" in the American historical profession. [Howard Zinn](#) seriously questions whether history should be objective, as do many others. Zinn felt that if telling the story of slavery from the perspective of the slave helped the slaves become free, he was all for it. Objectivity may not be the historian's ideal objective. Staughton Lynd wrote, "Should we be content with measuring the dimensions of our prison instead of chipping, however inadequately, against the bars?"^[93]

In the arena of history, there are rules, ideals and methods that historians supposedly adhere and aspire to. A worthy historian relies heavily on "primary" evidence, which is the evidence of the eyewitness or the participants.

If somebody writes about the "criminal career" of Dennis Lee, for instance, as [Mr. Skeptic did](#), a historian would adhere to the primary evidence, which was the testimony of those who witnessed Dennis' acts. [My account of my days with Dennis](#) is considered primary history, because I was there, witnessed it, and participated in it. Other primary evidence would be a court transcript from Dennis' Ventura trial. Police reports and other witness documents can constitute primary evidence. Secondary evidence would be a newspaper account of Dennis' "criminal record." The risk of relying on secondary history is relying on the interpretation of the primary history by the author of the secondary history. In Dennis' case, Mr. Skeptic failed spectacularly as a reporter of history or the news, because the secondary history that he relied on was false. That newspaper account contradicted the primary evidence given by the official records, so Mr. Skeptic relied on a false account of history. In Mr. Skeptic's case, his rendering of false history is more egregious than

simply getting it wrong, reporting that Dennis was prosecuted and confessed to criminal acts when he in fact had not. Mr. Skeptic actively ignored the primary evidence so he could report a false secondary history, one that told the story he wanted to tell.

In looking at the Aztec conquest, for instance, and Hugh Thomas' *Conquest*, his sources are an array of primary and secondary sources. Thomas performed archival research in Seville, which is how a historian ideally does his/her work. Thomas relied on primary accounts and secondary histories, but he tried using secondary histories written close to when the events happened. He did a creditable historian's job of seeking sources that were most primary. Yet, how reliable are they? The two main primary sources regarding the Aztec conquest are the accounts of Hernan Cortés and Bernal Díaz del Castillo. Cortés wrote five letters to the king of Spain, and the first one has been lost to history. Cortés was stealing command of the expedition from the Cuban governor, Velázquez, who carefully chose Cortés, even over family members, because there were few Spaniards that he trusted. In light of Cortés' performance, it appears that there were *no* Spaniards to trust. Velázquez first distinguished himself militarily in the New World during the treacherous [Xaraguá massacre](#), and slaked Cuba with native blood. Cortés sent a huge royal bribe to Spain - the largest haul of loot to ever hit Europe's shores until that time - which [French pirates stole](#).

Cortés was writing his letters in part to impress the king, in part to justify his theft of the expedition, and historians consider his account to be self-serving in numerous aspects. The other primary account, by Bernal Díaz del Castillo, was written sixty years after the events happened, when Castillo was blind and in his eighties. How trustworthy his account is has been a matter of debate for many years.

There are native accounts of what life was like before the Spaniards showed up, but Spanish chroniclers working for the Catholic Church recorded them. What kind of bias crept into those accounts? They were generally recorded more than a generation after the conquest, so people were looking back at those days through the eyes of old age, after their world had been turned upside down, and they had survived the devastating consequences of their enslavement by the Spanish. The greatest chronicler of those native accounts, the priest Sahagún, stated in the introduction of his history that he was studying the native culture and memories so he could cure the "disease" of their culture. Thousands of Aztec and Mayan books were burned by the Spanish priests in those days, and only a handful have survived, and what survived gives evidence that priceless knowledge of native cultures was lost in the Catholic bonfires.

During the centuries since those accounts, other evidence has come to light, such as the excavation of the Great Temple of Tenochtitlán, which was discovered in the 1970s in Mexico City. The excavation apparently confirms the trustworthiness of Spanish accounts of human sacrifice. The sacrificial altar is exactly where Spanish writings put it, and the stone skull racks give impressive testimony to the Spanish and "native" accounts of real skull racks where the heads of sacrificed natives were strung like an obscene abacus. Accounts such as Díaz's, where the Aztecs even strung up the heads of sacrificed horses alongside the human heads, seem true in light of the excavation. In addition, the offering caches unearthed in the excavation, including one cache of the skeletons of more than forty sacrificed children, give impressive evidence of institutional human

sacrifice among the Aztecs. The excavation of the Great Temple has largely settled the issue of institutional human sacrifice, but the extent of it may be argued. [Pedro de Cieza de León](#) wrote that human sacrifice among the Incas did happen, but the Spaniards greatly exaggerated it to justify their conquest.

Although the issue of human sacrifice has largely been settled, the issue of Aztec cannibalism has not. [Columbus began the cannibalism myth](#) in the New World on his first voyage, and no convincing evidence of cultural cannibalism by the pre-Columbian New World natives has ever come to light.^[94] Thomas gives numerous accounts of native cannibalism in *Conquest*, but the accounts are arguably more in the tradition of myths that were universally held than of actual deeds being performed. The first mention of Aztec cannibalism comes from Cortés, after he had worn out his "welcome" with the Aztecs, and attempted to justify his conquest. He wrote, "they are all cannibals, of which I send Your Majesty no evidence because it is so infamous."^[95] His next accounts of cannibalism are given while [retelling the war against the Aztecs](#), and Cortés reported that their enemies had abandoned "sacks of maize and roasted babies" when pursued by the Spaniards.^[96] Roasted babies. That sounds exactly like the [wartime propaganda](#) that has characterized the dehumanization of the enemy, practiced from time immemorial.

No independent evidence of cultural cannibalism has ever been adduced for those native cultures, and other accounts deny them. For instance, during the siege of Tenochtitlán, the Spaniards and their native (chump) allies reduced the Aztecs to starvation. While the bodies of their fallen surrounded them, they starved, and there is no account of them eating human flesh to stay alive.

In coming to my own conclusions of the nature of the Spanish conquest and aftermath, I have read primary accounts (Columbus and his friends, also Las Casas, Cortés, Castillo, Zorita, Cieza de León) and numerous secondary accounts. I have had to partly rely on the scholarship of others. Relying on secondary scholarship is perilous for the historian. I have tried mitigating my potential errors by reading a spectrum of secondary history on the issues. If I read sympathetic and antagonistic histories, I have a fair chance of seeing the entire spectrum of evidence that exists, and making my own determinations.

Yet, even primary evidence is subject to being questioned. For instance, my writings regarding [my days with Dennis](#) are considered primary history. Yet, others who rode in the saddle with Dennis will not see things quite the way that I did. My controller, who [engineered the theft of Dennis' company](#), would surely give a starkly different account of events in Seattle than I did. I *know* the man is dishonest; I saw him in action. I cannot be rationally disputed that he committed theft, but he may present a case for his noble efforts in stealing Dennis' company. A historian may give his account and mine the same weight in arriving at the picture of what really happened in Seattle. That is the historian's right and duty, but is more evidence that there may not be an "objective" history to report, anywhere.

[Washington Irving](#), a novelist, wrote the first great American history of Columbus. He relied on primary and secondary evidence for his tale, which is a salient example of how "historians" can lie.

He sifted through the bloody facts for the few that [justified making Columbus into a hero](#), and even invented new "facts." That a novelist committed that crime is one thing, but that no American historian challenged that fabrication until my lifetime is a profound commentary on the state of the American history profession. In that light, the American history taught to American schoolchildren has been worse than worthless, if truly educating them was the goal.

Big lies were being told in virtually every area I have researched. How can any of us develop a semblance of intelligent and coherent solutions to our problems, when he have been so badly lied to, on all fronts? If all we are fed are lies, be it about [Columbus](#), [George Washington](#), [Junípero Serra](#), [George Bush](#), [fluoridation](#), [mainstream cancer treatment](#), the [energy industry](#), the [assassination of JFK](#), [data from NASA](#), what is happening in [Iraq](#) and [Yugoslavia](#), etc., how can we ever arrive at effective solutions to our problems? We cannot, given how misinformed we are, but one way to cut through all of it is to act from the heart, and realize that the [ends never justify the means](#).

When Americans were being fed lies that bombing Yugoslavia and Iraq, or invading [Panama](#) and [Vietnam](#), were regrettable yet necessary actions to make this world a better place, my response is that violence only makes the world more violent. So far, I have never seen any violent "good guys." Violence is *always* a violation. If we want a loving world, we need to act loving. [Teddy Roosevelt's corollary](#) to the [Monroe Doctrine](#) was "tough love," a doctrine that has led to the [enslavement, misery and deaths](#) of millions of Latin Americans. I see no love in that doctrine, just the flowery justification for violence and exploitation. Violence *always* violates somebody's free will.

In 1988, James Sandos, writing in the *American Historical Review*, discussed the issue of [Junípero Serra's](#) proposed canonization and the task of the historian.^[97] In the 1930s, Serra was the first person subject to the revised process of naming somebody a saint. The first stage was the compilation of the historical record of the person's life. America's most prominent historian on the Spanish experience in North America was Herbert Eugene Bolton. He was the only person outside the Catholic Church who was part of compiling Serra's life story. Bolton was supposed to impart historical objectivity to the Vatican commission that accumulated the historical documents. To be fair to Bolton, he was more than seventy years old and had his hands full with other matters. In the later years of his academic life, Bolton became aware of an incipient trend in American scholarship, one that began telling the story of the white man "civilizing" North America from the native's perspective.

Anthropologist John Harrington heavily relied on Bolton's original archival work. In 1930, Harrington sent Bolton a copy of his essay "The Reaction of the American Indian to his European Conquerors." Harrington wrote:

"...any amount of study of the American Indian only confirms the opinion that he was from start to finish a reluctant recipient of the European civilization brought to him by his discovers and

conquerors. The initial fear passed rapidly through the cycle of loving and returned to a long twilight of dread, mistrust and suffering."

Bolton read Harrington's work with a

"...great deal of interest and high approval...One of the great shortcomings in the early history of the western hemisphere is our lack of a record of what the Indians thought about things. If we only knew what he said and thought about our ancestors we probably would hang our heads in shame. This work of yours is in the right direction."

Bolton was leading a healthy trend in American historical scholarship toward a more balanced view, where our history was not only told from the viewpoint of the bloody conquerors (my ancestors), but also by the voice of the conquered. His performance on the issue of Serra's canonization process was another matter entirely, and served to show how entrenched is the white man's bias toward himself and his ancestors, even in the most "objective" of us. Around World War II, other scholars such as Sherburne Cook were doing intensive research into the historical record, which showed that the coming of the Spanish was anything but glorious to the natives. Cook's research showed that the Indians [interned in the missions](#) endured a genocidal population collapse.^[98] The experience in Baja California demonstrated that the mission system was an instrument of genocide, and the Franciscans ignored the California governor's advice (stop imprisoning the natives in the filthy "dormitories," for instance) to end the incredible death rates of native children behind the mission walls.

In the revelations that attended opening the [Nazi death camps](#), Carey McWilliams published *Southern California Country, An Island on the Land*, in 1946. McWilliams aptly compared the California mission system to the Nazi death camps.^[99] Although the expressed purpose of the Nazi death camps was to exterminate the Jew and other "subhumans," and the California mission system was intended to "save the native's souls," both produced the same result: the extermination of the inmates. Bolton and others on the Serra commission were aware of those trends in scholarship when they testified in 1948 regarding Serra's life and work, most particularly his establishment of the California mission system. Bolton actively engaged in the whitewash, painting Serra's legacy in glowing tones, helping to put him on the fast track to sainthood.

The most common response to the mission system by the natives was fleeing, and the fugitive rate in California was about ten percent, with the highest, 15.6%, at the mission that Serra is most closely associated with, the San Carlos mission. After 1790, the "marketing" tactic of the Spanish priests was often sending Spanish soldiers into the countryside to bring back "recruits." Even with the secularization of the missions, the carnage continued and even escalated, with the ranchers in

charge. One non-Spanish witness reported that as the soldiers were driving the fresh "recruits" to "civilization," the native children being driven along began falling behind. The leader of the recruiting mission did the logical thing: he hastily baptized the children and then killed them by beating their heads against the rocks. They were "saved."[\[100\]](#)

Bolton actively sanctified Serra's image, testifying that his considerable research on the missionizing work of the Spanish priests gave him a "partial indication of my competence to testify to the merits of Fray Junípero Serra, the greatest of all this galaxy of apostles to the heathen in North America." To this day, scholars do not have access to the full proceedings of the commission, but what has come forward indicates that Bolton completely abandoned his "historian's" perspective and actively participated in the whitewash. In Bolton's instance, it was literally a case of a historian playing hagiographer. Bolton knew of the work being done by Cook and McWilliams, as did others on the commission. Yet, Bolton and others apparently disregarded the highly unsettling nature of their revelations. Sandos wrote, "One might understand a seventy-nine-year-old man succumbing to romantic rhetoric, much of it his own..." Yet, the product that Bolton helped package was not history, but hagiography. The many dark aspects of [Serra](#) and his legacy were swept under the carpet, with the complicity of one of America's most respected historians.

Sandos wrote:

"Compilation of the historical record in Serra's case presents disturbing issues to the historian. If we are to avoid withering criticisms such as Voltaire's that history is a trick played on the dead or Napoleon's that it is a fable agreed upon, we must insure that all sides of an issue are presented. Historians have been taught for well over a century that contradictory evidence ought to be evaluated, not dismissed; and, if it cannot be explained, then readers should be allowed to judge it themselves."

Bolton is in good company. In 1986, the Church again turned to historians for an accounting of Serra's record. Regarding the 1986 inquiry, Sandos wrote,

"Not only was Cook's analysis disregarded but also were Serra's own words, the growing body of evidence from Indians, and the insights available from anthropology, all of which would have contributed to a balanced view of the past. Why were professional standards again suspended?"

Good question. Professional standards are easily suspended in [every profession](#), especially

[science](#) and [medicine](#), and including my erstwhile profession of [public accounting](#), if there is money or other gain in it. For the historian, the gain is a whitewashed version of the past, serving the current power structure.

Sandos finished his essay with some profound questions and observations.

"Tensions in the controversy presented here suggest two major difficulties in trying to use history in the service of religion: advocacy and presentism. Advocacy represents a suspension of the quest for objectivity in favor of a search for supporting material. In the case of sainthood, the operational hypothesis is not "What did the candidate do?" but rather "What did the candidate do that demonstrates proof of a holy (by Euro-American Christian standards) life? The questions are fundamentally different: the first is speculative and historical, the second, which presupposes the conclusion, is utilitarian and pragmatic. The purpose of assembling a historical record for a potential saint is to generate, among other products, a life of the individual that stresses the candidate's heroic virtues. This written product is hagiography. When serving a religious institution, the historian risks sacrificing a dispassionate reconstruction of the past in favor of justifying a foreordained conclusion.

"Disregarding Cook's assessment that mission punishment of Indians constituted 'severe and unwarranted punitive discipline' for the time suggests a more difficult challenge than mere advocacy faces the historian. Here, the historical record is being manipulated, probably in an unconscious way, by a variation of the fallacy of presentism. Since historical writing is the active reflecting on the past in the present, there is danger that the present can distort the historian's perspective. Because we now know how events turned out, it becomes imperative to maintain a sense of historical time lest the present moment be portrayed as inevitable and all sense of historical contingency be lost. In the quest for sainthood, an idealized past is sought in the present to be used as the basis for guiding the future.

"When religious advocates of the Serra cause ask us to judge Junípero Serra by eighteenth-century standards, not twentieth, they strike a resonant note with historians. But their request is simultaneously disingenuous, given their purpose, which is canonization. Sainthood requires that Serra's experiences, especially those with the California Indian, transcend time and place. Sainthood means that his is a universal example for all Catholics to follow. Phrased another way, if Serra is canonized, the eighteenth century would judge the twentieth and all the centuries to come.

"...Judging Father Serra by the standards of his time is what the historical record ought to permit. The failure of Bolton in 1948 and of the historians interviewed for Bishop Shubsda in 1986 to present both sides of Serra's story profoundly challenges the ethics of the historical profession. Personal bias, either in advocacy or apology, seems to be preventing objectivity by historians in public service. These episodes demand that historians re-examine the role their colleagues play in the service of religion. At the very least, the lesson for us all is *caveat scriptor*."

If [history](#) and the [news](#) are fabrications, how can we learn the lessons of history and relate them to current events? We cannot. A major reason why history repeats itself is that we are taught lies about it, so the lessons are not learned and not applied to the present day's events. The primary delusion that [Americans](#) labor under is that we are the good guys as we unleash death, destruction and exploitation onto the world on an unprecedented scale.

For all the presentism arguments, [Columbus](#), Cortés and [Serra](#) did have standards to hold them to. They self-righteously dictated those standards to others many times, and unless hypocrisy is a relative historical value, they can be held to account. Their standard was Jesus and his message of love. They were Christians who wore their faith on their sleeves, Columbus calling himself the [Christ-bearer](#), and Cortés putting up Christian images wherever he went, preaching his faith as he slaughtered countless natives. Is there something wrong with that picture? Can they be held to the standards they dictated to others? I think so.

If American historians were an honest lot, on every Columbus Day there would be picket lines of historians in front of the White House, decrying the travesty of naming a national holiday after Columbus. In one sense, American historians have prostituted themselves, as has probably every professional group. They bow to the prevailing winds of wealth and power, and if the powers that be want national holidays named after mass murderers, or want to grant sainthood to an initiator of genocide, the historians will produce a "history" to justify it.

When some of the [CIA's](#) (or other secret organization's) activities have crept into the public eye too visibly to be denied any longer, a strategy of partial disclosure is followed. Part of the story is told that is true, the part they can no longer deny. They tell that story, the one everybody already knows, accompanied with other "confessions" and context. They are usually fabrications designed to lead people away from the deeper truth of matters. It is a standard disinformation tactic.

In the mainstream media today, racism is still alive and well, but subtler than it used to be. *Time Magazine* ran an article soon after *Silence of the Lambs* debuted, and gave an example of how the FBI does its forensic sleuthing to catch those Hannibal Lecter-like criminals. The only example they gave was a blond-haired, blue-eyed woman, raped and murdered by a black teen-aged boy.[\[101\]](#) *Time* and the FBI were guilty of promoting, however subtly, the long-standing myth that black men rape white women whenever they get the chance. That is a myth spun long ago in America's slave-owning culture. The incidence of black men raping white women is not remarkably different from white men raping white women, etc.[\[102\]](#) Yet, the myth has persisted in order to keep black men in their place. Where did all those not-so-black Americans come from? Was it black slave men sleeping with the wives of their masters? Or, was it all those white masters who essentially raped their slave women? Which one outweighed the other by a ratio of about ten-thousand-to-one? It used to be a felony act for a white woman to have sex with a black man in Virginia. If black men took up raping white women as a habit, it could be considered an act of vengeance by the race, but they do not. The defunct [Lies of our Times](#) regularly pointed out that kind of subtle racism. Today, [Z Magazine](#) and other progressive publications point out the subtle and not-so-subtle racism,

sexism and classism that still pervade American society.

For an example of the kinds of subtle racism that infects works by white men attempting balanced scholarship regarding Native Americans, David Weber's *The Spanish Frontier in North America* will suffice. It is not the flag-waving exercise of earlier works of history, yet there are biases that Weber was probably unaware of. He attempts balance, but took it fairly easy on the Spanish genocidists who marauded through the Spanish frontier. From the Caribbean to [Mexico](#) to [South America](#) to [North America](#), the story was the same: the Spanish slaughter of the natives, followed or accompanied (or even preceded) by European disease, with the natives enslaved and worked to death, with the priests sometimes at the effort's forefront.

Spanish violence inflicted on the natives was so far beyond the violence that went the other way - native violence inflicted on the Spaniards - that native violence barely bears mention. The casualty ratio was more than 1000 to one, regularly. The Spanish frontier in North America was more sparsely populated than the Caribbean, Mexico or the Incan Empire, especially after [Soto](#) and others spread diseases among the natives that depopulated entire regions. Although Weber mentioned some of the innumerable acts of Spanish violence against the natives, in the book he presents some art of the day. Twice he presented images of Spanish-native violence. In both instances, it was natives killing Spaniards.[\[103\]](#) Weber may have been unaware of that disparity in his depictions. Where the real death toll by violence was about 1000-to-one in favor of the Spaniards, Weber *pictorially* depicts a score of the natives two, the Spanish zero.

Weber can probably present a convincing rationale for such a skewed depiction, but his bias is typical for white men who think they are being "balanced." It is similar to [Sir Hugh Thomas continually minimizing the pre-Columbian native population of the Caribbean](#), holding to estimates of sixty years ago, estimates that are considered the ultra-conservative extreme today. If Thomas was asked about it, he might protest that it had nothing to do with minimizing the white man's crime of "settling" the New World. He may even believe it. That kind of bias is surely less pronounced than the halcyonic writings about Columbus in days of yore, but it demonstrates how far Western scholarship has to go before it can aspire to be "objective."

In the end, having primary source documents means far less than the bias of the historian sifting through them.

[26] An excellent and accessible summary of East Timor contrasted with Cambodia is in the video documentary *Manufacturing Consent: Noam Chomsky and the Media*. Otherwise, *The Washington Connection and Third World Fascism*, and *Manufacturing Consent* provide excellent summaries.

[27] From a pre-invasion population of about 700,000, the death toll to the East Timorese people is reckoned conservatively at 100,000 and more realistically at 200,000. Those numbers may understate the true death toll. Gabriel Defert authored what is considered by some to be the best analysis of the Timorese deaths in his *Timor Est le Genocide Oublié*. That 1992 paper estimates that 308,000 people may have lost their lives in the Indonesian invasion and occupation. That is 44% of the population. The Jewish people may have lost "only" 33% of their population in the [World War II Holocaust](#). In addition, Indonesian professor George Aditjondro estimated 300,000 Timorese deaths based on his analysis of Indonesian Army data. See *East Timor: A People Shattered By Lies and Silence*, by Professor António Barbedo de Magalhães, of the Oporto University, Portugal (published July 17, 1996). It has been available on the Internet. A death toll of 200,000 deaths appears reasonable.

[28] See Lee and Solomon, *Unreliable Sources*, p. 279 for the NYT editorials, and pp. 278-283 for coverage of the incident in general.

[36] See Churchill, *A Little Matter of Genocide*, pp. 169-170.

[37] There is a distinction to be made here, although it is not very important. William Bradford was one of the Mayflower Pilgrims, and wrote the original history of the Plymouth Colony, but it was lost for a couple of centuries. They were not really Puritans, being a more radical group called Separatists, who left the Church of England, feeling it was too corrupt. The Puritans were members of the Church of England who also thought it was corrupt, and they tried reforming it from within. The twenty-year period of English Civil Wars and conflicts that began in 1640s is also known as the Puritan Revolution. Whether Puritan or Pilgrim, they were all still Calvinist Christians, and dourness was one of their more salient characteristics.

[Why Do We Celebrate Columbus Day?](#)

[Footnotes](#)

Introduction

Every year, Bill Bigelow, an Oregon high school teacher, plays out the same scene for his students. He seizes a student's purse and announces that the purse is his. He holds it. Is possession enough? He takes out the lipstick and announces that it is his. He now knows the purse's contents; is that enough? His arguments ring hollow, particularly when the students saw his crime in the making. They do not yet know that the student whose purse was seized was the teacher's confederate. When all his arguments have failed to convince, he then asks, "What if I *discovered* it?" The students chuckle a little, but reject that argument as well. Then Bigelow asks, "So why do we say that Columbus 'discovered' America?" In that spirit, this essay will investigate the feat of Christopher Columbus, the original American hero.

I worked in Columbus, Ohio for five years, and in 1992 during the 500th anniversary of the New World's discovery. The town mounted a celebration that lasted the entire year. In Columbus they have a replica of the Santa Maria, the ship Christopher Columbus sailed on during his epic voyage. The replica is a tourist attraction. There were even plans to erect a statue of Columbus, hundreds of feet tall. He is the original [Founding Father](#).

Most Americans are aware of recent significant revision of Columbus' feat. The celebration of 1992 was starkly different from 1892, the Chicago Columbian Exposition (actually staged in 1893). The 1893 Exposition was a huge event that attracted 24 million visitors, for the largest event attendance in world history to that time. In 1992, however, there were protests and events such as Indigenous People's Days, instead of Columbus Day celebrations. The year 1992 marked the release of a number of "revisionist" works. It coincided with research I was already doing into the news and history.

I originally became aware of blemishes to Columbus' image after reading [Howard Zinn](#)'s revolutionary *A People's History of the United States*. As a good scholar does, Zinn began his "revisionist" look at Columbus by studying the primary evidence, namely Columbus' log, prepared during his voyage of discovery. As with so much of history, we know little for sure.

For instance, Zinn did not really read the captain's log. He read a translation of a partial copy of the log that

Bartolomé Las Casas made nearly 500 years ago. The original log was lost centuries ago. Over the centuries there have been many portraits drawn of Columbus, and they all look different because nobody really knows what Columbus looked like. He may have had no portrait made while alive. Columbus' birthplace and year of birth have been enduring controversies. The standard view is that Columbus was born in Genoa, part of today's Italy, in around 1451, give or take a year, but there are arguments that Columbus was Spanish, Portuguese, Jewish and several other European nationalities. Debate has raged for centuries over where Columbus first landed in the New World. His very name means "Christ-bearing colonizer," so was possibly not this birth name, an incredible coincidence, a creative translation or a sign of "God's hand."[\[1\]](#)

The best "revisionist" histories attempt a determination of what may have really happened. In Zinn's "revisionism," he read the captain's log and reported what Columbus was after: gold.

The First Voyage, The Discovery

On Friday, October 12, 1492 the ships sighted land and the New World was discovered, although the men aboard did not know it yet. There was a reward of 10,000 maravedis (\$540, a large sum in those days, more than a year's wages for a typical sailor) from the Spanish Crown to the man who first sighted land. Columbus claimed the reward because the night land was sighted he thought he earlier saw a light in the West.[\[2\]](#) It was flimsy evidence, but Columbus stole the reward from the sailor who first sighted land.

According to his log, Columbus thought he had reached Asia and was near Japan and the Chinese Empire. At dawn, Columbus and his armed Spaniards went ashore, unfurled their flags, planted a cross, and claimed the land in the name of the king and queen of Spain. That ceremony attended the Spanish wherever they went.

Immediately after Columbus finished making his announcement (to the empty air) of taking possession, the natives began showing up on the beach. They were all naked and friendly, and Columbus described those new Spanish subjects at some length. Some natives carried short wooden spears, but were so unacquainted with weaponry that when Columbus showed a native his sword, the man grabbed the sword by the blade and cut himself.

On that epic day of first contact, three dynamics were evident that would figure largely in future events. They obviously had no common language or culture, and Columbus badly misunderstood much of what the natives tried telling him using gestures. Second was Columbus' judgment of how easily the natives could be turned into Christians. Third was the event Columbus finished that day's log with. Columbus inferred from native gestures that natives from other islands enslaved them. He thought those natives would make fine servants himself, so he captured six of them that first day.

On the second day of discovery, Columbus made first mention of the subject that dominated his logs thereafter: gold. He noticed that some natives had gold jewelry in their noses, so he made the first inquiry, an inquiry that presaged the [Spanish obsession for the next century](#): "Where's the gold?"

The standard sequence of events was going ashore to new land, claiming it for Spain, planting a cross and asking where the gold was. Columbus' voyage of discovery was really a gold hunt. In Columbus' log of December 26, 1492, he made his journey's purpose clear: to find enough gold to finance another [Crusade](#) to conquer Jerusalem.

While reading Columbus' log, I was struck by how many times Columbus ordered his men to not steal from the natives. Columbus made sure the Spaniards would be on their best behavior for those initial encounters. The natives freely gave all they had, or would trade objects of immense value for baubles. Columbus continually expressed his amazement that the natives gave all manner of goods to the Spaniards for trinkets, or simply gave it

away. As the boats sailed from island to island, the most common native reaction was fleeing when the Spaniards showed up (some apparently thought the ships were sea monsters, while others timidly fled from the strange men and boats). The other reaction was warmly welcoming the Spaniards. Columbus and his men never received a hostile reception.

In his log, Columbus regularly remarked on the astounding beauty of the islands and the natives' friendly, happy, peaceful nature, but the obsession of his writings was always where the gold was and how the islands' wealth could be exploited. A mere three days into his gold quest, on October 14th, Columbus made clear what he thought of the natives' military might. His log informed his king and queen that, "with fifty men you could subject every one and make them do what you wished."

On October 15th the ships anchored at an island where the natives "let us go anywhere we desired and gave us anything we asked." After staying a couple hours and determining there was no gold, they prepared to leave. One of the captives then escaped by jumping overboard, as another had done the night before. Columbus' men tried capturing the natives, but their boat was too quick. Columbus indicated to the local natives that his captives were with him because they had harmed him, but that ruse was probably unconvincing.

After sailing through the islands, visiting and trading with natives who had not fled, the ships came to another island on November 11. There a canoe with six "youths" in it approached the ship, and five came aboard. Columbus captured them. Then he sent his men ashore, where they captured seven women and three children. Columbus was modifying a standard [Portuguese](#) practice used in Africa, one he said he used many times when he was a slave runner: capturing the natives, taking them back to Europe, teaching them his language, and bringing them back as interpreters. It had not worked well with Africans, because the natives were not happy with their treatment, but Columbus thought that if he abducted entire families, he might have better luck. That evening, with his slave stock replenished, Columbus was delighted when a man came to the ship and asked to come aboard, as among the new captives were his wife and three children. Columbus gladly allowed the man to become enslaved with his family.

On November 21, gold fever may have overcome the Pinta's captain, as he sailed away in search of gold. Columbus was outraged, but had no option but to continue with his two remaining ships.

After sailing along the coast of Cuba, asking about gold and riches, Columbus reached the island that he named La Isla Española, on December 6, 1492. [Haiti](#) and the Dominican Republic are on that island today. It was the first place permanently colonized by Europeans in the Western Hemisphere.

As usual, the natives fled when they saw the ships. Columbus and his men had to work hard at convincing the natives of their friendly intentions, especially when they had captured natives aboard. As they sailed along the coast, their reception was either friendly or the natives fled. Columbus began to understand the political order, and discovered men called caciques were leaders of some sort. It was a hereditary office, with minor similarity to European royalty.

By "discovering" the Caribbean's inhabitants, Columbus had stumbled into a civilization about 1500 years old. Española was the center of that island civilization, and a people known today as the Taino dominated it. They had [migrated from South America](#), along the archipelago of Caribbean islands at about the time Jesus lived, gradually absorbing/displacing a hunter-gatherer culture. The Taino were Arawakan people. There were other ethnic groups in the Caribbean, such as the Caribs, Guanahatabey and Ciguayo, although the Taino were by far the largest group and occupied the greatest portion of Caribbean land. The Taino's material and spiritual culture was what all other Caribbean groups based their culture on. The Taino were settled in agricultural communities and possessed a rich and diverse food supply. Life was easy in the pre-Columbian Caribbean, and if there could be any generalizations made of the Taino, particularly as compared to today, it would be their happiness and gentleness. Their world was about as close to earthly paradise as human existence has ever come, a fact that was not lost on Columbus, as he

often remarked upon it in his log. He regularly observed that the natives did not seem [capable of dishonesty](#).

On December 25, 1492, with Columbus aboard, the Santa Maria ran aground at night while a boy was steering. The local village came to the rescue and unloaded the sinking ship. Columbus was amazed at the natives' helpfulness, and assured his king and queen that "not even a shoe string [more literally "lace point," used to secure shoes and clothes - Ed.] was lost!" The cacique of the helpful local village, Guacanagarí, welcomed the stranded sailors.

Because their largest ship was destroyed, Columbus left behind about 40 Spaniards and they built a fort from the ship's timbers. Many of Columbus' men begged to stay instead of sailing back to Spain. Columbus admitted that no fort was necessary among such friendly and peaceful people, but he could not put aside his European conditioning. Columbus wanted to condition the natives to obey their new Spanish overlords (although they did not know they had overlords yet) out of "love and fear."^[3] So Columbus had a lombard and musket fired in a demonstration of power, frightening those happy, helpful natives.

The Pinta eventually rejoined the Niña, its captain's gold quest profitably concluded. The captain claimed he was innocently separated from the other ships, which may have been true. Columbus felt the explanation was a lie, but could do nothing about it, so he did not punish the Pinta's captain.^[4] On January 16, 1493, the ships were sailing back across the Atlantic, soon after they had murdered two natives while trading on January 13th.^[5] Columbus described those murdered natives and their people as "evil, and I believe they are from the island of Caribe, and that they eat men."^[6] That characterized the attitude that prevailed during the second voyage and beyond. If the natives were friendly and welcoming, they were the gentle Taino.^[7] If they were less than welcoming or were unfortunate enough to be murdered by the Spaniards, they were cannibalistic savages, deserving whatever fate the Spaniards could dish out.

On that first epic voyage, Columbus began the unfounded myth that the Caribbean natives practiced cannibalism. About the only evidence there ever was for Caribbean cannibalism came from Columbus' imagination while he interpreted native gestures. His misunderstandings correlated with European mythology. Columbus wrote of savage cannibals, people with an eye in the middle of their forehead (log entries of November 4th and 23rd, 1492), and dog-like noses that drink the blood of their victims after cutting their throats and castrating them (log entry of November 4th, 1492). Columbus found in native gestures what he expected to find. For all the writing of what a Renaissance man Columbus was, he had many medieval fantasies. Late in his life he labored on an apocalyptic work that was eventually titled the *Book of Prophecies*, which Kirkpatrick Sale says has been "an acute embarrassment to most Columbus hagiographers, since it is so at odds with the scientific Renaissance rationalist they like to depict as the forerunner of European conquest..."^[8]

When Columbus arrived back in Spain, his sponsors were pleased to hear of new lands to exploit. Let there be no misunderstanding their intentions - they were not benevolent. It is true that Queen Isabella did not want to enslave the natives. She wanted loyal subjects. Yet, the sovereigns frowned on slavery only after it became evident that the natives made poor and unprofitable slaves, because they quickly died when shipped to Europe. In addition, in Europe the difference between slave and subject was sometimes little more than a semantics exercise.

It is true that "converting" them to Christianity was a goal. Conversion is a dubious goal for any religion, and the reign of Ferdinand and Isabella was notable for initiating the [Spanish Inquisition](#), which was mainly an attack against Jews who had lived fairly peacefully and prosperously for centuries under [Moorish rule](#). Jews converted to Christianity in order to continue to live in Spain, at least those who survived the mass murders that dotted Spain over the previous hundred years.

In January of 1492, Grenada, the last city held by the Moors on the Iberian Peninsula, fell to the Spanish armies, ending several centuries of warfare. The Islamic and Jewish people who had lived there for centuries were given

the option of converting to Christianity or being expelled from the country. The Jews had been [kicked out of European countries for centuries](#), and Spain had been a safe place for them, but no longer. The Inquisition especially targeted *conversos*, who were Jews forced to convert to Christianity. The suspected crime of *conversos* was continuing to practice their Jewish faith in secret. For that crime they could be burned at the stake, and thousands were.

What happened to the Canary Islanders off Africa's coast was a preview of the Caribbean Islanders' fate. The Guanches, who came across the ocean long before Jesus was born, had settled the Canary Islands. It is believed they came from North Africa, perhaps from Berber stock. They built step pyramids and made mummies as the Egyptians did. Many Guanches were tall and blond. Castile and Portugal were involved in conquering the Canaries. Pope Clement VI “awarded” the islands to Castile in 1344. They were first invaded in 1402, but the final Spanish conquest that destroyed the Guanches was mounted during the 1490s, directed by Queen Isabella, who began her campaign in 1477.^[9] The rationale was the same one used for Spain's Reconquest: the people they were conquering were not Christians. The invasion was to “save their souls.” That was an audacious rationale for thievery and murder. The process of saving them destroyed them.

In 1494, the Spaniards invaded the Canaries' largest island, Tenerife, for the first time. The Spaniards were defeated decisively by the Guanches, but mounted another campaign in 1496, and that time were successful, aided by an epidemic disease (obviously introduced by the invaders) that swept through the Guanches, killing large numbers of them. The Guanches were enslaved, the [islands deforested](#), and the settlers flocked there. In 1504, The Inquisition came to the Canaries to enforce the new faith and hunt Guanches still practicing their pagan faith in secret, and any Jewish settlers who thought they could escape the long arm of Spain. As a culture, the Guanches were largely extinct by 1600, but genetically their remnants were absorbed into the colonial settler populations, which can still be seen in Canary Islanders today.

Returning to the Spanish court with the six Indian captives who survived the return voyage (most of his captives had already died, and only two would survive a whole year), along with gold nuggets, parrots and other New World paraphernalia, was Columbus' finest hour. He was named Admiral of the Ocean Sea, cut in on 10% of the New World's loot, and a second voyage was immediately planned. Before he met with Ferdinand and Isabella, Columbus drafted a memorial regarding future colonization plans. Nearly two-thirds of the document was concerned with how to handle the gold.^[10] Inserted between paragraphs about securing the gold was a paragraph about building a church and converting the Indians. The sovereigns agreed with the document in principle and the second voyage was planned. The Spanish names of the sovereigns were Fernando and Isabel, and Columbus' Spanish name was Cristóbal Colón, but this essay uses their anglicized names.

The Second Voyage, The Invasion

The second voyage was not the three-ship excursion into the unknown of the previous year. A full-scale invasion was planned, with seventeen ships and far more than one thousand men, including well-armed soldiers, a troop of cavalry lancers, six priests to convert the heathens, man-eating dogs (those infamous dogs of war) and not one woman. It was no friendly expedition, going to dance and sing with the natives, asking politely if they had gold. It appears that the second expedition was partly financed by wealth seized from the Jews, as on May 23rd, 1493, the day the second voyage was authorized, the sovereigns issued royal orders stepping up Jewish wealth confiscation.^[11] Not many, if any, of those gentle New World islanders had any idea what the future held, but history was about to be made.

There is no surviving admiral's log, but others of the invading force chronicled that voyage's events. An Italian nobleman, Michele de Cuneo, one of the two hundred “adventurers” on the voyage, wrote a letter in 1495. A Spaniard, Guillermo Coma, wrote a few letters to the folks back home. The fleet surgeon, Dr. Diego Alvarez

Chanca, also wrote a letter, and those three accounts are the main surviving primary records of the second voyage. Columbus' son Ferdinand wrote a second-hand account of Columbus' second voyage, writing from Columbus' admiral's log, which has since been lost.[\[12\]](#)

The invasion force was prepared for the "inhuman savagery" of the natives. On the first day land was sighted, November 3, 1493, Coma had this to say, before he had even seen a native (besides those already in Spanish captivity):

"These islands are inhabited by Cannabali, a wild, unconquered race which feeds on human flesh. I would be right to call them anthropophagi. They wage unceasing wars against gentle and timid Indians to supply flesh; this is their booty and is what they hunt. They ravage, despoil, and terrorize the Indians ruthlessly."[\[13\]](#)

Descriptions such as Coma's, typical of the European perspective, said far more about Europeans than the natives. The Spaniards, led by Columbus, had already dehumanized people they had not yet seen. They were engaging in a time-honored practice of dehumanizing those they were about to prey upon.

No convincing evidence exists that the natives of the Caribbean were particularly warlike, fierce, or cannibals, even the legendary Caribs, although they raided the Taino islands, generally to take "brides." In one of many ironies of the New World's "discovery," the second voyage first made landfall at Guadeloupe (after a brief stop for Columbus to "claim" Martinique). Guadeloupe is considered the island furthest north that the Caribs inhabited. It was Columbus' best and nearly only chance to meet a real Carib on that voyage, and it is doubtful that he ever met a Carib in the flesh, except some possibly Carib women and children that he captured during a later voyage, in his standard exploration style.[\[14\]](#) The fleet stayed at Guadeloupe for a week. What kind of encounter did the Spaniards have with those fierce cannibals? The natives all fled inland when the Spaniards showed up, and the Spaniards failed to meet any.[\[15\]](#) On Guadeloupe, Columbus' men invaded the island, one party getting itself lost for days, while others seized the women they found, possibly Carib women, but also possibly "bride captured" Taino.

On November 14, two weeks before the fleet arrived at the fort manned by the forty Spaniards left behind on the first voyage, Columbus, Cuneo, Coma and Chanca recorded a native encounter on St. Croix. The seventeen ships were anchored off the island, and longboats had gone ashore to capture slaves. Just then a canoe appeared, paddling along the shoreline. The canoe held four men, two women and a child. The sight of the large ships left the canoe's passengers spellbound. The canoe just sat there for an hour, the natives mutely staring at the ships.

To the Spaniards, those awestruck natives were merely more slaves to capture. They sent boats after the canoe, sneaking up on it. The surprise attack worked, and the natives did not see the boat until escaping the two-dozen armed men was impossible. Then the men and women shot arrows at their attackers. One European was wounded and later died. The natives were captured and brought aboard. One man was severely wounded, his intestines hanging from his wound. The Spaniards knew he would not live, so they threw him overboard. The Spaniards then watched the native hold his intestines with one hand and swim to shore. Their captive Tainos apparently said they should not let the man escape to tell his people what happened, as they might retaliate. So the Spaniards caught him on shore and brought him back, where they tied him up and threw him overboard again. When he amazingly began swimming to shore again, they shot him several times until he died as he struggled for shore.

Those natives were the first ones the Spaniards met who tried defending themselves. Accordingly, the invaders called those unfortunate natives "Caribs." They were not Caribs, but it was in keeping with the good native/bad

native tradition Columbus had already begun on his first voyage. Whether they were Caribs or not, their treatment ended up the same.

Cuneo (probably Columbus' close friend, maybe from childhood) wrote the first recorded account of sexual relations between Europeans and natives. Cuneo received a "gift" from Columbus. The gift was one of the captured native women. In the words of Cuneo:

"While I was in the boat I captured a very beautiful Carib woman the said Lord Admiral gave to me, and with whom, having taken her into my cabin, she being naked according to their custom, I conceived desire to take pleasure. I wanted to put my desire into execution but she did not want it and treated me with her fingernails in such a manner that I wished I had never begun. But seeing that (to tell you the end of it all), I took a rope and thrashed her well, for which she raised such unheard of screams that you would not have believed your ears. Finally we came to an agreement in such manner that I can tell you that she seemed to have been brought up in a school of harlots."[\[16\]](#)

The fleet left a swath of terror wherever it went, and had not yet arrived at its destination: the fort at La Villa de la Navidad. On November 28th they arrived, looking for those forty men left behind near Guacanagarí's friendly village. The reception was different from what they had envisioned.

When Columbus sailed back to Spain, he gave the men at the fort several admonitions. They amounted to behaving themselves around their native hosts and finding the gold. The men at the fort, being creatures of their age, acted normally for fifteenth century Spaniards around naked women and gold. According to Guacanagarí, they fought with each other the moment Columbus' ship was out of sight. Some seized about five women each as their concubines while others marauded across the island in search of villages with gold. Their infighting climaxed when two Spaniards killed another one, then eleven of them marched across the island to where they thought the gold mines were. Some had already left the fort for good, striking out on their own in that land of naked women and gold. Some had already died of illness. God only knows what predatory excesses accompanied their trek across the island, but their reception in the "mining region" was likely not welcoming, as they encountered Caonabó, the cacique that reigned there. Caonabó was not a Taino, but from the less gentle Macorix ethnic group. He did not suffer the predatory Spaniards long. He had them killed, then marched to Columbus' fort. The remaining Spaniards had taken up residence in Guacanagarí's village with their concubines. Caonabó had the village burned in a night attack. Only eleven Spaniards remained, and eight of those died by drowning as they tried escaping. Guacanagarí tried protecting the Spaniards as his village burned, and was wounded.[\[17\]](#)

Columbus could not have been too surprised; he had already been handing out captured women as sex gifts to his men. The only ally the Spaniards had was Guacanagarí, and the head priest on the expedition, Friar Buil, wanted Guacanagarí executed as an example. Columbus was not about to execute his only ally, church advice or not. Instead he had the fort site dug up, to see if the men buried any gold they might have seized (as Columbus instructed them to), and they moved off to establish another settlement.

On the first voyage, the natives who did not flee were exceedingly friendly, and at times seemed to worship the Spaniards as heavenly beings visiting earth. The Spaniards' reputation preceded them then, and most local natives fled before them. The fort had been built near a shipwreck, so was not a great harbor. The fleet sailed seventy-five miles away to establish a beachhead, closer to potential gold mines in the island's mountains. Columbus picked the new site, yet the harbor was poor and there was no fresh water nearby, among other problems. That is where Columbus' ambition became focused, and the town of Isabela (in honor of his queen) was built there. He even gave his house (one of the few stone structures built there) the ostentatious name of "the royal palace" in case the sovereigns should stay there when surveying their empire.

The town of Isabela lasted two miserable years before it was abandoned in favor of the site at Santo Domingo. Isabela was plagued with disasters, including greed, famine, disease and violence. Pigs picked up in the Canary Islands may have carried swine flu, making a third of the Spaniards deathly ill, and killing the natives in droves. The dead natives lay in great stinking piles, in the words of the Spanish historian Oviedo, so many that “they could not be counted.”[\[18\]](#) European-introduced disease killed tens of millions of natives during the sixteenth century.

The Spaniards would always wear out any welcome the New World natives might give them. The [first-contact accounts](#) of Spaniards and other Europeans throughout the New World unfailingly recorded the friendly welcome they received. When a “first-contact” account recorded a hostile native reception, historians use that as evidence that white men had previously visited, such as [Ponce de León’s reception as he invaded Florida](#), or [Coronado’s as he invaded pueblo land](#).[\[19\]](#) Spanish cruelty was readily evident throughout the surviving accounts. In August 1493, as Columbus explored the Española coastline, they discovered an uninhabited island populated with seals and birds. The Spaniards killed eight seals and numerous birds, apparently for no other reason than they could, as those creatures had not yet learned to fear humans.[\[20\]](#) On his last voyage, one of Columbus’ men shot a spider monkey out of a tree with a crossbow; then cut off one of its arms. While the monkey was dying, impaled on the arrow with one arm missing, Columbus noted how the sight of the dying monkey frightened one of his dogs and even a native peccary on board. Columbus then performed an experiment: he threw the monkey and peccary together to watch the reaction. The monkey grappled and subdued the pig with its tail and remaining arm, and Columbus concluded that the monkey hunted pigs, what was not true. Columbus reported that event and finding to the Spanish sovereigns. Hans Koning wrote that such petty cruelty paled beside the human toll that Columbus’ reign and legacy would inflict on the natives, but for Columbus to write of the incident in an offhand, even scientific, way was sad.[\[21\]](#)

Admiral Columbus may have been a good or even great sailor. That issue is controversial, however. He lost a number of ships due to poor judgment, and there are other problems with his reputation as a great seaman. Kirkpatrick Sale takes Columbus’ image as a “great seaman” to task numerous times in *The Conquest of Paradise*. Whatever his merits may have been as a mariner, Columbus was a grossly incompetent colonial administrator. Columbus was about forty-three years old, a white-haired sailor for those times, especially to be sailing into adventurous waters.

Trying to transplant European civilization to new lands is not easy, and Columbus did not exactly bring with him the best people to do it. They all, probably even the priests, had visions of gold dancing in their heads. When it came time to build dwellings and other structures, the freebooters who were not sick were not eager laborers. The ground was not paved with gold, either. Many of those disappointed freebooters-turned-construction-workers “mutinied” in early 1494, led by the royal accountant (whose job was counting the crown’s loot), and tried seizing ships to sail back to Castile. They were imprisoned and sent back on the next boat to Spain. Columbus disfigured those who had stashed away gold by slicing their noses and ears, to little effect. The thievery was rampant.

Columbus was ill for a few months in late 1493. When he recovered, he sailed to Cuba in search of the Asian mainland, leaving one of his brothers behind as governor. Nepotism was a prominent feature of Columbus’ reign. Columbus sailed to Cuba and Jamaica - killing natives, enjoying a hearty welcome, or both - and he always searched for gold.

Columbus was so intent on saying that he found Asia that he engaged in a bizarre act in Cuba. In June 1494, after sailing along the Cuban coast for a month, he compelled his crew to swear that Cuba was not an island but was in fact, “the mainland of the commencement of the Indies.” He made his crew swear out a notarized statement to that effect, and told them they were subject to a “penalty of 10,000 maravedis and the cutting out of the tongue that each one hereafter should say contrary.” He also threatened whippings.[\[22\]](#) Columbus’ hagiographers again have a difficult time explaining such behavior, which was possibly to fulfill royal objectives to search for Asia. If Columbus could dot that “I” he could go back to Española and keep looking for gold.[\[23\]](#)

Columbus' behavior accords well with a devout Catholic of the day. A little more than a century later, the Inquisition would silence Bruno and [Galileo](#) for saying the earth was not the center of the universe (Bruno being burned alive). Galileo's crime was demonstrating it to anybody who dared look through a telescope. Columbus tried to create reality by decree.

Columbus became ill again in September 1494 and was bedridden for several months. His men ran wild. More than a thousand men swarmed across the island, looking for gold, sex and food. They had been ransacking the island before then, but when Columbus was sick it was a free for all. They raped, murdered and pillaged without mercy. Not everybody on the expedition was a fiend. Some were probably shocked by their comrades' depravity, but their shock did little to abate the atrocities. Friar Buil became disillusioned with the New World affair and went home. Because the battles on the Iberian Peninsula had ended (the Moors had been defeated), many unemployed soldiers and adventurers signed up for the expedition. It did not turn out as they had hoped, and many died of starvation and disease, alone in an alien world.

When the Spanish eventually invaded Mexico and the Florida region, it was evident that those more urbanized native cultures were more familiar with warfare than the naked Caribbean people. The mainlanders put up a better fight, but they too were no match for Spanish steel and bloodthirstiness. Events in the Caribbean were not really a collision of two cultures, as has been written. One devoured the other.

By the time Columbus had recovered enough to take control of his men, perhaps 50,000 natives had died, and possibly far more. By that time, the natives were trying to fight back, but were largely ineffectual against armed and armored men with a lust for gold and murder. In March 1495, Columbus regained control of his men and mounted an armed expedition that marched across the island. Hundreds of armed men slaughtered thousands more natives in battle, if "battle" can be used to describe the spectacle of naked people against Spanish swords, firearms, and man-eating dogs. It was a "pacification" campaign.

The purpose of the pacification campaign was to begin turning the native population into submissive and pliant slaves. Columbus sold the western voyages on the premise that the return on investment would be great. Although converting the heathen masses to Christianity was given lip service, nobody should take that notion seriously, and in fact no conversions took place. As with nearly every other exploration in world history, the bottom line of the expedition was the bottom line: how profitable would such an undertaking be? Columbus' extravagant claims of mountains of gold had yet to bear fruit. In February of 1494, Columbus hurriedly sent back to Spain the expedition's first dividends: slaves and gold. All gold taken from the natives was shipped back to the monarchy, to keep their interest up. Twenty-six natives survived the trip back to the Spain.

The cleverness of the Spaniards (and a sense of humor?) shines through from time to time. One anecdote which was funny, in a sick way, was how Columbus' men captured an uncooperative cacique, Caonabó, who Columbus said was the "principal king of the island." Caonabó initiated the killing of those rapacious men at the fort. The Spaniards had a pair of handcuffs and leg irons polished so they shined. One of Columbus' men went to Caonabó with the "gifts." Caonabó was told that the handcuffs and leg irons were jewelry of great status. He was told that the King of Spain wore them. Caonabó put them on and was shackled in short order. The Spaniards must have laughed about that one for days. After being put on display at Columbus' "royal palace," he was shipped to Spain with his fancy jewelry. He died en route, as usual for a native.[\[24\]](#)

In February 1495, Columbus shipped 550 of those "gentle Tainos" to Spain for the slave markets. Only 350 survived the voyage, and on arrival half of those were dying. In 1495, Columbus instituted policies that would prove more effective at exterminating the population than pure violence had so far, and would pay handsome dividends to the Crown.

Columbus designed a tribute system. Spaniards would not deign to dig any gold for themselves, so the natives had to. Every Taino over 14 years of age was to give a hawk's bell (about the size of a thimble) of gold to the rulers

(Columbus and his men) every three months. Upon receipt of the gold, the natives were given tokens to wear around their necks as proof of payment. It was a simple system. When the Spaniards found Tainos without the appropriate tokens, they chopped their hands off, leaving them to bleed to death and making examples of them. It is estimated that about ten thousand Taino died handless that way.

The quota was impossible to meet. The natives had to stop growing food and taking care of themselves to try mining gold. They began starving, falling prey to European disease and all manner of horror, even if the Spanish did not murder them for “sport.” The natives fled as far as they could go: across the island, up into the hills, even to other islands. There was no permanent escape, except by death. Mothers began killing their children before they took their own lives. The Tainos had mass suicides by jumping from cliffs and poisoning themselves, yet the Spanish killed far more, and in ingenious ways. Guacanagarí, Europe’s first ally in the New World, was eventually driven into the mountains himself by the Spanish depredations, dying alone, wandering the mountains of his ruined world.

Genocide

What happened on La Isla Española in significant ways has no precedent in world history. Until the gold strike in the island’s mountains in 1499, which made Columbus a rich man and was the first vindication of the whole Indies business, there was no gold found in significant quantities. Instead of chopping off endless hands, a new variant of a Castilian traditional system was imposed in response to a revolt by Columbus’ men, who wanted land and slaves for themselves. It quickly evolved into the “encomienda” system. It was slavery in everything but the name. The natives were given to Spanish “care” and taught good Christian principles while they were being worked to death, if they were not beheaded on a whim.

For all of Columbus’ rhetoric, conversion apparently was never implemented on Española, except when they began enslaving the natives in the “encomienda” program. That is a rich irony, as Columbus immediately began calling himself the “Christ-bearer,” although his efforts did not convert any natives.[\[25\]](#) “Death-bearer” would have been more apt. The gold strike of 1499 was when Columbus finally hit pay dirt. While the natives lasted, there was finally a genuine gold rush on Española, [the first of many in the New World](#).

Columbus’ passion for gold was more than mere greed. He invested it with supernatural, divine, qualities. A few years before he died he wrote,

“Gold is the most precious of all commodities; gold constitutes treasure, and he who possesses it has all he needs in the world, as also the means of rescuing souls from purgatory, and restoring them to the enjoyment of paradise.”[\[26\]](#)

Columbus thought that gold was the ticket to heaven. Apparently, he never heard the words: “You can’t take it with you.”

Columbus eventually fell out of favor with the Crown, and Francisco de Bobadilla and Nicolás de Ovando succeeded Columbus as the governor of Española in 1500 and 1501. The devastation of Española continued unabated, and Ovando was even more ruthless than Columbus. The mines were being worked furiously, and natives were dying at an incredible rate. In 1503, the island’s southeastern and southwestern regions had not been

completely conquered. Presiding over the southwestern region, known as Xaraguá, was Anacaona, the highly respected widow of Caonabó, the cacique who received the gift of those shiny manacles.

In 1503, Ovando went with 360 soldiers to Xaraguá for the stated purpose of improving relations with the Taino. Anacaona graciously welcomed Ovando and his men, housing and feeding them. All the region's caciques were summoned to welcome the Spaniards. The natives were either amazingly forgiving, or naïve. During that celebration, at a sign from Ovando, his soldiers fell upon their unsuspecting hosts. They slaughtered everybody in sadistic fashion - cutting children's legs off, etc. After enough people had been killed to satisfy the Spanish bloodlust, the soldiers herded the remaining caciques into the royal hut and set it ablaze, burning them to death. What Anacaona must have felt, after the deceitful capture of her husband years before, can only be imagined. Ovando had some warped sense of honor. Instead of disemboweling or burning Anacaona alive, they hanged her. [27] Eighty-four caciques (nearly all the region's leadership) died in the massacre, and that region was swiftly conquered. The next year the southeastern region of the island was "pacified" using standard Spanish brutality, and there was not much resistance from the fast-dwindling native population, although in their twilight years a native named Enrique eventually created a native stronghold in the mountains that held out for years, and they easily defeated the Spanish attacks while demonstrating vastly greater humanity than the Spaniards.

The dogs the Spaniards brought were large, strong breeds such as mastiffs and greyhounds, trained to kill. Dogs had been used in European warfare clear back to the ancient Romans, Greeks and Persians, which is where the phrase "let loose the dogs of war" came from. In Europe, the warfare was against armored opponents, and the dogs often wore armor themselves. In the Caribbean, where the people were naked, and in the New World in general where warfare was practically unknown in the European sense (large battles of extermination), the dogs were murderously effective. The invaders would let loose the dogs and they would easily kill and maim the terrorized people.

Infants' bodies are soft, and were quite a tasty treat for the dogs, so the Spaniards regularly fed infants to their dogs, alive, and at times while the horrorstricken parents watched.[28] The Spaniards had contests to see who could cut a living person in half with one stroke of the sword. They would test the sharpness of their blades by beheading the nearest handy native.[29]

During the Western Hemisphere's rape [during the next century](#), natives often became nothing more than dog food. An Inca conquistador described a dog food storage technique:

"...when I came from Cartagena, I saw a Portuguese named Roque Martín, who had the quarters of Indians hanging on a porch to feed his dogs with, as if they were wild beasts..."[30]

There were butcher shops throughout the Caribbean region during the years of conquest, where Indian bodies were sold as dog food.[31] One practice, used on the Guanches as another prelude to New World events, was known as the *montería infernal*, the infernal chase, or manhunt. Instead of hunting foxes, the conquistadors would hunt natives with their dogs in a jaunty outing. The dogs feasted on their hapless prey. The *montería infernal* became a favorite pastime of many conquistadors, such as [Hernando de Soto](#). Another event to pass the time and provide entertainment was to pit a naked native, sometimes armed with a stick, against a dog. It was reminiscent of the Roman Coliseum. The dogs killed their human prey by disemboweling them, although jugular attack was also used, sometimes leading to decapitation. The natives came to fear being thrown to the dogs more than any other fate.[32]

For various reasons, the New World's natives had few [domesticated animals](#). The llama of South America was the New World's largest domesticated animal. Parrots, turkeys, ducks, guinea pigs and a small dog the Aztecs raised for food were about the only other domesticated animals in the New World. There were no domestic herds of cattle, horses, goats, sheep or pigs for the Spaniards to slaughter. The natives were largely vegetarian, especially those not living near the oceans. The Spaniards took herds of European pigs with them as a cafeteria on the hoof, as Hernando de Soto did in southeastern North America. Those were exceptions, not the rule. When the Spaniards invaded and plundered the native people, the most available dog food was human flesh. Those dogs had been trained to kill human beings, and there were already instances in Europe of feeding the enemy to the dogs of war.

Ironically, the other animals the Spaniards took along for food were the dogs themselves. When the Spaniards found themselves starving in uninhabited territory while looking for natives to plunder, the dogs became the food of last resort. No historian has yet made this point (that I am aware of), but as the Spaniards made many unsubstantiated accusations of native cannibalism, they ate human-fed dogs.

As those acts became known and were seized upon by Spain's European rivals for propaganda purposes, the term "[Black Legend](#)" came into being to dismiss such events as mere propaganda. The events *were* used to score propaganda points, but that did not make them less true. As David Stannard and others have made the case, the Spanish genocidal temperament was far from unique. The English and their political descendants, the Americans, had attitudes every bit as genocidal as the Spanish. They just had fewer opportunities for slaughter.[\[33\]](#)

To Spanish credit, there were *some* people who lamented the slaughter, the priest Bartolomé Las Casas most prominent among them. He was the chief critic and most prominent witness of the Spanish atrocities. Las Casas and people like him were an extreme minority in Spain, although his and other Dominican efforts affected Spanish royalty, which resulted in some laws of limited effect, such as the Laws of Burgos in 1512 (which also spawned the insane, legalistic [Requerimiento](#)). Las Casas' attitude hinted at the Spanish attitude towards the natives: the Spanish generally saw them as human beings (when not using them for dog food), although of an "inferior" race and culture. At least on paper sometimes, the Spanish wanted to civilize the natives and turn them into "good Christians," whatever that may mean. The [English](#), on the other hand, generally felt the natives were subhuman. There is no record of a native advocate among the English, one who remotely approached the effort of Las Casas, who became known as the "Apostle of the Indians."

Las Casas is the primary chronicler of the Caribbean's devastation. He came to the Caribbean in 1502 as a conqueror. He lived in Cuba with his own Indian slaves. He was prosperous. He had a [breakthrough of conscience](#) in 1514 that was a long time in coming, but when it did, he gave away his Indians and dedicated the rest of his life to the natives' welfare, becoming their most outspoken advocate among the Europeans. He wrote a number of tracts and books, and no account of what happened in the Caribbean is complete without some of Las Casas' descriptions of what he saw.

One event that Las Casas witnessed is recorded in his [A Short Account of the Destruction of the Indies](#), the classic, polemic account of how the Spaniards treated the natives. A cacique named Hatuey escaped the butchery on Española and fled to Cuba after the 1503 [massacre at Xaraguá](#), taking his people with him. In 1511, the Spaniards were looking for new lands to plunder after Española had been devastated, and they invaded Cuba. Diego Velázquez, one of Ovando's captains at the Xaraguá massacre, led the first invasion of Cuba, partly because they knew Hatuey and his people fled there. Velázquez became Cuba's governor.

When Hatuey heard the Spaniards were coming, he gathered his people, telling them that the Spaniards had a god, and they would kill to get their hands on it. The Spanish god was a basket of gold jewelry. Hatuey and his people honored the Spanish god with a dance. Hatuey said that the only safety from the Spanish was not having their god around, so they threw the jewelry into the nearest river.

That strategy did not save them. After fleeing across Cuba, Hatuey was captured by Velázquez and his men, while his people were slaughtered and enslaved. Las Casas was a Dominican priest and witnessed a Franciscan brother doing his duty at Hatuey's execution. Hatuey was tied to a stake, to be burned alive in the Christian style. The Franciscan tried converting Hatuey as he stood there, tied to the stake. If Hatuey converted to Christianity, they would *merely* have executed him with a sword, and the Franciscan would have "saved" one more soul. The priest told him about heaven and hell, of eternal rest or damnation, depending on the choice Hatuey took. Hatuey carefully considered the priest's words. He asked the priest if Christians went to heaven. When the priest said that the good ones did, Hatuey replied that he would rather go to hell than be around those monstrous Christians.[\[34\]](#) Then the flames took him.

Multitudes died in the horrific mine conditions. During the early 1500s, the Spaniards were faced with a new problem: it was becoming difficult to find enough natives to do the work. In 1496, when the tribute system was still in place, Columbus' brother Bartolomé, the acting governor while Columbus returned to Spain, apparently surveyed the population to get an idea of how much tribute would pour in. The count tallied 1.1 million people. That was just counting the adults, in the region the Spaniards controlled at that time, which came after two years of severe population decline from violence, starvation, disease, etc.[\[35\]](#) In 1508, the count tallied 60,000 people. By 1535, the original inhabitants of La Isla Española were virtually extinct, and were *completely extinct* a generation later. The Taino were completely exterminated throughout the entire Caribbean long before the year 1600.

Today, there is a revival of the Taino people, and there are stories and some evidence of some mixed-blood survival in mountainous pockets in the Greater Antilles and survivors who fled to South America, but by 1600 the Taino were extinct for practical purposes in the Caribbean. Today's prevailing estimate is that they numbered somewhere between two to three million in 1492, but they may have numbered more than ten million. It is history's only *complete extermination of millions of people*. There is nothing to compare it to. Some of the Old Testament's Jewish [battles of extermination](#) are quite bloody, but the *complete extermination of millions of people* is unique. The 1,500 years of Taino inhabitation of the Caribbean was plenty of time to have populated the islands with numbers in the millions, and with the perfect climate, nearly zero violence, zero epidemic disease, superior agriculture and other benefits that Europe did not remotely enjoy, to number less than millions would be surprising.

The pre-European-contact headcount on La Isla Española and the entire Western Hemisphere is a matter of fierce academic controversy. The notion of the Western Hemisphere as a primeval wilderness waiting to be tamed is a fantasy. With archeology coming into its own during the past fifty years, today's evidence is that people have been living in the Western Hemisphere possibly as long as they have in Europe. North and South America comprise about sixteen million square miles, only slightly less than Asia, which has more than seventeen million square miles. People have been living in the New World for tens of thousands of years. The "primeval wilderness" myths were partly self-serving lies invented by Europeans to make the New World's rape look more benign. Americans are not alone with those delusions. South Africa is another "settler-state" (where the Europeans invaded and stayed) that conjured similar myths to soothe their national conscience. The pre-invasion head count is consequently probably underestimated, perhaps severely so, in all "settler states."

The Western Hemisphere's natives were reverent towards nature, whereas Europeans were afraid of it, and the European goal (so obvious even today in the Western mentality) was to conquer and subjugate it.[\[36\]](#) Although the natives [rarely raped the land as the Europeans did](#), it is illogical to think they did not have many children, and increased their population.

There is plenty of evidence for a New World population in 1492 of 100 million people. There is speculation it could have been higher. Today, mainstream estimates of ninety million can be found, which is naturally a piece of sophisticated guesswork.[\[37\]](#) It is estimated that Europe had about [80 million people in 1500 AD](#), and Asia somewhere around 300 million, with a margin of error of 10 to 25% because there was no census anywhere in the world.[\[38\]](#) The surface area of the Western Hemisphere is about four times that of Europe. One early, authoritative "scientific" estimate, which is regrettably still influential today, by Alfred Kroeber of the University of California at

Berkeley in 1939, estimated slightly more than eight million people for the entire Western Hemisphere in 1492. The British Isles alone had nearly five million in 1492. Spain's population was about eight million in 1492, or a population equivalent to (in Kroeber's estimate) the entire Western Hemisphere's, which had land just as inhabitable or more, people living at about the same level of technology, and often more so, for a preposterous population density about fifty times greater than the New World's. One reason for such a low estimate was the now-discredited notion that the natives migrated to the New World only a few thousand years ago, an estimate that was upheld for generations by attacking any scientist who found evidence suggesting otherwise. A more likely estimate now is 40,000 years, and nobody in academia is arguing for less than 13,000 years ago.[\[39\]](#)

To Kroeber's credit, he stated that his estimate was based on many guesses, and suggested that detailed scientific work be undertaken. The challenge was accepted by scholars who also taught at Berkeley, most notably Carl Sauer, Sherburne Cook and Woodrow Borah. They used a multidisciplinary scientific methodology to arrive at better estimates, first by doing intensive work on a selected area, for instance, and extrapolating it. The numbers the "Berkeley School" generated were startling: eight million for Española alone and twenty-five million for Central Mexico, leading Borah to conclude the population of the Western Hemisphere was more than one hundred million. Based on the higher estimates, the decline of the New World population in the 16th century was by about seventy million people, perhaps more.[\[40\]](#) The main side effect of the [Spanish gold rush that lasted for a hundred years](#) was the extermination of about 90% of the Western Hemisphere's population.

The new estimates sparked intense scholarly debate, which has been raging for many years now.[\[41\]](#) There is no good reason for believing that the Western Hemisphere's population was orders of magnitude less dense than the other continents in 1492. There are credible arguments for it being more densely populated than other parts of the world: no epidemic disease, no mass warfare, superior agriculture[\[42\]](#), and idyllic climates and environs for significant parts of the Hemisphere. All [early chroniclers of the New World's invasion](#) remarked on how thickly populated the lands were.

The Caribbean natives lived in a state Columbus described as Edenic during his first voyage. They did not need clothes, food grew the year-round with crops and environment far superior to Europe's, the ocean was bountiful, epidemic disease was unknown and many of them did not know what a weapon was. According to Las Casas and others, no Spaniard ever witnessed two Tainos fighting each other. If Española only had the population density of the hellhole that was England in 1500, with its poor climate, rampant disease, starvation and violence, it would have had more than a million people.

David Stannard, author of the devastating *American Holocaust*, uses the high end estimates in his book, but for good reason: he has authored the most sophisticated existing pre-contact population estimate for the Hawaiian islands.[\[43\]](#) Stannard makes the impressive and nearly unchallenged case that the Hawaiian islanders may have numbered about a million people before Captain Cook "discovered" them. That challenges the conventional wisdom that has put the population at a few hundred thousand at most. Hawaii has less than one-quarter of Española's land, with similar climactic conditions.

Las Casas made the estimate of three million people on Española prior to Columbus, as have other scholars. This essay will use two million for argument's sake (a million is widely accepted by today's scholarship[\[44\]](#)), something Stannard would call conservative.

The depopulation to 60,000 people by 1508 was a 97% depopulation in fifteen years. That might seem an unparalleled holocaust, but a 95% depopulation ratio is the standard for the world's natives after contacting the filthy, disease-ridden Europeans.[\[45\]](#) The major culprits were the disease epidemics that swept through the natives like wildfire. Across the planet, the cultures that had been isolated from the Asia/Europe/Africa pathogens had a disastrous time when first exposed to them, whether they lived in Iceland, Australia, the South Pacific, Hawaii, or the New World. The Spaniards obviously killed many thousands of natives, and ended up working and starving thousands (millions?) more to death (or the one-two-three whammy of starvation and overwork leading to

susceptibility to disease), but nobody is suggesting that the Spaniards killed two million people on Española with their swords.

There are numerous accounts of the psychological dislocation that the natives manifested. Imposing one culture on top of another, with the expressed purpose of eliminating it, as the Spanish priests did for centuries, takes a tremendous psychic toll. The native responses varied from drunkenness to chronic depression to infanticide to suicide to simply lying down and dying.[\[46\]](#) Two side effects of those psychological dislocations were a collapsing birth rate and high infant mortality rate. Even if disease, starvation, overwork and murder did not eliminate the natives, the [low numbers of surviving infants](#) may have done the job.[\[47\]](#) The Spaniards noticed the collapsing infant survival rates, and at times attempted to force the natives to have children.

Kirkpatrick Sale summarized the native puzzlement toward their exterminators:

"It is said, by Las Casas among others, that what perplexed the Tainos of Española most about the strange white people from the large ships was not their violence, not even their greed, nor in fact their peculiar attitudes toward property, but rather their coldness, their hardness, their lack of love."[\[48\]](#)

The Bahamas, where Columbus first made landfall in the Western Hemisphere,[\[49\]](#) was the home of perhaps a half million happy people. They became extinct within a few years.[\[50\]](#) Similar decimation happened to the entire Caribbean region.

As the natives died by the millions, the slave stock had to be replenished, and the [Spaniards raided further and further away](#), which eventually took them to the mainland. One more important source of slaves to mine the gold and work the plantations was exploited: Africa. As the natives became extinct, the Spaniards and [Portuguese](#) began importing Africans to the Caribbean. The African slave trade is another dark chapter in world history. The European-African-American slave trade killed many millions of million people, perhaps reaching as high as 30 to 60 million people.[\[51\]](#) For what it is worth, Columbus, who worked in the African slave trade in Europe, and who helped initiate what became the encomienda policy on Española, and was a primary architect of the Caribbean genocide, was not directly responsible for bringing African slaves to the Caribbean.

In Columbus' log of his first voyage, the primary accounts of the second voyage, or Columbus' and others' accounts of his other voyages, the mentality of the conquerors was striking.[\[52\]](#) Columbus specialized in kidnapping natives as interpreters as he explored the coastlines in and around the Caribbean. Capturing women for his men to use as sex slaves was typical behavior, when his men were candid enough to admit it (Columbus was writing to the queen, after all). Getting rich quickly (and/or famous) was the preoccupation of all of them.

The accounts were disquieting when describing the native flora and fauna in one section, as Cuneo did, then casually describing killing more than twenty natives with crossbows and firearms from their ships, as a prelude to "trading" with them.[\[53\]](#) Columbus made it a policy not to allow his men to leave the ships unchaperoned, because they robbed and raped with abandon when left on their own.

The Spaniards were quick to suspect their "hosts" were plotting against them. Then they would then [launch a "preemptive" strike against the natives](#), slaughtering hundreds or thousands of them. What betrayed the fact that there was likely no plot was that the Spaniards' preemptive strikes nearly always caught the natives by surprise. The natives were shocked and totally unprepared for the Spanish violence that was unleashed against them. Nearly 100% of the time, there was no trap about to be sprung. As with Columbus' [fanciful interpretations](#) of Taino

gestures, the Spaniards concluded from native gestures what they wanted to find, and justifying a surprise attack on their "hosts" seemed a Spanish penchant.[\[54\]](#)

In no instance that I have seen or heard of, did anybody in Spain ever question the conquest's propriety. It was a universally held concept that conquering the Western Hemisphere was a God-given right. Not even sympathetic historians, such as Las Casas and Cieza de León, questioned if conquering the natives was justified. For Las Casas, who was a great admirer of Columbus, the conquest was bringing the light of Christianity. Las Casas [came the closest to asking that Spain bring its ships home](#), but never quite went that far. For soldier-historian Cieza de León, conquest was merely what he did for a living. Although Cieza de León [lamented the awesome destruction](#) that the Spanish invasion inflicted on the native populations, the question of whether the Spaniards should have even come across the Atlantic was never given consideration. It is a revealing commentary that nobody ever asked if invading the New World was "right." The only debate was whether it could have been done more gently. Such an assumption can be seen throughout history's imperial cultures, including the United States.

Much has been made of Columbus over the centuries. Sailor-historians have worshipped Columbus as one of history's great navigators, and have engaged in senseless debates regarding where Columbus first landed in the New World.[\[55\]](#) Others have extolled his renaissance virtues. During the 19th-century, there was an attempt to make Columbus a saint. There has also been plenty of vilification, particularly lately.

If it were not Columbus, it would have been another European. Columbus was little better or worse than his contemporaries, as far as his regard for the human beings he exterminated. The awesome bloodshed of the first century of conquest was a standard "frontier" situation. The people who manned the voyages to the New World during the years of discovery [were not the best and brightest](#) Europe had to offer. Soldiers of fortune and "gentleman adventurers" would not make an enlightened first contact with the natives, and the men of the cloth often made things worse. Many of the New World's early "settlers" had clipped ears and noses, denoting criminal status in Europe.

After the mercenary elements of European society secured the frontier, then came the "settlers," also not from European society's premier ranks. Although they did not usually inflict the bloodshed of the "frontier" warriors and conquistadors, they finished wiping out the native people and their cultures as they made their homes on native lands and fleshed out the system of exploitation. They became participants in the system and found people below them in society's hierarchy. Having natives to exploit moved them up one notch.

What happened on Española is a phenomenon seen many times during the research for this site. The resources (natives and land) seemed so limitless and abundant that few thought of the consequences of their depredations. While everybody was trying to get rich by mining gold and turning the Caribbean into one big plantation, the natives and local environments were devastated. Hardly anybody bothered to extrapolate the trends to see where they would lead until it was too late. By 1517, the gold had been mined and the Españolan natives were about one percent of their pre-contact population. Nearly the entire Caribbean had been depopulated by then. The priests, led by Las Casas, campaigned to have African slaves brought in to do the plantation work, as they had proven heartier than natives in the mines, and there were few natives left.

By 1518, the priests' campaign succeeded, and the official policy was to have African slaves replace the native slaves. The few remaining natives were to be freed and moved into villages to live somewhat as they had before Columbus arrived. The plan might have worked to rescue the Caribbean natives from the brink of extinction, but fate had another card to play. European diseases had already killed countless natives, but 1518 saw the first recorded epidemic of smallpox in the New World. It wiped out more than half of the remaining natives on Española, quickly driving them to extinction. Thus ends the story of the happy people who greeted Columbus.

Around 1990, I as began to study these areas, I believed that the black-skinned people of today's Caribbean were indigenous people, some kind of equatorial New World natives. I had no idea that they were *all* originally from

Africa. The *complete genocide* of the original Caribbean inhabitants was never emphasized in my schooling.

Columbus made four voyages to the New World. He eventually suspected that those islands were not off of Asia, but that he had discovered a new continent.^[56] He was shipwrecked on his fourth voyage, and the natives of Jamaica fed the surviving crewmembers for a year, while Columbus' men had a mutiny and not only killed each other, but natives. For all his adventures, Columbus died in bed in 1506, in Spain, surrounded by his family, friends and his seven servants, a man made rich from the New World's plunder.

There is more to Columbus' story than this essay tells. He spent one return voyage to Spain in chains (not really as a prisoner, but in a display of self-pity). He was the first to realize that native genocide would be bad for Spain in the end, as dead slaves cannot do any work.

What this essay presents is not controversial to those who have studied Columbus. Today, most Americans have some passing acquaintance with the real story. That Columbus initiated the genocide of the natives is not really debated, even by his admirers. [Washington Irving](#) published a mammoth and hugely popular biography of Columbus in 1828, where he invented, among other myths, the story of Columbus proving that the world was not flat. There is something significant about a novelist writing the first major American work on Columbus.

With most good propaganda, most frequent are the lies of omission, not commission. Nevertheless, some historians deride the work of Sale and Stannard as "ideological." Las Casas entered the political arena and Sauer taught at Berkeley. Some scholars make the case that the New World was not as pristine as "revisionist" scholars would have people believe.^[57] The point made throughout this site's essays is that we know little for sure.

With all the uncertainty, there is *some* warranted confidence regarding what may have happened. People lived in the Western Hemisphere in large numbers. They altered the landscape somewhat, and could destroy their environment to where it no longer sustained them, as how the Mayans had a population collapse that ended their "classic" phase a thousand years ago. Yet, compared to what the Europeans did to their land, the Western Hemisphere generally was pristine. We can never come close to knowing what it was really like before Columbus showed up, partly because the Europeans actively destroyed the culture they invaded.

Why Do We Celebrate Columbus Day?

Why does America celebrate Columbus Day? Modern scholarship does not take the heroic image of Columbus seriously, and yet the "revisionists" are taken to task for their critiques of Columbus' image and other popular myths.

America's capital is named after Columbus (he jointly holds that honor with another American hero, [George Washington](#)), and America was nearly named after him. Cities, streets, a river and other places are named for him. According to an official at the 1893 Columbian Exhibition in Chicago, Columbus' likeness was second place to Jesus in how often it had been produced.^[58]

Americans celebrate the "discovery" of the Western Hemisphere because our ancestors erected European-style civilizations on the bones and ashes of its dead inhabitants. The Columbus Day celebrations are the dysfunctional rituals of a conqueror society. It is true that there were dark sides to native cultures. They apparently practiced human sacrifice in *some* of the New World cultures, sometimes. Warfare was not unknown. The people of the New World were human, but in the areas of viciousness and avarice, on a scale of ten the Western Hemisphere's natives probably ranked a two or three, and the Europeans a nine. America celebrates Columbus Day because Columbus was a "winner."

During the past several centuries, the apologists for Europe's conquest of the New World have gladly told graphic tales of human sacrifice, cannibalism, torture of captives and other native atrocities. The record is nearly devoid of a European witness to those acts.

[Howard Zinn](#) summed up the position America and its scholarship has taken towards Columbus. He wrote about the brainwashing American students receive, how they rarely learn differently, and how scholars have abetted the situation. Zinn wrote:

"Past the elementary and high schools, there are only occasional hints of something else. Samuel Elliott Morison, the Harvard historian, was the most distinguished writer on Columbus, the author of a multi-volume biography, and was himself a sailor who retraced Columbus' route across the Atlantic. In his popular book *Christopher Columbus, Mariner*, written in 1954, he tells about the enslavement and the killing: 'The cruel policy initiated by Columbus and his successors resulted in complete genocide.'

"That is on one page, buried halfway into the telling of a grand romance. In the book's last paragraph, Morison sums up his view of Columbus: 'He had his faults and his defects, but they were largely the defects of the qualities that made him great - his indomitable will, his superb faith in God and his own mission as the Christ-bearer to lands beyond the seas, his stubborn persistence despite neglect, poverty and discouragement. But there was no flaw, no dark side to the most outstanding and essential of all his qualities - his seamanship.'

"One can outright lie about the past. Or one can omit facts that might lead to unacceptable conclusions. Morison does neither. He refuses to lie about Columbus. He does not omit the story of mass murder; indeed he describes it with the harshest word one can use: genocide.

"But he does something else - he mentions the truth quickly and goes on to other things more important to him. Outright lying or quiet omission takes the risk of discovery which, when made, might arouse the reader to rebel against the writer. To state the facts, however, and then to bury them in a mass of other information is to say to the reader with a certain infectious calm: yes, mass murder took place, but it's not important - it should weigh very little in our final judgments; it should affect very little what we do in the world.

"...To emphasize the heroism of Columbus and his successors as navigators, and to de-emphasize their genocide, is not a technical necessity but an ideological choice. It serves - unwittingly - to justify what was done.

"My point is not that we must, in telling history, accuse, judge, condemn Columbus in absentia. It is too late for that; it would be a useless scholarly exercise in morality. But the easy acceptance of atrocities as a deplorable but necessary price to pay for progress (Hiroshima and Vietnam, to save Western civilization; Kronstadt and Hungary, to save socialism; nuclear proliferation, to save us all) - that is still with us. One reason these atrocities are still with us is that we have learned to bury them in a mass of other facts, as radioactive wastes are buried in containers in the earth. We have learned to give them exactly the same proportion of attention that teachers and writers often give them in the most respected classrooms and textbooks. This learned sense of moral proportion, coming from the apparent objectivity of the scholar, is accepted more easily than when it comes from politicians at press conferences. It is therefore more deadly.

"The treatment of heroes (Columbus) and their victims (the Arawaks) - the quiet acceptance of conquest and murder in the name of progress - is only one aspect of a certain approach to history, in which the past is told from the point of view of governments, conquerors, diplomats, leaders. It is as if they, like Columbus, deserve universal acceptance, as if they, - the Founding Fathers, Jackson, Lincoln, Wilson, Roosevelt, Kennedy, the leading members of Congress, the famous Justices of the Supreme Court - represent the nation as a whole.

"... 'History is a memory of states,' wrote Henry Kissinger in his first book, *A World Restored*, in which he proceeded to tell the history of nineteenth-century Europe from the viewpoint of the leaders of Austria and England, ignoring the millions who suffered from those statesmen's policies. From his standpoint, the 'peace' that Europe had before the French Revolution was 'restored' by the diplomacy of a few national leaders. But for factory workers in England, farmers in France, colored people in Asia and Africa, women and children everywhere except the upper classes, it was a world of conquest, violence, hunger, exploitation - a world not restored but disintegrated." [\[59\]](#).

Zinn's *A People's History of the United States* is filled with insightful nuggets. His book should be read in American classrooms instead of the paeans to Columbus.

What has happened during the past generation, with Columbus' heroic image being tarnished, is not new facts arising, but looking at the facts objectively. The picture that then emerged can rightly be called horrifying. Indeed, what have our ancestors been cheering about? Yet, we still have a national holiday called Columbus Day.

We cannot all get on boats and sail back to Europe. The acts of our ancestors are not pretty, and if we had been born then, we might have done the same. The past is the past, and we can do nothing about it except learn from it, and perhaps try healing some of the damage that our ancestors inflicted, such as treating the remnants of the native tribes a lot better, even giving back some of the land that our ancestors murderously stole from theirs. Celebrating what our ancestors did and lying about the past seem the most inappropriate responses, and probably [underlie a mass psychosis](#).

Along with Zinn, there have been other efforts to counter the Columbus Myth propaganda. Hans Koning's *Columbus, His Enterprise*, was published in 1976, which was Zinn's first inkling that the story that Zinn, a Ph.D. in history, had been taught about Columbus might be a little awry. My college history textbook also [did nothing to try challenging the Columbus Myth](#). In the 1991 edition of *Columbus, His Enterprise*, the final chapter is titled "Columbus in the Classroom," written by Bill Bigelow. Bigelow described that [presentation he makes to his classes every year](#), and then led them down the inexorable path of understanding that the European "discovery" of the New World was really invasion, murder and theft from the people who had been living here for millennia.

Bigelow uses *Columbus, His Enterprise* as a textbook for his class, and the students then studied history textbooks and critiqued their highly slanted presentations of the New World's "discovery." The people being discovered may as well have not existed as far as the textbooks went. The focus was all on the Spaniards and their awe of the new land, taking possession of it in the name of the King and Queen, the glory, etc. Who likes to hear they have been lied to their entire lives? At least regarding the Columbus Myth, those students began getting their brains unwashed, which helped them cast a critical eye at other myths they had been told. If only every American history class did the same.

Zinn was a professionally trained historian, ironically earning his doctorate at *Columbia*, and he openly admits that he did not realize what a whitewash the Columbus story was until he began researching *A People's History of the United States*. *Professional American historians* have gone their entire lives and never learned about the dark side of Columbus' legacy. One student said:

"It seemed to me as if the publishers had just printed up some "glory story" that was supposed to make us feel more patriotic about our country. In our group, we talked about the possibility of the government trying to protect young students from such violence. We soon decided that was probably one of the farthest things from their minds. They want us to look at our country as great, and powerful, and forever right. They want us to believe Columbus was a real hero. We're being fed lies. We don't question the facts, we just absorb information that is

handed to us because we trust the role models that are handing it out."[\[60\]](#)

In 2006, I heard from a college professor who has used this essay in his class curriculum for several years. He told me that the information on Columbus in this essay is a shock to about 99% of his pupils. As James Loewen remarked in his seminal [Lies my Teacher Told Me](#), the real hero in American history textbooks is America itself. The story is of the state as hero, always right, forever unstained, marching off to greater feats of glory and righteousness. That is the Big Lie of American "history." That mentality is needed, however, in order to get boys to [march off to distant wars](#), to defend our great nation from "threats" such as [Iraq](#) and [Vietnam](#).

America's entertainment industry has a long-standing tradition of depicting invading armies from other planets, from the 1938 radio broadcast of *War of the Worlds* to the 1996 movie *Independence Day*. The themes of those works of art tap deep into our national psyches and memories. In those stories, we are the natives. Unlike *War of the Worlds*, where invisible disease vanquished the invaders, or *Independence Day*, where a small group of unlikely heroes pulled off an unlikely upset, the Tainos (and most natives of the Western Hemisphere) were not so fortunate. Imagine the Martian invasion was successful. Humanity quickly became a dying species as the invaders "cleared" the land for settlement, while importing their people, culture, crops, animals and technology. Maybe humanity was not totally exterminated, but small surviving groups were allowed to exist on land the invaders deemed useless, where they barely eked out an existence. Then imagine the anniversary of the invasion's first day became a great day of celebration for the conquering extra-terrestrials, their invading fleet's captain a hero, with their rhetoric stating they had displaced an inferior species, beings who were not properly taking advantage of what their planet offered. How *advanced* would such a conquering culture be?

Or turn the story of Columbus around a little. Imagine that Native Americans discovered the British Isles in 1492. They were searching for flint, because they used it as currency. Because they had a military prowess that nobody could resist, they quickly enslaved the British Isles' natives, and in a couple of generations had exterminated the Isles' entire population, while the natives were forced to mine flint. It was also a mere prelude to invading Europe and killing off about 95% its inhabitants. The Indians, after they had secured Europe, wrote histories that extolled the virtues of their race and European culture was nearly wiped off the map. The English and Celtic languages became as extinct as their culture and people, and the Indians could not have cared less, and never even mentioned or cared about the people they exterminated. Would the Indians therefore be a "great people"? Or, might some legitimately lament the passing of a people and culture that might have contributed much to humankind? Imagine a world with no Shakespearean writings. Would that be something to celebrate, or something to lament? Some might think it would be have been great, given the course of world history. Not me. *Everybody* can have something worthwhile to offer. Perhaps the gentle Taino could have taught the world profound lessons about loving one's neighbor, which they may have done better than any other culture. We will never know. It is one of history's ironies that Christians completely exterminated them.

Will Americans ever stop celebrating (or overlooking) the murderous acts of our ancestors? That is something only we can answer. Progress has been made. Columbus Day is not the frenzied celebration it was a hundred years ago, or even forty. The day we unmake that national holiday and replace it with one for native remembrance, for instance, (and maybe give some land back) will be an important one for our progress as a people. Maybe then we will be on our way to becoming "great."

[4] The side trip the Pinta took was eventually the subject of litigation. The Pinzón family helped finance the voyage and captained the Niña and Pinta. Carl Sauer believed the evidence weighed in favor of a mix-up leading to the separation of the Pinta, and Martín Pinzón was not taking a disloyal side-trip to fill his pockets. See Sauer, *The Early Spanish Main*, pp. 27-29.

[5] I write, "murdered," because the last the Spaniards saw of them they fled into the jungle with wounds that were probably mortal. The incident was almost certainly one where the Spaniards interpreted harmless native gestures incorrectly and attacked their hosts. The "shoot first and ask questions later" (if ever) mentality would characterize European attitudes toward New World natives for the next few centuries. See Sale, *The Conquest of Paradise*, pp. 120-121. See also Fernando Colón's *The Life of the Admiral Christopher Columbus*, pp. 88-90. Colón's account is typical in how it projected hostile motivation onto what were likely innocent native activities. It strains credibility to think that Columbus, just as he was heading back to Spain, received his first hostile response, especially if one reads the accounts of it. After buying some bows and arrows from the natives, Columbus' men tried buying more, as Columbus instructed them to. After selling them some bows and arrows, the natives (they were not the Taino, but the nearby Ciguayo) brought forward some rope to trade, which Columbus' men interpreted to mean they were going to try to tie them up. Columbus' men then ferociously attacked the natives, severely wounding two, who likely died. The natives fled at the attack by Columbus' men. The landing boat's pilot helped restrain the attacking Spaniards, and prevented it from becoming the first wholesale slaughter of the Columbian era. Columbus heartily approved of the attack. He thought them Caribs (they were not), and thought that when word got around that a few Spaniards could chase off more than fifty Caribs, they would fear the Spaniards and leave the men left behind at the fort alone. It appeared that Columbus and his men were looking for a reason to make an example out of some natives, and found the opportunity just as they were "leaving town."

[6] Columbus. Log of January 13, 1493. Reproduced in Fuson, *The Log of Christopher Columbus*, p. 173.

[7] Taino is a name given to the Arawakan people of the Greater Antilles, related to their mainland cousins in South America, from where they originally emigrated. "Taino" is the name of convention today, and what they called themselves, so I use it on this site. Columbus called them "Indios," and believed them to be people of Asia.

[8] See Sale, *The Conquest of Paradise*. p. 189. The *Book of Prophecies* was not really a book, but a collection of writings that Columbus planned to present to the Spanish sovereigns. It was largely composed of excerpts from the Bible and other Christian writings. The general theme was Christian evangelism and the "liberation" of Jerusalem. Columbus was trying to draw parallels from scripture to his discoveries across the Atlantic Ocean. To be fair to Columbus, the issue of geography and the Bible was significant then. Bible scholars before Columbus' voyages asserted that there could be no other lands than what were described in the Bible, and the [Isabella-instigated Spanish Inquisition](#), with its flaming stakes and hot tongs, enforced the Bible's certitude. Columbus, in part, was trying to justify his enterprise with the Bible, draw a line through his discoveries, convert the entire world to Christianity, and mount another Crusade to Jerusalem, and prepare for the coming battle with the Antichrist. It partly reflected the times he lived in, as well as his ambition and fanaticism. As Sale wrote, there is little of the Renaissance's influence evident in that work. See the scholarly edition of *The Book of Prophecies* by Roberto Rusconi, translated by Blair Sullivan, University of California Press, Berkeley, 1997.

- [24] See Sale, *The Conquest of Paradise*. p. 154.
- [25] Columbus began calling himself the Christ-bearer immediately after the first voyage, but the tally for Columbus' reign was: native deaths = millions; native conversions = zero. See Sale, *The Conquest of Paradise*, p. 127. See Morison's *Journals and Other Documents on the Life and Voyages of Christopher Columbus*, p. 202,
- [26] Written during his fourth and final voyage to the New World, in a letter to the King and Queen. McAlister, Lyle. *Spain and Portugal in the New World, 1492-1700*, p. 81. A different translation is in Morison, ed., *Journals and Other Documents on the Life and Voyages of Christopher Columbus*, p. 383, which states, "O, most excellent gold! Who has gold has a treasure with which he gets what he wants, imposes his will on the world, and even helps souls to paradise."
- [27] It was perhaps not so warped. The Tainos regarded hanging as the worst way to die. See Barreiro, "A Note on the Tainos," *Confronting Columbus*, p. 41.
- [28] See Stannard, *American Holocaust*, pp. 71-72, 83-84. See Las Casas, *The Destruction of the Indies*, pp. 74, 125. See Todorov, *The Conquest of America*, pp. 138-139. One phenomenon deserves mention here. Events on the New World's frontier were sparsely documented. When an atrocity such as feeding a live infant to a dog was witnessed and recorded by

concerned priests, or a historian wrote of seeing Indian parts hanging from a porch, being used for dog food, it is guaranteed those practices happened far more than were documented.

[29] On the Caribbean colonization, the following are some sources I used and liked, where readers can find out more. Fuson, *The Log of Christopher Columbus*; Morison, ed., *Journals and Other Documents on the Life and Voyages of Christopher Columbus*; Benjamin Keen, translator, Fernando Colón, *The Life of the Admiral Christopher Columbus*; J. M. Cohen, translator, *Christopher Columbus, The Four Voyages*; Koning, *Columbus: His Enterprise*; Todorov, *The Conquest of America*; Sale, *The Conquest of Paradise*; Sauer, *The Early Spanish Main*; Las Casas, *A Short Account of the Destruction of the Indies*; McAlister, *Spain & Portugal in the New World, 1492-1700*; Jacobs, *The Tainos, The People who Welcomed Columbus*; Rouse, *The Tainos, Rise and Decline of the People who Greeted Columbus*; Stannard, *American Holocaust*, chapter 3 in particular; Bitterli: *Cultures in Conflict*, chapter 3 in particular; Zinn, *A People's History of the United States*, chapter 1; Loewen, *Lies My Teacher Told Me*, chapter 2; Yewell, Dodge, DeSirey eds., *Confronting Columbus*.

[30] Pedro de Cieza de León, *The Incas*. Translated by Harriet de Onis. Norman: University of Oklahoma Press, 1959. p. lix.

[31] Las Casas remarked on herds of natives being used for dog food, and that the more "compassionate" Spaniards would first kill the natives before feeding them to the dogs. The less genteel ones would just set the dogs on their live food. For a contemporary reproduction of one of those butcher shops, see Varner and Varner, *The Dogs of Conquest*, pp. 30-31, which is from a version of Las Casas' *Destruction of the Indies*.

[32] These "dogging" practices are documented in Varner and Varner, *The Dogs of Conquest*.

[33] See Stannard, *American Holocaust*, chapter 4.

[34] This story is recounted in Las Casas, *A Short Account of the Destruction of the Indies*, pp. 27-29. See also Barreiro, "A Note on the Tainos," *Confronting Columbus*, p. 42.

[35] A number of modern scholars dismiss virtually all estimates made by the Spanish at that time. The rationale is that soldiers, "adventurers" and priests (virtually the only European visitors to the New World for many years) wildly inflated the numbers to make their conquests or potential conversions seem grander, or Las Casas inflated his numbers to make the horror greater. When Cortés estimated the number of warriors he faced in battle, he was almost undoubtedly engaging in that medieval practice, but the count of natives on Española in 1496 was influenced by neither soldierly nor priestly "heroism." It was a bureaucratic attempt to determine the future flows of gold from the tribute system. To disregard the number of 1,130,000 adult natives apparently counted on the controlled part of the island is questionable scholarship. The count may not have been the most accurate of all time, but it is the only count performed back then, and modern scholarship and scientific investigation has determined that number is by no means unreasonable, and neither is such a large population's collapse. It may be unreasonable to those trying to minimize the devastation the European invasion inflicted on the New World natives, and those who prefer the myth of an untamed wilderness awaiting the conquering heroes from Europe. See discussion by Carl Sauer in *The Early Spanish Main*, pp. 65-67, 200-204. The Spaniards could certainly count. They were great at counting up how many pesos of gold they plundered from the New World. Columbus used a method of navigation on his first voyage known as dead reckoning. Dead reckoning is sailing without any landmarks, and estimating how many miles you traveled by simply watching the water go by. Robert Fuson, one of the sailor-historian types, stated that Columbus might have been the "greatest dead-reckoning sailor who ever lived." (Fuson, *The Log of Christopher Columbus*, page 29, and his sentiment is held by many others.) Only fifteen years after "discovery," the Spanish were taking accurate head counts of the remaining natives. Angel Rosenblat, the leading minimalist scholar on the pre-contact population of the New World, believes the count of one million was more of Columbus' hyperbole. See his argument in Denevan's *The Native Population of the Americas in 1492*, pp. 43-66.

[36] Kirkpatrick Sale covers the topic in *The Conquest of Paradise*, with a good literature review. For instance, William Leiss' *The Domination of Nature* and Keith Thomas' *Man and the Natural World* are two excellent reviews of the European attitude toward the natural world and how they developed it.

[37] *Encarta Encyclopedia*, 2001 edition, estimates ninety million. Denevan's *The Native Population of the Americas in 1492*,

p xxviii, weighs in at fifty-four million, from its 1992 edition. This site uses an eighty million estimate.

[38] See Thornton, *American Indian Holocaust and Survival*, p. 57.

[39] It is one more area of intense debate. See Adams, *Prehistoric Mesoamerica*, pp. 20-2; Diamond, *Guns, Germs and Steel*, pp. 35-52; Stannard, *American Holocaust*, pp. 261-266; Churchill, *Since Predator Came*, pp. 265-296; Mann, *1491*, pp. 137-173. Charles Ginenthal summarizes the political situation regarding the supposed migration date in his *The Extinction of the Mammoth*, pp. 13-36. For a generation Ales Hrdlicka, who in 1903 became the first curator of the Smithsonian Institution's department of physical anthropology, attacked anybody who questioned his pet theory that mankind did not migrate to the New World earlier than a few thousand years ago. Even Louis Leakey drew Hrdlicka's ire. Scientists' careers were ruined when they proposed that mankind was here before Hrdlicka's magic date. Scientists even suppressed their own data when it suggested an earlier migration date than dogma dictated, in order to preserve their careers. Such inquisitorial behavior set back the science considerably, and such dogmatism persists in the field today. The dark journey of Dr. Virginia Steen-McIntyre will serve as an example of that phenomenon. In the 1960s, a major archeological find was discovered in Hueyatlatco, Mexico, where sophisticated stone tools were unearthed. Three geologists working for the U.S. Geological survey were given the task of dating the finds. Steen-McIntyre was one of them. They used four independent methods of dating the find, including the radioactive decay of uranium. Their results were startling: an age of 250,000 years. If valid, such evidence would jeopardize entire bodies of evolutionary and anthropological theory. The scientific establishment acted predictably: it suppressed the findings' publication. Worse than that, in the words of Steen-McIntyre, the establishment's efforts "killed my career." She lost her university teaching position and was blackballed from the profession. In a letter written in June of 1995, Steen-McIntyre wrote "...the only work I can get now is as a flower gardener in a local nursing home!" See Cremo and Thompson, *Forbidden Archeology* and Cremo, *Forbidden Archeology's Impact* for documentation of Steen-McIntyre's tale. See also Mary Owen Webb and Susan Clark's (from Texas Tech University) "Anatomy of an Anomaly," in *Disputatio* 6, May 1999. Today, it is [on the Internet](#). Unfortunately, hers is far from the [only modern account](#) of that type of treatment of anomalous evidence. Anthropologist Thomas Lee excavated stone implements in glacial till in Canada in the 1950s that were dated to more than 65,000 years old, also challenging the prevailing dogma. The establishment treated Lee similarly, also documented in *Forbidden Archeology*. George Carter, Louis Leakey and others have had their anomalous findings received similarly. Wipe out all the disquieting evidence, and the theories can survive.

[40] See discussion in Stannard, *American Holocaust*, p. 95, 305-306.

[41] The classic summary of the situation today is found in William Denevan's *The Native Population of the Americas in 1492*. Denevan took the average of the scholars in the various New World regions that they studied, and arrived at an estimate of the 1492 population of 54 million people in the 1992 edition of the book, with a likely range from 43 to 65 million. With all the work that has been done, they are no more than sophisticated guesses, as they always will be. In contrast to Hugh Thomas' assertion that the maximalists have clouded the issue and largely prevailed, in the United States the minimalists prevailed for a long time. Denevan admits that 100 million is reasonable. The crux of the matter is how devastating the first instances of European-introduced disease were. The numerous studies favor a particularly high mortality rate, with entire regions being quickly depopulated.

[42] New World natives developed more than half of the world's crops grown today, such as potatoes, sweet potatoes, corn, tomatoes, cassava, many varieties of beans, and peanuts. The introduction of New World crops is largely credited with the [tremendously expanding world population](#) during the past few centuries. See Weatherford, *Indian Givers*, pp. 59-115. See Rouse, *The Tainos*, p. 170.

[43] See Stannard, *Before the Horror*. See also O. A. Bushnell, *The Gifts of Civilization, Germs and Genocide in Hawai'i*.

[44] For instance, Denevan uses the estimate of one million for Española in the 1992 edition of *The Native Population of the Americas in 1492*, down from the two million estimated in the 1976 edition. The several million estimated for Española is still respected in many scholarly quarters.

[45] See Stannard, *Before the Horror*, pp.46-47 for a review of twenty examples of comparative depopulations due to Western contact, in Iceland, Australia, Guatemala, etc. See Diamond, *Guns, Germs and Steel*.

[46] See Jackson and Castillo, *Indians, Franciscans, and Spanish Colonization*. pp. 51-53, 85. See Stannard, *American Holocaust*, p. 74. See Gibson, *The Aztecs Under Spanish Rule*, p. 7, 150, 409. See Fogel, *Junípero Serra, the Vatican, and Enslavement Theology*, pp. 114-164. See Hemming, *The Conquest of the Incas*, pp. 350-351. The same phenomenon happened to the Hawaiians after they were "discovered" in 1778. There was one hallucinogenic plant in Hawaii, which only the chiefs enjoyed. Alcohol caught on as the natives underwent the profound psychological dislocations of being introduced to the white man's "civilization," and the natives drank with abandon as they succumbed to the genocide that the white culture and germs inflicted on them. See O. A. Bushnell, *The Gifts of Civilization, Germs and Genocide in Hawai'i*, especially pp. 193-194.

[47] See census results of children in the collapsing population of Española in Sauer, *The Early Spanish Main*, pp. 200-204. See Hemming, *The Conquest of the Incas*, pp. 350-351. See Todorov, *The Conquest of America*, p. 134.

[48] Sale. *The Conquest of Paradise*. p. 151.

[49] On one Bahaman island, we do not know which. The sailor-historians have been wrestling about which one it was for hundreds of years. I suppose the debate is so they can put the monument to Columbus on the correct island.

[50] See discussion in Stannard, *American Holocaust*, p. 72-73.

[51] See Stannard, *American Holocaust*, pp. 317-318, n. 9 for a good discussion, referencing numerous research papers, on the issue of the African slave trade's death toll. Of course, there are lower estimates, such as Basil Davidson's estimate of nine million deaths between 1650-1850 in his *The African Slave Trade*. Stannard's *Before the Horror* was a groundbreaking study of the pre-discovery Hawaiian population. A popular scholar whose estimates of the Caribbean pre-Columbian population are among the lowest existing is Sir Hugh Thomas. Thomas recently wrote *The Slave Trade*. He also wrote a recent popular and critically acclaimed account of those early days of Spanish conquest, *Conquest*, which deals with the Aztec conquest. Although scholarly and mammoth, some of Thomas' biases, as with much of mainstream history writing, were evident. On the subject of Mexico's pre-contact population, Thomas writes at length, devoting an appendix to the issue. He semi-humorously portrayed the debate regarding the pre-contact population levels as a battle between the "maximalists" and the "minimalists." He concluded his survey by stating that nobody really knows what the numbers were, but when he has made an estimate of the pre-Columbian Caribbean population, he is a staunch minimalist. On p. 67 he states that the pre-contact population on "Hispaniola...may have been over 100,000." That is the lowest existing estimate, and such an estimate neglects (among other things) Bartolomé Colón's (Columbus' brother) apparent 1496 estimate of 1.1 million adults on only part of the island, for tribute calculation purposes. What is difficult to reconcile with Thomas' minimalist estimate is the fact that after fifteen years of wanton slaughter, disease, starvation, mass suicide, and being worked to death in the mines and plantations, the Spanish royal treasurer took a careful count in 1508 and counted about 60,000 natives (and perhaps only counted the natives of working age. Sauer, *The Early Spanish Main*, p. 65-67, 155-156, 200-204). The trajectory after that count was a swift slide to extinction: less than 30,000 by 1514 (after the entire Caribbean had been scoured for natives to work on Española), less than 20,000 by 1518, and virtual extinction by 1535 (200 counted in 1542, Las Casas, in Sale, p.161. See also Las Casas *The Destruction of the Indies*, p. 26 and 27, where he remarked that Puerto Rico, Jamaica and Cuba were similarly depopulated), and total extinction well before the end of the century. Thomas sides with the scholar Angel Rosenblat and his estimates of more than sixty years ago, estimates considered the ultra-conservative extreme by modern scholars. See Denevan *The Native Population of the Americas in 1492*, pp. xvii - xxix. Even Columbus remarked that more than 80% of the native population alive in 1500 died by 1504 (see Sauer, *The Early Spanish Main*, p. 155). Regarding the pre-Columbian population of Cuba, the estimates run from 600,000 to the preposterously low 16,000. A number of 16,000 is less than half a person per square mile. Tibet, with one of the planet's most inhospitable climates, is ten times more densely populated than that. On page 1512 of *Cuba, The Pursuit of Freedom* (New York: Harper and Row, 1971), Thomas states, "The lowest estimate and the one to which I incline is 16,000." Thomas is the minimalist's minimalist. On page 65 of *Conquest* Thomas wrote that Columbus' men "seduced" the native women. [Cuneo's pre](#)y probably would not have called herself "seduced." Thomas seemed to consistently side with the Spanish accounts of events, such as the death of Montezuma and the myth of Aztec cannibalism. All that stated, I read *Conquest*, though warily, and found it a useful source of history on the Aztec conquest. In Thomas' *The Slave Trade* I find no quantification of the African death toll due to the slave trade. He put a number on how many slaves made it to the New World in his appendices, but not how many died in the process. For a scholar who is lauded, even knighted, for his scholarship, and whose work is held up for how balanced it is, it consistently minimized or overlooked native suffering due to Europe's devastation of Africa and the New World.

[52] Several are presented in Morison, *Journals and other Documents in the Life and Voyages of Christopher Columbus*. See also *Christopher Columbus, The Four Voyages*, translated by J.M. Cohen.

[53] See Cuneo's account in Morison, ed., *Journals and Other Documents on the Life and Voyages of Christopher Columbus*, especially p. 222.

[54] The [Xaraguá](#) massacre was one of many. On the way to Tenochtitlán, the Spanish mercenaries were constantly looking for plotters against them. Cortés accused the city of Cholula, a religious center, of plotting against him, and virtually destroyed the town while slaughtering several thousand people. The Spaniards never saw any opposition to their approach, were welcomed by Montezuma, who they quickly kidnapped and held for ransom. While Cortés was away defeating the army the [Cuban governor had sent against him](#), his men slaughtered thousands of Aztec citizens at their spring festival, once again invoking the “plot” against them. While the evidence for a Cholula plot was extremely weak, there was absolutely no evidence that the residents of Tenochtitlán were plotting against the Spaniards. After the slaughter, however, the populace laid siege to the imperial palace, and the Spaniards were caught sneaking out of town and the resultant battle during their flight is today called “[The Night of Sorrows](#)” by Spanish chroniclers. Thomas’ *Conquest* ably covers those events.

[55] See Fuson, *The Log of Christopher Columbus*, pp. 201-202 for a listing of several dozen guesses over the past four centuries where Columbus first landed. Fuson himself weighs in with his theory that it was Samana Cay.

[56] See Las Casas' abstract of Columbus' third voyage in Morison, ed., *Journals and Other Documents on the Life and Voyages of Christopher Columbus*, especially pp. 278-280.

[57] For one example of a summary of the “revisionism” by a mainstream historian, where his opinions are of the establishment variety, see Axtell, James. "Columbian Encounters: 1992-95." *The William and Mary Quarterly*, 3rd Series, Vol. LII, No. 4, October 1995. Ward Churchill takes Axtell’s scholarship to task in his *A Little Matter of Genocide*.

[58] See Sale, *The Conquest of Paradise*. p. 348.

[59] See Zinn, *A People's History of the United States*, pp. 7-9.

[60] See Bigelow, "Reading the Past," in *Confronting Columbus*, p. 72.

Purpose and Disclaimer

Summer 2002

Not many Americans will find this essay an enjoyable read, but that is not its purpose. I am an accountant by profession, not a historian, political scientist, economist or scientist, and this essay should to be read with that in mind.

The [radicalizing experience](#) of pursuing alternative energy woke me up to the extent that I created this website. This essay is not just an exercise in scholarship, but also tells what it has been like to be an American while my nation throws its weight around. Please do not take my word for anything, but find out for yourself what is true for you.

Timeline

This essay contains many names and dates. This timeline is an abbreviated version of this [site's timeline](#), and is intended to make the reading experience easier.

[Timeline from 1492 onward.](#)

	This timeline presents events related to this site, with links to pertinent parts of it.	

Date	Event	Human Population Statistics
c. 30,000 BC	Humans probably first appear in North and South America.	
c. 10,000 BC	The most recent ice age ends.	
c. 9000 BC	Extinction of most large mammals in North America, possibly caused by human over-hunting, probably also influenced by climate changes.	
c. 8500 - 8000 BC	Large mammals become extinct in South America , which was not covered in a continental ice sheet, probably from human over-hunting. Hunter-gatherer lifestyle is increasingly unsustainable. Domestication Revolution begins in Fertile Crescent and the Americas. Wheat, peas and olives domesticated in Fertile Crescent. Squash and pumpkins first domesticated in Mesoamerica. Beginnings of marine-based culture of North America's Pacific Northwest.	4 million
c. 5000 BC	Civilization begins forming in the Fertile Crescent. Early societies are egalitarian. The agricultural societies have goddess-based religions, while the pastoral, herd-tending societies develop male-based religions. The mobile pastoral societies begin invading the sedentary agricultural societies. Metallurgy first practiced near mountains of Eastern Europe. Copper weapons developed by herder societies of steppe regions.	5 million
c. 4500 BC	First large religious facilities built at site of today's Iraq. Stratification of early society begins, with elites - priest class, craftsmen, rulers and probably the first medical doctors. Earliest known bronze implements are made in Thailand.	

c. 4000 BC	Horse domesticated in steppe region north of Black Sea. Llama and Alpaca domesticated in South America. Camel first domesticated near Fertile Crescent. Invasions from steppe regions wash across Europe, Fertile Crescent and Middle East. Warfare practiced on large scale. Iberians migrate to today's Spain, from either northern Africa or central Europe. They also become the British Isles ' first permanent inhabitants during the historical period.	
c. 3500 BC	Migrating farmers from Fertile Crescent settle Indus valley in present day Pakistan. Bronze age begins in Fertile Crescent . The wheel is invented in Mesopotamia. By this time, corn, potatoes, manioc, beans and turkeys are domesticated in the Americas.	
c. 3000 BC	Sumeria becomes the world's first literate society. History begins. State bureaucracy and military establishment are developed. Plow agriculture begins in Fertile Crescent. The Pacific Northwest marine-based culture begins fully developing, from southern Alaska to Northern California.	14 million
c. 2400 BC	Sumerian wheat yields decline by 42% between 2400 and 2100 BC.	
c. 2000 BC	Great migration wave of pastoral societies from steppe regions (generally between the Caspian and Black Seas) into the Fertile Crescent, India and Europe. Intense deforestation of the region from Morocco to Afghanistan commences. Today, only about 10% of that forest remains; much has turned to desert.	
c. 1700 BC	Wheat yields in Sumeria decline by 65% since 2400 BC. Fields turn white from salt. Sumer declines as a power, and the center of Mesopotamian civilization shifts north.	
c. 1500 BC	A four hundred year period of chaos and warfare begins to sweep Europe, the Fertile Crescent and Mediterranean region. The violent, male sky-gods come to dominate religion, including one named Jehovah. The Aryan (pastoral tribes of the steppe regions) invasion of India leads to their caste system; the invaders are the favored class.	38 million

c. 1400 BC	Iron first smelted by Hittite civilization in present-day Turkey . Agriculture begins in Japan.	
c. 1200 BC	Iron made into weaponry. Iron weapons rapidly replace bronze and become common throughout Europe, the Fertile Crescent, Egypt and elsewhere. The feminine-friendly Minoan civilization on Crete collapses, as does Mycenaean civilization. Joshua's Israelites lay siege to Jericho . Celts invade from region of today's Austria into France and Germany. The Polynesian expansion, from the region near New Guinea to the South Pacific's islands, begins.	
c. 1000 BC	Agriculture collapses in central Mesopotamia due to soil salination. In 1990, Iraq imported 70% of its food. The anti-feminine culture of ancient Greece develops, known as Greece's "dark age." Women are gradually excluded from public life. Although male gods dominated Greek mythology, women were also present, if subservient. The Picts migrate to Scotland from Europe. The Greeks make the first heat-treated iron weapons .	50 million
c. 700 BC	A village that began with shepherds' huts, eventually known as Rome, is growing.	
509 BC	Republic of Rome begins, which takes power away from local kings. The Roman republic tries balancing the needs of peasants and aristocrats.	
c. 500 BC	Celts begin invading the British Isles, absorbing the Iberians. Etruscan civilization is at its peak influence, to eventually fall to neighboring states.	
480 BC	Persians sack and nearly destroy Athens. Themistocles, and later Pericles, rebuilds Athens into a great city. At its height, of its 200,000 inhabitants, only 50,000 were citizens (men). The rest were women, slaves and foreigners.	

c. 450 BC	Roman law codified on twelve wooden tablets. The laws make men the absolute rulers of family households, giving them the authority to sell their children into slavery, among other rights.	
432 BC	Peak of the Greek classic period. Hippocrates , Socrates, Thucydides and Aristophanes are alive.	
c. 400 BC	Rome begins rising as a power, eventually defeating the Etruscans of today's northern Italy, and incorporate Etruria's cultural and technical achievements. By the time of Jesus, Etruscan culture was almost completely absorbed into Roman culture.	
334 BC	Alexander the Great of Macedonia conquers Persia and tries uniting East and West. The short-lived Macedonian Empire helps pave the way for the Roman Empire.	
264 BC	After subduing Italy, Rome engages in its first war against Carthage. Italy and Sicily are rapidly deforested to meet Rome's needs.	
202 BC	Rome defeats the forces of Carthaginian general Hannibal, ending the second Punic War.	
c. 200 BC	Picts migrate to Ireland from Scotland. Lion and leopard are extinct in Greece and coastal regions of Asia Minor. Beaver is extinct in northern Greece due to trapping.	
197 BC	Rome invades Greece and conquers them. Rome would incorporate much of Greek culture into its own, borrowing its gods and technology.	
146 BC	Greek resistance to Roman rule leads to the complete destruction of Corinth and the sale of its inhabitants into slavery. That same year, Rome does the same to Carthage . The Roman Republic begins expanding across Europe, northern Africa and the Middle East.	

58 BC	Rome begins handing out free food. Eventually, hundred of thousands of Rome's citizens received free food for political reasons. Intensive agricultural exploitation of imperial lands are undertaken to feed the empire. Places such as today's Libya are forced to become farms for Rome, with the agricultural practices eventually turning Libya into the desert nation it is today.	
54 BC	Julius Caesar's armies defeat the inhabitants of southern Britain.	
31 BC	Cleopatra and Anthony's forces defeated by Rome, and Egypt comes under Roman rule the next year.	
27 BC	After a century of bitter civil war, the Roman Republic ends with the naming of Augustus Caesar as the first Roman Emperor. Rome's citizens cease having representation in government.	
1 AD	Jesus is alive. Much of Palestine, Syria, Lebanon and surrounding regions are deforested by Rome, eventually turning it into desert. In the Caribbean, agricultural Arawakan peoples begin migrating along the archipelago from South America, eventually displacing/absorbing the hunter-gatherer peoples there. They populate the Greater Antilles in the millions by 1492 , and are loosely known as the Taino. At this time, and perhaps a few centuries earlier, Polynesians begin colonizing the Hawaiian Islands.	World population: 170 million.
251 AD	An epidemic sweeps through the Roman Empire until 270, killing 5000 of Rome's citizens each day during the epidemic's peak, including the Emperor Claudius in 270. Rome was forced by the population loss to recruit barbarian troops. The first mass conversions to Christianity were apparently a consequence of the epidemic.	
324 AD	Roman Emperor Constantine convenes the Council of Nicea, his gambit to hold the fragmenting empire together through a state religion	

410 AD	Visigoths invade Rome, for the first invasion of the city in eight centuries.	
451 AD	Hun invasion of Roman Empire stopped by a great battle in France. Hundreds of thousands die in battle.	
476 AD	Western Roman Empire falls. Germanic peoples invade the Roman Empire's lands in Europe during the late 400s, including the Anglo-Saxon invasion of Britain. The Eastern Roman Empire lasts nearly continually for the next 1000 years, with Constantinople (earlier named Byzantium and later Istanbul) as its capital city. Europe, however, fell into its Dark Ages.	
562	32-year drought begins to afflict the Moche culture in South America. El Niño cycles regularly affect South American civilization , and elaborate food production and storage systems are designed to cope with them, as well as other environmental challenges. That region's people become the world's greatest agricultural experimenters.	250 million
c. 570	Muhammad born, founder of Islam.	
632	Muhammad dies, after an amazing life that founds one of the world's great religions. Islam sweeps throughout the Arab world, spreading widely.	
c. 650	Mesoamerican empire centered in city of Teotihuacan begins its collapse, to be replaced in power by the militaristic Toltecs, similar to the way empires rose and fell in the Fertile Crescent.	
711	Islamic armies invade the Iberian Peninsula. Jews live under Moorish rule in Iberia , and it is their golden age in Europe, lasting for 300 years.	

C. 800	Mayan civilization begins its collapse. It attained a peak population of several million, before its overtaxed environment failed to support the population. Famine, war and disease accompanied the collapse of the Mayan population to perhaps a million before 1000 AD, similar to Fertile Crescent dynamics. The forest recovers and covers the Mayan ruins. Charlemagne tries to create a new Western Roman Empire, with a unity of church and state. The Holy Roman Empire lasted until Napoleon. Vikings begin raiding the British Isles, and some settle in France and become the Normans. Others go inland and become the Russians.	
c. 1000	Leif Ericson extends Viking colonization past Greenland settlements to North America, probably in today's Newfoundland. They may have driven Irish monks from Iceland before them to North America. The Vikings' violent ways quickly create resistance from the local Algonquin people, and their colonization is not permanent. In Iceland, the Vikings are unable to easily plunder neighboring lands and quickly become a peaceful people, engaging in trade.	
1036	Umayyad dynasty ends in Moorish Iberia, and fractures into mutually hostile, petty kingdoms.	
c. 1050	Northern and central Europe, especially the Germanic lands, engage in great age of deforestation , making way for civilization, clearing about a third of the forest in a couple of centuries, and up to 75% deforestation by the end of the medieval era. This is the beginning of the High Middle Ages. In 1900, about 25% of the forest remains.	
1056	Ferdinand I, who proclaimed himself the Emperor of Spain, undertakes "Reconquest" of the Iberian peninsula.	
1066	William the Conqueror leads the Norman invasion of Britain. Islamic preachers incite anti-Jew riot in Granada , which kills about 5000 Jews.	

1085	Christian conquest of Toledo , which introduces European scholars to the ancient Greek writings via Islam. The introduction of the Greek writings leads to humanism, the Renaissance and Protestant Revolution.	
1096	Christian Europe makes its first united act: the first Crusade to Palestine . The first wide-scaled Jew slaughters in Europe take place as a warm-up for the first Crusade, in France and Germany. Jews would no longer be safe in Europe, and warfare would be the European way of life until World War II ended.	
c. 1170	Mesoamerican Toltec city of Tula is destroyed, probably due to major drought and population migrations that led to war.	
c. 1200	Polynesian people begin colonizing New Zealand. The Islamic culture attains the world's highest standard of living. Incan people conquer the land around Lake Titicaca, the first step in their empire building. Human hunters render large mammals on Madagascar extinct.	
1204	Fourth Crusade ends up sacking its "ally" Constantinople.	
1212	In a great battle near Toledo, Christian armies defeat the Islamic forces in the decisive conflict of the "Reconquest" of the Iberian Peninsula.	
1215	Magna Carta sealed by England's King John I. Pope Innocent III convenes the Fourth Lateran Council .	
1221	Genghis Khan's Mongol armies conquer Islamic armies in Indus valley. Islamic peoples are devastated by the Mongol invasion, and Islam begins its decline as a social force.	
1244	Massacre at Montségur, the last stronghold of the Cathars . The Catholic Church eliminates the greatest threat to its religious monopoly, until Martin Luther posts his Ninety-Five Theses in 1517.	360 million

1295	Marco Polo returns to Venice from many years in the court of Kublai Khan in China. His account deeply influences European merchants.	
1314	Europe is gripped by major famine that lasts until 1317.	
c. 1325	Immigrants to Valley of Mexico settle in marsh in the valley's lake, the only land available to them. They are known as the Mexica, and eventually form the Aztec Empire.	
1326	Ottoman Empire is born, as the Turks attack the Eastern Roman Empire.	
1337	England and France begin the 100 Years War. Originally invented in China several centuries earlier, but used for fireworks, gunpowder for weaponry begins to be manufactured in England and Germany at about this time.	
1344	The Pope "awards" the Canary Islands to Castile.	
1346	The Black Death probably originated in China. In 1347 it swept across Asia to Europe. The death toll for Europe and Asia was about 50 million people by 1351, wiping out one quarter to one-third of Europe's population, and periodically recurring for the next three centuries. War and death imagery would become prevalent in European art.	Europe's population declines from about 75 million to 50 million. It would not regain 1345 levels until the 16 th century.
Late 1300s	Beginning in northern Italy's city-states, a multifaceted phenomenon begins which is now called the Renaissance. Humanism takes root, which eventually undermines the Catholic Church's influence.	
1400	After a century of unrelenting epidemics, warfare and calamity, Europe's population is two-thirds-to-half of what it had been in 1300.	400 million.

1405	Ming Dynasty begins mounting great naval expeditions along southern Asia, which reach Africa. They <i>do not</i> plunder the people or lands they sail to. The last expedition is in 1433.	
1410	Christian Reconquest of the Iberian Peninsula reenergized with attack on Granada.	
1415	Portuguese defeat Moors at Ceuta in North Africa . Prince Henry subsequently encourages and helps fund the study of maritime science. Henry's motivation is outflanking Islamic rivals in the gold trade.	
1418	Portugal begins colonizing the Madeira Islands , the Azores in 1427 and the Cape Verde Islands in 1450.	
1428	Itzcoatl leads Mexica to military victory and Aztec Empire begins.	
c. 1430	"Little Ice Age" begins, and runs for four centuries, until about 1850.	
1444	Portugal enters the African slave trade.	
c. 1450	Gutenberg invents printing press in the German city of Mainz.	
1453	Ottoman armies capture Constantinople, which terminates the Eastern Roman Empire, controls Europe's trade route to the Orient, and inspires effort to find another European route.	
1455	The Wars of the Roses, which are several dynastic civil wars that last until 1485, begin in England.	
1469	Isabella I of Castile marries Ferdinand V of Aragon.	
c. 1470	Incas conquer the imperial city of Chan Chan and the Chimoran people, completing their imperial consolidation.	

1474	Paolo Toscanelli of Florence suggests to Prince Alfonso V of Portugal that the quickest way to the Indies (spice trade) is sailing across the Atlantic. Toscanelli was wrong. Christopher Columbus eventually obtains the letter from Toscanelli that makes the suggestion. Castile and Aragon formerly united under Isabella and Ferdinand.	
1479	Portugal cedes Canary Islands to Castile, and Queen Isabella I mounts their invasion. The conquest of the Guanches was complete in 1496 , and the Guanches became an extinct culture by 1600.	
1480	Isabella I initiates the Spanish Inquisition , which is largely concerned with hunting down Moors and Jews who were forced to convert to Christianity, but may still practice their erstwhile faith in secret.	
1488	Portuguese explorer Bartolomeu Dias rounds the southern tip of Africa, and Portugal abandons the idea of reaching Asia by crossing the Atlantic Ocean. Columbus, who made a living in the Portuguese slave trade, takes his plan to sail across the Atlantic Ocean to Castile, which the experts thought was an impossible plan because the distance to Asia would be too great. Columbus had badly miscalculated the earth's circumference. His early attempts to convince the Castilian court fail.	

**Timeline
from
1492
Onward**

1492	The Spanish “Reconquest” of the Iberian peninsula ends in January with the conquest of Granada, the last city held by the Moors. Jews are given the options of conversion, expulsion or death. In April, Columbus finally gets authorization for his doomed plan to reach Asia via the Atlantic Ocean. He stumbles into the New World in October, enslaving the first humans he meets. He builds a fort on Española from the wreckage of his flagship.	World population: 470 million, at least half in East Asia and India. Population in the Americas: 50 to 100 million (this site uses 80). Europe’s population: 70 to 80 million. Taino population: 2 to 10 million. At least one million on Española (this site uses 2)
1493	Columbus is named Admiral of the Ocean Sea and returns to Española to mount a large-scale invasion . The Incan Empire is at its peak in South America.	
1494	Treaty of Tordesillas delineates the eventual New World domains of Portugal and Spain.	
1496	The genocide of the Taino is well underway on Española. Selling the Taino in the European slave markets does not work, because they quickly die upon being shipped to Europe, and the Spanish sovereigns officially frown upon the idea when it proves unprofitable. Columbus devises a tribute system to force the Taino into mining gold.	
1497	Vasco da Gama sails from Portugal to India around Africa; Arab traders cure his crew of scurvy in 1498 , and he returns in 1499 with trade specimens, including valuable spices.	
1499	First major gold strike on Española.	
1502	Montezuma II crowned, the last pre-invasion Aztec emperor.	
1509	Henry VIII ascends throne of England.	

1510	Portuguese ships conquer the Muslim port of Goa in India, beginning the era of Portuguese dominance along southern Asia. Portugal makes its first official sale of African slaves in the New World .	
1511	Portuguese traders capture Malacca, in today's Malaysia, establishing themselves in the spice trade .	
1513	Vasco Núñez de Balboa "discovers" the Pacific Ocean in present-day Panama, and claims it in the name of the Spanish crown. Juan Ponce de León hunts for slaves for Caribbean gold mines and "discovers" Florida. Niccolò Machiavelli writes <i>The Prince</i> , which foreshadows future European political practice.	
1517	Martin Luther publishes his Ninety-Five Theses, which begins the Protestant Reformation.	
1518	First New World smallpox epidemic begins, wiping out most of the surviving Taino on Española, who were already only about 1% of their 1492 population.	
1519	Hernan Cortés and his men kidnap Aztec Emperor Montezuma and loot all the gold they can get . As Columbus did, Ferdinand Magellan seeks route across Atlantic to the Asian spice trade. He dies in 1521, battling the natives in the Philippines, but his mission circumnavigates the planet in 1522. Charles of Spain bribes his way into becoming the Holy Roman Emperor.	
1520	Smallpox epidemic that began on Española in 1518 comes across with the Cuban governor's army, probably killing several million people in Mesoamerica.	
1521	The Cortés-led siege of Tenochtitlán completely destroys what is probably the world's most spectacular city. Ponce de León invades Florida again, and dies from battle wounds.	

1524	Giovanni Verrazano , an Italian explorer in the employ of France, sails along the coast of North America.	
1525	European epidemic sweeps through Incan Empire, kills emperor and ignites civil war.	
1528	Pánfilo de Narváez ' <i>entrada</i> into Florida ends in disaster.	
1529	Ottoman armies lay siege to Vienna , but fail, in the greatest advance into Europe it would make.	
1530	The Portuguese begin their colonization of Brazil .	
1532	Francisco Pizarro invades Incan Empire , kidnaps Incan emperor and sacks empire. Anne Boleyn, Henry VIII's second wife, gives birth to Elizabeth.	
1535	Native American medicine man cures Jacques Cartier's crew of scurvy on Saint Lawrence River with evergreen foliage and tree bark tea, which was high in vitamin C. Henry VIII's England begins confiscating Roman Catholic properties.	
1539	Hernando de Soto invades southeastern North America, seeking gold.	
1540	Francisco Vázquez de Coronado invades southwestern North America, seeking gold.	
1542	Juan Rodríguez Cabrillo "discovers" the Californian coast. Hernando de Soto dies on banks of Mississippi River after his fruitless gold quest devastates southeastern North America . Spanish expedition asserts Spain's claims to the Philippines . Efforts of Bartolomé de Las Casas persuade emperor Charles V to sign laws repealing native slavery .	
1543	Portugal begins trading with Japan .	Taino population on Española: 200

1545	The great silver mine at Potosí (in modern-day Bolivia) is established.	
1549	A Portuguese expedition establishes a large colonial presence in Brazil.	
c. 1550	The English deforestation of Ireland is underway.	
1552	Las Casas publishes his A Short Account of the Destruction of the Indies , which quickly becomes a bestseller, especially in Protestant Europe, and the “Black Legend” begins.	
1556	Portuguese establish port of Macau on Chinese coast.	
1557	Spanish crown goes bankrupt , the first of several bankruptcies that would chart Spain’s decline as an imperial power.	
1558	Elizabeth I becomes England’s first ruling queen.	
1559	Catholic Church publishes its index of banned books. Index survives until the 1960s. Tristán de Luna expedition goes where de Soto’s went, hoping to find rich lands to plunder as de Soto did, and finds the region depopulated from aftermath of de Soto expedition. Portuguese Crown gives official approval to begin shipping African slaves to Brazil .	
1562	Wars of Religion begin in France, a series of nine conflicts that last until 1598.	
1564	Spain begins conquest of the Philippines , and establishes Manila in 1572.	
1565	Saint Augustine , in today’s Florida, is established, originally a fort to protect Spain’s plunder route from pirates. It is the first permanent European settlement in North America.	

1566	Ottoman sultan Suleiman dies, and the Ottoman Empire begins its long decline.	
1568	Oppressive Spanish rule leads to Dutch revolt, which lasts until 1648. Spanish “discovery” of the Solomon Islands .	
c. 1570	Hiawatha and Deganawidah form the Great Law of Peace and the Iroquois Confederation, which influences the creation of the U.S. Constitution . It might have been formed as early as 1200 AD, however.	
1576	Martin Frobisher seeks gold near Baffin Island. He ravages natives and hauls back hundreds of tons of fool’s gold to England on the next voyage. .	
1577	Francis Drake mounts pirate expedition to plunder the Pacific ports of Spain’s empire. His successful voyage circumnavigates the world, returning home in 1580, and got him knighted as well as made him England’s richest private citizen.	
1580	Spain annexes Portugal , and remains in control of it for sixty years. Castile is no longer able to produce enough food to feed its population.	
1582	Russia invades Siberia in pursuit of fur trade.	
1585	Walter Raleigh establishes the ill-fated Roanoke colony.	
1586	Spain goes to war with England, to try ending the Dutch revolt.	
1588	Spanish Armada is destroyed in battle with English navy. The defeat marks the end of Spain’s imperial dominance.	
1595	Walter Raleigh seeks golden city of El Dorado in South America.	

1598	The year its Wars of Religion finally conclude, the French try to establish a colony on uninhabited Sable Island off of Nova Scotia, in a rich fishing area, and with no interference from natives or European rivals, the colony completely fails.	
1599	Spanish forces slaughter hundreds of Pueblo Indians at Acoma, in present day New Mexico, in revenge for the killing of eleven Spanish soldiers who had been plundering and raping the natives at will. Spain ends the 16th century probably worse off than it began it.	Native population of the Americas: 8 million
1600	The English East India Company is incorporated. The Dutch begin sailing to Asia for spices, and establish their own East India company in 1602.	
1603	Elizabethan Era ends with the death of Elizabeth I of England. England completes its conquest and subjugation of Ireland.	
1604	English war with Spain ends, and Spain never again rises to its former imperial dominance.	
1605	Squanto , of Puritan fame, first kidnapped by the English.	
1607	Jamestown established . The first task is finding gold.	
1609	With their French allies using guns, Huron warriors surprise a war party of their Mohawk rivals, with deadly effectiveness. On behalf of the Dutch, Henry Hudson, while searching for the Northwest Passage, explores the river that is named for him, in present-day New York.	
1614	Squanto is captured by John Smith's men.	
1618	The Thirty Years' War , Europe's last great religious war, begins. About 4 million people die in the conflict.	

1619	Squanto returns as interpreter with English, and discovers that his entire tribe had been wiped out by European disease. The Puritans would settle on that tribe's land. The Dutch establish Jakarta , which becomes the center of the Asian spice trade.	
1620	The Pilgrims land at Plymouth , and Squanto teaches them how to survive in the New World. Squanto dies in 1622 of disease.	
1626	The Dutch "buy" Manhattan Island from the natives.	
1628	Dutch ships seize entire Spanish silver fleet off of Cuba.	
1637	The English surround Pequot village of several hundred people on the Mystic River at night, then burn it to the ground while killing nearly every inhabitant, selling the few survivors into slavery.	
1638	Three million pounds of tobacco per year are exported from present-day Virginia, reaching 17 million in 1672. Caribbean sugar growing becomes a business on Barbados, and the great period of New World sugar growing begins. New Sweden established in present-day Delaware.	
1639	Japan kicks out Portuguese traders , and thereafter trades exclusively with the Dutch. Dutch fleet defeats Spanish fleet in the English Channel.	
1640	Fur trade renders the beaver extinct in the Hudson River Valley. English Civil War, also called the Puritan Revolution, begins. It is the last significant religious conflict in Europe.	
1641	The Dutch governor of Manhattan offers the first scalp bounty.	
1643	Spanish army destroyed by French army at Rocroi.	

1644	John Underhill successfully reproduces his strategy of strategy of surrounding Native American villages at night and annihilating all of its inhabitants. That time, he did it under hire to the Dutch, and the Manhattan church fathers declared the second Thanksgiving to celebrate the feat.	
1646	Pamunkey tribe (natives who initially fed the Jamestown invaders) is completely destroyed, and survivors sold into Caribbean slavery.	
1649	Only forty years after receiving military assistance from the French, the Huron tribe becomes extinct . King Charles I of England is publicly tried and beheaded.	
1652	English and Dutch navies begin a series of wars that last until 1684.	
1664	The Dutch lose their North American possessions to the English.	
1670	Charleston founded , which becomes the center of the early English-American slave trade.	
1675	The French East India Company establishes its first outpost in Bombay .	
1676	King Phillip's War results in the extinction of the tribe that welcomed the Puritans.	
1680	The Pueblo Indians revolt against brutal Spanish rule, and kick them out of today's New Mexico. The Spaniards begin their reconquest of them two years later. The revolt leads to horses becoming part of Native American life, especially benefiting the Plains Indians.	

1682	Frenchman La Salle explores Mississippi river , finds it deserted, depopulated by disease left by de Soto's expedition and other European-introduced epidemics.	
1688	England has its Glorious Revolution, which limits the power of English sovereigns and empowers its Parliament.	
1689	King William's War begins, between France and England, largely over dominance in North America, and it involves the native tribes. The English Bill of Rights is passed by Parliament, and the Toleration Act, which promotes religious toleration. Those laws become the model for the U.S. Bill of Rights.	
1692	Twenty people executed in Salem , Massachusetts, for practicing witchcraft.	
1700		600 million
1702	Queen Anne's War begins between the French and English in North America. It was known in Europe as the War of Spanish Succession.	
1707	England unites with Scotland, becoming Great Britain.	
1717	Voltaire spends his first stint in the Bastille, for his satirical writings. His work would come to embody the ideals of the Enlightenment.	
1739	Spain tries halting trade between England and its American colonies, and the conflict is called the War of Jenkins's Ear, and becomes part of the War of the Austrian Succession, which begins in 1740.	
1744	King George's War begins, which is waged in North America, but is also part of a larger war, the War of the Austrian Succession.	

1750	The Enlightenment becomes prominent in France at about this time. China and India comprise 57% of world industrial output.	
1754	French and Indian War begins in North America, which was the last war of dominance between England and France in North America. Benjamin Franklin, influenced by the Iroquoian model of government, introduces his Albany Plan of Union , which sought to unite the colonies. The plan becomes the first step toward creating the U.S. Constitution.	
1756	The Seven Years' War breaks out in Europe between the imperial powers, England and France most notably. The Third Carnatic War in India between France and England breaks out at this time.	
1763	Lord Jeffrey Amherst suggests deliberately introducing smallpox amongst the Native Americans who resisted the English invasion. The subsequent epidemic kills more than 100,000 natives. The French and Indian War ends in North America, with the English prevailing. The Third Carnatic War in India ends, with the English victorious over the French. The English announce the Royal Proclamation of 1763 , which forbids the American colonists to settle west of the Appalachians.	
1764	Battle of Buxar establishes British rule over Bengal. The British rape of India begins.	
1768	James Cook visits Australia, names it New South Wales, and targets it for British colonization.	

1769	James Cook visits New Zealand and claims it in the name of Great Britain. The Maoris had eliminated about a third of New Zealand's forests by that time, and large animals, such as the Moa, were about extinct. In the first century of the European invasion, more than 75% of the Maori population dies off. Similar population collapse accompanies the Europeans wherever they appear in the South Pacific. Junípero Serra establishes first mission at San Diego. James Watt patents the modern steam engine, and the Industrial Revolution begins. Daniel Boone begins the illegal invasion of Kentucky.	800 million worldwide
1770	British exploitation of Bengal leads to a great famine that killed one-third of Bengal's peasantry. Famines always greatly increased wherever Europe had colonial dominance.	
1773	James Cook makes the first visit to Antarctic icepack and surmises that it had to be formed in connection with a landmass. Boston Tea Party helps lead to the American Revolution.	
1776	The American Revolution begins. Adam Smith publishes his <i>Wealth of Nations</i> .	
1778	James Cook "discovers" the Hawaiian Islands, with the world's human-friendliest climate. His crew's venereal disease rapidly spreads through the islands, quickly depopulating Hawaii. The Hawaiian Islands' population possibly approaches one million inhabitants. Within 100 years, fewer than 50,000 Hawaiians were alive.	
1782	Kamehameha begins conquering the Hawaiian islands, using Western arms and waging bloody battles. It takes 13 years to complete his empire building. George Washington proposes a plan to the Continental Congress to swindle the Native Americans out of their land. His plan becomes national policy for the next century.	

1786	Because of the American Revolution, England can no longer ship its criminals to North American penal colonies. Australia is picked as the next English penal colony. The population of the aborigines in southeastern region of Australia (site of the penal colony) declines by about 95% in 60 years. Shays' Rebellion begins in the United States.	
1788	Britain claims Tasmania , and within 50 years, none of the 5000 aboriginal inhabitants remain on the island. Only 43 survived in 1843, and the last Tasmanian aborigine died in 1876.	
1789	French Revolution begins. George Washington becomes the first U.S. president. The U.S. Bill of Rights is passed, 100 years after the English Bill of Rights.	
1791	Inspired by the American and French revolutions, Haitian slaves lead a successful revolution against the French colonial masters. The U.S., with its millions of slaves, would not officially recognize Haiti until the American Civil War. The U.S. Army suffers its greatest proportional defeat ever, at the hands of Native Americans, as it invades the Ohio River Valley .	
1794	Whiskey Rebellion over American taxation begins. The Battle of Fallen Timbers completes the U.S. theft of the upper Ohio River Valley.	
1798	U.S. Congress passes the Alien Act and the Sedition Act . The Sedition Act makes it a crime to criticize American government officials. The Alien Act authorizes summary deportations of "aliens." It is specifically intended to rid the nation of people with revolutionary ideas, such as French and Irish immigrants.	
1799	Napoleon leads overthrow of French government. He begins war with neighbors in 1803 and crowns himself Emperor in 1804	

1802	French invasion to try reconquering Haiti fails.	
1803	The United States consummates Louisiana Purchase from France. Lewis and Clark expedition sets out to reconnoiter the new territory. The expedition initiates the short-lived exploitation of the fur trade 's last frontier.	
1804	Haiti declares itself independent, for the world's only successful slave rebellion.	
1807	Spain supports Napoleon in war against Portugal, which ignites the Peninsular War, which lasts until 1814.	
1808	In reaction to Napoleon crowning his brother as the King of Spain, Venezuelan colonists form self-government, and send Simón Bolívar to England as its emissary, to try gaining recognition.	
1811	Venezuela is first Spanish colony to declare its independence , a revolution that fails the next year.	
1812	Napoleon begins his disastrous invasion of Russia. War of 1812 begins.	
1814	British troops burn Washington DC. First self-contained cotton mill is built, in Waltham, Massachusetts. Napoleon's reign ends, as all of Europe unites against France.	
1815	Battle of Waterloo ends Napoleon's bid for a comeback to power, a year after he was finally defeated. The Congress of Vienna is convened by the European powers, to reestablish lines of political demarcation.	

1819	After years of battles and exile, Simón Bolívar and his troops overthrow the Spanish Crown in 1819 in New Granada, now called Colombia. It is the first successful Latin American revolution, with Bolívar becoming Colombia's first president. Bolívar seeks to unite South America on the model of North America's United States, a plan that fails.	
1822	Americans establish colony to ship slaves back to Africa . In 1847 the colony became Liberia. Brazil achieves its independence peacefully .	
1823	The Monroe Doctrine is formulated.	
1835	By this time, the beaver pelt trade has collapsed in western North America, after only 30 years of exploitation.	
1836	American settlers complete theft of Texas from Mexico .	
1838	Cherokee and other "civilized" tribes are forced into migrating to Oklahoma, even after the Cherokee prevailed in the U.S. Supreme Court. The genocidal relocation becomes known as the Trail of Tears .	
1839	Britain begins exploitation of China with first Opium War, and forces opium addiction on China by also forcing the Bengal region into opium production.	
1841	Britain captures Hong Kong.	
1843	Charles Dickens publishes <i>A Christmas Carol</i> .	
1845	Irish potato famine begins.	
1846	America wages war on Mexico to steal what becomes the Southwestern United States.	

1848	U.S. finishes stealing most of southwestern United States from Mexico. Gold discovered at Sutter's Mill in California . Revolution sweeps Europe. Karl Marx presents his <i>Communist Manifesto</i> .	
1850	California admitted to the union, and its first governor declares open season on the natives .	
1853	Diplomatic invasion of Japan by the American Commodore Perry forces Japan into the world economy. Expanding rail system allows mass "hunting" and shipping of passenger pigeons from American Midwest to markets in east. Passenger pigeon population begins collapsing. Seal fur trade collapses in North Atlantic. Crimean War begins, in the first great struggle of the great European powers, a conflict that would eventually lead to the World Wars of the 20 th century.	
1859	First American oil well drilled.	
1861	American Civil War begins.	
1862	The United States recognizes Haitian independence .	
1863	John Rockefeller enters the oil industry and concentrates on taking over oil refining.	
1864	Sand Creek massacre of Black Kettle's Cheyenne tribe in dawn attack.	
1865	American Civil War ends.	
1868	George Custer 's troops slaughter Black Kettle's Cheyenne tribe in dawn attack. Revolution in Japan leads to a unified nation, and Japan begins playing catch-up with the West.	
1870	Franco-Prussian War begins. It is the last major conflict on European soil until World War I.	

1876	“Custer’s luck” runs out at the Little Big Horn. El Niño-caused drought that lasts three years, combined with European export crop imperialism, devastates India, China and Brazil, causing as many as 30 million deaths from starvation and disease. Japan forces trade agreement on Korea; similar to what Perry did to Japan in 1853.	
1880	John Rockefeller’s empire controls 95% of U.S. oil refining. Pacific whaling industry has largely collapsed, in less than 80 years of Pacific whaling.	
1882	Jews expelled from Moscow, and Jewish pogroms spread in the Russian Empire.	
1885	Belgium begins plundering the Congo.	
1887	John Rockefeller begins rebuilding a Baptist seminary into the University of Chicago.	
1890	Massacre at Wounded Knee, ending Native American resistance to U.S. land theft. Extermination of Plains Indian sustenance, the bison, is also complete, as only 23 animals survive in the wild, compared to 40 to 60 million before the white man’s invasion.	
1893	Columbian Exhibition in Chicago, celebrating 400 years of European presence in the New World. Largest event attendance in world history to that time.	
1894	Japan wages a war and easily defeats China, supplanting China as the dominator of Korea.	
1896	Another El Niño-caused drought, combined with European exploitation, ravages India and China, causing perhaps another 30 million deaths over several years, similar to 1876 event.	

1899	Chinese uprising against foreign occupation becomes the Boxer “Rebellion.” It is put down by foreign troops, including American, British, French, Russian, Japanese and German troops.	
1900	After 150 years of European exploitation, beginning in Bengal , China and India produce 8% of world industrial output, versus 57% in 1750. The gray whale is thought to be extinct at this time.	
1903	U.S. steals Panama from Colombia , creating the divided nation of Panama so it can own the route for its proposed canal.	1.6 billion
1905	Japan beats Russia in war.	
1906	Mark Twain writes <i>King Leopold's Soliloquy</i> regarding the Belgian rape of the Congo , and the American publishing establishment completely suppresses its publication in the United States.	
1913	Federal Reserve Act sneaks through U.S. legislature.	
1914	World War I begins. The last passenger pigeon dies in captivity in Cincinnati.	
1915	The United States invades Haiti , overthrowing its government.	
1918	World War I ends. Prescott Bush , father of George Bush the First, allegedly robs the grave of Geronimo , and the remains were put on display at the Skull and Bones Society, an oligarchical secret society at Yale. George the First and Second also belong to the club . The Great Powers of Europe begin carving up the Ottoman Empire into controllable nation-states. Oil politics dominates the affair.	
1924	Hitler writes <i>Mein Kampf</i> .	

1926	Pancho Villa's tomb raided, and his skull allegedly acquired by the Skull and Bones Society at Yale .	
1927	Rockefeller's Empire enters into its first cartel agreement with I.G. Farben .	
1929	Wall Street collapses.	
1930		2.0 billion
1933	Hitler comes to power. Franklin Roosevelt takes office as president. American industrialists try to mount a Fascist coup of the White House .	
1935	Smedley Butler writes War is a Racket .	
1937	Japan invades China, and the Rape of Nanking is the first major atrocity of what became World War II.	
1939	World War II begins.	
1941	Japan attacks Pearl Harbor , and U.S. enters World War II. Hitler's Final Solution is underway.	
1942	Nazi disaster at Stalingrad late in the year. Father of George Bush the First is director and shareholder of company that U.S. government seizes because it helped arm and finance Nazi Germany. The Rockefeller Empire, which also helped Nazi Germany , escapes that fate.	
1945	Third Reich ends, as well as greatest war in human history, ending with two nuclear bombs being dropped onto civilian population centers .	
1946	Anti-Jewish sentiment in the United States reaches its all-time high.	

1947	The CIA and NSA are formed . The United Nations proposes the establishment of Israel. U.S. engages in first major manipulations of post-war era, as it overthrows popular communist movements in Greece and Italy.	
1948	Israel established, and Jewish oppression of Palestinian people begins.	
1949	George Orwell's 1984 published.	
1950	U.S. invasion of Korea begins.	
1953	U.S. prevents nationalization of British oil monopoly in Iran by overthrowing the government , installing the Shah and one of the 20 th century's more brutal regimes.	
1954	U.S. prevents nationalization of United Fruit's investments in Guatemala by overthrowing its U.S.-friendly government , leading to a generation of brutal rule by Guatemalan juntas. The U.S. takes over from the French failure of trying to recolonize Southeast Asia.	
1963	John Kennedy murdered . Gerald Ford of the Warren Commission would help concoct the "magic bullet" theory to pin the crime on "lone nut" Lee Harvey Oswald.	
1964	The U.S. fabricates the Gulf of Tonkin Incident , and begins the destruction of Southeast Asia.	
1965	CIA helps military junta take power in Indonesia . Suharto's forces "cleanse" Indonesia of about a million "communists" by murder.	
1967	Israel invades neighboring areas and seizes large swaths of land.	

1968	Martin Luther King, Jr. and Robert Kennedy are murdered by “lone nuts.” Nixon elected president. In Saigon, Ralph McGehee finally figures out what the CIA is all about.	
1969	United States “secret” war in Cambodia , killing hundreds of thousands of people and setting the stage for the Khmer Rouge’s reign.	
1972	Watergate burglary , planned by the CIA’s E. Howard Hunt , begins Nixon’s downfall. George Wallace shot by “lone nut” while campaigning for president.	
1973	OPEC oil price shocks create worldwide cycle of inflation until the 1980s. Vice president Agnew resigns to avoid criminal charges of bribery and income tax evasion. U.S. overthrows elected Marxist government of Chile and installs one of the world’s most repressive regimes.	
1974	Nixon resigns, taken down by his own people. Gerald Ford takes office, makes Nelson Rockefeller his vice president, and pardons Nixon for alleged crimes.	
1975	Two assassination attempts on Gerald Ford by “lone nuts,” nearly making Rockefeller the second appointed president, Ford being the first. With American approval, Indonesia invades East Timor using U.S. weapons, killing off about a third of East Timor’s inhabitants.	4.0 billion
1977	Jimmy Carter signs treaty to give Panama Canal back to Panama.	
1979	The Shah of Iran is overthrown in a revolution. The United States manipulates the Soviet Union into invading Afghanistan.	

1980	Ronald Reagan elected president. October Surprise operation , probably aided by George Bush, helps sabotage Carter's attempt for re-election. Iraq invades Iran , beginning eight-year war.	
1981	Ronald Reagan becomes president. " White paper " of fabricated documents "justifies" reign of terror that the U.S. begins in Central America . Reagan shot by "lone nut" friend of vice-president George Bush's family . Panamanian national hero Omar Torrijos dies in "plane crash," and Manuel Noriega takes over.	
1982	Ronald Reagan signs Savings and Loan deregulation law , setting the stage for America's greatest financial scandal.	
1984		5.0 billion
1985	U.S. ships weapons to "enemy" Iran through Israel. It becomes basis for Iran-Contra Scandal.	
1988	George Bush is elected president, and the next week the American people are told of the magnitude of the Savings and Loan Scandal .	
1989	Berlin Wall falls. U.S. invades Panama and Bush apprehends his former employee, Noriega.	
1990	With virtual encouragement from the United States, Iraq invades Kuwait. Tomb of Omar Torrijos robbed , probably by the Skull and Bones Society that both George Bushes belong to.	
1991	After actively avoiding negotiations for an Iraqi withdrawal, the U.S. bombs Iraq into the Stone Age, and the subsequent death toll is more than one million people.	
1999		6.0 billion

2000	George Bush the Second comes to office in a voting scandal.	
2001	Terrorist attacks on World Trade Center and Pentagon . George Bush the Second begins his “war on terror”	
2002	Enron Scandal makes news. America prepares to invade Iraq .	

Introduction

Ever since protohumans left their native habitat in the tropical forests, they had to exploit new [energy sources](#). Whether it was tools to scavenge predator kills, weapons that made humans into superpredators, fur from human prey worn as clothing, felling trees and using deforested land to grow crops and pasture animals, the game was *always* about securing or preserving human-usable energy.

The hunter-gatherer lifestyle began coming to an end about 10,000 years ago, on a global basis, as human superpredators [hunted all the easily killed and large animals to extinction](#). Then the [Domestication Revolution](#) began, with plants and animals made into human-controllable and human-digestible food. The “agricultural surplus” allowed humans to begin creating what is called “civilization.” According to today’s prevailing theories, the first place civilization made its appearance was in [Sumeria](#), which was in present-day Iraq. It took thousands of years to happen, but deforestation, irrigation, mass grazing, plow agriculture and continually increasing human populations eventually turned much of the Fertile Crescent into a desert. In 1990, Iraq imported 70% of its food.

Along with [civilization](#) came social stratification, with elites, professions, slaves and ideological justification of their hierarchical positions. The [Zero-Sum Game](#) came into being. As each civilization appeared, whether it was in China, the Fertile Crescent or Mesoamerica, the elites tried expanding their energy base, and empire building was one of humanity’s most common “civilized” activities. Because humans became superpredators during their evolutionary journey beyond the tropics, humans killing each other became one of the species’ most identifiable aspects. Energy capture, preservation and consumption is the basis of all the world’s ecosystems, and hence every economic and political system, with the word “power” having similar meaning in each discipline. Violence has usually been the primary method by which political-economic power has been amassed, whether the violence was against the environment or fellow humans.

The altering of earth’s ecosystems and mining its elements, to create human-friendly environments

and products, is called “[progress](#)” in the West. It has also been the dynamic of [earth’s destruction](#). One of humanity’s oldest histories is perhaps also the bloodiest, filled with tales of mass murder, largely to seize land and peoples to secure energy and resources. The Jews of the Old Testament, led by Moses, began an era of genocide as they acquired their Promised Land. The practice of invading and annihilating the inhabitants, with the Jewish god cheering them on, is a predominant Old Testament theme. The complete annihilation of [Jericho](#)’s residents was [Joshua](#)’s most famous feat in securing the Promised Land, with divine assistance, as his god crumbled Jericho’s walls. From the beginning, ideological justifications were concocted to make it seem that naked theft was not so naked, and the murders transform into righteous deeds, usually by making those who were annihilated, enslaved or forced to migrate somehow impure, worshipping the wrong gods, or subhuman. The people on the wrong end of the weaponry were thus made exploitable/expendable, and people could then commit their awesome crimes against each other with clear consciences.

Empires rose and fell in the Old World for millennia. The [Roman Empire](#) ruled over more than a quarter of humanity two millennia ago, and its bloody reign devastated the Mediterranean region, helping to turn such places as Libya into deserts. Environmental degradation has contributed to the decline and fall of nearly *all* earthly empires.[\[1\]](#)

When the Western Roman Empire collapsed in the 5th century AD, [Europe](#) reverted to a primarily agrarian economy; mining declined, and Islamic lands and the Eastern Roman Empire became vastly more civilized than Europe. European Crusading coincided with the [High Middle Ages](#), which was a great period of deforestation and city building. Europe’s High Middle Ages also took advantage of a global warming trend, and previously unsuitable lands were deforested and put under the plow. By 1300, earth was cooling off, Europe had bred to its Malthusian limit, and the High Middle Ages ended, with a [major famine beginning in 1314](#). England entered a new era of incessant battling with France, beginning with its Hundred Years’ War, in 1337. In 1347, the [Black Death](#) swept into Europe, and in 1400, Europe’s population was perhaps as low as half of what it had been in 1300, although two-thirds is a more common estimate.

The Renaissance began in the late 1300s in the city-states of northern Italy, and the 1400s were a period of ferment and change in Europe that would have a global impact. [Portugal](#) began exploring, colonizing and conquering the East Atlantic and African coast in the early 1400s, and as Spain completed wiping out [Moorish rule](#) on the Iberian Peninsula, it joined the game, leading to Christopher Columbus’ [fateful voyage](#).

The New World Before “Discovery,” and the First Contacts

What is today called North and South America, or the Western Hemisphere, has been a source of great speculation among anthropologists and other scholars, on a wide variety of topics. During the past century, especially during the past couple of generations, the New World’s pre-Columbian past, as viewed by academia and mainstream society, has changed drastically. Early in the 20th century, the prevailing view among anthropologists was that humans first inhabited the New World no more

than a few thousand years ago, and that the New World's pre-Columbian population was perhaps eight million. Those views were held [quite dogmatically](#) by academia, and it took a long time to overturn them.^[2] Beginning with the Berkeley School's efforts, represented by the groundbreaking work of Woodrow Borah, Sherburne Cook and Carl Sauer, both the early date of inhabitation and the [pre-Columbian population](#) have changed by an order of magnitude. Today, a first date of New World inhabitation of at least thirty thousand years ago is widely held in academia, and even the 2001 edition of *Encarta Encyclopedia* presents a pre-Columbian New World population of 90 million. There is credible speculation that the New World may have had well in excess of 100 million people in 1491. This site uses an estimate of 80 million, well within the range of current estimates.

From the Arctic ice cap to Tierra del Fuego, an astonishing diversity of terrains, climates and peoples existed. Pre-Columbian natives spoke about 2,000 languages from about 150 language families, for vast linguistic diversity, providing more evidence that the New World has been peopled for a very long time. As was the case elsewhere on earth, particularly in China and the Fertile Crescent, when the hunter-gatherer lifestyle became unsustainable, the [Domestication Revolution](#) began. In the New World, the Domestication Revolution [seems to have begun in Mesoamerica](#), where the New World's most advanced "civilized" activity took place, with squash and pumpkins being the New World's first domesticated plants.

Along the Andes mountain range appeared one of the world's most remarkable feats of human adaptation. From seashore to mountaintop, from desert to jungle, in a region that was extremely vulnerable to El Niño climate fluctuations, the feats of engineering and environmental adaptation of that region's pre-Columbian peoples are still marveled at by modern anthropologists. The Incan Empire "discovered" by the Spanish was merely the latest in a series of empires that rose and fell there.^[3] [Machu Picchu](#) may have been at least partly an agricultural laboratory, as those people were the world's greatest agricultural experimenters. Maize was probably first domesticated in Mesoamerica, and the potato along the Andes. Even during the 1990s, "academics" defended [Columbus Day](#), have called the pre-Columbian New World a sparsely populated land of primitive hunter-gatherers, with the coming of Europeans the best thing that ever happened to the New World.^[4] The facts are different.

Of the estimated 80 million people who lived in New World in 1491, the vast majority lived in sedentary agricultural communities. The natives had developed three thousand varieties each of maize and potatoes, and maize was grown from New England to Chile in 1491. Most of the crops raised worldwide today are of Native American origin.^[5] Agriculture was the basis of the two largest New World populations: the Mesoamerican and Andean civilizations. The Arawakan peoples of the Caribbean had an agriculture-based civilization, and along with the Hawaiian peoples (and the South Pacific, in general) lived in what was probably the closest thing to an earthly paradise that historic humans have seen. Agriculture was practiced in North America's eastern woodlands, today's American South, the Great Plains and today's Southwest U.S. In addition, food-procurement practices in many parts of the pre-Columbian New World have become the source of intriguing evidence, heated debate and a fair amount of amazement.

As with most animals, humans cannot digest cellulose, so most of the sun's energy that goes into

creating forests and grasslands is not directly digestible by humans. Forests are the world's greatest soil producers, with trees having unique abilities to break up rocks, extract minerals, circulate water through the soils, vent it to the sky, and dead leaves and trees provide vast nutrient deliveries to the forest biome. A temperate forest can produce a foot of topsoil in about 400 years. Grasslands create topsoil on a far more modest level. Human-caused deforestation began with the Agricultural Revolution, in order to create environments conducive to crop production. While [razing forests to raise crops](#) can be highly productive in the short run, it can create long-term environmental devastation, including soil loss, which also fills rivers with silt as the soil blows and washes away.

While there is evidence that environmental over-taxation led to the decline and fall of civilizations such as the Anasazi and Mayan people and at Cahokia, in general the New World natives had a much gentler tenure on their lands than Old World peoples.[6] Anthropologists have surmised that the situation was because the New World was "behind" the Old World in "progress," the "agricultural surplus" in Mexico being thousands of years behind the Fertile Crescent in its development, as maize ears were still only a few inches long in 1491. Although North America's eastern woodlands peoples' adoption of swidden agriculture apparently began because of the demands of the European introduction of depopulating disease and violence, and laborsaving metal axes, they did *not* use plow agriculture, which helped ensure long-term soil fertility. Parts of Mexico today have been using *milpa* agricultural methods for four thousand years continuously, with no decline in soil fertility.[7] Today, it is thought that the introduction of maize to today's Northeastern United States about a thousand years ago increased the agricultural yields and led to greater population density, making it more sedentary. That led to population pressures with its resultant warfare, which the Iroquois responded to with their [Great Law of Peace](#).

While anthropology is a respectable discipline, studying stones and bones is a perilous way to try reconstructing extinct cultures. There is a [spiritual facet too](#), and purely materialistic interpretations are limited by definition, which can lead to significant misinterpretations of the evidence.[8] In their interaction with their environment, for instance, New World humans may have been far ahead of the Old World. Here is some of the evidence.

One of the few sustainable civilizations that earth has ever seen was the [Pacific Northwest](#) culture, partly because spawning salmon provided a digestible energy delivery to a village's front door. The natives, depending on the calories of salmon-borne deliveries of sunlight energy that fell in the North Pacific, did not [deforest the land](#) to divert the sun's energy into crops, so when white men finally got around to conquering that part of the world, the trees they chopped down were prodigious and the soils were intact. That kind of culture *could* have been developed in some Old World environs, but it was not, not on that scale or duration. It is possible that maintaining such an environmentally gentle civilization was a conscious choice by New World natives, and it became ingrained in their culture.

The first Europeans to North America's eastern woodlands remarked on a park-like, open forest, which was a hunter's paradise. That open forest was maintained by humans burning the undergrowth every year, turning the woodlands into an environment conducive to feeding animals that humans could hunt and eat. There is significant evidence that the [Great Plains](#) was an environment husbanded by humans over millennia, burning the plains regularly so forests could not

recover, and turning it into the world's biggest pasture, where bison, elk and other edible animals could flourish.[\[9\]](#)

Similarly, the Amazon may at least partly be a human-created biome. It is controversial today, but there is persuasive evidence that the [Amazon](#) basin and vicinity was partly terraformed, millennia ago, on a scale so vast it is difficult for modern observers to even imagine, much less accept. Thousands of square miles of the Amazon basin were terraformed by mixing ceramics into the soil, thereby creating a kind of supersoil, and ancient earthworks in the plains above the Amazon basin are so vast that it is challenging to imagine the civilization that wrought them. The plants of the "wild" Amazon are highly unusual in their abundance of fruits, nuts and other human-usable nourishment, which is strong evidence that the biome was transformed by humans millennia ago. The Amazon rainforest may be the world's largest garden.[\[10\]](#)

History has shown that *all* cultures unravel when subjected to the stresses of disease, famine, warfare and the like, especially when large fractions of the population die off. Because European contact was so quickly and universally disastrous for Native Americans, what later chroniclers recorded were generally remnants of New World cultures that existed before Columbus.

What the New World was like before Europeans showed up will be a source of enduring controversy, but some pursuable evidence is the first contact accounts of Europeans in the New World. The early Europeans to North America, whether they saw the Great Plains, the Eastern Woodlands or California, described peoples who were not particularly hostile toward one another, even enemy tribes.[\[11\]](#) Few early European observers left behind detailed descriptions of the New World they encountered, and those that do can have major deficiencies. [Columbus](#) and [Cortés](#) chronicled the first contacts between Europeans and the intact cultures in the Caribbean and Mesoamerica, but both chroniclers had agendas. Although [his journal is dominated with his quest for gold](#) and how he might exploit the wealth of the discovered lands, Columbus regularly remarked on the incredible beauty of the islands and the happy, healthy, peaceful natives, and many of them did not know what weapons were. He described the islands as an Edenic paradise and the natives its worthy inhabitants, and he was right. Columbus and his invasions quickly destroyed it, however, so reconstructing that extinct culture has been a challenging task for modern anthropologists.

When Ponce de León first invaded Florida in 1513, for the first recorded contact with Florida's natives, they almost certainly had already suffered from Spanish slavers, as [they fought off the invasion](#). Cortés and Castillo described the first European encounters with the natives of inland Mesoamerica, meeting the Aztecs in 1519.[\[12\]](#) The Spaniards had already pillaged the Mesoamerican coastline, so their welcome was not friendly there, and they easily slaughtered the Mayans with their superior weaponry. As they marched toward Tenochtitlán however, they were welcomed along the entire route, except when they encountered a rival state, Tlaxcala. The Tlaxcalans ferociously fought them off, but when the Spanish invaders began slaughtering women, children and the elderly (unthinkable in Mesoamerican society), the Tlaxcalans realized they were facing barbarians of a kind they had never seen before. They then surrendered and became the Spaniards' first significant ally in Mesoamerica, a relationship they would [later regret](#).[\[13\]](#)

In 1519, the same year that Cortés invaded Mesoamerica, Ferdinand Magellan led the expedition that first sailed around the world. Magellan's voyage marked Europe's first encounters with many native peoples along his route. Magellan's men violated many of the natives they met along the way, as well as killed each other in mutinous behavior.[\[14\]](#) Magellan died fighting the natives in today's Philippines. In 1568, a Spanish expedition from Peru landed in the Solomon Islands (named after King Solomon and his mines, because the Spanish, as usual, [were seeking gold](#)), for the first European contact in that region. Although the natives were once again friendly and welcoming, there was little gold to be found, and the Spaniards wasted little time in waging war against them.[\[15\]](#)

Cortés and Castillo recorded a Mesoamerican civilization that overwhelmed them, with sights so incredible that some Spanish mercenaries thought they were dreaming. The Aztec capital city was more fantastic than anything the Old World had to offer, and some of the Spaniards had seen Constantinople and Venice. There was also the [grim spectacle of human sacrifice](#), although the cannibalism issue is probably the New World's first urban legend. Columbus made up the story of [Caribbean cannibalism nearly from thin air](#). Cortés concocted the tale of Aztec cannibalism in 1522 [after he conquered them](#), and his mention of his foes carrying "roasted babies" sounds like classic wartime propaganda. Consequently, various aspects of their reporting must be viewed with skepticism. Nearly every early interaction with Spanish and Native American cultures show that when given a choice, natives thought European culture an inferior one, even when [treated to the best that Europe had to offer](#).[\[16\]](#) While the Aztecs had a stratified society that was materialistic, violent and greedy to a degree found nowhere else in the New World, it still paled beside the European versions of those qualities. When some Brazilian Indians visited France in the 1560s, they were amazed at the disparity in French society, where gluttons turned away emaciated beggars at their doors. The Indians did not understand why the poor did not kill the rich.[\[17\]](#) When Charles Mann recently asked seven academics in the field where they would have chosen to live in 1491, Europe or with the [Iroquois](#), the scholars were wary of being asked such a question, them being acutely aware of the [presentism](#) issue. Nevertheless, with all their caveats, all seven scholars chose the Iroquois.[\[18\]](#) Native Americans also valued cleanliness, a virtue that Europeans would not appreciate for centuries.

When Portugal's [Corte Real](#) expedition landed in today's Newfoundland in 1501, or [Ayllón](#)'s ships sailed to South Carolina in 1521, or France's [Verrazano](#) expedition of 1524 explored the coastline from the Carolinas to Maine, or [Cartier](#)'s expedition explored the St. Lawrence River in 1535, they *always* captured natives, usually to make them slaves. *All* first contact situations along the east coast of North America were openly predatory on the Europeans' part, and they always preyed upon *friendly* natives. By the time the [Pilgrims showed up in the 1600s](#), the natives there had already been attacked numerous times, with their people carried off to short lives of slavery. Even then, the invading Pilgrims were welcomed and fed by the natives.

The Spanish invasions were called *entradas*, and the [Narváez](#) *entrada* invaded Florida in 1527 on the Gulf side, landing in Tampa Bay and outrunning the Spanish reputation in southern Florida. The natives the Narváez expedition encountered were generally timid or friendly, and although the Spaniards did plenty to provoke the natives, it rarely became violent. That *entrada* was doomed by its incompetence, not native malice.

By the time the Spaniards got around to discovering, conquering and sacking the [Incan Empire](#) in 1532, the Incas had already been devastated by a European epidemic several years earlier, which killed the emperor and led to a civil war, so *no* European ever saw anything close to pre-Columbian Incan culture. Even then, their welcome was initially good, although with [Soto](#) in charge, a reconnaissance foray raped an entire nunnery of several hundred virgins, and then slaughtered the local populace when they resisted it.[\[19\]](#) The surprise attack, capture, ransoming and murder of the Incan emperor made even [Charles V](#) uneasy, as his men did that to a *sovereign*, putting a dent in the Divine Right of Kings doctrine. The Spanish accounts of [Cuzco](#)'s subsequent sack give some hint of what their capital city was like, and along with Tenochtitlán, they were the New World's two most spectacular cities, and perhaps the world's.[\[20\]](#)

When the [Soto entrada](#) invaded Florida in 1539 and marauded through today's Southeast United States for three years, it may have been history's most destructive expedition, laying waste to the entire region, mainly from the diseases they left behind. One native empire had already been [devastated by European epidemics](#) when Soto passed through, so even then, Soto intruded upon a far from unsullied land, but the chroniclers of that expedition, as bent as they were for plunder, described intriguing peoples, ones who seemed largely at peace with their neighbors, although warfare was not unknown and apparently increased as populations became more dense. Soto was about the first and last white man to see the Mississippian culture, which had flourished for several centuries before becoming extinct from European invasion and disease. Some of the mounds are several thousand years old. The Mississippian period *may* have begun declining a century before Soto showed up. Why they declined is one of archeology's current mysteries, and there are educated *guesses* about what it was like then. It is not unreasonable to theorize that European epidemics washed through the Mississippian culture as early as the 1518 smallpox epidemic that raged through Mesoamerica and carried off millions of people, or even the unrecorded slavers that hit the Florida coastline before Ponce de León's *entrada* of 1513.

When the [Coronado](#) expedition invaded today's American Southwest in 1540, looking for cities gilt in gold, the natives had already been visited by Spanish slaving expeditions, so they resisted Coronado's invasion, the first Spanish *entrada* that tried treating the natives well. It ended up much as the other Spanish invasions did, however.[\[21\]](#) Although openly predatory, the Coronado *entrada* described gentle peoples, with even rival tribes living peacefully, including those who hunted bison on the plains.

In 1542, [Cabrillo](#) "discovered" the California coast, and the native welcome was not always warm, and he found out why. The supplier of the Coronado expedition, Melchor Díaz, had already marauded through Southern California, abusing the natives and amusing himself by [hunting natives from horseback](#), which was one of the Conquistadors' favorite activities. Cabrillo described a densely populated California coastline, and the natives were usually gentle and friendly. Epidemics tore through them long before [Serra showed up](#) to "civilize" them. .

In 1577, [Francis Drake](#) came through on a pirate expedition, sailing beyond the European reputation

and putting ashore in Northern California (some scholars argue that he really landed in Oregon). They stayed for several weeks as they repaired their ship, and the natives helped feed the expedition, treating the strange white men with great reverence. At about the same time, [Martin Frobisher](#) described gentle people that he captured in his voyages to the North Atlantic.

In short, in about every European first contact account that history offers during the 16th century, in the New World and Pacific islands, the Europeans described gentle and either timid or welcoming natives, and when the welcome was less than friendly, it is nearly certainly because Europeans had already visited the region, and the natives were acquainted with the greedy, kidnapping, murderous men with white skin.

There is a great deal of evidence, some of it quite compelling, that the New World was visited many times, by many world cultures, long before Columbus showed up.[\[22\]](#) It is questionable whether the Europeans did to the New World what anybody else would have done in their shoes. In the same century that Columbus stumbled into the New World, the [Ming Dynasty](#) mounted a series of massive naval expeditions along southern Asia, including trips to Africa. They *did not* rape and plunder the peoples they visited.[\[23\]](#) Similarly, [gunpowder](#) was invented in China, and they began using it several hundred years before Europe did. While the Chinese exclusively used it for firecrackers, Europe began using it in the 1330s, just before the Black Death epidemics, and Europeans invented its use in weaponry. Europeans were uniquely violent, and their mastery of violence allowed them to conquer the world.

The First Century of the New World's Invasion

The development of the Europe that gave birth to [Christopher Columbus](#) was a long time in coming. Arguments can be made that go back to the Fertile Crescent and the [dawn of the Old World's civilizations](#), when feminine-based religion was overthrown by male-based religion, leading to what is called the [dominator model of society](#). For the past several thousand years, men have uniquely dominated Old World cultures. The influence of Western men has been profound in numerous disciplines, and has greatly led them astray at times, such as in [Western Medicine](#). After [Rome fell](#), Germanic tribes conquered most of Europe. Islam made its rise during the 600s, and [Moors invaded](#) and conquered the Iberian Peninsula in 711 AD, wresting it from the Visigoths, and today's Spain was Europe's most civilized place during Moorish rule, with Jews living in their golden age in Europe. Vikings began their disastrous invasions of Europe in about 800, conquering and settling lands from Newfoundland to Russia. A global warming trend, beginning around 900, helped lead to Europe's High Middle Ages, which was a great period of [deforestation and city building](#). In 1036, the Umayyad dynasty ended in Moorish Iberia, and the Christian conquest of Moorish Spain began in 1056. The Normans (Vikings who settled in today's France) invaded and conquered England in 1066. The [Crusades](#), the first launched in 1096, were Europe's first united acts, with Europe's first great Jew slaughters being a warm-up for the first one.

The Catholic Church owned about a quarter of Western Europe's land, and it was Europe's dominant medieval institution. The Crusades backfired in ways the Church did not anticipate. Instead of the Church extending its religious monopoly, returning Crusaders brought back [Catharism](#), which flourished in southern France, Christian Europe's most culturally advanced region, which led Pope Innocent III to declare a Crusade on France. The resulting Albigensian Crusade killed about a million people, and also became an opportunity for the Parisian elite to extend their rule, helping lead to today's France.

In the century that the [Black Death](#) swept off at least a quarter of Europe's population, Europe became a hell on earth, with famine, disease and warfare continually raging throughout it. Europe's cities were extremely deadly, with the continual influx of the "surplus population" from the countryside being the only thing keeping the urban populations sustained. The Renaissance began in the late 1300s in northern Italy's city-states, and it led to humanism, which eventually undermined the Church's power. By the early 1400s, the "Reconquest" of Spain was reenergized with a renewed attack on Granada, which would be the last holdout of Islamic rule on the Iberian Peninsula.

Portugal is a tiny nation compared to Spain, both in land mass and population, having about a million people, compared to Spain's eight million, around 1500. It came into being during the Reconquest, and if the peoples of what is called Spain today were not busy fighting the Moors and friends, and each other, Portugal as a political entity may not have come into being. Its existence was aided by geography, being bounded by mountains, rivers and the Atlantic Ocean.

[Spices](#) can be tasty, and hide the taste of stale and rotting food, but the primary reason for using them was their antibacterial properties, to preserve food, especially in warmer climates, where food can spoil quickly. Spices generally came from Asia and the Spice Islands, and were not only lucrative trade items for the right players, but were seen as necessities by many, especially in the meat-eating culture of the Iberian Peninsula, as spoiling animal products are the deadliest foods of all. Luxury items also came from the Asian trade, such as silk and porcelain. The spice trade from Asia to the Middle East and Europe was an ancient one, with the Romans gaining control over the sea routes by its conquest of Egypt in 30 BC, and Alexandria became a hub of trade, which bypassed Arab traders, control they later regained with the fall of Rome and the rise of Islam.

Christian elites on the Iberian Peninsula had been seeking another route to Asian trade for some time, and Portugal's conquest of Ceuta in 1415 was an attempt to gain a trade route across Africa, to outflank its hated Islamic rivals. It would not be as easy as it first seemed, and Portugal began sailing along the Atlantic coast of Africa in the 1430s, seeking the West African gold trade, where most of the Old World's gold was mined. Those efforts led Portugal to enter the African slave trade in 1444.

There have been very few, if any, pre-industrial, sedentary cultures that did not have some form of forced servitude. History has seen a wide spectrum of coercive institutions, with great diversity in how they operated. Even today, relatively gentle Western taxation is a form of coerced servitude, where people are compelled to part with the fruits of their labor, to support violent states. In Western and Northern Europe, slavery was nearly an extinct institution by the late Middle Ages. It flourished in the Middle East however, with Arab slavers plying their trade in Africa and elsewhere. The Balkan

side of the Adriatic became a slave coast, the very word “slave” coming from “Slav.” Enslaving the Islamic “infidel” became a feature of the Spanish Reconquest, and would lead to slavery making its rise again in Western Europe. Christian rationales were the most prominent ones used during the coming age of slavery. Even during America’s push for abolition (after nearly the rest of the West had abandoned the institution), Southern defenders of slavery could often be found pointing to their Bibles to justify it. The new version of slavery also became a uniquely economic and racist institution, with scientific management principles and other sophistication that earlier incarnations of it did not possess.[\[24\]](#) Portugal’s quest for slaves and gold became a theme of “exploration” and “settlement” that would not quickly disappear.

Portugal helped advance Europe’s maritime science and technology (and also borrowed some from Islamic culture), and began exploring, conquering and settling the Eastern Atlantic’s islands. In 1418, the Portuguese discovered the uninhabited Madeiran islands and colonized them, the Azores in 1427 and the Cape Verde Islands in 1450.

The Fourth Crusade sacked its “ally” Constantinople in 1204, and the Eastern Roman Empire never fully recovered from it. Venice gained a monopoly on the Asian trade with Europe from Constantinople’s sack, and charged exorbitant prices to Europeans. Turkish expansionism and Byzantine weakness led to the fall of Constantinople (today’s Istanbul) in 1453, which ended Venice’s trading monopoly and led to its decline. It also led to renewed Portuguese attempts to find an alternate route to the Asian spice trade. The fall of Constantinople also hastened the rise of European humanism, as Byzantine scholars fled to Europe, with their knowledge of classical Greece. Beginning with the reign of John II in 1481, Portugal began launching ambitious expeditions down the African coast, and in 1488, Portuguese explorers rounded the southern tip of Africa. Christopher Columbus tried getting Portugal to finance his ideas for sailing across the Atlantic to Asia, but after rounding Africa’s tip, Portugal was no longer interested and doubted his strategy, which had been put forth by [Paolo Toscanelli long before.](#)[\[25\]](#)

[Columbus](#) finally sold Spain on the idea, getting the sovereigns of Iberia, who finally wiped Moorish rule off the Iberian Peninsula in early 1492 with its conquest of Granada, to finance his foolhardy journey.

After Bartolomeu Dias returned with news of his successful rounding of Africa’s southern end, in 1497 Vasco da Gama set sail down Africa with four ships. Two years later he returned with news of reaching India, and he brought back specimens of spices and other coveted trade goods. He had violent encounters along the way, and his trading overtures were not well received, as the Persian and Ottoman traders in India easily guessed what the Portuguese ships were up to. Of 168 men who began the voyage, only 44 survived to make it back to Lisbon.

At the time, a successful voyage to India was more useful news to the European powers than what Columbus had stumbled into across the Atlantic. In 1500, thirteen ships, with Dias captaining one of them, set sail toward India again. The fleet visited Brazil along the way, taking a circuitous route around Africa, and seven ships were lost, including Dias’. The six-month journey returned to Calicut on the western coast of India, and once again the reception was less than wonderful, and the Portuguese retaliated by bombarding the city with cannons and burning some boats. A series of

explicitly military voyages ensued, with the Portuguese violently establishing a trade route to India and conquering the Muslim port of Goa in 1510. In 1511, the Portuguese conquered Malacca, in today's Malaysia, which was the spice trade's heart. While the Portuguese found the Arabs and other Muslims relatively easy to defeat militarily, and seizing their trading ports was how Portugal established itself, the Chinese Empire was another matter. The [Ming Dynasty's voyages](#) in the early 1400s were tremendous, with more than 20,000 men on each excursion. The few Portuguese boats that showed up failed to overawe the Chinese, who were far more civilized than the European interlopers, and the Portuguese were reduced to smuggling as they continued to try gaining trading rights with China, and they began trading with Japan in 1543. In 1557, Portugal finally secured the rights to an easily watched and non-defendable tip of a peninsula. Their toehold became Macau. Pepper was by far the greatest import from Portugal's trade route to Asia, amounting to about 6000 tons annually by 1520, and accounted for about 40% of Crown revenues.[\[26\]](#)

Christian proselytizing accompanied the Portuguese trading missions, and it was fairly successful in Japan, perhaps too successful. While the Chinese sneered at missionary efforts in Macau, which generated only about 20 Chinese Christian converts, Portuguese successes in Japan were another matter. By 1580, there were an estimated 150,000 Japanese Christians, and Nagasaki was the heart of the proselytizing effort. The Japanese converted largely to gain the advantages that came from trading with the Portuguese. Apparently the Portuguese success went to their heads, and they began treating the Japanese converts shabbily and arrogantly. In 1587, a powerful Japanese ruler saw the "Christian invasion" as a threat, and began courting the Protestant, non-proselytizing Dutch. He also began a savage persecution of the missionaries and Japanese converts, and thousands were killed. In 1639, Portugal was completely expelled from Japan, and the leadership of a subsequent delegation from Macau was infamously beheaded. The Dutch then served as Japan's foreign trade conduit for the next two centuries.

It can be difficult for modern Westerners to comprehend the conditions that prevailed back then, for the Europeans who began sailing across the world. In 1500, Europeans had been living on the cusp of disaster for the previous two centuries. Earth began cooling off by 1300, and the High Middle Ages' aggressive deforestation and agriculture on previously unsuitable lands, combined with the resultant population explosion, left Europe in a precarious state. The first great famine that began in 1314 set the stage for what came afterward. The "Little Ice Age" continued until about 1850, and war, famine and disease were constant facts of life. During those centuries, there was no European city that went an entire generation without suffering an outbreak of famine, war or epidemic disease (or all three at once). Not that Europe was a paradise before then, but Europe became a hell on earth during those centuries.

Some recent motion pictures have attempted to recreate the ambience of those days, but no movie can do justice to the smells, feelings and general atmosphere. Heretics and witches burned across Europe. In "civilized" London, a man did not walk down the street without a weapon in hand. In European cities, criminals waited on every street, ready to pounce on the unwary. One favored method was dropping bricks and masonry onto unsuspecting passersby, and looting their body. Food riots became common, beginning around 1500, as Europe's population again began hitting the Malthusian limit. Modern Westerners can scarcely imagine the filth and stench of those days. People would go their entire lives without bathing, except for baptism. England's King James I, who

commissioned his famous Bible, would not have been allowed in many Western homes. He may have not washed his hands for his entire adult life, and was notable for his personal filthiness and boorish behavior. The streets of Europe were open sewers, as were its rivers and lakes. If Thomas Hobbes' famous phrase, "nasty, brutish and short" ever applied to the lives of any people, it was to average Europeans during the "Little Ice Age."

The Iberian Peninsula, during its several century "Reconquest," was the scene of continual warfare, disease and famine. The filthiness among Christians was enforced there on an even more stringent scale than the rest of Europe. The Queen of Aragon once boasted that she had two baths in her life: when she was born and when she was married. Bathing was a Moorish practice, and in 1500 bathing attracted the interest of the Spanish Inquisition, as it hunted down crypto-Moors and crypto-Jews, so filthiness was evidence of a Spaniard's true Christian nature. When the Spaniards encountered the Caribbean natives, they used the fact of the natives' regular bathing as evidence of their "primitive" condition. When the Spaniards eventually encountered the Aztecs, they remarked on their fanatical devotion to cleanliness, with daily baths and all manner of body and breath deodorant. The Aztecs found the stench of the Spaniards so overpowering that they held flowers to their noses when speaking to them, and rulers would have Spaniards bathed in clouds of incense before speaking to them. Tenochtitlán had an army of street cleaners, and was cleaner than any European city would be until the 20th century.

The filth, violence, starvation, disease and overall misery of Europe made life a pretty cheap commodity, which is made evident by some telling statistics. During the 1600s, the life expectancy of a male in Europe's ruling families was 28 years.[\[27\]](#) As noted above, that first Portuguese voyage to India had about a 25% survival rate, and the risk was so high on that voyage that criminals were forced into being crewmembers. A 75% mortality rate was a bit high, but during the next two centuries, Portugal launched about 15,000 men per year (and a few women) on its trade route. The *average* mortality rate for the two-year voyage to Asia and back was about 25%.[\[28\]](#) A death rate of a third of the passengers and crew was typical. It is difficult to imagine anybody loading up ships today, to distant lands, with that projected survival rate. As late as 1762, ten ships of the Dutch East India Company lost more than 1000 people, about 45% of those aboard, just sailing from the Netherlands to the Cape of Good Hope. [Scurvy](#) was the biggest killer on the high seas, but was far from the only one. Living on a ship of the day challenged even the European tolerance for squalor. Not surprisingly, mutiny was a constant risk, and drastic methods were used to keep the crews in line. In an early English attempt at colonization, at [Roanoke](#), the colony simply disappeared. The next attempt, at [Jamestown](#), was only sustained by the continual influx of colonists. During the first generation of the English invasion, nearly a third of the colonists died in the first year. In 1624, of about 7000 colonists who arrived in Jamestown since 1607, only 1200 still survived.

Not surprisingly, the best and brightest that Europe had to offer were rarely aboard those ships. They were not all impressed criminals, and the death rates aboard were not state secrets, although deception was usually used in recruiting efforts. The turnip truck could not keep showing up for two centuries, so imagine the kinds of people who accepted a 25% risk of death by hiring onto a ship bound for Asia. People coming from those backgrounds would not make many gentle and enlightened encounters with the peoples of distant lands, particularly when they came from the world's most violent culture, and the Iberian Peninsula was no exception. The Iberian Peninsula had

been the scene of innumerable invasions and forced migrations during the previous millennia, and four centuries of nearly continual warfare, raging across the peninsula, made the Spanish and Portuguese cultures thoroughly militaristic. The violence they were about to unleash, on a global scale, had never been seen before.

Columbus and his men usually abused the unfailing native hospitality during the [first voyage](#), and he returned to lead a [full-scale invasion](#) the next year, with more than 1000 men. The gold hunt soon degenerated into sending captured natives to Spain as slaves, which came naturally for a man who slaved in Africa with the Portuguese. The natives died off quickly when shipped across the Atlantic, and Columbus then resorted to a tribute system, where each native was supposed to give Columbus and his men a thimble's worth of gold every few months, or they had their hands chopped off. Thus began the [genocide](#) of the New World's natives, and history's [biggest gold rush](#).

The Guanches, who probably migrated from northern Africa more than a millennium earlier, [inhabited the Canary Islands](#). The Spanish completed their conquest of them in 1496, aided by a European-introduced epidemic, which devastated the virgin population. By 1600, the Canary Islands had been largely deforested and turned into a big plantation, and the Guanches were essentially an extinct people.

Several dynamics were evident in the early days of European colonialism. One was the environmental devastation inflicted onto the "discovered" lands. Deforestation leads to desertification, and a mere fifty years after discovery, Columbus remarked that the Cape Verde Islands seemed misnamed, as there was not a green thing on them. They were green when the Portuguese "discovered" them.^[29] He also noted that the Canary Islands had become much drier during the years he had been sailing to them, which was only a generation. What was done to the [previously forested Mediterranean region](#) over many centuries was quickly done to those Atlantic islands. Immediately after discovery, on the Madeiran island of Santo Porto, two rabbits were introduced. They bred rapidly, as rabbits are prone to do. Within a year, the entire island had been denuded of its vegetation by those rabbits and their progeny

In the early days of European global hegemony, ideology was a turbulent milieu. The Catholic Church still held its religious monopoly over Western Europe, and religion was a central issue for the Spaniards who conquered the New World. Spanish nationalism was also ascendant, with the rule of Isabella and Ferdinand forming the *idea* of Spain. Isabella initiated the Spanish Inquisition in 1480, which was mainly concerned with hunting Jews and Moors who had converted under duress to Christianity, but who might have been practicing their erstwhile faith in secret.

After Columbus came to an obscure end, [other Spaniards](#) kept the gold quest alive in the New World, as natives died off by the millions. The mining practices of the [Egyptians and Romans](#) were revived. The Native Americans became expendable commodities in the fevered quest for gold. Columbus was the [first person to realize](#) what the wanton slaughter and ill treatment of the natives would mean for Spain's burgeoning empire. Native labor was the source of harvestable wealth on Española, as they did all the work.^[30] His observation was ignored. Killing off the native population would ultimately cripple Spain's imperial ambitions.

By 1510, the Caribbean was being [dramatically depopulated](#) to keep Española's gold mines and plantations running. Jamaica, Puerto Rico, Cuba, and the Bahamas' indigenous human populations were soon extinct, and slavers were almost certainly visiting the Florida natives. The Spaniards then struck out, invading the Caribbean periphery. They invaded Florida, Panama and South America, looking for slaves and gold. For the first time, the Spaniards encountered armed native resistance, and numerous *entradas* ended in disaster. More often, the Spaniards easily conquered and enslaved the natives.

Enslaving the natives became the standard Spanish tactic during its first century of plunder. Ideological justifications were concocted to justify exploiting the “discovered” and enslaved peoples, with racial, religious and imperial justifications prominent. They all merely spruced up the might-makes-right mentality. The greater the violation, the more strained the ideology to justify it, usually by making the exploited peoples somehow subhuman. With their humanity thus removed, their treatment became justified as clearing valuable land of subhumans (English ideology), or putting them to work as beasts of burden or serving as sex toys (Spanish ideology).

The mining frenzy and other horrors [completely exterminated](#) the natives of the Greater Antilles, known today as the Taino. Today's prevailing estimate is that there were a [few million island Taino](#), but there may have been more than ten million of them in 1492. By 1520 they were nearly extinct on Española, and they were *completely* extinct long before the year 1600, and they suffered pretty much the same fate throughout the Greater Antilles. It is the only *complete* genocide of *millions* of people in world history.

In 1511 however, the Christian conscience peeked through the blackness. Just before Christmas, Dominican priest Antonio Montesinos delivered a startling sermon on Española. He quoted from the Bible, and noted the vast genocide that turned the pre-Spanish “paradise” on Española into a human desert. The priest called into question the Spaniards' very Christianity, asking how they could justify such treatment of their fellow human beings. The brave priest nearly lost his life at the hands of enraged Spaniards, and they tried getting him sent back to Spain.

In the audience for that audacious sermon was a prosperous, conquering Spaniard, with land and slaves of his own. He became the first priest ordained in the New World. [Bartolomé de Las Casas](#) did not indignantly receive Montesinos' sermon, but did not really see anything wrong with keeping slaves, either. Three years later, Las Casas was preparing for an Easter sermon when the Bible text suddenly made him question the Spanish slave system. He then gave his slaves away and dedicated the rest of his life to the natives' welfare, eventually becoming appointed the “Protector of the Indians.”[\[31\]](#)

Before Las Casas' moment of truth, some Spanish Dominicans were able to make the Spanish court uneasy with their reports from the New World, and in 1512-1513 the Laws of Burgos were passed. They dealt with native treatment. Although the laws sounded high-minded for the day, the reality was that they were paternalistic, unenforceable, and laughable when compared to New World reality. The most famous document from those laws became known as the Requirement, which is partly reproduced at this footnote.[\[32\]](#) The Requirement epitomized Spanish legalism. [Legalism](#) is a sign

of a degenerate system, where form prevails over substance. Spanish legalism resembled that of the late Western Roman Empire, and foreshadowed [today's United States](#). Las Casas wrote that he did not know whether to laugh or cry after reading the Requirement.

The Requirement was usually read to people who did not understand Spanish. Las Casas, who knew and admired Columbus, recorded that a typical Spanish strategy was to read the Requirement in the night jungle before attacking the villages. Care was taken so the Requirement would not be read where the natives could hear it, so they would not awaken.^[33] It was sometimes read from ship to the distant shoreline. For instance, during a 1518 *entrada* to the Yucatán, the Spaniards went ashore on the island of Cozumel. The Spaniards' reputation preceded them, and the local populace fled. Undeterred, the Spaniards climbed the town pyramid. They read the Requirement to the sky, and then posted it (unreadable to the natives) to the side of the pyramid. Duty was fulfilled.^[34]

Las Casas' efforts were inexhaustible regarding the natives' welfare, and he is seen today as the most radical Spaniard, the one who came the closest to questioning the entire business of Spain in the New World. He noted that African slaves seemed harder than the native slaves, and in 1518 his efforts were successful. The Spanish crown agreed to have African slaves replace the native slaves in the mines, and it might have rescued the last natives from extinction, but then the New World's first smallpox epidemic broke out in the mines, [killed off more than half of the remaining natives](#), and soon swept to the mainland as the Spaniards invaded the Aztec Empire, killing untold millions.

After observing that African slaves fared little better than the natives, Las Casas then sought to ban the use of African slaves, and eventually advocated the position of just having Spanish trading ports in the New World, with priests going forth to try converting the natives. That proposal was obviously not undertaken.

Other than the short-lived gold strike on Española, the entire New World business was a disappointment for the Spanish Crown, as not much loot was coming in. The Spanish invasion finally hit pay dirt when Hernan Cortés stole the *entrada* sent out by Cuba's governor, [Velázquez](#), in 1519. Cortés conquered the Aztec Empire with a few hundred men. One historian accurately stated that it was a grand tale with everything in it but a hero. The Aztecs were vastly more civilized than the Spaniards. The center of their empire, Tenochtitlán, was quite possibly the world's most spectacular city, a sparkling, manmade island, sitting in the middle of a vast lake, in the midst of a majestic valley ringed with mountains and snow-capped volcanoes

The Valley of Mexico and surrounding region had the largest New World population, generally estimated at somewhere between 10 and 25 million people. There is nothing the Spaniards did worth cheering about in Mexico, unless rape, plunder, bloodshed and genocide qualify. The loot began flowing in from the Aztec plunder, Spain got excited, and European freebooters began flooding the New World. The Spanish Crown continually enacted measures to reduce native abuse, but in practice, the effects were minimal. The Crown's primary preoccupation was the flow of loot into its coffers.^[35] The first Crown officials to the New World were treasury officials.

In 1519, the year the Spaniards began invading the Aztec Empire, [Ferdinand Magellan](#), who was

Portuguese, tried finding a way across the Atlantic to the Indies, and sailed around South America. Although he died fighting the natives in today's Philippines, his crew made it back to Spain in 1522, with enough cloves picked up in the Spice Islands to make a profit on the world's first circumnavigation, even when four of the five ships were lost, and only 18 of the original 250 men completed the journey.

Pánfilo de Narváez, the rapist of Jamaica, led the [Cuban governor](#)'s army to Mesoamerica to try ending Cortés' usurpation of the *entrada*, and Cortés easily won the engagement, bribing most of Narváez' men with the promise of Aztec gold before the short-lived battle even took place.[\[36\]](#)

Narváez ended up losing an eye in the fracas. In 1527, seeking an empire for himself, he led an *entrada* of hundreds of men into Florida, landing in Tampa Bay, outrunning the Spanish reputation in southern Florida. The *entrada* was doomed by its brutality and incompetence, and it spread disease among the natives. After eating their horses, some Spaniards resorted to cannibalism. Only a few members of the Narváez *entrada* survived the ordeal.[\[37\]](#)

Taking his cue from Cortés' success, the illiterate Pizarro conquered the Incas in South America the same way a decade later. The main strategy was kidnapping the emperor, something the natives could not conceive of. After capturing the Incan emperor during a surprise attack that killed thousands of his unarmed retainers, Pizarro's men ransomed the Incan sovereign for tons of gold and silver, and killed him after the ransom was delivered. Pizarro's own men eventually murdered him, as they vied for power. The initial Incan and Aztec plunderings, although they created great excitement in Europe, were modest when compared to the silver mines discovered at Zacatecas (today's Mexico) and Potosí (today's Bolivia). At Zacatecas, the labor was scarce in the desert, so the natives were treated *relatively* well. At Potosí, the "personnel" practices used on Española were evident. The natives died at rates that rivaled Auschwitz.[\[38\]](#) The Potosí and other South American mines consumed several million native lives. Along the streams and rivers that flowed from the Andes, natives dying under the Spanish lash worked the mines furiously. In South America, the Spaniards could not lose their way when traveling between New Granada and Popayán, because the bones of dead men formed an unmistakable path.[\[39\]](#) The vultures would circle each time a new mine was dug. In Mexico, where the natives were treated somewhat better, the natives were still forced into mining and becoming beasts of burden for the Spaniards, dying in heaps in the mines and along the roads. The Spanish labor practices, in a macabre continuation of what they did to the Taino in the Caribbean, may have been the greatest contributing factor to the native genocide [\[40\]](#)

The [Egyptian](#), [Roman](#) and Spanish mining practices were not universal. Professionals, not slaves, performed gold mining in India. The natives of the Incan empire saw their mines as sacred places, as the gold for their sun-god religion came from there. The Incan miners were all married, as the Incan system had a miner's wife care for him while he mined, and neighboring provinces would work his fields while he mined. Bachelors could not mine. No Incan miner ever died from overwork while the Incas ran the mines, and they were exceedingly well fed. Mining for the Incan Empire was not even considered hard work.[\[41\]](#)

Cuzco, the seat of the Incan Empire and the center of Incan sun worship, may have contained the most amazing gold treasures the world has ever seen. The Spanish mercenaries came upon an Incan Empire wracked by civil war, caused by another Spanish-introduced epidemic that carried off

vast numbers of people, including the emperor. When they sacked the capital city, Cuzco, they stripped it of its treasures and melted it all down. While the Spanish plunderers were busily stripping and melting all the Incan art, some were aware enough to lament what was happening, and they wrote of seeing life-sized statues of people and animals, made of gold, and a garden full of plants and a herd of llamas (including their shepherd), all in gold and silver.

Pedro de Cieza de León wrote what many consider the finest history of the Incan people before they were "discovered." Cieza de León was a soldier of conquest, but became interested in those he was conquering. His Incan history and conquest was written with the Spanish Inquisition and royal censors in mind, as his work had to pass their review before publication. He was a soldier and never questioned the conquest's propriety. Yet, even he wrote the following:

"Thus, in the days of the Incas there was very little arable land in these kingdoms that was not under cultivation, and all as thickly settled, as the first Spaniards who entered this realm can testify. To be sure, it is a sad thing to reflect that these idol-worshipping Incas should have had such wisdom in knowing how to govern and preserve these far-flung lands, and that we, Christians, have destroyed so many kingdoms. For wherever the Spaniards have passed, conquering and discovering, it is as though a fire had gone, destroying everything in its path."[\[42\]](#)

For the millions of natives already dead from mining gold and working on plantations, the horrors of the Potosí silver mines may have been greater. Descending hundreds of feet into the earth for a week at a time, hauling hundred pound loads up ladders with only a candle to give light, most of the millions who went to the mines died there or along the way. One observer wrote that a Potosí mineshaft was "a mouth of hell." The natives were forced to use mercury in refining the ore, which added to their misery and death rates.[\[43\]](#)

Slightly preceding and concurrent with silver mining in South America, the region's coca plantations were native death factories. Life expectancy on the plantations was measured in months. The Aztecs had an alcoholic drink called pulque, made from fermented cactus. Drinking pulque was generally forbidden in Aztec society before Cortés "discovered" them. After the conquest, getting drunk became the native pastime as they underwent the [profound psychological dislocation](#) of being conquered, enslaved and their culture actively attacked by the Spanish priests, in an attempt to eradicate their culture and turn them into "good Spaniards."

As the Aztecs had restricted alcohol, consumption of the coca leaf was restricted in pre-conquest Peru. After conquest however, the coca habit swept the natives, and chewing it became their pastime, undoubtedly to soften the psychological and physical hardships that the natives endured due to the "unrestrained greed of the Spaniards."[\[44\]](#)

Accompanying the natives' genocide were numerous accounts by outraged Spanish observers and

attempts by the crown to limit the abuses, but it rarely slowed the carnage. Estimates of the death toll of Incan natives after a century of Spanish presence range from a “low” of a third of the population to more than 95%.[\[45\]](#) The natives in the Valley of Mexico were probably more than 90% decimated in the first century after conquest. In the sixteenth, seventeenth and eighteenth centuries, fifteen, sixteen and eighteen epidemics respectively swept through the Valley of Mexico.[\[46\]](#)

Cieza de León remarked that the Spaniards exaggerated human sacrifice and other unsavory aspects of the Incan culture to attempt to [justify conquest and exploitation](#), in a timeless dynamic. The Spaniards constantly inflicted surprise attacks on their “hosts,” from [Xaraguá](#) to [Cholula](#) to [Tenochtitlán](#) to the [Incas](#). Attacking sleeping villages was a Spanish tactic, with the [most capable and virtuous conquistador](#) practicing it, and it quickly became standard Spanish practice. Greed was a vice that the Aztecs nurtured, but they were about the only people of the pre-Columbian New World who did, which was partly why the Spaniards appreciated their culture and incomparable markets. Among most New World natives, greed was a terrible vice, and among many tribes, greed was not even a concept. The idea of owning land was as strange to many native tribes as owning the sky would be.

In South America, Central America or North America, when captured, natives were each loaded with about 75 pounds of loot, and then marched towards the coast. They were chained together at the neck, forming long marching lines. If a native faltered, collapsing under his load (women also met this fate), the Spaniards beheaded him as an easy way to remove him from his collar. The natives in line had to step past or over the headless body.[\[47\]](#) In one region where that practice flourished, the native word for “Christian” was the equivalent of “demon.”[\[48\]](#)

Spain had a steeply stratified society; 85% of the population was composed of landless peasants, while a few families owned more than half of Spain's land. About the only career options for ambitious peasants were becoming priests or soldiers. The Madonna/whore mentality was deeply ingrained in the Spanish men. The Spanish also picked up some of the worst traits of the Moors, such as embracing machismo and the practice of having harems. Sometimes even priests had them. In colonial Paraguay, the *average* Spaniard had nearly twenty native concubines.[\[49\]](#)

The Spanish soldiers who conquered the New World mainly came from the peasant class. The New World's soldierly leaders were generally *hidalgos*, which was the lowest form of Spanish nobility, usually meaning that an ancestor did well in battle against the Moors. From the moment they discovered the naked women of the Caribbean, they were like brutal kids in candy stores. Raping native women was perhaps the favorite pastime of Spanish soldiers, from 1492 until the 1800s, which is where the huge mestizo class of Latin America came from. Their role models were the grandees of Spain, who were rich landowners that did not take off their hats in the king's presence. The merchant and skilled classes of Spain were significantly composed of Jews and Moors, but they were run out of the country, which helped set the stage for Spain's decline in comparison to its European rivals.

[When Ponce de León “discovered” Florida](#) in 1513, the natives violently resisted the Spanish intrusion, for the first hostile welcome recorded in the New World.[\[50\]](#) The Spanish then began

raiding the coastline. In 1521, the same year that Ponce de León died battling Florida's natives as he again invaded, two Spanish ships visited the Bahamas, where Columbus first made landfall in the New World. The Bahamas had long since been depopulated by the Spanish slave trade. Not finding anybody to enslave, they then sailed along the coastline and landed in present-day South Carolina. They outran the Spanish reputation and the natives welcomed them. The Spanish gave food and other gifts to the great numbers of natives who greeted them. The Spaniards invited them onto their boats for further festivities. The number who came aboard is estimated at between 60 and 130. When the natives were safely aboard, the Spaniards set sail for Española. One ship was lost at sea, while the other delivered its human cargo to Santo Domingo. Those natives had to fend for themselves, and were reduced to scavenging garbage and eating carrion. In 1526, only one of those captured natives still lived.[\[51\]](#)

One young captive came under the control of Lucas Vázquez de Ayllón, an Españolan plantation owner who sponsored that slaving expedition and others, bringing several boatloads of hapless North American natives to Española. Ayllón became quite attached to the boy and practically adopted him. The boy was named Francisco Chicora. He quickly learned Spanish, was baptized, and was eventually presented at the Spanish Court. Chicora spun grand tales of his homeland, and Peter Martyr, who was uncharacteristically taken in by the boy's fantastic stories (Oviedo was skeptical of the boy's tales), eagerly wrote them up. Bedazzled with Chicora's stories, Ayllón planned to colonize Chicora's homeland, and an expedition sailed in 1526, with six ships and 500 men (and even some women). Ayllón had plans to establish a peaceful colony. Even [Montesinos](#) was involved. It was the first attempt at gentle New World settlement by the Spanish.

The Spanish treated Chicora as well as any Native American ever was, but his first act upon coming home was fleeing back to his people, abandoning his benefactors. As the [Jamestown](#) Englishmen later voted with their feet, so did the natives who were treated to the best that Europe had to offer. As early as Columbus' second voyage, as he ["rescued" natives](#), they almost always fled from their "benefactors" at the first opportunity. Ayllón did worse than misjudge Chicora's motivation; the Spaniards ran their flagship aground as they made landfall, losing the greater part of their food and equipment. Instead of the fantastic paradise that Chicora had painted, the Spaniards found themselves shipwrecked in swampland, and all natives fled inland. Ayllón sailed southward with the remaining ships, and found more suitable lands near present-day Savannah, Georgia. Ayllón soon died, Spaniards began killing one another and the colony fell apart. Some Spaniards strayed into native villages, quickly wore out their welcome and were killed. Only about 150 bedraggled Spaniards made their way back to Española.[\[52\]](#)

The failed colony left a lasting impact, however. Hernando de Soto had perhaps the most improbable career of any Conquistador. He is the only Spaniard to have been prominently involved in the first plunderings of Central America, South America *and* North America. Born in about 1500, he got an early start in raping Central America as one of Balboa's men, perhaps as early as 1514. Balboa was about the most capable and virtuous of all the Conquistadors, but he still wantonly killed natives and fed them to his [dogs](#), had gold fever and played a large part in the complete depopulation of Central America, as millions died.[\[53\]](#)

[Balboa](#) was beheaded in a power play by his father-in-law, in another example of how the most

dangerous New World enemies of the Spanish were often the Spanish.[\[54\]](#) After getting rich in Central America, Soto became an investor/participant in the 1532 *entrada* to the Incan Empire, and his share of that pillage made him fabulously wealthy.[\[55\]](#) For those in greed's thrall, there is no such thing as "enough." Not satisfied with his vast, bloody fortune, Soto mounted an invasion of North America in 1539, after scouring Cuba for men and supplies.

Although Ayllón tried a gentle colonization, and [Coronado](#) would invade what is today the Southwestern United States in 1540 pursuing gentle principles (although practice and theory were at odds once again), Soto's expedition was openly predatory, seeking another gold-plated civilization to rob. Even when Soto arrived, one region he visited was almost completely depopulated. The woman who presided over the remnants of her empire treated Soto's men to warehouses full of goods (before Soto kidnapped her, in the standard Spanish "exploration" style). Those lands were upriver from the failed Ayllón colony, which probably unleashed the epidemic that depopulated the region, if it was not from other European intruders.[\[56\]](#)

The Soto expedition's chroniclers described a densely populated southeastern North America. Entire civilizations were destroyed by Soto's *entrada*, and regions were devastated by its disease-ridden aftermath, perhaps spread by the pigs he brought along.

In 1559, the Tristán de Luna *entrada* marauded through the thickly populated lands that Soto plundered a generation earlier, and expected to prey upon the same natives. Starvation was the Luna expedition's constant companion, as they trudged through the ruins of depopulated regions. When the Frenchman La Salle traveled the Mississippi River about 140 years after Soto, in 1682, he was in for a surprise. Where there were about fifty settlements along the Mississippi when Soto came, there were perhaps ten when La Salle passed through, and some of those were due to recent native immigrants.[\[57\]](#) La Salle thought there must have been a mistake in the chronicles and maps of Soto's *entrada*, because the lands he visited were wilderness. In 1828, about 140 years after La Salle passed through, a French biologist could locate only four nations of the fifty-two that the La Salle expedition recorded in today's Texas.[\[58\]](#)

In 1542, the year that Soto died on the banks of the Mississippi River, [Las Casas](#)' efforts persuaded Holy Roman Emperor and King of Spain Charles V to sign laws repealing native slavery, but once more, theory and practice resided an ocean apart. In 1550-1551, Las Casas engaged in a famous debate regarding the humanity of Native Americans. Las Casas argued for the essential humanity of Native Americans and all people, while his opponent, another priest, Juan Ginés de Sepúlveda, refurbished Aristotle's philosophy and argued that the Native Americans were natural slaves, simple beasts of burden. In practice, Sepúlveda's argument prevailed, while the Crown gave an ambiguous answer to their arguments a decade later.

In 1552, Las Casas decided to publish his horrifying *A Short Account of the Destruction of the Indies*, which he originally presented to the Spanish court in 1542. He published it without the Inquisition's permission, and it became his best-known work and Europe's second most popular book, behind the Bible. Las Casas died in 1566, and his greatest work, his history of the Indies, sat in the Vatican archives for more than three centuries, to finally be published in 1875. Pedro de Cieza de León's

history of pre-conquest Incan society met the same fate, not being published for three centuries. The reason for that treatment was that Las Casas' *Short Account* became a runaway bestseller, and the resultant "Black Legend" became used for propaganda purposes by Spain's imperial rivals, the English in particular. Burying the work of Las Casas, Cieza de León and others became a form of damage control for Spain and the Church, which was battling the Protestant Reformation.

Lack of readily plunderable gold and silver spared the North American natives from immediate, violent conquest. Coronado and Soto invaded North America, looking for the El Dorado, but none was discovered. Nevertheless, the diseases they brought along devastated the North American natives, destroying many tribes and civilizations before they even saw white men.

Those were the early days of European colonialism, celebrated in the United States with [Columbus Day](#). The Spaniards killed off nearly all the Greater Antilles' millions of natives in [one generation](#), so Caribbean colonialism is not a good example to chart European colonialism's development. The conquest of the Aztecs and Mesoamerica, however, is the earliest example of European colonialism in the Columbian phase.

The Valley of Mexico was the center of Mesoamerican civilization and the New World's most densely populated region, crowned by its most spectacular city, Tenochtitlán. The legalistic Spanish enacted many laws that exploited the natives, and the laws that supposedly protected them were largely ignored. The misery seen today in Mexico was partly created by a constellation of such laws and their enforcement.

A series of institutions came and went in colonial Mexico. First there was encomienda, then repartimiento, and finally there was the hacienda (the rancho was a related institution). Encomienda and repartimiento were systems that commandeered the native labor.[\[59\]](#) As epidemics and Spanish rule decimated the native population, farms and villages were abandoned, so the Spanish took the land. A spectrum of tactics existed for obtaining the native land "legally." Often natives "sold" the land, but it was rarely, if ever, a fair deal. Transactions were usually performed under duress or fraud.[\[60\]](#) Other times it was given to the petitioning Spanish directly. They ended up owning the land, and recreating the great ranches that dominated Spain. By 1600, most of the Valley of Mexico's arable land was in the hands of Spaniards.[\[61\]](#) Lower-class Spanish immigrants became lords in a New World. The hacienda system evolved from that seized land.

The hacienda system was the first one without forced labor, but it was not forced because it did not have to be. By the time the hacienda system appeared, the natives had been reduced to such abject poverty, as the white lords owned everything, that working for a hacienda could provide badly needed food and shelter. Forced labor institutions still existed, however. In the most notorious, the obraje system, which was a prison labor camp, the workers spent their entire lives locked up, producing textiles and other goods. One of the most dreaded forced labor systems was work on the aqueduct that was being built and maintained to slowly drain the Valley of Mexico's lakes, known as the Desagüe.

Gold, silver, mercury and salt were royal monopolies in Spain's New World territories. Commercial monopolies, granted by the Crown, greatly inflated the cost of European goods in the New World.

The net profit margin on goods shipped to the New World was 50%, according to one qualified observer.^[62] The moneylenders who financed New World expeditions received interest rates from 50% to 90%, partly because of the great risk of failure by shipwreck or piracy.^[63] Also, the Crown controlled or banned certain industries so they could not compete with those in Spain.

[Gold and silver](#) were by far the most lucrative Spanish exports from the New World. Also exported were hides, dyes and sugar, although they aggregated less than 10% of the value of gold and silver during the 1560's. The traffic of goods had virtually [no net beneficial effect for Europe](#), while the natives died off by the tens of millions. The substantial benefits to Europe and the world from Native Americans were the introduction of native foods such as corn and potatoes, the democratic ideals of the [Iroquois](#) and many other benefits, but virtually none of that had happened by 1600.^[64]

Corn had been the backbone of the native economy, where it was generally raised in communal plots. That changed too, and eventually haciendas raised most of the corn (and wheat cultivation began to dominate in some areas). The natives no longer had control over the food they ate. Capitalistic practices made their appearance, and hacendados speculated on prices by hoarding, undercutting native producers with bulk transactions and manipulating the markets with their control of supply.^[65] Those practices led to native hunger.

The Catholic Church was a major player in New Spain's transformation. Church-owned monasteries, haciendas, obrajos and other institutions dotted the landscape. Natives were required to give tribute to the church, and many priests became rich. For every friar who sincerely believed in his holy mission, others kept concubines, solicited women during confessionals, drank heavily, fed people to their dogs and so on. As with the monastic wineries in Europe, New Spain's versions often made pulque, although many priests tried stamping out drunkenness. The Jesuit hacienda of San Xavier was devoted almost exclusively to making pulque (they sold more than six million pounds of it in 1770), and had one of the highest incomes of any hacienda.^[66]

Another economic effect of European hegemony was the introduction of guilds. They were anti-competitive institutions, and the natives were often excluded from them. Blacksmiths and veterinarians, with their relationship to elite European horsemanship, made it clear that natives were not allowed in their professions. All apprentices were to be "Spaniards, pure and without stain, as demonstrated through their baptismal records, for ours is a noble profession."^[67]

Laws enacted in colonial Mexico, called New Spain in those days, were explicitly racist and designed to oppress the natives. Three races - European, African and Indian – met in the New World. The Spanish developed sixteen categories of interracial distinction in eighteenth-century New Spain.^[68] Of the 200,000 "Spaniards" in New Spain by 1570, it is estimated that two-thirds were of Jewish or Moorish descent, to cloud the racial picture further.^[69] Conquering Spaniards marauded from town to town, seizing the best looking women for their concubines and creating the huge mestizo class of Mexico.

Erstwhile Cortés allies Tlaxcala and Huexotzinco found themselves much worse off with the Spanish overlords than the hated Mexica, and they were the natives who got the "good deal" from the

Spanish. They would not have believed it, but the days when the Mexica ruled were the “good old days.” Helping Cortés conquer Tenochtitlán slit their own throats in the end.

By 1560, forty years after they performed their "heroic" service, the tribute extracted from the Huexotzincos by the Spanish was *seven times* what the Mexica had obtained from them. The deal Cortés made with the Tlaxcalans was that they would never have to pay tribute at all.[\[70\]](#) The Tlaxcalans eventually fared much the same.

Europeans honored their agreements when they were convenient or served their interests, but when an agreement obstructed European desires, it was not worth the paper it was printed on. Europeans would always find a legal rationale, no matter how strained, to justify their behavior. They backed up their legalistic arguments with deadly violence.

Occasionally the most abusive Spaniards would find themselves being imprisoned for their crimes against the natives, but that treatment was reserved for either the most evil of the lot or those with political enemies.[\[71\]](#) The crown-sponsored *residencias* and *audiencias* were tribunals that investigated the conduct of New World officials such as Cortés. The tribunals recorded many allegations and evidence of misdeeds, information that historians use today. While such investigations may seem to reflect the Spaniards' “just” nature, and indeed “justice” seemed to be served at times, the *residencias* were mainly used to trim the power of those posing the greatest threats to Crown authority.[\[72\]](#)

Fraud, corruption and exploitation were the facts of life in colonial Mexico, and the natives always bore the brunt of it.[\[73\]](#) The legal system was rigged to favor the Spaniards. One of the few honest lawyers in New Spain suggested a method to reduce the fraud and corruption: keep Spanish lawyers out of the natives' business.[\[74\]](#)

European cultural practices could be found in many facets of the colonial experience. Although Montezuma had a hunting island, the aristocratic "hunts" of Europe made their appearance, using thousands of natives to flush the animals out to be slaughtered at leisure by Spaniards trying to act like European lords.[\[75\]](#)

Before the middle of the seventeenth century, the native population in Mexico bottomed out at probably less than ten percent of the pre-conquest population.[\[76\]](#) After that, it began a slow recovery. After studying what the Spanish did to the Caribbean and periphery, what they did to the Aztecs and Mesoamerica, what they did to the Incas and South America, their “explorations” into North America, what the Portuguese did to Brazil, and after looking at the death rates in the mines, plantations and periphery, I estimate that between fifteen and twenty million natives died as a direct result of the violence and greed of the Spanish and Portuguese during the 1500s. Some can argue for as few as ten million (while others argue that there were not ten million natives in the whole hemisphere), and others can argue for as many as thirty million. European diseases killed off another fifty million natives or so in the 1500s, and the Spanish and Portuguese labor practices probably contributed substantially to those fifty million deaths. It is within the range of modern estimates to say that the New World's human population declined by 90% during the first century of

the European invasion, or by about 70 million people. It is an immense tally, with nothing in world history to compare it to.

Spaniards remade the New World's ecological systems. Imported cattle, sheep, pigs, horses and jackasses dominated the landscape. Chickens became a barnyard staple. Sugar, bananas, and citrus fruits were introduced and flourished.[\[77\]](#) In many places, the landscape was altered beyond recognition.[\[78\]](#) Spain was a land of shepherds and cattle ranchers, and many farmers in Spain were put out of business as the rich, herd-owning, land-owning aristocracy obtained the legal rights for their livestock to overrun the land.[\[79\]](#) Spain's great herds helped make it such an arid land.[\[80\]](#) South of the great bison herds of North America, there were no large roaming herds of grazing animals. Huge tracts of farmland were destroyed throughout the New World by those imported European grazers, with areas previously cultivated or unused quickly destroyed, leaving a desert-like environment behind. In Spain, the sheep dominated. In New Spain, the cattle dominated. Deforestation and mass grazing altered the landscape immensely.[\[81\]](#) In a replication of what happened to the Mediterranean and eastern Atlantic islands, the Spaniards noted that when they cut down the forests for their lifestyles, the streams dried up and eventually there was less rainfall.[\[82\]](#) The desert-like environment of Mexico is not completely natural, but is somewhat the result of Spanish depredations.[\[83\]](#) Not only was 90% of the human population exterminated, the first century of the Spanish invasion was also the greatest ecological catastrophe for native plants and animals in history, rivaled, and in ways exceeded, by what the English and Americans would later do to North America.

Native Mesoamericans were not always great environmentalists. The collapse of the Mayan "classic" phase before 1000 AD, the fall of Teotihuacan and other events in pre-Columbian Mesoamerica were probably related to an overtaxed environment. The Europeans, however, initiated what is called "The Rape of the World."[\[84\]](#) Their increasing technological prowess was largely directed at developing more effective methods of exploitation and killing each other.

There was a major effect of the Spanish gold rush on Europe: the money revolution.[\[85\]](#) Before Europe's money revolution, land was the primary basis of wealth. Money became the primary symbol of wealth during the Spanish gold rush, with Europe's money supply tripling during the first fifty years of conquest. By 1800, the money supply in places such as France and Italy increased by about twenty-fold. Because gold and silver were the basis of money in the Old World, it heralded Europe's ascent relative to its rivals, such as the Ottoman Empire. The flooding of Europe by New World gold and silver, although it made no European society wealthier, crippled the Ottoman Empire's monetary system. Ottoman coins fell to half their value in the first century of the New World's plunder, and the Ottoman Empire never regained its former prominence.

With the Spanish gold rush, [greed](#) became a mainstay of the European mind. While gold lust inflamed the Spanish mind, England and France were plundering Spanish ships coming back to the New World, laden with gold and silver. The pirate [Francis Drake](#) became England's richest private citizen and was knighted for his surprise pillage of Spain's Pacific ports.

Europe's money revolution resulted from tens of millions of Native American deaths, and brought no

real wealth to Europe. What the Spanish gold rush *did*, however, was change how Europeans viewed money and wealth. In his classic study, Tzvetan Todorov showed how contemporary Spanish chroniclers chalked up the motivation of Spaniards in the New World to sheer greed. It was a new phenomenon. Todorov wrote:

“Certainly the desire for riches is nothing new, the passion for gold has nothing specifically modern about it. What is new is the subordination of all values to this one. The conquistador has not ceased to aspire to aristocratic values, to titles of nobility, to honors, and to esteem; but it has become quite clear to him that everything can be obtained by money, that money is not only the universal equivalent of all material values, but also the possibility of acquiring all [spiritual values](#). It is certainly advantageous, in Montezuma’s Mexico as in preconquest Spain, to be rich; but one cannot purchase status, or in any case not directly. This homogenization of values by money is a new phenomenon and it heralds the modern mentality, egalitarian and economic.”[\[86\]](#)

Adam Smith noted in his *Wealth of Nations* that gold mining was [perhaps the most counterproductive economic activity that any nation could engage in](#). The only “wealth” that gold and silver had was what people bestowed on it. It was only valuable because it was scarce and difficult to produce, and so became a form of currency. Obtaining more of it would not grow one more crop, manufacture one more tool, or make society any wealthier, unless luxury goods such as gold plating and silverware counted. In fact, such activities made society *less* wealthy, because so much activity was devoted to such a worthless pursuit. Expendable natives were the only way that Spain’s 16th century gold rush could take place. Gold rushes are merely counterfeiting operations, in essence stealing from one’s neighbor.

The grim joke was on Spain in the end. In 1557, a mere generation after the huge Incan haul began hitting Spain’s shores, [the Spanish Crown went bankrupt](#). Although some Spanish scholars cautioned the Crown that simply importing shiploads of gold and silver would not improve Spain’s economy, if nothing were done to develop the real economy, their advice was ignored. By about 1580, Castile no longer raised enough food to feed its people, and by the 1590s, its textile industry was in steep decline. Price levels rose in Spain by 500% by 1600, the Spanish Armada was destroyed in battle with England in 1588, bubonic plague swept through Spain beginning in 1596, killing off nearly 10% of its population, and Spain was arguably worse off in 1600 than in 1500, for one of history’s greatest ironies. The 1500s had seen Spain rise to the height of European power, to decline into a backwater, imperial has-been, with its empire eventually seized by its rivals, or its imperial domains revolting and becoming independent. Gold, weapons and rapacity generate no real wealth, and Spain’s experience is instructive.

Among the most famous and best works on the early Spanish experience in the New World is Carl Sauer’s *The Early Spanish Main*, and the book’s cover sums up the character of those early days, stating that the book was,

“not so much a record of European villainy as of human stupidity. Columbus’ lack of understanding not merely of where he was but of the possible consequences of his being there established a pattern of conquest and settlement that was repeated all over Spanish America.”

The book’s foreword finishes with a quote from Sauer:

“the ‘frontier’ attitude has the recklessness of an optimism that has become habitual, but is residual from the brave days when north-European freebooters overran the world and put it under tribute. We have not yet learned the difference between yield and loot.”[\[87\]](#)

Long ago, Sauer saw the nature of the West’s “progress”:

“We have accustomed ourselves to think of ever expanding productive capacity, of ever fresh spaces of the world to be filled with people, of ever new discoveries of kinds and sources of raw materials, of continuous technical progress operating indefinitely to solve problems of supply. We have lived so long in what we have regarded as an expanding world, that we reject in our contemporary theories of economics and of population the realities that contradict such views. Yet our modern expansion has been effected in large measure at the cost of an actual and permanent impoverishment of the world.”[\[88\]](#)

As David Stannard, Ward Churchill and others have competently made the case, although Spain’s imperial rivals used the Black Legend for propaganda purposes, it did not make the so-called “legend” less real, and Spain’s European rivals were no better in their attitude toward the natives they encountered, especially the English.[\[89\]](#) About the only reason the Spanish depredations racked up the greatest death toll was that they had a “virgin” hemisphere to rape, having it nearly to themselves, for about a century.[\[90\]](#)

Study of the early Spanish experience in the New World identifies several dynamics that have been central to the West’s experience ever since: greed, violence, sexism, nationalism and proselytizing. Not that any of them were necessarily new phenomena, but they were all indulged on a level that had largely not been seen before. On a vast scale, women were raped, men were worked to death and children were used as [dog food](#). Spanish nationalism was a new phenomenon, and Christian

proselytizing hit the mother lode, just as the Church began losing its power. Christian ideology eventually gave way to secular religions, such as [materialism](#), [nationalism](#) and [capitalism](#).

The economic ideology known as mercantilism took root during those early colonial days. The basic idea was importing cheap raw materials from the subjected colonial peoples, and exporting one's way to prosperity. The Spanish were the first to practice it, in relatively primitive fashion, as [they exploited Mesoamerica](#). Spain's plunder of Mexico is the predecessor to the more refined exploitation that the British would later inflict on [India](#). Spain dominated the first century of Columbian-era colonialism, but they were not alone on stage.

The Portuguese experience was different. Each European power had distinctly different methods by which they pursued their colonial enterprises. While Spain had little trust in its freebooters, as they always tried carving out New World empires for themselves, and endless tribunals were held to try trimming their ambition, the Portuguese Crown did not continually hound its imperial agents, but maybe it should have. It is estimated that in those early days, only about a quarter of the revenues that should have made it into Portugal's royal coffers ever got there, the rest being skimmed off along the way by the corruption in Portugal's nascent imperial system. The lavish court and inefficiency of Portugal's imperial system left the Crown continually strapped for cash.

Lisbon became the heart of Europe's early imperial efforts. Portugal's African slaves became domestic servants in Lisbon. By 1550, Lisbon had about 100,000 people in it, nearly 10,000 of them Africans. The 1494 Treaty of Tordesillas divided the global romping grounds between Spain and Portugal. The early Portuguese success was with its trade route to Asia. The Portuguese originally viewed Africa as an obstacle to getting at Asia, although the slaves and gold from Africa came in handy. After Lisbon was satisfied with its number of African slaves, Portugal began using them on the sugar plantations on its Atlantic islands. The first instance of Portuguese slaving in the New World was when the Corte Real brothers seized more than a hundred gentle Beothuk Indians from the shores of Newfoundland in 1501, and delivered their cargo to Portugal.[\[91\]](#) Although the king was pleased, those were the only boatloads of slaves that Portugal obtained from that region.

The discovery, conquest, sack and destruction of the Aztec Empire brought great excitement to Europe. The Spanish gold rush began in earnest with that event. Until then, Europeans had largely encountered "primitive" natives in the New World, but the Aztecs were another matter. Their capital city was arguably the world's most spectacular, its markets more breathtaking than anything than anything the Spanish invaders had ever seen. After the Aztec discovery and sack, endless boatloads of European freebooters set sail for the New World, seeking fame, riches, and there was a virtually unlimited supply of native women to rape. The Treaty of Tordesillas unwittingly gave Portugal a chunk of South America as their domain of conquest, but Portugal was far too busy mining the "Golden Goa" route for the spice trade to devote any resources to the New World. French ships began landing in Brazil in 1504, and they had no respect for Portugal's theoretical claims to it. French pirates harried the returning Spanish ships as early as 1504, seized a huge Aztec plunder shipment in 1523, and began raiding Spain's Caribbean ports in the 1530s. Silver was relatively expensive in those days, and had been getting more expensive for centuries, as gold was the primary preoccupation of mercenaries and miners. In China there was a particular desire for silver, and it was better to pay them in silver for their goods than gold. Portugal began seeking silver.

In 1530, Portugal's King John III sought to establish a significant presence in Brazil, and sent an expedition to scout it. By that time, South American coastal natives were well acquainted with European intentions and fought off European settlement attempts. The 1530 expedition was successful, and captured some French ships that traded in brazilwood. In 1532, the Spaniards discovered, conquered and sacked the Incan Empire, including its capital city of [Cuzco](#), in what may have been history's most lucrative sack of a capital city. In 1534, Portugal began granting "captaincies" in Brazil to ambitious minor nobles. The captaincies were authorizations to invade and conquer Brazil. The discovery and sack of the Incan Empire was as good as it would get for Europe's pillagers, but it did not keep them from dreaming of finding more gold-plated empires in the New World's vastness. That insatiable lust drove [Coronado](#) into Pueblo land and [Soto](#) into southeast North America. The Portuguese captains eagerly invaded the Amazon basin, but to their great disappointment found no cities gilt in gold and silver. They also did not find vast settlements of sedentary natives, as the Spanish had done, although, as with the rest of the New World, increasing research keeps revising the estimate upward of pre-Columbian Amazonia's population. In 1992, the most prominent scholarly estimate put it at nearly six million.[\[92\]](#)

The Portuguese presence, as with all European invaders, meant native genocide, but the Portuguese colonial experience was gentler than Spain's. Probably mainly due to Portugal's past, with its many races and ethnic groups living together, due to its many invasions and forced migrations over the millennia, the Portuguese colonial experience was the least racist in character of the European powers. Consequently, Portugal had a more harmonious racial mixing with those it conquered and traded with, which is reflected in Brazil's *relative* multi-ethnic harmony today.

Untold numbers of Europeans died in the jungles, mountains and deserts of the New World, seeking El Dorados, Seven Cities of Cibolas and other mythical lands that dripped with riches. Portuguese enthusiasm for overrunning their chunk of South America quickly waned, and they tried reproducing the sugar plantation culture of its Atlantic island colonies, and instead of dumping its criminals on the Atlantic island of São Tomé, it began dumping them in Brazil in 1535. By 1545, the plantations of Brazil sent about fifty shiploads of sugar to Europe each year. In theory and practice, the early Portuguese experience in Brazil was similar to Spain's in the Greater Antilles. Lip service was given to converting the natives to Christianity, and zealous missionaries (in Portugal's instance it was the Jesuits, beginning in 1549) did their best to convert the natives, but the outcome was that the natives were enslaved as they were "christianized" and worked to death. Native Americans always died off quickly when subject to the rigors of plantation and mine slavery. The enslavers also introduced epidemic disease that carried off incredible numbers of natives, and the evil triplet of starvation, overwork and disease quickly eradicated the native population.

Fortunately for the Portuguese, they had already initiated the world's greatest era of slavery, and bringing in African slaves to replace the extinguished natives was a natural idea, which began in Brazil around 1550. In 1559 came royal approval for Portuguese slavers to sell their wares in Brazil. The Portuguese had been officially selling African slaves to the Spanish in the New World since 1510, when Lisbon authorized the sale of 250. In 1550, there were only about 15,000 African slaves registered in the New World.[\[93\]](#) As the native population became extinct, Caribbean plantation work became an expensive proposition. African slaves were far more expensive than Native American

slaves, and French pirates began plying the Caribbean waters in the 1530s as the plunder of mainland empires and mining activity took off. Spain stopped supporting the Caribbean plantation economy, and the Caribbean became little more than a port of entry to the lucrative mainland. Piracy of Spain's shipments to Europe began in earnest, and in 1565 the fort at St. Augustine was built to protect the plunder route, which became the first permanent European settlement in North America.

Because the Spanish were preoccupied with the gold and silver business, Portugal got into the plantation business, growing sugar in Brazil. In 1570, there were only about 3000 African slaves in Brazil, and as the sugar economy took off, so did the imports. In 1600, there were about 15,000 African slaves in Brazil. By 1650, another 200,000 were brought there.

Imperial Jockeying

While the Spanish and Portuguese were having their way in the New World, Renaissance Europe was in tumult. Similar to how the [Crusades turned out](#), the invention and use of the printing press, in about 1450, did not turn out as the Church had hoped. With the advent of the printed word, the Bible was Europe's biggest bestseller, and the Church hoped to expand its religious hegemony through literacy. It backfired. By 1500, literacy was growing in England's incipient middle class, and was becoming more common in Europe. During the 1400s, student enrollment in German universities quadrupled, and it was representative of Europe as a whole. Europe was slowly becoming educated. When Columbus made his way back to Spain in 1493, Europeans began reading of new lands. While Columbus called himself the "[Christ-bearer](#)," there were about zero conversions to Christianity among the quickly disappearing Caribbean natives. When Cortés and his mercenaries conquered the Aztecs, however, the Church hit the big time in Christian recruitment. In 1524, twelve Christian missionaries came to Mesoamerica to convert the natives who survived the conquest. The mass conversion of Mesoamerica began. There were baptisms of thousands of natives at a time. Although the conversions were rather compulsory, and burning Aztec books was part of the Christianizing process, with the Inquisition following closely behind the converting missionaries, the Catholic Church never before had such immediate and massive success in recruiting the sheep to its flock. However, just as the Catholic Church was enjoying its greatest recruitment success, its European downfall was beginning.

Ever since the fall of Rome and the invasion of Germanic tribes, Europe was the scene of constantly shifting royal alliances and musical crowns. In 1513, Niccolò Machiavelli wrote his most famous work, *The Prince*, and it, perhaps more than any other work, would describe European political reality for the next five centuries. Political "realists" of the 20th century saw his work as seminal.

King Charles of Spain, the grandson of Ferdinand and Isabella, bribed his way into becoming Charles V, Holy Roman Emperor and Europe's most powerful man, in 1519. His reign marked the peak of Hapsburg power. It also began falling apart under his rule. In 1517, Martin Luther posted his *Ninety-Five Theses*, and at the Diet of Worms in 1521, Charles V outlawed him. The Protestant Reformation thus began.

Charles V and England's Henry VIII allied against France, and Charles' armies were victorious against France in 1525, and they battled in Italy. Charles V's armies continued marching and captured the Pope in 1527. Charles V's brother Ferdinand ruled in Austria, but in 1526 the Ottoman armies began invading from the Balkans, and in 1529 they laid siege to Vienna. The continual wars, with Charles V's European neighbors and the Turks, led to a fragmenting empire, and suppressing the Reformation was proving hopeless,

In 1555, Charles handed the Netherlands over to his son Phillip II, who was Spanish by birth. The next year, Charles handed over his Holy Roman Emperor crown to his brother, and in 1557 the [Spanish Crown went bankrupt](#), the first of several bankruptcies that would chart Spain's [decline](#) as an imperial power.^[94] Charles retired to a monastery in 1558, his once mighty empire feeling the strain, and he died that same year.

Las Casas' [A Short Account of the Destruction of the Indies](#), published in 1552, quickly became a runaway bestseller, especially in Protestant Northern Europe. That began the "Black Legend," and in 1559 the Church began publishing its infamous *Index Librorum Prohibitorum*, its list of banned books that lasted until the 1960s.

The Catholic Inquisition had its roots in the Church's efforts to exterminate the [Cathars](#) in the 1200s, but the Spanish Inquisition was more of a Spanish nationalistic institution than a Roman Catholic one. King Philip II had little liking for the Netherlands, and his solution to the Protestant Reformation there was to send the Spanish Inquisition. When the Spanish Inquisition was *only* persecuting Moors and Jews, few in Europe really cared, but when Phillip sent his inquisitors to the Netherlands, and the hot tongs began being used on white Christians, that was going too far, and then "The Inquisition" came into being in Protestant polemics.^[95] The Wars of Religion began in France in 1562, lasting until 1598, and a new era of inter-Christian warfare began in Europe. In 1568, the Dutch revolted against Spain's oppressive rule. The Netherlands declared its independence in 1581, becoming Europe's first republic, but the war with Spain lasted nearly continually for eighty years, until the Thirty Years' War ended.

Portugal was largely untouched by the furor that erupted in Europe. Its own Inquisition kept the populace in line and the Reformation did not touch it. However, it also overextended itself imperially. Its tenuous trade route was not the source of its overextension, ironically. Portugal's big mistake was trying to extend itself in Africa, near home. In 1557, King Sebastião came to the Portuguese throne at age three. At age fourteen, he began running his empire. He was virtually uneducated and had two passions, in the great European tradition: religion and warfare. In 1578, with Church assistance, he mounted an expedition to Africa. He had few plans, other than a glorious invasion against the infidel Moors. With an army of about 25,000 people, which included several thousand mercenaries and much of Portugal's nobility, Sebastião sallied forth. For most of the campaign he amused himself with hunting, and he felt that the Moors would flee at the sight of his army. In a ferocious battle in which 40,000 Moors fought, the Portuguese army was annihilated. Sebastião died heirless in Africa, and in 1580, Spain's King Phillip II simply annexed Portugal. A Sebastião cult quickly took root in Portugal's peasantry, which fantasized that Sebastião had not really died in Africa, and would return to lead Portugal back to greatness, the first Sebastião pretender appearing in 1584. The cult persisted while Portugal was under Spanish rule.

Even though Phillip II was careful to not extend Spain's rule over Portugal too oppressively, and left Portugal's imperial concessions alone, Portugal's lot had now been involuntarily thrown in with Spain's. Spain's enemies were now Portugal's, including the Dutch, who were suddenly cut off from Lisbon's trade. By being joined at the hip with Spain, Portugal's imperial fortunes were doomed when the Spanish Armada was destroyed in 1588. While there would be more wars fought with the European powers, the 1588 disaster marked the end of Spain's imperial dominance in Europe, further emphasizing the [bankruptcies](#) the Crown experienced during those years, and other factors of [Spain's decline](#).

By 1600, the Netherlands had cleared all Spanish troops from its lands, and began sailing to Asia to get spices. That same year, England established its East India Company, and it also sought Asian trade. The Dutch formed their East India Company in 1602. The Dutch and English soon became the two great mercantile empires. Their nations were better suited to commerce than Spain and Portugal. England and the Netherlands had rising middle classes and their merchants had not suffered the devastating blows that Spain and Portugal's had. The Spanish and Portuguese inquisitions oppressed Jews and Moors, who comprised a large share of their educated and merchant classes. Portugal, and to a greater extent Spain, had more primitive economies than England and the Netherlands. Throughout the 16th century, Spain exported raw materials such as wool, hides and the gold and silver it was plundering from the New World. England and the Netherlands had a much stronger craft and proto-industrial base, being large exporters of manufactured goods.

The Dutch revolt was part of a series of religious conflicts that culminated in the Thirty Years' War, which began in 1618. Until the French Revolutionary and Napoleonic Wars in the early 1800s, the Thirty Years' War was Europe's most devastating war. It killed about four million people and left Germany in ruins, where most of the fighting took place. While Europeans had long ago abandoned any notion of "honorable" war, winning being the only thing that mattered, and the more ruthless the better, the Thirty Years' War took it to a new level, and the concept of "total war" came into being. As Europeans honed their craft in the Reconquest, Crusades, Hundred Years' War and countless other conflicts, they refined the art of violence. While non-European peoples across the world generally regarded organized violence more as a sport or religious experience, in Europe it became a science, which was mainly why Europe conquered the world. Nobody could match European viciousness and their winning-at-all-costs style of warfare, something the Thirty Years' War and related conflicts further ingrained. France had been harrying Spain since the early 1500s, while England was busy subduing its Celtic periphery. By 1600, the Dutch and English began seizing Spain and Portugal's imperial assets.

The new Dutch republic made Spain and Portugal pay for its oppression. The Dutch made their first attack on Bahia, the capital of Portuguese Brazil, in 1604, as the English had also done in 1587. In 1609, a truce was signed between Spain and the Netherlands, which gave the Dutch trading rights with peoples outside of Europe. Most particularly, that meant the Asian trade route, which the Dutch immediately undertook to seize. Arrogant Portuguese proselytizing had caused great animosity among many of the peoples along its trade route, and the Dutch were mainly interested in commerce, so were more welcome than the Portuguese.

In 1619 the Dutch founded what became Jakarta, which became the new center of the spice trade. In 1621, the Dutch incorporated its West India Company, and in 1623 it mounted an expedition that seized Bahia. By that time, its spice route had largely been lost to the English and Dutch, so Portugal devoted its effort toward Brazil and reconquered Bahia the next year. In 1628, the Dutch seized the Spanish silver fleet off Cuba, which was the first time that Spain lost an entire fleet. In 1630, the Dutch mounted another invasion of Brazil, which would be fought for several years. During the 1630s, the Dutch, English and French began growing sugar in the Lesser Antilles, which not only competed with Brazil but also initiated the great age of New World sugar growing, which led to a huge increase in the African-Atlantic-Americas slave trade.

The end of Spanish military dominance was further reinforced by the Dutch defeat of the Spanish fleet in the English Channel in 1639, and the French destruction of the Spanish army at the Battle of Rocroi in 1643. Those defeats marked the end of Spain's military might in Europe. Portugal got its independence back in 1640, the same year that England began having its civil wars.

The Dutch established a trading post on Manhattan Island in 1624, and in 1626 they "bought" Manhattan Island from the natives for a few trinkets. In 1638, the Dutch seized the Portuguese outpost of El Mina in western Africa. The Swedes and Danes even joined the Empire Game briefly, with a short-lived New Sweden in present-day Delaware, established in 1638 but captured by the Dutch in 1654, to be further lost to the English in 1664, when the Dutch lost all their North American colonies to the English.

The English also joined the spice trade, and in 1622 an English-Persian expedition seized Ormuz from Portugal, in present day Oman, at the mouth of the Persian Gulf. Dutch imperial supremacy did not last long. With the devastating Thirty Years' War ending in 1648, it did not take England and the Netherlands long to begin a new series of wars, the first beginning in 1652, with the wars lasting until 1684. In 1664, the New Amsterdam colony in North America was lost to the English, but it had other gains. The peak of the Dutch East India Company's supremacy was around 1669. The Dutch East India Company was a direct forerunner to modern corporations, and was a combination of corporation and state, and owning shares of its stock was a lucrative proposition, for a while. The French East India Company entered the fray in 1675, with its outpost at Bombay.

During the last half of the 17th century, the Asian trade route was the scene of continual battles between the Portuguese, Dutch, French and English traders. Portugal had largely lost out by 1620, and the Dutch by the early 1700s, leaving the English and French alone on the field.[\[96\]](#) The rivals also carved up the Caribbean and periphery into imperial chunks. By 1770, the Spanish kept a grip on Cuba, better than half of Española (today's Dominican Republic), Puerto Rico, New Granada (today's Colombia) and Venezuela. The French took Haiti on Española, and got Guadeloupe and Martinique in the Lesser Antilles, as well as part of the South American mainland, in what became French Guiana. The Dutch got Dutch Guiana and Surinam on the South American mainland, and the islands of Curacao and Saba. The English got Jamaica, and in the Lesser Antilles they got the Leeward Islands, Barbados and Grenada. The Danes were able to hold onto part of the Virgin Islands.

The main Caribbean game was plantation work, although Portugal finally joined the big game with a

gold strike, finally, in Minas Gerais in Brazil. Then the Portuguese had their very own gold rush, which saw about 600,000 Portuguese citizens migrate there by 1760. The Portuguese Crown tried keeping control and getting its cut, but greedy chaos prevailed regularly, as in all gold rushes. As with all New World gold rushes to that time, slaves were needed to make it work. The 18th century was the greatest era of the trans-Atlantic slave trade. Portugal, being the inventors of the African-Atlantic-Americas slave trade, was also its biggest beneficiary. More than half of the slave voyages to the New World were Portuguese, and of the estimated 11 million Africans who eventually became New World slaves (with probably at least an equal number dying, and perhaps as many as [30 to 60 million](#), in the process), more than 4.5 million ended up in Brazil, with the English in second place with 2.6 million slaves.[\[97\]](#) A Brazilian slave could be expected to provide about seven years of usefulness before dying.

The Portuguese, Dutch and Spanish were able to hold onto pieces of their empires, but the English and French dominated the scene after 1700, with the other powers reduced to gnawing on the bones of their former glory. The imperial jockeying during the 1600s, with constantly shifting alliances and endless wars, can make a reader dizzy, and the point of this essay is charting the American Empire, so it will begin focusing on the imperial powers and North America, and especially America's parent, England.

The English and Their Rivals in North America

When Spain's rivals appeared in the New World during the 1600s, they acted similarly to Spain. Spain was after slaves and [gold](#). England's first New World adventures also sought slaves and gold. In 1576, Martin Frobisher captured a native of Baffin Island while looking for the mythical Northwest Passage. Frobisher also found what appeared to be gold, and it was assayed as such in England. The next year Frobisher returned with a mining expedition that devastated the local natives and hauled two hundred tons of ore back to England. The year after that, Frobisher returned to mine two thousand more tons. It all turned out to be fool's gold.[\[98\]](#) In 1577, the same year that Frobisher hauled his fool's gold back to England, the slave runner and pirate [Francis Drake](#) raided Spain's Pacific ports and stole their loot, mainly silver. Drake also sought the Northwest Passage and circumnavigated the earth to complete his mission on behalf of Queen Elizabeth. When Drake returned with his haul, he was knighted and became England's richest private citizen.

Humphrey Gilbert was a soldier who eventually became the English governor in Ireland. Gilbert had a practice of lining the path to his tent with severed Irish heads, a strategy designed to induce a psychological effect when Irishmen led to his tent recognized their relatives among the heads. After an unsuccessful attempt at finding the Northwest Passage in 1578, Gilbert was lost at sea near the Azores in 1583 after a failed attempt at colonizing today's Newfoundland (some colonists mutinied). Gilbert's explorations inspired his half-brother, Walter Raleigh.

In 1585, Raleigh tried establishing a colony at Roanoke. Although the natives of the North American east coast, particularly the southerly shores, had already suffered from numerous Spanish

depredations and European-introduced epidemics,[\[99\]](#) the natives welcomed and fed the Roanoke pirate-colonists, who arrived via the Caribbean, where they plundered and traded with the Spanish colonists. The English pirate-colonists originally hunted for gold, and quickly wore out their native welcome, as they destroyed a town and burned its cornfields when a silver cup turned up missing. The colony failed, with the survivors probably adopted into the native tribes.[\[100\]](#)

Raleigh followed up the Roanoke failure with a fruitless quest for El Dorado, in South America in 1595. He also sought to establish a beachhead to attack and seize Spain's South American mines. Raleigh spent thirteen years in the Tower of London for alleged treason against James I, and was finally released to seek El Dorado again. James I forbade Raleigh to harass the Spanish, who were at peace with England at that time, but Raleigh's expedition attacked a Spanish outpost, his son dying in the process, and Raleigh ended up losing his head in 1618 to satisfy the Spanish Crown.

The first permanent English settlement in the New World was at Jamestown, which began in 1607. By that time, the Europeans had established their murderous intentions in that region, and Jamestown was a military outpost from the beginning, with no women accompanying the first landing. As usual, the invaders sought gold, and their first task was building a fort in the Pamunkey lands before the natives realized what was happening. Due to European-introduced disease, those lands already had a small fraction of the human population that it possessed a century earlier. It may have been no exaggeration when an elderly native told the English invaders in 1608 that he was the only surviving member of his family, going down his family tree for three generations.[\[101\]](#)

The Jamestown relationship between natives and invaders was largely hostile from the beginning. Powhatan was the Pamunkey chief, and his warriors attacked before the fort was finished. The English strategy was intimidating the natives with their weaponry, which included a cannon. Largely for self-serving reasons, Powhatan initially fed the starving invaders, and both sides played diplomatic games. Powhatan's younger brother, Opechancanough, captured John Smith, the most capable Jamestown leader, as Smith tried forming an alliance with a tribe independent of Powhatan. Powhatan studied Smith and adopted him. Powhatan probably thought he was installing his adopted relative as the chief of his new, dependent, white-skinned tribe. The English tried reversing the political situation by crowning Powhatan the next year, and making him a subject of King James by doing so. Neither side probably fully appreciated what the other tried accomplishing with its political gestures.

The English then tried allying themselves with Powhatan's enemies, and Powhatan stopped feeding the invaders in 1608. John Smith then raided the neighboring villages, holding people for ransom, including an infamous instance when he held a loaded gun against Opechancanough, as Smith extorted food. In 1609, the English were starving, sick and began spreading out along the shores in "self-sufficient" settlements. In one expedition, Smith compelled the natives to "sell" an entire village, with its ripening cornfields, to the invaders. War broke out, and Powhatan had his warriors encircle and starve out the Jamestown fort. The Englishmen resorted to cannibalism that winter, and many fled and took up residence with the natives, in the first recorded English instances of "going native" in the New World.

Jamestown was about to be abandoned in 1610 when ships arrived with veterans of the bloody Irish

wars. “Going native” was a capital crime to the English overlords, and in 1610 Jamestown governor Thomas West, known as Lord De La Warr (the state of Delaware is named after him), demanded that Powhatan hand over those English runaways. When Powhatan refused the demand, the English launched several exterminatory raids that wiped out entire villages, and concluded one particularly savage day by executing the children of the village’s chief.

During the first generation of “settlement,” Jamestown’s population was sustained by the continual influx of thousands of “settlers” to replace those who died of disease and starvation. In 1612, some of Jamestown’s settlers ran off to live with the Indians, preferring the native way of life. Governor Thomas Dale had them hunted down and executed. Hanging, burning, shooting and being tortured to death were among the treatments dealt out to those deserters.[\[102\]](#) “Settlers” running off and going native was an epidemic problem for the invading English for generations, and extremely harsh methods were devised to discourage such “abandonment.”

The first Jamestown war ended in 1614, when Powhatan refused to pay the astronomical ransom that the English were demanding for his captured daughter, Pocahontas. He instead accepted her marriage to an English settler who was experimenting with raising tobacco for export. Pocahontas’ forced marriage was one of only three recorded Anglo-Pamunkey marriages during the 17th century. The Smith-Pocahontas love story was originally a fabrication by Smith, with today’s tale a retread of a probably true story of a native woman sparing a member of the ill-fated [Narváez entrada](#), in Florida, nearly a century earlier.[\[103\]](#)

Powhatan died in 1618, and his successor Opechancanough was under increasing pressure from the heavily armed, increasingly well provisioned invaders. The invaders regularly entered into peace treaties that they fully intended to violate, and killing women, children and the elderly was a standard English tactic.

By 1622, the land-hungry English had seized all the good land around Jamestown, and European disease and warfare further thinned the Pamunkey’s ranks. Opechancanough demonstrated his misunderstanding of the English mind by planning what he thought would convince the invaders to quit Virginia. A surprise attack killed 347 of the 1240 English settlers, including the few women and children that lived there.[\[104\]](#) Opechancanough, thinking like a native, thought that such a devastating blow would convince all the English to leave. He reckoned incorrectly. The English retreated to their forts and began mounting attacks on the neighboring villages, which evolved to attacking and securing the fields, which led to hungry Pamunkey people. As the English destroyed or raided native fields, the natives had to make new ones, which the English then hunted for. During those attacks, the English mistakenly killed thirty native allies from the Patowomec tribe, who were helping the English find those new fields. Killing “friendly” natives was something the English and Americans did throughout their conquest of North America, and many times killing friendly natives was not all that accidental, the discovery of their “mistake” accompanied by a wink.

In 1623, English duplicity took a celebrated turn when they poisoned the wine at a peace conference with the Pamunkey, killing two hundred natives. The English then engaged in their first reported scalping, of another fifty Pamunkey killed in an ambush.[\[105\]](#) After Opechancanough’s failed strategy of surprise annihilation, it was open season on the natives. In 1644, Opechancanough was

nearly a hundred years old, and he mounted one last attack on the invaders, but by that time the Pamunkey were little more than nuisances to the vastly more numerous and heavily armed English. In 1646, Opechancanough was captured, chained and put on display at Jamestown, where an English soldier, who was guarding him and thought too him prideful in his captivity, shot him to death.

With Opechancanough's death, the Pamunkey were effectively an extinguished people, with most surviving women and children sold into slavery. In 1672, 17 million pounds of tobacco were exported from Chesapeake Bay, and Virginia's human population was about 44,000 in 1675. About 3500 of them were natives, 2500 were African slaves, and 38,000 were Europeans.[\[106\]](#) With their beachhead established, the English "settlers" quickly began invading their neighbors, seizing native lands and completely eliminating entire tribes.[\[107\]](#)

While the English were securing the lands of Virginia and vicinity, religious fanatics were conquering New England. The Pilgrims who landed at Plymouth Rock were Calvinist Christians, and their dour, fearful philosophy contained a catalog of sinful behaviors that boggle today's minds, such as laughing or kissing one's child on the Sabbath. Calvinist fanaticism would lead to one of the West's last witch trials and executions, in 1692 in Salem. American mythology has held that the Calvinists came to the New World for religious freedom, but the facts do not support that notion. The Mayflower Pilgrims came from the Netherlands, where they had already escaped their persecution in England. They sought economic opportunity, not religious freedom. They were sailing to the English colony at Virginia in 1620, but bad weather and poor navigation landed them in present-day Massachusetts. They came ashore on land that had already been depopulated by European disease, and the Wampanoag tribe fed them and taught the English city dwellers how to farm and survive in the New World.

There really was an original [Thanksgiving](#), where the Pilgrims and their native benefactors feasted and played games with each other, but the settlers eventually annihilated the tribe that welcomed them. The bloody record of the English in New England is probably worse than the English record in Virginia.[\[108\]](#) In 1637, the English slaughtered an entire sleeping village of several hundred people of the Pequot tribe, selling the few survivors into slavery. One leader of the massacre, John Underhill, would later [justify the attack](#) by citing King David's genocidal Old Testament activities. The complete extermination of the village alarmed the Mohegan and Narragansett allies who accompanied the attack, Underhill writing that they complained about the English manner of fighting, because, "it is too furious, and slays too many men."[\[109\]](#)

A Narragansett sachem, Miantonomi, whose tribe helped the English wipe out the Pequot, may have seen the writing on the wall. In 1642, he allegedly spoke to the Montauk tribe on Long Island, and noted that the English arrival was ominous, and unless the native tribes learned to put aside their differences and unite against the white man's invasion, before long there would not be any more natives.[\[110\]](#) The next year, citing rumors of that speech and other activities, the Massachusetts authorities had Miantonomi executed by the Mohegan, a rival tribe and Pequot offshoot. The Mohegan subsequently made themselves useful to the Europeans as warriors and guides, and their utility kept them alive, although repeated visits of epidemics reduced their numbers. Even after absorbing the remnants of tribes they helped extinguish, there were less than 1000 of them in 1680, and only about 200 in 1790. Their "loyalty" may have kept them alive, but settlers kept gobbling up

their lands, with the tribe possessing only 2300 acres in 1790, when their lands were broken up into individual plots. The 1910 census recorded only 22 of them. As with many other tribes that were seemingly extinct, the Mohegan have made a bit of a comeback, being reorganized as a tribe in the 1970s, and claiming about 1000 members today, with the standard casino accompanying their resurgence.

The Dutch, who colonized present day New York, were no better than the English, with the Manhattan governor offering the first known scalp bounty in 1641. Because Underhill proved himself so effective at dispatching sleeping villages, in 1643 the Dutch hired him. The first thing Underhill's men did was attack a friendly and tribute-paying local tribe, the Wappingers. When attacked, the tribe fled to the Dutch governor, asking for protection, not knowing that he had hired their attackers. The governor instead ordered their annihilation, and the subsequent attack killed about eighty men of fighting age, who were then scalped and skinned. The remaining women and children were slaughtered, and severed heads were kicked around the streets of Manhattan like soccer balls during the subsequent celebration. Then Underhill and his men tried exterminating the resisting local tribes, but usually only destroyed empty villages. In 1644 however, Underhill was able to successfully reproduce his night attack strategy, on a sleeping village of about 500 people.[\[111\]](#) After Underhill's men finished butchering them, the church leaders of Manhattan declared the second Thanksgiving. The white invaders then held Thanksgiving celebrations after mass murders of natives. That was the real Thanksgiving tradition in colonial America, one that my history lessons failed to teach me, as I made my construction paper Pilgrim outfit in kindergarten.

Similar to the Jamestown residents who ran off and "went native," in the earliest days of the Puritan invasion there were those who had high appreciation for the native way of life and their human virtues, which were in far greater abundance among the natives than contemporary Europeans. Thomas Morton arrived in the Massachusetts Bay colony in 1625 and lived at his home at Merry Mount, happily living among the natives. The New England of those days was a hunter and outdoorsman's paradise, a fact not lost on Morton, who eventually wrote *New English Canaan*, where he marveled over the paradise that was New England. Morton was first arrested by Miles Standish in 1628, and was shipped back to England to stand trial for selling guns and liquor to the Indians. The charges had slim justification and the case collapsed, with Morton soon returning to his home at Merry Mount. John Endicott then tried having Morton arrested in 1629 on a frivolous charge. John Winthrop had Morton arrested the next year. A kangaroo court ensued, and Morton's house was burned down and he was shipped back to England. The Puritanical colonial authorities worked to silence Morton's joyful voice for a generation.[\[112\]](#) Morton concluded that the colonial Puritan leaders were motivated by a joy in inflicting pain, agony and bloodshed onto others. As Richard Drinnon noted, Morton saw that the Puritan leaders,

"were not coldly righteous monsters, however great their hypocrisy, but men who found their cruelty great bloody fun."[\[113\]](#)

While the symbol of Morton was his happy Maypole, the symbol of the Puritans was the whipping post. The typical English pattern of invasion and genocide was using the slightest imagined affront as justification for exterminating entire tribes, while eagerly taking their land afterward. In the northeastern United States, numerous towns have the word “field” as part of their name, such as the many Springfields that exist. The “field” came from the fact that the town was established by stealing a native town (often obtained by annihilating its inhabitants), and the “field” was where the natives raised their crops.

Notable Puritan leaders such as Cotton Mather rejoiced in the butchery and genocide. Mather openly approved of [Underhill's annihilation of that Pequot village](#), writing that those women and children were “dismissed from a world that was burdened with them.”^[114] Mather wrote of that slaughter, “It was supposed that no less than 600 Pequot souls were brought down to hell that day.”^[115] Mather called the natives who fed and hosted the Puritans “ravenous howling wolves.” The insatiably greedy Puritans and the other English settlers eventually seized more and more land that was Wampanoag, leading to what is called King Philip's War in 1675, Philip being Massasoit's son (the chief who welcomed and fed the original Puritan invaders). The war ended with the annihilation of the Wampanoag, and Philip's head being mounted on a pole at Plymouth for 24 years. Thus ended the tribe that welcomed the Puritans. As with the [Spanish in the New World](#), the English process of invasion and settlement was devastating to New England's environment, which further doomed the natives.^[116]

Underhill also remarked on the method by which the “savages” carried out warfare. Their so-called warfare was highly ritualized, with symbolic gestures, such as firing arrows at the distant enemy and then going home. Underhill said that the Pequot battles seemed more for pastime than conquering and subduing enemies. Henry Spelman, who lived among the [Pamunkey](#), said that in their wars, “They might fight seven yeares and not kill seven men.” It has been estimated that as many as 70% of North American tribes were pacifists, a notion supported by the high status of women in many tribes and the fact that in perhaps two-thirds of the native tribes, warfare was so small a part of their existence that there were no “war stories or battle legends of any kind.”^[117]

The English practiced headhunting before they began invading the New World, as exemplified by [Gilbert's tactics in Ireland](#), as a way of instilling terror in the locals as well as confirming just who and how many they killed.^[118] In the New World, the English began paying people to deliver native heads. Heads were more positive proof of death than scalps, as people could survive scalping, but scalps were easier to haul, an adult human head weighing about eight pounds. The English practice was not just for fun; big money was paid for scalps and heads. During the 1600s, the English in New England offered scalp and head bounties. In 1704, the Massachusetts authorities raised their bounty to 100 pounds per man's scalp, 40 pounds per woman's and “only” 20 pounds for a child's. In those days, a good New England farmer earned only about 25 pounds in a year.^[119]

Indian killing became big business in colonial America, with such lucrative bounties. Nobody could tell if a scalp came from a “friendly” or “hostile” native, and it was easier to kill “friendlies” than “hostiles,” so there was a great deal of “scalp fraud” among the bounty hunters, as they *preferred* killing friendlies, and the less talented particularly went after women and children. Even though

women and children's scalps paid less, there was far less risk in obtaining them, and they were more plentiful than braves. In 1750, "pacifist" Pennsylvania lowered its definition of an adult native male to ten years old, to keep the bounty hunters happy and busy. The scalp bounty business was an immensely popular undertaking in colonial America. As an example, in 1757 the Reverend Thomas Smith of today's Maine was an investor in a bounty-hunter operation. In return for providing ammunition and provisions, Smith and his fellow investors received one-third of the bounty.[\[120\]](#) Scalp and head bounties became an American institution wherever natives were to be found along the "American frontier," clear up until the 1880s, when there were virtually no natives left to be scalped.

The French had a gentler tenure in the New World, but that had more to do with France's political-economic-demographic situation than benevolent intent. While it is true that the French respected Native American culture more than any other European power did, during the 1760s, when France's commitment to New World colonization was its greatest, they had fewer than 50,000 people in the New World, while the English had nearly a million members of its "surplus population" in the New World.[\[121\]](#) Hence, France manipulated the native tribes to its ends more effectively than its European rivals did. In 1536, Jacques Cartier impacted the native political situation by kidnapping leaders deemed obstructive to his aims. Although Cartier's men got [scurvy](#) and were cured by a native medicine man, an empirical observation that Europe would fail to embrace for the next three centuries, they left behind their calling card. The natives began falling prey to European disease almost as soon as they met Cartier and his men. Cartier began wearing out the native welcome early on, and after his last failed attempt at invasion/settlement, the French left the area, and did not return for 60 years.

In 1598, 250 French settlers (200 men and 50 women) tried establishing a colony on uninhabited Sable Island off of Nova Scotia, in a rich fishing area, and had it to themselves. With no interference from either the natives or France's European rivals, the colony completely failed, with murders and desertions. In 1603, the eleven survivors were rescued and brought back to France.[\[122\]](#)

When Samuel de Champlain returned to found Quebec in 1608, he found that the entire St. Lawrence Valley was depopulated. There is speculation as to its cause, but if other European experiences carry any weight, the diseases Cartier's men began spreading almost immediately in 1535 was at least partly responsible.[\[123\]](#) The "help" that Champlain provided the Hurons led to a fairly unique event in 1609. It is about the only surviving account of what North American warfare was like before the white man showed up. Champlain went with a Huron war party to go hunt their rivals, the Mohawks. Champlain was their secret weapon. The Huron and Mohawk met on the shores of Lake Champlain. The Huron sent a delegation to the Mohawks, to confirm their willingness to fight. The Mohawk then hastily made a barricade. That night, the two war parties camped within earshot of each other, singing songs and shouting insults. The next day, the groups approached each other, as three Mohawk chiefs advanced to meet the Huron, still with no arrows being fired or other hostile behavior, Champlain came from his hiding place behind the Huron warriors and shot the chiefs with his arquebus, immediately killing two of them and mortally wounding the third. The Huron killed many surprised and overmatched Mohawk warriors that day.[\[124\]](#) The event gave more evidence of the notion that pre-European Native American warfare, even among such "savage" tribes as the Mohawk, resembled rugby matches more than European-style warfare.

The Huron and Iroquois, as with other tribes, had an unfortunate habit of torturing a captive warrior to death, a practice that horrified Champlain. The Spanish were [horrified at human sacrifice](#), and the French at torturing captives. [Cannibalism](#) however, was a myth virtually made from whole cloth by Columbus on his first voyage (a favorite European myth, to describe “savage” people) and a self-serving one that did not go away. Those were definitely dark sides to Native American cultures, but it all depended on what “atrocities” captured the European fancy.^[125] Burning people to death was a European specialty, which horrified Native Americans. Being fed to the dogs (a [Spanish specialty](#)) was considered the worst way to die for the natives of today’s Latin America, and the Spanish fed native infants to their dogs as a canine delicacy. The Native American tribes, even the highly warlike Aztecs, did not kill women, children and the elderly; something that a warrior knew had no honor in it (although an offering cache of about forty sacrificed children was discovered during the excavation of Tenochtitlán’s great temple, during the 1970s). The Europeans *preferred* killing women, children and the elderly instead of native warriors, as they were far easier to kill, and that practice would eventually render the tribe extinct, which was the desired result. The Europeans were selective in what horrified them about Native American practices, and would usually [greatly exaggerate](#) the darker aspects.

That “help” that Champlain gave the Huron tribe was short-lived. The next year they marauded across the land, with their newfound military advantage, and annihilated a Mohawk party they came upon. The Mohawk did not raid Huron lands for a generation. The Mohawk fought a war with the Mahican in order to gain access to Dutch arms at Fort Orange in 1624. French Jesuit missionaries had been proselytizing in North America since 1611, and their tenure in North America was the gentlest European effort that those early days of invasion would see. Although there was sincere, soul-saving effort made by many Jesuits, it was part of a larger pattern of exploitation that the French would inflict on the natives. No matter how seemingly benevolent the Jesuit intent, their presence exterminated the natives. Priestly zeal was exploited by French elites, similar to how [Peace Corps](#) volunteer zeal is manipulated today, or how the CIA exploited [Ralph McGehee](#)’s zeal. Wherever the Jesuits showed up, smallpox broke out, beginning as early as 1625.

The Huron did not miss the “coincidence” of priests and smallpox arriving at the same time. Huron leaders contemplated wiping out all the priests, but did not, while smallpox repeatedly swept through their ranks. Similar to the Spanish experience with the Aztecs, the natives noticed that the European intruders seemed immune from the scourge that carried off so many of their people. While Cortés attained mythic status among the natives because the 1520 Mesoamerican smallpox epidemic failed to decimate the Spanish invaders, the Huron concluded that the Jesuits must have more powerful medicine and gods, because the epidemics left them untouched. As the Huron died in droves, many decided that the Christian god might be able to save them, and the Jesuits then had great success in converting the natives.

In 1630, there were about 30,000 Huron. By 1640, waves of smallpox reduced them to about 10,000, and half of the survivors were Christian. In the culture that existed before the French showed up, the decimated Huron would have come to an accommodation with the Mohawk, who after all were their cousins, both tribes being Iroquoian. Fired up with new crusading Christian zeal, however, the Huron began attacking the far more numerous Mohawk, who had long possessed

European arms, even though a peace agreement had been negotiated in 1645. The Mohawk and Seneca responded in kind. By 1649, when the Mohawk and Seneca destroyed Huron villages and adopted the surviving women and children into their tribes, the complete demise of the Huron tribe had come to pass.[\[126\]](#) From warfare that resembled rugby matches to the complete extinction of a people in forty years; that was the typical effect of the European invasion, even at its most benevolent.

Even though the French and Dutch efforts had disastrous effects on the natives, the English were by far the most murderous and overtly exterminatory of the European powers in North America, which is partly why they were the most successful. The story of the English in North America is a continual tale of invasion and genocide, with even deliberate introduction of European disease to the natives, which may have even begun in the Massachusetts colony in 1636.[\[127\]](#) As the Spanish did, the English hunted the natives with their [dogs](#).[\[128\]](#) Hunting humans was the ultimate sport for the Spanish and English “settlers.”

Not very different from the Spanish experience, ambitious Englishmen wanted to carve out empires of their own in the New World, and in 1776, a new kind of empire was born.

Fathers of a Different Kind of Empire

The [French and English](#), virtually alone on the world imperial stage during the 1700s, had several full-fledged wars in North America, beginning as early as 1689. In all those wars and heated rivalries, the big losers were the natives, whether they were in North America, Australia, Asia or the South Pacific. The Europeans did not show up to help anybody but themselves.

In 1756 the [Seven Years' War](#) broke out, and was largely about Britain and France competing in the Empire Game. The war was played out across the globe, foreshadowing the so-called World Wars of the 20th century. On Continental Europe, Russia and Austria allied with France, and Prussia with Britain, with other minor players in the mix. The most important impact on the world's people, however, was the imperial rivalry between Britain and France beyond Europe. In North America, the British/French war was called the French and Indian War, and in India it was called the Third Carnatic War. In 1763 the British were victorious, and the next year they began their [rape of India](#), which began in Bengal. After losing India and much of North America to the British, the French then began searching for new lands to claim, and a period of competition between the French and British ensued, especially in the South Pacific.[\[129\]](#) The French were losers there too, as James Cook visited Australia in 1768 and New Zealand in 1769, setting the stage for British invasion and colonization. In 1773, Cook made the first visit to the Antarctic icepack, and in 1778 Cook “discovered” the last great unconquered land: Hawaii, which was probably the closest thing there was to an earthly paradise.

Along with the imperial rivalry was a more salutary trend. The Renaissance marked the beginning of the end of the Catholic Church's dominance. The Protestant Reformation dominated European

affairs for a century, culminating in the Thirty Years' War. The 17th century saw the rise of science and reason, with Galileo, Newton, Descartes, Bacon and others making their contributions. By the early 1700s, [science](#) and reason were on the rise, and religion was on the wane. England's Civil War, also known as the Puritan Revolution, began in 1640 and initiated conflicts that lasted twenty years. It was the beginning of the end of royal absolutism in England, challenging the Divine Right of Kings that James I believed so fervently in. James' son, Charles I, ended up being publicly tried and headed in 1649. The "rabble" was beginning to have a say in their governing, with kings and popes having less influence.

In 1688, England had its Glorious Revolution, which permanently limited the power of English royalty. In 1689, English Parliament passed its Bill of Rights and Tolerance Act, which promoted religious tolerance. Both English legal acts of 1689 directly influenced the U.S. Bill of Rights. England united with Scotland in 1707, becoming Great Britain.

The Frenchman Voltaire spent his first stint behind bars in 1717 for his satirical writings, and his work came to epitomize an era known as the Enlightenment, which was well established by 1750, France being its heart, while philosophers across Western Europe, in Britain most particularly, embraced the movement. Paradoxically, as the imperial rivals were battling across the globe for supremacy, its Enlightenment theoreticians argued for the inherent equality of all people. Today's scholars legitimately wonder just how influential the European experience in the New World was to its Enlightenment philosophers, where truly egalitarian societies were witnessed; something far removed from the European experience.[\[130\]](#)

The collision of Britain and France's rivalry, the Enlightenment and the ambition of British colonists led to the American Revolution and the birth of a new kind of empire. The profits of slavery helped fuel British efforts, both the chattel slavery in North America and the Caribbean, as well as the imperial exploitation that Britain imposed on India. The most prominent British colonists in America were often slaveholders, with Founding Fathers such as George Washington, Thomas Jefferson and Ben Franklin (and even "Give-me-liberty-or-give-me-death" Patrick Henry) being affluent slaveholders. [Washington](#) was perhaps the richest man in America when he became president.

The Europeans played divide-and-conquer from the very beginnings of their invasions, and the natives rarely [realized the European game](#) and put aside their differences to form a united front. Far too often, testosterone overrode the brains and hearts of young men, which thwarted the attempts of elders to maintain peace among the tribes.[\[131\]](#) The French, partly because they had far fewer colonists in the New World, and partly because they were less arrogant and exterminatory than the English, had friendlier relations with the natives, although the French could also be genocidists. French attempts to exterminate the Fox tribe alienated their native allies, which ultimately diminished French efforts in the region.[\[132\]](#) After a generation of warfare, the fiercely independent Fox (who called themselves the Mesquaki) were very weakened by 1730, and living in present-day Wisconsin. They tried escaping, to go live with the Seneca, in present day New York, but their flight was detected. About three quarters of the remaining Fox were women, children and the elderly. After a siege of a hastily constructed fort in a stand of trees, the Fox asked to surrender, but the French would give no quarter and the tribe was nearly exterminated, with several hundred killed. The survivors were parceled out to the French-allied tribes.[\[133\]](#)

The Delaware tribe is of Algonquin origin, and they call themselves the Lenape. When the Europeans showed up, they had been living on the North America's east coast, occupying today's New Jersey and vicinity, for thousands of years. They were considered the eldest of the region's tribes, and had great respect. Their first contact with Europeans was with the Italian explorer Verrazano, working on behalf of France in 1524.[\[134\]](#) Verrazano tried kidnapping the friendly natives. Slave raids were about the only times the coastal natives saw white people for the next eighty years of European contact, which understandably made them a bit hostile toward the invaders. When the European invasion began in earnest, warfare and disease quickly decimated the Delaware, and they were forced to relocate about twenty times before ending up in today's Oklahoma.

A number of the Delaware diaspora became visionaries and prophets, influencing other tribes. Some were pacifists, others were warlike, and Pontiac became a disciple of one of them. An Indian only known today as the Delaware Prophet encouraged the natives to give up drunkenness, intertribal war, magic and other practices, and said that if the natives regenerated their culture, they would be strong again and able to resist the European invasion. In 1760, when the French left the scene, the natives were on their own with the British, whose arrogant, paternalistic, exterminatory attitudes and behaviors led to friction. After three years of dealing with the British, Pontiac had enough. He was chief of the Ottawa tribe, and tried uniting the natives from the Great Lakes to the Gulf of Mexico to attack the British encroachments into Indian lands. In 1763 the attacks began, and they were successful. The British invasion of the Ohio River Valley was especially targeted. Virginian land speculators such as George Washington led the invasion. The French captured Washington and his men in 1754.

As Pontiac's forces were laying siege to forts in Detroit and today's Pittsburgh (Fort Pitt), Jeffrey Amherst, who commanded the British army in North America, and for whom a town in Massachusetts is named, had a series of exchanges with his commanders, and the strategy of giving the Native Americans smallpox blankets was raised and approved by Amherst, rather offhandedly. They [gave out smallpox blankets](#), and a smallpox epidemic broke the siege. The timing of letters, handing out smallpox blankets and epidemics makes it doubtful whether giving out smallpox blankets led to the epidemic *during* the siege, but during the following year, smallpox annihilated the Ohio River Valley's natives, making its conquest by the United States, a generation later, an easier task. The intention of germ warfare is clear, and surely at least contributed to the resulting epidemic that killed more than 100,000 people. Amherst was one a long line of British genocidists, and he even wrote that he wished he could use the Spanish "[dog](#)" method on the Indians, but lamented the fact that he did not have enough dogs for the job.[\[135\]](#) Ben Franklin was a staunch advocate of using dogs on the Indians.[\[136\]](#)

Not long after Amherst mentioned his longing to use dogs on Native Americans, the English nearly replicated the Spanish experience in the Caribbean on the aboriginal inhabitants of [Tasmania](#). On Tasmania, the British invaders used natives for dog food, and three centuries after the [Spanish atrocities](#) the British did the same thing, when the opportunity presented itself. The colonization of the South Pacific and Australia was supposedly the "enlightened" colonization. There were only

about 5000 original Tasmanians, because they were hunter-gatherers and the hunter-gatherer lifestyle cannot support nearly the population densities that agricultural societies can, as the Caribbean islanders were. By 1843, only 43 Tasmanians were left alive, and the last Tasmanian died in 1876, for a complete genocide that the British were responsible for during the modern age.

There was a temporary positive effect for the natives due to Pontiac's war. King George III made the Royal Proclamation of 1763 that set aside the lands between the Appalachians and Mississippi River to be reserved for native tribes. That act enraged the land-hungry colonists, and led directly to the Revolutionary War. The colonists regularly ignored the proclamation. [Daniel Boone](#) was illegally penetrating into today's Kentucky by 1769. He had big dreams to build his empire there, but he was not nearly as successful in his empire-building dreams as Washington was.[\[137\]](#)

While tribes were regularly exterminated, some scattered survivors eked out existences here and there, to give rise to tribes/nations making a "comeback" today, the Taino, Huron and Wampanoag being examples of this trend. It can be seen as a healthy trend (although the casino phenomenon is anything but auspicious), there is reason for skepticism toward some claims, but critiques of white people appropriating Native American culture are accurate.[\[138\]](#) I am nearly an eighth Native American myself (Creek tribe, and perhaps a bit of another), although native blood in the family was something that my ancestors vehemently denied. The "taint" is obvious in some of my relatives; their bloodlines are supposedly all from Northern Europe, but some could have been convincing extras in *Dances with Wolves*. Although I have some native blood, I write this essay as a white American, which I consider myself to be.

In 1769, [James Watt](#) invented the modern steam engine, which was probably the 18th century's most important event, as it made the Industrial Revolution possible. In 1776, two events marked the rise of a new kind of empire. One was American elites signing the Declaration of Independence, and the other was the publication of Adam Smith's *Wealth of Nations*. Similar to how the Catholic Church's influence began unraveling as it reached new heights of power, just as Great Britain was reaching a truly global dominance, its most successful colonies revolted. The American Revolution probably would not have succeeded without French assistance, as France did what it could to thwart its rival. Capitalism already existed when Adam Smith wrote his monumental work, although the term would not be used until the 20th century. Smith, an Enlightenment philosopher, would have been [horrified by today's corporate capitalism](#), although he is considered its father today. Smith's work provided a theoretical framework that dogma would later harden around, as it was used to justify a new breed of thief: the capitalist.

Europe's money supply tripled during the first fifty years of the Spanish invasion, and wealth became seen as money, and money could buy everything, even a [ticket to heaven](#), in the Spaniards' eyes. [Greed](#) became a European mainstay from that time forward. European ideologists transformed a deadly sin into a virtue, and greed is *assumed* in today's capitalistic ideology, with the "law" of supply and demand, and [ever-increasing profits](#) (for the idle owners) being the primary reason for a corporation's existence. Once ideological principles are [assumed](#), they largely [become invisible](#) and are rarely examined afterward.

The European concept of wealth became abstracted with the money revolution, and it became further abstracted with the rise of capitalism. Shares of corporate stock are the ultimate symbols of wealth in today's world, defining the fortunes of the world's richest people, from Bill Gates and the Walton (Wal-Mart) family on downward. Not long ago, Bill Gates possessed more "wealth" than the 100 million poorest Americans combined, to reach surreal levels of wealth concentration. The rise of the corporation was evident when Britain began plundering India, and shares of the English East India Company became coveted as the money rolled in from the [rape of Bengal](#), and the East India Company became the acting government of India.

The United States' government is hailed as the world's oldest, and the best example of the virtues of democracy. The facts are something different. More than 400 years ago, and perhaps as many as 800 years ago, the Iroquois Confederation came into being, founded on its "[Great Law of Peace](#)." It still exists. American elites created the Constitution by borrowing heavily from the Iroquois Confederation's system. The Iroquois had a system that is still more democratic than any political system the West has ever devised. Women owned the village land, cast their children's vote in proxy, and elected the chiefs. The women could replace the chiefs if they did not act as the women liked. It was a balance of power between the sexes that no Western nation has ever approached. White men can still be found who deride the influence of the Iroquois system on the Constitution as "apocryphal," partly because the Iroquois have never put their law to paper. The Iroquois believe that ideas lose too much of their meaning when committed to a limiting form such as writing (and can more easily fall prey to dogmatism, not to mention legalism), a common understanding among the "primitive" natives.

The [Iroquois](#) government was highly decentralized and democratic, with decisions being made by consensus, with little power vested in the hands of any one person. When the United States used the Iroquois system as a model, those monarchical Europeans invented the executive branch (George Washington was almost named king, and to his credit did not like the idea), which has been the primary method by which the U.S. government has been undermined, with almost wholly unaccountable executive branch agencies such as the Internal Revenue Service, FBI, [CIA](#), Department of Justice, Department of Defense and the like, agencies that rely in large measure on secrecy, deception and violence. The balance of power between the branches of the U.S. government is more theoretical than actual, with the same rich interests largely owning all of them, but the presidency is the easiest to manipulate, as there is only one person in that branch, although his retinue is immense.

When the English colonists declared their independence in 1776, industrialization was in its early stages, and land was still seen as the greatest source of wealth. George Washington became America's richest man by "surveying" and stealing Native American land.[\[139\]](#) Stealing their land stole their lives.

American mythologists conjured stories from the thin air about Washington (as they did about [Columbus](#)), such as the story of him chopping down a cherry tree and admitting it to his father because he "[could not tell a lie](#)." Contrary to the fairy tales, Washington was one of U.S. history's most successful criminals, aptly described as the "father of our country." In 1782, as the dust was still settling on America's successful elite revolt (although the poor were drafted to fight in it),

Washington presented a plan to the Continental Congress to defraud the Native Americans. It was a blueprint for theft and genocide. Washington built his fortune partly by stealing native land, so his plan came to him quite naturally, although his initial, more openly militaristic, plan of theft was modified by General Philip Schuyler's "low intensity" method of swindling the natives.[\[140\]](#)

[Washington](#)'s plan was to compel Native Americans to sell their land by treaty. The U.S. agents would promise that their new nation would honor its treaties, but the promises would only be kept until the "settlers" showed up. Then the treaty was not worth the paper it was printed on, and the tribes would be coerced to "sell" their treaty-provided land and be forced ever westward. Washington advocated a divide-and-conquer strategy of negotiating with each tribe separately, and trying to incite animosity between them by playing one against the other. The new "settlers" would then exterminate the game and chop the trees down, thereby making the land even less desirable to the natives. Washington specifically recommended that Indian lands be promised to Revolutionary War veterans, and having those veterans "settle" in Indian lands would form a vanguard of invasion, and those veterans could be used to create a ready-made militia when the inevitable violence broke out, as the natives were forced off their land. That plan was consistent with Washington's view of the natives. Washington doubted that the natives were quite human. He wrote that buying out the natives was preferable to removing them by force, and that their eventual removal would be,

"like driving the Wild Beasts of the Forest...when the gradual extension of our Settlements will as certainly cause the Savage as the Wolf to retire; both being beasts of prey tho' they differ in shape."[\[141\]](#)

The new nation was weak, and Washington's plan was, in his words, "the cheapest and least distressing way" of eliminating the Indians. Allan Eckert observed that Washington's conspiracy was "immoral, unethical and actually criminal," but it "was so logical and well laid out that it was immediately accepted practically without opposition and at once put into action." Eckert concluded, "Without even realizing it occurred, the fate of all Indians in the country was sealed. They had lost virtually everything."[\[142\]](#) I was never told of Washington's clever plan, during four years of American history studies, including college.

History has shown how well Washington's plan worked. Of more than 370 treaties forced onto the native tribes by the United States during the succeeding century, historians cannot find even one that the United States honored. When natives were coerced into the "voluntary" ceding of lands, the U.S. government paid them between one and two *cents* per acre, and then turned around and sold it to land companies and "settlers" for between one and two *dollars* per acre.[\[143\]](#) Forced sales at 1% of the retail price probably is, in proportional terms and arguably even in absolute terms, history's greatest swindle. When Nazi Germany compelled Jews to sell off their properties in the 1930s for bottom dollar in their [Aryanization](#) program, the "buyers" received around half of the asking price.[\[144\]](#) My ancestors profited handsomely from the "cessions" of Native American land.[\[145\]](#) The

issue of dishonest treaty implementation still [exists today](#) in most of the United States' [dealings with foreign countries](#). Washington was the architect of America's Final Solution to the Indian Problem, and America has a national holiday in his name.

As [Zinn observed about Columbus](#), that little tidbit about Washington's plan, which cannot be found in the standard biographies, while American children are told outright [fairy tales](#) about him, is far from innocent. It is not merely good-natured story telling, to deceive American children into ranking Washington up there with Santa Claus. Washington's land grabs, both imperial and private, were the very *essence* of his life and career, and to sweep his greatest crime/achievement under the rug, while extolling his honesty with fabricated tales, is a form of reality-inversion.

The natives, to their credit, saw the likely outcome of a successful revolt by those elite colonists, and few supported the revolutionaries, and they generally backed Britain or hoped they would win. At that time, Britain was trying to honor its [Royal Proclamation of 1763](#). That angered the land-hungry colonists, especially the land speculators, Franklin and Washington among them, who set their sights on the Ohio River Valley.

About as many colonists were loyal to Britain as revolted. About 500,000 American colonists of the day would be considered "loyalists," about 20% of the colonist population.[\[146\]](#) The revolutionaries forced as many as 100,000 British loyalists to flee the colonies. Both "rebels" and "loyalists" were often more on the order of bloodthirsty, criminal rabble than bona fide soldiers.[\[147\]](#) Washington as general did not have a high regard for his Yankee soldiers, noting after a review of his troops in 1775, "an unaccountable kind of stupidity in the lower class of these people."[\[148\]](#) Washington disdained the militias, while they were probably a deciding factor in the war. As with all wars, the poor did the bulk of the fighting for the colonies during the American Revolution, and the war may have widened the gap between rich and poor in America.[\[149\]](#)

By the time Washington became the first U.S. president in 1789, the American invasion of westward lands was well underway. New York, the Ohio River Valley and Kentucky were the early prizes. After nearly two centuries of ultimately fruitless bloodshed, the Iroquois vacated their lands and went to reservation land in Canada, with hardly a shot being fired. Ironically, the Seneca, an Iroquois tribe, who had treaty rights to about half of present-day New York State in 1784, were devastated at Washington's instruction during the Revolutionary War, and Washington was known as "Town Destroyer" among the Seneca.[\[150\]](#) Seneca leader Red Jacket told Washington in 1792 that the mere mention of his name brought trembling fear to Seneca women and children.[\[151\]](#)

Washington was the first in a long line of American empire builders who made the United States into the global empire it is today. John Jay summed up the attitude of the Founding Fathers when he said that those who owned the country should run it. The hallowed Constitution made it clear just who were true citizens and who were not. Full-fledged citizens were white, land-owning men. Women, slaves, natives and white men who did not "own" stolen native land were specifically excluded. In Virginia, in those early days of the republic, about 1% of the population could vote; a proportion that approximates the Communist Party in China today. Just who were the real "patriots" during the American Revolution: the rebels, or those loyal to King George?[\[152\]](#)

The United States has been a *plutocracy* from its earliest days, and having its richest citizen as its first president was no coincidence. Interestingly, the slave-owning elites were the very people who often yelled for “liberty” the loudest.[\[153\]](#) Alexander Hamilton (who was one of the few Founding Fathers who actually freed his slaves), who wanted Washington to become America’s first king, unabashedly sought to give the rich a “permanent share in our government.”[\[154\]](#) The new American government immediately imposed heavy taxation onto America’s poor, generally without fair representation, the exact thing the Founding Fathers said they were fighting the British over. The oppression led to revolts such as Shays’ Rebellion in 1786. The Whiskey Rebellion in 1794 was waged over Hamilton’s whiskey excise tax, which fell heavily on Pennsylvanian farmers.

Hamilton wanted to make George Washington America’s first king, but Thomas Jefferson believed more strongly in democratic ideals. Hamilton and Jefferson were both in Washington’s cabinet, and their differences in philosophy led to the non-Constitutional phenomenon of political parties, the first two being the Federalist and Democrat Republican.

John Adams and Thomas Jefferson were members of a committee of five people that drafted the Declaration of Independence, as was Ben Franklin. The sacred Declaration of Independence is an interesting document. In its original draft, Jefferson charged King George III with waging a “cruel war against human nature” for Britain’s participation in the trans-Atlantic slave trade. Although Jefferson was casting blame on King George, the southern slave-owning “patriots” would not support anything that cast a harsh light on their hallowed institution, so those words were struck from it. What *all* the Founding Fathers heartily agreed upon, however, was the following passage,

“He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes and conditions.”

Interestingly, as the [English killed all men, women and children](#) from the earliest days of their invasion, the mass slaughters even [cheered on](#) by their religious leaders, they remarked that when the natives captured white women, [they never raped them](#), as had been standard operating practice for Europeans for millennia. So, while the Indians are uncontroversially merciless savages in the Declaration of Independence, the institution of slavery passed in silence and the reader is left with the high-minded rhetoric that stated, “all men are created equal,” and among their inalienable rights were the right of “Life, Liberty and the pursuit of Happiness.” The original statement by John Locke was the “pursuit of property,” but was changed to “happiness” by Jefferson to try appealing to the property-less, who comprised the majority of those living in the colonies. The notions of liberty and property were firmly conjoined in those days of the ascending British Empire.[\[155\]](#) What to make of such a document? Today’s defenders of the Founding Fathers make generous allowances for such a remarkable bifurcation of their minds. Perhaps it is an example of what George Orwell would call

“[doublethink](#)” in his 1984. Jefferson would later write that the choices left to the natives were “[extermination](#)” or expulsion from their lands.

Along with Declaration of Independence, Jefferson and Adams drafted the Articles of War for the new nation, and they simply retreaded the British laws when making it a crime for Americans to use “traitorous or disrespectful words” toward Congress or state legislatures.[\[156\]](#) Adams made that proposed wartime crime a peacetime crime, soon after he came to office. Two laws were passed in 1798, which reflected Adams’ elitist views. The laws were the Alien Act and the Sedition Act. Adams and friends did not want revolutionaries from France, Ireland or, God forbid, [Haiti](#), stirring up trouble, so the Alien Act authorized the summary deportations of “revolutionaries.” Adams did not use the Alien Act, but the Sedition Act was used effectively.

The Sedition Act made it a crime to criticize American officials. Even before the Sedition Act was passed, Ben Franklin’s grandson was jailed for criticizing Adams’ administration.[\[157\]](#) The Sedition Act helped lead to Adams’ political downfall, and the law expired in 1801, but various Sedition Acts were passed during the next two centuries. The Espionage Act, passed in 1917 to specifically curtail freedom of speech, with even presidential candidate Eugene Debs, a staunch pacifist, being jailed by its authority, is in force even today.

Other abridgments of freedom of speech exist today. Pondering the gauntlet that [Ralph McGehee](#) had to run to publish his memoirs, or all those [fired American journalists](#), can be a sobering experience for those who think that there is true freedom of speech in the United States.

Jefferson and John Adams both served as emissaries to France, as did Franklin. Adams and Jefferson were destined to represent two distinct philosophies of American politics. Jefferson nominally believed in democratic rule, and was sympathetic to the French Revolution. Adams saw what the French mobs did with their guillotines, wanted no part of it, and aligned himself with the royalist Hamilton. Jefferson and Adams became heated rivals during their political careers, but rekindled their friendship in their retirement, both dying on the same day.

Adams was a Puritan from Massachusetts, believed strongly in religion and admired English royalty. Jefferson, although a slave-owner, embodied the Enlightenment in America, and as with Washington and Franklin, Jefferson was a deist, not a Christian. Jefferson even created the *Jefferson Bible*, where he edited out all the “miracles” of Jesus and other parts that a rationalist/materialist had a difficult time swallowing. Jefferson rightfully thought highly of Jesus’ *ethics*, but wanted no part of religion’s baggage. There was no resurrection in the *Jefferson Bible*, which ended with Jesus’ entombment.

In the 1790s, the new nation was quite weak. Giving grants of Indian land to soldiers was partly done because the government could not afford to pay them, so the government gave away what was not theirs to give. Washington waged war against the natives as soon as he became president. His strategy of fraudulent diplomacy and low-intensity conflict was not always sufficient. In 1791 the American army, a fighting force more than two thousand strong, led by Major General Arthur St. Clair, invaded the Ohio River Valley and was trounced by a smaller contingent of native warriors in

present day Ohio, not far from Dayton. That defeat saw the greatest proportional casualties that the American army ever suffered. Washington, sobered by the disaster, was able to commit more than a million dollars, a large sum in those days, to making the American military more formidable.[\[158\]](#) Within a few years, the American conquest of the upper Ohio River Valley was complete, with the Battle of Fallen Timbers won in 1794, and the Greenville Treaty signed in 1795, which the U.S. violated in short order, with future president William Henry Harrison leading the swindle of the natives.[\[159\]](#) Harrison's efforts helped lead to [Tecumseh](#)'s campaign to unite the native tribes to resist further U.S. invasion. U.S. expansionism, not only against the native tribes, but also against its European rivals, helped lead to the War of 1812, although that aspect of the war's dynamic is generally minimized or missing from the mainstream histories.[\[160\]](#)

Washington, as was the case with most American plantation owners of the day, engaged in the triple evil of raising tobacco on stolen land with slave labor. It is said that Washington was "troubled" by the institution of slavery. Maybe so, but not troubled enough to actually *free* any of his slaves. He should be given *some* credit, however; his will called for freeing his slaves after his wife died, although he [illegally kept slaves](#) at his Philadelphia residence when president, and when one escaped (two escaped Philadelphia when he was president), Washington attempted recovery by having her kidnapped. He signed the *Fugitive Slave Act of 1793*, which made it a crime to assist a freed slave, and thereby created a slave-catching industry.

Washington was a typical Founding Father in significant ways. Thomas Jefferson shared many of Washington's sentiments. Perhaps more than any other Founding Father, Jefferson could pen the most impressive rhetoric, as with the Declaration of Independence. All too often however, his *actions* were a very different matter. While writing about unalienable rights, Jefferson owned quite a stable of slaves. Similar to Washington, while Jefferson was supposedly a father of freedom, he never freed any of his slaves while he was alive. His hagiographers can always be counted on to stress how well Jefferson treated his slaves, and that he could not afford to free any (and there is a raging debate today regarding Jefferson perhaps fathering the slaves he freed upon his death). He sold his personal library, America's largest private library, which contained more than 6000 books, for \$23,950 to the Library of Congress, a vast sum in those days. For the record, Jefferson's plantation went deeply into debt, up to \$120,000. The issue of freeing the slaves was purely economic. Jefferson could not *afford* to free his slaves, at least if he wanted to continue playing the aristocrat game; such was the logic of an economic system built on turning people into property.

Jefferson exemplified the deeply ingrained racism of America. In scale, intensity and duration, the United States is history's most racist nation. Jefferson, being a child of the Enlightenment, thus derived scientific rationales for his racism. In his *Notes on the State of Virginia*, Jefferson tried his hand at anthropology and wrote at length about African slaves. Jefferson thought they were equal to whites in feats of memory, but inferior in reasoning ability, and he put them well below Native Americans in ability to make art and speak.[\[161\]](#) That is not to indict Jefferson, but to demonstrate how thoroughly racist early America was, that the embodiment of the Enlightenment in America could speculate on the natural inferiority of Africans. If people such as him are hoisted into America's Pantheon, people Americans are supposed to look up to, it is only ethical to examine the saint's life. Jefferson later reasoned that the treatment of slaves might have contributed to their condition, a suspicion that his abolitionist friend [Benjamin Rush](#) was fully convinced of.

Other events further demonstrate Jefferson's humanity. Near his home was an Indian burial mound, and not a long abandoned one. Jefferson noted that about thirty years earlier, passing natives went twelve miles out of their way to visit the mound, where they solemnly stayed for "some time." The burial mound was about forty feet in diameter and twelve feet high. Jefferson made an excavation into the mound, cutting a ditch from end-to-end that he could walk through. He took bones and examined them, noting that skulls generally fell apart in his hands. Jefferson played archeologist, and estimated that about 1000 natives were interred there.[\[162\]](#) While Jefferson would declare that the "dead have no rights," the burial mounds were sacred in the Indian view, as cemeteries are respected in white culture. If Jefferson had played archeologist in a white cemetery, one not long ago visited by solemn descendants, he would have been called a grave robber.[\[163\]](#)

In 1792, Jefferson's notes record a meeting with the British ambassador, George Hammond. Hammond made the blunt observation that the Indians were the big losers in Europe's New World, and that U.S. intentions appeared to be to "exterminate the Indians and take their lands." Jefferson replied that the U.S. system was instead designed to protect the natives (too bad Hammond could not produce [Washington's plan](#) at that meeting), and that the United States had "no views of even purchasing any more lands from them for a long time." Between the meeting with Hammond and Jefferson's handing over the presidency to James Madison in 1809, the United States had acquired, partly by deception and force, nearly 110 million acres of Indian lands.[\[164\]](#)

In an 1803 letter to then Indiana governor William Henry Harrison, before the Lewis and Clark expedition was launched, Jefferson echoed Washington's strategy by admitting that,

"To promote this disposition to exchange lands, which they have to spare and we want, for necessities, which we have to spare and they want, we shall push our trading uses, and be glad to see the good and influential individuals among them run in debt, because we observe that when these debts get beyond what the individuals can pay, they become willing to lop them off by a cession of lands."

And later in his letter,

"As to their fear, we presume that our strength and their weakness is now so visible that they must see we have only to shut our hand to crush them, and that all our liberalities to them proceed from motives of pure humanity only. Should any tribe be fool-hardy enough to take up the hatchet at any time, the seizing the whole country of that tribe, and driving them across the Mississippi, as the only condition of peace, would be an example to others, and a furtherance of our final consolidation."

Jefferson concluded by telling Harrison that it would be “improper” to reveal the content of his letter to the natives.[\[165\]](#) The sitting president made his logic plain in 1807, and warned that “In war, they shall kill some of us; we shall destroy all of them.” In 1813 during his retirement, Jefferson made his intent clearer. There were two choices regarding the natives, “extermination, or drive them to new seats beyond our reach.”[\[166\]](#) Hitler drew inspiration from the way America pursued *its* Final Solution, and regarded it as a forerunner of his programs. Hitler sought to clear Eastern Europe of subhumans, for German “settlers.”[\[167\]](#)

The Big Three Founding Fathers were Washington, Jefferson and Franklin. Ben Franklin was the universal man of the English colonies, putting America on the intellectual map. He originally amassed a fortune in the printing business, and is considered the father of America’s free press. He then retired at a young age and pursued science, civics and politics.

In 1744, at a conference between Indians and the colonists, an Iroquois leader noted that the colonial system was impossible for the Indians to deal with, with thirteen different governments. If the colonies came together, as the Iroquois did, it would be far easier, administratively. Franklin took the Iroquois observation seriously, and in 1754 Franklin introduced his Albany Plan of Union, which is considered [the first step toward the creation of the U.S. Constitution.](#)[\[168\]](#) A large delegation of the Iroquois Grand Council was there to advise Franklin and the colonists on forming their confederacy. Franklin played a crucial role in the American Revolution, being the ambassador to France and parlaying his celebrity into gaining French assistance, without which the American Revolution probably would not have succeeded. While the Americans rarely had 10,000 soldiers in the field at any time, the French committed more than 30,000 soldiers to the American Revolution. At the final battle of the Revolutionary War, the siege of Yorktown, there were as many French soldiers and sailors as American soldiers. Thirty French warships, cutting off the British Army from receiving reinforcements, proved decisive. Little did the French know it, but their support of the American Revolution would help lead to their own, which began in 1789 but ended with Napoleon’s power grab.

Franklin is associated with Philadelphia, but he was from Boston and his attitude toward the Indians displayed the Puritans’ genocidal intentions more than Quaker pacifism. Even though Franklin was an emissary to the Iroquois, where he gained a deep appreciation of their government, he openly pondered the coming annihilation of the *all* Native Americans, writing, “...if it be the design of Providence to extirpate these Savages...” then he thought that rum was the preferred means.[\[169\]](#)

I discovered that although Franklin became the father of [American freedom of the press](#), once more practice and theory were at odds. While Franklin and his cohorts plotted their rebellion, religious pacifists in Pennsylvania wanted no part of an armed insurrection. The [false dichotomy](#) was directed at them. If they were not for armed insurrection, they must have been Loyalists to the Crown.

Europe’s imperial jockeying in the New World led to war after war against the natives and each other, and the pacifistic sects in Pennsylvania were hard-pressed to maintain their ideals. The religious idealism of William Penn soon degenerated into seizing native land.[\[170\]](#) Penn’s gang became

Pennsylvania's ruling class, and they eventually abandoned their pacifism, advocating an armed militia to keep the natives in line. Opposing the increasingly militant English Penn cadre were numerous German immigrants, who still held to the Quakers' pacifist ideals. Penn recruited religious sects throughout Europe, and the Church of the Brethren was one of many radical European religious groups that eventually came to Pennsylvania, to escape persecution as well as pursue economic opportunity. The Sauer family became prominent printers, especially Johann Christoph and his son Christopher II, although their story is obscure today.

The Sauers' tale dealt does not appear to be dealt with in American scholarship, even by America's radical left. The Sauers printed the first Bible in America, and it was printed in German. Franklin was a notorious anti-German bigot, and used his monopoly power in the printing business to try putting the Sauers out of business. Franklin had considerable control over the paper and ink trade, as well as publishing distribution, and his attempts to wipe out the Sauers led them to manufacture their supplies and create their own distribution network. The Sauers, just as the "patriot" presses did, wrote criticisms of the Stamp Act and other English colonial measures. When the "patriots" began advocating armed resistance, Christopher II backed off, due to his pacifism. He also was an advocate of humane and fair treatment of the Native Americans, their ongoing dispossession and genocide quite obvious. Christopher II did not align with either side during the American Revolution, but his son became a British Loyalist, as did Ben Franklin's illegitimate son William.

While some scholars today debate whether the famous kite-flying experiment ever took place, it may have been William Franklin who built and flew the famous kite in that dangerous thunderstorm, while his father hid in a nearby shelter. If the experiment took place, William was the witness. Father and son were both English loyalists before the 1770s. William became the New Jersey governor and headed the Board of American Loyalists. Father changed his stripes, while the son remained loyal to the Crown. Ben arranged for his son's harsh imprisonment during the American Revolution, and later compelled him to sign over his properties. Father and son did not part on good terms. While nearly disinheriting his son, Franklin's will stated a little vindictively,

"The part he acted against me in the late war, which is of public notoriety, will account for my leaving him no more of an estate he endeavoured to deprive me of."

Christopher Sauer II never advocated violent resistance, nor did he take sides, because *any* loyalty oath was against his religious convictions, but the "patriots" nevertheless seized and sold off his business and properties to their fellow rebels, cheaply. They imprisoned and tortured the elderly Sauer, and he died a pauper in 1784. Franklin apparently profited from the seizure of Christopher Sauer's printing property.[\[171\]](#) In the Sauers' case, Franklin's "free press" ideals did not comfortably mesh with the reality of his actions. He acted just like a capitalist, trying to wipe out the competition, and his huge fortune may not have been amassed as honestly as his hagiographers would have people believe. The original Constitutional Convention was a bona fide conspiracy, the Founding Fathers far overstepping their authority. The *Pennsylvania Herald* was bought out by the Founding

Fathers during the Constitutional Convention, because it was reporting the facts from that illegal convention. With the press thus bought out and silenced, the American people knew nothing about the most important issue of the day. That censorship also foreshadowed how the [American press is censored today](#), by capitalistic means, not direct government intervention. The Constitutional Convention was not exactly a democratic undertaking. In fact, the Founding Fathers generally dreaded democracy.^[172] Franklin headed the first abolitionist society in America, although he was a slave-owner and slave trader himself who partly built his fortune on running ads for recapturing runaway slaves. He never freed his slaves, and his stance on the issues is far less than heroic.^[173]

The only non-slave-owning, non-plantation-owning president of the first five was John Adams, who joined his Founding Father brethren in bestowing subhuman appellations upon the natives. In 1775, he called them “blood Hounds” when they fought alongside the French a decade earlier, but the next year, while calling them “Savages with their cruel, bloody dispositions,” Adams, when considering the early British military successes, thought that the revolutionaries “need not be so delicate as to refuse the assistance of Indians.”^[174] By happenstance, [Morton’s Merry Mount](#) was on the Adams’ family lands, and John sought long and hard for Morton’s *New English Canaan*, and after half a century of searching (because the Puritans’ suppression efforts were so effective), his son John Quincy finally found a copy of it in Europe. Adams concurred with his Puritan forefathers about the depraved nature of Morton and the degenerate spectacle of Morton and the natives dancing and playing together. With Morton and the natives long gone, his book was more of a curiosity than a threat, and Adams even found pleasure in Morton’s work and vision, from a safe two centuries later.

Adams allied himself with Alexander Hamilton (about the only Founding Father who freed his slaves). Adams was the vice president under Washington, but in those days, there was not a president/vice president ticket as America has today. Adams became vice president because he was in second place in receiving Electoral College votes cast for president. Adams generally sided with Washington’s policies as vice president, and when he became president, he did nothing to ameliorate the dispossession of the Native Americans, being the “blood Hounds” that they were.

The lustrous aura surrounding the Founding Fathers dims greatly when the minimized facets of their lives are considered. They were all-too mortal. As Howard Zinn has written, the American Revolution was “A Kind of Revolution.”^[175] Although there was some of the “rabble” effect of the common people, as in the English Civil War, the American Revolution was obviously a revolt of American elites, as shown by the names that signed the Declaration of Independence, the Constitution giving full citizens’ rights to white, land-owning men, and the fact that the oligarchy tried managing the “rabble” from the beginnings of the American Revolution, and quickly took over the American political system.

Although Mason Locke Weems began fabricating fairy tales about George Washington immediately after his death, with Weems eventually concocting the cherry tree story from thin air, Boston was indeed a hotbed of radicalism before the Revolution began, and there was some true heroism shown by the Founding Fathers, and the common people played a significant role. The “rabble” was given lip service, a Bill of Rights was passed, much as the English Parliament did exactly 100 years earlier, and some other measures that led to today’s America are reasons to look upon it with *some* respect.

However, a critical look at the American Revolution can be sobering. Studying how America celebrated its holidays in the early days, such as the Fourth of July, punctures a few myths. Events such as the protest of the Stamp Act, Boston Tea Party, Boston Massacre and Paul Revere's Ride look a lot different when the primary documents are considered and the patriotic veneer is stripped away. Not only was Revere captured during his ride, the vast majority of Americans had never heard of him before Henry Wadsworth Longfellow wrote a poem about him in 1863. Revere's memory was in oblivion during the early 19th century.

When appraised objectively, the 1773 Tea Party was a deliberately provocative, quasi-military, destructive act, and no American revolutionary could have been too surprised when events led to war. Why the Tea Party? The thinking was to protest British taxation. Fair enough, but the reasoning used by those "patriots" would fall flat today, when the nature of the cargo was contemplated. The tea shipment was from the English East India Company, and was bought with [India's blood](#). Today's radicals might have been impressed if the Tea Party radicals had protested in sympathy with the truly suffering colonized peoples of Asia, and not the self-serving motivation of tax avoidance. That observation is not in instance of [presentism](#), for some activists of the day held that enlightened understanding of the British tea "trade."[\[176\]](#) The American colonies, peopled by whites, were the *least* oppressed of the British colonies, and those who signed the Declaration of Independence were the colony's elites, about half of them owning slaves, and they deliberately provoked Britain into America's "War of Independence."

The Eastern Oligarchy quickly overcame Bostonian Radicalism, even before the Revolutionary War ended. Even during the Revolutionary War, "patriots" were drafted, and the rich easily got out of service. The American colonists had impressment riots during the 1760s, when the British Crown conscripted sailors, yet the American government was doing the same thing by 1779, before the war was won. In Connecticut, a law was passed that specifically exempted Yale's students and faculty from conscription, and even then, a drafted man could buy his way out of service for five pounds. [\[177\]](#) Even then, the U.S. government could not afford to pay the soldiers, which was partly why Washington proposed "giving" Native American land to Revolutionary War veterans, and piracy was a popular way to serve one's nation, getting a cut of the booty if one was lucky. The practice of government-sanctioned piracy was nearly identical to how the Spanish Crown financed its 16th century New World adventures, and was called "privateering." Official English pirates such as [Drake](#) became knighted. Official American pirates became "patriots."

Washington set the blueprint for what the United States concentrated on during the next century: stealing a continent.

To Steal a Continent – An Empire Begins

The first century of [Spanish tenure in the New World](#) was history's greatest genocide, and honor was not easily found among the mercenaries that conquered and annihilated the Native Americans. When the English showed up, they proved themselves as honorable as the Spanish, with [poisoning](#)

[the wine](#) at a peace conference being an early example of English tactics. Entering into treaties they had no intention of honoring was part of the English bag of tricks. Those behaviors led to the native saying, “White man speak with forked tongue.” Lying was not unknown among the native tribes, but somebody who lied was considered insane, one who lost touch with reality.[\[178\]](#) It was more of a sickness than a crime to many native tribes. [Washington’s strategy](#) was a more refined version of what Europeans had been doing to Native Americans for three centuries. European violence, dishonesty and greed are not pleasant subjects, but they go a long way toward explaining why I live in Seattle, and are critically important to understand what is happening in today’s world.

In American history circles, Meriwether Lewis and William Clark are heroic icons. No imperial taint besmirches their noble expedition of discovery...or does it? When he sent out the Lewis and Clark expedition to scout the ultimate reach of empire in North America, Jefferson lied so creatively to the Spanish ambassador about U.S. intentions that Eisenhower’s biographer, Stephen Ambrose, wrote that in the midst of his show, Jefferson was “into a third or fourth degree of indirection.”[\[179\]](#) Lewis, Jefferson’s emissary to the great unknown, had messages to deliver. On the Missouri River, at present day Council Bluffs, so named after the meeting between the expedition and the Oto tribe, Lewis and his men dressed in their military best, and made a show of their military precision as they marched and shot their guns. Then came the speech. In essence, it was no different than the [Requerimiento](#) that the Spanish invaders read to their victims.[\[180\]](#) Lewis began his speech by calling the natives “children,” and Jefferson the “Great Father.” Lewis’ speech to the natives, who would have had limited understanding at best, as it went through a French translator, stated in essence,

“You have never seen my kind before, but we are a mighty people, having sanction from the highest authority, and this land you have lived on for time immemorial is now ours. If you submit to our rule, it will go well for you, but if you resist, we will destroy you, and it will be your fault.”

European disease, especially smallpox, had already repeatedly decimated the Plains Indians. The trigger-happy soldiers almost ended the exploration before it began, threatening to shoot their boat’s cannon at the Sioux, and it was only the cool head of a native leader that saved the day.[\[181\]](#) Native tribes all along the way hosted and assisted the expedition. The expedition left a swath of destruction in its wake, wantonly chopping down trees and shooting anything that moved in order to provision themselves. Western North America was the Northern Hemisphere’s last place that had not been [shorn of its fur-bearing animals](#). The fur trade would eliminate the fur-bearing animals there too, very quickly, as well as [most Indian tribes](#) and the vast bison herds.

Later in the expedition, on the way back, immediately after notifying some teenage Blackfeet braves that America had just allied with the Blackfeet’s traditional enemies and would arm them, Lewis and his men killed a Blackfeet boy and wounded a young brave while they tried stealing rifles and horses. Lewis then hung a medal around the dead boy’s neck, to advertise the deed.[\[182\]](#) Although

Lewis and Clark were credited with great courage for mounting the expedition, how courageous was Clark's slave, who was forced to walk every step with him, served Clark hand and foot and then was beaten by Clark when they got back, when he became "insolent" when Clark refused to free him or reunite him with his wife?[\[183\]](#)

America's most humiliating war was the War of 1812, with the British burning Washington, D.C. American history textbooks rather lightly cover the War of 1812. Americans soon saw it as another war of independence, and it was not until after that war ended that Americans began creating the "patriotic" culture that is familiar today. The British, on the other hand, regarded the War of 1812 as little more than a sideshow. The British were fighting the Napoleonic Wars, battling their old nemesis, which was Europe's bloodiest era until World War I. For the United States, it was another war of expansion, with American "frontiersmen" wanting the U.S. government to conquer Canada, seize Spain's imperial lands in southern North America, and, as always, steal more Native American land.

The French Revolutionary and Napoleonic Wars had far-reaching influence. France was the home of the Enlightenment, but it was ruled by the feudalistic *ancien régime*, and the American Revolution seemed to be an example of what the Enlightenment was capable of producing. In 1789, the same year that George Washington came to office as the first American president, French citizens stormed the Bastille. From an auspicious beginning, it did not take long for the French Revolution to go sour. By 1791, the royal family had become outright prisoners of the revolutionaries, and by 1792, the revolutionary government declared war on Austria and Prussia. The wars did not go well, and the revolutionaries took it out on the monarchy. Led by Maximilien Robespierre and the Jacobins, the revolutionaries beheaded Louis XVI with the revolutionaries' new contraption, the "humanitarian" guillotine.

By that time, England and Spain were also battling the revolutionary forces and whipping them. Faced with mounting defeats on the battlefield, the revolutionaries turned on each other, and in 1793 the Jacobins approved a reign of terror on the populace to consolidate the revolutionary government. A quarter million people were arrested during the reign of terror and the guillotines were used with vigor. In 1794, the Jacobins turned on each other, and Robespierre and his cohorts all met the business end of their guillotines. By 1795, France was in full retreat from its revolutionary zeal, and political rights were reserved for the wealthiest Frenchmen. France was winning battles and the European coalition collapsed, with only Austria and England opposing France militarily by 1796. In 1799, Napoleon came to power and things calmed down for a little while. Napoleon eventually crowned himself emperor and handed out crowns to family members.

By 1803, France and Britain were at war again. The English Channel would prove to be one of Britain's greatest assets, as it helped discourage invasion from France. Napoleon decided it would be easier to invade Austria than England, and Napoleon quickly conquered Europe. In 1807, Spain supported Napoleon in a war against Portugal, and for the next several years the Iberian Peninsula became the scene of the Peninsular War. Napoleon's continual battles with the British-supported Spanish guerillas weakened France's military efforts, helping lead to Napoleon's downfall.

Napoleon's biggest mistake, which [Hitler also fell prey to](#) a few wars later, was invading Russia.

After capturing a deserted and burned-out Moscow in the autumn of 1812, most of Napoleon's half-million-man army died during the winter retreat. While Britain had the English Channel as its greatest defense against invasion, Russia had its fierce winter as its greatest defensive asset. The French Revolutionary and Napoleonic Wars killed about five million people, and was Europe's bloodiest period since the Thirty Years' War, nearly two centuries earlier. The Seven Years' War and Napoleon's reign foreshadowed the so-called World Wars of the 20th century, which were really wars of empire between the Great Powers. The Napoleonic Wars also marked the beginning of the end of Spain's empire. In the Seven Years' War, Britain and France battled across the world, with France being the loser. In North America, Britain got most of France's imperial lands, and it also got Florida from Spain. France held onto lands east of the Mississippi River, with Spain and Britain getting Louisiana.

In 1800, Napoleon forced Spain to give back Louisiana, which the United States bought in 1803 with the Louisiana Purchase. In 1802, Napoleon launched an invasion of Haiti to try putting down the slave rebellion, which began in 1791. As was the case with Britain and Russia, geography was Haiti's greatest defensive asset, and the tropical conditions decimated the French invasion. Of the 28,000 French troops sent to Haiti, which landed in January 1802, 20,000 were dead by September, due to yellow fever and the fierce resistance of the ex-slaves.[\[184\]](#)

As with all revolutions, theory and practice were at odds in Haiti. In events leading up to the original rebellion, mulatto ex-slaves tried becoming a new, intermediary class that rode atop the ones still enslaved. Encouraged by the French Revolution, which gave mulattoes some rights in 1791, a more popular rebellion took place. Haiti's revolution did not turn out as egalitarian as the revolutionaries hoped, although the Haitian constitution wisely forbade foreign land ownership. A republic of ex-slaves caused fear and loathing throughout the West, especially in the slave-owning United States. The United States would not recognize Haitian independence until 1862 during its Civil War, for obvious reasons. As with every other colonial power, a fair amount of "miscegenation" happened in Haiti. The offspring of French masters and slave women became house slaves, and had higher status than the pure African field slaves. Even today, the more French blood a Haitian mulatto can claim, the better. The mulattoes became Haiti's ruling class, while others settled in New Orleans and became part of the Creole culture. European racism still infects the New World. There is not a nation in the Western Hemisphere where the rule (officially or unofficially) is *not*: "the lighter your skin, the better off you are."

The European chaos encouraged the Spanish colonies to revolt, beginning in earnest when Napoleon put his brother on the Spanish throne in 1808. The colonists in Venezuela formed an independent government that refused to recognize Napoleon's rule, and one of Venezuela's elite, Simón Bolívar, became the junta's representative to Britain, to try gaining recognition. Bolívar's attempts failed, and in 1811 the junta declared itself an independent nation. The revolution failed the next year, as the royalists regained power, but the course was set, with Bolívar, a pupil of the Enlightenment, successfully ending Spanish rule in 1819 in what became Colombia. He became its first president. During the next several years, he led efforts to end Spain's rule in what became Peru, Bolivia and Ecuador.

In Southern Spanish America, José de St. Martín led revolutionary efforts in Argentina and Chile, and

he was the first to defeat royal forces in Peru, to later allow Bolivar to finish the job, which was not complete until 1825, when the Peruvian highlands were rid of the last royalist resistance. That upland region became Bolivia. Bolivar had grand plans to unite South America into a confederation, much as the English colonists had formed the United States, but his plans came to naught, and by 1828 he had become Colombia's dictator, and in 1829 Venezuela proclaimed its independence from Colombia, and by the time Bolivar died in 1830, he was largely a pariah, and Venezuela would not even allow his body to be buried on its soil.

Following Venezuela's lead, Mexico had its Hidalgo Rebellion in 1810, in another attempt at bringing Enlightenment ideals to a New World colony, at least for its elites. After numerous revolts and royalist counterattacks, Mexico gained its independence in 1821.

When Napoleon invaded Portugal in 1807, the Portuguese court fled to Brazil and set up operations there. Despite attempts to suppress it, Enlightenment ideals also infected the Brazilian populace. Portugal never quite had the fractious relationship with its colonies that Spain had, and Brazil was unique in Latin American by coming to its independence peacefully, in 1822.

The only holdings that Spain was able to hold onto were in the Caribbean. Cuba and Puerto Rico did not join the mainland revolts. Cuba was a competitor of Haiti in the sugar trade, and the Haitian Revolution created many dead and fled plantation owners, something the rich Spanish overlords did not want to see happen in Cuba, so it stayed quietly in the Spanish fold.

The post-9/11 patriotism that gripped the U.S. in late 2001 would have looked strange to the average American of 1810. In Boston, the hallowed Fourth of July celebration was completely taken over by Puritanical Harvard-types, not long after the Revolutionary War was over. The radical spirit that was sometimes seen in the American Revolution was wallpapered over by safe, conservative celebrations. Even elite radicals such as John Hancock and Samuel Adams were quickly written out of the histories. When Samuel Adams died in 1803, his passing was nearly greeted with a yawn, leading John Adams to state in 1809 that Hancock and his cousin were "almost buried in oblivion."[\[185\]](#) Washington was the only "hero" that Boston celebrated during the first fifty years after the American Revolution. In Boston, there was no celebrating the anniversary of the "Tea Party," the protests over the Stamp Act, the "Boston Massacre" or other revolutionary events. There were not any 50th anniversary celebrations of those events, even in Boston.

It was not until the 1820s that Americans began recovering American Revolution memories, and their revisionism typically had a bias, serving the day's agenda. The Puritans' reputation had faded to nothingness by 1820, especially as they made the mistake of supporting the British Crown during the American Revolution. With the rising nationalism, they were rescued from oblivion in the 1820s, and eventually became the "Pilgrims," although little about the popular representations of them is accurate.[\[186\]](#)

In 1825, ascendant nationalism led to a big bash, with Lafayette, the French general whose forces were the deciding factor in the American Revolution (and he also took a prominent role in the French Revolution), coming to Boston during his American tour, and commemorating the 50th anniversary of the Battle of Bunker Hill. The rising tide of nationalism led to a big celebration in 1826 of the fiftieth

anniversary of the American Revolution. When Thomas Jefferson and John Adams, adversaries who personified America's political philosophies, both died on July 4th, 1826, Americans felt it was the sign of providence.

George Robert Twelves Hewes was a shoemaker of modest means. Shoemaking was a poor man's trade in those days, and Hewes became one because he was too destitute and small (standing five feet, one inch) to pursue the more lucrative ones. He was a participant in the "Boston Tea Party," and eventually served in the American Revolution as a [privateer](#) (and his captain stole his lucrative share of the plunder) and was conscripted into the militia, and once bought his way out of conscription. He met with General Washington and even repaired John Hancock's shoes in his younger days, but his participation in the "Tea Party" brought him fame as America recovered its revolutionary memories. He was about the only living survivor of the "Tea Party" in the 1830s. The term "Tea Party" was never used to describe that event until the 1830s.[\[187\]](#) A figure so obscure that most of his life lies beyond the recovery of historians, Hewes bathed in his newfound fame during the 1830s. When seen in the golden glow of his celebrity and old age, Hewes recalled destroying the tea alongside John Hancock, a memory that was almost certainly false; the elite ringleaders of the tea action conspicuously stayed at the Old South facility when the "Tea Party" was arranged.[\[188\]](#)

[Christopher Columbus](#) died in obscurity in 1506, but when mercenaries began discovering gold-plated civilizations on the New World's mainland, Spain recovered Columbus from obscurity and he began becoming a heroic figure, although few, if any, facts support such stature. Accompanying the rise in American nationalism, [Washington Irving](#), a novelist, published a three-volume epic on the life of Columbus in 1828. It became a huge bestseller. Irving made up events from whole cloth, such as the Spanish Court doubting that the world was round, and Columbus setting out to prove it. When the fabrications of Irving, [Weems](#) and others were discovered, American ideologists defended them. The logic was that America needed its own mythology, separate from Europe's.[\[189\]](#) With all the fake hagiography being concocted by American mythologists, there was even an effort in the 19th century to make Columbus a saint. In 1831, a poem set to the tune of a drinking song won a contest, and the *Star Spangled Banner* became the U.S. national anthem.

James Madison, who drafted the Bill of Rights, was president from 1809-1817, and as with Washington and Jefferson, he was another slave owning, Virginian tobacco plantation owner, and the international embarrassment that those slave-owning presidents were accumulating began weighing heavily on their images, if not their hearts. As with the others, Madison tamely advocated slavery eventually becoming an extinct institution (long after he was gone), and was an early advocate of shipping the slaves back to Africa. Later in life, he used novel reasoning to support the expansion of slavery to new lands as a way to "dilute" it. He died in 1836, without having freed any of his slaves. Europe began abolishing the slave trade before 1800, and most of Europe abolished it before 1820, and the United States appeared increasingly anachronistic, especially with its many slave-owning presidents.

James Monroe was the U.S.' fifth president, serving from 1817 to 1825. Monroe, a protégé of Jefferson and another slave owning, Virginian tobacco planter, was another paternalistic racist who

also favored eventually eliminating American slavery by shipping them back to Africa. During his presidency, just such a colony was established in 1822, which later became Liberia. Monroe sized up Indian lands during the 1780s, and his efforts led to the Northwest Ordinance of 1787, which was designed to legitimate the American invasion, seizure and settlement of those lands. Those machinations were part of [Washington's grand plan](#), even as native tribes were petitioning the U.S. government regarding the "illegal treaties" that were already being foisted on them.[\[190\]](#) The U.S. government was planning on becoming solvent by selling off Indian lands, lands that were not theirs to sell. Monroe also negotiated the Louisiana Purchase from Napoleon's France, which really was the purchase of rights of conquest. It was the Indians' land, not France's, and no negotiations were made with the *natives*, as Jefferson's emissary [Lewis soon made clear](#).

Monroe was James Madison's Secretary of State. Monroe led a brutal repression of a slave revolt in 1800, and all those slave-owning presidents were highly aware of what had happened in Haiti, and wanted no threat that American slaves might actually rise up and free themselves. As governor of Virginia, Monroe refined the system of keeping the slaves suppressed and less likely to revolt. Monroe presided over the Missouri Compromise of 1820, which extended slavery to southern North America as the empire expanded westward. Madison and Jefferson both approved of the measure. Monroe was a Revolutionary War veteran, and he got back into uniform, leading American forces during the War of 1812, and he became Madison's Secretary of War after the British burned Washington D.C. Four of the first five American presidents were land-grabbing, slave-owning empire-builders.

All political systems have *always* [ridden atop economic systems](#), and all those slave-owning Founding Fathers' actions further highlighted that fact. In those pre-industrial days, unless one had slaves, or colonial lands and subjects to exploit, one could not live a life of leisure, to contemplate the affairs of state and other lofty issues. The ancient Greeks, in "democratic" Athens, had a similar philosophy, with slaves outnumbering citizens. In that respect, the allusions to ancient Greece in American government are accurate. The Founding Fathers saw the slavery economy as necessary to their livelihood, and no afflictions of conscience could persuade any of them to free their slaves and actually work for a living.

In 1823, Monroe gave a speech to the U.S. Congress that became the Monroe Doctrine. While his rhetoric sounded impressive, the reality was that he staked out Latin America as the United States' arena of influence, with no European powers allowed. Monroe virtually declared the United States a hemispheric empire in 1823, although there was still plenty of work to be done. History has borne that notion out. Between 1798 and 1945, the United States sent its soldiers abroad in 168 separate events. Of those 168 events, 85 times the troops were sent to what was or is known as Latin America.[\[191\]](#)

Andrew Jackson was America's first president not from the Eastern Oligarchy, although he was another slave owner. The son of Scotch-Irish immigrants, Jackson was born after his father died and was raised in today's Carolinas. A fighter and brawler from a young age, he fought in the Revolutionary War at age 13, and all of his immediate family members died in the war, leaving him on his own at age 14. Jackson became a lawyer, and in 1796 he became Tennessee's first U.S. Congressman. While in office, he aligned with Jefferson's Democratic-Republican Party and went on

the record, calling Washington's policy toward the Native Americans too *lenient*. Jackson left Congress in 1798 and became a judge, retiring from that position in 1804. Still having the fiery temper he displayed as a boy, Jackson brawled and dueled regularly. Jackson's violent, belligerent reputation got him elected to head the Tennessee militia in 1802, and when the War of 1812 broke out, Jackson offered to invade Canada, but was instead ordered to defend the imperial outpost of New Orleans. His men were forced to return when their orders were reversed, and short-provisioned by government inadequacy, Jackson looked out for his men on the march back to Tennessee, earning their admiration and the nickname "Old Hickory."

By that time, Native Americans were virtually extinct in today's Northeastern United States. [Washington's plan](#) was highly successful. William Henry Harrison, the governor of Indiana Territory, spent the first decade of the 19th century swindling the natives out of their treaty-provided lands, as he had been ordered to do. The great Shawnee leader Tecumseh tried uniting Native Americans against the white invaders. Tecumseh was at the [Battle of Fallen Timbers](#), but his resistance was more to not let the white men get any more Indian land. The natives he influenced were following Jefferson's prescription: settle down and adopt the white man's ways.^[192] Jefferson's advice was apparently more on the rhetorical level, seeming impressive, but to be avoided in practice.

Tecumseh did not believe that *any* tribe should cede lands without the consent of the others. Tecumseh, returning the Founding Fathers' racism in kind, adopted a cosmology that saw whites as a variety of pond scum. His brother reformed himself from being a drunken Indian to turning his life around and becoming "The Prophet" to his people. William Henry Harrison was surprised when the natives following Tecumseh's teachings refused whiskey. The natives were acting far too responsibly for Harrison's liking, and were forming a united front. Uniting the American colonies had won them independence from British rule, and a united native front might thwart U.S. imperial designs. When faced with dwindling prospects of swindling the natives, and the appearance of an effort that could resist further white invasion, Harrison launched a pre-emptive strike in 1811, while [Tecumseh was away on a recruiting mission](#). Harrison led an army to Tippecanoe, Tecumseh's headquarters. Tecumseh's brother, in charge while his brother was away, acted rashly and fell into Harrison's trap, and after a bloody battle that saw more white casualties than native, the whites drove the Indians away and burned Tippecanoe. Tecumseh returned months later to the ashes of his dreams.

In post-9/11 America, white people might begin developing *some* comprehension of what North American natives were facing back then. History has shown that cultures unravel when subjected to catastrophes that kill off large fractions of the population, such as what the [Black Death did to Europe](#) in the 1340s. Although [Osama bin Laden](#) and gang is biting the hand that fed them, nobody seriously thinks that waves of Islamic settlers will be coming across the oceans, to invade and exterminate Americans; Native Americans faced just that. By the American Revolution, the natives of Eastern North America clearly saw the trends, with many eastern tribes already extinct, and an inexorable march westward by the white invaders, destroying everything in its path in the name of "progress." Not only were the woods, creatures and natives disappearing under the boots and axes of the white juggernaut, but also there was active, exterminatory hatred directed at the natives from the very beginning of the white invasion...and it was successful. Invasion, disease and environmental devastation were inflicted in never-ending waves upon the natives. [Miantonomi](#) was

perhaps the first North American native to figure it out, but was far from the last. The [Delaware](#) sages clearly saw the disintegration of Native American culture, and as they were violently dispersed from their homelands, they influenced many inland tribes, [Pontiac](#)'s Ottawa tribe among them. Pontiac's efforts influenced Tecumseh's, and the confederacy the [tribes tried creating](#) during the American Revolution.

Tecumseh died in the War of 1812 a couple of years later. He was about the Indian equivalent of George Washington, so his corpse was eagerly scalped by the American troops, and the frenzy to get pieces of him was heated. One soldier contented himself with seizing a dime-sized piece of Tecumseh's flesh, attached to a mere tuft of hair, which he produced in an interview seventy-three years later. After being stripped and scalped, one enterprising soldier *flayed* Tecumseh's body, cutting his skin into foot-long strips to make razor straps for his pals.[\[193\]](#)

While Tecumseh was pursuing the shards of his shattered dreams in America's Midwest, Old Hickory was making progress in America's Southeast. From the very beginning of the European invasion of the New World, even on Columbus' [first voyage](#), it really did not matter much if the natives were friendly or hostile; they all eventually died under the European boot. Sometimes friendliness meant they were the first to be exterminated (such as scalps of friendly natives being easier to obtain than scalps of hostiles), and sometimes it meant they were the last to fall to their state (such as the [Tlaxcalans](#)). The Cherokee tale is important. Not only are they the largest surviving North American tribe, their journey demonstrates how even the most U.S.-friendly natives were doomed, if they lived on land the whites wanted. The Cherokee were one of the "five civilized tribes," which included the Creek, Choctaw, Chickasaw and Seminole.

The [Iroquois](#) lived at the north end of the Appalachians, and the Cherokee at the south end. The higher elevation of their lands probably spared them the worst of the early diseases that Europeans introduced. While the Iroquoian people engaged in the short-lived [fur trade](#) (the beaver was extinct in the Hudson River Valley by 1640), the Cherokee traded in deerskins for Europe's manufactured goods. In the early 1700s, England, Spain and France were jockeying for position in the region, with the English settlers doing their usual land grabbing, which led to numerous wars. The natives were largely battling for survival, and allied however they could. In the early 1700s, the Tuscarora were completely eliminated from their homeland in today's North Carolina. The survivors fled north and joined the Iroquois Confederation. The Shawnee were also losers, first being kicked out of Ohio during the late 1600s by the Iroquois, with most of the scattered tribe moving to today's Southeast U. S. The wars down there saw many of them flee back to Ohio, and the English invasion of the Ohio River Valley inspired [Tecumseh](#) to try uniting his Shawnee with other tribes, to form a united front. Other tribes simply disappeared in the mayhem.

In pre-Columbian times, the Cherokee probably controlled at least 100,000 square miles of territory, and may have had more than a half million people. America's Southeast was the most densely populated part of North America, and warfare and empire building were not unknown. The Cherokee lived in palisaded towns in their heartland. [Soto](#) was the last European to see those lands in close to their 1491 condition. The Mississippian cultures built large mounds, as palaces, cemeteries and temples. Those types of structures have only been built in densely populated regions. By the time

Soto saw those lands, the populations had probably already been reduced by European disease. After [Soto visited that desolate former empire](#), his *entrada* wandered through territory that was partly the Cherokee's, as well as other tribes. After Soto, a few more smallpox epidemics made their way through the area before the English began invading the region.

The Cherokee have an Iroquoian language, and probably migrated from the Great Lakes region, as did the Tuscarora, at least several centuries before Soto showed up. Iroquoian civilizations were matrilineal. The [high status of women](#) is generally the sign of a healthy and vibrant society. The other "civilized" tribes are from the Muskogean language family, and they also had matrilineal societies.[\[194\]](#)

By 1700, Florida's original inhabitants were nearing extinction. The largely hunter-gatherer Calusan and Timucuan peoples became extinct in Florida before 1800. The Apalachee people lived in northern Florida and were largely farmers, and did not become quite as extinct as the Timucuan and Calusan peoples. During the destructions of numerous tribes of America's Southeast, survivors joined with others, and the Seminole people are an amalgamation of tribal fragments of largely Muskogean peoples. Even former African slaves joined the Seminole. The word "Seminole" may be derived from the Spanish word for "runaway."

South Carolina was England's early slave coast in the New World. Just as the European slavers had done in Africa, the English armed coastal natives, turning them into pawns of the slave trade, encouraging them to use the English's superior weaponry to invade inland and capture neighboring tribes. Slave trains from inland were making their way to Charleston as early as the 1670s, to be sold into Caribbean slavery.[\[195\]](#) The English slave trade quickly decimated the natives, and fragments of tribes came together to make new "tribes," such as the Westos, who made a brief living enslaving other intact tribes. When their utility expired, the Westos also became extinct.[\[196\]](#) The English enslaved the Cherokee as early as 1681, and in 1693 the Cherokee sent a delegation to the South Carolina's Royal Governor to ask for protection from the native slave raiders. The year before, the Shawnee, who the Cherokee welcomed (to become a buffer tribe - it was not a completely humanitarian act) to their lands, destroyed a Cherokee village while the men were away hunting, and sold the women and children into slavery. It was an act of treachery that the Cherokee never forgot, and the Shawnee were eventually expelled back to the northern lands, with the Cherokee happy to see them go.

Because of South Carolina's continued pursuit of the flesh trade, the tribes united and began a war against South Carolina in 1715. The Cherokee began fighting as English allies as early as 1689, in England's imperial struggles with France. After the war of 1715 briefly interrupted their relationship, the Cherokee signed their first treaty in 1721, which ceded land to British colonists.

Similar to the Iroquois, the Cherokee were a democratic people. In 1730, there were less than 50,000 Cherokee left, and the English at Charleston tried making one of them an "emperor." Some young braves visited King George II in England, and supposedly gave fealty to the King, but those boys did not run the Cherokee people, although one of them subsequently became prominent. In 1738, a slave ship to Charleston brought smallpox, and killed off at least a quarter of the remaining Cherokee, while also sweeping through other local tribes, such as the Catawba. By 1730, the

Cherokee were as low as ten percent of their numbers of two centuries earlier, and another large fraction was taken away in one swoop in 1738. Another devastating plague swept through in 1753, bringing the Cherokee population to perhaps 25,000 (estimates vary, going as low as 10,000 in 1780), where it would largely remain until they were forcibly removed during the 19th century.

Largely because of epidemics, widowed lands were easier to give up than occupied ones, such as the Wampanoag welcome to the Puritans. The wars, epidemics and continually encroaching settlers created massive displacements among the native tribes. Tribes were forced away from the eastern coastline, and intruded upon neighboring tribes. Sometimes inland tribes would allow the coastal tribes to settle with them, and other times they might resist or otherwise give less than a friendly welcome. Surviving tribes would be crowded together, and formerly friendly relations would degenerate into hard feelings and warfare, as each tribe tried surviving. The Creek and Cherokee shared hunting grounds in today's northern Georgia, but settler pressures led to them fighting a war that began in 1752.

The British were arrogant, with a predilection for murder, and few natives liked them much, but they made the best trade goods, and were cheaper than what the French offered. The French had greater regard for the natives, and did not try imposing their notions of what people should be like, at least not nearly to the degree that the British did. The Cherokee were the region's dominant tribe, and the British worked hard at maintaining a good relationship with them.

The British were soon allying with the Creek to fight against the Spanish settlements, eventually laying siege to St. Augustine. The French were also in the picture, trying to form alliances with tribes, to fight the British. The French generally allied with the Algonquin tribes of the north, and they were able to ally with the less-warlike Choctaw in the south (the Choctaw-French alliance also split the tribe). The Chickasaw were bitter enemies of the French, as the French tried dominating the Mississippi River for trade purposes, and tried exterminating the Chickasaw during the early 1700s. The French never successfully penetrated the Cherokee region, largely because of Chickasaw resistance, which helped bring an end to France's imperial designs in North America.[\[197\]](#)

When the Cherokee-Creek war ended in 1755, with the Cherokee victorious, the Cherokee then supported the British in the French and Indian Wars, at least for a time. The Cherokee fought alongside the British during the wars, but there was continual uneasiness, as the colonists always coveted Indian land. The British built forts in Cherokee lands to protect the colonists, supposedly from the French and their allies, but the British always suspected the Cherokee of having French sympathies. There were sporadic conflicts with the Cherokee and white settlers, although the British tried hard to maintain the peace, at least while the Cherokee were useful.

In 1758, a Cherokee war party was traveling with British forces through Virginia when the Cherokee lost their provisions while crossing a river. Their "allies" abandoned them, leaving them to get home on their own. Some angry braves then helped themselves to local provisions, such as Virginian horses. Skirmishes broke out, with Virginians killing Cherokee warriors and selling their scalps for the Virginia bounty. An Indian scalp brought fifty pounds in Virginia, the equivalent of a year's income for a Virginian farm, and bounty hunters sold the scalps of "friendlies" as "hostiles" regularly. Attacks and counterattacks occurred along the Cherokee frontier, and angry braves prevailed over

the chiefs who sought peace. The British were beating the French by that time, had less use for their native “allies,” and a war broke out between the Cherokee and British in 1759. The British soldiers, who had been drunkenly raping the local natives, kidnapped a Cherokee peace delegation, then murdered them when Cherokee braves attacked the fort where they were held and killed one of the rapists. Those events inflamed matters. The killing escalated, with the Cherokee laying siege to Fort Loudon, and [Amherst](#) sending a huge expedition to the region in 1760. The Cherokee chiefs were dismayed that their English allies were making war against them. The Cherokee made several attempts to gain native allies against the English, but were unable to. After massacres on each side, and an English expedition that destroyed many Cherokee villages, a “peace” was negotiated in 1761, where the Cherokee ceded huge chunks of land along the Carolina frontier. Thousands more Cherokee died in the war.[\[198\]](#)

Watching the British turn on their allies made a deep impression on the natives along the northern frontiers, and helped lead to [Pontiac](#)’s “rebellion.” The British inflicted genocide on the Abenaki people at the same time, which made their intentions clear. Even so, the Cherokee became British allies again, even as greedy colonists ignored the [Royal Proclamation](#). Daniel Boone’s penetration of Cherokee hunting grounds led the Cherokee elders to give in to the inevitable, “selling” the lands in Kentucky and Tennessee to the speculators in 1775. The Cherokee chief Attakullakulla, who was the “emperor” that visited King George II in 1730, and who was raised in the Cherokee village that Tennessee is named after, acquiesced to the inevitable. He saw the teeming hordes of England and the writing on the wall. His son, however, did not. A young warrior who survived smallpox epidemics, with his skin heavily scarred, he defied the treaty, making the following prophetic speech before leaving.

“Where now are our grandfathers, the Delawares? We had hoped that the white men would not be willing to travel beyond the mountains. Now that hope is gone. They have passed the mountains, and have settled upon Cherokee land. They wished to have that usurpation sanctioned by treaty. When that land is gained, the same encroaching spirit will lead them upon other land of the Cherokees. New cessions will be asked. Finally the whole country, which the Cherokees and their fathers have so long occupied, will be demanded, and the remnant of Ani-Yunwiya, “The Real People,” once so great and formidable, will be compelled to seek refuge in some distant wilderness. There they will be permitted to stay only a short while, until they again behold the advancing banners of the same greedy host. Not being able to point out any further retreat for the miserable Cherokees, the extinction of the whole race will be proclaimed. Should we not therefore run all risks, and incur all consequences, rather than submit to further laceration of our country? Such treaties may be all right for men who are too old to hunt or fight. As for me, I have my young warriors about me. We will have our lands.”[\[199\]](#)

Attakullakulla’s son waged a guerilla war against the white invaders, in today’s Tennessee, for the next generation. When the American Revolution began, the Iroquois Confederacy and other hostile tribes such as the Shawnee saw where events were headed. If the colonists succeeded in breaking

away from their mother country, the Indians would be more certainly doomed. A delegation was sent to the Cherokee in 1776, as part of an effort to unite all tribes from the Great Lakes to the Gulf of Mexico against the colonists.

By that time, the British colonies had taken on characteristics that could be discerned during the next century, dynamics that can be easily seen in the United States today. From the earliest days of the [Spanish invasions](#), the losers of European society came to the New World. Europe's upper classes rarely made trips to the New World or other imperial lands, unless they were royal representatives. European sovereigns did not go abroad to survey their realms. The lower class invaders turned themselves into local elites, and Europe's rulers continually tried undermining colonial aspirations, and made grand pronouncements in Europe about respecting native lives. The colonists mostly laughed at the proclamations and laws, which was particularly evident in the Spanish and English colonial experience. English subjects even sold themselves into slavery, called indentured servitude, to gain passage to the New World.

Even though early [Jamestown](#) "settlers" ran off and lived with the natives, and [Morton](#) had high appreciation for the native way of life, and the spectacle of the "Unredeemed Captive" played itself out in the early 18th century [\[200\]](#), by the time of the American Revolution, the new elites had carved out estates in the settled east, and were the forerunners of today's Eastern Establishment. The opportunities for free land and dreams of estates lay on the frontiers of English/British encroachment, and was pursued by the losers of colonial life. Trappers, traders and soldiers were the early English vanguard, followed by settlers. While frontiersmen might wear buckskins and take native wives, they rarely thought like Indians, and the native ideal of harmony with nature was in stark contrast to how frontiersmen behaved. Eastern North America was completely deforested by those frontier settlers, which wiped out both native humans and animals. The white invaders would rarely make enlightened contact with the natives, and the genocidal aspirations in [Amherst's](#) letters to his men (a sentiment that was missing in his writings about his French adversaries) were more literate versions of the scalp-hunting attitudes of frontier settlers.

Attakullakulla's son waged warfare against the intruders, but his was the minority opinion among the Cherokee. Attakullakulla's niece married a white trader and distinguished herself in battle against the Creek. She sought peace with the whites, and even warned them about the plans of Attakullakulla's son. In the big picture, guerilla warfare by tribal minorities provided justification of slaughter and dispossession of entire tribes. When the northern delegation came in 1776, Attakullakulla's son gladly accepted the war belts, while the Cherokee elders held a sad silence. By 1777, the rebel colonists had overrun the Cherokee once more, launching extermination raids against Cherokee villages, mostly neutral ones. The elders then sued for peace, and signed a treaty at gunpoint that gave up nearly all their lands in the Carolinas. Another treaty in 1781 took more land. Most Native American tribes sided with the British, or more properly, *against* the rebel colonists. Not the Cherokee.

Although [Washington's secret plan of 1782](#) made U.S. goals evident, the first tribe the United States made a post-revolution treaty with was the Cherokee. The 1785 Hopewell Treaty was about the only one that did not make land cessions a part of it. High-minded happenings in Washington translated poorly to the frontier. White invaders had zero respect for the Hopewell Treaty, and the breakaway

“state” of Franklin ran the Cherokee off their lands, and in 1788 murdered several elderly chiefs under a truce flag. Although natives could perform atrocities, it was nearly always provoked, and a disinterested frontier observer remarked that the settlers were “in the wrong four times out of five.”[\[201\]](#)

Another of Attakullakulla’s sons participated in the [1791 annihilation of the American Army in the Ohio River Valley](#), but in 1794, all Cherokee factions signed another treaty with the U.S. In 1792, the United States allocated funding to begin trying to turn the Native Americans into European peasants, and the Cherokee were the logical tribe to begin the experiment on. The U.S. began providing plows, spinning wheels and other European technology. It was not exactly an altruistic move. Sedentary farmers and craftsmen needed far less land than hunter-gatherers, and the Cherokee adopted the white man’s ways in order to survive. That transformation caused upheaval within the Cherokee people, as many of the white man’s ways were disgusting to native sensibility. Nevertheless, the Cherokee adopted European methods to such an extent that the name “civilized” was applied to their tribe, and others who adopted similar practices. The Cherokee became cotton growers and cloth weavers instead of deer hunters and skinners. Apparently, George Washington genuinely tried the assimilation policy on the Cherokee, especially after the [1791 disaster](#).

The Cherokee kept ceding lands in “treaties,” in 1798, 1804, 1805 and 1806. Some pro-French Cherokee migrated to today’s Arkansas in 1763, after the French lost the war against the British and the Spanish granted them land. Pro-British Cherokee also began migrating there in 1782. After the United States “bought” the land by the Louisiana Purchase, in an 1817 treaty it officially recognized the Western Cherokee. Under pressure from white settlers, the Western Cherokee were induced to move to Oklahoma in 1828.

The Eastern Cherokee kept assimilating the white ways and giving up their lands. With white influence came tribal corruption, with lying and greed making their appearance among the warriors and chiefs, which was something new to the Cherokee. The more traditional Cherokee (usually the full-bloods) migrated to the western reservation, and the Eastern Cherokee adopted the white ways. In the 1806 treaty, the Cherokee ceded ten million acres, an area half as large as today’s South Carolina. The chief who negotiated the treaty, and got rich in the process of selling out his people, was assassinated by a faction of young men, led by a brave named Ridge. The chief was so hated that even his relatives did not mind his murder.[\[202\]](#)

Ridge became a prominent Cherokee leader, and led the effort to assimilate the white culture. The assimilation brought on problems that no society could easily manage. The entire fabric of Cherokee existence was under siege. Women were to stop tending plants in the fields and become textile makers, while the men performed plow agriculture. Native concepts of reciprocity and the concept of sufficiency did not mesh with the “[greed-as-a-virtue](#)” attitudes of whites, who grabbed whatever they could and always wanted more. Try imagining a female American president that dismantles the military, declares holidays to bake bread, Christianity is discarded as a male aberration, and she declares a Goddess-based, nature-worshipping religion as the national religion. The culture shock the Cherokee underwent was greater, but they underwent it, and it presented them with a chance to survive.

By 1811, more than 1000 traditional Cherokee had migrated west, and Ridge and others who favored adopting the white man's ways dominated the Eastern Cherokee. Great rifts rent the "civilized" tribes. During 1811, Tecumseh toured Eastern North America, trying to unite all tribes against the white invasion. Tecumseh gave symbolic red sticks to the tribes he spoke to. The sticks were prepared by his brother, the Prophet, and were to help tribes mark time until their uprising, each stick representing a moon cycle. Although his brother was known as The Prophet, prophetic ability was apparently a family talent, and Tecumseh had prophesied for several years that a great earthquake would mark the time when the tribes should make their move to present a united front to the whites. Tecumseh was born on the night of a "shooting star," and also prophesied that a shooting star would also be a sign that the Great Spirit supported his efforts.

At a huge meeting at the Creek capital, in present-day Alabama, attended by five thousand natives from numerous tribes, Tecumseh spoke of his plan, and the red stick bundles were only three moons large. At that meeting, Ridge threatened to kill Tecumseh if he came to speak to the Cherokee. A Creek chief challenged Tecumseh, and Tecumseh told the chief his blood was white and that when he went home to Tippecanoe, he would stomp on the ground and shake the land, to let the tribes know the truth. On November 7, 1811, the battle of Tippecanoe was fought, which was Harrison's pre-emptive strike against Tecumseh's efforts. On November 16th, a great meteor was seen in the sky, supposedly informing the natives that Tecumseh's efforts had the Great Spirit's approval, but [Tippecanoe's](#) ashes said otherwise. A month later, while traveling back to Tippecanoe, at a camp near New Madrid, Missouri, Tecumseh received word of the disaster of Tippecanoe. That same night, December 16, 1811, the first New Madrid quake hit, which was a series of quakes that are the strongest in U.S. history, measuring more than eight on the Richter scale, which caused church bells to ring in Boston. It stands today as a most curious testament to Tecumseh's alleged ability. Because of Tippecanoe, Tecumseh (some say it was his brother) also allegedly cast a curse on the United States, where every president elected in a year ending in zero would die in office. Harrison was the first to fall to this alleged curse, being elected in 1840 and dying soon after coming to office. [\[203\]](#)

With the destruction of Tippecanoe, The Prophet lost standing among the natives, Tecumseh's plans were ruined, and he died in battle against the Americans a couple years later. Many Creeks took his message to heart, and they dyed their war clubs red, becoming known as the Red Sticks. The last New Madrid quake was the most devastating, occurring on February 13, 1812. In June the War of 1812 began, and Tecumseh's alliance was in ruins. The Red Stick faction, acting on its own, initiated a civil war among the Creeks, warring against Creek villages that had adopted the white man's ways. The Spanish armed the Red Sticks, and in 1813, a group of U.S. soldiers stopped and looted a Red Stick pack train, which ignited war with the Red Sticks. The Red Sticks then laid siege to Fort Mims in Alabama, and about 250 settlers were killed, which made huge news that swept the U.S.

The Cherokee elders advocated neutrality in the latest white man's war, and wanted no part of the Creek civil war. Ridge however, was violently opposed to Tecumseh's movement, and he gathered hundreds of men and joined Andrew Jackson's motley crew. While "Old Hickory" gained the respect of his men during the march back from the aborted trip to New Orleans, as time wore on, with his men weary and under-provisioned, they lost their morale and wanted to go home. Old Hickory then became draconian, executing a teenage soldier who became unruly, making an example of him. He

took on Ridge's braves, about five hundred strong, and made Ridge a major in the Tennessee Militia, and Ridge called himself Major Ridge for the rest of his life. The Cherokee were much better fighters than the white soldiers, something Jackson readily admitted. Friendly Creeks also were part of the fighting force. Jackson did not trust his Cherokee fighters, but willingly used them as high-grade cannon fodder.

In March 1814, a force of 2000 whites and 500 Cherokee and Creek cornered the Red Stick army at what is today called Horseshoe Bend, on the Tallapoosa River in Alabama. Jackson had never led a battle before, and his strategy amounted to firing cannons at their fortifications. The action would have probably ended in failure if not for the Cherokee braves who swam the river and attacked the Red Sticks from the rear. Their efforts divided the Creek defense, and the whites then laid siege to the fortifications. In that fierce battle, eight hundred of the thousand Red Sticks died. The aftermath was as brutal as they come. The whites were not content with mere scalps. They skinned Red Stick bodies to make bridle reins, belts and other fashionable items. Jackson ordered cutting off the noses of dead Red Sticks to get an accurate body count. He later gave body parts to the "ladies of Tennessee" as souvenirs. Davy Crockett, who fought at Horseshoe Bend, as did Sam Houston, wrote that the troops ate potatoes that had been basted in the fat of Red Stick warriors. That battle made Jackson an *American hero*. Part of the Cherokee logic was that if they adopted the white man's ways and fought with him, they might be able to survive without being eliminated from their lands, as most other tribes had already suffered. On the way home, the Tennessee volunteers passed through Cherokee lands and ravaged them. When the Cherokee complained, Jackson was furious with them for making the scandal a public matter.[\[204\]](#)

Although the Creek saw the Red Stick War as a civil war among the Creek and not against the U.S., Jackson got himself appointed the treaty commissioner, and forced the Creek to cede the largest single cession the natives of the South ever made: 23 million acres, an area substantially *larger* than South Carolina. Even land of the white-friendly Creeks, Creeks who had fought *with* Jackson, was taken from them. Part of the "ceded" land the Creek and Cherokee had shared. Jackson and his friends bought up the choice lands that he forced the Creek and Cherokee to cede. It was an early example of Jackson's theory of government, where the winner gets the "spoils." Jackson should not be treated too harshly here; George Washington did virtually the same thing, speculating in lands that his troops violently wrested from the natives. The Cherokee protested Jackson's claim on the land they shared with the Creek, and Jackson acted typically: he bribed most of the Cherokee chiefs into acquiescence.[\[205\]](#) Where Washington's plan called for negotiating with tribes individually, to play divide-and-conquer, Jackson introduced a new tactic, breaking up tribal lands into individual plots, then being able to bribe and coerce individual landowners, cutting out the tribes altogether. [\[206\]](#) Bribery and threat of attack were Jackson's two primary methods of dealing with the Indians, especially when stealing their land, something that Jackson openly admitted, saying that treaties were secured by playing to the Indians' "avarice or fear."

Jackson's tactics were openly fraudulent, and characterized the legal treatment that the U.S. imposed on the natives. During the century that the U.S. entered into treaties with native tribes, a common tactic was getting the chiefs roaring drunk, and when they had sobered up, they realized that somebody got them to "sign" a treaty that ceded their lands. Treaties entered into at gunpoint, outright forgery of a chief's signature onto treaties (not a difficult task, when a chief did not know how

to read or write), straight bribes to a “chief” who was not empowered to negotiate for his tribe - those were typical U.S. tactics. When Major Ridge and another prominent chief discovered what the chiefs had “negotiated” with Jackson, the head chief was stripped of his powers. They protested, but the U. S. Senate ratified the fraudulent treaty. Jackson only got one million of the two million acres that he and his cronies set their sights on. Jackson was not happy.[\[207\]](#) Even back then, Jackson’s goal was the removal of *all* Indians. He did not believe that any Indian could ever become “civilized,” so removal or extermination was his goal. In that instance, Major Ridge and John Ross successfully lobbied the U.S. government and got the treaty rescinded, for the first time ever.

Jackson became a war hero again when his defense of New Orleans trounced the British a couple of weeks after the War of 1812 had ended. After beating Napoleon, the British came in a little too arrogant, and the militia-types slaughtered them as they marched across an open field, thinking the “rabble” would scatter when seeing lines of marching soldiers coming at them.

The fragments of destroyed Muskogean tribes fled to Florida, amalgamating with the Apalachee remnants, and became the Seminole. On his own initiative, Jackson attacked and took the British fort at Pensacola on the way to New Orleans. He wanted Florida, and was dismayed that he did not get it after the Battle of New Orleans. Not to be thwarted, Jackson invaded Florida in 1818, which was a Spanish possession at the time. John Quincy Adams was James Monroe’s Secretary of State when Jackson invaded Florida. Jackson had no authority to invade Florida as he had. Jackson had committed an unprovoked act of war against Spain, prosecuted with exceptional brutality. Jackson, like [Underhill](#) and others before him, cited Old Testament stories to justify his actions, imagining that he was some kind of avenger for Jehovah.[\[208\]](#)

Jackson’s invasion appeared less than godly, and more like a land-grabbing, bloody invasion of conquest, with the invasion’s leader getting rich off the lands he stole. John Quincy Adams stood alone in the Monroe administration, defending Jackson’s invasion, casting blame on the Spanish. Adams performed a remarkable Orwellian somersault, calling Jackson’s invasion, “defensive acts of hostility.”[\[209\]](#) All the surviving ex-presidents approved of Adams’ gymnastics. Adams became the sixth U.S. president, followed by Jackson. Adams was the primary architect of the Monroe Doctrine, and he became president in 1825. Jackson handpicked his successor, Martin Van Buren, who was his Secretary of State and campaign advisor.

Jackson might have died at Horseshoe Bend, if not for the daring efforts of his Cherokee warriors, and Jackson led the swindle of the Cherokee. Today, many Cherokees refuse to use twenty-dollar bills, because Jackson’s face is on them. From Washington’s original subsidy of civilizing them, to the 1830s when Jackson was president, the Cherokee engaged in what may be history’s most astonishing feat of cultural change.

The Cherokee were liberal in adopting people into their tribe, which is partly why they are the largest surviving tribe today. John Ross was only one-eighth Cherokee. There were blond haired and blue-eyed Cherokee. A Western Cherokee, the reclusive Sequoyah, performed one of the greatest intellectual feats of all time by creating a Cherokee alphabet. It was easy to learn, and most of the tribe became literate by 1825, with a literacy rate higher than most of the world, even the United States. The Cherokee created a true nation, with a constitution, electing John Ross as its “Principal

Chief.” By 1828, they had a national weekly newspaper, published in Cherokee and English. The Cherokee were out-whiting the whites. The Cherokee were more prosperous than the whites in the vicinity, with their groomed lands and society being the envy of its neighbors. They even had African slaves (the Cherokee’s slaves were largely treated better than African slaves of whites). Subsequent events betrayed the racist foundation of the white invasions and exterminations of Native Americans. Gold was found in northern Georgia in 1828 and 1829, creating a gold rush in Cherokee lands, with the white miners flooding in. History has rarely recorded a baser breed of people than gold rush miners, as greed and desperation are their most salient characteristics, whether it was [16th century Spain](#) or 19th century America. The Georgia gold rush foreshadowed the gold rushes that propelled the invasion and “settlement” of whites west of the Mississippi River. With a new lure of greed, the Georgia government then began plotting the Cherokee expulsion in earnest.

Andrew Jackson was the first president to bring the frontier mentality into the White House. His Indian-killing reputation got him elected. While all the previous presidents were dishonest land-grabbers, they at least adopted a “civilized” veneer to their murderous criminality. Jackson often dispensed with even that. Jackson openly bribed people, and adopted the “spoils” system of governance, where party loyalists were appointed to government posts. His reputation was so well known that people stayed at his inauguration until the wee hours, hoping that if they hung around long enough, they might be appointed to government positions. Jackson’s tenure marked the rise of machine politics in America.

When he ascended to the presidency, Jackson soon pressed his “Indian Removal” dreams. After he was elected but before he took office, Jackson wrote to a Georgia Congressman about the Cherokee, “Build a fire under them. When it gets hot enough, they’ll move.”[\[210\]](#) Indian removal was the biggest issue of his presidency. In seven of his eight annual addresses to Congress, he talked about the “Indian Problem.” Jackson pushed through his Indian Removal Act in 1830, which was called at the time the greatest issue ever to come before Congress, except for matters of war. Although Jackson was its architect, he was a master of political doubletalk, and feigned powerlessness when Cherokee delegations called on their “great friend” to aid their plight. A fraudulent subterfuge played out. Native American tribes were always forced to deal with the U.S. government, even though the U.S. never kept up its end of the deal. Now, Jackson played the “states’ rights” card, telling the Cherokee that the U.S. government was powerless in the face of the claims made by Georgia. Jackson’s pushed through his Indian Removal Act, but when meeting the Cherokee delegates, he wrung his hands in impotence, when faced with Georgia’s might. It was a genocidal con game, and helped lead to the American Civil War.

The Cherokee kept playing in the rigged system, and even won in the U.S. Supreme Court, with Chief Justice Marshall issuing his famous 1832 ruling on *Worcester v. Georgia*, where he ruled that the federal government had jurisdiction over native lands, not the states. Jackson made the infamous reply to Marshall’s ruling, stating, “John Marshall has made his decision; let him enforce it now if he can.”[\[211\]](#) Beginning in 1836, the civilized tribes were removed from their homes at gunpoint, interned in concentration camps and force-marched several hundred miles (in the winter) to their new “homes” west of the Mississippi, in a dynamic that would foreshadow how the [Nazis treated the Jews](#) during the 1940s. That forced removal is known as the Trail of Tears. Jackson left office, in 1837, and his successor, Martin Van Buren, presided over the removal of the Cherokee. White

historians and scholars can be counted on to continually underestimate or ignore the body counts caused by their kind. The death toll of the Trail of Tears (including internment, transport and resettlement) used to be estimated at only 15% to 25% of the removed populations, but the most recent and thorough study of the Cherokee removal estimates a 55% mortality rate, a rate that probably roughly applies to the other tribes that were force-marched.[\[212\]](#) The “first lady” of the Cherokee, John Ross’ wife, died on the march.

Major Ridge, who could not be bought when younger, and said he would kill anybody who sold off Cherokee lands, ended up signing the fraudulent “treaty” that led to the Cherokee’s forced removal. The case can be made that Ridge, similar to other Cherokee elders over the generations, was simply succumbing to the inevitable, but when he signed it, he said he was signing his own death warrant. He was right. His cadre relocated with the Western Cherokee before the Trail of Tears, but when Trail of Tears survivors were finally delivered to the Western Cherokee, Ridge died by his own code, being assassinated along with others who had signed away Eastern Cherokee land. The Seminole fought removal, beginning in 1835, and the U.S. waged a war of attrition against them for several years, with the Seminole finally surrendering in 1842.

As with [Las Casas](#) and other Spaniards of conscience, there were some American observers whose humanity would not allow them to keep silent. John Burnett was a U.S. soldier who participated in the Trail of Tears, and later wrote,

“School children today do not know that we are living on lands that were taken from a helpless race at the bayonet point to satisfy the white man’s greed...

“I fought through the Civil War and have seen men shot to pieces and slaughtered by thousands, but the Cherokee removal was the cruelest work I ever knew.”[\[213\]](#)

Land grabbing and dispossessing the natives was how America was built, and was the *essence* of Jackson’s career, but future CIA-asset Arthur Schlesinger won a Pulitzer Prize for his 1945 *Age of Jackson*, and in it there is no mention of Jackson the land grabber, no mention of the Trail of Tears, no mention of his slave ownership, no mention of the Battle of Horseshoe Bend, which made him famous and won him the presidency.[\[214\]](#) That is how a great deal of American “history” has been fabricated, by simply white washing over the greatest feats of the early robber-baron presidents, acting as if they never happened, and winning awards for doing so. Schlesinger is also the most prominent person to fabricate the Camelot image of the Kennedy presidency. The cultural awakening of the 1960s has helped ameliorate such nationalistic revisionism.

While Jackson and friends were securing the South, the Northwest boundary was being expanded. The Fox were [nearly exterminated by a French-led alliance in 1730](#). They barely survived, and lived with the Sac tribe in today’s Illinois and Wisconsin. A century later, after Tecumseh died and settlers

began flooding into today's Midwest, the Sac and Fox chiefs were made drunk and "signed" a "treaty" that ceded their lands east of the Mississippi. They acquiesced to the fraud and tried eking out a life in present-day Iowa, but many starved to death in the winter of 1831-1832, and the Sac chief Black Hawk led about two thousand of his people back to northern Illinois in early 1832 to plant crops, and the whites quickly began organizing a militia against them. When faced with the mounting military effort, Black Hawk tried surrendering, but the militia fired on his people and the "Black Hawk War" thus began. The Sac and Fox peoples then went on a fruitless quest to avoid the white troops, with braves raiding frontier farms and villages as they fled. The Sac and Fox tried to go settle with other tribes that had already been forced west of the Mississippi, but the white army caught them trying to cross the Mississippi in 1833, and even though the natives tried surrendering, the whites engaged in an outright extermination of the Sac and Fox peoples, virtually completing what the French could not accomplish. Two future presidents took part in the Black Hawk War, Zachary Taylor as an officer, and Abraham Lincoln as a foot soldier.[\[215\]](#) Black Hawk was captured and then sent around the United States as an exhibit of a "humbled savage." After Black Hawk died, his remains were disinterred and put on display as trophies in an Iowa museum, which later burned down. The tiny remnants of the Sac and Fox got a postage-stamp-sized reservation in Iowa, in return for officially "ceding" their last six million acres of land.

The Spanish government allowed Americans to settle in Texas beginning in 1820, and the Mexican government foolishly allowed the practice to continue the next year. The deal was for only American Catholics to settle Texas, but the American whites only pretended to be Catholic. As the fake Catholics flooded in, they quickly wore out their welcome, especially as they brought African slaves with them, and Mexico opposed slavery. The whites began trying to take Texas from Mexico as early as 1826, with its Fredonian Rebellion. The rebellion caused the Mexican government to forbid more white settlement in Texas. Afraid that Mexico would abolish slavery in Texas, the white settlers revolted, and stole Texas from Mexico in 1836.

By 1840, except for tiny Iroquois reservations in New York and the few Seminoles who were holding out in Florida, the Native American was virtually extinct east of the Mississippi. The vast tract of land between the Appalachian Mountains and the Mississippi River, which the British set aside for native tribes in 1763, was now completely in the hands of white Americans. The tiny remnants of the Eastern Woodlands' tribes were living largely in today's Arkansas and Oklahoma, although the trend was forcing all of them into Oklahoma, which was about the most inhospitable land then known and available. Every single American president to 1840 was an unabashed, land-grabbing empire builder. As the "frontier" kept being pushed back, killing Indians was the American way to fame and fortune. During the 19th century, being known as an Indian fighter was the quickest way to garner votes, a trend that would continue after 1840.

In 1840, there were about seventeen million Americans, as compared to less than four million in 1790, when the first U.S. census was taken. The 1840s saw the U.S. in the midst of trends that define its character today. Between Napoleon and World War I, European soil was largely free of warfare. That was partly because the United States acted as a safety valve for poorer Europeans. British subjects and Germans were the most common immigrants, and the Africans who came against their will as slaves. Early industrialization in Europe was a hellish experience, with Britain leading the way. British factories were known as "satanic mills" and dismal British urban life of the

late 18th and early 19th century is epitomized by the work of Charles Dickens. His *Christmas Carol* was published in 1843.

The United States began a rapid industrial development, but [Britain's was even faster](#). In 1830, the United States' industrial output per capita was higher than any other nation in Europe, except for Britain, which was nearly twice as high, and was more than three times higher in 1860.[\[216\]](#) The era of the corporation was on the rise. Cornelius Vanderbilt began making his fortune as a war profiteer during the War of 1812, getting the government contract to supply the forts guarding New York Harbor. He quickly built a shipping empire, then began building a railroad empire, and he was worth \$20 million when the Civil War broke out, when the robber barons *really* began their ascent in America. The du Pont commercial empire was begun in 1802, by a pupil of [Lavoisier](#). The du Pont company provided gunpowder during the War of 1812. Warfare and monopolies became the American way to build fortunes, which led to the Gilded Age in the late 19th century.

The Great Potato Famine of the 1840s caused millions of hungry Irish to leave for the New World, and millions of Germans and British also came during those years. Large families and greater life expectancy also contributed greatly to America's population increase. Slave populations, unless they are worked to death as the Native Americans were, tend to have life expectancies not far removed from the master population, which led to a phenomenon unique to the United States: the ability to breed slaves. By the Civil War, there were about 6 million Africans in the United States, but only about a half million slaves were brought to what became the United States.

By 1870, the U.S. population tripled from its 1830 population, to 39 million. American xenophobia also began during that time.[\[217\]](#) The natives had been exterminated or removed, and African slaves largely accepted their lot, and Anglos dominated, especially in the Eastern Establishment. The immigrants did not get the red carpet treatment, although their horrid living conditions were better than what they left in Europe. American life expectancy was far greater than Europe's early on, as the whites plundered such a rich continent. The United States became a relief valve for Europe's huddled masses. By 1900, the United States had 76 million people in it, nearly all of whom were of European extraction, except for the 9 million Africans.

Native Americans were virtually extinct by 1900, as were many of their fellow creatures. The period from 1700 to 1900, when the English/American Empire expanded across North America, is arguably the most single-minded and sustained effort of environmental destruction that any species has ever inflicted upon this planet. John Adams wrote that his family cut down more trees than any other family in America. As one author wrote, the ax was the appropriate symbol of the early American attitude toward nature.[\[218\]](#) North America probably had earth's greatest store of environmental wealth, and the English and Americans ruthlessly [plundered it](#). Eastern North America had the world's largest temperate forest, and the old saying that a squirrel could have run from the Atlantic Ocean to the Mississippi River, without ever touching ground, was not very fanciful. Eastern North America was almost completely deforested by those "pioneers." The passenger pigeon, which may have flown in the greatest flocks our planet has seen, was on the brink of being driven to extinction in 1840, in capitalistic fashion. Expanding railroads in the 1850s allowed for a short-lived industry of killing the pigeons in the Midwest and transporting them to East Coast markets. Passenger pigeons numbered in the billions, and migrating flocks turned day into night, but by the 1880s their

populations had collapsed, and the last passenger pigeon died in captivity in 1914. The woodland bison, which roamed today's Eastern United States, was rendered extinct by the early 19th century.

The single greatest cause of the explosion of world human population, which began growing with increasing rapidity during the last half of the 1700s, was probably the introduction of New World crops to the rest of humanity. For providing human-digestible calories, New World crops were superior in significant ways. Maize is earth's hardiest seed crop, and Native Americans developed more than three thousand varieties of it, so it could thrive from northern forest to arid desert, from mountaintop to seashore. Northern China came to subsist on the sweet potato. Ireland, Russia and other harsh climates came to rely on the potato, which provided nearly double the calories of a wheat crop in half the time for less work at cultivation. It was a healthier food than wheat (people can subsist solely on the potato) and was not as subject to the vagaries of weather. The cassava root and maize became the staple of Africa, which led to its population increase that began during the 19th century. When New World crops were introduced to Old World agriculture, famines decreased and populations exploded, in Malthusian fashion. With the introduction of the potato, Ireland grew from 3.2 million in 1754 to 8.2 million in 1845, while an additional 1.75 million migrated to the New World. Today, more than half of the world's crops are of New World origin.[\[219\]](#)

Native Americans developed more than three thousand varieties of potato, and the white man made fatal errors in adopting New World crops. The Irish came to depend solely on one variety of potato, which made the Irish subsistence crop vulnerable, and in 1845 a blight ripped through not only the Irish mono-crop, but also Europe's, leading to a famine. The Great Potato Blight and subsequent famine reduced Ireland's population by more than a million, and initiated another great wave of migration to the New World.

To Steal a Continent – Finishing the Job

The 1840s saw the ascendance of two cultural phenomena. One was the xenophobia directed toward non-Anglo whites, and the other was a concept known as *Manifest Destiny*. An American diplomat, when making the case for annexing Texas, first used the term in 1845. It borrowed from the Jewish idea of a land promised to them by God, and then killing the inhabitants to get it. Manifest Destiny provided a similar rationale for the U.S., and even retroactively sanctified its vast murders. The Indians of eastern North America were gone, so American racism needed a new target, and the immigrants, even though their skin was white, served that purpose. On the frontiers however, there were still natives to eradicate, and the hatred could still be focused on dark-skinned subhumans.

Manifest Destiny may have been an attempt to reduce “cognitive dissonance,” which is a psychological condition where beliefs conflict with experience, leading to “dissonance.” The healthy response is to question or modify one's beliefs. The pathological response takes two forms. One is to increase the “positive cognitions,” which means to stress information that supports the belief being challenged by experience. The other is to decrease the “negative cognitions,” which means to ignore, suppress and forget the experiences that contradict the belief in question.

It took extreme effort to paint early American nation building in a positive light. American nationalism began growing in the 1820s, and the events that could lead to negative cognitions were abundantly clear. Accordingly, they were largely minimized, such as “historians” omitting history’s greatest complete genocide from [Columbus’ story](#), or [Washington’s fraudulent strategy](#). A creative bag of tricks was used to decrease the negative cognitions, including making the Indians subhuman. Then [Weems](#), [Irving](#) and many others created fictional positive cognitions. Manifest Destiny was another case of fabricating positive cognitions, invoking the Creator’s sanction. The basic tenet of Manifest Destiny was that Americans were “destined” to rule from sea to shining sea, and anybody in the way was in *God’s* way.

Why deal with *anybody* fairly, if superior violence will prevail? The thief just takes what he wants, and lets violence decide the issue. Might makes right has been the rationale for every empire, but it has never been prudent to come right out and say it, so Machiavelli’s professional descendants have concocted a wide range of cover stories over the centuries. Early on, because the Bill of Rights and other factors limited the coercion that the U.S. could inflict on its citizens, those who ran the U.S. began refining the art of deluding the masses to unprecedented levels. Anti-sedition laws were too crude a means of control. The art of creating mass delusions became a science during the 20th century, with the rise of the [public relations](#) industry, among others.

In 1840, William Henry Harrison was elected president, and his campaign’s slogan was “[Tippecanoe](#) and Tyler too.” As with Jackson, Harrison’s claim to fame consisted of killing Indians. The Harrison campaign was nearly apolitical, and simply tried cashing in on Harrison’s Indian-killing celebrity. Harrison was the early example of a [Ronald Reagan](#)-type front man, Harrison being 67 when elected, similar to Reagan’s 69 - America’s two oldest elected presidents. Harrison’s campaign avoided dealing with *any* substantive issues. He died quickly while in office, and Tyler usurped power. Harrison was the first president to die in office, and the Constitution was unclear about what should happen. The general thinking was that the vice president should become acting president, and call for a new election. Tyler decided to grab the throne for himself, which was bitterly denounced in his day, but his move became the precedent that America has used ever since.

Tyler was another slave-owning Virginian plantation owner, who believed that the landed aristocracy should run things. As a congressman, Tyler was against the Missouri Compromise, not wanting any restrictions on slave ownership. Another slave-owning president was an embarrassing anachronism in the West during the 1840s. The abolition movement was strong by that time. The British Empire passed laws to free all of its slaves in 1833, and by 1838 ended the “apprenticeship” program for “ex-slaves” that permitted flogging. France was forced to by the European revolutions of 1848, leaving Latin American sugar plantations and the United States virtually alone on the world stage. About the sole feat of Tyler’s administration was bringing Texas into the national fold in 1845, something that he did in cahoots with the next president, Polk. A treaty to annex Texas was defeated in the Senate in 1844 due to the slavery issue, so Tyler and Polk fabricated a legal end-run around the abolitionists, making it so that only a majority vote was needed, instead of the two-thirds majority that the Constitution required for treaty-ratification. Tyler pushed through his strategy and signed the measure a few days before he left office.

James K. Polk took office in 1845 and immediately began planning a vigorous American expansion,

to make America's Manifest Destiny come to fruition. There were even discussions at Polk's inaugural about buying California from Mexico. Mexico considered Texas a renegade territory, and when the United States absorbed Texas, Mexico broke off diplomatic relations with the United States, and Polk's cohorts began immediately plotting to seize western lands from Mexico.

For hundreds of years, all references to New Spain's province of "Tejas" delineated its western boundary as the Nueces River, something that Mexican maps confirmed. The Texas land grabbers, however, claimed that Texas extended another 150 miles westward, to the Rio Grande River, in violation of the region's history. Mexico was understandably upset with the claims of Texas, not only becoming part of the United States, but also arbitrarily extending its boundaries another 150 miles into Mexico.

General Zachary Taylor, whose claim to fame was, as usual, [killing Indians](#), did not even like the idea of annexing Texas, but he was ordered to lead an army to the Rio Grande and start something. The U.S. army purposely created a "border" incident to justify launching an invasion. Hitler did a similar thing to Poland, to start World War II. Before word even got back to Polk of Taylor's successful baiting of Mexico into the trap, Polk was campaigning to his cabinet to declare war on Mexico. When news came of the expected incident, Polk immediately declared war. U.S. Congressman Abraham Lincoln, among others, heatedly contested the war declaration, calling it nothing more than a naked land grab. A young officer serving under Taylor, Ulysses S. Grant, helped lead the American army into Mexico, where the army marauded almost at will. Grant later wrote in his memoirs that he regarded the Mexican-American war as "one of the most unjust ever waged by a stronger against a weaker nation." Disinterested historians have generally agreed with Grant's assessment.

Mexico made the mistake of allowing Anglo settlers to come to California. With the bad experience of allowing American "Catholics" to settle in Texas, Mexico made it a requirement that all white settlers to California become Mexican citizens. They did, but it proved a worthless tactic. The California whites revolted even before news of the U.S.' war declaration reached them. Similar to the whites that seized Texas, the whites in California tried establishing a new nation, called the Bear Flag Republic. That new nation lasted less than a month, ending when the U.S. Navy showed up. The Mexican-American war was an easy one for America. Although about 12,000 Americans died in the war, less than 1800 were battle deaths, the rest being disease and the related miseries of invading tropical Mexico and laying siege to Mexico City, as [Cortés](#) had done more than three centuries earlier. The United States stole half of Mexico in that war, and made Taylor a "war hero." Although Taylor never voted in his life, the Whig party used his celebrity to sweep him into the presidency in 1848, as another war hero front man. Taylor used Jackson's "spoils system," and soon died in office. Although American establishment scholars downplay the evidence, with questionable logic, substantial evidence shows that Taylor's death may have been due to intentional poisoning, and he was hard to kill, so his assassins had to poison him more than once.[\[220\]](#)

Cuban plantation owners realized the precariousness of their situation, and Polk's Secretary of State, the pro-slavery James Buchanan, tried buying Cuba. Polk even tried taking all of Oregon Country, nearly all the way to today's Alaska, willing to risk war with Britain (at that time, still the world's greatest power) to do so. Arbitration set the line at 49 degrees north latitude, where the U.S. boundary with Canada is today. Polk's tremendous land grabs helped make him one of history's

“best,” in the eyes of presidential historians.

The “treaty” between Mexico and the United States, legitimating the U.S. seizure, was signed in early 1848, and before the U.S. Senate even ratified the treaty, gold was found on John Sutter’s land, in today’s Sacramento. America’s biggest gold rush was then underway, and the usual rabble got to California any way they could. Sailing around South America was one way, and going overland to California was another, which was by far the most common method for the more than 200,000 gold seekers that made it to California by 1852. The quickest and easiest way, however, was to sail to Colombia and go overland across the Isthmus of Panama. The U.S. signed a treaty with Colombia in 1846, as its empire began straddling North America, for rights to pass through the Isthmus and build a railroad across it, which was completed in 1857, and the trip from New York to San Francisco was then shortened to about two weeks.

Before Polk, Indian removal ideology held that natives could be always pushed westward as the empire expanded, but Polk’s rapid successes leapfrogged the continent. The natives could not be pushed further westward...or could they? The Indians of the California coastline, from San Francisco to the tip of Baja California, had suffered [almost complete genocide at the hands of Spanish priests and soldiers](#) by 1846. All of Southern California’s coastal tribes were extinct long ago; the only coastal natives that survived California’s mission era were those that fled inland. When the 49-ers showed up, there were only about 150,000 surviving California natives, from a pre-Columbian population of perhaps a million. The man who initiated the genocide of California’s natives [is up for sainthood today](#), and [I went to a school named after him](#), and that most important part of his legacy was never told me as a child. Indian removal westward was not practical in California, so the first governor of California, which joined the Union in 1850, called for an open season on California’s natives. There was a lucrative head bounty on the gentle natives of California, and in the 1850s and 1860s the slaughter of the remaining California natives may have been the most intense genocidal effort of the entire history of the white man in North America, something that also escaped my California history textbooks. When the 49-ers slaughtered entire villages every weekend for fun and profit, surviving children were often sold into slavery in Sacramento and San Francisco. Indian girls brought twice the price of Indian boys, [because they also served as concubines](#) for the “settlers.” Similar dynamics took place in Oregon Country.

Even though the genocide of Northern California’s natives proceeded, celebrated and unabated, there was still talk in the 1860s to “resettle” the natives even further westward, on unnamed islands in the Pacific Ocean.[\[221\]](#) By 1900, the Native American population in California was 15,000, for a greater than 95% extermination rate since 1769, the typical rate that all Native American tribes experienced at the white man’s hands, if they survived outright extinction.

The United States began thinking on a global basis fairly early. In 1853, Commodore Perry mounted his diplomatic invasion of Japan, forcing an insular, feudal people into the developing world economy. [Japan quickly began playing catch-up with the West](#), leading to their participation in World War II.

With eastern North American bereft of its native population, and the genocide of the West Coast’s

natives well underway, there was only one region still “unsettled” by the white man, the mountainous, desert-like interior of the American West, and the Great Plains north of Oklahoma. The beaver pelt trade collapsed in the 1830s, as the [fur trade](#) finally encircled the world. Gold was discovered in the Rocky Mountains in 1858, and Denver was established in 1860. Black Kettle’s Cheyenne tribe welcomed the white men, but no matter how warm the welcome, the “pioneers” were bent on collecting scalps, which led to the outrageous [Sand Creek Massacre in 1864](#). The “pioneer” press went delirious with [joy at each new massacre](#). The “frontier” Americans [cheered the slaughters the loudest](#). The “noble pioneer” archetype of the American settlers is [nearly a complete fabrication](#). [Few seem to want to remember the truth](#), however, at least in white America.

The American Civil War is probably best seen as a crisis of empire. Abraham Lincoln even openly admitted it, saying that keeping the Union whole was the point of the Civil War, and that keeping blacks in slavery was acceptable to him if it kept the Union together. Most empires, from the earliest days of civilization, through Rome, Spain, Britain and others, have largely collapsed from within, from internal corruption and imperial lands breaking away, seeking independence (to create their own empires). [No empire has ever given up its lands easily](#), and the United States is no exception, and it had been grabbing land as virtually no earthly empire had ever done before. Such unprecedented growth was bound to lead to internal friction, with imperial subjects breaking away and vying for power, just as the United States originally broke away from the British Empire, soon after *its* greatest moment of triumph.

Corporations originally had limited lives, being temporary vehicles for conducting business. During the Civil War, war profiteering became an American science, and the corporation became the real power in America, with laws being rewritten to give corporations the rights of people and even unlimited life. Graft and corruption were on the rise.

The United States still bears the scars from the Civil War. The Civil War was about the world’s first industrial war, with submarines and railroads seeing use, and other technologies. The North’s strategy, as represented by Grant’s philosophy, was to simply use the North’s greater industrial capacity to grind down the South through a war of attrition. That also became the strategy for how future wars would be won, notably [World War II](#). Early cameras recorded the Civil War’s carnage, bringing it into people’s living rooms, which considerably dimmed the glorious luster that is always falsely attributed to the organized murder known as warfare.

Slavery and abolition played its role in the Civil War, but Lincoln’s Emancipation Proclamation did not free one slave, being more of a politician’s gambit. Until Lincoln’s proclamation, the Civil War was explicitly one to hold the Union together. His proclamation gave the veneer of righteousness to the affair, and helped sway European opinion, as the northern half of the empire was now waging war against a barbaric anachronism. The European powers were toying with intervention, as the American empire threatened to fragment. Britain sent troops to Canada, and France sent troops to Mexico, both supporting the South. The Czar of Russia sent his navy to the U.S, anchored at New York and San Francisco, in a show of support for the North. Russia, Britain and France were jockeying in those days for supremacy, the [Crimean War](#) ending a few years earlier, and with U.S. instability, the New World became a theater for the jockeying of European powers, for a historical moment. Secretary of State Seward deftly handled the situation and avoided open war with Europe,

especially in 1861 when a northern ship stopped and boarded the *Trent*, a British ship, and seized two Southern diplomats bound for England. Seward, like his predecessors, grabbed what land he could, but failed with his plans to acquire Caribbean islands and Hawaii. His only success was “Seward’s Folly,” “buying” Alaska from the Czar of Russia.

When Ulysses Grant toured the South after the Civil War, he saw no problem with blacks becoming even worse slaves than before, working for the same masters they had before the Civil War, except with no guarantee of food or shelter, which was part of the slavery “deal.” Grant even called the freedmen’s refusal to submit to a new form of slavery lazy on their part.[\[222\]](#)

The slaughter and dispossession of the Indians continued unabated during the Civil War. Ironically, the demographic group to suffer the greatest was the Cherokee Nation. After the [Trail of Tears](#), and also being violently kicked out of Texas by white settlers, they made the best of their lives in Oklahoma, and when the Civil War broke out, they wanted no part of another white man’s war. Oklahoma, however, was strategically placed between North and South, and the Cherokee were pretty much forced to choose between the lesser of two great evils. They generally aligned with the South, and the resultant carnage killed off probably more than a third of the Cherokee. White America lost less than 2% of its population in the Civil War.

The Bozeman Trail to gold fields in Montana went right through Sioux hunting grounds, and the whites wreaked their usual devastation as they passed through. In 1866, the Sioux, led by Red Cloud, fought off the white invasion. In 1868 the U.S. relented and agreed to close its forts along the trail, for the only war that Native Americans ever won against the United States. However, the 1868 treaty was deceptive, in the U.S. tradition, with it calling for the Sioux to move to reservations in today’s South Dakota. Fittingly, that deceptive treaty with Red Cloud was the last treaty the United States would sign with a Native American tribe. Washington’s subterfuge worked brilliantly. More than 370 treaties were forced by the U.S. onto Native Americans, and the U.S. did not honor even one of them. After 1868, the stratagem was not needed any longer, as there were virtually no more natives left to swindle. The last remaining land to steal was in the northern plains, and the industrial giant would not need much more effort to subdue the last remaining natives...or so they thought.

In 1868, another famous “Indian fighter” made his mark, when [George Custer](#) attacked the sleeping, friendly camp of Black Kettle’s. Black Kettle survived the [Sand Creek Massacre](#) and amazingly kept advocating peace, to only die in Custer’s dawn attack on the [Washita River](#). Custer became a national hero because of Washita. He was also an accomplished liar. His first account of the Washita massacre stated that he killed a bunch of warriors, instead of sleeping women and children. He led a gold-hunting expedition into the Black Hills in 1874, in violation of the treaty. The Black Hills were sacred, spirit land to the Sioux, and they would never cede them. Custer lied about the gold that was found there on his illegal expedition, and a gold rush then descended on the Black Hills, when gold really was found. After more fraudulent diplomacy, the U.S. declared war on the Sioux in 1875.

Custer turned 35 during the winter of 1875-1876, the minimum age for presidential eligibility. He hobnobbed with New York’s elite that winter, and a conspiracy apparently hatched. The Grant administration was possibly America’s most corrupt ever, and the centennial celebration was coming

up that summer, with American nationalism reaching a deafening crescendo. The plan, [later admitted by his Indian scouts](#), was for Custer to kill more sleeping Indians that summer, and the resultant fervor would sweep him to the presidency that autumn. The Sioux were proving to be rather tough customers for the U.S. military, as Red Cloud's war demonstrated. In the spring of 1876, marauding armies were hunting for Indians to kill, and an army attacked a large bison-hunting party in early June. Led by Crazy Horse, those natives crippled the U.S. forces. A couple of weeks later, the army with Custer in it was in the vicinity, also hunting for natives, and happened upon the same Indians.

Custer deserted his post earlier in his career, but his Civil War reputation got him lenient treatment, and he was merely suspended from duty for a year. Custer nearly did not make it to the Great Plains that summer to mount his presidential campaign. Grant knew of Custer's ambition and tried clipping his wings, but Custer did some maneuvering, pulled some strings and got into position to kill Indians that summer.

Custer was not leading the army, and when they caught sign of a large group of natives, Custer was assigned to reconnoiter them, not attack them. His ambition was well known among the army brass, and when he went to scout the "enemy," his commander reminded him to follow orders, which Custer replied to jokingly as he rode off. Custer knew that he needed to place the heroic mantle on his shoulders alone, in order to be swept into the White House. He disobeyed orders so he could monopolize the killing. The [Washita Massacre](#) showed him to be a sloppy commander, not properly sizing up the situation before attacking. At the Little Big Horn his "Custer's luck" ran out, as he led a charge of less than three hundred men into a camp of four thousand armed natives. The surprised natives made short work of Custer and his men.

The news of "Custer's Last Stand" made it to Washington during the midst of the centennial celebration. Instead of Custer being hoisted onto the nation's shoulders as the greatest Indian-killer of all, America had a sobering moment. I have a special interest in the genocide of the Plains Indians, which is discussed at this footnote.[\[223\]](#)

During those days, [robber barons](#) were busily building their capitalistic empires, most of them getting their start in Civil War profiteering. Today's empires in [energy](#) and [medicine](#) had their beginnings during the Gilded Age, empires that largely hold Americans (and even humanity) hostage today. The defrauding of Native Americans out of their lands and lives would have been bad enough if it had stopped there, but it continued. In 1775, the revolutionaries formed a Committee of Indian Affairs, headed by Ben Franklin. Today's Bureau of Indian Affairs (BIA) was formed in 1824. The treaties the Indians signed often provided for government assistance, because the natives had the land taken away that sustained them. Similar to how the United States honored its treaties, the graft and corruption in the Indian Bureau was probably worse than in any other government agency, a notable feat. One of the quickest ways to riches in the mid-19th century was becoming an Indian agent at the Indian Bureau. A favorite Indian agent method was pocketing the money appropriated for Indian food and supplies, and then devoting a tiny fraction of the purloined funds toward largely worthless "supplies." The corruption was so bad that the Grant administration tried the strategy of hiring church members as agents.[\[224\]](#) Grant's "Quaker Policy" was not very successful.

In U.S. history, one of the greatest vehicles for mischief has proven to be “philanthropy.” Some has been disastrous, such as the “philanthropy” of [Rockefeller and Carnegie](#), which [helped create](#) today’s medical racket. It is challenging to put a humanitarian spin on the machinations of some of U.S. history’s greediest men. Their right hand would machine-gun striking employees, while their left hand “gave” money to “worthy causes.” Wink, nudge. Other “philanthropists” may have been well intended, but their actions were often based on arrogant paternalism, thinking that they knew what was best for the victims of the very system that garnered the philanthropists their wealth.

When the Civil War ended, the Cherokee clawed back from the edge of the abyss once again, and more of their land was taken, while railroads and other land-grabbing enterprises moved in. The Cherokee, as with all North American tribes, did not have the concept of individual land ownership. Tribal members owned their homes and other possessions, but the tribe owned the land. On the East Coast, “philanthropists” huddled together to decide how to “help” the dispossessed. American “philanthropy” was a cousin to the “[White Man’s Burden](#),” which was rooted in some sense of responsibility, at least superficially. Seemingly more often than not, the “help” given in the name of philanthropy and the White Man’s Burden made the situation worse.

A most curious instance of U.S. “philanthropy” was the “reform” that Massachusetts Senator Henry Dawes rammed through during the 1880s. In 1883, at a meeting of Eastern philanthropists, Dawes, an Indian “expert,” spoke of his recent visit to Indian Territory. Almost certainly speaking of the Cherokee, Dawes painted a portrait that even the most Indian-friendly observer would have blushed at. What Dawes said was true, about how there were no Cherokee homeless, how the Cherokee Nation had no debt, how high literacy was and the like. For what the Cherokee had endured, what they accomplished was truly astounding, although they still had their problems, as every society does. Dawes then came to the nub of the issue as he saw it,

“Yet the defect of their system was apparent. They got as far as they can go, because they own their land in common. It is Henry George’s system, and under that there is no enterprise to make your home any better than that of your neighbors. There is no selfishness, which is at the bottom of civilization. Till this people will consent to give up their lands, and divide them among their citizens so that each can own the land he cultivates, they will not make much more progress.”[\[225\]](#)

Seldom has there been a more frank admission about what really drives Western civilization. The Cherokee surely had a “civilization,” something arguably more civilized than anything the whites ever had, but it was not *selfish* enough. Dawes tried remedying that defect. Congress passed the Dawes Severalty Act in 1887. It broke up tribal lands into individual plots, at 160 acres for a head of household, down to 40 acres for a child. Such arithmetic took away 10,000 square miles of land that had been designated for the Cherokee tribe, and that land was used in the famous Oklahoma homesteader rush of 1893, complete with a starting line and gun to start the race. What Jackson could not do by outright fraud, Dawes accomplished under the rubric of “philanthropy.” The

Cherokee heatedly contested such “philanthropy,” and the U.S. government responded with the 1898 Curtis Act, which abolished the governments of the Civilized Tribes. The names, faces and tactics changed, but the game remained the same.

While the Oklahoma Indians did their best to put the shattered pieces back together, the last free natives of the northern plains were under siege. What happened on the plains was an industrial genocide. Early on, Americans used killing off the bison as a method of starving the Plains Indians out, related to [Washington’s strategy](#). Railroads were built into Indian Country, and there were even “railroad hunts,” where “hunters” would shoot out the windows of the trains, slaughtering the bison in awesome numbers. The railroad builders even fairly regularly [murdered their laborers](#), as it was cheaper than paying them. Great heaps of bison bones lined those early railways along the prairie. The U.S. government handed out free ammunition to “buffalo hunters.” Shooting bison was about the least sportsmanlike activity that an “outdoorsman” could engage in. Bison would stand in a herd, and shooting a “stand” of bison was the ideal. If done properly, the bison would fall one-by-one, as the marksman dropped each one, until they were all down. The record for a single man, shooting at a bison stand, was more than one hundred. From a pre-Columbian population of about 60 million animals, the bison were reduced to 23 wild ones, and less than a thousand of them in all, at about the same time that the Plains Indians were finally conquered and brought to the brink of extinction.

The Sioux may have prevailed momentarily during 1868 and the summer of 1876, but their triumphs were short-lived. The American juggernaut merely threw more resources at the problem, and the standard murderous duplicity was brought to bear. Sitting Bull and Crazy Horse met violent ends at the hands of white men; the usual fate for those who led the resistance, especially if it was successful. By the late 1880s, the Sioux joined their North American brethren, being ground under the white man’s boot. The American vengeance inflicted on the Sioux lasts to this day. The Pine Ridge reservation sits in the United States’ poorest county. Life expectancy there is at Third World levels, as it is on all Indian reservations. In 1980, the life expectancy of a Native American reservation man was 44.6 years, nearly 30 years less than their white American counterparts.[\[226\]](#) The reservation women lived less than three years longer.

During the late 1880s, the forlorn remnants of the Plains Indians engaged in something that Native Americans had done since at least the Aztec conquest: mourning the passing of their societies, and a desperate hope that if they beseeched the spirit world properly, the whites would disappear and the lands and peoples would be restored.[\[227\]](#) Local whites feared the Ghost Dance. They probably did not understand its purpose, but would have undoubtedly been more hostile if they had. The U.S. mobilized against the Ghost Dance “threat,” to prevent the natives from dancing. In late 1890, U.S. troops killed Sitting Bull and a dozen other Ghost Dancers, and the survivors fled to Wounded Knee. A few days after Sitting Bull died, Frank Baum, the author of the *Wizard of Oz*, [called for the complete extermination of all remaining Native Americans](#). A few days later, U.S. troops put an end to the Ghost Dancers, opening their guns on them at Wounded Knee, killing a few hundred men, women and children. The troops were so eager that they killed quite a few of their own with “friendly fire.” Native survivors of the massacre were tracked down and murdered. When he heard of Wounded Knee, Baum recorded his approval, urging his readers to “wipe these untamed and untamable creatures from the face of the earth.”[\[228\]](#) With the massacre at Wounded Knee, Manifest Destiny succeeded in securing the continent. From [Morton](#)’s Puritan persecutors to

Wounded Knee, dancing Indians were only good for killing.[\[229\]](#) In the words of David Stannard, “There was, at last, almost no one left to kill.”

The Empire Goes Global

In 1890, the American “frontier” was declared officially extinct. American settlement spanned the entire continent, from sea to shining sea. The 1900 census counted about 76 million people, and 250,000 Native Americans. The frontier was not the only thing extinct. The Eastern Woodlands were almost completely leveled, in history’s most spectacular deforestation. The passenger pigeon was nearing extinction, with the bison close behind it. The [European/American whaling industry](#) virtually wiped out several species of whales, and whaling was [becoming industrialized](#), eventually bringing what is probably [another sentient species](#) to the verge of extinction. Native Americans in the United States were reduced from their pre-Columbian population by probably somewhere between 95% and 98%. American cultural managers appeared to try reducing the [cognitive dissonance](#) of the nation’s people, because American nationalism was about to achieve orgiastic dimensions.

America in 1890 was turbulent, although the subsequent decade is known as the “Gay Nineties.” The robber baron empires had largely been built by that time. Monopolies were the rage, their excesses becoming so overt that the era of “trust-busting” began early in the early 20th century, with limited effectiveness. Modern medicine was well on its way to becoming [the racket it is today](#). By the 1890s, surgery vaulted from [barbaric obscurity](#) to [becoming a racket](#). In the South, the Ku Klux Klan, which was originally formed by Southern elites to harass the Reconstruction government, quickly degenerated into poor, uneducated whites lynching blacks - their primary economic competitors. American lynchings peaked during the early 1890s, and were highly popular, with people murdered in a carnival atmosphere, the lynchers making postcards from the scenes, [posing next to the burning or hanging \(or both\) corpse](#). The North was not noted for its [enlightened racial attitudes](#), either.

The 1880s saw a huge influx of immigrants from Eastern Europe, with Slavic peoples arriving by the millions, as well as Jews, Italians, Chinese and others who differed markedly from the Germanic, Anglo and Celtic immigrants of earlier generations. The United States was well on its way to [becoming an anti-Semitic society](#)[\[230\]](#), and American xenophobia was on the rise. Every non-Anglo American group had an unflattering epithet bestowed onto them, including nigger, chink, greaser, kike, spic, dago and so on.[\[231\]](#) The cognitive dissonance dynamic surely contributed, but also some sought to unify widely disparate groups.

Post-9/11 Americans might be surprised to know that today’s American flag worship had its roots in the modern era, not the American Revolution. England was the first Great Power to permanently undermine the power of royalty, with its revolutions during the 1600s, but the phenomenon of worshipping British royalty is regarded as a strange, pre-modern relic, something found nowhere else in Europe. Sober scholars see American flag worship as even more bizarre.[\[232\]](#)

The American flag was originally the British Union Jack with white stripes added. The American flag was created solely because ships needed to carry a flag. Adopting a flag was a trifling formality for the Founding Fathers. No flags flew in the early days of the American republic, and even the Founding Fathers were not sure what it looked like. A year after the American flag was adopted, a letter to the king of Naples, signed by Ben Franklin and John Adams, informed the king that the American flag "consists of thirteen stripes, alternately red, white and blue." In 1794, a bill was introduced to add two stars to the flag, because Vermont and Kentucky were admitted to the union. Congressmen objected that their important time was being wasted by such a trivial matter, and the bill was quickly adopted "as the quickest way of terminating" discussion of it.[\[233\]](#) The Betsy Ross "stitching-the-flag" story is a fabrication, concocted by her grandson. There are no contemporary depictions of the American flag in *any* American Revolution artwork. Francis Scott Key, who wrote the poem that was wedded to a drinking song to become the national anthem, thought that the U.S. had begun the War of 1812 and deserved to lose it.

American nationalism began its ascent during the 1820s, reaching a fevered pitch with [Manifest Destiny](#), as the United States began looking more like a proper empire. As the continental theft was completed, and "surplus" Europeans flooded in, there was a conscious attempt to create a new form of religion: state worship. Fittingly, a Marxist minister created the American pledge of allegiance in 1892, in a conscious attempt to create a new object of worship. The original pledge was not performed in the hand-over-heart way that we see today. The "Bellamy Salute" was originally given with an outstretched arm pointing to the flag, palm up. Imagine Romeo making his love speech, with his hand held toward Juliet's balcony, and we get an idea of what the original pledge of allegiance looked like. It stayed that way until 1942, when the fascist salutes of Hitler and Mussolini looked a little too close to the American pledge of allegiance, and Americans took their arms down and placed them over their hearts. The connection with Nazi Germany is more than coincidence. In the modern era, only three states have had a pledge of allegiance: the U.S., Nazi Germany and the U.S. vassal state, the [Philippines](#).

People I consider enlightened Christian Americans refuse to say the pledge of allegiance and salute the flag, because it is the worship of an inanimate object, which is idolatry and something that the Second Commandment forbids. They consider saluting the American flag the equivalent of Moses' followers worshipping the golden calf. Interestingly, as I was writing this essay in July 2002, a federal judge declared the pledge of allegiance unconstitutional, because of the words "under God" (added to the pledge in 1954, during the McCarthy witch hunts) in it. American politicians called the ruling ridiculous, but both the politicians and judge completely missed the real issue, which is that the entire pledge of allegiance amounts to an act of religion that American children are forced to undergo. Few Americans seem to think that flag and state worship are not acts of religion, even when laws pertaining to flag treatment use overtly religious terms such as "desecration."

The pledge of allegiance was given to American schoolchildren as a warm-up to the 400th anniversary of Columbus' "discovery" of the New World. The Columbian Exposition was held in 1893, because the affair was so colossal and took awhile to stage. It had the [highest event attendance in world history](#), to that time. The American continent was secured, and the empire then began to go global. In early 1893, white settlers overthrew the Hawaiian government (with the help

of the U.S. Marines), bringing the Pacific plum into the American hand. Some Congressmen decried the move as naked imperialism, and even the new president, Grover Cleveland, tried putting Hawaii's queen back in power. The whites in Hawaii, as with whites in California and Texas, created a short-lived republic, with Sanford Dole becoming Hawaii's president. Hawaii stayed a white republic until the openly imperial William McKinley came into office in 1897, and the U.S. soon annexed it. Dole, as in Dole Pineapple, became the Hawaiian territory's first governor. Land grabbing was still the road to riches in the pre-industrialized world.

The European powers did not idly sit by while the U.S. conquered a continent and began its global expansion. After losing the best parts of North America to its ambitious colonies, Britain busily conquered and colonized Australia, New Zealand, South Africa and Canada, while devastating the peoples of those lands. Britain ruthlessly pillaged [India and China](#). France also did not sit and watch. It secured some of the South Pacific, and during the 1860s it began conquering Indochina and inflicting its brutal reign. In the 1870s the [Scramble for Africa](#) was witnessed, as Europe began to carve up Africa, turning it into a big plantation and mine, with railroads installed to ship the loot to Europe. Russia and today's [Germany](#) were a little late in coming to the imperial table, and were largely landlocked. Russia and Prussia had to content themselves with more local conquests, and the Hapsburg Empire, headquartered in Austria, was feeling a bit hemmed in. Belgium was the first nation on the European mainland to industrialize. Belgium's King Leopold II wanted an empire, but it was difficult finding lands and people not already living under the European lash. After years of searching, Leopold finally engaged in "philanthropic" empire building in the Congo. The subsequent rubber boom became the source of Leopold's wealth, and one of history's greatest and most neglected genocides is what Belgium did to Congolese Africans during Leopold's rubber grab and afterward. During its first generation of conquest and exploitation, Belgium's efforts killed off about ten million Africans.[\[234\]](#)

Britain played the Great Game with Russia in Central Asia, with Afghanistan being an imperial battleground. While the Great Powers were securing the planet, there were also imperial losers. The Ottoman Empire began declining during the 1500s. Ironically, Europe had more ancient and lasting animosity with Islamic peoples than any other non-European culture, but it was about the planet's last place to have the European boot laid across its neck.

By 1800, about the only thing keeping the Ottoman Empire alive was the Great Powers preventing any one of them from seizing it. The issue of the Ottoman Empire's fate became known as the Eastern Question. The European powers nibbled away at it, however. Greece was carved away from it in the 1820s, Russia kept southward pressure on Ottoman lands and sought influence in the Balkans, and a series of events eventually led to the Crimean War, which began in 1853, with France, Britain and the Ottoman armies fighting against the Russians. The war blunted Russia's ambition for Black Sea hegemony, as seven hundred thousand people, most of them civilians, died.

The era from about 1870 to World War I is generally seen as a cultural golden age in imperial Europe, known as La Belle Époque. The Impressionist and post-Impressionist period was one Europe's more fecund artistic eras. Life expectancy in England began rising dramatically during the late 19th century, from about forty years for a man in 1860, to more than fifty in 1910. [Life insurance](#) companies began taking note of obesity and mortality, as obesity was no longer the sole province of

the rich. While Europe was having fun, the peoples in its imperial domains were devastated. King Leopold was just one of the gang. The imperial, capitalistic conquests of Britain in Asia dealt severe blows to the economic, political and cultural systems in India, and China also suffered. El Niño events in the late 1870s and late 1890s, combined with the effects of European imperialism, created two catastrophes that killed off between 40 and 60 million people in [India and China](#), while boxcars of food with armed guards were shipped to Europe. Between 1750 and 1900, Europe's population rose from 17 to 21% of world population, while South Asia's declined from 23 to 20%.^[235] It partly had to do with a resource transfer. The same resource-transfer situation prevails today, with more than a billion overweight people and more than a billion underweight people, with the [fat ones in the imperial world](#) and the skinny ones in the colonial world.

The United States was enjoying its Gilded Age at the same time. Life for the white man was good, sitting atop the world. By 1900, the world's only place of significance not under white domination was Japan, [and they were feverishly playing catch-up with the West](#). Taking their lead from the United States, Japan created a Manifest Destiny-type ideology that focused on China, making their Chinese cousins into subhuman dogs, something evident in the Rape of Nanking.^[236] The year after adding Hawaii to its larder, the United States waged a war against Spain, with Manifest Destiny cheerleader William Randolph Hearst giving an infamous message to his employee Frederick Remington, who was covering the non-events in Cuba, "You furnish the pictures. I'll furnish the war." Hearst's yellow journalism won the day, and the United States stole Cuba, Puerto Rico and the Philippines from Spain, as a former New World colony seized about the last shreds of Spain's imperial lands. Not far removed from how the [Spanish mercenaries treated the Incan emperor](#), President McKinley made demands of Spain as he rattled his saber, and even after Spain capitulated, meeting all U.S. demands, McKinley still declared war on them. The peoples of those lands that the U.S. seized became anything but free. They merely had new imperial overlords.

The Philippines' case was particularly egregious. The U.S. had designs on Caribbean islands for many years, and as they were in the U.S.' back yard, Americans could concoct some mildly plausible case for their conquest. The Philippines, however, lay across the world's largest ocean. "Discovered" by [Magellan](#) in 1521, who died while fighting the natives there, the Philippines were conquered by Spain during the 1560s, and Manila was established. The Philippines did not have the imperial culture of the [Aztecs](#) or [Incas](#), and there were no gold-plated civilizations to plunder. Also, the Philippines were conquered later in the imperial game than the New World was. The Spanish experience in the Philippines was kind of a cross between the mass conversions of Mexico and its hacienda economy, imposed on peoples more like Caribbean natives than Aztecs. Priests, ranchers and plantation owners dominated the Philippines during the colonial era, with the church being the Philippines' largest landowner. The Spanish never had a gentle colonial tenure anywhere, but at least the Philippine experience was not the vast genocide that marked their [New World efforts](#).

Cuba and the Philippines had independence revolts, and the Spanish brutally put them down. That became the U.S. excuse for invading: freeing the subjected peoples. Cortés mouthed some of the same rhetoric [as he laid siege to Tenochtitlán](#). As the United States took the global stage with its invasion of the Philippines, Britain's imperial bard, Rudyard Kipling, penned a poem titled "The White Man's Burden." Kipling was articulating British racism, framing the imperial venture as bringing

“civilization” to the world’s dark-skinned peoples, and his poem was specifically an exhortation to the Philippines to submit to America’s benevolent rule. Kipling was welcoming the United States to the intercontinental smorgasbord. U.S. Senator Albert Beveridge was a leading light of the day, eventually joining Teddy Roosevelt’s third party when he ran for president in 1912. In January of 1900, Beveridge gave a famous speech where he called the Filipino people “children,” totally incapable of “self-government.” It was a direct echo of Kipling’s sentiments. McKinley told a group of Methodist ministers,

“The truth is I did not want the Philippines and when they came to us as a gift from the gods, I did not know what to do with them.”[\[237\]](#)

The invasion’s benevolence quickly became evident. The Filipino people could not be kept from childish notions of self-government, and the United States quickly waged a war against them, in much the same way they prosecuted the exterminations of Native Americans, even using the same rhetoric at times. In the Philippines, while many thousands of “militant” natives were killed, the U.S. murdered about 200,000 civilians, using starvation and other tactics, including torture. The Americans called the Filipinos “goo-goos,” and waged scorched-earth campaigns. It was a preview of what the United States did to Southeast Asia during the 1950s, 1960s and 1970s. “Goo-goo” was a direct predecessor to “gook” and the same kinds of “kill-all-the-civilians” tactics were used in both wars, to “help” those people. Tacitus remarked on the Roman style of warfare and subjugation, “They make a desert and they call it peace.”

One American officer in the Philippines justified the exercise with,

“There is no use mincing words...If we decided to stay, we must bury all qualms and scruples about Weylerian cruelty, the consent of the governed, etc., and stay. We exterminated the American Indian, and I guess most of us are proud of it, or at least believe the end justified the means; and we must have no scruples about exterminating this other race standing in the way of progress and enlightenment, if it is necessary.”[\[238\]](#)

There was little domestic dissent to that latest American adventure.[\[239\]](#) When atrocity stories began trickling into the United States, Philippine hearings were held, but they were rigged by Henry Cabot Lodge, with Beveridge assisting in the whitewash, which has been a standard outcome in [virtually every governmental investigation into its own conduct](#), a pattern that holds to this day.

Not everybody in America cheered the Philippine invasion. There was a vigorous Anti-Imperialist

League, and Mark Twain was its leading spokesperson. Twain considered the last years of his life his most important, as he led campaigns against U.S. and European imperialism. Mark Twain wrote about [King Leopold's genocidal efforts](#), but because American corporations were big investors in the rape of Africa, the publication of Twain's [King Leopold's Soliloquy](#) was almost completely suppressed in the United States, and remains one of his least known works.

When [Las Casas](#) published his tract on the Spanish experience in the New World, it became a huge bestseller, although the Vatican suppressed his greatest work for three hundred years. At least Las Casas' work is readily available today. The suppression of Mark Twain's anti-imperial writings is one of the most impressive instances of how Western censorship works. Western censorship is not accomplished by government or church interests, but by corporate interests, reflecting who is really in charge. For nearly a century, it was virtually impossible to even know that Twain had ever written any anti-imperialist essays, as virtually all of his biographers silently passed over his life's most important work. His anti-imperialist essays were never included in anthologies of his work. Finally, in 1992 there was a publication of his work, in a small-volume printing titled *Mark Twain's Weapons of Satire: Anti-Imperialist Writings on the Philippines*. The book quickly went out of print and is nearly impossible to find today. Fortunately, [excerpts are on the Internet today](#). I have tried to locate the book several times over the years, and currently have a standing order for it at Amazon.com. That kind of suppression and censorship, done by the "free market," exceeded anything that the Stalinist Soviet Union or Maoist China accomplished. George Orwell, writing the forward to perhaps the 20th century's most read political book, *Animal Farm*, remarked on how the West's "free press" performs its censorship. His publishers, as if to prove him right, [censored that preface](#), and it has never been restored to its rightful place, and still is virtually unknown.

Here is a sample of Twain's neglected work, which has poignant application to today's post 9/11 world.

"A Patriot is merely a rebel at the start.

"In the beginning of a change the patriot is a scarce man, and brave, and hated and scorned. When his cause succeeds, the timid join him, for then it costs nothing to be a patriot. The soul and substance of what customarily ranks as patriotism is moral cowardice and always has been.

"In any civic crisis of a great and dangerous sort the common herd is not privately anxious about the rights and wrongs of the matter, it is only anxious to be on the winning side.

"In the North, before the war, the man who opposed slavery was despised and ostracised, and insulted. By the "patriots." Then, by and by, the "patriots" went over to *his* side, and thenceforth *his* attitude became patriotism.

"There are two kinds of patriotism -- monarchical patriotism and republican patriotism. In the one case the government and the king may rightfully furnish you their notions of patriotism; in the other,

neither the government nor the entire nation is privileged to dictate to any individual what the form of his patriotism shall be. The gospel of the monarchical patriotism is: "The King can do no wrong." We have adopted it with all its servility, with an unimportant change in the wording: "Our country, right or wrong!" We have thrown away the most valuable asset we had:-- the individual's right to oppose both flag and country when he (just *he*, by himself) believed them to be in the wrong. We have thrown it away; and with it all that was really respectable about that grotesque and laughable word, Patriotism."
